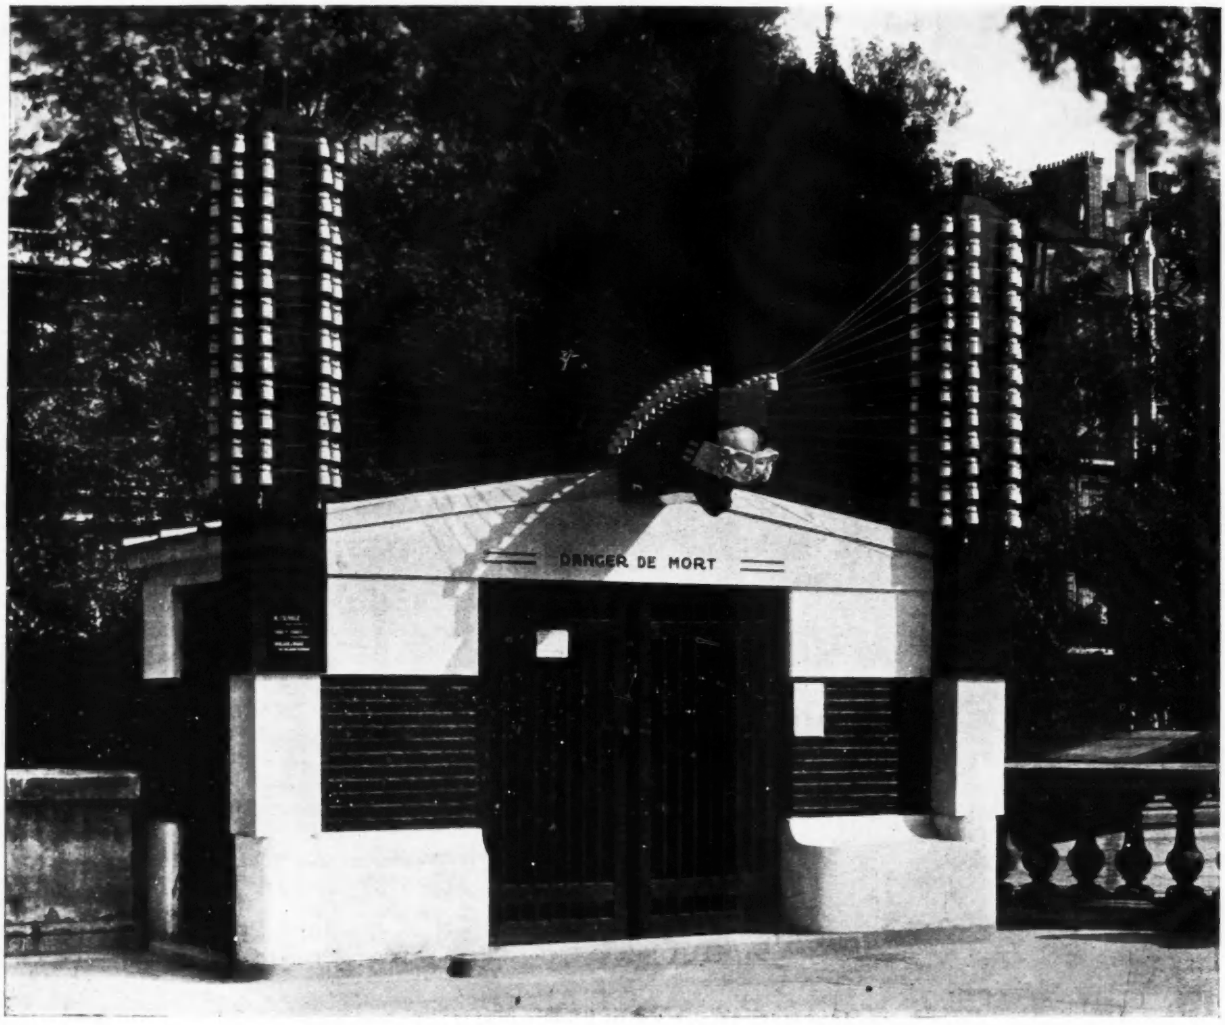
ARCHITECT OR ENGINEER?

"Adherence to 'the mechanical fallacy' will not enable a designer to achieve that success in civic design which we should like to see exemplified in the new Dorchester House."



THE recent correspondence in *The Observer*, in which the old issue between architects and engineers has been raised, once more appears to have generated more heat than light. It began with enthusiastic praise of Sir Owen Williams in his capacity of designer of the new building which is to be erected on the site of Dorchester House. This, coming from an architect who, apparently, had not seen the designs of the building in question, seemed to be a gratuitous surrender of a line of defence which the architectural profession as a whole regards as being of great strategic importance; so it was not surprising that it evoked a strongly-worded protest. Yet, undoubtedly, professional jealousies are bad in themselves, and the only way to get rid of them is to appeal to some social or artistic principle to which the disputants on either side can give their unqualified allegiance.

What kind of building do most people want to see erected on the site of Dorchester House? Obviously, the best building possible; and they are utterly indifferent as to whether an architect or an engineer designs it, provided that it is an ornament to Park Lane. For only a few pessimists will say that they do not care what becomes of this thoroughfare on the ground that, owing to recent happenings there, it is, architecturally, a devastated area already. There still remains a possibility that a new Dorchester House will actually be an improvement upon the old, and will contribute to a street composition which need not disgrace the twentieth century. But we can only look forward to this happy consummation if we are assured that the designer of the new building is acquainted with certain cultural values which must be borne in mind if its façades are to have a human quality, and are to be characterized by the peculiar kind of beauty which appertains to architecture.

It is possible that an engineer may possess the knowledge which is required for the creation of such a design, and it would be unfair to condemn him out of hand; yet a critic is showing an equal lack of intellectual balance in acclaiming the engineer as a heaven-sent saviour who is going to show us architects how the new Dorchester House is to be designed, when as yet he has given no proof of having won the artistic victories which would entitle him to such eulogies.

One thing at least is certain: an adherence to the worn-out mid-Victorian shibboleth stigmatized by the late Mr. Geoffrey Scott as "the mechanical fallacy" will not enable a designer to achieve that success in civic design which we should like to see exemplified in the new Dorchester House. And, unfortunately, it must be confessed that the architectural correspondent who would have us welcome the intervention of Sir Owen Williams in this particular instance, and gave the impression that he was voicing the engineer's own opinions, was not ashamed to reiterate the aforementioned fallacy as if it were a newly-discovered truth. For it is indubitably not sufficient for the designer of a building to have the kind of constructional competence which engineers acquire, nor is it a useful comparison to liken a new building to an aeroplane or motor-car, and to say that the former need only follow the dictates of structure and utility in order to be beautiful. To describe aeroplanes and motor-cars as necessarily beautiful is to beg the question. Perhaps when the critics have recovered from their first child-like enthusiasm for mechanical inventions, and begin to apply æsthetic standards to the new engines of locomotion, they will discover that many of them are extremely ugly, for the simple reason that they fail to conform to those subtle standards of organic design which a trained architect is accustomed to acknowledge.

The obvious *lacuna* in the engineer's artistic equipment is due to the fact that he is concerned with individual structures only, and his scientific training does not bring him to a consideration of those subtle problems which concern the mutual harmony of several units of building which are set in juxtaposition. Let not the architect, then, in a spirit of too great complacency, make public surrender to the engineer!

STRINGS OF THE VOLT

This building was a purely temporary electric transformer station designed by Henri Sauvage to tap one of the main high-tension sector cables of the Paris network, step down its voltage and distribute its current to all parts of the 1925 Exposition des Arts Décoratifs. It might well serve as an exemplar for the transformer stations to be used for the rural electrification of England.

The prominent inscription Danger de Mort *was certainly no idle warning. Indeed, it seemed astonishing to English eyes that the municipal authorities of Paris should have allowed an exhibition of anything but non-inflammable construction, and one containing so many valuable exhibits, to be fed by naked overhead conductors.*

The materials used in this remarkably adroit and workmanlike essay in substation design—timber, brick, cement, ordinary glazed earthenware telegraph insulators and drawn copper wire—were the cheapest and readiest to hand. Notice the way the protuberant, slightly arched central bracket (the silvered head of which was modelled by Mme. Thérèse Schueler) knits together the composition, and is webbed to the deftly-grouped pairs of "mustard-pots" of the twin timber pylons, much as the strings of a fiddle are held taut over the bridge by parallel rows of screws. The wooden gate (clearly a stock pattern), however, would undoubtedly have repaid more individual treatment.

NEWS & TOPICS

AMENITIES

AS Mr. Gerald Barry observed, in the last of his broadcast talks on "The Week in London," it is remarkable what a dearth of news there has been during the holiday period, despite the fact that for two days no papers were edited. Mr. Barry has all along been on the side of the angels in his advocacy of those movements that may be briefly comprehended in the word "amenities." It was on one of these subjects that *The Daily Telegraph* published letters, written in the House of Commons, on Christmas Eve, by Mr. Stanley Baldwin and Mr. Lloyd George. Referring to the countryside, "the visible history of England," the ex-Premier writes: "Its beauty is a great national possession, and its preservation a national duty." With such aspirations the Liberal leader is in agreement: "While it would be criminal to allow a sentiment of mere reaction to restrict the nation in its search for better housing, sunlight and fresh air . . . it is of the utmost importance that these developments shall be carried out in a manner reflecting not the wasteful greed of the jerry-builder and the profiteer, but the wisest planning and best taste which the nation can command."

★

Let us determine that these shall not remain mere pious hopes. When Sir William Crawford, in the same correspondence, answers his own question: "Who are to blame for the present state of affairs? Architects, surveyors, town-planning authorities, advertising men, and, last but not least, the public . . ." however, I feel he is doing the profession less than justice. The order of culpability should surely be reversed. The most indifferent building in which a qualified architect was ever concerned cannot conceivably wreak the havoc of the average sign set up by the advertising man. The unfortunate circumstance is that so many buildings are put up without benefit of architecture.

CHARING CROSS BRIDGE BILL—

Parliament will re-assemble after the Christmas recess on Tuesday, January 21, but it is unlikely that the House of Commons will have an opportunity of discussing the private Bill, promoted to enable the L.C.C. to erect the new Charing Cross Bridge, until next spring. The text of the Bill, however, is now available. In the first part of the Bill it is declared to be expedient that the Council should be empowered to erect a bridge for pedestrians and vehicular traffic across the Thames at Charing Cross; to construct an embankment wall and embankment on the Lambeth side of the river, and to erect a temporary bridge for use during the construction of the new bridge; to make new streets and widenings and alterations of streets, including a temporary approach to the temporary bridge; to acquire lands and property for the purpose of the bridge and street works; and to construct tramways. It is also declared to be expedient to remove Charing Cross station to a site across the river, to demolish the existing bridge and to erect (by the Southern Railway Co.) a new terminal station, and to enter into heads of agreement on these matters by the L.C.C. and the proprietors of the railway. The estimated capital expenditure of the scheme is £14,660,000.

—AND REFLECTIONS ON ITS FUTURE

So much for the powers sought. There is much still to be done if they are to be applied in the most profitable way, from the point of view of future return on this vast investment, quite as much as from the purely æsthetic one. It seems pretty clear that, grievously disappointing as is the official scheme which the powers that be are thrusting forward, its worst defects are due to the Southern Railway's inexplicable and inexcusable refusal of a site for their new station adjoining the present Waterloo terminus, which was, in fact, the first proposal to be made to them, and their insistence upon a river frontage for it. As Mr. Goodhart-Rendel has said: "It is absurd to suppose that any reason there may be in this demand could justify its concession at the cost of the evils it would entail" (the barricading of traffic and the perpetuation of the south side slums).

★

But is there, as a matter of sober fact, any necessity whatever for a new station? Is not the whole matter being regarded in too parochial a frame of mind on the part of the railway company? It is years since Mr. H. S. Leaning advanced, under the ægis of the London Society, a plea for the study and rationalization of the railway systems running into London as a comprehensive whole; every Parliamentary Select Committee that has reported on railway Bills for decades past has set up a finger-post pointing in the same direction. It so happens that the Government announce their intention of moving in the matter of London transport at the very time when the Charing Cross scheme is about to be debated. What an opportunity! Mr. Leaning's scheme of 1922 visualized four main terminal stations only in London, to be cleared of all suburban traffic by interweaving the same with the Underground system. In briefly recapitulating these plans in a letter to *The Times* of December 13, he pertinently inquires why, if the great railway trunk lines running into London from the North and West can do with one, or at most two, stations apiece, why does the Southern require six?

★

Sooner or later London's railways will just *have* to be co-ordinated. In the process the new south-side substitute for Charing Cross station may well find itself left derelict. Then why build it? With this incubus removed, the way would be clear for a great competition envisaging the remoulding of the whole of this important London area, as has already been advocated in this JOURNAL.

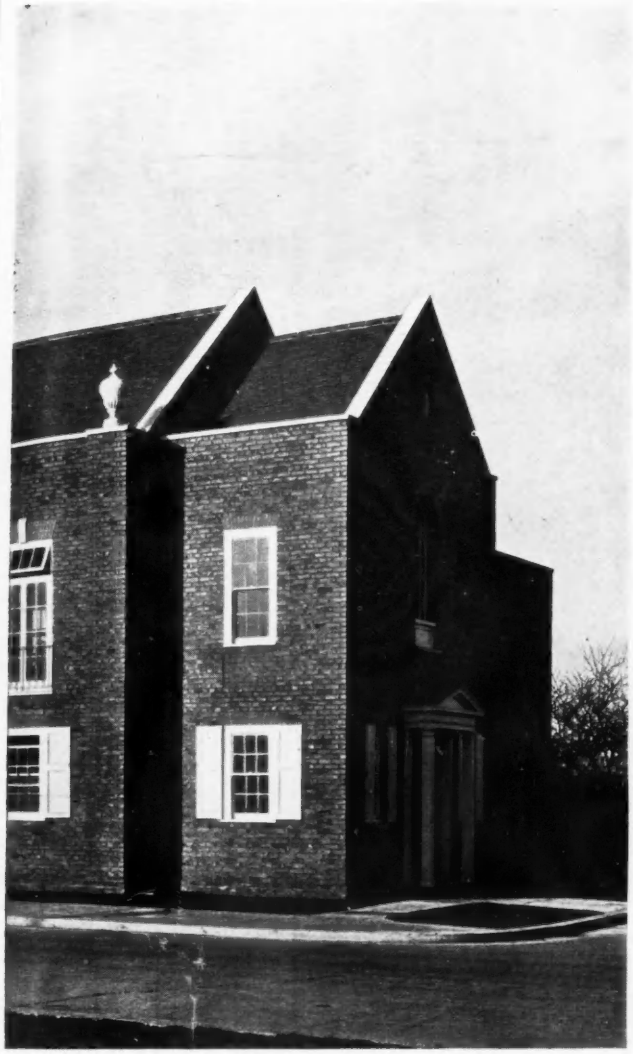
THE LATE W. L. LUCAS

I cannot leave the subject of the Bridge without a reference to the death, on Christmas Eve, of Mr. William Louis Lucas, F.R.I.B.A., for he was one of the few advocates of a "high-level" structure at Charing Cross, and the first to put forward (but this was years ago) the idea of the removal of the station. Mr. Lucas, who was sixty-three years of age, was a pupil of the late Ernest George, and one of his most important works was the offices for the Imperial Continental Gas Company, in Devonshire Square, E.C. His interests were not confined to architecture. An ardent Territorial, he transferred, on the outbreak of war, at the age of forty-eight, to the regular Artillery, and saw active service in France, where he was gassed. Though returning, after recuperation, in command of a brigade ammunition column, he never entirely recovered, and had latterly lived a retired life. ASTRAGAL

A near view of the principal entrance, seen in the adjacent photograph. It is interesting to note that the plasterwork about the first-floor window was not pre-cast, but worked by hand in situ.

General view of the main front, facing the village square,

CLUB HOUSE IN A



DESIGNED BY

WHEN a paper-mill was established recently at Kemsley, two or three miles from the older mills in the town of Sittingbourne, Kent, a village, to provide housing for the workpeople engaged, was laid out at the same time, and has been added to continuously as the mill has been extended. The club house, the first building of a purely social character to be completed in Kemsley, is the latest addition; and stands alone above the more or less uniform level of the cottage roofs. Its position is a prominent one, facing the village square, itself approached and crossed by a road, the vista of which is closed by the building that has been placed axially therewith.

It has been designed more to be the "house" of the village than a building of the institute class. At the present time there are about 800 persons housed in the surrounding cottages, though the complete scheme provides for nearer 3,000. An inn and shops are included in the layout, and when they are completed will render the village self-supplying and self-sufficient. It is intended that the shops shall be built round the square, with the club and the inn at the end of the village nearest the mills.

In planning the club house the aim has been to give as large a hall as possible, with its own entrance from the road, and cloak-rooms, etc., and to link it up with the smaller club-rooms, which include a library, a lounge and billiards-room, and a bar for alcoholic drinks, with service to the upstairs hall. This hall is of such a character as to be suitable for general purposes, including that of a cinema, a dance hall, a concert room or a theatre. Thus a projection-room, completely equipped with projection apparatus, is provided for showing films, while the floor is semi-sprung and boarded with maple.

The building has been erected in Sittingbourne stock bricks, has a tiled roof, and is fitted with metal casement windows. There are dressings of artificial stone, and some ornamental plasterwork to central first-floor window, etc.

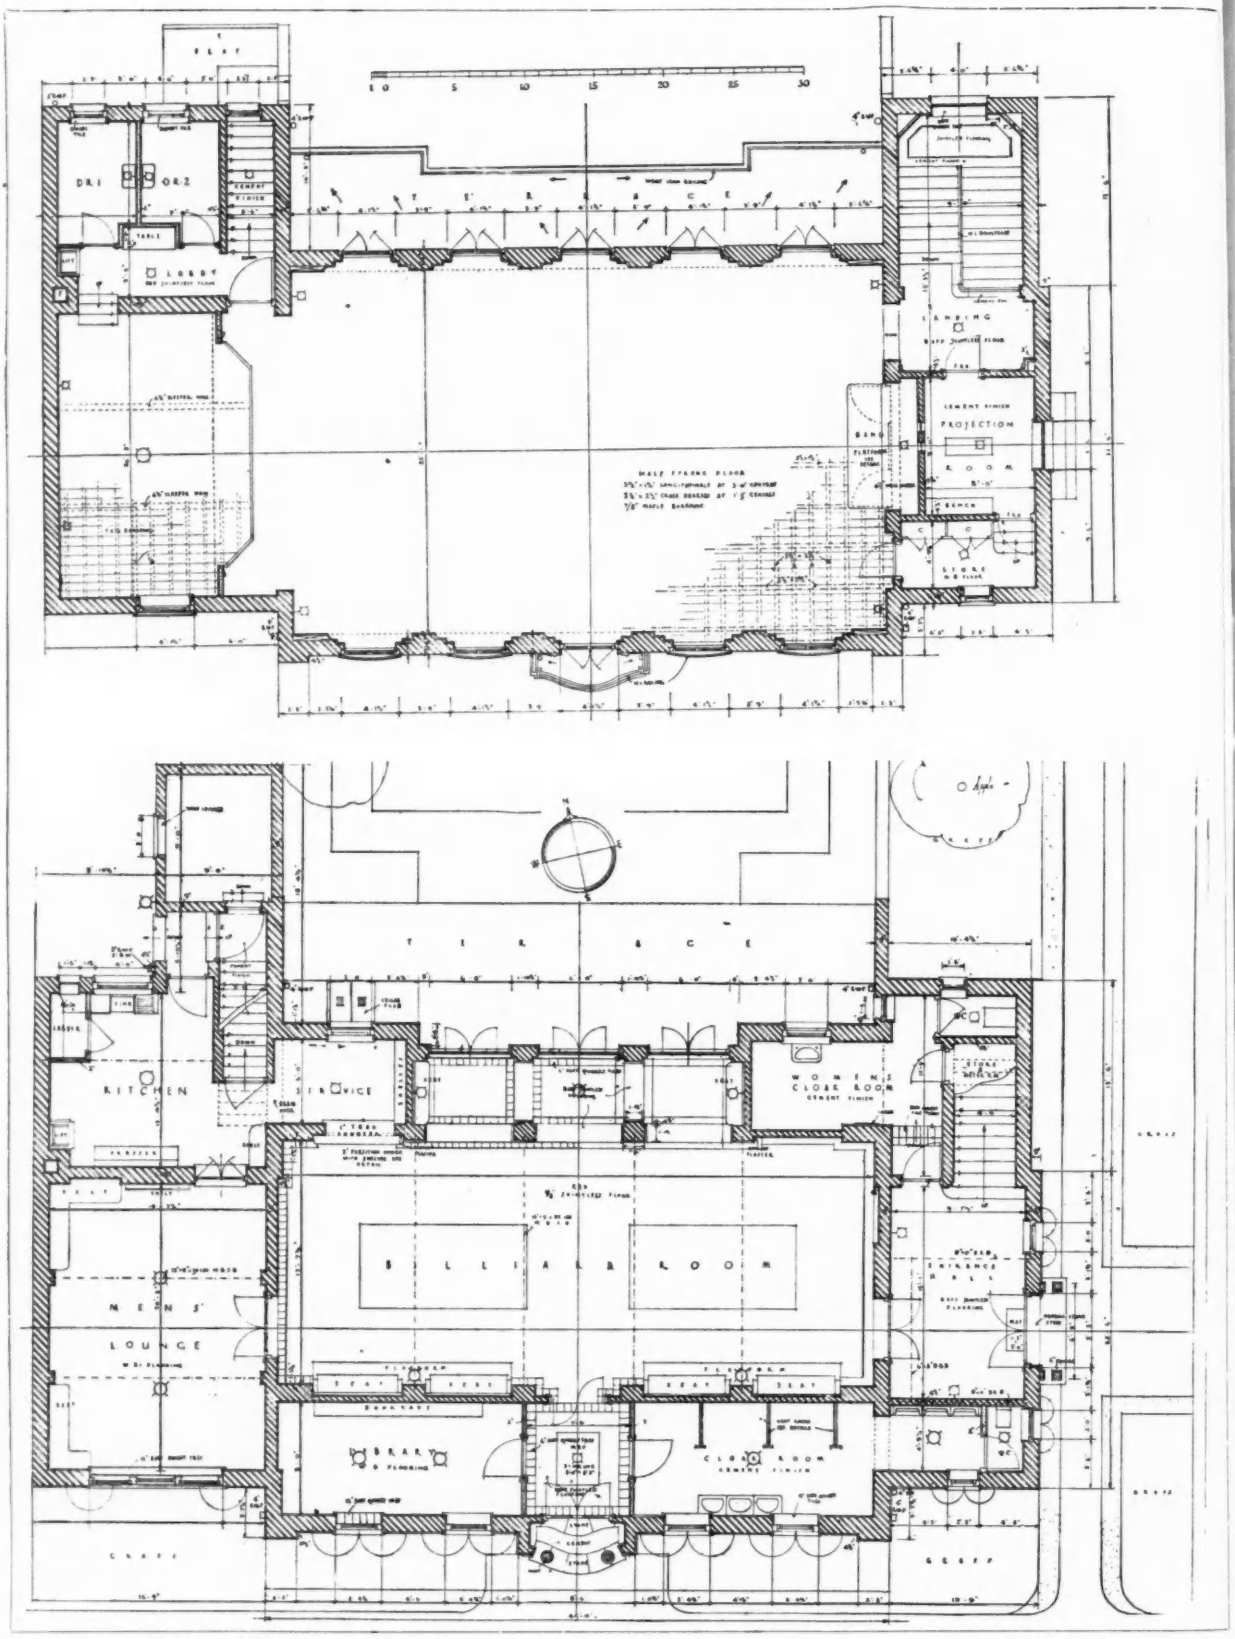
with the approach through which it is axially placed.

Details of the side entrance, a glimpse of which is also to be seen in the central view. It leads direct to cloak-rooms and the main hall, and so will be used by others than club members.

KENTISH VILLAGE

ADAMS, THOMPSON AND FRY

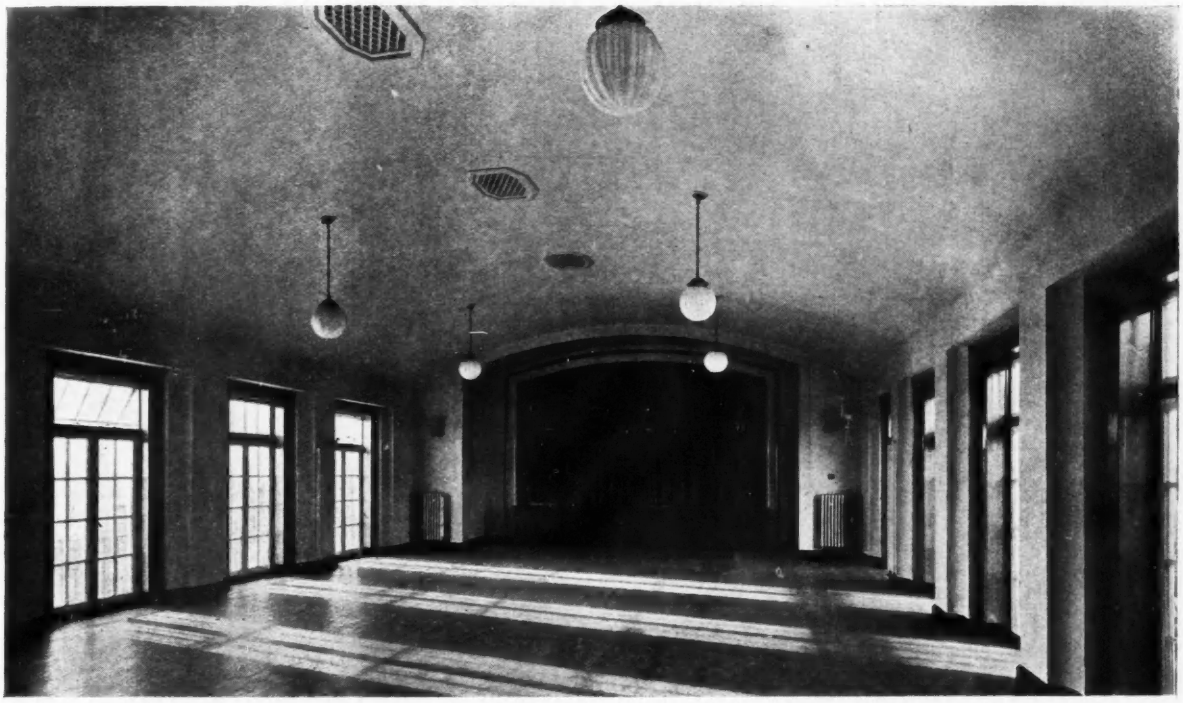
The Sittingbourne stock brick used on the building has been for long the normal brick in use in London, where it becomes a little drab after a few years. This tendency has been countered here by using flush frame windows, with the shutters and plasterwork all painted in varying shades of cream and white, so as to produce an effect of brilliance and lightness.



A feature of the scheme is the layout of the garden at the back. This has been paved with stone from the Stancliffe quarries in Derbyshire and red brick, mixed, and is surrounded by flower borders. On the road side there is to be a wrought-iron gate and railings above the dwarf wall, both of which are being made by a local smith. Metalwork is, in fact, freely employed, as, for example, in the weather vane, which was specially made for its position above the belfry to the architects' design.

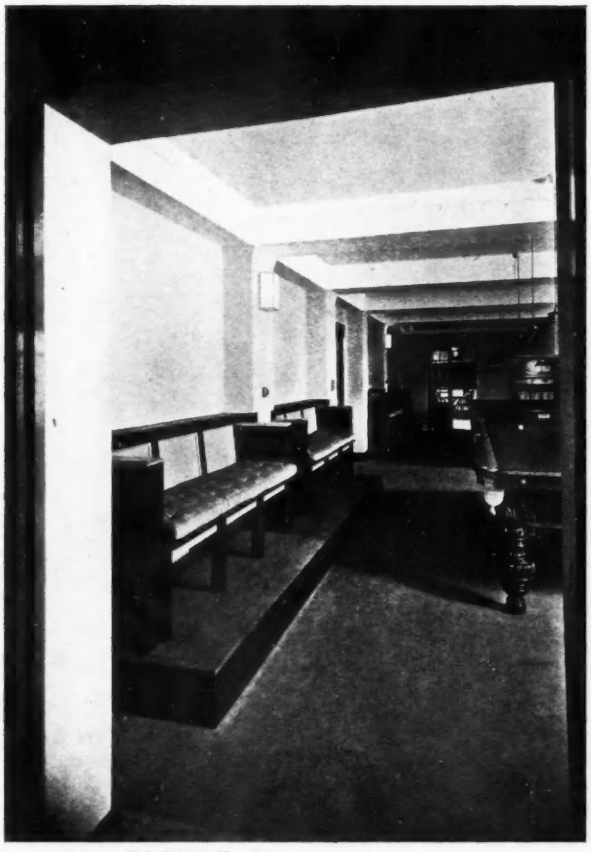
The compact nature of the planning will be appreciated, and it is noteworthy that every care has been given to comfort, although the keynote of the whole building is economical simplicity. With what success these results have been achieved will be clear from a study of the accompanying illustrations of, for example, the billiards room and the main staircase.

It is interesting to know that a good deal of heavy furniture, such as bookcases, benches and tables, and all the prominent electric light fittings, were designed by the architects, and the furniture carried out by the general contractors, without materially adding to the cost of a relatively cheap building.



Some little way from the club premises is a bowling green, run in conjunction, and for this there has been provided a small pavilion which is part of the general scheme, and is the subject of illustrations on a following page.

The club house was the last gift to his workpeople of the late Mr. Frank Lloyd, head of the well-known firm of paper-makers.

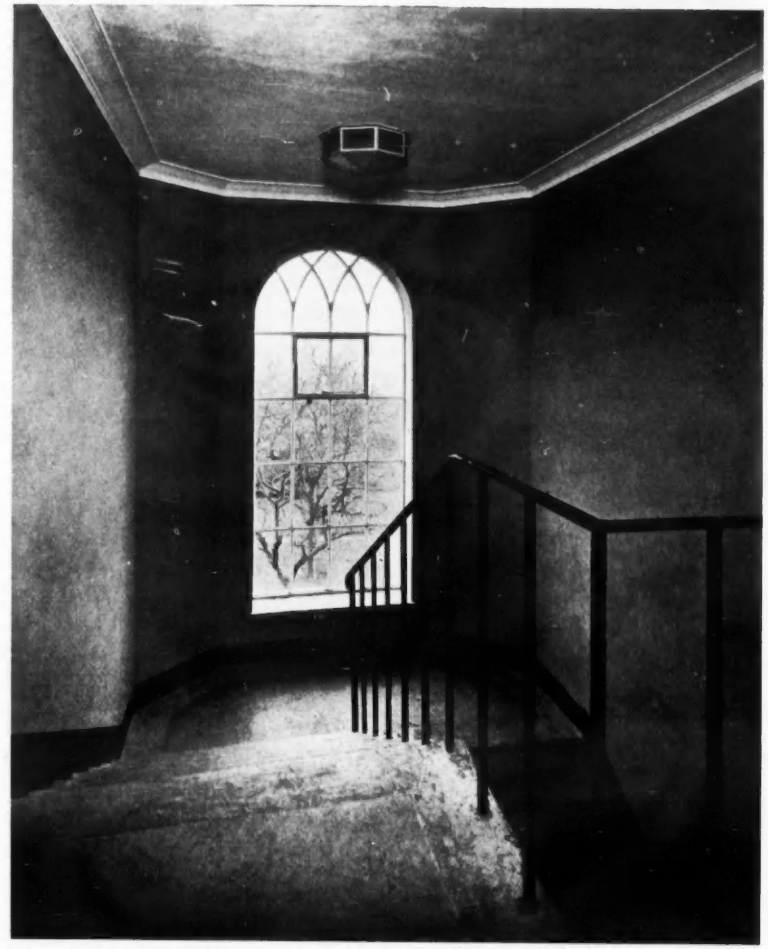


Kemsley Village Club House, Kent.] [*By Adams, Thompson and Fry.*

The architects' plans of the ground floor (including part of layout of garden, etc.) and first floor. The club quarters provide a billiards room, opening into the garden, library, lounge and bar, and service accommodation. Above, the space is mainly devoted to a hall with a cinema projection room among other adjuncts. A sectional drawing is reproduced on page 12.

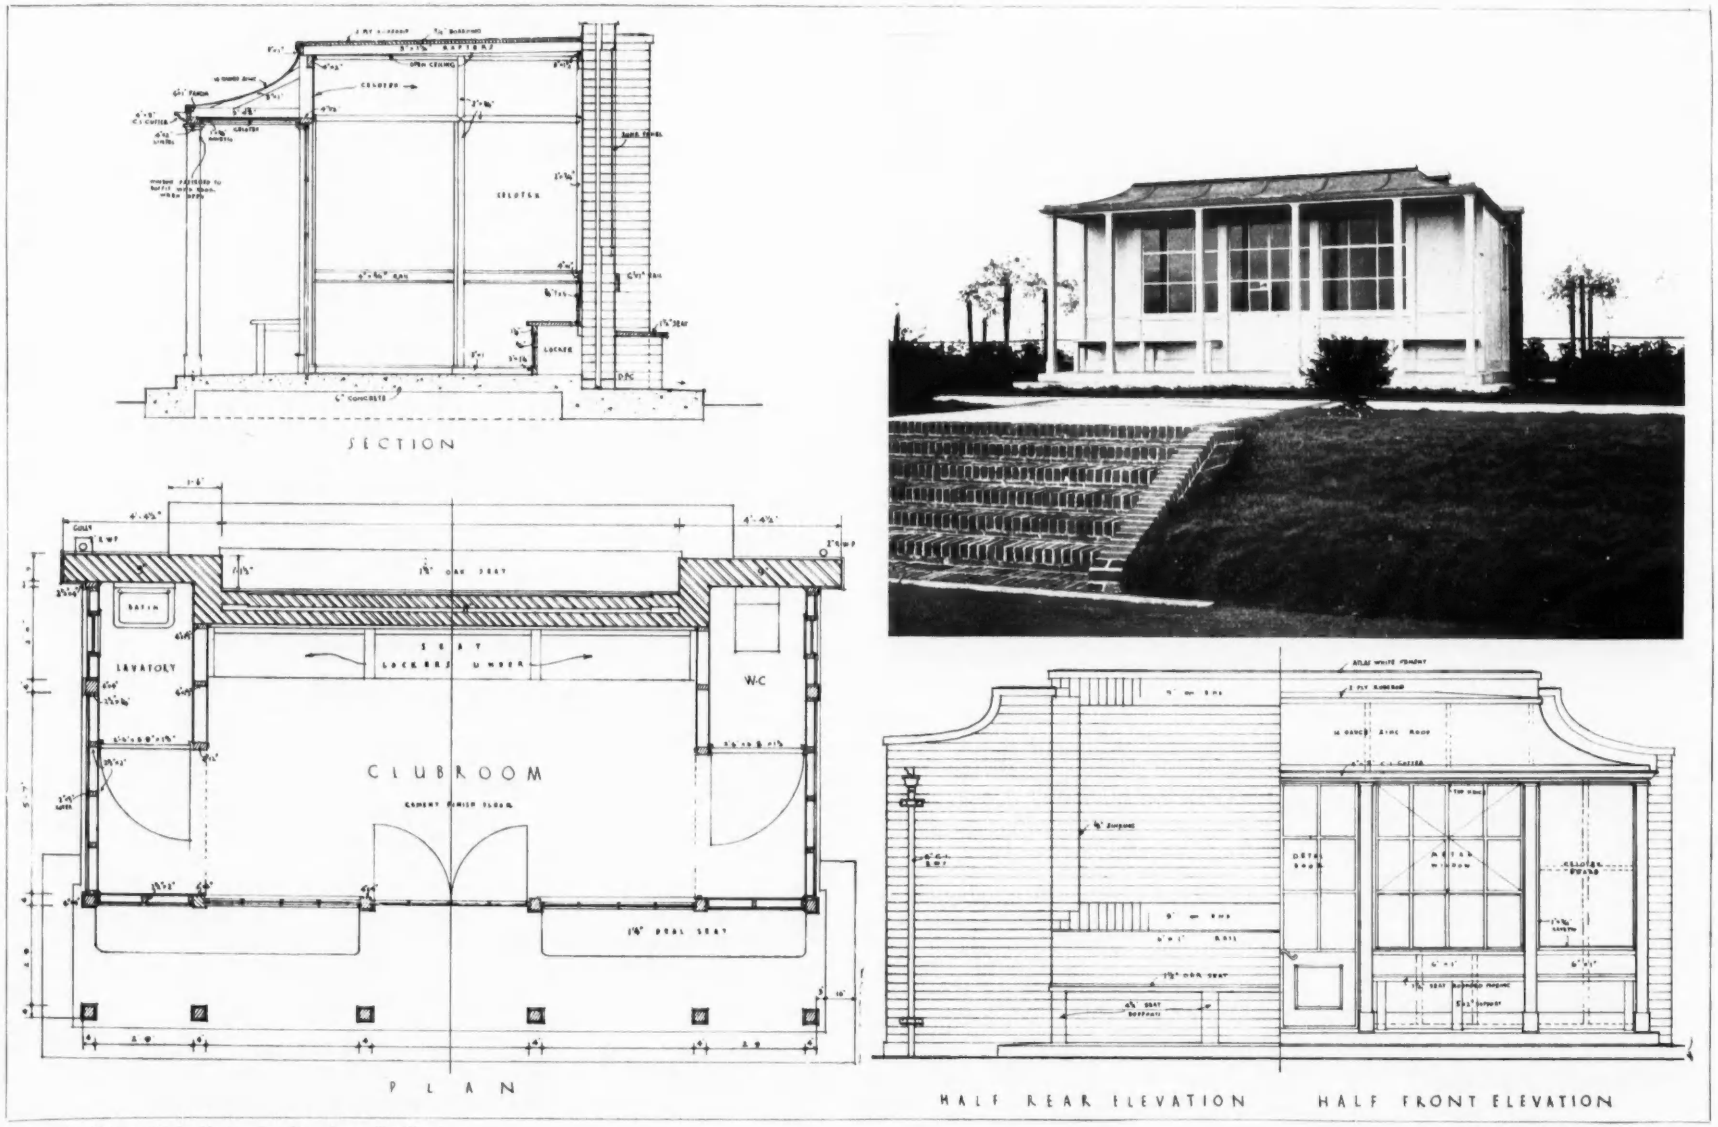
In the main hall, on the first floor, looking towards the stage, which is adaptable for concerts, theatricals or cinema purposes ; film pictures are thrown on to the back wall of the stage, and at the other end of the hall is a fully-equipped projection room.

Kemsley Village Club House, Kent.] [*By Adams, Thompson and Fry.*

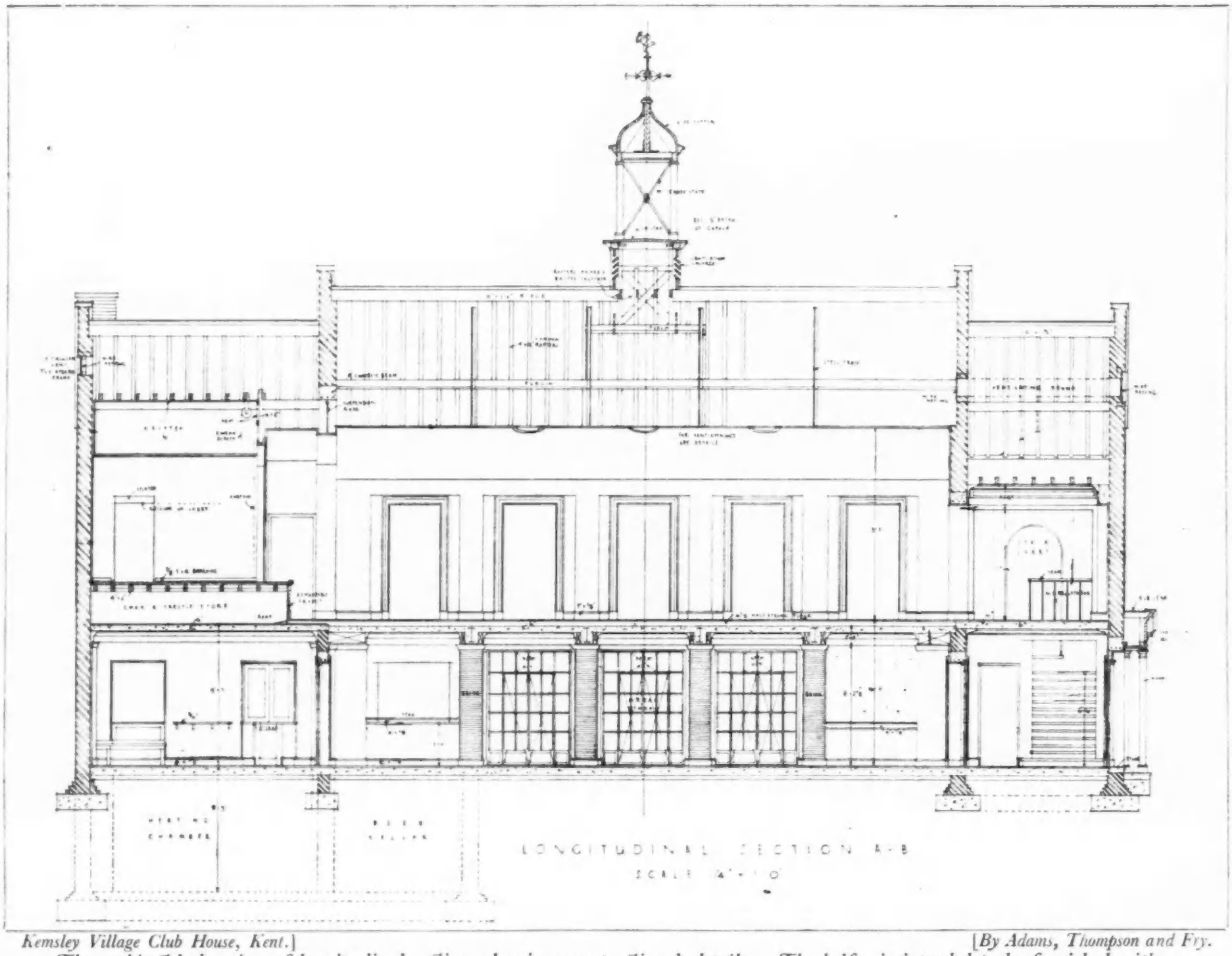


One side of the billiards room, showing the raised seating, provided, as in the most sumptuous halls, to facilitate the watching, in comfort, of play on the tables.

The other side of the billiards room, which overlooks the garden and has windows opening direct on to it from the alcove. The pillars of bare brick are an effective feature.



The rear or garden front. A wrought-iron gate and railings, made by the local smith, are to be placed across the opening to the paved garden, and on the low wall.



The main staircase, leading from the side entrance to the hall. The window is that shown in the photograph of the exterior, reproduced to the left of this one. The walls are coloured pale green, and the floor is finished in buff and brown. The lamp, made to the architects' design, is painted pale green outside and post-office red within.

Kemsley Village Club House, Kent.] [*By Adams, Thompson and Fry.*

Kemsley Village Club, Kent : Bowling Green Pavilion.] [*By Adams, Thompson and Fry.*

The architects' plan, elevation and section drawings, together with a photograph, of a small pavilion for the bowling green connected with the club. The low yew hedge which shows to right and left, in the photograph, is estimated to grow to the height of the standard roses, planted in front of it, in ten years' time. The cost of the pavilion, including fittings, w.c., lavatory, and an oak bench (not shown) was about £200

Kemsley Village Club House, Kent. [*By Adams, Thompson and Fry.*

The architects' drawing of longitudinal section, showing constructional details. The belfry is intended to be furnished with a single bell. As an alternative to the removable cinema screen, pictures are thrown on to the back stage wall.

House at Hampstead, N.W.

No. 21 West Heath Avenue, Hampstead, N.W. [*By C. H. James.*

Plans of the house illustrated and described on the facing and subsequent pages. The service accommodation is concentrated on the left on both floors, and advantage has been taken of the built-in garage to plan a music room in an isolated position over it.

HOUSE AT HAMPSTEAD, N.W.

DESIGNED BY C. H. JAMES

The south, or garden, front. The large window, to the left, on the ground floor, lights the drawing-room; the two immediately to its right belong to the dining-room. The brickwork visible is of London stocks, with dressings from Tunbridge Wells.

THIS house was designed for a client who was particularly anxious not to use red bricks or tiles, and was therefore carried out in a colour scheme of green, yellow and grey. The brickwork up to the plinth level is of brindled Staffordshire wire cuts, the general walling above being of picked London stock facings in lime mortar, with dressings of grey High Brooms bricks from near Tunbridge Wells.

The roof is covered with green glazed interlocking pantiles. The windows throughout the building are standard steel casements, set in wooden frames, these latter, and the front doorway and surround (fully described and illustrated on pages 1 and 2 of this issue), being the only woodwork in the house which is painted.

The key to the planning is to be found in the fact that whereas one of the occupants had the wish to be free to practice singing and to play the pianoforte, the others did not wish to suffer possible disturbance therefrom. The music-room was therefore placed in a position over the garage, in the wing otherwise devoted to servants' quarters, isolated from the remainder of the living accommodation on the floor below.

The aspect of the road front is due north, so that the main sitting-rooms, on the ground floor, and four of the bedrooms above, face the garden on the south side of the house, and enjoy maximum sunlight. The house is centrally heated throughout by fifteen radiators, served by a boiler in the boiler-house, whilst a small boiler adjoining the gas cooker in the kitchen supplies hot water for domestic uses inside the house. The whole of the joinery was made by the general contractors, who, in the architect's words, "made a very good job of the work."

The main entrance. The porch is illustrated on the first and second pages of this issue.

Internally, the whole of the joinery is in British Columbian pine, lightly stained and waxed. The balustrade of the staircase is of moulded, jointed, British Columbian pine boards, with black ebonized handrail and turned newels.

The fireplaces throughout are of marble, that in the dining-room, a general view of which is reproduced, being of Cippolino of a yellowish-grey colour, with a reeded black Belgian architrave, and curb to the hearth, on a background of Roman stone, arranged for a gas-fire. The skirting and moulded shelf are of black Belgian marble, the shelf having rather a large projection to take a bracket clock. The coal fireplace, adaptable for gas, in the drawing-room, also illustrated on a larger scale, has a mantel of somewhat similar character, but of quite different proportions, and the marble immediately surrounding the fire is Rose Numidie.

A general view of the dining-room. The window on the left is one of two overlooking the garden. The marble fireplace is arranged for a gas fire, and has a mantelshelf designed to carry the clock shown. The architrave is of Belgian black marble, reeded.

No. 21, West Heath Avenue, Hampstead, N.W.]

Looking across the hall towards the staircase. A glimpse of the study is seen through the open door; the closed one gives into the drawing-room. The woodwork is of British Columbian pine, lightly stained and waxed.

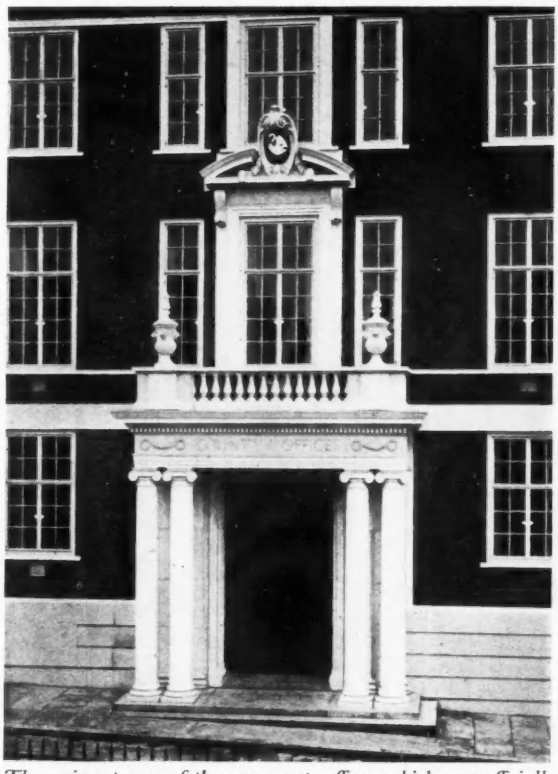
[By C. H. James.

The fireplace in the drawing-room, of which the materials are mainly the same as those used in the dining-room illustrated above, save that the panels nearest the coal fire grate are of Rose Numidie. Gas is also laid on.

ENGLISH PRECEDENT No. 96

DOVECOT, LUNTLEY MANOR, HEREFORDSHIRE

This dovecot is at Luntley Manor, about two miles to the south of Pembridge, in the Leominster district of Herefordshire. It is an example of the seventeenth-century dovecotes of elaborate design which still survive in this district of fine half-timbered houses.



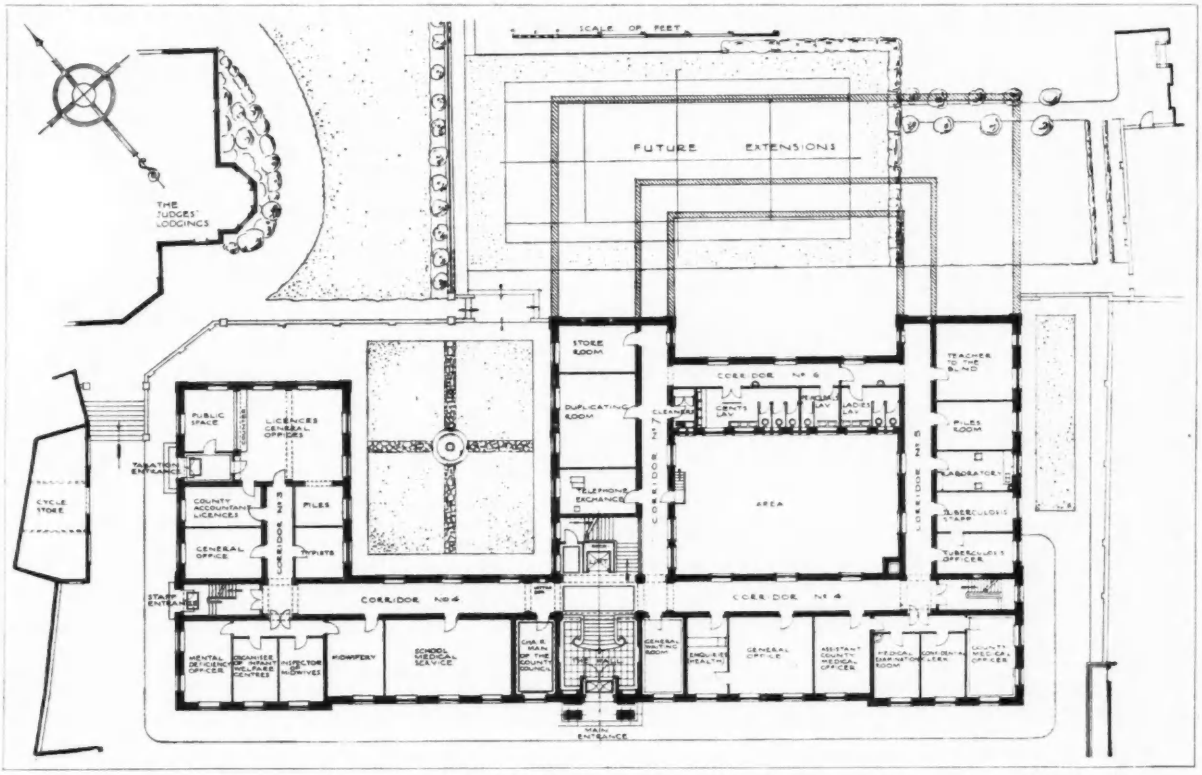
The date 1675 is carved on the shaped doorhead.

—[THOMAS FALCONER.]

NEW OFFICES FOR BUCKS. COUNTY COUNCIL

Walton Street, Aylesbury

DESIGNED BY C. H. RILEY



The main entrance of the new county offices, which were officially opened by Dr. Leonard H. West, chairman of the County Council, last month. Building work commenced in May, 1928.

THE Bucks. County Council, on February 8, 1923, considered a resolution of the Standing Joint Committee, suggesting that the Council should appoint a special committee to consider the whole question of their office accommodation with a view to the adoption of a comprehensive scheme for housing the whole of their staff. A committee known as the Special Buildings Committee (later superseded by the County Works Committee) was thereupon set up and all questions relating to office accommodation were referred to that Committee, who shortly afterwards instructed the county architect to prepare reports for consideration—*a:* As to the possibility of adapting the Chief Constable's house, No. 17 Walton Street, so as to provide additional office accommodation, and *b:* As to the best methods of carrying out a general building scheme with a view to housing the whole of the staff, either immediately or in the near future, by the erection of a new building to replace the existing scattered accommodation.

After consideration of various alternative schemes and suggestions, the Council eventually decided upon the erection of a comprehensive block of offices in Walton Street.

The preliminary plans of the new county offices were prepared by Mr. C. H. Riley, the county architect, and after Sir Edwin Cooper had been consulted upon the suitability of the proposals, the county architect's

Ground-floor plan. In view of the narrow width of Walton Street, the building has been set back nearly 30 ft. to provide a private carriage-way in front, leading to the main entrance. The building has been so planned that it could, if necessary, be extended on the east side so as to add about thirty per cent. to the present accommodation.

The main front to Walton Street is about 230 ft. long. The elevations are faced with multicoloured bricks and reconstructed Portland stone dressings; the main roof is covered with Westmorland green slates.

New County Offices, Aylesbury. [*By C. H. Riley.*

In the hall, opposite the main entrance, are steps leading to the main corridor of the ground floor, and beyond them is the main staircase, in the centre of which is a passenger lift. The wrought-iron grille to the lift is at corridor level.

scheme was adopted. Building work commenced in May, 1928.

Owing to the slope of the site, the lowest story is partly under and partly above the ground, and contains the departmental store rooms, heating chamber and caretaker's quarters, the latter consisting of a well-appointed flat, with entrance at road level. The walls of the hall are treated with French stuc to represent Caen stone, and the floors, steps and balustrade are formed with terrazzo. A room for the use of the chairman of the county council adjoins the main entrance, and is panelled in English oak. The telephone exchange, public health and taxation departments are also accommodated on the ground floor, the latter having a separate entrance for the use of persons requiring licences.

On the first floor are the education and highways departments; there is also a large room for committee and other meetings, which can be divided by a folding partition so as to form two smaller rooms when required. This room has an enriched plaster ceiling, and the walls are covered with quartered English oak panelling.

The second floor accommodates the departments of the county accountant, agricultural organizer, county architect and county land agent. Here is a second committee room, which may be used at times by the district auditor.

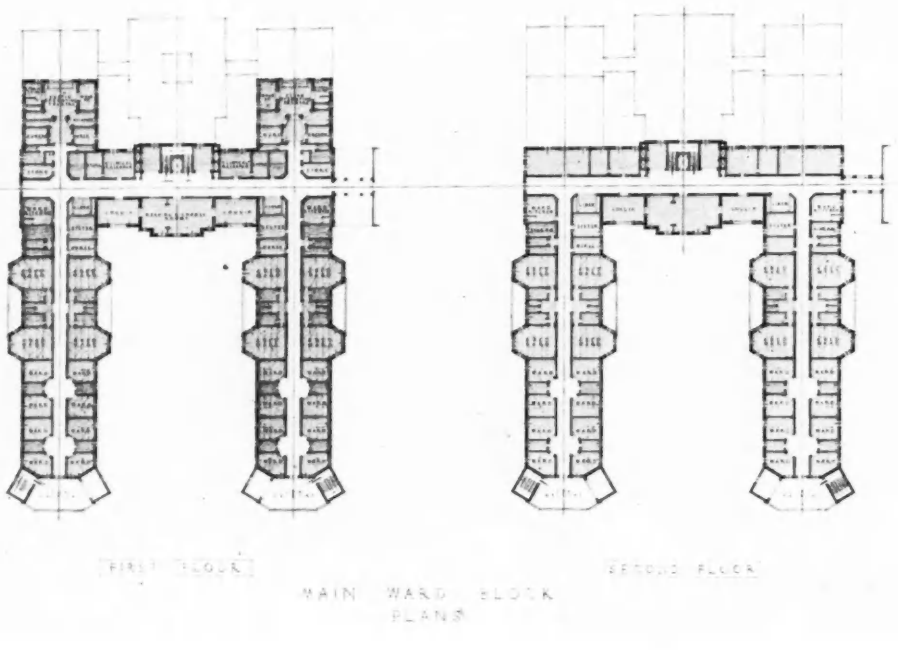
The mansard roof over the front portion of the building is of steel and concrete construction. It provides a clear floor space, 183 ft. long by 20 ft. wide, and has been designed to facilitate division into offices and store rooms when required. Flat roofs have been provided for the remainder of the building, with a view to another story being erected if necessary at any time.

Altogether the premises provide a floor space of about 34,500 ft. super, in addition to which the main roof has a floor area of another 3,660 sq. ft.

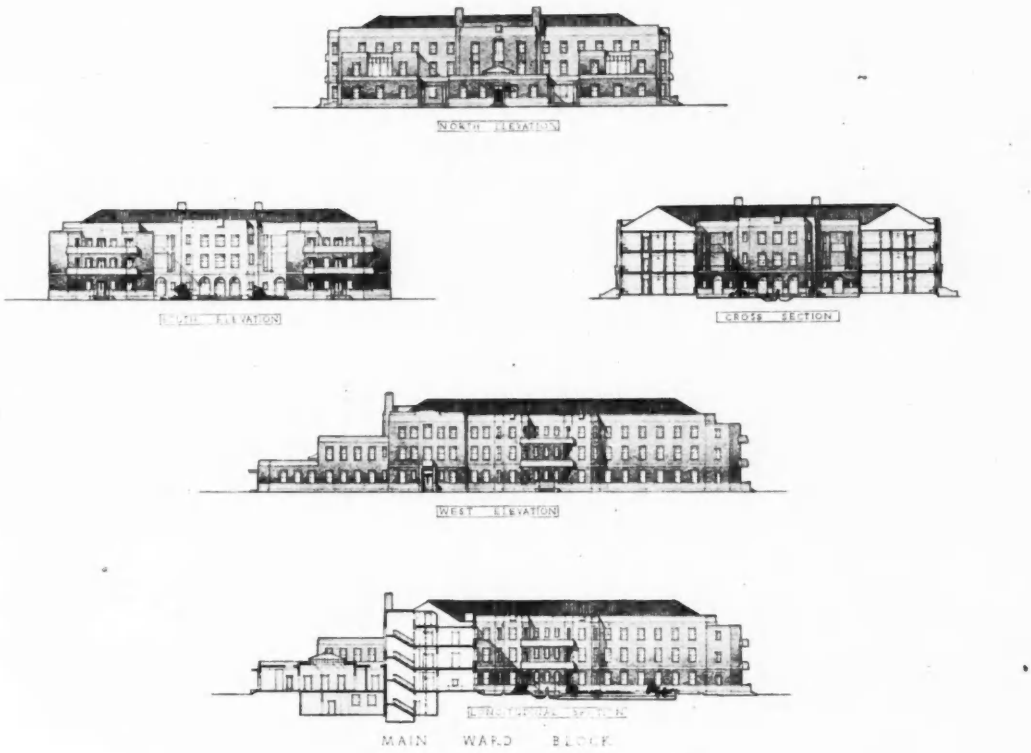
The floors throughout the building are of reinforced concrete, and in the case of the corridors and offices are surfaced with Tasmanian oak blocks. The heating system is by low-pressure hot water, with pump acceleration. The lavatory accommodation has been centralized on each floor. The walls, floors and partitions are all formed with terrazzo, and the white glazed fireclay fittings have all been carefully selected to secure the highest hygienic efficiency. The telephone arrangements provide six Post Office lines and fifty-two extensions. All departments have also a system of buzzers. The whole of the common and facing bricks used in the building were made in the county.

The assistant architect was Mr. J. Harrison, A.R.I.B.A.

Main corridor on the ground floor. On the left are the lift and main staircase, and opposite are steps leading down to the main entrance.



New County Offices, Aylesbury.] [*By C. H. Riley.*



A committee room. The walls are covered with quartered English oak panelling. Excluding the basement there are seventy-three rooms for use as offices and committee rooms. All the offices have been treated in a uniform manner, the general colour scheme being a combination of white, cream, stone and brown.

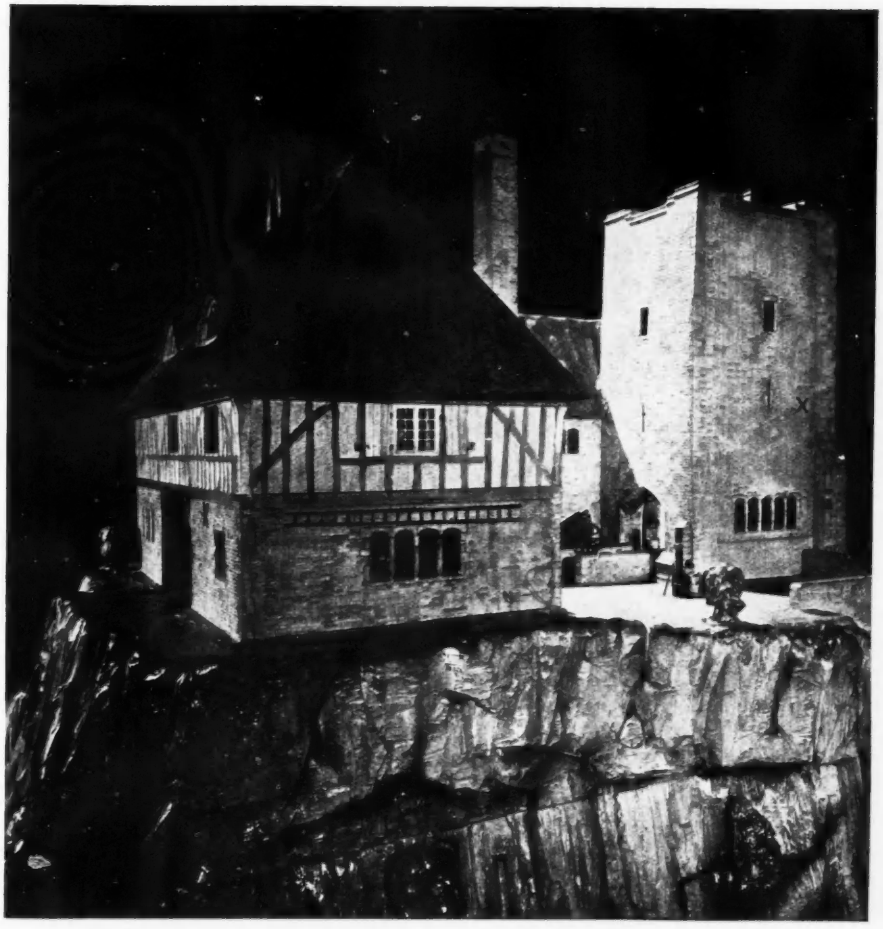
Hull Street Facades Competition: Winning Design.] *[By F. Scarlett and H. Ashworth.*

The competition was assessed by Sir Reginald Blomfield, and was promoted by the Kingston-on-Hull Corporation for designs for façades of the proposed new street from Paragon Station to Beverley Road. There were thirty-nine competitors, and the awards were: First prize, £750, F. Scarlett and H. Ashworth; second prize, £350, C. A. Farey; third prize, £150, J. E. Winfield.

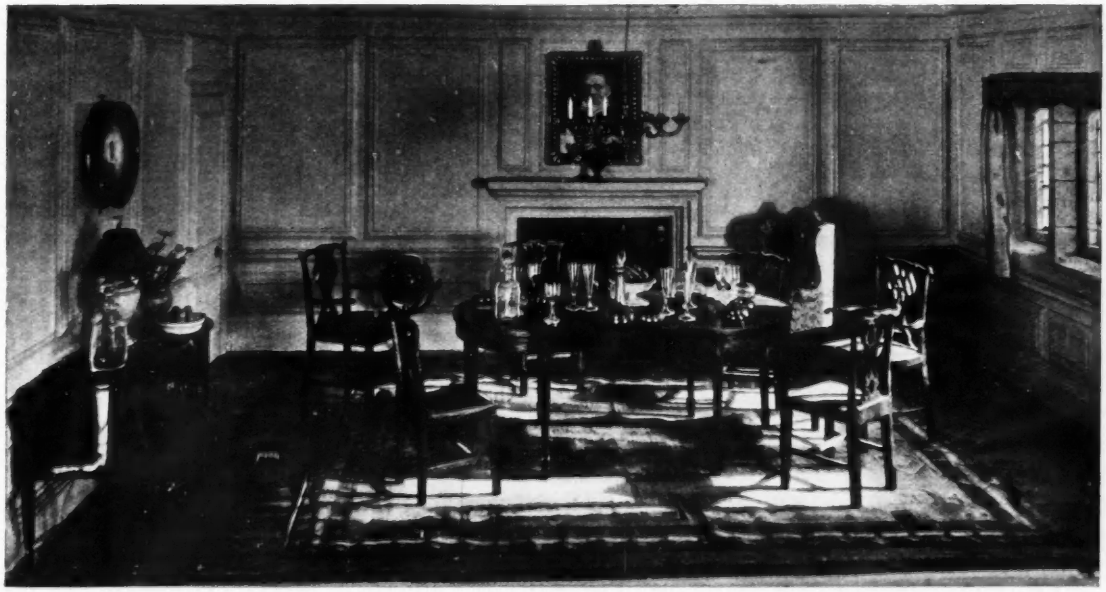
Hull Street Facades Competition: Winning Design.] *[By F. Scarlett and H. Ashworth.*

Detail of entrance to hotel. Sir Reginald Blomfield, in his report, says: "The design of the central feature of the hotel above the triple arcade required some consideration, and the segmental pediment in the block between Portland Place and Pearson Street would be better omitted, but in other respects the design was a very satisfactory one, and the treatment of the archways and colonnades, and the general conception of the scheme, were excellent."



MIRROR GRANGE

DESIGNED BY MAXWELL AYRTON



MIRROR GRANGE the miniature house designed by Mr. Maxwell Ayrton, F.R.I.B.A., for *The Daily Mirror*, was placed on exhibition at Grafton Galleries, the whole of the profits from the charges for admission being assigned to the Chailey Heritage Craft Schools.

The wall papers have been designed by Mr. George Sheringham, who also directed the painting of the model, and painted reproductions of old colour prints. Much of the actual furniture, the little ornaments, the carving of the trees, the thatched roofs, have been painted by Mr. Victor Hembrow. Mrs. Grace Lovat Fraser, assisted by Miss Stella Pearce, designed and chose the curtains, and Miss Polly Hill Clarke, the carver of wood figures, is responsible for the appointments in the nursery, such as the rocking horse.

Mirror Grange is no jerry-built affair. It is a home of cosy rooms and fascinating furniture, a striking monument to architectural imagination and British craftsmanship. The whole of the construction was carried out in the workshops of Messrs. Higgs and Hill.

The Daily Mirror's *house for Pip, Squeak and Wilfred, showing the courtyard and ancient waterpump. It is 7 ft. 6 ins. high, 8 ft. long, and 7 ft. wide.*

The Chippendale dining-room. Miniature portraits in the house include H.M. the King, by Sir Arthur Cope, K.C.V.O., R.A., shown in the illustration, H.M. the Queen, by Walter Russell, R.A., and H.R.H. the Prince of Wales, by Reginald Eves. There are also portraits of Pip, Squeak and Wilfred, by Sir William Orpen, K.B.E., R.A.

CORRESPONDENCE

OUR CO-EDUCATED ARCHITECTS

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—Are those most concerned with the well-being of architectural education and character really satisfied with the practice of allowing men and women students in the schools to study side by side? Would they make a change if they dared?

Architectural schools differ from residential universities in that they are self-contained; there is no outside pull, no gravitation to the masculine corporate life of a college. In the schools, from, say, 10 a.m. till 7 p.m., a seething mass of young men and women simmer together in a single pot. Occasionally, the pot boils over, but that is not the worst feature, since individual men and women always have boiled over and always will. What does matter is the inevitable debilitation wrought by propinquity, especially on the men.

The period of nineteen to twenty-four is the most vital and intense in a man's life. It coincides with a degree of susceptibility and vitality that is never touched again. Men at that age can work all day and dance all night without loss; but, put crudely, what they cannot do is to work all day, and day after day, under a constant emotional and sexual stimulus.

It is difficult to make a drastic change at once; but, without affecting a constitution, it is possible for the administration to make a start that would be really helpful. The increasing congestion in the big schools will create opportunities for rearrangement and segregation when new accommodation is secured. Separate sitting-rooms for men and women students would probably be equally appreciated by both sexes, since, contrary to the impression given by comic writers, women, as well as men, generally appreciate the company of their own sex. Certain reserved tables, in those schools that contain a restaurant, would tend in the same direction.

At present, except for the provision of separate cloak-rooms, there is nothing to indicate that the inmates are not unisexual. In short, the intention should be to make it easier for the men to keep together and for the women to keep apart. To say that such is not the natural tendency during the working periods of life is a modern and sentimental perversion of nature.

The writer of these opinions had in due humility decided to term herself "Mid-Vic."; she is, however, not so sure that she may not be prophetic rather than retrospective; and emboldened by this confidence she will face the existing *Zeitgeist* and sign herself

"1959."

SMETHWICK FIRE DISASTER

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—The attention of the Council of the Institution of Electrical Engineers has been drawn to newspaper reports [not published in THE ARCHITECTS' JOURNAL] of the proceedings at the inquest, which concluded on September 25 last, upon eleven persons who lost their lives by reason of a fire at premises in Rolfe Street, Smethwick, on September 2.

Some of the evidence purported to show that the fire was due to a defective electrical installation in a neighbouring building, and in this connection one of the witnesses condemned the use of lead-covered, rubber-insulated cables for the wiring of public buildings. This statement has caused great uneasiness in the minds of consulting engineers, architects, electrical contractors and others, inasmuch as the use of lead-covered, rubber-insulated cables is permitted by, and the proper methods of installation of such cables are set out in, the "Regulations for the Electrical Equipment of Buildings" issued by the Institution. These Regulations are recognized by consulting engineers, electrical contractors, electricity supply authorities and the Fire Offices, as representing the best standard practice, and the Fire Offices in particular recommend their use.

The Council reaffirm, therefore, that they are of the opinion that lead-sheathed cables are both suitable and safe for electrical installations, if installed and maintained in accordance with the I.E.E. Wiring Regulations.

From the evidence given, as reported in the newspapers, there is every indication that the electrical installation, which, it is suggested, caused the fire at Smethwick, did not comply with these Regulations.

P. F. ROWELL,
Secretary,
The Institution of Electrical Engineers.

SOCIETIES AND INSTITUTIONS

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND

The annual general meeting of the above Royal Institute was held in Dublin. The President, Mr. F. G. Hicks, F.R.I.B.A., who occupied the chair, read the result of the ballot for the Council for 1930, and declared the following elected: Messrs. J. J. Robinson, T. J. Byrne, G. F. Beckett, F. Hayes, R. M. Butler, H. Allberry, L. F. Giron, C. H. Mitchell, and T. F. Strahan.

In the annual report of Council, read by the Hon. Secretary, it was stated that the present membership of the Institute was constituted as follows: Thirty-six fellows, 123 members, two honorary members, seven students, and thirty-six probationers, making a total of 204. The Council decided to award a certificate for the best result at the intermediate examination, and a gold medal for the best result at the final examination. The Institute prize of fifteen guineas was again offered, and was won by Mr. Leonard Manning, with a design of a frontage to a group of shops and offices in a city of about the size of Dublin. During the session the question of awarding a medal for the best building erected was discussed, and it was decided to award a medal triennially. Conditions have been drafted and it is hoped that the first medal will be awarded in 1930. Awards or certificates for craftsmanship were also brought before the notice of the Council and the matter was referred to a Joint Consultation Board of members of the Council and members of the Master Builders' Association.

The adoption of the report was proposed by Mr. H. G. Leask, seconded by Mr. J. J. Robinson, and passed. Mr. Thomas Geoghegan was elected auditor for the coming session.

COMPETITION DESIGNS

At a general meeting of the Sheffield, South Yorkshire and District Society of Architects and Surveyors, a lecture was given by Mr. Percy Thomas, O.B.E., F.R.I.B.A., on "Competitions."

The lecturer pointed out that only by going in for competitions could the young and unknown architect, unless he had money or an established practice to step into, become known, and although objections had been made to competitions on the score of the large sums of money spent by unsuccessful competitors, he did not think that this objection was very material, as competition work was usually done in spare time and general practice was not put aside.

Mr. Thomas said that the making of finished drawings should be deferred until the latest possible stage, the competition design being studied best by means of repeated revisions on tracing paper, as it might be found that the best "motif" for the design lay in the first sketch and not in the last. Therefore, this system was preferable to the constant use of indiarubber, where no record was available of the designer's early ideas. This system also enabled judgment to be formed on the progressive development of the design.

He also emphasized the necessity of elevations being shaded, as it was extremely difficult for an assessor to judge the possibilities of light and shade on a line drawing only.

TOWN PLANNING OF THE PAST

The importance of town planning was stressed by Professor T. Harold Hughes in a lecture delivered to the members of the Royal Philosophical Society of Glasgow.

One of the earliest examples of town planning, he said, dated back some 3,000 years before Christ, and was that of Kahun, a town which was laid out for the accommodation of the builders at work on the Egyptian Pyramids. There were records of town planning of very ancient date in China and in the valleys of the Tigris and Euphrates, but the earliest important contributions came from Greece and the Greek colonies, Selinus being a well-known example.

He explained that town planning was practised in the Middle Ages. There were examples of towns laid out by barons and clerics in front of their castles or abbeys respectively, but of all examples the most interesting were the bastides planned by Edward I. in the South of France and in Wales.

In Great Britain the best-known examples of the laying out of complete towns were Bath and Edinburgh, of the eighteenth century. Of the nineteenth century the finest example was the work carried out in Paris for the Third Napoleon, a work which had influenced many countries since, notably the United States of America.

GLASGOW SCHOOL OF ARCHITECTURE

Diplomas, certificates, and prizes of the Glasgow School of Architecture were presented to a number of students at a meeting of the joint committee of the governors of the Royal Technical College and the School of Art, Glasgow.

Principal Rait, Glasgow University, addressing the students, said that he thought that architecture gave a more widely diffused pleasure to unsophisticated human beings like himself than certainly any other of the pictorial arts. Because of that fact it had always been more open to criticism than other arts, since even the unsophisticated man knew what gave him pleasure and what did not.

He congratulated them on entering the work of a profession which had become in recent years so distinguished in our own country. It seemed to him that, even within his own recollection, there had been a very great change in point of view with regard to buildings of a utilitarian character. Forty or fifty years ago it seemed to be accepted —not by architects but by the general public—that if one had to erect a building for practical purposes, the uglier it was the better, because the uglier it was, probably the cheaper it was. He thought, however, that the public was beginning to realize that a building honestly built for an honourable purpose might be, and ought to be, a beautiful building.

ARCHITECTURAL RENDERING

Mr. E. M. K. Ellerton delivered a lecture on "Architectural Rendering" to the members of the Liverpool Architectural Society.

He said that understanding of decorative form and colour was essential to architecture, and he drew a parallel between music and colour, pointing out that in both cases harmony, contrast, and discord made their contribution to the complete scheme. He urged the importance of a systematic instead of a haphazard study of colour, and by means of lantern slides and diagrams he indicated the relation of colour to architectural form and composition.

HOLIDAY LECTURES FOR BOYS AND GIRLS

The Hon. Humphrey Pakington, A.R.I.B.A., delivered the first of three Christmas holiday lectures on architecture for boys and girls at the R.I.B.A. on Monday last.

The lecturer, who took as his first subject "English Architecture—How it Began," said that there was hardly anything in this country which could be called architecture till the Romans came over here. The Britons were fairly civilized people; the south-east corner of England—that nearest to the mainland of Europe—had been prosperous and well populated hundreds of years before Cæsar came.

With the aid of lantern slides, he explained how, while the Roman was building great palaces and temples of marble and stone, great lawcourts and theatres and aqueducts and triumphal arches, the Briton was digging himself into the earth to live in, or making himself a little hut of wickerwork, smeared over with plaster.

Mr. Pakington showed on the screen many different styles of architecture, which helped his explanation tremendously, and the rapt attention of the listeners showed how they enjoyed it.

STAINED GLASS WINDOWS

The Council of the British Society of Master Glass-Painters have had under consideration the methods and practice of inviting competitive designs for stained glass windows.

They state that (1): the form in which designs for stained glass windows are submitted gives very little indication of what the finished window will be, and in some cases may prove misleading, for the same design can be executed in glass by several artists with wholly different results. Stained glass, perhaps more than any other craft, depends for its beauty upon the quality of the material and the brilliance and setting of the actual coloured glass used in making the window. On such points a watercolour design can give small guidance, while the sketches usually submitted are inadequate to represent the full-scale cartoon, especially as regards the character and expression of faces.

2: Competitions on such lines, therefore, may in themselves be inadequate for making the best choice; better prospect of success will be secured if competitors are offered a fee.

It is also desirable that the money available for a window should be made known to each competitor. The information is serviceable to the artist and helps to produce equality in the terms of competition.

The Norsdon Football Club

The male staff of Messrs. North, Robin and Wilsdon, of Townsend House, Greycoat Place, Westminster, S.W.1, the London architects, have organized between themselves a football and social club, to be known as the Norsdon Football Club, under the captaincy of Mr. F. J. Woollard, the office accountant. The project has been enthusiastically and materially supported by the partners of the firm, who have provided the club with playing fields and colours; the latter, green jerseys with white shorts, have a green, white and red badge, designed by Mr. W. H. Ford, the chief draughtsman, incorporating the tools of their craft—set squares and compasses. Although the recent weather has been unfavourable for play, the team has turned out several times and shown considerable promise. The captain has arranged some matches with other teams for the New Year, including the following, but will welcome challenges from any other clubs for vacant Saturday afternoons:—

Jan. 4th .. Vacant.
,, 11th .. Edmundson's.
,, 18th .. Express Lift Co.
,, 25th .. Hillier, Parker, May & Rowden.
Feb. 1st .. Eclipse F.C.
,, 8th .. Vacant.
,, 15th .. Express Lift Co.
,, 22nd .. Vacant.
Mar. 1st .. Vacant.
,, 8th .. Vacant.
,, 15th .. Watson House Sports Club.
,, 22nd .. Vacant.
,, 29th .. Vacant.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

Lieutenant-Colonel Fremantle inquired if the attention of the Minister of Health had been called to the development of certain properties in the West End, such as the sites of Grosvenor House and Devonshire House, Westminster, and Hereford Gardens, near Marble Arch, whereby large new populations were housed without regard to the traffic capacity of the serving streets; and when he proposed to introduce legislation to enable developed areas to be replanned and the population to the acre limited.

Mr. Greenwood replied that he was aware generally of the type of development referred to. He hoped in due course to introduce legislation for extending town-planning powers to developed areas.

Mr. Greenwood informed Mr. Gill that, according to the information available in his Department, the average price paid for housing sites by local authorities was approximately £200 per acre.

Mr. Leif Jones asked the Minister of Health whether, in view of the failure of county councils adequately to administer the Housing (Rural Workers) Act, 1926, and of the fact that applications for assistance would cease to be entertained after 1931, he proposed to take any further steps to improve the condition of rural housing, or to secure more energetic administration of the Act.

Mr. Greenwood said that as regarded the Act of 1926 he was prepared, as he had been in the past, to consider any representations that special circumstances existed in any particular case which would justify him in declaring that the Council of the County District should be the local authority for the purposes of the Act. As regarded wider measures for the improvement of rural housing, he would ask Mr. Leif Jones to await the introduction of the housing legislation which was now in preparation

Miss Lawrence, in reply to Mr. Mills, said that the Minister hoped to introduce legislation extending town-planning powers to built-up areas.

Lt.-Col. Moore, a Scottish Unionist member, introduced into the House of Commons the Architects' Registration Bill. The measure, however, in view of the congestion of Parliamentary business, had no chance of becoming law last Session.

Miss Susan Lawrence informed Sir J. Power that the number of houses completed under the Housing Acts of 1923 and 1924, during the three months ended November 30, 1929, was 46,039. During the corresponding months of 1928 the number was 32,090.

THE BUILDINGS ILLUSTRATED

Following is a list of the specialists, general contractors, and some of the sub-contractors for the buildings illustrated in this issue :

Kemsley Club House (pages 6–12). General contractors, E. Bishop and Sons, Ltd. Sub-contractors : Trussed Concrete Steel Co., Ltd.,Hy-Rib construction; Crittall Manufacturing Co., Ltd., metal window frames; Gloucester Concrete Construction Co., Ltd., artificial stone; Braithwaite & Co., Engineers, Ltd., steelwork; Haywards, Ltd., heating; Birmingham Guild, Ltd., ornamental ironwork; Richard Anderson & Co., lightning conductor; Minimax, Ltd., fire extinguishers; Doulton & Co., Ltd., sanitary goods; Edmundsons Electricity Corporation, Ltd., electric light; Limmer and Trinidad Lake Asphalte Co., Ltd., asphalt; H. H. Martyn & Co., Ltd., ornamental plaster; Farrow and Jackson, Ltd., beer pipes and engine; Wiggins & Co. (Hammersmith), Ltd., roofing; The Wilfley Co., Ltd., oak and marbolith flooring; N. F. Ramsey & Co., Ltd., ironmongery; Express Lift Co., Ltd., lift; Roberts, Adlard, & Co., tiles; Heal and Son, Ltd., furniture and hangings.

New County Offices, Aylesbury, Bucks (pages 17–19). Specialists : Consulting engineer for heating, T. J. R. Kiernan, B.SC.; quantity surveyors, Baker and Mallett, F.F.S.I.; general foreman, G. Bignell. General contractors, Webster and Cannon, who were also responsible for the counter and other joinery fittings. Sub-contractors : Trussed Concrete Steel Co., Ltd., reinforced concrete floors, main staircase and Hy-Rib metal lathing; Empire Stone Co., Ltd., stone dressings, service stairs and other artificial stonework; Limmer and Trinidad Lake Asphalte Co., Ltd., asphalt work; Crittall Manufacturing Co., Ltd., steel windows and enamelled county crest; Hollis Bros. & Co., Ltd., Tasmanian oak block flooring; The Wilfley Co., Ltd., marbolith jointless flooring in caretaker's quarters; Diespeker & Co., Ltd., terrazzo work; Braithwaite & Co., Engineers, Ltd., steel roof trusses; Henry Hope and Sons, Ltd., patent roof glazing; Brightside Foundry and Engineering Co., Ltd., heating and hot water installation; Express Lift Co., Ltd., passenger lift; James Gibbons, Ltd., strong room doors and grille; E.S. Mackrill and Sons, electric light, buzzers and private telephones; Hill and Smith, Ltd., wrought-iron fencing; N. F. Ramsay & Co. (London), Ltd., lift enclosure, letter chute, ironmongery, bronze commemoration and direction plates; H. H. Martyn & Co., Ltd., oak panelling and decorative plastering; Shanks & Co., Ltd., and Doulton & Co., Ltd., sanitary fittings; Waring and Gillow, Ltd., general furniture; Hughenden Chair and Furniture Works, Ltd., W. Birch, Ltd., and R. Tyzack, Ltd., chairs; F. Parker & Co., Ltd., furniture for committee rooms; Pyrene Co., Ltd., fire extinguishers; V. Robinson, curtains and rods.

House, 21 West Heath Avenue, N.W.11 (pages 12–14). General contractor, Welwyn Builders, Ltd., who were also responsible for the electric wiring, electric light fixtures, electric heating, ventilation, plumbing and joinery. Sub-contractors : Limmer and Trinidad Lake Asphalte Co., Ltd., asphalt; Stirling and Johnson, Ltd., tiles; Fram Reinforced Concrete Co., Ltd., patent flooring; J. Wontner-Smith, Gray & Co., Ltd., central heating; Teale Fireplace Co. (London), Ltd., grates; Beeston Boiler Co., boilers; John Bolding and Sons, Ltd., sanitary fittings; A. E. Davis, door furniture and window furniture; Crittall Manufacturing Co., Ltd., casements; G. Jackson and Sons, Ltd., decorative plaster; G. Hobbs and Son, wrought-iron entrance gate; H. T. Jenkins and Son, Ltd., marble surrounds and hearths; Carter & Co. Ltd., tiling; Silical Water Softeners, Ltd., water-softening plant.

House at Cambridge (pages 32–33). Garden layout designed by Christopher Smithells, Watford. General contractors, Arthur Negus and Sons. Sub-contractors : G. M. Callender and Co., Ltd., Led-Kore dampcourses; Bratt Colbran & Co., Ltd., grates; Osler and Faraday, Ltd., and Negus Electrical Co., electric light fixtures; H. Pontifex and Sons, sanitary fittings; A. E. Davis, door furniture; Crittall Manufacturing Co., Ltd., casements; Dry-tone, Ltd., doors.

NEW INVENTIONS

The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents, and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full published specifications here enumerated, readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.

THE ARCHITECTS' DIARY

WEDNESDAY, JANUARY 1, 1930

R.I.B.A., 9 Conduit Street, W.1. Second of three Christmas holiday lectures for boys and girls. "English Architecture—How it Grew." By the Hon. Humphrey Pakington, A.R.I.B.A. **3.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Indian Section: "Metalwork." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

THURSDAY, JANUARY 2

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "English Sculpture." By T. F. Wilson, F.R.S.A.I. "Italian Sculpture." By T. F. Wilson, F.R.S.A.I. 7 p.m. **3 p.m.**

FRIDAY, JANUARY 3

R.I.B.A., 9 Conduit Street, W.1. Last of three Christmas holiday lectures for boys and girls. "English Architecture—What it Means." By the Hon. Humphrey Pakington, A.R.I.B.A. **3.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Early English Furniture." By T. F. Wilson, F.R.S.A.I. 12 noon. "Far Eastern Pottery." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

SATURDAY, JANUARY 4

Sunrise, 8.6 a.m. Sunset, 4.4 p.m.

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Indian Section: "Architecture." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

MONDAY, JANUARY 6

SOCIETY FOR THE PROTECTION OF ANCIENT BUILDINGS AND THE NATIONAL TRUST. At the Royal Society of Arts, John Street, Adelphi, W.C. "Windmills in Holland." By Jan den Tex. (Lantern illustrations). Also "The Development of the Windmill." By R. Wailes. A. R. Powys will preside. **8 p.m.**

TUESDAY, JANUARY 7

R.I.B.A., 9 Conduit Street, W.1. Annual Exhibition of Designs and Drawings submitted for the Prizes and Studentships 1930 till Monday, January 20. The Exhibition will be open daily (Sundays excepted), free to the public between the hours of 10 a.m. and 8 p.m. (Saturdays 5 p.m.). **10 a.m.**

WEDNESDAY, JANUARY 8

R.I.B.A., 9 Conduit Street, W.1. General Meeting. "Regional Planning with special reference to Greater London." By Dr. Raymond Unwin, F.R.I.B.A. Award of Prizes and Studentships. **8 p.m.**

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Regional Planning in S.W. Lancashire." By T. Pierson Frank, M.INST.C.E., F.S.I. **8 p.m.**

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At Swedenborg Hall, 20 Hart Street, Bloomsbury, W.C.1. "Observations on Flue Equipment, &c." By C. A. Masterman, B.A., A.I.C., M.S.C.I., M.S.I.E **7 p.m.**

THURSDAY, JANUARY 9

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "The Work of the Building Research Station." By Dr. R. E. Stradling, D.SC., PH.D. **8 p.m.**

GOLDSMITHS' HALL, Foster Lane, E.C.2. "Modern Design and Decoration." By Howard Robertson, F.R.I.B.A., S.A.D.G. (Lantern Illustrations.) **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C. 2. Ordinary Meeting. 6 p.m. Dundee Sub-Centre. At the University College, Dundee. "Lubrication." By G. H. Chalmers, 7.30 p.m. **6 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Engineering Contracts, some legal problems affecting Structural Engineers." By E. J. Limner, M.ENG., A.M.INST.C.E. **6.30 p.m.**

SATURDAY, JANUARY 11

Sunrise, 8.3 a.m. Sunset, 4.13 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C. 1. First of Series of Six Non-Technical Lectures on Present Day Architecture. "Architecture in Daily Life." By Howard Robertson, F.R.I.B.A., S.A.D.G. **3 p.m.**

MONDAY, JANUARY 13

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Western Centre. Annual Dinner (at Cardiff).

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, S.E. 1. Paper on "Oil versus Solid Fuels." By N. A. Seabeater. Light refreshments at 6.30 p.m. **7 p.m.**

TUESDAY, JANUARY 14

INSTITUTION OF ELECTRICAL ENGINEERS. Scottish Centre. At the North British Station Hotel, Edinburgh. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. **7 p.m.**

WEDNESDAY, JANUARY 15

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C. 2. Ordinary Meeting. "Quality in Pottery." By Joseph Burton, A.R.C.SC.I. Professor H. E. Armstrong, PH.D., LL.D., D.SC., F.R.S., will preside. **8 p.m.**

THURSDAY, JANUARY 16

INSTITUTION OF ELECTRICAL ENGINEERS. Hampshire Sub-Centre. At University College, Southampton. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. **7.30 p.m.**

FRIDAY, JANUARY 17

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Smoking Concert to be held at Carr's Restaurant, 264 Strand, W.C. Tickets may be obtained from the Secretary.

LONDON SOCIETY, Lancaster House, St. James's Street, S.W.1. "London's Parks and Open Spaces." By F. W. Parker, F.S.I. **5 p.m.**

SATURDAY, JANUARY 18

Sunrise, 7.57 a.m. Sunset, 4.24 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C. 1. Visit to Tower Bridge. Meet at Superintending Engineers' Office, Tower Bridge, at 2.30 p.m. **2.30 p.m.**

UNIVERSITY COLLEGE, Oxford. Conference in the Hall. The Rt. Hon. H. A. L. Fisher, F.R.S., P.B.A., will preside. Exhibition of drawings by P. Wilson Steer, Sir Charles Holmes and Gilbert Spencer, open from 2 p.m. Tea 4.30 p.m. **2 p.m.**

MONDAY, JANUARY 20

R.I.B.A., 9 Conduit Street, W. 1. General Meeting. President's Address to Students. Criticism by Louis de Soissons, O.B.E., F.R.I.B.A., on work submitted for Prizes and Studentships. Presentation of Prizes. **8.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. South Midland Centre. At the University, Edmund Street, Birmingham. "Voltage Control of Large Alternators." By H. W. Taylor. **7 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C. 2. Cantor Lecture. Harold J. L. Wright, of Messrs. P. and D. Colnaghi & Co., on "Three Master Etchers: Rembrandt, Meryon, Whistler." (Lecture I.). **8 p.m.**

TUESDAY, JANUARY 21

INSTITUTION OF ELECTRICAL ENGINEERS. East Midland Sub-Centre. At the College, Loughborough. "The Breaking Performance of High-Power Switchgear and of a New Form of Quenched-Arc Switch." **6.45 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W. 7. "Early Renaissance Sculpture." By L. O. Faraker. **12 noon.**

WEDNESDAY, JANUARY 22

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Architectural Lighting." By R. W. Maitland. **8 p.m.**

THURSDAY, JANUARY 23

INSTITUTION OF WELDING ENGINEERS, 30 Red Lion Square, W.C. 1. At Birmingham. "Modern Improvements in Resistance Welding Machines." By C. A. Hadley.

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W. 1. "Setting out and erection of Multiple Storey Buildings." Informal Discussion to be opened by G. F. C. Caswell. **6.30 p.m.**

SATURDAY, JANUARY 25

Sunrise, 7.50 a.m. Sunset, 4.36 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C. 1. Second of Series of Six Non-Technical Lectures on Present Day Architecture. "The House You Want." By R. Randal Phillips, Hon. A.R.I.B.A. **3 p.m.**

MONDAY, JANUARY 27

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C. 1. "Some Aspects of Contemporary Continental Decoration." (Lantern Illustrations.) By J. M. Holmes. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C. 2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture II.). **8 p.m.**

MONDAY, FEBRUARY 3

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C. 2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture III.). **8 p.m.**

THURSDAY, FEBRUARY 6

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Annual Dinner at the Hotel Cecil, Strand, W.C.2. 7 p.m. for 7.30 p.m. **7.30 p.m.**

SATURDAY, FEBRUARY 8

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Third of a series of six Non-Technical Lectures on Present-Day Architecture. "The Creation of a Garden City." By Louis de Soissons, O.B.E., F.R.I.B.A., S.A.D.G. **3 p.m.**

MONDAY, FEBRUARY 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting. "The Thames Valley Preservation Scheme." By Professor Patrick Abercrombie, M.A., F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. Lecture I. **8 p.m.**

WEDNESDAY, FEBRUARY 19

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. Cantor Lecture. "Alfred Stevens: Architect-Sculptor-Painter." **8 p.m.**

SATURDAY, FEBRUARY 22

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Fourth of a Series of Six Non-Technical Lectures on Present-Day Architecture. "Decoration and Furnishing." By G. G. Wornum, F.R.I.B.A. **3 p.m.**

THE WEEK'S BUILDING NEWS

LONDON AND DISTRICTS

The BARKING U.D.C. has accepted the surveyor's estimate of £57,000 for the erection, by direct labour, of 114 houses on the Utney estate.

The Teachers' Training and Registration Society is to enlarge the Maria Grey training college and the BRONDESBURY and KILBURN High School, at a cost of £20,000.

The Middlesex C.C. is to contribute £25,000 towards the cost of the reconstruction of the bridge carrying Hanger Lane over the Great Western Railway Company's lines at EALING.

Plans passed by the HORNSEY Corporation: Conversion of 18 to 21 Firs Parade, Fortis Green Road, into four shops, for Messrs. Murrell and Pigott; alterations and additions, 17 High Street, for Messrs. Malcolm Burr and Sweeney; two houses, Wood Vale, for Messrs. Smerdon Bros.; alterations and additions, 63 Hornsey Park Road, for Mr. H. J. Heath.

Mr. F. Smith is to erect seventy-two houses and garages on the Wangeyhall estate, High Road, ILFORD.

The ILFORD Corporation Health Committee has approved plans and estimate of £39,761 for extensions at the Isolation Hospital.

The ILFORD Corporation Housing Committee has asked the borough surveyor to prepare plans for the erection of 120 houses on a site abutting on Tomswood Hill and Fencepiece Road.

The ILFORD Corporation Electricity Committee has approved plans of the proposed new offices and central show and storerooms on the Clerk's Road site, and has authorised the town clerk to seek sanction from the Electricity Commissioners to borrow £31,756, the estimated cost of the work.

Plans passed by the ILFORD Corporation: Fourteen houses, Danehurst Gardens, for Mr. W. Millner Knight; six houses, Roll Gardens and Gaysham Avenue, for Suburban Developments, Ltd.; thirty-six houses, Horace Road, for Mr. E. Meredith; six garages, rear of Beehive Lane, for Mr. W. Longworth; three shops and houses, Cranbrook Road, for Mr. G. Hamblin Fox; forty-three houses, Middleton Gardens, for Suburban Developments, Ltd.; seventeen houses, Glenwood and Kenwood Gardens, for Mr. A. Smith; alterations, twelve shops and houses, Eastern Avenue, for Mr. J. A. Dartnall; shop and house, Green Lane, for Mr. F. C. M. Young; fifteen shops, Longbridge Road, for Mr. E. Meredith; roads and sewers, Grove Road estate, for Mr. P. Triplete; additions, Metropolitan Cable Works, Grove Road, for Mr. F. Smith; three houses, Suffolk Road, for Mr. W. H. Lewis; twenty-two houses, Eastern Avenue, for Mr. J. Aldridge; twenty-four houses, Fencepiece Road, for Messrs. Haines and Warwick, Ltd.; five bungalows, Woodford Bridge Road, for Mr. T. Anders; twenty-eight houses, Roxy Avenue, for Messrs. P. Triplete, Ltd.; shop, Station Approach, for Mr. H. Tanner; thirty-seven houses, Charter Avenue, for Mr. J. W. Lohden; sixteen houses, Lyndhurst Gardens, for Seymour Construction Co.; twenty-four houses, Woodford Avenue, for Mr. T. Anders; six houses, Campbell Avenue, for Mr. H. W. RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 4d. *per hour;* LABOURER, 1s. 4d. *per hour;* NAVVY, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.			£0	11	6
Thames ballast, per yd.			0	10	0
Pit gravel, per yd.			0	15	0
Pit sand, per yd.			0	12	6
Washed sand, per yd.			0	13	0
Screened ballast or gravel, add 10 per cent. per yd.					
Clinker, breeze, etc., prices according to locality.					
Portland cement, per ton			£2	8	0
Lias lime, per ton			2	0	0
Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.					
Transport hire per day:					
Cart and horse £1 3 0	*Trailer*		£0	15	0
3-ton motor lorry 3 15 0	*Steam roller*		4	5	0
Steam lorry, 5-ton 4 0 0	*Water cart*		1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
IF left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1. per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* BRICKLAYER, 1s. 9d. *per hour;* PLUMBER, 1s. 9d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. 6 *in., per ft.*	0	1	3
DO. 9 *in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. 6 *in., per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft.	0	4	3
DO. 6 in., per ft.	0	5	0
DO. 9 in., per ft.	0	7	9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0	8	3
DO. 6 in., per ft.	0	10	3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 9d. *per hour;* LABOURER, 1s. 4d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour.*

London stocks, per M.	£4	5	6
Flettons, per M.	2	12	6
White facing bricks, per M.	5	0	0
Multi-coloured facings, per M.	7	7	9
Best red facings, per M.	7	7	9
Rubbers, 9½ in., per M.	12	0	6
Staffordshire blue, per M.	9	5	0
Firebricks, 2½ in., per M.	9	5	0
Glazed salt, white, and ivory stretchers, per M.	21	10	0
DO. *headers, per M.*	20	10	0
Colours, extra, per M.	5	10	0
Seconds, less, per M.	1	0	0
Cement and sand, see "Excavator" above.			
Lime, grey stone, per ton	£2	11	6
Mixed lime mortar, per yd.	1	6	0
Dampcourse, in rolls of 4½ in., per roll	0	2	6
DO. 9 *in. per roll*	0	4	9
DO. 14 *in. per roll*	0	7	6
DO. 18 *in. per roll*	0	9	6
BRICKWORK in stone lime mortar, Flettons or equal, per rod	32	0	0
DO. in cement do., per rod	34	10	0
DO. in stocks, add 25 per cent. per rod.			
DO. in blues, add 100 per cent. per rod.			
DO. circular on plan, add 12½ per cent. per rod.			
DO. in backing to masonry, add 12½ per cent. per rod.			
DO. in raising on old walls, etc., add 12½ per cent. per rod.			
DO. in underpinning, add 20 per cent. per rod.			
HALF-BRICK walls in stocks in cement mortar (1–3), per ft. sup.	£0	1	0
BEDDING plates in cement mortar, per ft. run	0	0	3
BEDDING window or door frames, per ft. run	0	0	3
LEAVING chases 2½ in. deep for edges of concrete floors not exceeding 6 in. thick, per ft. run	0	0	2
CUTTING do. in old walls in cement, per ft. run	0	0	4
CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0	0	7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0	3	6
DO. 14 ft. by 9 in. do., per ft. run	0	6	0
FLAUNCHING chimney pots, each	0	2	0
CUTTING and pinning ends of timbers, etc., in cement	0	1	0
FACINGS fair, per ft. sup. extra	0	0	3
DO. picked stocks, per ft. sup. extra.	0	0	7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0	4	9
DO. in salt white or ivory glazed, per ft. sup. extra	0	5	6
TUCK pointing, per ft. sup. extra	0	0	10
WEATHER pointing, do. do.	0	0	3
TILE creasing with cement fillet each side, per ft. run	0	0	6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0	5	0
DO. 1½ in., per yd. sup.	0	6	0
DO. 2 in., per yd. sup.	0	7	0
If coloured with red oxide, per yd. sup.	0	1	0
If finished with carborundum, per yd. sup.	0	0	6
If in small quantities in finishing to steps, etc., per ft. sup.	0	1	4
Jointing new grano. paving to old, per ft. run	0	0	4
Extra for dishing grano. or cement paving around gullies, each	0	1	6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup.	0	0	7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0	8	0
DO. vertical, per yd. sup.	0	11	0
SLATE DAMP COURSE, per ft. sup.	0	0	10
ASPHALT ROOFING (MASTIC) in two thicknesses, ¾ in., per yd.	0	8	6
DO. SKIRTING, 6 in.	0	0	11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0	5	3
DO. DO. 3 in.	0	6	6
BREEZE fixing bricks, extra for each	0	0	3

MASON

MASON, 1s. 9d. *per hour;* DO. *fixer,* 1s. 10d. *per hour;* LABOURER, 1s. 4d. per hour; SCAFFOLDER, 1s. 5d. *per hour.*

Portland Stone:			
Whitbed, per ft. cube	£0	4	6
Basebed, per ft. cube	0	4	9
Bath stone, per ft. cube	0	3	0
Usual trade extras for large blocks.			
York paving, av. 2½ in., per yd. super.	0	11	0
York templates sawn, per ft. cube	0	7	6
Slate shelves, rubbed, 1 in., per ft. sup.	0	2	6
Cement and sand, see "Excavator," etc., above.			

HOISTING and setting stone, per ft. cube	£0	2	2
DO. for every 10 ft. above 30 ft. add 15 per cent.			
PLAIN face Portland basis, per ft. sup.	£0	2	8
DO. circular, per ft. sup.	0	4	0
SUNK FACE, per ft. sup.	0	3	9
DO. circular, per ft. sup.	0	4	10
JOINTS, arch, per ft. sup.	0	2	6
DO. sunk, per ft. sup	0	2	7
DO. DO. circular, per ft. sup.	0	4	6
CIRCULAR-CIRCULAR work, per ft. sup.	1	2	0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0	1	1
DO. circular, do., per ft. run	0	1	4
HALF SAWING, per ft. sup.	0	1	0

Add to the foregoing prices, if in York stone, 35 per cent.
DO. Mansfield, 12½ per cent.
Deduct for Bath, 33⅓ per cent.
DO. for Chilmark, 5 per cent.

SETTING 1 in. slate shelving in cement, per ft. sup.	£0	0	6
RUBBED round nosing to do., per ft. lin.	£0	0	6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1	7	6
YORK SILLS, W. & T., ft. cub. fixed	1	10	0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0	1	3
DO. 2½ in. thick, per ft. sup.	0	1	6

SLATER AND TILER

SLATER, 1s. 9d. *per hour;* TILER, 1s. 9d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* LABOURER, 1s. 4d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:			
Portmadoc Ladies	£14	0	0
Countess	23	0	0
Duchess	32	10	0

Old Delabole	*Med. Grey*	*Med. Green*
24 in. × 12 in.	£42 11 3	£45 1 0
20 in. × 10 in.	31 4 3	33 0 6
16 in. × 10 in.	20 18 0	22 4 9
14 in. × 8 in.	12 1 0	12 16 3

Green Randoms, per ton	8	3	9
Grey-green do., per ton	7	3	9
Green peggies, 12 in. to 8 in. long, per ton	5	13	9
In 4-ton truck loads, delivered Nine Elms station.			
Clips, lead, per lb.	£0	0	6
Clips, copper, per lb.	0	2	0
Nails, compo, per cwt.	1	6	0
Nails, copper, per lb.	0	2	2
Cement and sand, see "Excavator," etc., above.			
Hand-made tiles, per M.	£5	18	0
Machine-made tiles, per M.	5	8	0
Westmorland slates, large, per ton	9	0	0
DO. *Peggies, per ton*	7	5	0

SLATING, 3 in. lap, compo nails, Portmadoc or equal:			
Ladies, per square	£4	0	0
Countess, per square	4	5	0
Duchess, per square	4	10	0
WESTMORLAND, in diminishing courses, per square	6	5	0
CORNISH DO., per square	6	3	0
Add, if vertical, per square approx.	0	13	0
Add, if with copper nails, per square approx.	0	2	6
Double course at eaves, per ft. approx.	0	1	0

SLATING with Old Delabole slates to a 3 in. lap with copper nails, at per square.

	Med. Grey	Med. Green
24 in. × 12 in.	£5 0 0	£5 2 0
20 in. × 10 in.	5 5 0	5 10 0
16 in. × 10 in.	4 15 0	5 1 0
14 in. × 8 in.	4 10 0	4 15 0

Green randoms	6	7	0
Grey-green do.	5	9	0
Green peggies, 12 in. to 8 in. long	4	13	6
TILING, 4 in. gauge, every 4th course nailed, in hand-made tiles, average per square	3	17	6
DO., machine-made do., per square	3	7	6

Vertical Tiling, including pointing, add 18s. 0d. per square.

FIXING lead soakers, per dozen	£0	0	10
STRIPPING old slates and stacking for re-use, and clearing away surplus and rubbish, per square	0	10	0
LABOUR only in laying slates, but including nails, per square	1	0	0

See "Sundries" for Asbestos Tiling.

CARPENTER AND JOINER

CARPENTER, 1s. 9d. *per hour;* JOINER, 1s. 9d. *per hour;* LABOURER, 1s. 4d. *per hour.*

Timber, average prices at Docks, London Standard, Scandinavian, etc. (equal to 2nds):			
7 × 3, per std.	£22	0	0

TURNING pieces to flat or segmental soffits, 4½ in. wide, per ft. run	0	0	4½
DO. 9 in. wide and over per ft. sup.	0	1	2

[*continued overleaf*

CARPENTER AND JOINER: *continued.*

SHUTTERING to face of concrete, per square	£1	10	0
DO. in narrow widths to beams, etc., per ft. sup.	0	0	6
USE and waste of timbers, allow 25 per cent. of above prices.			
SLATE BATTENING, per sq.	£0	12	6
DEAL boarding to flats, 1 in. thick and firrings to falls, per square	2	10	0
STOUT feather-edged tilting fillet to eaves, per ft. run	0	0	6
FEATHER-edged springer to trimmer arches, per ft. run	0	0	4
STOUT herringbone strutting (joists measured in), per ft. run	0	0	6
SOUND boarding, ¾ in. thick and fillets nailed to sides of joists (joists measured over), per square	2	0	0
RUBEROID or similar quality roofing, one ply, per yd. sup.	0	2	3
DO., two-ply, per yd. sup.	0	2	6
DO., three-ply, per yd. sup.	0	3	0
TONGUED and grooved flooring, 1¼ in. thick, laid complete with splayed headings, per square	2	5	0
DEAL skirting torus, moulded 1¼ in. thick, including grounds and backings, per ft. sup.	0	1	0
TONGUED and mitred angles to do.	0	0	6
WOOD block flooring standard blocks laid herringbone in mastic:			
Deal 1 in. thick, per yd. sup.	0	10	0
DO. 1¼ in. thick, per yd. sup.	0	12	0
Maple 1¼ in. thick, per yd. sup.	0	15	0
DEAL moulded sashes, 1¾ in. with moulded bars in small squares, per ft. sup.	0	2	6
DO. 2 in. do., per ft. sup.	0	2	9
DEAL cased frames, oak sills and 2 in. moulded sashes, brass-faced pulleys and iron weights, per ft. sup.	0	4	6
MOULDED horns, extra each	0	0	3
DOORS, 4-panel square both sides, 1¼ in. thick, per ft. sup.	0	2	6
DO. moulded both sides, per ft. sup.	0	2	9
DO. 2 in. thick, square both sides, per ft. sup.	0	2	9
DO. moulded both sides, per ft. sup.	0	3	0
DO. in 3 panels, moulded both sides, upper panel with diminished stiles with moulded bars for glass, per ft. sup.	0	3	6
If in oak, mahogany or teak, multiply 3 times.			
DEAL frames, 4 in. × 3 in., rebated and beaded, per ft. cube	£0	15	0
Add for extra labours, per ft. run	0	0	1
STAIRCASE work:			
DEAL treads 1¼ in. and risers 1 in., tongued and grooved including fir carriages, per ft. sup.	0	2	6
DEAL wall strings, 1¼ in. thick, moulded, per ft. run	0	2	0
If ramped, per ft. run	0	4	6
SHORT ramps, extra each	0	7	6
ENDS of treads and risers housed to strings, each	0	1	0
2 in. deal mopstick handrail fixed to brackets, per ft. run	0	1	6
4½ in. × 3 in. oak fully moulded handrail, per ft. run	0	5	6
1½ in. square deal bar balusters, framed in, per ft. run	0	0	6
FITTINGS:			
SHELVES and bearers, 1 in., cross-tongued, per ft. sup.	0	1	6
1¼ in. beaded cupboard fronts, moulded and square, per ft. sup.	0	2	9
TEAK grooved draining boards, 1¼ in. thick and bedding per ft. sup.	0	4	6
IRONMONGERY:			
Fixing only (including providing screws):			
To DEAL—			
Hinges to sashes, per pair	0	1	2
Do. to doors, per pair	0	1	7
Barrel bolts, 9 in., iron, each	0	1	0
Sash fasteners, each	0	1	0
Rim locks, each	0	1	9
Mortice locks, each	0	4	0

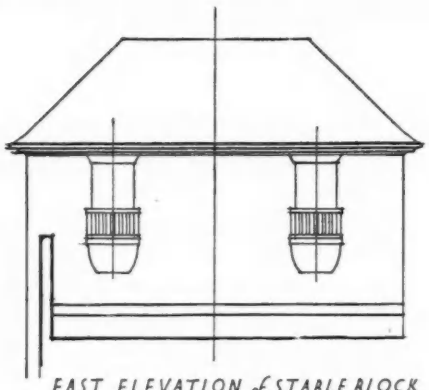
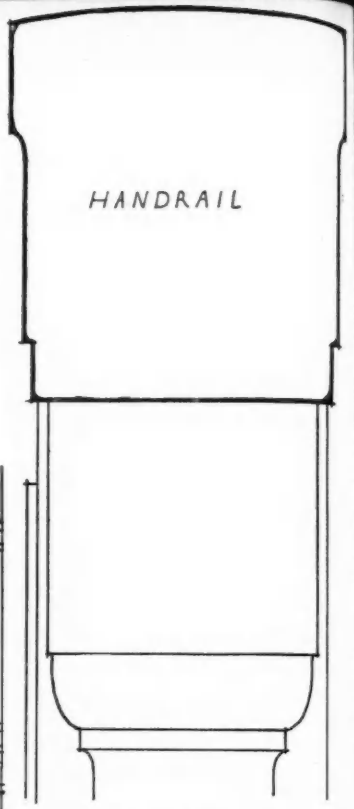
MARGINALIA: No. 2

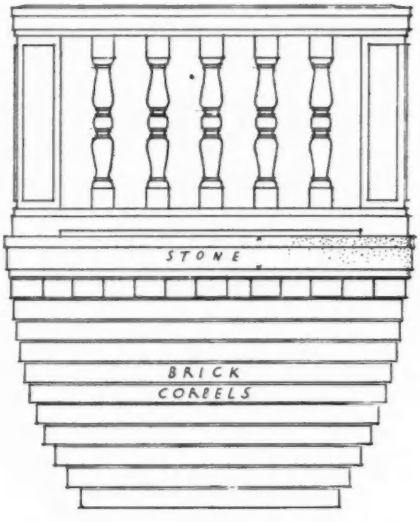


BALCONY TO END OF STABLE BLOCK: SHEPHERD'S HILL, BUXTED, SUSSEX

By EDWARD MAUFE



THE original double-hung sashes in the east end of the old stable block, overlooking the sunk garden, have been converted into French casements, with their stone thresholds extended to form balconies. Oak balustrades were designed to accord with the style and manner of the rest of the work, and the whole was supported on brick corbellings, tailed into the wall.



The detail drawing, reproduced to scale on the following page, shows that the corbellings were intended to be of elliptical outline and convex in mass, but only one set has been so built; the other, owing to some misunderstanding, has been given a concave outline. The resulting effect, giving equality of mass, with this slight difference of detail, is altogether satisfying.

The oak has been left in the white, with no subsequent treatment. On reference to the detail drawing it will be seen that openings have been left in the bottom rail or sill, and on the front and sides, to allow the surface water from the balcony to get away.

ARCHITECTURE MILITANT

A Year of Warfare

HOW pleasant it would be if the architectural profession could consist of artists who had no other concern than to practise their art. Unfortunately, however, it is incumbent upon architects to be not only artists but warriors. Unrestingly they must fight the battle of architecture; and a very severe and bitter form of warfare it often seems to be.

The past year has witnessed some formidable encounters, which, if they have not in every case resulted in a victory for the architectural profession, have at least given proof that it has a healthy combatant spirit. The general public is gradually being made aware that the architectural profession exists and that when some vital principle is at stake it is capable of showing that it has not only a bark but a bite.

Its first display of pugnacity occurred four years ago, when the London County Council had expressed a determination to demolish Waterloo Bridge. The Royal Institute of British Architects was the prime mover in establishing the Conference of Societies for the protection of Waterloo Bridge, with the result that Parliament appointed a Royal Commission to consider the whole question of cross-river traffic, and this Commission issued a report which caused the London County Council to revoke its decision concerning Waterloo Bridge. But although the architectural profession were victorious in the first round of this battle, they have not as yet been successful in the last.

The Charing Cross Bridge scheme, as agreed upon by the technical advisers of the London County Council and the Southern Railway, should be so amended as to be worthy of the unique architectural occasion which called it forth. Here again it will be necessary to work through the vehicle of Parliament. It is not sufficient to impress our legislators by press propaganda directed to exposing the blemishes in the official scheme; an effort must also be made to canvass individual members of Parliament, wherever this is possible, and inform them of the serious issues involved.

It is noteworthy that in a number of important instances those who are fighting the battle of architecture have found that they could best advance the cause which they have at heart by insisting upon the virtues of open competition. Not often can an institution simultaneously express the basic ideas of both aristocracy and democracy, but surely this merit may be claimed for a system which secures that great opportunities are given to the highest talent and which at the same time enables this talent to be chosen from the widest possible field. In the case of Charing Cross Bridge it would be an obvious solution of the present difficulties if a great competition might be held, in which architects were invited to submit their designs for the new bridge and for the layout of its environs.

Only a few weeks ago the principle of the open architectural competition was once more appealed to, and this was in connection with the activities of H.M. Office of Works. It did not appear desirable that a Government department should reserve to itself the privilege of designing public buildings of every description, while at the same time no steps were being taken or, in fact, could be taken, to appoint or retain a staff of architects comparable in efficiency and talent to that which could be chosen from the ranks of private practitioners. Fortunately, H.M. Office of Works has seen fit to yield upon one point, and it is now no longer certain that the projected new block of offices in Whitehall will be designed by civil servants. And even in the case of Calton Jail in Edinburgh, the design prepared in H.M. Office of Works will be subject to a full measure of public criticism before contracts for it are invited.

The Westminster Abbey Sacristy was yet another subject of controversy, and here again it was suggested that the best method for improving upon a certain architectural proposal was by the formulation of alternative schemes. And it is undoubtedly a notable victory that the critics of the original scheme secured its abandonment. Whatever now happens to the Abbey, its North front will not be disfigured by the addition of a structure inharmonious with it.

Other architectural battles await us in 1930, one of the foremost of which will probably be in the field of æsthetic control, and a further effort will need to be made in order to stop the tide of bad buildings which threaten to disfigure both town and country. We want no pacificism here, and indeed it behoves every one of us to make a New Year's resolution to represent in his own person the spirit of architectural militancy.

LLOYDS BANK, VICTORIA STREET, LIVERPOOL: DESIGNED BY GRAYSON AND BARNISH

A leading provincial building, recently completed, selected for illustration and critical description in the article, "Two New Buildings Reviewed," beginning on page 44 of this issue. "This building attracts attention by its solid artistic merit. The architects are aware that certain problems of design have already been solved, and they are not ashamed to make use of time-honoured motifs, provided that these are justified in logic."

Professor C.H.Reilly, who has celebrated his 25th year at the Liverpool School of Architecture.

NEWS & TOPICS

The Past Year Under Review

The late Ralph Knott, architect of the London County Hall, now to be completed.

CONTROVERSIES OF THE YEAR

SENDING my mind down that brief corridor of time labelled 1929, I seem to have found it more a year of promise than of action; and more of promises than of promise. Of the discussions by which the year has been marked, that anent Charing Cross Bridge is by far the most important and in some lights the most disappointing. Whether the scheme which finally appeared, and is, maybe, to be jockeyed through Parliament, is the very worst that could be found remains a matter of opinion; but that it could be immeasurably finer, and less wasteful of golden opportunity, there can be no doubt. Yes, Charing Cross is a disappointment.

OFFICIAL ARCHITECTURE OR OPEN COMPETITION ?

Barren, too, is that other more acrimonious controversy that sprang fully armed from Lord Londonderry's bold words to the Architecture Club : Official Architecture or Open Competition ? The Office of Works is silent and, for the moment, all the letters that have been given prominence in *The Times*, all that have been sent to the Minister of Health, even the weightiest of deputations itself, have glanced aside from the adamantine front which the Crown officials have been able to present to the architects, its critics. One feels the draught of a heavy door slamming, and hears the clang of the lifted drawbridge.

WESTMINSTER ABBEY SACRISTY

Things have been brighter over the other side of Parliament Square. I shall remember the campaign over the Abbey Sacristy as being a very model of what such things should be : full of action and surprise, march and countermarch, and ever the uncertainty of the issue.

PROFESSOR REILLY'S ACHIEVEMENT

Forgetting Battersea Power Station, where the odds were heavy, and might triumphed, let me turn to celebrate happier events, chief among which must be ranked the more than ordinary achievement of Professor Reilly's twenty-fifth year as director and *pater patria* of the Liverpool School of Architecture. Far beyond the boundaries of the school, which owes everything to his vision and passionate energy, his influence has been felt in the whole body of contemporary architecture, as a new orientation towards scale and fine detail, and a return to the careful study of exact proportion. It would indeed be difficult to overestimate the value of Professor Reilly's contribution to present-day architecture, and there is perhaps nothing that can be looked back upon with more certain pride than the knowledge that this year, which commemorates his long association with architectural education, sees also something of its fruits.

LIVERPOOL'S MIGHTY ECCLESIASTICAL BUILDINGS

Sir Edwin Lutyens's appointment as architect to the new Roman Catholic Cathedral for Liverpool must be had in remembrance, not only because Liverpool finds itself thus in the unique position of being the only city in the country to be engaged in the building of two mighty ecclesiastical buildings, but because we shall be enriched by the greatest work of an architect who has shown himself to be an artist, and perhaps the last master of the grand Romantic-Classic school.

MARKS OF MODERNITY

Far removed stands another of the year's definite achievements. The Underground building at St. James's Park may be hailed as the first large-scale success for architecture without history. And not far away stands the Horticultural Hall, which, in the new turn it gave to the conception of a modern building of the exhibition class, broke fresh ground and won for its architects the gold medal of the R.I.B.A. for the best building of the year. Here one does well to recall, too, that modern decoration and furniture were given full public honours when, early in the year, Messrs. Waring and Gillow organized the best exhibition of well-designed *ensembles* which it has been our good fortune to see. And must I also recoil from the growing plethora of hideous initiations of modernity with which some willing but misguided shopfitters have defiled our public thoroughfares ? And must I shudder again at the thought of all the hundreds of new cinemas which imitate everything under the sun and sky ? Needs must, I fear, if the year is to be chronicled in its bad days along with its good.

COUNTRYSIDE PRESERVATION

There is to be told on the gentle side the story of the work of preserving the beauty of the countryside. A sad story, when one remembers why we seek to preserve, and cannot, as in time past, leave well alone; but heartening, when one recalls the many places of real beauty and the tracts of fine country which a reawakening public taste has arisen to secure for all time. There is to be detected also, as a growing force directed towards the same end, a new spirit, among those who direct local government, to make greater use of the instruments which have been put

into their hands for dealing with the worse aspects of spoliation, advertisements, bungaloid growths, and litter, great and small. I may remark, indeed, a certain new note of seriousness with which the public Press, both in London and the provinces, discusses matters of architecture, town-planning and all things pertaining to amenity. These things seem to have become a quite real part of the " news," and never before have we been able to command so good a Press as now.

INFLUENCES FROM ABROAD

In other countries but our own many things have happened which a wider survey of the year might take

The late Sir Robert Lorimer, who made his reputation in Scottish baronial architecture, and won fame and a knighthood with his chapel for the Knights of the Thistle, St. Giles's Cathedral.

into account. Who knows what, of all the events of the international year, will have its repercussion upon our own national architecture? In Paris, Berlin, Stockholm and Chicago, new forms are being evolved, and men are working out new theories of salvation, the effects of which may reach us long after the first shocks of their discovery. Let it be sufficient indication of our awareness of these things that we should be honoured by the Swedish Government, through the instrument of Mr. Yerbury's recent decoration, a matter of congratulation only too well deserved.

VALE

The hand of death, alas! is never shortened. I think of Ralph Knott, cut off in the very prime, before his mortal eyes could see the fulfilment of his great conception of the London County Hall; of Sir Robert Lorimer, full of works and of honour; and of many more, ill to spare from the ranks of the profession, whose services thereto have been recorded in these pages during the twelvemonth.

THE STORY OF A FIRST COMMISSION

It remains to set on record that 1929 produced, during many breathless weeks, the story of one Spinlove and his first big job. Never before has it been given us to see ourselves as some who are blessed with humour and a gentle irony have seen us, and never before was there written such an exposition of the joys and sorrows, difficulties and triumphs of the ten-sided job of being an architect. There is little wonder that *The Honeywood File* should have become a best-seller to a wider public than the R.I.B.A. can hold, for it will be accounted one of the most interesting documents on contemporary life which we can bequeath to future generations. Almost it makes me think that 1929 was not the disappointing year I feel it to be, but a Karshish jubilee.

ENVOI

Would that it were possible to flatter ourselves with the recollection of more definite achievements. Too many issues linger in suspense: the R.I.B.A. and registration; the conference; elevation control; housing; competitions; Mr. Lansbury; the financial slumps. There is too much, here, to think of with equanimity. Let 1929 go down the wind with no more reproaches.

★

Even as I had laid down my pen, the closing hours of this sinister old year bring in, over the wireless, the appalling news of the disaster at a cinema in Paisley. No man may learn of such happenings without being shaken, least of all an architect. For they remind him of the grave nature of his responsibilities to the public. This was, it seems, a pure mischance where no blame can be laid, at least, on a violation of planning regulations. But it does emphasize the supreme importance of such ordinances that have, at times, irked most of us; and we may well congratulate ourselves on their preventive efficacy.

★

It strikes me as a good deal more than mere coincidence that Karshish should have chosen, weeks before, as the theme of his new serial, which is to begin in this issue, the serious and detailed, if fictional, history of the collapse of a hall that might well, as he remarks, have incurred a tragedy that would have been similar in kind.

FEMININE MODESTY

" I think bachelor architects should be shot on sight ! " So writes a certain lady—" the well-known architect, in an interview "—in a provincial paper. There is a very great deal more that she may intend to be more provocative than it really is. " I am an idealist about homes . . . I culled the best . . . and applied some of each to my own houses." " In a house which I built in Sydney, in Australia, at the request of the Government, I used a pet idea of mine—to utilize the roof-space. And why not ? " (Why not, indeed ?) " Why *do* most men architects overlook the need for plenty of windows ? " (But do they ?) " A man invariably places the hot water supply just where it isn't convenient ! And excuses himself by

What the new German flat balconies must really have been designed for: a cartoon entitled "Prosit Neujahr 1930!" from the monthly magazine Uhu.

saying the extra walking to and fro is good for the cook's figure!" (This, of course, is sheer nonsense.) "One other feature which is another step forward. In my ideal home I have designed the furniture to match the house—ensuring complete harmony." (Now, a man would never have thought of that.) "Truly, in all modesty, there is room for more women architects and builders," she winds up.

*

A correspondent who sends me the cutting, from which I, too, in my humble way, have attempted to cull the best, points out that no reference appears to be made to this lady's name in the current issue of the *R.I.B.A. Kalendar*, and adds that perhaps this is fortunate, as she is apparently capable of causing a hold-up in Conduit Street, seeing the murderous impulses to which she owns. He thinks that a more appropriate place for the execution would be "on site." It behoves all bachelor architects to set about insuring their lives with all convenient dispatch.

HIGHWAY DEVELOPMENTS AT HIGHGATE

Will some of the charming eighteenth-century houses to be found in Heath Street and High Street, Hampstead, soon be demolished in order to provide wider roads to accommodate the increasing heavy traffic coming into London from the north of England via Hampstead Heath? This is one of the questions which is agitating lovers of old Hampstead, for there are rumours of road developments to the north of Ken Wood which will seriously jeopardize existing amenities. It is also known that the Ecclesiastical Commissioners and the Hampstead Co-partnership Tenants wish to develop for building purposes much of the open country close to Turners Wood, and that they are resisting the town-planning proposals put forward by the Finchley Urban District Council. Fortunately public opinion is now awake to the danger. At a public enquiry which will be held in the course of the next few weeks it is hoped that the forces of those who intend to resist the spoliation of North London's open space, and the probable destruction of many buildings of architectural merit, will be mobilized in time to secure the approval of Finchley's admirable town-planning scheme in its present form.

WELL DONE, BOMBAY!

In Bombay, I read, the Corporation have referred the following resolution to the Municipal Commissioner for consideration: "That the Corporation recognize that the beauty and dignity of the city depend to a great extent on the sound architectural design of its buildings and that, to ensure the municipal buildings being worthily designed, the Corporation are of opinion that the head of the Architectural Department and his assistants should be men who have received an adequate architectural training and who have obtained a recognized degree in that art. The Head of the Department must therefore be one who has passed the Associate Examination of the R.I.B.A., now to be held in Bombay, and all the assistants of the department should hold at least the Bombay Government Diploma in Architecture."

DEAR, OH DEAR!

"Now, Johnny," said the teacher, "what do we see in the country besides grass, trees, and flowers?"

"Advertisements," said Johnny. ASTRAGAL

Behold this scene. Consider well
The horrid corp' where it has fell.
Ladies and Gents, that's how I dishes
Folks as refuse my Christmas wishes.
So when I says, as says I do,
An 'earty Christmas unto you,
Jump to it, or by Joves and Jingo,
I'll larn you in another lingo.

An original Christmas card sent by one of Astragal's friends.

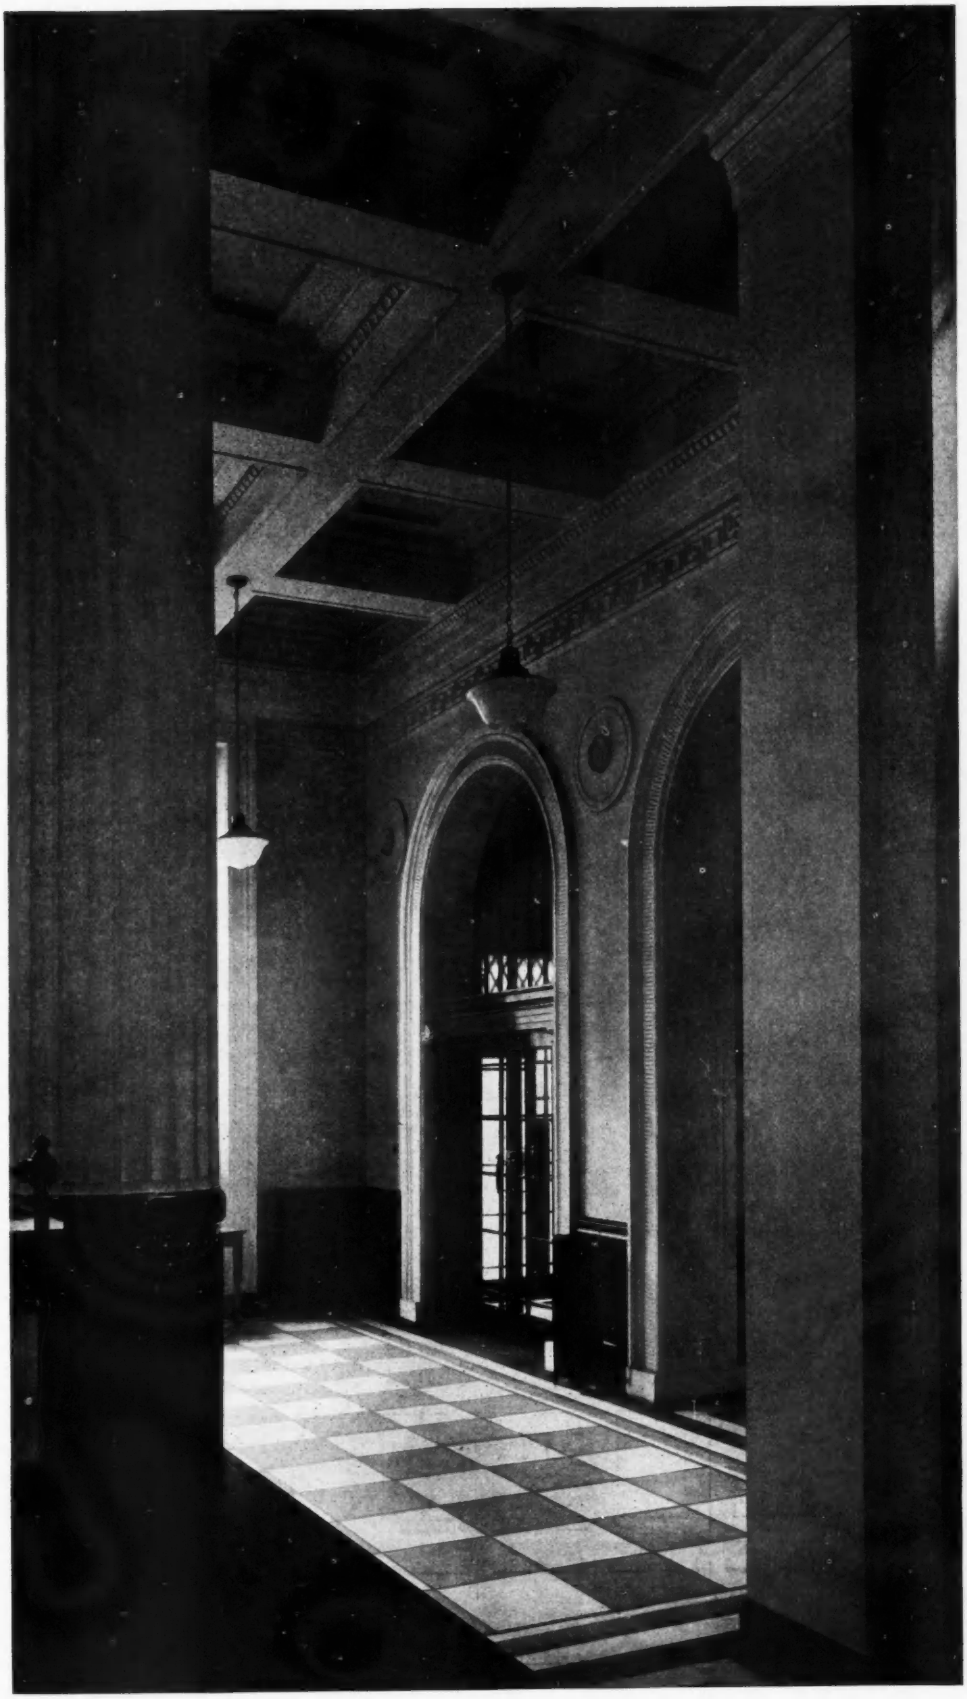
TWO NEW BUILDINGS REVIEWED

i: Lloyds Bank, Victoria Street, Liverpool

DESIGNED BY GRAYSON AND BARNISH

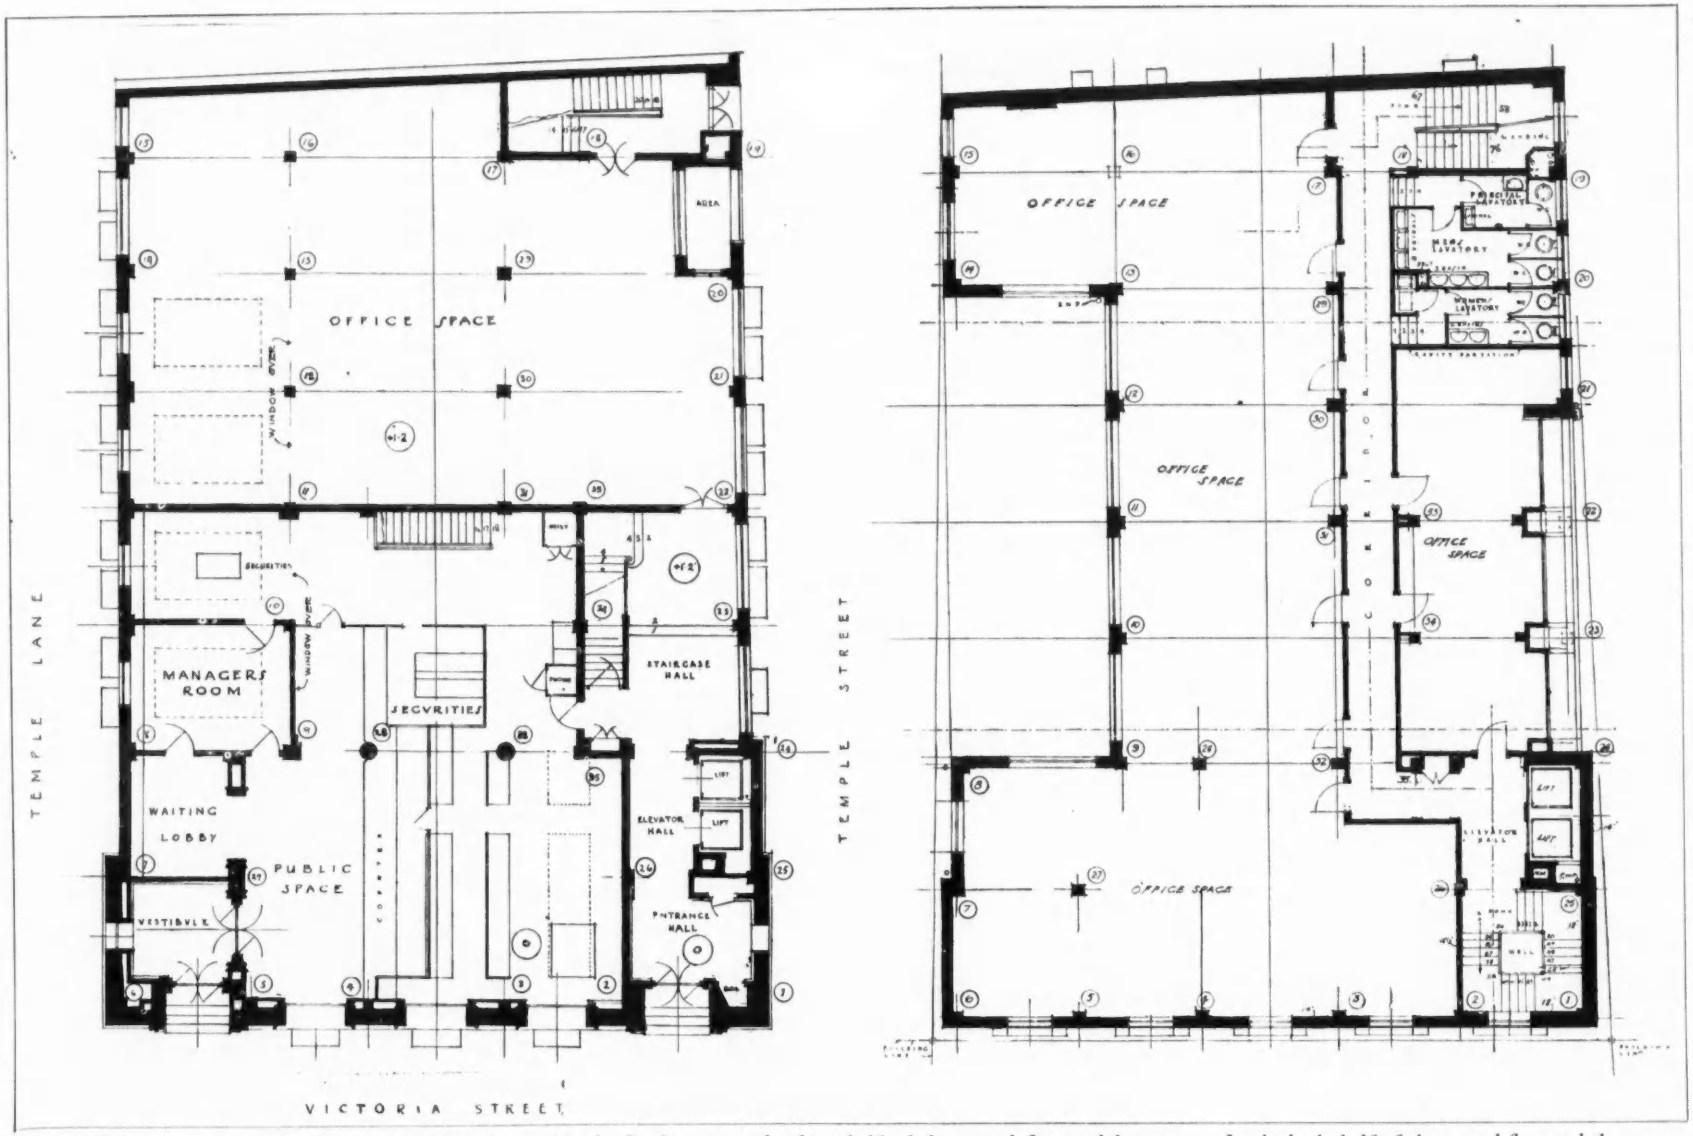
ON this and the following six pages are illustrated and critically reviewed two of the most recent buildings erected during the past year. Both reach a high architectural standard, though vastly different in styles. In the case of Lloyds Bank, Liverpool, Messrs. Grayson and Barnish have taken time-honoured motifs and used them logically and to the best advantage. In the case of the National Research Building at Hampstead Mr. Maxwell Ayrton has expressed the twentieth-century spirit in architecture with simplicity and orderliness. Each building is of brick, although Mr. Maxwell first intended to erect his building in concrete.

The Victoria Street, main, front. Silver-grey facing bricks of particular hardness and density were selected to withstand the soot and dirt of the city atmosphere.



THE great banking houses have shown a phenomenal architectural activity during the last ten years, and have indeed played an important part in establishing the post-war convention for commercial architecture. Their influence has been a conservative one, for banks should be so designed as to suggest credit and security, and it is therefore unlikely that "experimental" styles will find favour with the directors of such institutions. The latest example, here illustrated, is that of Lloyds Bank in Liverpool. This building, designed by Messrs. Grayson and Barnish, attracts attention by its solid artistic merit. The architects are aware that certain problems of design have already been solved, and they are not ashamed to make use of time-honoured motifs, provided that these are justified in logic. For instance, it is observable that the façade is properly punctuated at its lower and upper terminals. The ground-floor story is differentiated from those above by the rustication of its brickwork, while its formal identity is further emphasized by the stone plinth and the small stone cornice, which also provides a fascia for the inscription. Near the summit of the elevation is the cornice, a feature which at the present day appears to need a defence, so often is it attacked by our modern puritans on the ground that it is not "functional"; whatever this may mean. But, obviously, the cornice serves the æsthetic purpose of giving to a façade an element of organic unity, for it makes it appear conscious that it is not stretching upwards indefinitely, but has a precise termination which deserves to be treated with ceremony. Moreover, a great advantage of the cornice is that it need not be placed at the summit of the building, but may on occasion be situated lower down, leaving an attic story above it; the terminal feature of the façade is then not the cornice alone, but the cornice plus attic. By such an arrangement it is possible to correct or modify the proportions of the elevation, should this prove desirable. For instance, if in the bank here illustrated the cornice had been at the very top, the façade would have appeared uncomfortably square. The cornice itself is of small projection, in order to comply with the local authority's bylaws, but what it loses in width it gains in depth, for it is associated with a frieze, also in stone, which is separated from the brickwork beneath by a torus moulding.

Another view of the main front, showing one of the two Portland stone entrances.



The stone facings appear again in the panelled parapet of the attic, and the architraves of the first-floor windows surmounted by bracketed hoods, and in the plinth and entrance doorways. These latter features are deserving of special notice, inasmuch as they are given an artificial equality for the sake of symmetry, although one of them serves the bank, while the other provides access to the offices above.

This duality of purpose, which characterizes most bank buildings, presents difficulties to the designer. It so happens that only on rare occasions

Plans of ground, and of a typical upper, floor. Lloyds Bank occupy the front half of the ground floor and basement. In the back half of the ground floor and the basement are a fruit saleroom and a fruit warehouse, respectively. The upper floors are let off, all the space being taken before the building was completed. Rectangular at the base, it had to assume a dumb-bell plan for the upper floors, to comply with ancient lights on both flanks.

is it possible for a bank itself to occupy the whole of a building, for urban ground rents are very high and necessitate the erection of the tallest structure which the regulations allow if the site is to be commercially exploited. Thus we generally find the premises of the bank occupy only one or two floors, while the stories above are sublet as offices. The architect has the choice of two treatments: either he may give to the whole building a note of opulence which by right belongs to the bank alone, or else he may introduce a dichotomy into the façade and openly proclaim that the lower portion differs in function from the upper. In the former case the façade has a homogeneity which belies its real subject, while in the latter artistic unity is sacrificed to truthfulness of expression. Messrs. Grayson and Barnish have effected a happy compromise, for the grand cornice helps to secure the unity of the composition as a whole, while the rustication of the brickwork on the ground floor and the subsidiary cornice sufficiently differentiate the bank premises from the remainder of the building. The bricks are of a highly attractive shade of silver grey, with the result that the stone facings do not stand out too obtrusively. The detail, both outside and inside the building, is scholarly.

The plan is self-explanatory. The banking hall is well arranged, and has an air of dignity and spaciousness; and the communication between the public space, the waiting lobby and the manager's office could not be improved upon. The office quarters above are well-lit and ventilated, and lend themselves to convenient subdivision. This is a thoroughly well-equipped modern office building.

ii: Medical Research Building Extension, Hampstead, N.W.

DESIGNED BY
MAXWELL AYRTON

MR. MAXWELL AYRTON has departed from the rather florid style of architecture characterizing the original building to which he was required to add a new wing. The design here illustrated expresses a pleasing orderliness and simplicity, expressive of the twentieth-century spirit in architecture. Yet, by a strange misfortune, this building was singled out for attack by a well-known statesman living in the vicinity, who complained of its design, and further alleged that it obstructed his view. Yet the façade visible from the statesman's house could scarcely be plainer than it is, and is, moreover, almost entirely concealed by trees immediately in front of it. And that facing towards the declivity of the hill, although it has the interest which is derived from a variety in its parts, is yet entirely free from adventitious ornament and has the merit of good composition.

The building was first intended by the architect to be wholly in concrete, and even the walls were to be faced with this material; but eventually it was decided that such a treatment, while logical in itself, would not only have indicated too violent a departure from the style of the original block, but would also have introduced a discord between the new wing and the majority of the neighbouring houses which were faced with brick. The façade as at present designed is a singularly successful one, for the bricks chosen are very pleasant both in colour and texture, and great care has been taken to effect an adequate transition between the new

The south-west front. The bricks used are very pleasant, both in colour and texture, and great care has been taken to effect an adequate transition between the new and the old buildings and the neighbouring houses. To the right of the view is the bridge connecting the new and old buildings.

Medical Research Building Extension, Hampstead, N.W.] [*By Maxwell Ayrton.*

The building is notable, apart from its skilful planning, for its internal equipment, which is in accordance with the most scientific standards, and for the elaborate precautions taken to secure the cleanliness and ventilation of the rooms.

Medical Research Building Extension, Hampstead, N.W.] [*By Maxwell Ayrton.*

A view from the north-west, showing on the right a portion of the old building. The open balcony on the upper story is needed to ventilate certain special rooms of the Institute.

block and the old. This is effected by an arched bridge, so designed that we are not conscious of the difference of floor levels in the two buildings. The new block shows an interesting pattern of fenestration, which, however, reflects the interior planning, because the open balcony on the upper story is needed to ventilate certain special rooms of the Institute. The internal equipment is in accordance with the most advanced scientific standards; and elaborate precautions are taken to secure the cleanliness of the rooms.

The slope of the ground provides an opportunity for planning a small basement which gives accommodation for a staff lavatory and the lift motor-room.

It may be of interest to compare this building with others which house the activities of the medical profession. A question of civic values here arises, and the designer must consider what is the right degree of emphasis appropriate to a building intended to serve the purpose either of a hospital or of a laboratory for medical research. Two pitfalls here confront the architect. In yielding to the imperious dictates of economy, he may allow practical considerations to determine the whole design, and there results an ugly structure with wings jutting out here and there and a much too obtrusive display of the numerous soil-pipes and other symbols of modern sanitation. A blemish of the opposite kind occurs when the building takes upon itself an architectural splendour quite unfitted to its position in the hierarchy of civic buildings. Mr. Maxwell Ayrton is to be congratulated upon striking the happy mean, and the National Institute of Medical Research is neither crudely utilitarian nor yet ostentatious.

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

The essential constructional facts of this fiction are from experience and are exactly true in all details. The procedure of a reference to Arbitration is presented with accuracy, and the setting, if somewhat highly coloured, is a true picture.

i: The Plaintiff Opens

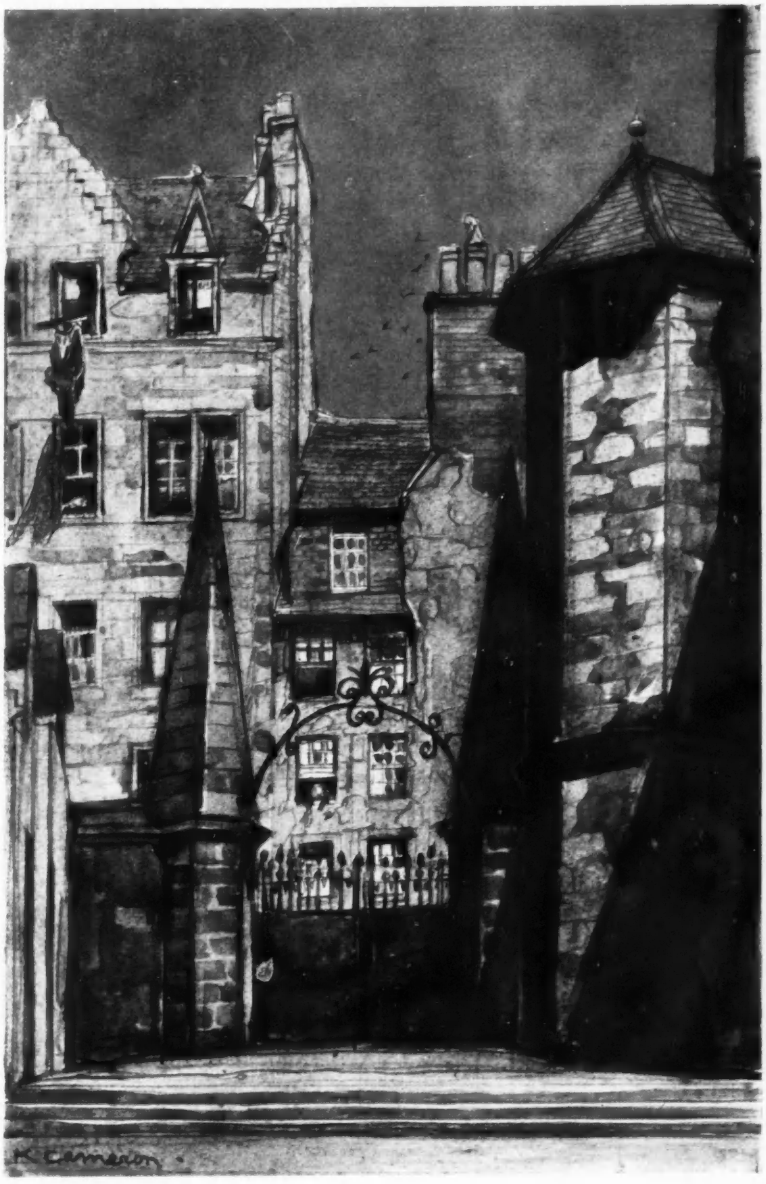
THIS was an action by Colonel Vivian Fanshawe Jago, of Grastopen Manor, Midshire, Justice of the Peace, for damages for negligence on the part of the defendants for the collapse of a Village Hall. Defendants were respectively the builder and the architect. The plaintiff's statement of claim showed a total of £3,127, of which £2,873 was the estimated cost of reconstruction. The defendants jointly denied liability for the failure of the structure, and each, alternatively, contended that failure was due to the negligence of the other.

Mr. Hopetoun Gizzard, F.R.I.B.A., F.S.I., Barrister-at-Law, had been appointed arbitrator by the President of the Royal Institute, under a provision of the arbitration clause in the contract, as the parties had not been able to agree a nomination. Not only had they failed to agree an arbitrator, but they had failed to agree that any one of them should propose a name. This was not remarkable if we consider, first, that there were three parties to the suit, so that—as in choosing a wall-paper—the chances of agreement were ten times as remote as when two parties only are concerned; second, that each party felt that the others sought some secret advantage in the nominations they would make; third, that Jago wanted a lawyer, Swillerton a surveyor, and Toomer an architect; and, finally, that none of the three were in a temper to agree about anything whatever.

This question whether lawyer, surveyor or architect should preside over their destinies proved so difficult for them that it had been referred to a Master in Chambers—a Master being an officer of the High Court empowered to decide preliminaries of actions; and the Master in Chambers had decided that the arbitrator should be someone who was a member of the Bar, and an architect and surveyor as well—a solution that any three disputing schoolboys would probably have arrived at in five minutes. The President for the time being of the R.I.B.A. had duly nominated Mr. Hopetoun Gizzard as satisfying these conditions, and his task must have been easy, for his choice was, obviously, small.

In the matter of procedure the parties had, however, come to terms. Jago had, necessarily, to bring two actions—one against the builder and the other against the architect—for he considered each to be liable to him for his losses, although their responsibilities to him were different. Either party could, however, have the action made a joint action by going before a Master in Chambers, but they had saved themselves, and the Master, that trouble by agreeing the matter.

Jago had also, to this same end, agreed with Toomer to submit their action to arbitration; for though Jago and Swillerton were, under the terms of the contract, bound to refer their dispute to arbitration, Toomer, as architect, was not a party to the contract, and was not so bound: his contract with Jago was the implied contract between principal and agent which is set up between building-owner and architect when the latter is offered, and accepts, a commission; and *either* party was entitled to make the case an action in the High Court. To do this would have suited the lawyers' pockets excellently, but it would not have suited the pockets of Jago and/or Toomer, and terror had guided them to agree in submission to an arbitrator. Thus, Mr. Hopetoun Gizzard, of multiple qualifications, had to decide (1) whether the plaintiff Jago was entitled to damages, (2) the amount of those damages, and (3) whether the defendant Swillerton or the defendant Toomer were liable and, if both of them, then in what proportion. From this it will be realized that the arbitrator's task was a pleasanter one than that of the unlucky defendants, who, by the infernal logic of lawyers, had to plead at one and the same time that neither of them was in any way liable and that each of them was, separately, completely so.



The plaintiff, Jago, was represented by Mr. Geoffrey Chawlegger, K.C.—whose name I seem to recognize—and by Mr. Richard Gadd; the defendant, Swillerton, by Mr. Twistle; and the defendant, Toomer, by Mr. Charles Polechat, K.C., and Mr. Charles Wrackem—hereinafter called the Charles's.

Mr. Bosson, of Noble and Bosson, Toomer's solicitors, said that it was "just as well" to brief a K.C., as "the other side" had done so; and Toomer had sighed as he sat nervously biting his thick fingers, for he knew this meant a bigger fee and two-thirds as much again in fees for K.C.'s mate, or "Junior Counsel," as they called him; and though Toomer had a well-established practice in a provincial manufacturing town, the poor devil had no money to throw about. The unhappy man was so unnerved by the mishap that had flung him bodily to the lawyers, that he had no power to take stock of his chances: it was as though a tiger had sprung at him from among his own gooseberry bushes, for a newly finished building of his had fallen down. It had actually collapsed flat on the ground.

Such a thing would knock the confidence out of any "architect and surveyor" of forty-seven who had been in independent practice nineteen years; but the thing had not only happened in the middle of the district where Toomer's activities almost exclusively lay, but almost next door to his country home, and under circumstances which offered no security that any other building of his, past or future, might not, for some inscrutable reason, sit down on its heels in the same way. It was a lucky chance that he had not killed a round score of his neighbours and maimed twice that number; but his gratitude to Providence for sparing him this crowning horror was tempered by resentment at the unnecessary officiousness of Providence in knocking the place down.

Toomer was accordingly greatly depressed in spirits; and as he was a surveyor only by training, and an architect only by assumption; and as he was, besides, a phlegmatic man, slow, exact and methodical, with the mental equipment of an extremely intelligent bullock, he was overawed by the professional ascendancy and brilliance of London, so that Bosson speedily took charge of him and lugged him about impatiently as though he were a heavy child. The firm of Noble and Bosson was a firm of one solicitor and a bit over, and Bosson was the bit over. Noble was a huge, overpowering man and Bosson a ridiculously smaller and subservient, and he was glad to recapture some of his self-esteem by hectoring it over Toomer, whose dejection thus became reduced to numb, bovine misery.

At an early interview Bosson had said: "Well, now about your proof." "But they don't say anything was wrong with the roof, do they?" Toomer

THE GATEWAY OF MORAY HOUSE:
A RELIC OF MEDIEVAL EDINBURGH

From Haunting Edinburgh, *by Flora Grierson, illustrated in colour by Katharine Cameron, A.R.E., R.S.W. Published by John Lane The Bodley Head Ltd., London.*

(See the Book Review pages in this issue.)

exclaimed in consternation. "Proof; proof, man!" said Bosson; and he took a quire of thick blue paper and wrote down rapidly all Toomer's christian names in full, his age and place of birth and particulars of his education, qualifications, and professional circumstances; and then went on to gather all that was creditable and praiseworthy in the antecedents of his client, so that Toomer presently warmed up a bit and mentioned that, as a boy, he had been awarded a certificate of the Royal Humane Society.

Bosson muttered "No, no," and shook his head frowningly as though the thing were an indecency, but afterwards said: "Well, perhaps just as well," and put it down. The proof finally set forth the evidence Toomer would give, and Bosson so questioned his client as to stress the points favourable to his case. This proof afterwards formed part of the "brief" which, after consultation with Mr. Polechat's clerk, was marked "75 Gns." and left, with a mass of associated documents, at the great man's chambers.

Polechat, K.C., accepted the brief—or rather his clerk, who got a shilling in the pound out of his briefs, accepted it—and, three weeks before the date fixed for the hearing, Toomer was hailed up to London by a wire from Bosson, to attend conference with "Counsel"—hereinbefore called the Charles's. As the hour fixed was 10 a.m. Toomer travelled the 116 miles up to town from Nollingborough the night before, only to be told when he called at Noble and Bosson's at 9.30 a.m. that Mr. Polechat had to go into Court but would see him at 4.45.

Toomer accordingly called again at 4.30, Bosson engaging a taxi to carry them from Carey Street to the Temple and waving aside Toomer's gesture of paying for it with a lavish air scarcely reconcilable with the charge "disbursement 9d.", afterwards faithfully recorded in his bill. At the Temple Bosson said: "Better put away your pipe," and they went up an extremely dingy wooden staircase till they came to an excessively dingy door on the second landing, where Polechat's name was painted up among thirteen others, and waited in an outer office from 4.37 till 5.19.

Bosson was nervous. Polechat was an eminent advocate and an educated gentleman, and Bosson was not at all an eminent attorney and was so well aware of his inferiority in the other respect that he was ashamed of his client, who sat in a humble, loutish way on the edge of his chair, with his large, podgy hands dangling between his legs and his coat collar half up on one side, reeking of the provinces. At 5.19 a clerk snatched the door open and thrust in his head for an instant, and Bosson bounced from his seat as though stung.

"Come along! Never mind your hat," he said, and he hurriedly turned Toomer's collar down for him and spurred out of the room. Toomer, with half a stone of specifications, bills and correspondence under one arm, and the other clutching an umbrella and various drawing rolls like a game of spillikins, lumbered after him across a lobby into a tidy, plainly-furnished room where Mr. Polechat, a tall, vigorous, hatchet-faced man of seventy, with piercing grey eyes like crumbs of glass set close together in a grey face, was standing with his back to the fireplace, addressing someone who was moving to the door—"Don't!" said Mr. Polechat, "Remember—*Don't do it.*"

"Jago and Toomer" said Bosson at once (Polechat, as we know, had nothing to do with Jago's claim against Swillerton). "This is Mr. Toomer." Polechat, with his hands behind his back, bowed microscopically from the hips to Toomer—who at that moment dropped his umbrella—and said rapidly to Bosson, while he pointed the two men to chairs: "The important point is—Is, or is not, American maple wood not known to be unrefractory—not known, that is, to be unrefractory as a matter of ordinary technical building experience to an averagely reasonably intelligent person qualified in ordinary building practice answer me?"

Bosson turned to Toomer—"Is it? Is it?" Toomer, who was trying to dispose of his parcels, had not realized he was being questioned and did not know what the question was. "Well—er," he began, "If you mean——"

"You take the point?" Polechat went on to Bosson, who nodded. "We must have a witness to it, and in that case we may perhaps be hit to the extent of a ten-pound note."

Here he turned and consulted a slip of paper on the mantelpiece; he must also have given some private signal, for at that moment his clerk snatched the door open. "Rex and Bubber," said Polechat.

Bosson stood up and frowned and signalled to Toomer, who began to claw his parcels together again.

"That schedule of apportionment won't do," Polechat said to a group of three anxious-looking men who had immediately hurried into the room and occupied the chairs Toomer and Bosson had just vacated and which, on Polechat's busy days, never had a chance to cool, and he was closely engaged with his new clients as Bosson hustled Toomer through the door.

A young, elegant-looking man in morning coat, spats and striped trouserings, who had been sitting at the side of the room with his legs stretched out and his hands in his pockets, followed them. He said a laughing word to Bosson, took his silk hat, and left the chambers. Bosson at once said ominously—"Do you know who that was?"

"No," said Toomer in the tone of a man who never knows anything.

"Mr. Wrackem, our junior counsel—a very rising man," said Bosson as who should add "so look out!" Toomer thought that Wrackem might have spared a nod for the client who was feeing him, but he was past surprise at anything.

"It didn't take long," he said to Bosson, as they walked away.

"Mr. Polechat is a very busy man," the other replied, in a tone of reprimand. "You heard what he said? 'May perhaps get hit to the tune of a ten pound note?' I never knew Counsel give a more hopeful view of a case."

"But if we are," Toomer objected, after several seconds' heavy thought, "I shall have to pay the whole of the costs."

Bosson's reply was to say "Goodbye" suddenly, as though his client were too incorrigible an ass to waste words with.

The pleadings, or submissions, had been delivered to the arbitrator by a clerk of the solicitors for each party, who left the documents at Mr. Gizzard's office and took acknowledgments of receipt. These submissions, two in number, one signed by client and builder, the other by client and architect, had been carefully drawn by Counsel, and set forth briefly and exactly, in ordinary language, the grounds and extent of plaintiff's claim, and the contention by which the defendants jointly and separately sought to exculpate themselves. Each party had a copy of these documents, which constituted the terms of reference to the arbitrator, and which informed him of the issues he had to decide.

The arbitrator, thereafter, directed a preliminary hearing to be held to settle details of procedure and, in particular, to decide what the cost of reconstruction, in fact, was. The plaintiff Jago had employed an independent surveyor who had measured the work and prepared specification and secured tenders from five builders; the lowest tender had been accepted and the work of reconstruction was actually in hand. The amount of that lowest tender, viz.: £2,873, plus certain added fees and expenses the plaintiff had been involved in, amounting to £54, and plus a sum of £200 he claimed for delay in completion and "loss of enjoyment" consequent upon the collapse, totalling in all £3,127, was the amount of the damages the plaintiff claimed. The arbitrator realized that the claim for reconstruction was a question of fact which could be ascertained and ought to be agreed as a preliminary to the hearing of the cause: the other items, being discretionary, would be judicially considered by him, as arbitrator.

This preliminary sitting was held in the Gizzard's office, which was so convenient for that purpose as to suggest it was set apart for such grisly occasions. Leading Counsel did not attend, but were represented by their juniors. Swillerton had so marvellously brushed his hair that he appeared to be in disguise, and Toomer scarcely recognised him, and his difficulty in making up his mind whether the builder were friend or enemy was by this circumstance much increased. Wrackem, twice during the proceedings, apologized for fouling Colonel Jago's legs under the table, and Toomer had the experience of sitting opposite his late client for an hour and a quarter without once meeting his eye.

The arbitrator suggested that a still more independent surveyor should be appointed by the two defendants to examine and agree the cost of reconstruction, but after various difficulties and objections had been raised and disposed of, and Counsel had tripped each other up many times, Swillerton and Toomer were persuaded to agree the plaintiff's figure as the ascertained value of the work, without, of course, prejudicing their contention that neither of them was in any way liable and that the other was so.

On the afternoon of the day before the hearing, Toomer came up to town and called at Bosson's office. Bosson was out, but when at 7.0 Toomer returned to the Strand Palace Hotel, where he was putting up, he learnt that Bosson had telephoned asking that Toomer should ring him directly he came in.

There was no answer from Bosson's office, but when Toomer again returned to the hotel, shortly after eleven, he was told Bosson had been shrieking for him again and had given a telephone number at Esher. Finally Toomer got him at 11.20, and learnt that at 5.30 a wire had been received from Bristol saying that Polechat was engaged in Court there and could not appear next day. Toomer supposed that Wrackem would take his place, but Bosson said he had thought it "just as well" to brief a leader, and that Mr. Pitfall, K.C., had agreed to appear for them next day; and he went on to express annoyance that Toomer was not at his hotel when he rang up at six o'clock, and to appoint nine o'clock the next morning at the Municipal Surveyors' Institute, where the arbitrator was to sit, at 10, for Toomer to confer with Pitfall. Toomer objected that Pitfall knew nothing of the case. "I can't help that," Bosson retorted, with such tartness that the receiver brayed in Toomer's ear, and rang off and, presumably, got into bed again.

Pitfall, who proved to be a small, wiry, exhausted-looking man of fifty, frankly admitted that he had only had time to glance through his brief and knew nothing of the bag of papers, covered with Polechat's cross references and blue pencillings, bequeathed him by his learned and delinquent brother. He began asking questions; but his acute discernment and nimble wits left Toomer—who, given a week, could have presented an accurate and exact account of everything — helplessly stranded. Toomer knew little of points of law and Pitfall still less of the technicalities of building, and when he asked, "What is a wirecut?" Toomer, instead of answering, "A common kind of brick," lumbered off on an explanation of brickmaking processes. Time was soon up. "I shall not have to examine you until to-morrow," said Pitfall, "and I will get up the case tonight and see you here at nine again tomorrow."

The arbitrator sat in a vast room having a long table down its centre, covered with a thick, puce-coloured cloth, upon which quires of blotting-paper, ink-pots, pens and foolscap were exquisitely ranged out in a lavish way. At the head of the table was a great armchair with high upholstered back, which served to dignify the arbitrator and screen him from the devil's own draught caused by the hot air from a radiator chilling against the glass of the vast window behind him. At the other end of the room was a fireplace with a blackleaded iron fire-screen; and, centrally above the bare, black marble mantelpiece was the one striking decorative feature of the apartment—a large, splendidly-framed photograph of an unfinished sewage works, in a wide, duck's-egg green, bevelled mount, boldly titled with the contractor's name and address.

The plaintiff, his Counsel and certain clerks and witnesses sat on leather-upholstered mahogany chairs along the side of the table to the arbitrator's right; the defendants similarly ranged themselves on the left. The chair next the arbitrator on each side was reserved for the occupation of witnesses, as they were called. The arbitrator administered the oath to these successive witnesses in the following prescribed form: "Take bookinyer ry han. Gibble gabble gobble gubble quesyas mabeaskyer tougemat diffinref selpyergud"—that, at least, was all Toomer could make of it. Throughout the proceedings everyone remained seated—even when swearing and being sworn.

After a few introductions, bows and handshakings, and cheery or chaffing interchanges among the lawyers and arbitrator, as though they were all sitting down to a friendly game of poker, the proceedings began by Mr. Chawlegger, a plump, bald, red-faced man, spreading out his papers before him with the assistance of his junior, and opening the case for the plaintiff.

Mr. Chawlegger said that the task of the arbitrator would be lightened by the accommodating act of his client in agreeing to make his actions against the defendants a joint action, and in ascertaining and agreeing the cost of reconstruction. The question of the amount of damages incurred by his client was therefore greatly simplified and the task of the arbitrator reduced, otherwise, to deciding whether his client was entitled to damages—and he had no doubt that he (Counsel) would be able overwhelmingly to substantiate that claim—and, if so, whether the defendants were jointly, or severally, liable—i.e. whether Swillerton and Toomer were jointly liable for damages awarded, so that Jago could get payment of the whole from either of them; or whether each was liable for a separate amount, or if one only was liable, which of them.

"I will not," Counsel continued, "detain you, Mr. Arbitrator, with a statement of facts which will be clearly elucidated by the evidence I shall call, but I will take the opportunity of saying for my client what his native modesty (laughter)—native modesty will not allow him to say for himself. He is, sir, 'The Squire.' In all regards he upholds the honourable prestige of a title which once distinguished, beyond any rank of elevation, the leading country gentlemen of England. He is the Lord of the Manor of Grastopen, the occupier of the Hall, the benefactor of his tenants and the good genius of the village.

"In that last capacity Colonel Jago last year decided to bestow upon the village of Grastopen a Village Hall, built on freehold land, to be held in trust for the use and enjoyment, under certain seemly restrictions, of the inhabitants of Grastopen in perpetuity. It is because of that response to a generous impulse, Mr. Arbitrator, that my client comes before you today, a wearied, and disappointed, and disillusioned man. He comes here partly to reimburse himself for the heavy losses and inconvenience in which the negligence of the defendants, or one of them, has involved him; but he has come also, sir, from a sense of that public duty which demands of him, as a representative man, that he shall protect the community from the dangers which the negligence, incompetence and ineptitude of builders and architects may at any time inflict upon them. I will not detain you longer, Mr. Arbitrator, but will at once call my client, from whose own lips you will hear the plain story of the wrong which he lays before you in vindication of his rights as a man, and in his claim for restitution as an individual."

Colonel Jago then moved to the chair reserved for plaintiff's witnesses, on the right hand of the arbitrator, and was duly sworn.

(NEXT WEEK—ii : THE PLAINTIFF CLOSES.)

LANDMARKS OF THE YEAR

A Retrospect of 1929

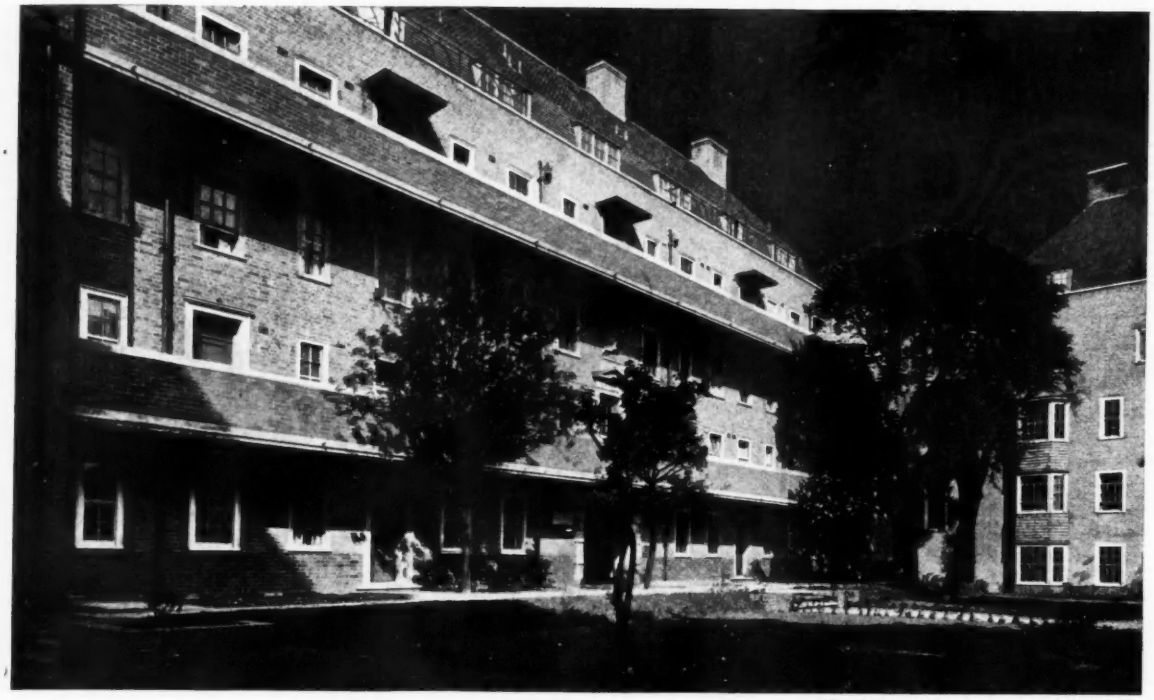
BY PROFESSOR C. H. REILLY

It is, the author thinks, the day of the younger in spirit; architects are seen to be full of life and vigour, despite depressed commercial conditions. The usual array of "City architecture" is leavened by several churches and more than one municipal building of distinction. "Victorian fruitiness is giving way to neo-Georgian elegance."

LOOKING over the year's work one has the feeling that, however depressed the state of the country may be, architects are full of life and vigour. The profession as a whole may not be in the condition I am told holds good in Canada, where everyone has so much work on hand that no one can take on any more, and a leading insurance company has had to send a representative round the English Schools of Architecture to find young men willing to detail the interior and furnishings of their latest skyscraper, owing to the great firm of architects they employ on the other side having only time to design the exterior. No, we are certainly not, as a whole, like that! What I rather mean is that most of the work executed during the year, whether modernist or traditional or, as is more common, of the usual English compromise between the two, does not look so tired out before it is born as has sometimes been the case in recent years.

THE DAY OF YOUNGER MEN

It really looks, in spite of what I may call City architecture, as if the younger men—younger in spirit at any rate—are now getting a good look in. There is the Underground building, for instance, with its steel-framed logic forcing itself on our notice in a variety of ways, and throwing out a challenge which only the dullest can avoid meeting. Then there is Basil Ionides, going about with a few pieces of coloured material and glass in his pockets, and converting our hotels, theatres and restaurants, at a touch, from soft blurred rich nothingness into sharp bright happy places where even the oldest of us feel young again. Then there is one of our Rome scholars—a fact which proves his youth—Louis de Soissons, who has already made the only garden city which is modern without being garden-cityish, putting up great blocks of flats at Larkhall, Clapham, which show that Georgian breadth and modern solid Dutch balconies can become united into something new and stimulating. And Gordon Jeeves and Raymond Hood have put up, opposite to Liberty's toy Tudor block, a great strong black building which is nevertheless both modern and bright. This is quite enough to show it has been an exciting year. Let us now get down to details, since the space allowed is strictly limited.



THE UNDERGROUND BUILDING

The Underground building, both from its size and the vigour of its form, claims precedence. Messrs. Adams, Holden and Pearson have adopted a type of building which, like the later American tall buildings, disregards the alignment of the street. This has occurred before, of course, notably in the new Grosvenor House building in Park Lane and in University College Hospital in Gower Street. The architects of the Underground building are,

[*By Adams, Holden and Pearson.*

"There is the Underground building, with its steel-framed logic forcing itself upon our notice in a variety of ways, and throwing out a challenge."

[*By Louis de Soissons and G. G. Wornum.*

"Blocks of flats at Larkhall, Clapham, which show that Georgian breadth and modern solid Dutch balconies can become united into something new and stimulating."

[*By Gordon Jeeves and Raymond Hood.*

"The famous black building for the National Radiator Company, veneered with polished slabs of black granite and decorated at the base and top."

however, more justified in that their building is on a corner site where several streets meet; but I should be sorry to see any of our main streets turning into a series of individual buildings with no relation to one another, as is so often the case in America. Apart from this independence of its surroundings and a certain apparent thinness in the walls, which we shall have to recognize as inherent in a veneered steel structure, it is fine to have a great new commercial building whose masses pile up so nobly, and whose lines are so clean-cut and decided. The one little detail to which exception has been taken, apart from the interesting sculpture which was bound to shock the man in the street, is the weakness of the arches (the only ones in the building) which link the wings to the central mass. That, however, is a small point. It is a great thing to have among us a building so truthful to its programme and to its construction, which relies so happily on the effect of its masses rather than on that of its detail. Here at last we are producing something masculine and entirely unaffected.

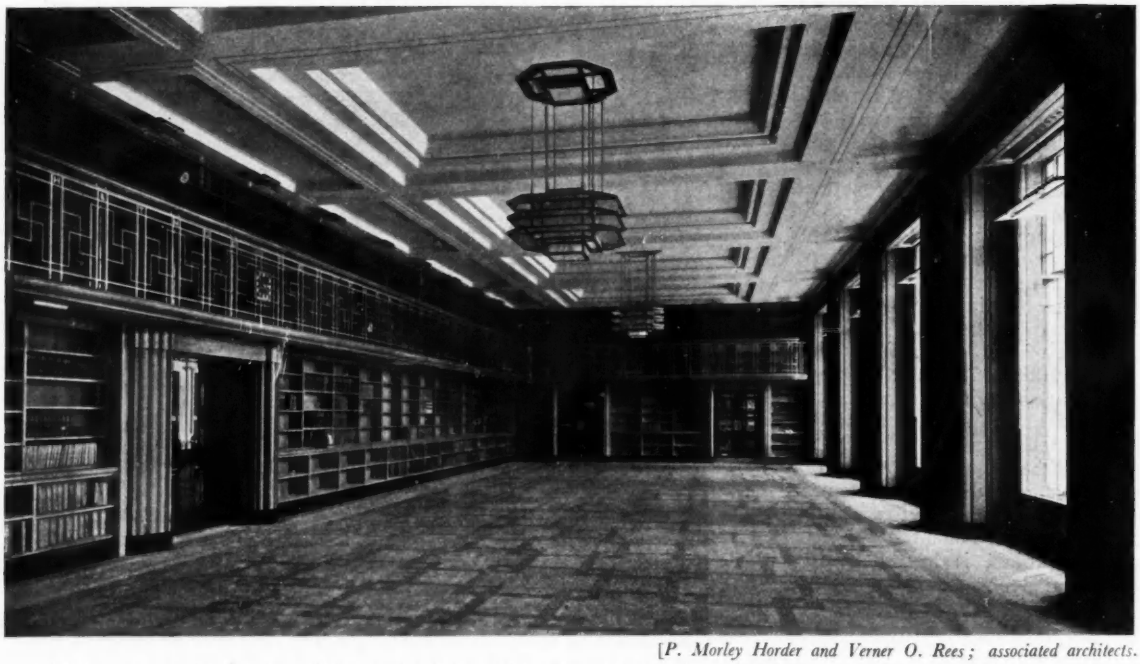
IDEAL HOUSE

The famous black building for the National Radiator Company in Great Marlborough Street, veneered with polished slabs of black granite and decorated at the base and the top with brightly enamelled copper sheeting, and with all the windows lightened

with gilded window-bars, is another brave, vigorous thing which makes 1929 a notable year. Here, again, the simple mass of the building is allowed to tell to the uttermost, the regularly spaced windows, all of the same size and shape, in no way interfering with it. Nevertheless, just as I hope we are not in for a series of diagonally planned tall buildings, which will play Old Harry with our streets, so for the same reasons I hope we shall not now have scattered about among more sober Portland stone or brick structures green, red, yellow or even black ones. A whole street of the latter, if you like. Nothing would be more effective—I remember a crescent on the front at Brighton in black brick—but not an indiscriminate scattering. This Radiator building has, by the way, a fine interior on the ground floor, with strong plain travertine walls and a massive stairway to the basement. The only weakness, I think, is in the ceiling, which is of an elaborateness unprepared for, and therefore slightly out of harmony with the rest of the structure.

MASONIC TEMPLE, MANCHESTER

To change now to another school of thought, let us turn to Dr. Percy Worthington's Masonic Temple at Manchester, the latest work by the architect we shall all delight to honour this year when he—the first provincial architect, if that phrase means anything today—receives the Gold Medal. This building, as I have said elsewhere, with its general air of repose and with the dignity of its great colonnaded Hall of Memory, through which every Mason has to pass to the lodge rooms, bars and restaurants, really deserves the title of "Temple." Till I went over it, I had secretly wondered what right Freemasons had to call their meeting and feasting houses temples. If, in future, they are like Dr. Percy Worthington's building, they will have every right. It is in the main a traditional building, but the front is minus a cornice, and with a great deal of plain wall surface, owing to the happy fact (for the architect at any rate) that the lodge rooms require no windows. The Temple itself has a great range of Ionic columns on either side and a semi-circular barrel vault lit through coffers in the ceiling—a rather doubtful expedient, this latter, I fancy. It is an arrangement the architect has used before in his Arts Faculty Building for the University, and on the whole a very impressive one. The rest of the rooms, which are really a vast series of club rooms, give the impression of a superior Athenæum, a result obtained by careful detailing. There is, too, a very brave curved staircase on a big scale, with the steps flying out of the wall, which delights one with its combined grace and courage.



[*By Thomas Worthington and Sons.*

The Masonic Temple, Manchester. "This building, with its general air of repose and with the dignity of its great colonnaded Hall of Memory, through which every Mason has to pass, really deserves the title of 'Temple.'"

SOME MODERNIST BUILDINGS

Swinging back again to the more modernist work, there is the well-known house at Silver End by T. S. Tait, which looks bright and cheerful now. With the sunlight emphasizing its rectangular forms, and softened by trees, it is not so strange in reality as it appeared in the drawings. There are, too, the fine interiors of the London School of Hygiene and Tropical Medicine by Messrs. P. Morley Horder and Verner O. Rees, especially that of the

[*P. Morley Horder and Verner O. Rees; associated architects.*

"There are the fine interiors of the London School of Hygiene and Tropical Medicine, especially that of the library."

library. The exterior of this latter building, with its compromise between the older methods and the new, seems to me a little heavy, especially in some of its ornamental detail. The Firestone Factory, on one of the new arterial roads out of London, is much the same in this respect. This latter building is by Messrs. Wallis, Gilbert and Partners, who have built so many fine factories. The monumental, almost classical, appearance of the front of this one is probably due to a laudable desire to do deference to the main road on which it is built. The actual programme seems hardly to call for such treatment, and I am not sure that it would not have been better if the whole building had been frankly treated as a factory, instead of a factory hiding behind a sort of art gallery. The "art gallery" part, however, is very interesting in itself, and has a fine breadth about it. Striking colour effects have been obtained by the use in special places of glazed tiles, which have probably been introduced with a view to their advertising value on motorists going by at sixty miles an hour—a rather difficult addition to the architect's programme.

FIRST CLUBLAND CHURCH

Neither old nor new, but fresh and delightful, like his well-known Acton Church for the Deaf and Dumb, is Edward Maufe's new church at Walworth. It has been called "The First Clubland Church." As in his other building, this one has the church proper on an upper story, but it is not raised to the same extent and the building has not therefore quite the same romantic-looking exterior. Here the church has a narthex between the

two staircase towers, from the terrace in front of which outdoor services can be held, with the congregation in the courtyard of the building. The interior has a painted timber roof like the Acton one, but not so fine an east end.

The long single-light windows, with their interesting arches made up of series of ogee curves, rather reminiscent of Sweden, are an interesting feature inside and out.

SALVATION ARMY HOSTEL

Slightly akin to this church in its semi-romantic brick architecture is the great group of buildings for the Salvation Army at Denmark Hill by Messrs. Gordon and Viner and Sir Giles Scott, which is one of the most important undertakings of the year both in size and achievement. Here is a great training institution economically built, which might very easily have looked like a barracks or a workhouse. Instead, by good simple building, with broad stretches of fine brickwork, and windows so placed and divided as to form an interesting foil to it, and without any definitely architectural feature save a tower (using the word "architectural" in a restricted sense), the architects have achieved a fine monumental quality which flows naturally out of the planning. The projecting of the two staircases, for instance, to each hostel block, placed naturally one-third of the way from either end, makes a pair of strong vertical elements, such as modern German architects are so fond of, while the overhang of the roofs everywhere at the same level gives the necessary horizontal emphasis. The fine strong square tower is one of Sir Giles's best, somewhat like a simplified brick edition of his great tower for Liverpool.

BOURNEMOUTH PAVILION

The Bournemouth Pavilion, by Messrs. Home and Knight, is one of the best buildings which have come out of an open competition of recent years, and somehow, neither externally nor internally, looks like a competition building.

Its detail, though not modern in

[*By Sir Edwin Cooper.*

Gray's Inn Library : the front to the Square.

the strict sense—it appears to be based on Soane, the modernist of his time—has too individual a flavour for the work of the man hurrying on to the next gamble. One expects a good plan, of course, in a competition building, and the plan here is particularly spacious and effective, especially for the circulation of large crowds.

The building, placed in the public gardens, has wisely been kept low. and, while admitting cornices, pilasters and other classical features, is very broad, strong and massive in its general composition.

NOTTINGHAM EXCHANGE

The Council House at Nottingham, by T. Cecil Howitt, is another great municipal building, this time placed rather magnificently at the head of the market square and no doubt appealing very much to the pride of the councillors.

It is, indeed, an impressive classical structure, with a great pediment and a tall dome such as one did not imagine would be built again until some classical revival, perhaps a hundred years hence. There is no denying this exercise in standard forms is imposing both within and without. It shows the safety of such forms, and "safety first" for great municipal structures is not a bad maxim. Nottingham has given herself a great advertisement with the general public—one that all can read—but Stockholm has given herself a better, which, though few can read it, nevertheless provokes discussion. Some advertisers think that is, after all, the best form of advertisement.

CHURCH OF CHRIST SCIENTIST

There is one more semi-modernist building to be mentioned, and then we come to the City architecture, which I have left to the end because we seem to know all about it beforehand. It is the new Church of Christ Scientist, by Paul Phipps, in Kensington. Its modernism, indeed, is very English and gentle. It consists chiefly in simplifying the ordinary classical detail, while keeping to Wren-like proportions.

This makes a very pleasant exterior in brick and stone, with a side doorway under a big window as at St. Paul's, without, however, any of the baroque swagger of Wren's splendid feature. Nevertheless, Mr. Phipps's method suits our present mode of thought.

His interior, too, is not unlike that of a Wren church, with its galleries pulled out and its ornament shaved off. It is a good meeting-house, with a reduced Wren organ as the central feature.

STOWE CHAPEL

I suppose I ought to mention Stowe Chapel. If Sir Robert Lorimer had not died I should have dealt with this building at length, not because I think it a good building, but because I think it a great pity to strain classical proportions, as he has done both externally and internally, so near a great example of the accepted way of using them.

If nothing more sympathetic to the old work could be managed by the architect, a chapel in some contrasting manner would have been a better compliment to the work of the brothers Adam.

ARCHITECTURE IN THE CITY

Imperial Chemical House, by Sir Frank Baines, and Royal Mail House, by Sir Edwin Cooper, are great commercial City buildings wherever they may be, both designed, one feels, to express commercial success and then, and then only, to provide so much office space. Of the two I prefer the Royal Mail building. The architect appears to have the greater scholarship at his command. Perhaps from the distance Imperial Chemical House (what a dreadful name !) is the more effective. Its Lutyens-like composition certainly carries well. The Royal Mail building seems overloaded in detail for the narrow streets of the City. Internally, however, Sir Edwin Cooper's halls and windows are becoming quite like Adam in their simple shapes and reserved detail. These appeal to me much more than did those of his Port of London building or even of his Lloyds building. As usual, they are all very skilfully planned. It can be no easy matter to get fine classical plan forms on to a City site. The City of London will no doubt be the last stronghold to surrender to the modernist movement, and probably Sir Edwin the last architect.

Nevertheless, it is clear that that movement is already having a simplifying effect even on banks and shipping offices. Victorian fruitiness is giving way all round to neo-Georgian elegance, as the Royal Mail interior proves.

STRONGHOLDS OF INDUSTRY

The Cloth Mills of the Cotswolds

BY THOMAS FALCONER

THE beautiful stone-built cloth mills in the Stroudwater valleys of Gloucestershire were erected in the eighty years between 1760 and 1840, that period known as the Industrial Revolution, when the inventions of power loom and spinning jenny overthrew the domestic system.

Before this period cloth weaving had been a cottage industry, carried on with the simple tools that had changed but little since the fourteenth century. In the early days of the domestic system the only process necessarily carried out in a mill was the fulling or felting of the cloth. The millmaster of the valleys followed in his style of building the woolman of the hills, and

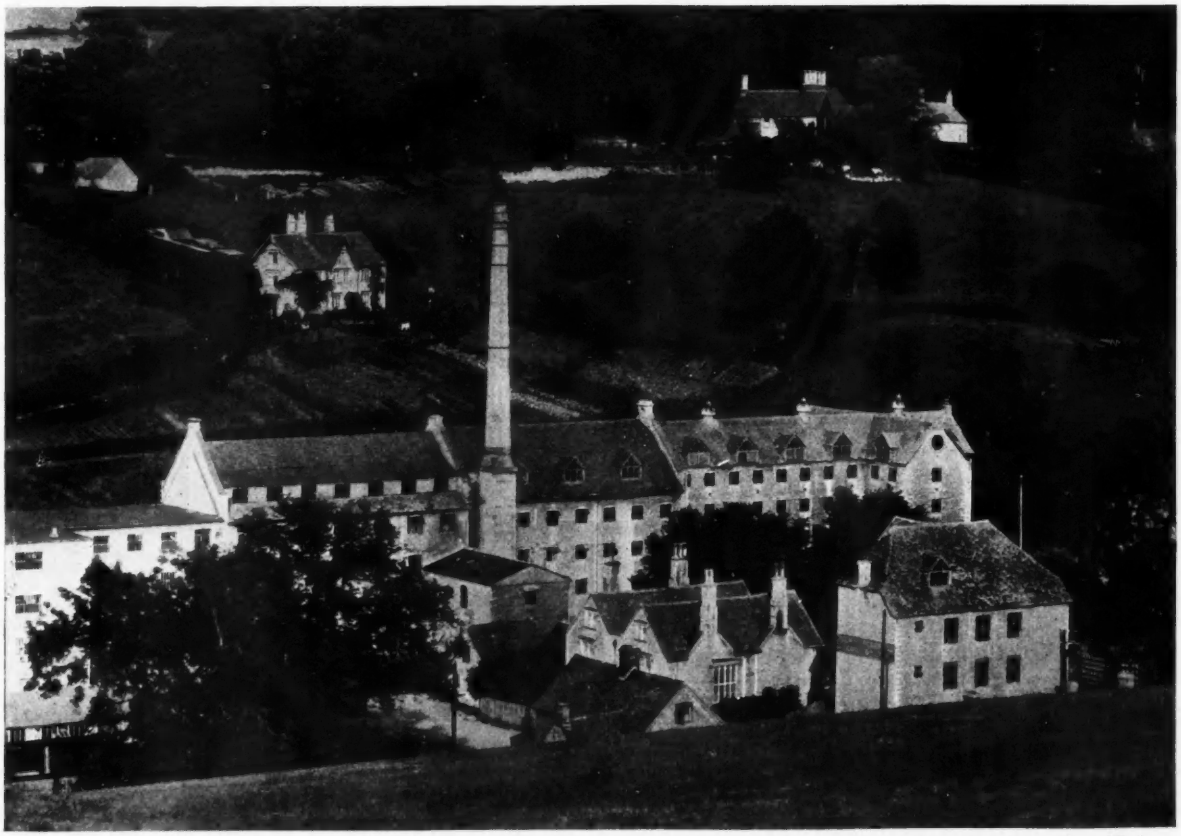

Figure four. Looking down from the hillside on Dunkirk Mill buildings, erected between 1798 and 1855. It will be noted that some of the buildings—for example, those on the right—are of the Cotswold gabled type.

Figure five. The bell- and dove-cote at Dunkirk Mill, one of the minor architectural features to be found in abundance in the stone buildings of the Stroudwater valleys.

Figure six. A nearer view of part of Dunkirk Mill, design. In the foreground is the tennis court of the celebrated novel,

Figure eight. Woodchester Mill, a typical example of the Renaissance style of architecture, characteristic of the majority of the mill buildings in the district. It was probably erected about 1740.

showing, more clearly, the details of the typical gable private garden. This is the mill of Miss Mulock's John Halifax, Gentleman.

Figure seven. Another interesting detail: the bell cupola at Woodchester Mill, pictured at the bottom of the facing page, seen here at close quarters. It is very similar to that of Hope Mill.

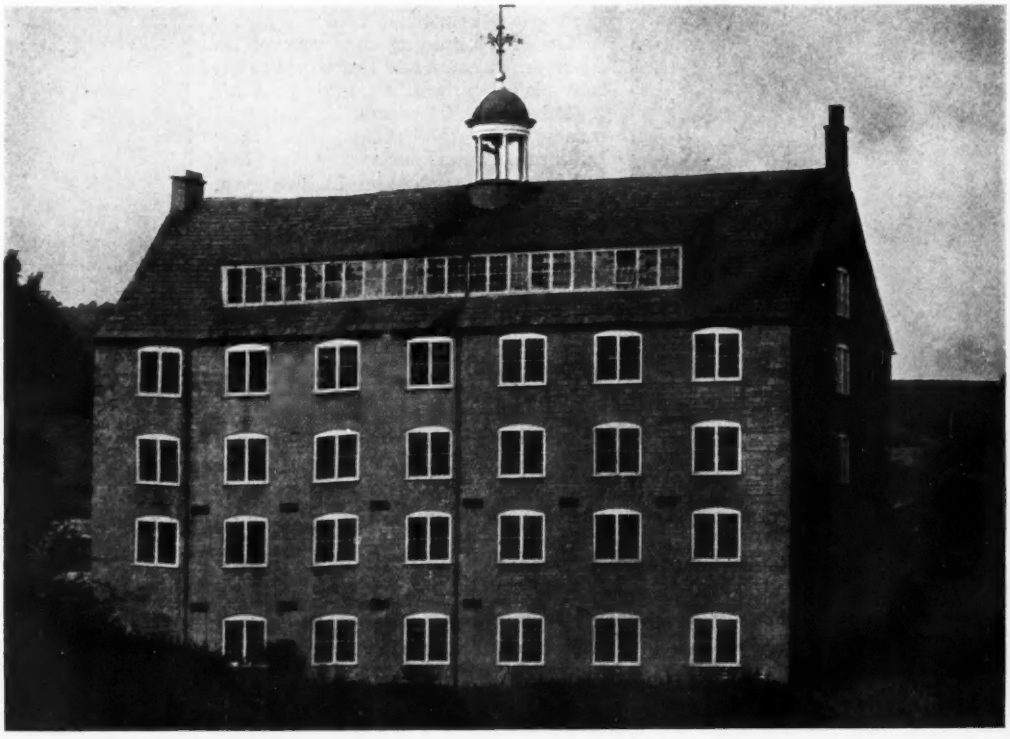

Figure nine. Hope Mill, Brimscombe. Though smaller than Woodchester, it has obvious points of similarity. It is interesting to note that the architectural style does not necessarily indicate the date, however.

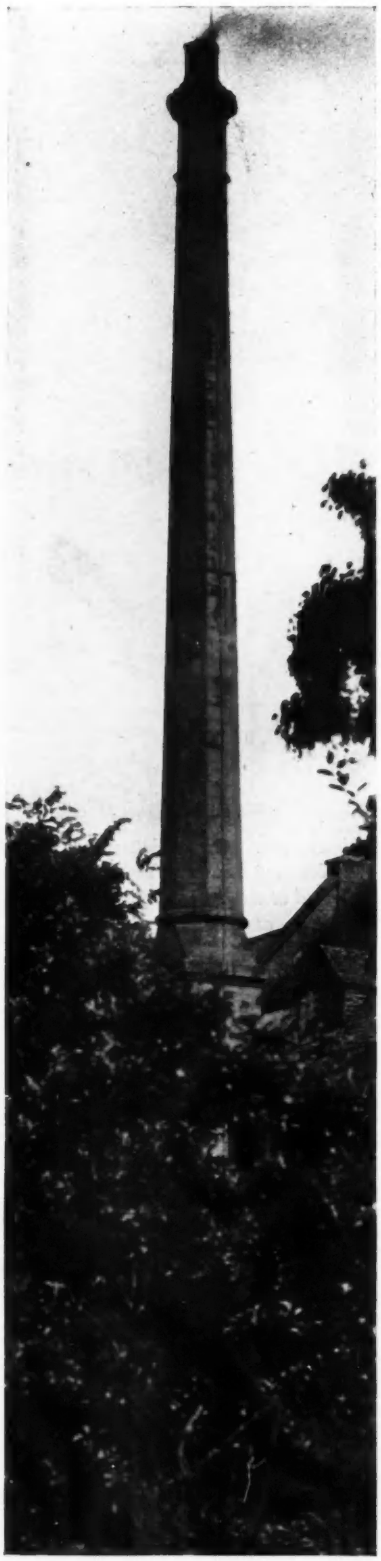

Figure ten. The graceful chimney-stack of Dunkirk Mill, one of the tallest in the whole of the Stroudwater valley district.

beside the streams are found gabled and stone-tiled houses of great interest. The remains of an early fulling mill with millmaster's house adjoining is seen in Merrett's Mill, Woodchester (figure two), dated 1672.

Nearby these early mills are sometimes found the strange martello-like towers, which were built as drying chambers for the wool after it had been scoured and rinsed. Their floors were latticed to allow the hot air from the fires on the ground floor to pass through the wool and out by the flue in the roof-apex.

There is a good example by the roadside at Frogmarsh (figure one) in the Woodchester valley. These towers are much like those dovecots that display the ingenuity of the tiler and the way in which he worked up his stone tile on the curve. In passing, it may be of interest to observe that the large jars, now keenly sought for by collectors of garden ornaments, were imported by the millmasters from the Mediterranean as containers of the Gallipoli oil used on the wool before the process of carding. These jars were then given out by them to the cottages and inns around as vessels for the collection of the urine in which the wool was boiled in order to loose it of its natural grease. The mill at Frogmarsh has undergone many changes, but the summer or music house (figure three) built by the mill owner for his Dutch garden still stands, though the garden has gone.

The mills of the late eighteenth and early nineteenth centuries, though built in a difficult period and to house the new machinery, display the fitness for purpose and generosity of spirit inherent in the earlier stone masons of the Cotswold district. The mill owner of the day, retaining the pride of his forebears in home and hearth, reflected that right spirit of ownership in his mill building. Records of the mill owners and the occasion of their building schemes have come down to us, but in very few cases can the identity of designer, master builder or men employed be established.

The mill buildings sometimes follow the form of the Cotswold gabled type, as in the case of the Dunkirk Mills (figures four and six), but were more often of a Renaissance pattern, as in the cases of Woodchester Mills (figure eight), Hope Mill, Brimscombe (figure nine), and Fromehall Mill (figure eleven). The type does not necessarily indicate the date, for the Dunkirk Mills were built in sections between the years 1798 and 1855, whereas the Woodchester Mill was probably built about 1740. Dunkirk Mill is the mill of Miss Mulock's famous novel, *John Halifax, Gentleman.*

There are many interesting minor architectural features in these mills, such

Figure eleven. Nor is this smaller example, at Fromehall Mill, a Renaissance building, devoid of proportions of elegance.

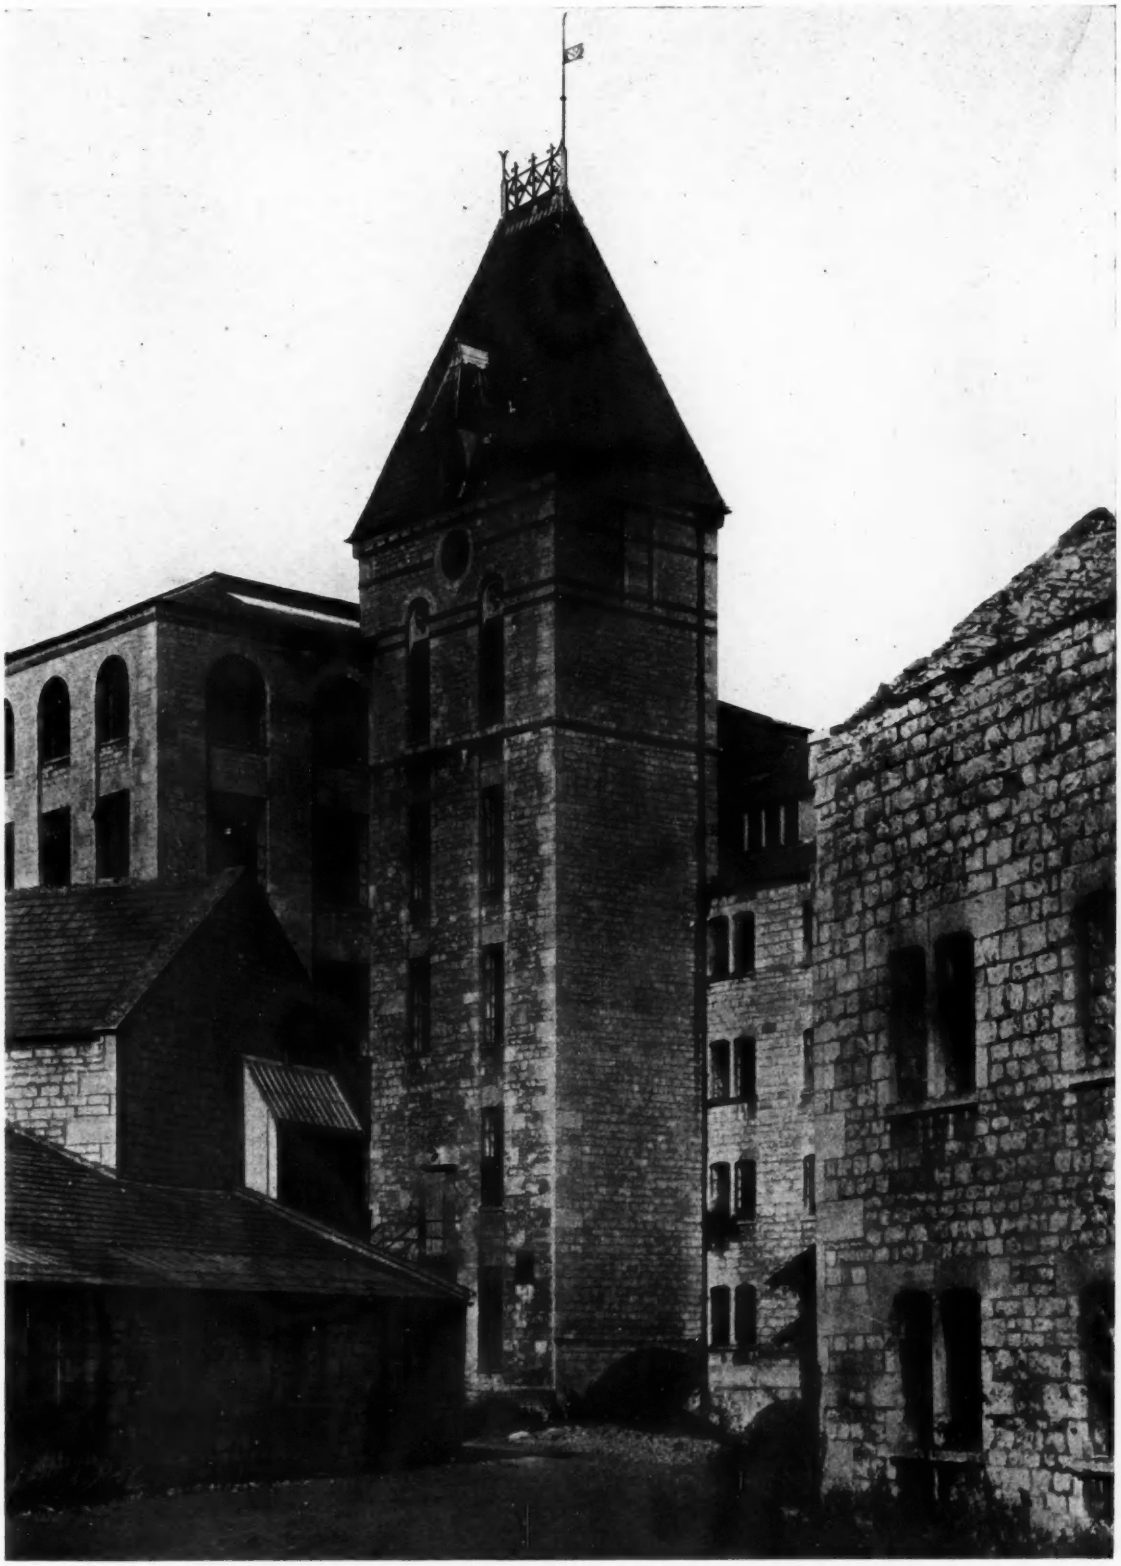

Figure twelve. Mr. Bodley designed this Gothic tower of Ebley Mill while in the district about the building of the neighbouring church at Selsley, which dates from the middle of the nineteenth century.

Figure thirteen. Stanley Mills, the measured dignity of which bears witness that even so late as 1850 the tradition of good mill building had not departed.

as doorways, bell- and dove-cotes, and bell cupolas. Figure five shows the dove- and bell-cote at Dunkirk Mill, and figure seven the bell cupola at Woodchester Mill. Hope Mill (figure nine) has a like cupola, and is in many ways similar to Woodchester Mill. Nor must the graceful chimney-stacks pass without notice. One of the largest is at Dunkirk Mill (figure ten); and the stack at Fromehall Mill (figure eleven) is not without grace. Some of the later mill work is very well done. Ebley Mill (figure twelve) boasts a Gothic tower designed by Mr. Bodley when he was building the neighbouring church at Selsley, celebrated for its windows by Burne-Jones, D. G. Rossetti, Holman Hunt, and William Morris. Stanley Mills (figure thirteen) show that even in 1850 the tradition of good mill building had not altogether departed. Although the mills have by this time passed to other hands and other trades, here and there records of their past importance are preserved. At Woodchester Mill is a painted board (figure fourteen) recording a visit of King George III, who honoured the mill with his presence in 1788, and, if truth be told, was seen with a rent in his coat-sleeve by a vast concourse of near 30,000 people.

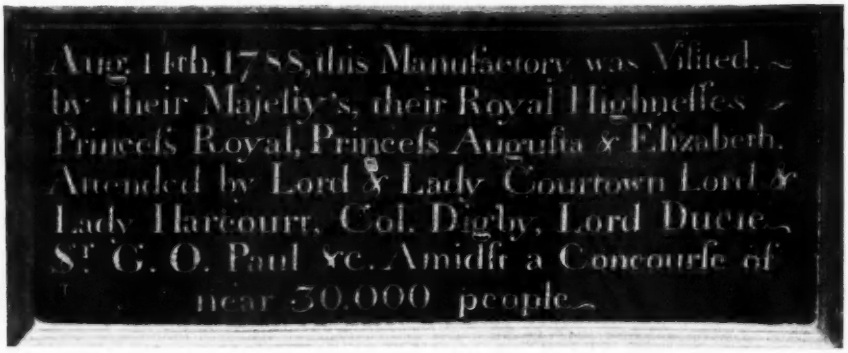

Figure fourteen. This board records a visit of King George III and members of the Royal Family to the Woodchester Mill—an event that attracted a crowd of sightseers.

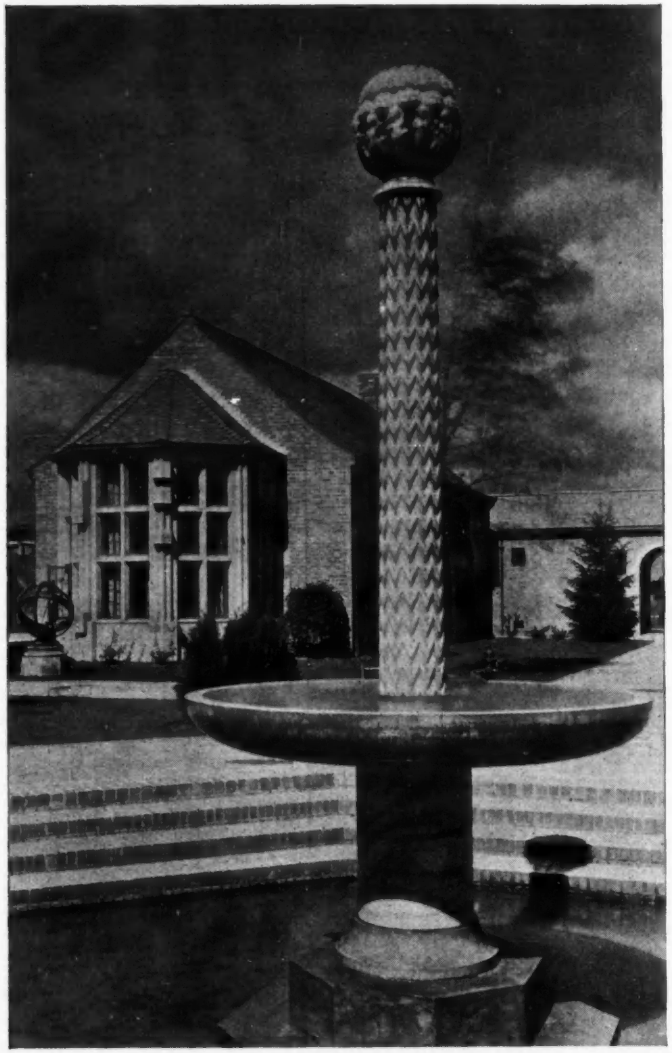
CRANBROOK SCHOOL, DETROIT, U.S.A.

A Unique American College Scheme

DESIGNED BY ELIEL SAARINEN



The academic building and observatory tower. The site of the new school is in the Bloomfield Hills, a rolling terrain, with magnificent scenery. In the foreground is an astrolabe of ancient pattern, with the Zodiacal signs, etc.

ELIEL SAARINEN, the Finnish architect, was first recognized in America in 1925, when he secured second place in the competition for the *Chicago Tribune* building. His design was never executed, but it is generally regarded as having had a marked influence upon the appearance of American skyscrapers erected subsequently. Curiously enough, it also paved the way for the early entry of this architect into a sphere more natural to his artistic temperament, for in 1926 he was commissioned to design the Cranbrook School.

This school is now being erected through the munificence of Mr. and Mrs. George G. Booth. The scheme includes separate schools for boys, girls and small children, a school of arts and crafts, and an academy of fine arts.

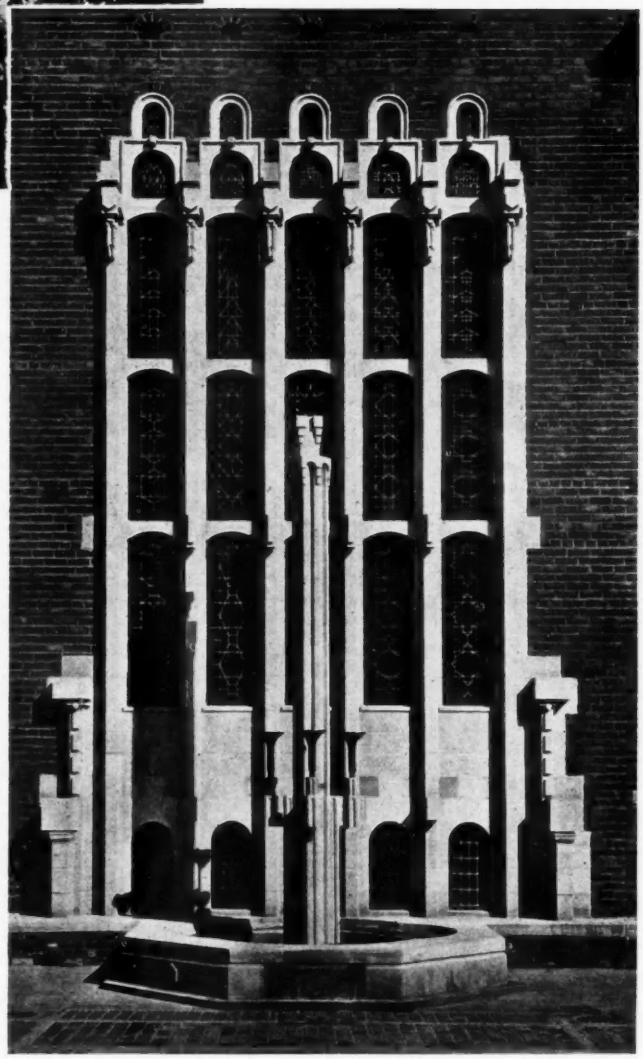
The buildings at present completed are the main school unit, a gymnasium,

The fountain court and the study hall. The buildings are planned and grouped around a number of flagged courtyards, in a manner entirely different from the conventional American collegiate plan. The ball at the summit of the fountain is carved with a design of pastoral figures alternating with open-mouthed heads of lions, etc., contrasting effectively with the repetitive toothed pattern of the column itself, which is of sandstone. The building behind it is the library.

Cranbrook School, Detroit, U.S.A.] [*By Eliel Saarinen.*

Two entrances. That on the left is a near view of the entrance to the study hall, shown on the right, above. The door and architrave are of oak, and on either side is a sandstone column, which will support a sculpture. The door panelling itself is of diamond pattern, and on the architrave are boldly carved panels, with a figurehead representing Knowledge. The other doorway leads to the dormitories. It owes a good deal to the modernistic bronze light standard—a pergola, not here illustrated, is somewhat similarly treated—and the coffering above. The steps are of hard-burnt brick.

museum, dining hall, dormitories, an infirmary, faculty residences, and service buildings.



The site of the new school is in the Bloomfield Hills, which are situated about ten miles to the north of the city of Detroit. Here the school authorities possess about seventy-five acres of rolling terrain, with magnificent scenery. The site has unusual attractions. There is, for instance, a delightful valley through which runs a stream broken by islands covered with clusters of willow trees. This part of the site has been converted into a lagoon, and on the main island a rustic cabin has been built for camp-fire celebrations.

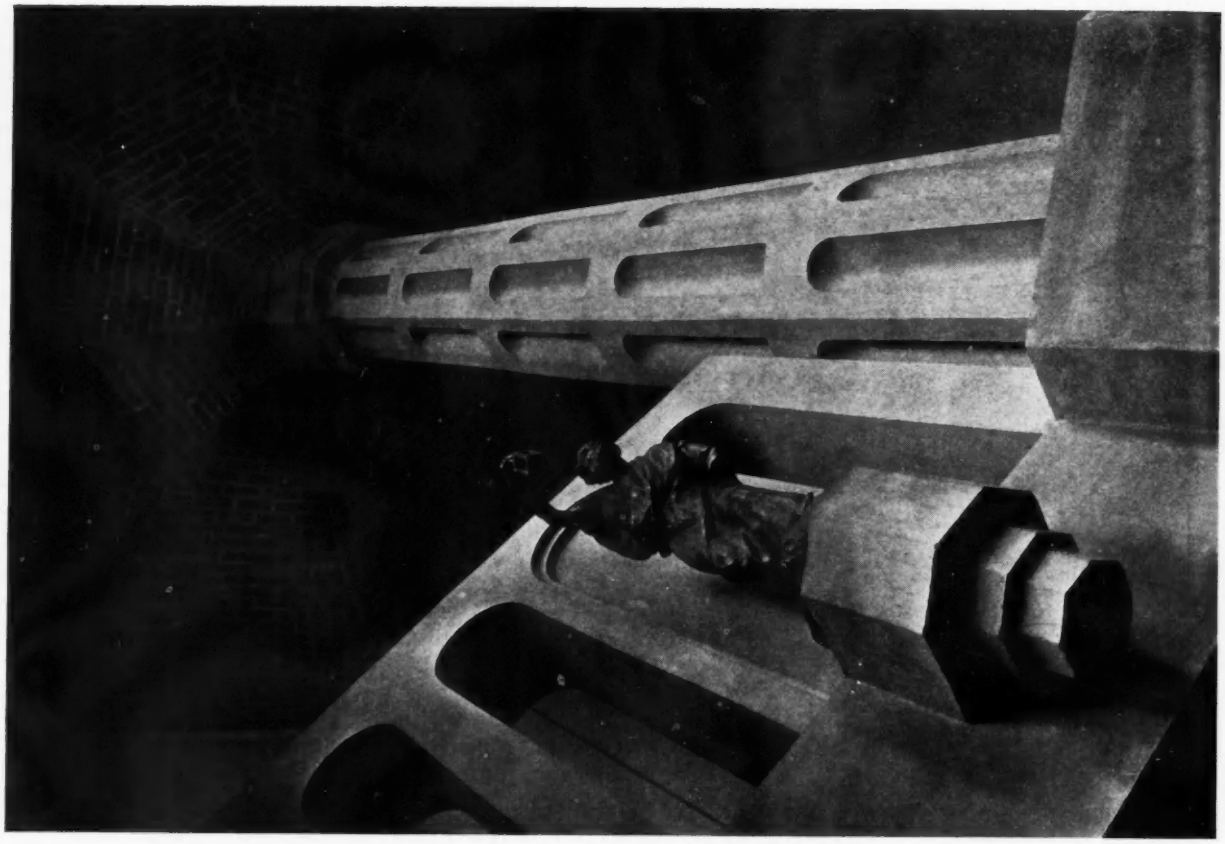
In short, the site offered an opportunity that comes rarely enough to any architect for the erection of a fine architectural conception, planned and designed in the grand manner. This opportunity has been grasped and exploited to the full by Saarinen.

In placing the buildings he has abandoned the conventional American collegiate plan. Instead, his buildings are admirably grouped and planned around a number of courtyards. In design and detail they reflect the strong individuality of the architect.

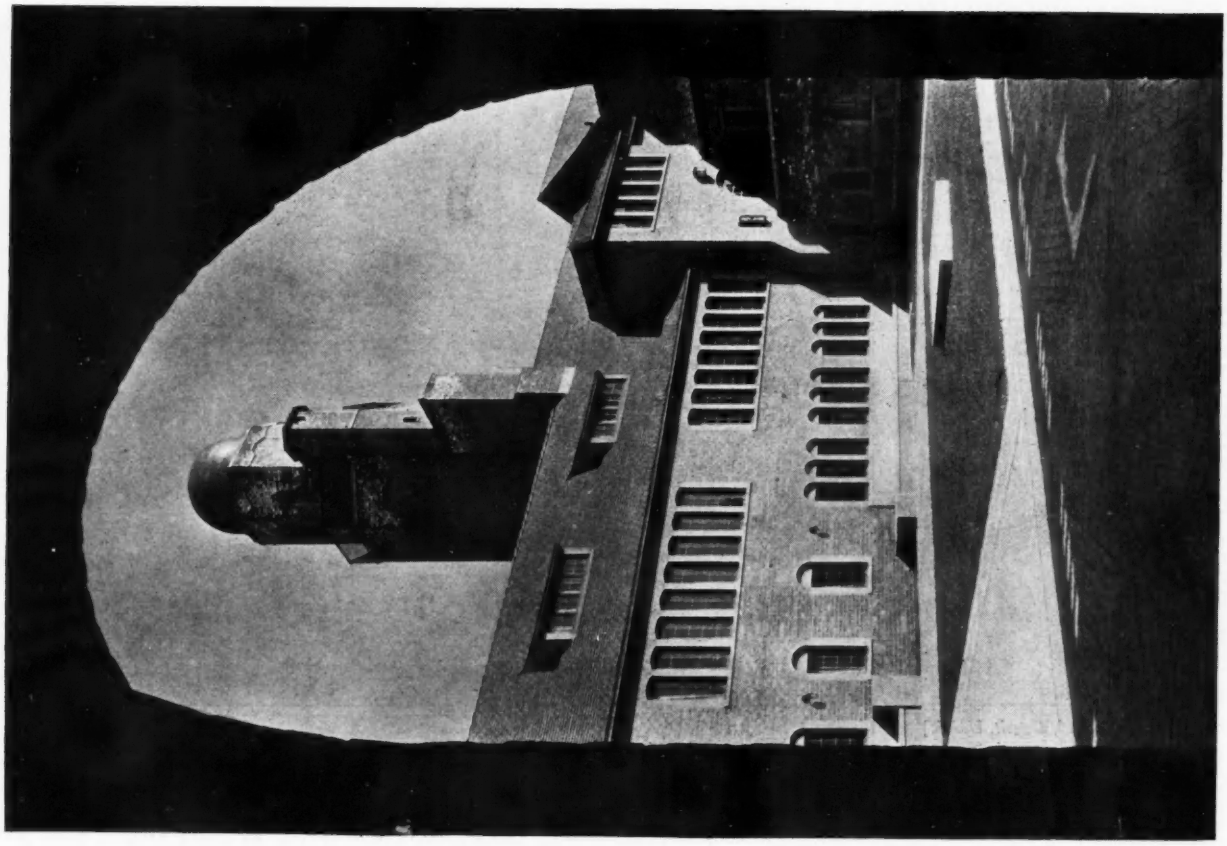
The observatory tower, the entrance to the study hall, the window to the dining hall, and the fountain in the fountain court are among the exterior details already completed that serve to give earnest of his quality. The observatory tower stands at the corner of the academic building. It is of brick, octagonal in shape, with deep circular-headed staircase windows. Above the gallery, surrounded by a railing of simple design, it is set back, and surmounted by a brick cresting and a movable dome. The study-hall entrance is a typical composition of stone, brick and wood. That most of the interior details, as well as those exterior ones mentioned, are of equal interest and character readers may be left to judge from the illustrations.

The structures are built in a yellowish brown tone of brick, among which the darker elements produce a delightful play in colour. Dressings are of sandstone. Much of the layout of gardens, lawns and brick and flag paving has been completed, so that it is possible to judge the buildings in conditions of something like permanence. That judgment can hardly fail to be that Cranbrook School bids fair to be an architectural masterpiece.

The dining hall. All the school buildings are in a yellowish-brown tone of brick, with sandstone dressings. Here and there a single brick is allowed to project to add texture to the surface.

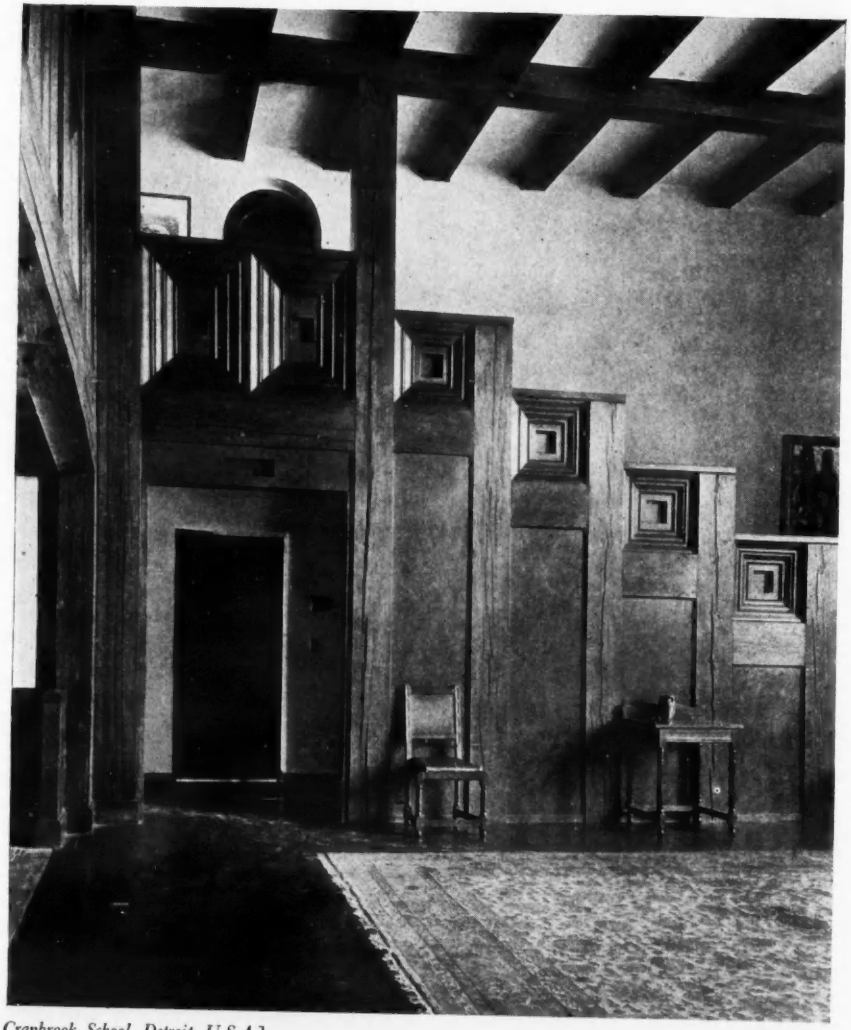


Cranbrook School. By Eliel Saarinen.



A near view of the stone window treatment of the dining hall, illustrated above, with octagonal-based detached fountain. The brickwork repays careful examination.

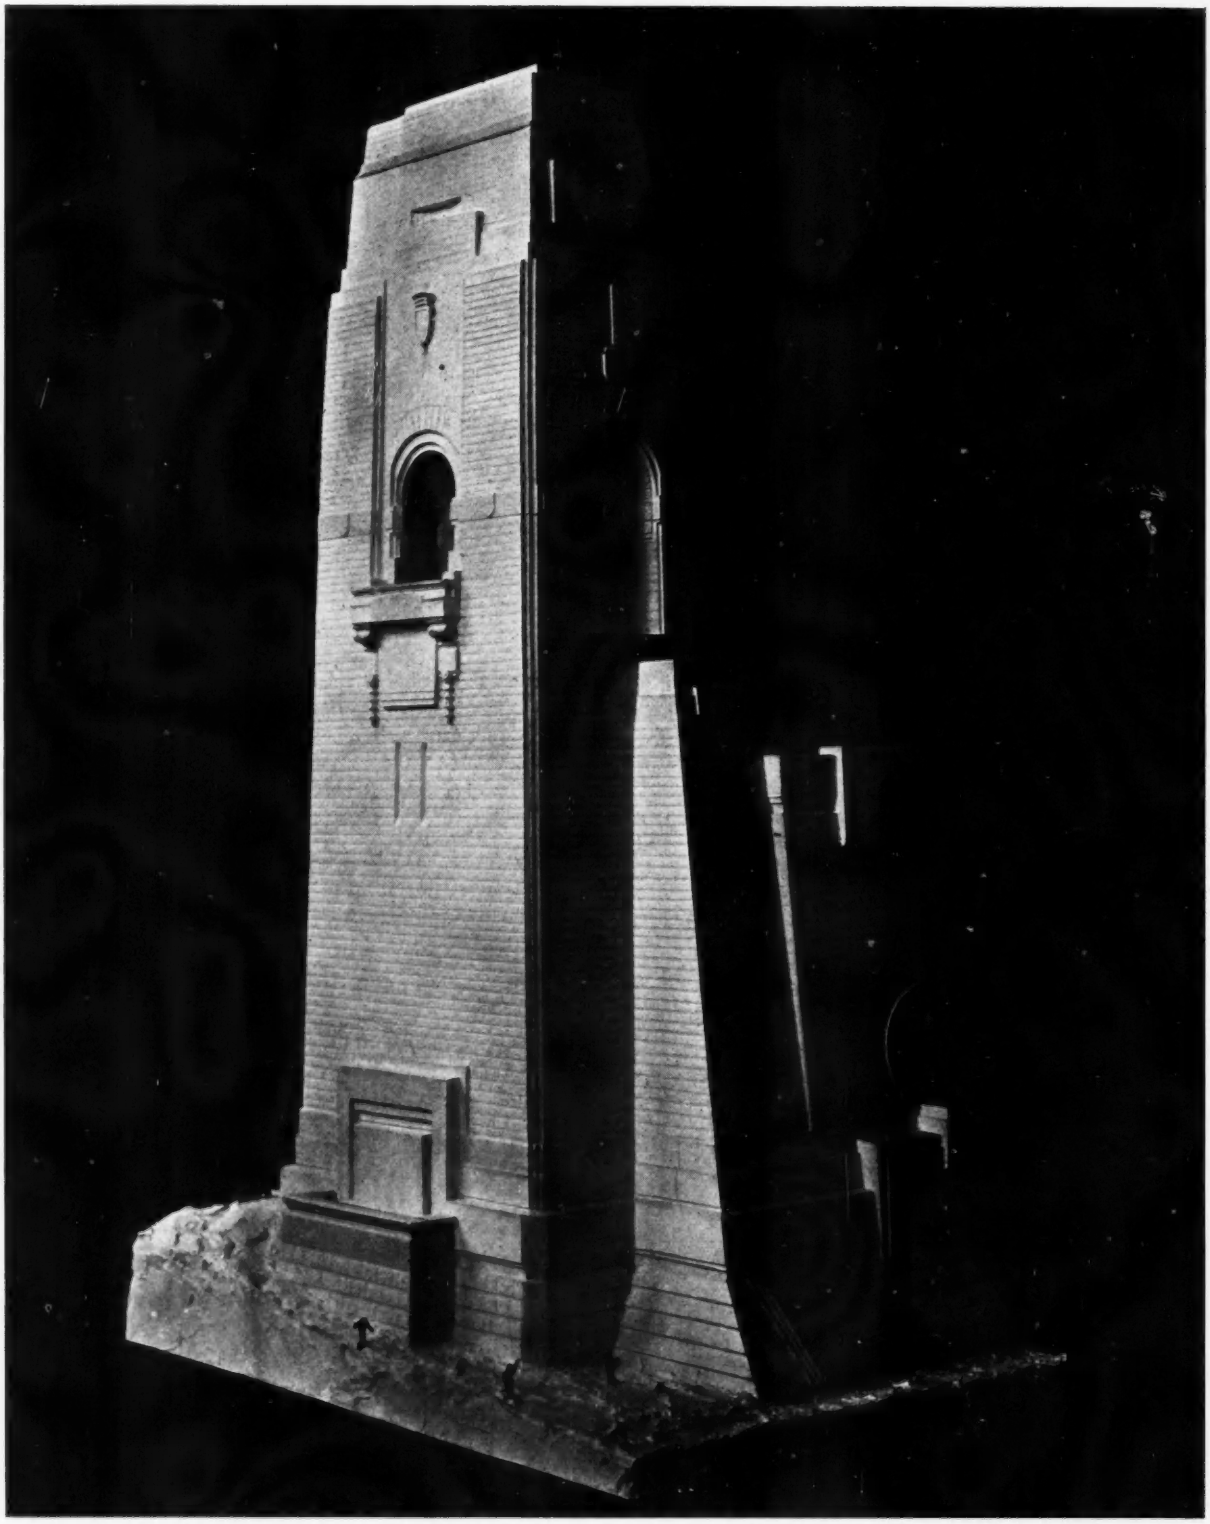
Cranbrook School, Detroit, U.S.A.] [*By Eliel Saarinen.*

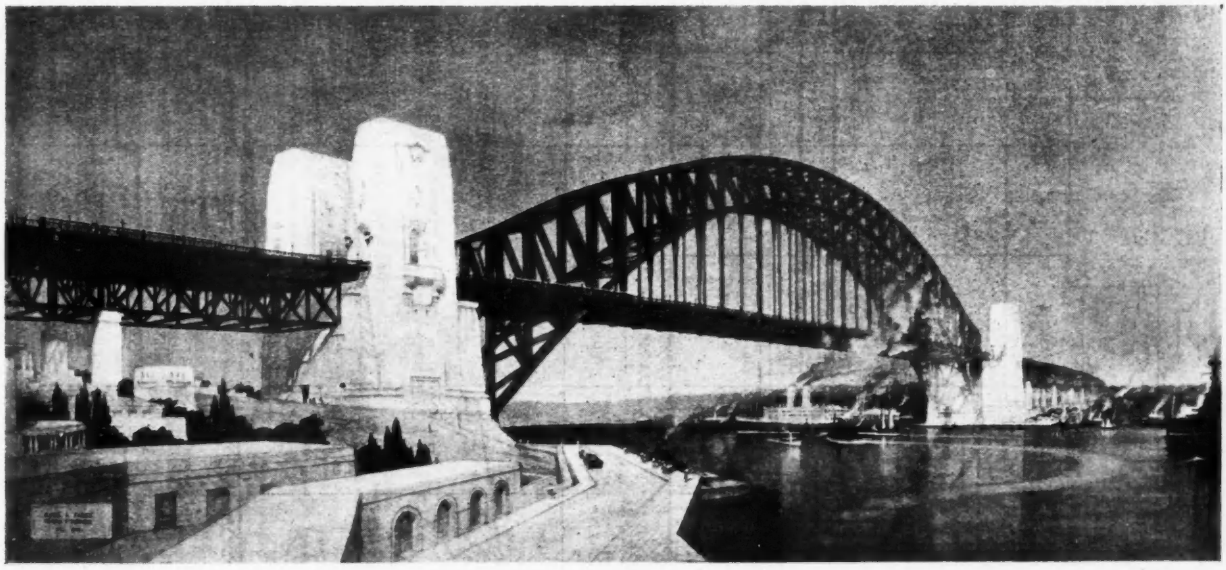


The dining-room has been designed with plain walls, with a wood-panelled dado and a plain barrel-vaulted roof. At one end of the hall are two pylons, carrying banners, placed one on either side of the fireplace. At the other end is the large stone window illustrated on the facing page. The furniture and fittings have been specially designed. An effective decorative feature is made of the piercing of the window-arch soffits.

The rear court, looking towards the academic building and observatory tower, and an interior view of the tower itself. The observatory is a unique feature of the scheme. It has

The rear court, looking towards the academic building and observatory tower, and an interior view of the tower itself. The observatory is a unique feature of the scheme. It has been equipped in the most complete manner, and the tower supports a mounting for a six-inch equatorial telescope. Its other side is illustrated in the view reproduced on page 73. The figure of Diogenes, the centre column, and the arched work in the interior are of sandstone. The walls are stucco, and the ceiling is brick.

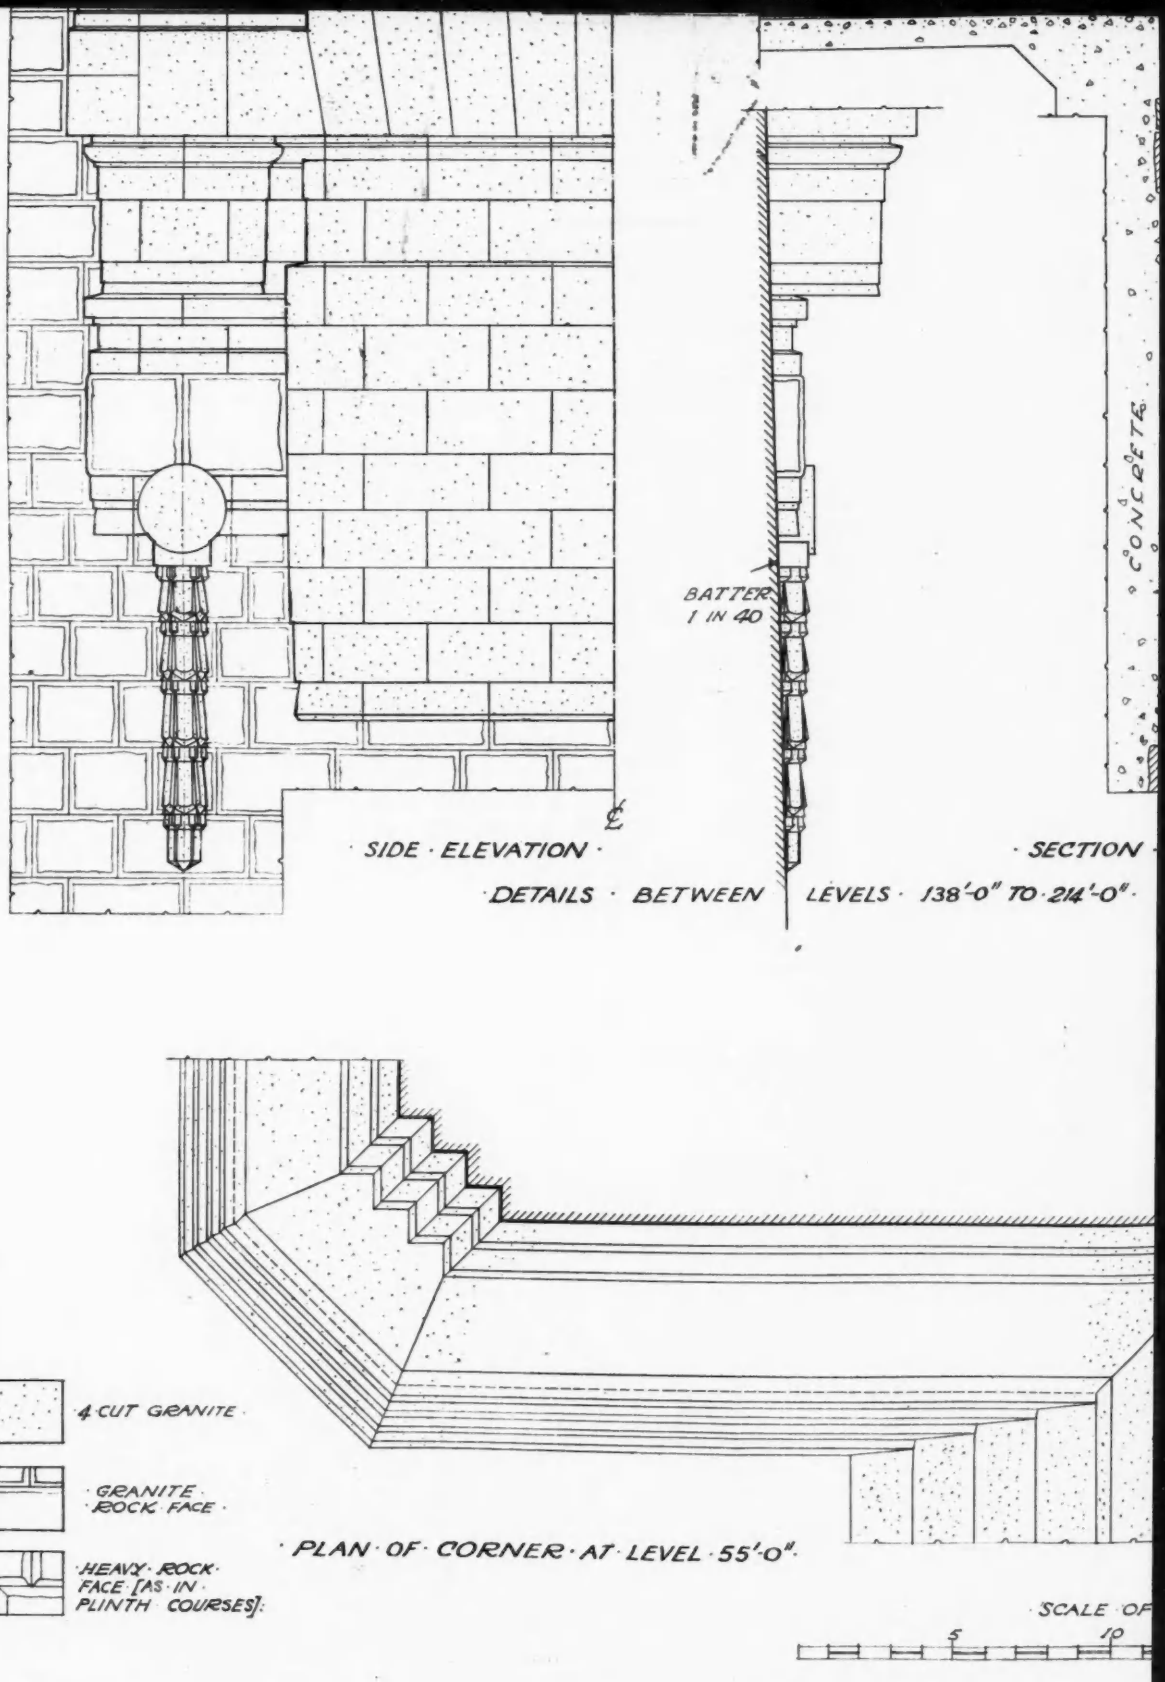




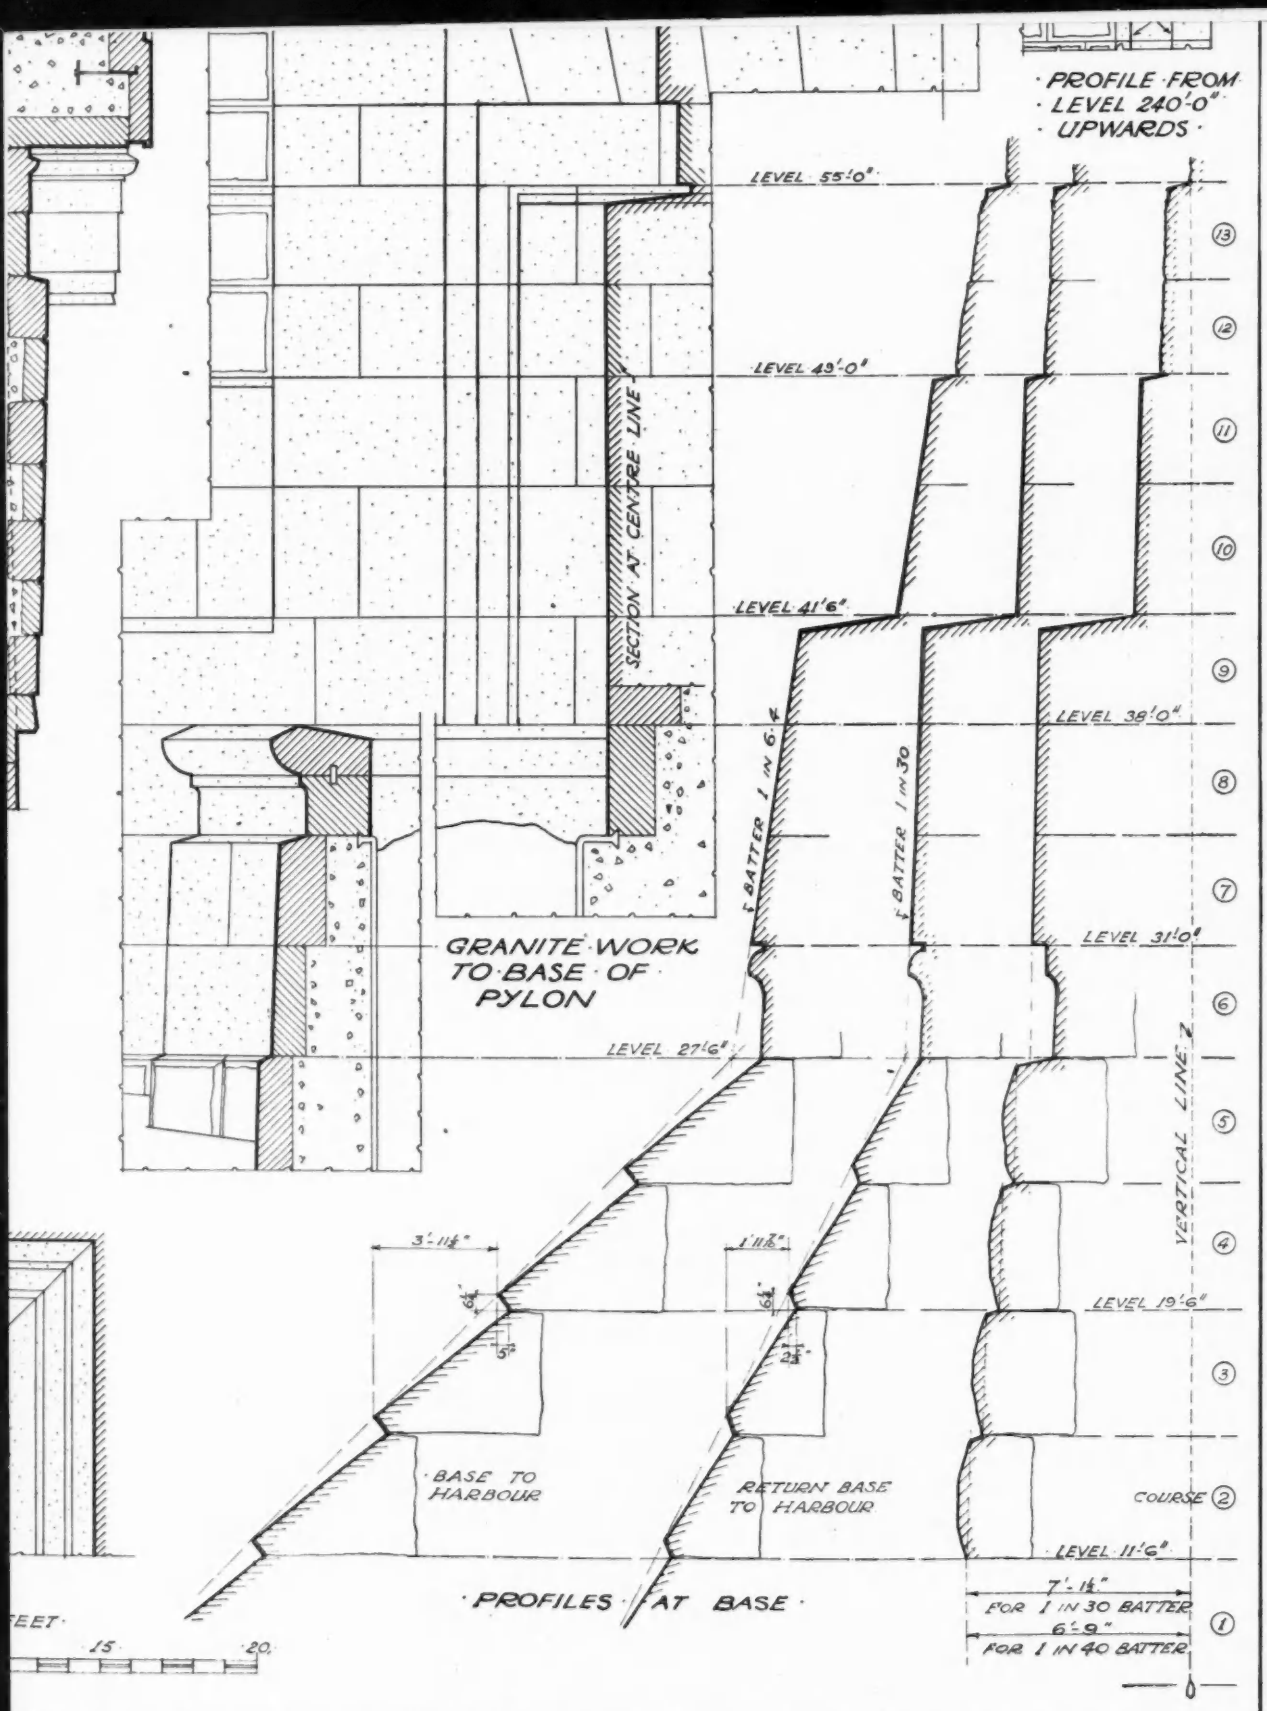
Cranbrook School, Detroit, U.S.A.] [*By Eliel Saarinen.*

In the main stair hall, two views in which are shown, linear motifs have been adopted. They have been used with great originality in the stepped oak balustrading to the staircase, in the balcony, and in the brick and tile surround to the fireplace. The deeply recessed panels, though differing in actual design, are of much the same root idea as some of the exterior detailing, and are a happy expression of diversity in unity. The walls, as well as the ceiling, are of stucco.

SYDNEY HARBOUR BRIDGE: ONE OF THE PYLONS

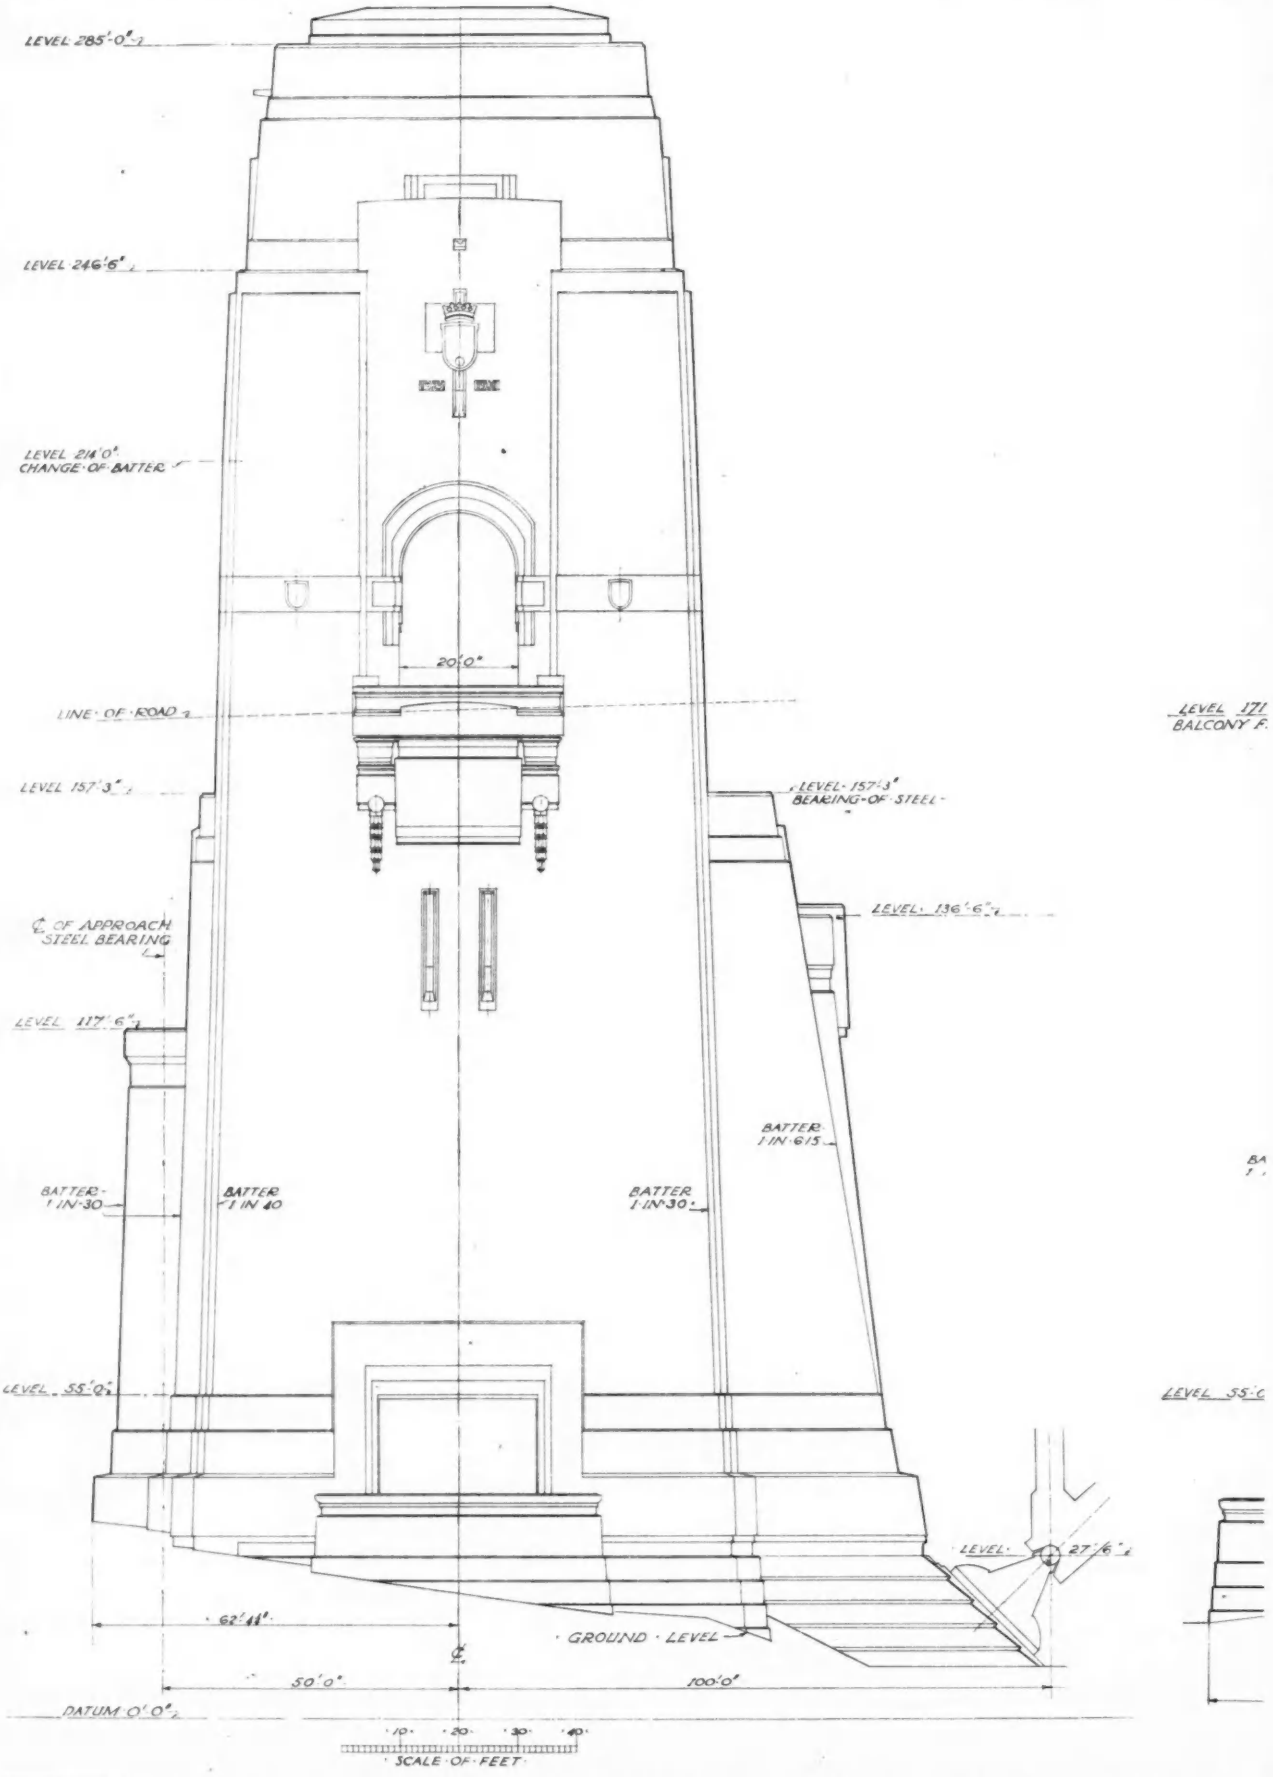


Into the model here photographed, tiny figures of men have been introduced, in order to convey a graphic idea of the scale of the pylons, working drawings of which, devoted to plans, elevations and details of the masonry, are the subject of reproductions in the pages of the special supplement bound in, facing this page.

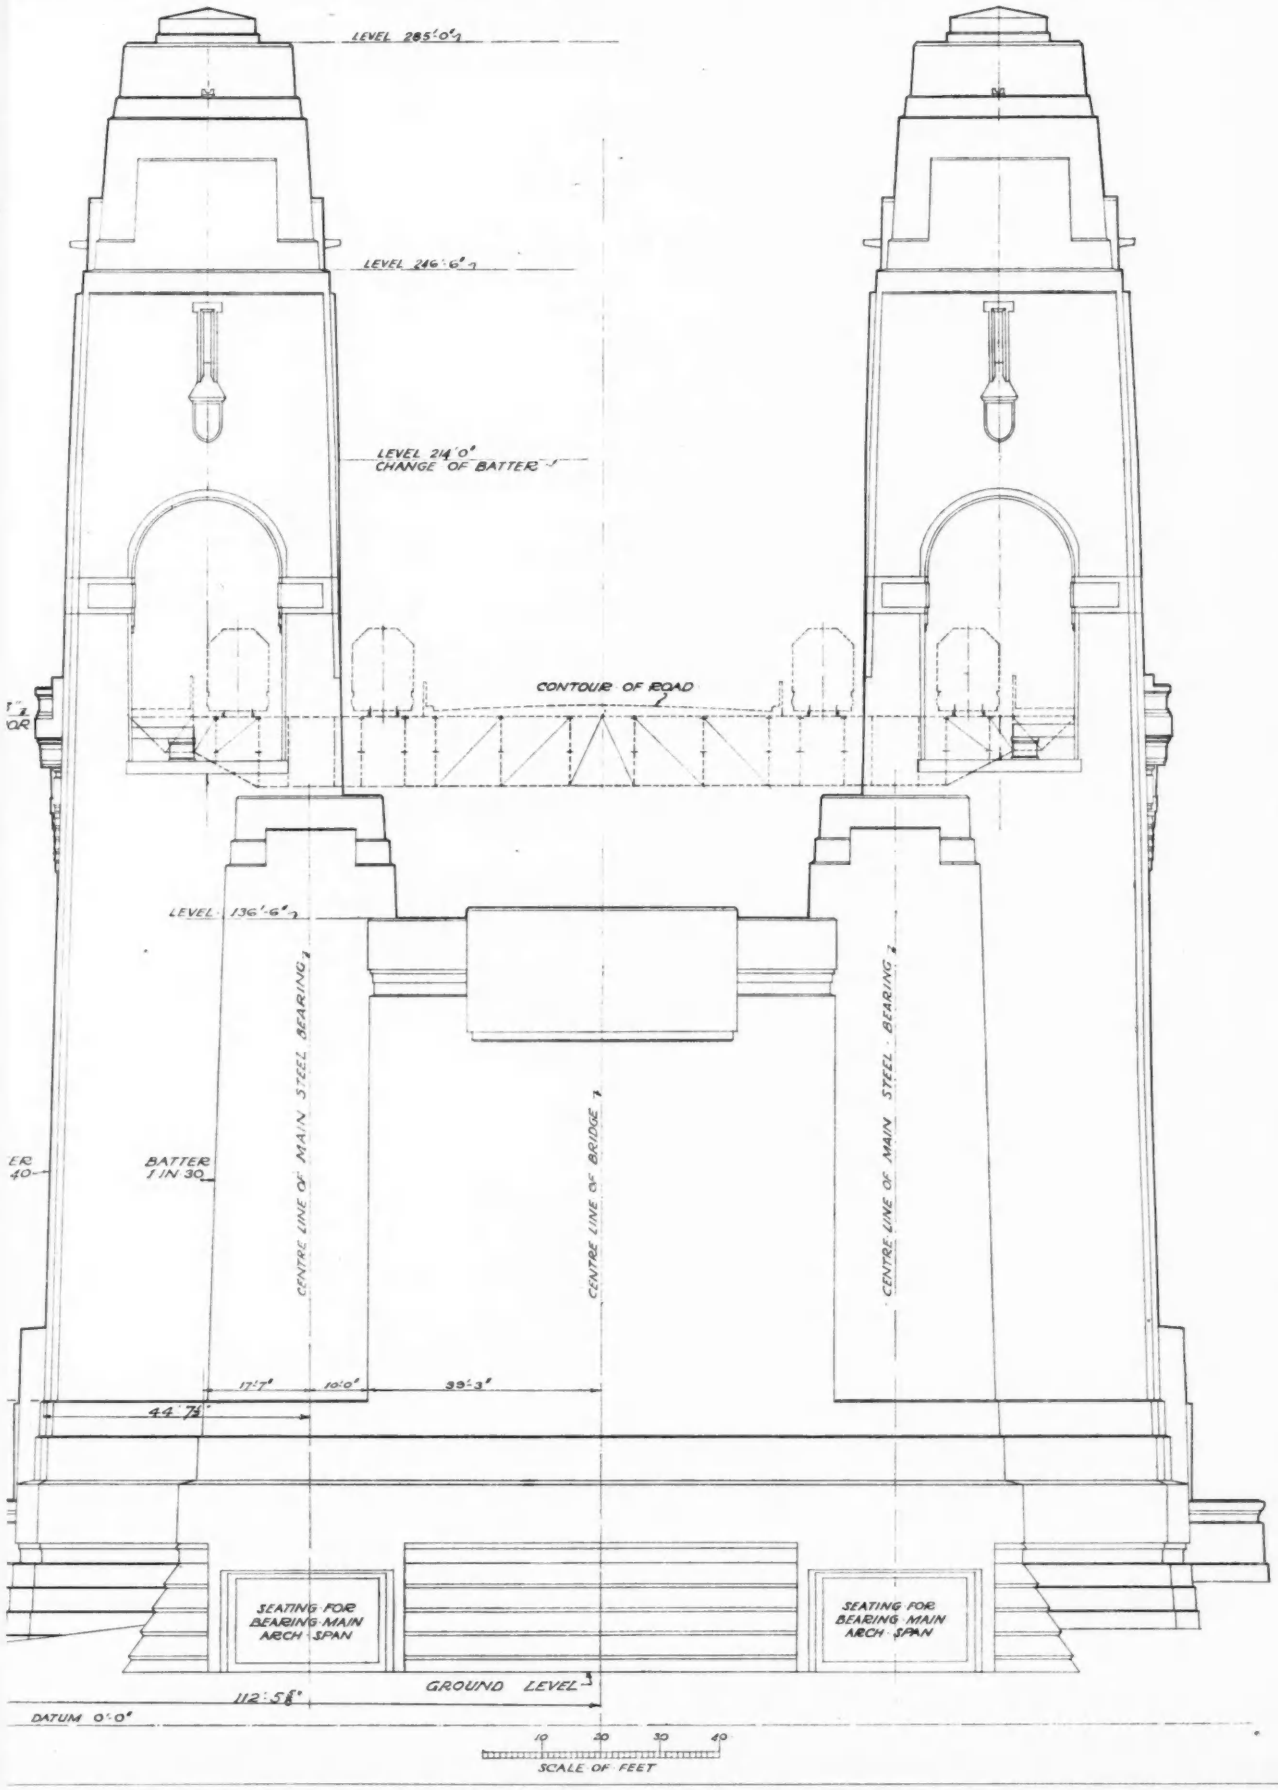


The bridge as it will appear when completed: a reproduction of the perspective drawing, by Cyril A. Farey, made from the drawings of the approved design prepared for the masonry by the architects, Sir John Burnet and Partners

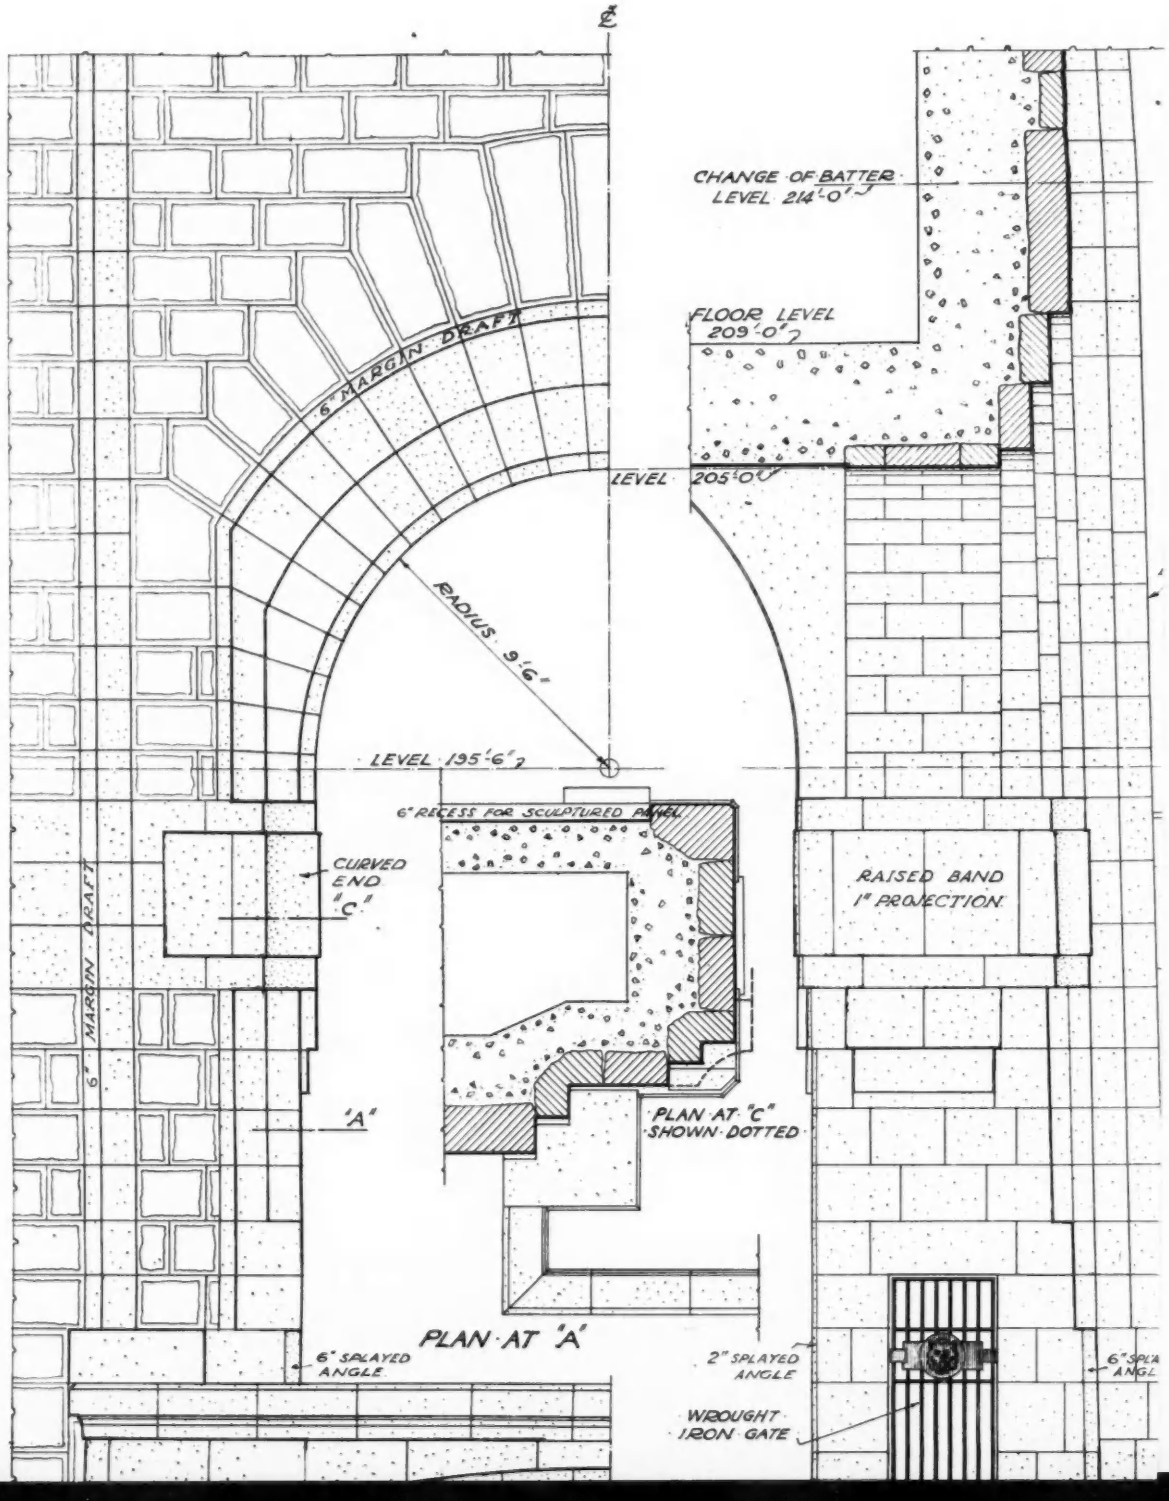
SYDNEY HARBOUR BRIDGE



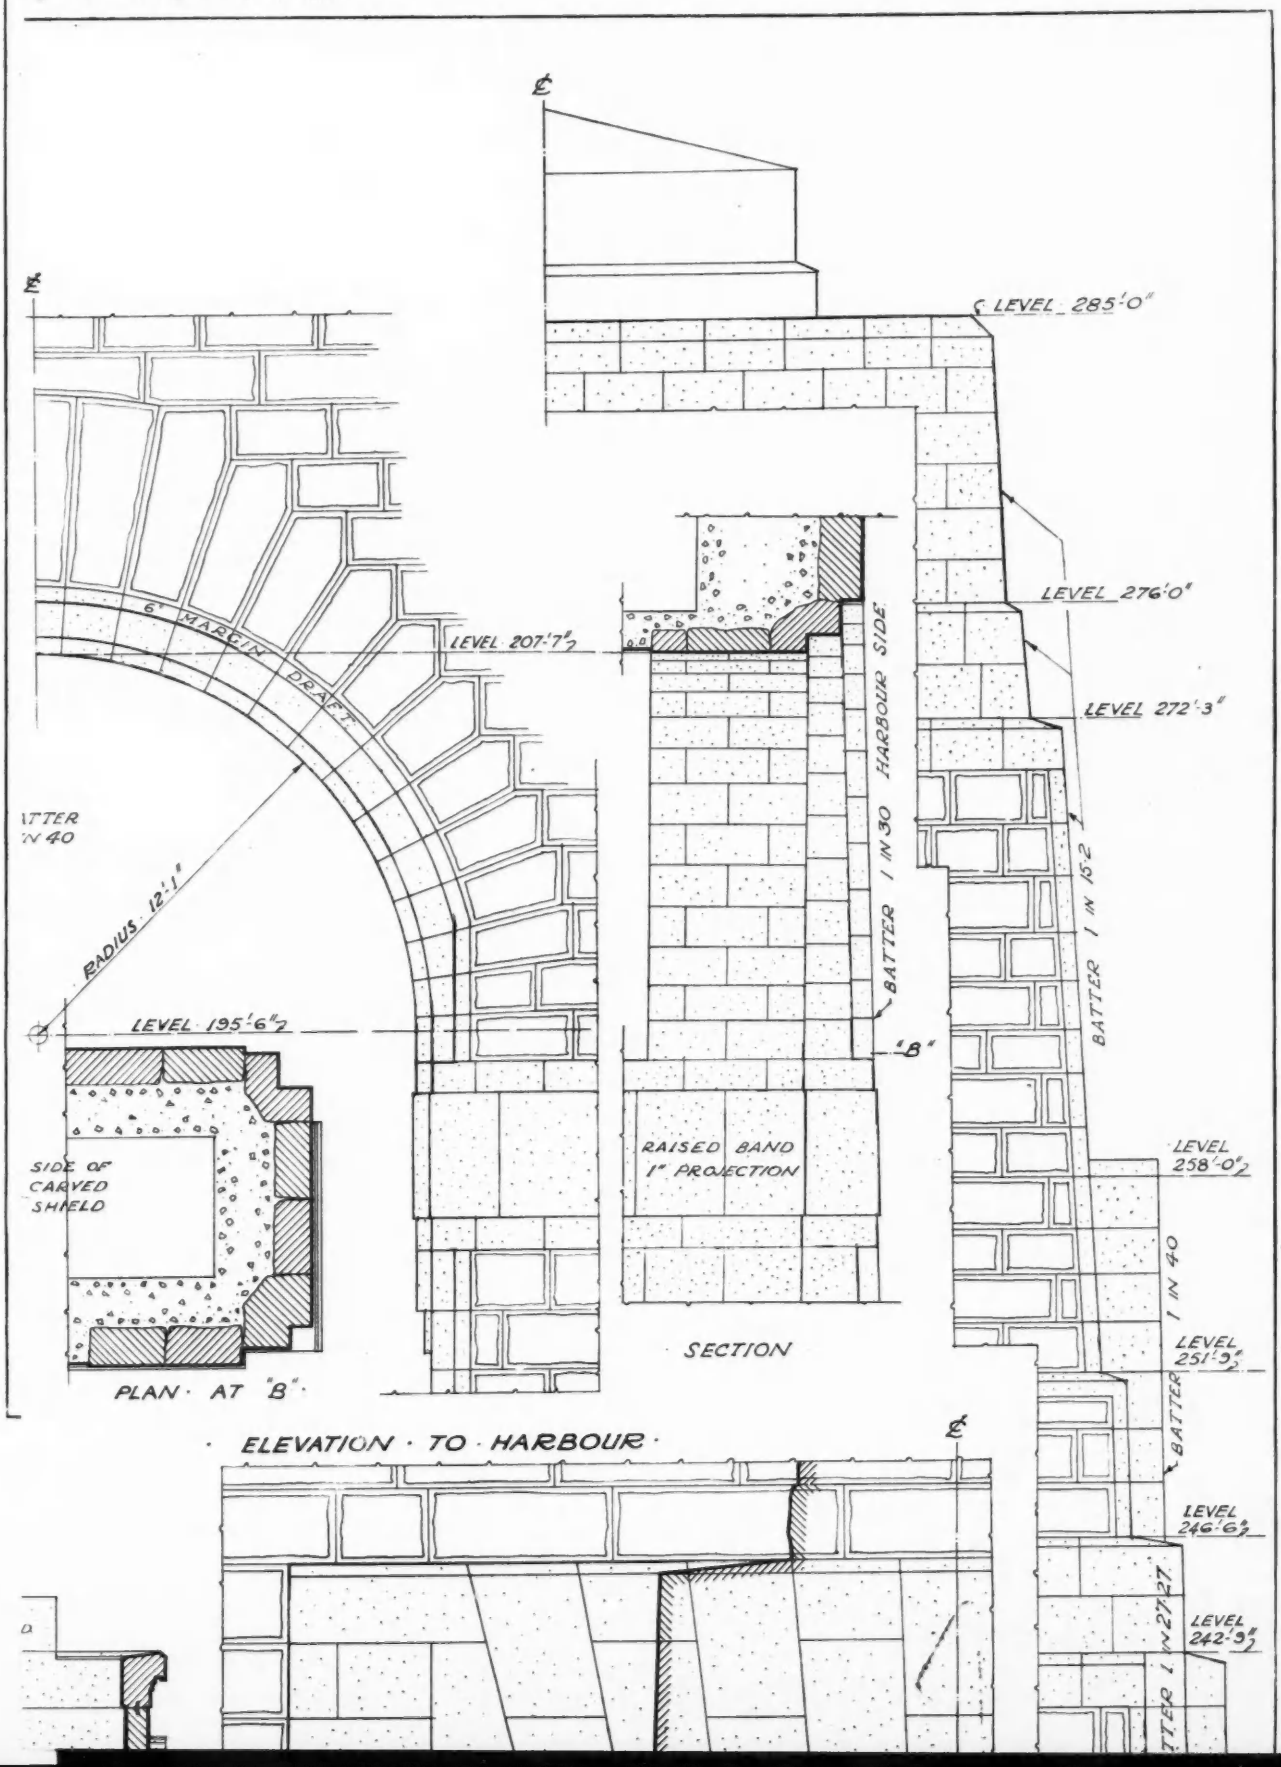
THIS special supplement is devoted to reproductions of working drawings of the masonry pylons of the vast bridge now in course of erection to span the waters of Sydney Harbour, New South Wales, Australia, famous as one of the world's finest natural anchorages. Dr. J. J. C. Bradfield, Chief Engineer, Government of New South Wales; Sir John Burnet and Partners, Architects; Messrs. Dorman, Long and Co., Ltd., Contractors.

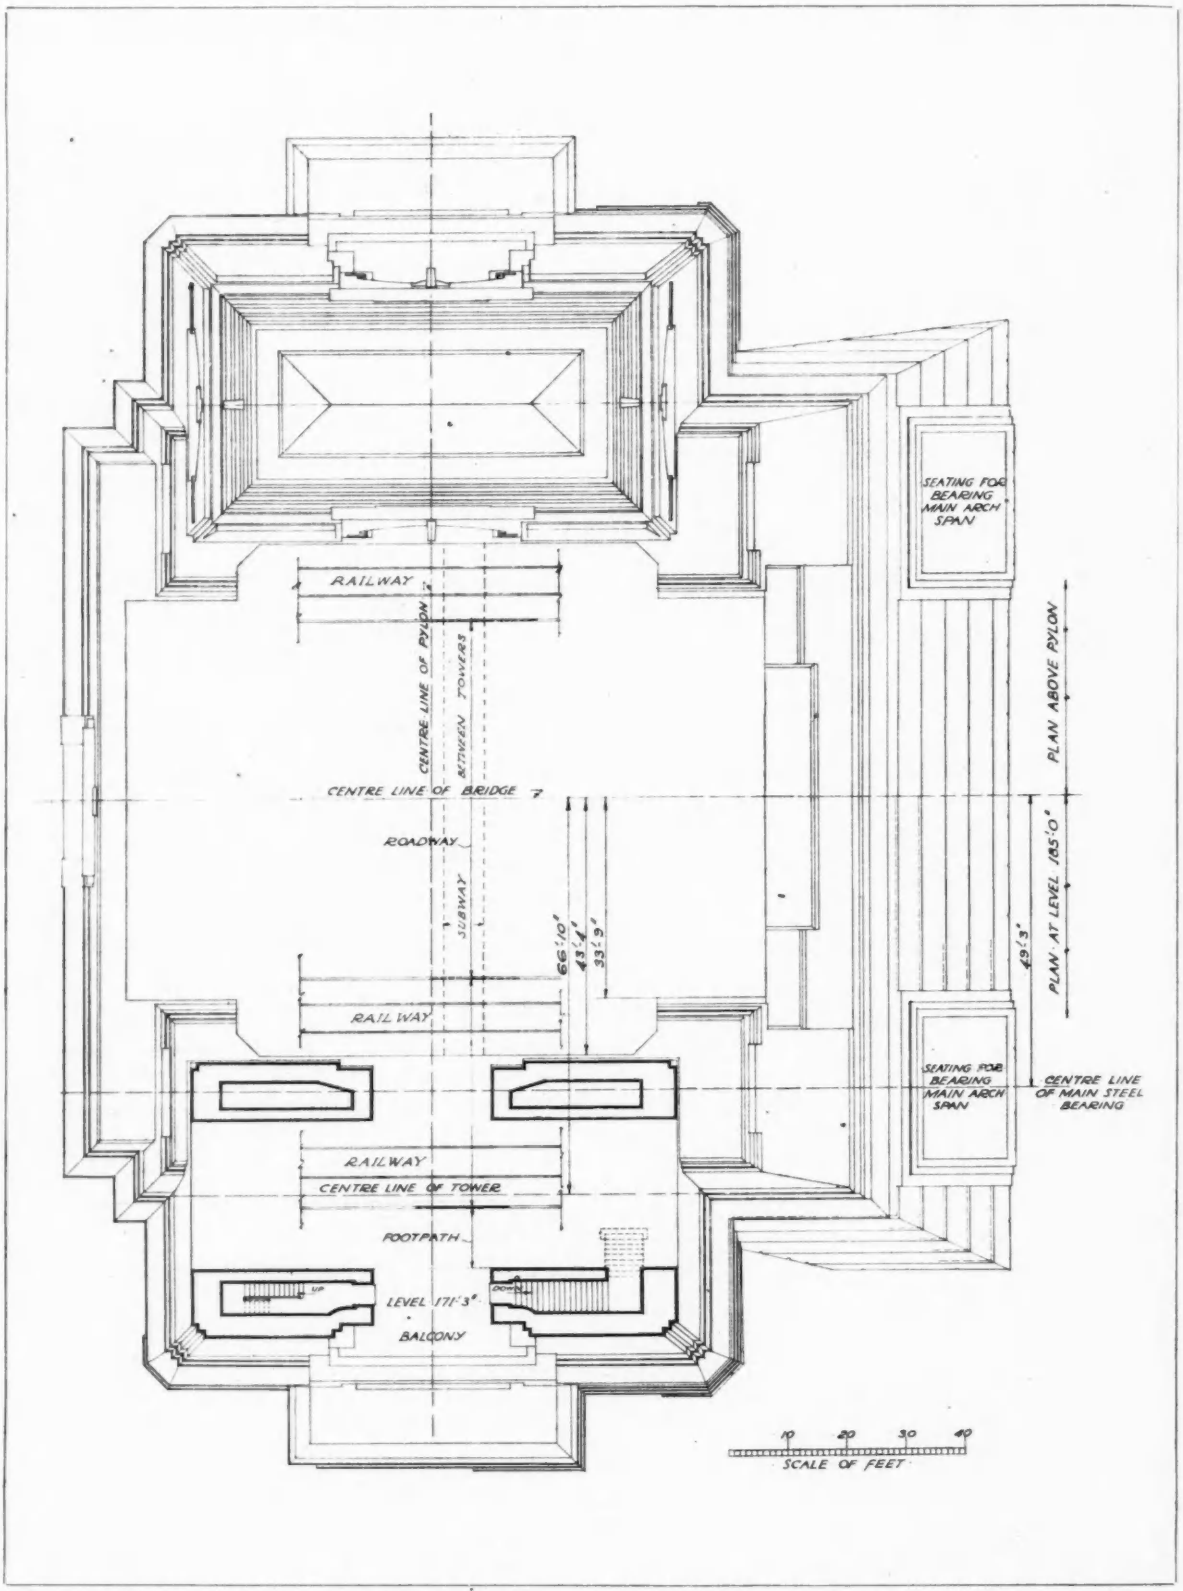


These details of the masonry of the bridge, to a larger scale, should be studied in conjunction with the elevational drawings reproduced
the subway connecting the footways. On the right are



erleaf. On the left are details of the side elevation of a pylon at balcony level, showing one of the wrought-iron gateways leading to etails of the elevations of the pylons on the harbour side.





Side elevation of a pylon of the bridge and elevation of tower to harbour. At balcony floor level, about 171 ft. above the water,

bridge supports a central roadway, on either side of which are two railway tracks and a footway. The pylons are 285 ft. high.

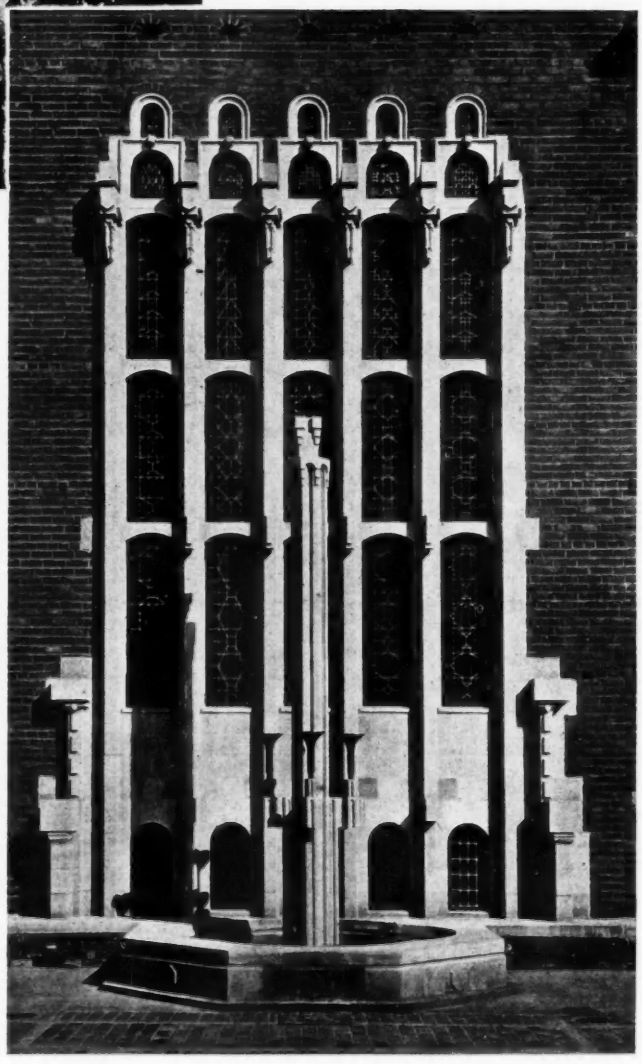
[*By Eliel Saarinen.*

Two entrances. That on the left is a near view of the entrance to the study hall, shown on the right, above. The door and architrave are of oak, and on either side is a sandstone column, which will support a sculpture. The door panelling itself is of diamond pattern, and on the architrave are boldly carved panels, with a figurehead representing Knowledge. The other doorway leads to the dormitories. It owes a good deal to the modernistic bronze light standard—a pergola, not here illustrated, is somewhat similarly treated—and the coffering above. The steps are of hard-burnt brick.

museum, dining hall, dormitories, an infirmary, faculty residences, and service buildings.



The site of the new school is in the Bloomfield Hills, which are situated about ten miles to the north of the city of Detroit. Here the school authorities possess about seventy-five acres of rolling terrain, with magnificent scenery. The site has unusual attractions. There is, for instance, a delightful valley through which runs a stream broken by islands covered with clusters of willow trees. This part of the site has been converted into a lagoon, and on the main island a rustic cabin has been built for camp-fire celebrations.

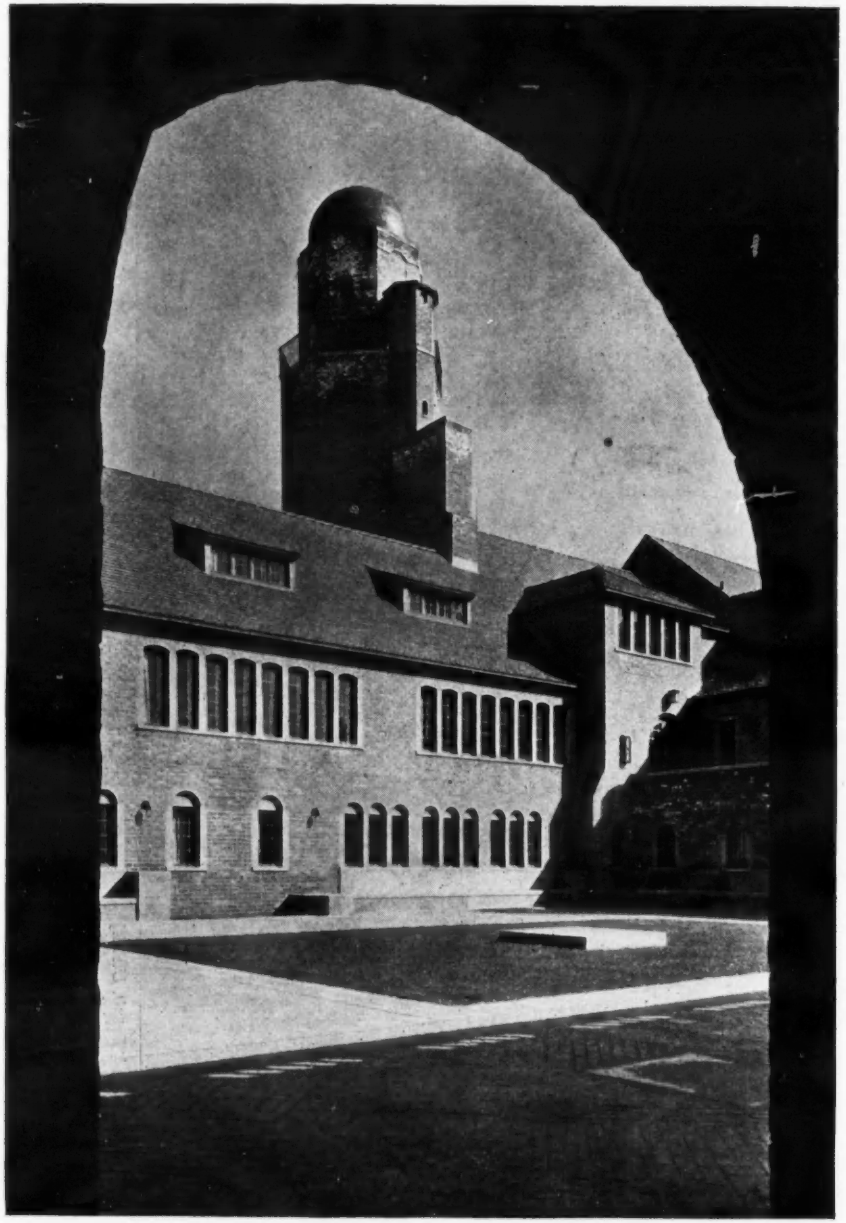
In short, the site offered an opportunity that comes rarely enough to any architect for the erection of a fine architectural conception, planned and designed in the grand manner. This opportunity has been grasped and exploited to the full by Saarinen.

In placing the buildings he has abandoned the conventional American collegiate plan. Instead, his buildings are admirably grouped and planned around a number of courtyards. In design and detail they reflect the strong individuality of the architect.

The observatory tower, the entrance to the study hall, the window to the dining hall, and the fountain in the fountain court are among the exterior details already completed that serve to give earnest of his quality. The observatory tower stands at the corner of the academic building. It is of brick, octagonal in shape, with deep circular-headed staircase windows. Above the gallery, surrounded by a railing of simple design, it is set back, and surmounted by a brick cresting and a movable dome. The study-hall entrance is a typical composition of stone, brick and wood. That most of the interior details, as well as those exterior ones mentioned, are of equal interest and character readers may be left to judge from the illustrations.

The structures are built in a yellowish brown tone of brick, among which the darker elements produce a delightful play in colour. Dressings are of sandstone. Much of the layout of gardens, lawns and brick and flag paving has been completed, so that it is possible to judge the buildings in conditions of something like permanence. That judgment can hardly fail to be that Cranbrook School bids fair to be an architectural masterpiece.

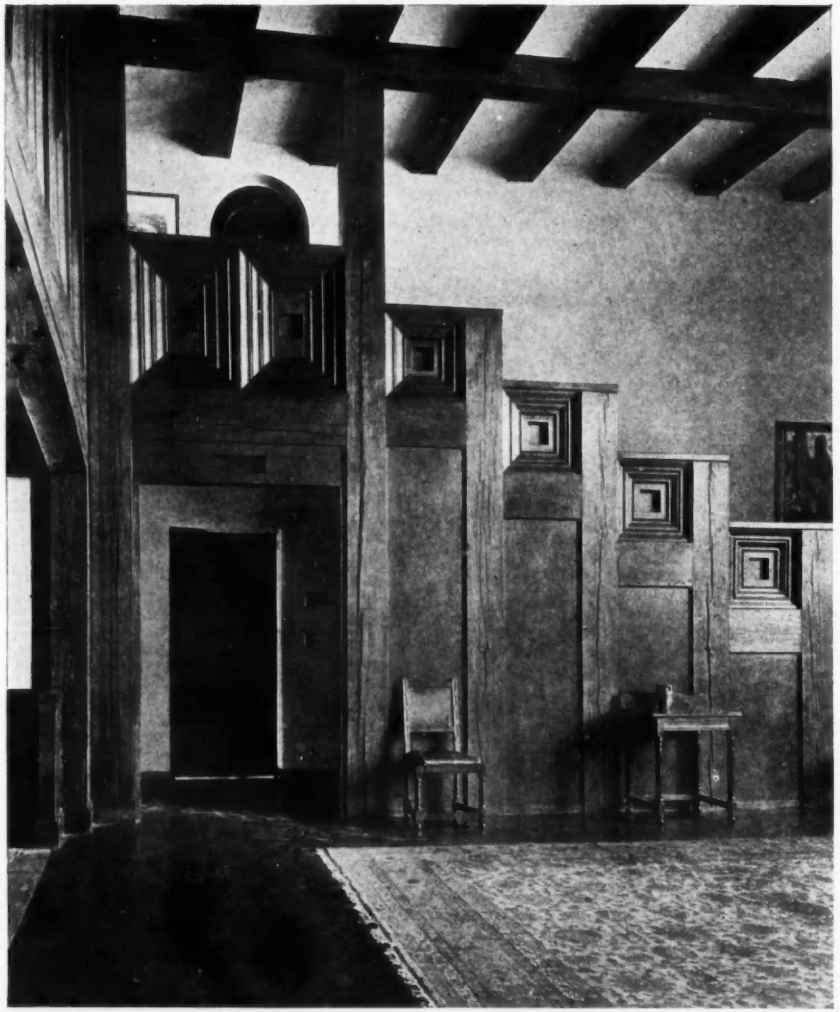
The dining hall. All the school buildings are in a yellowish-brown tone of brick, with sandstone dressings. Here and there a single brick is allowed to project to add texture to the surface.



Cranbrook School. By Eliel Saarinen.

A near view of the stone window treatment of the dining hall, illustrated above, with octagonal-based detached fountain. The brickwork repays careful examination.

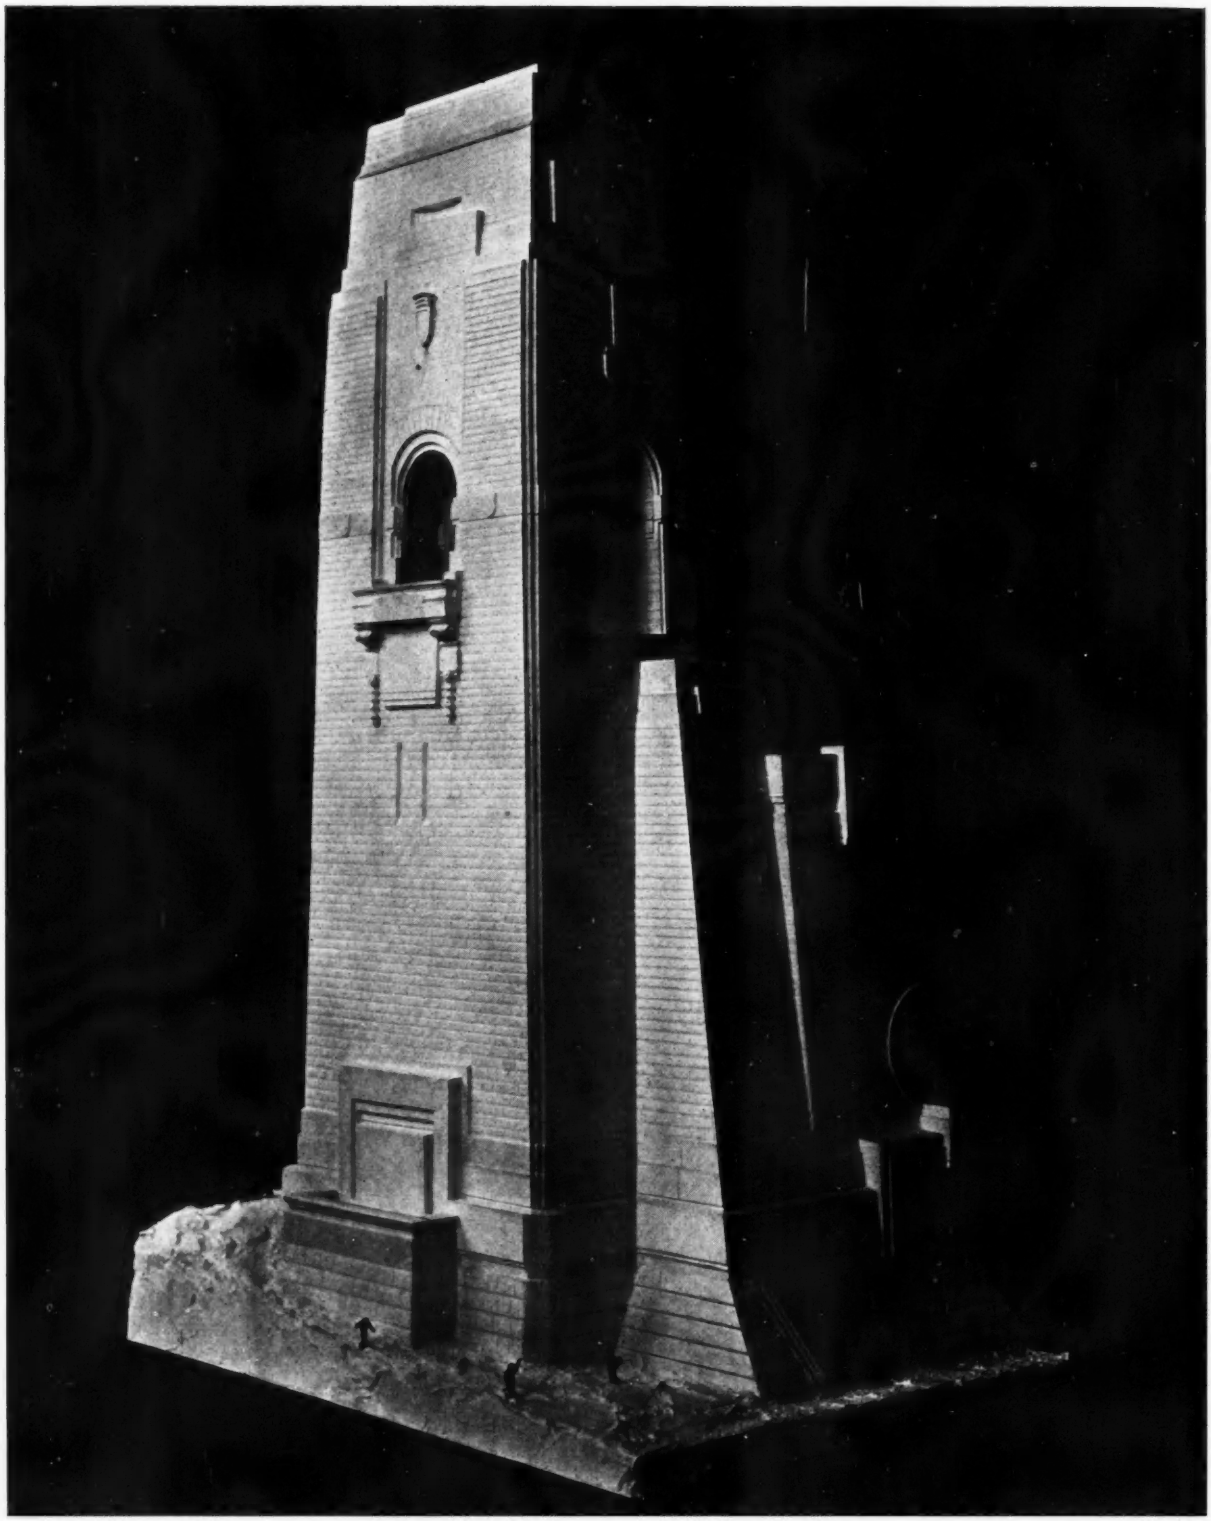
Cranbrook School, Detroit, U.S.A.] [*By Eliel Saarinen.*



The dining-room has been designed with plain walls, with a wood-panelled dado and a plain barrel-vaulted roof. At one end of the hall are two pylons, carrying banners, placed one on either side of the fireplace. At the other end is the large stone window illustrated on the facing page. The furniture and fittings have been specially designed. An effective decorative feature is made of the piercing of the window-arch soffits.

The rear court, looking towards the academic building and observatory tower, and an interior view of the tower itself. The observatory is a unique feature of the scheme. It has

The rear court, looking towards the academic building and observatory tower, and an interior view of the tower itself. The observatory is a unique feature of the scheme. It has been equipped in the most complete manner, and the tower supports a mounting for a six-inch equatorial telescope. Its other side is illustrated in the view reproduced on page 73. The figure of Diogenes, the centre column, and the arched work in the interior are of sandstone. The walls are stucco, and the ceiling is brick.



Cranbrook School, Detroit, U.S.A.] *[By Eliel Saarinen.*

In the main stair hall, two views in which are shown, linear motifs have been adopted. They have been used with great originality in the stepped oak balustrading to the staircase, in the balcony, and in the brick and tile surround to the fireplace. The deeply recessed panels, though differing in actual design, are of much the same root idea as some of the exterior detailing, and are a happy expression of diversity in unity. The walls, as well as the ceiling, are of stucco.

SYDNEY HARBOUR BRIDGE: ONE OF THE PYLONS

Into the model here photographed, tiny figures of men have been introduced, in order to convey a graphic idea of the scale of the pylons, working drawings of which, devoted to plans, elevations and details of the masonry, are the subject of reproductions in the pages of the special supplement bound in, facing this page.

VIEW FROM THE TERRACE OF OLD SOMERSET HOUSE, LONDON

From the painting by Paul Sandby, R.A., in the Victoria and Albert Museum, reproduced here by permission of the Museum authorities, and by courtesy of The Connoisseur.

(See the Book Review pages in this issue.)

The east or garden side of the house, as it is today. To the left is seen the end of the stable block, and a glimpse of the arcaded return wing of the new outbuildings which have been placed to enclose the courtyard.

SHEPHERD'S HILL, BUXTED, SUSSEX

The Home of Mr. Edward Maufe

Below, one architect discourses, with professional appreciation, about another architect's fortunate find, and what he has done with it. He has made what was a farm dwelling-cum-dairy, with some fine features but not a single window on its sunny side, into a country house full of sunshine and quiet dignity.

As it was, the house had no windows at all on the south side, its sole feature being a rain-water pipe sloping right across it. Six windows have been formed here, while the fenestration of the east side has been revised, and its lean-to converted into a balcony, as shown in the upper view.

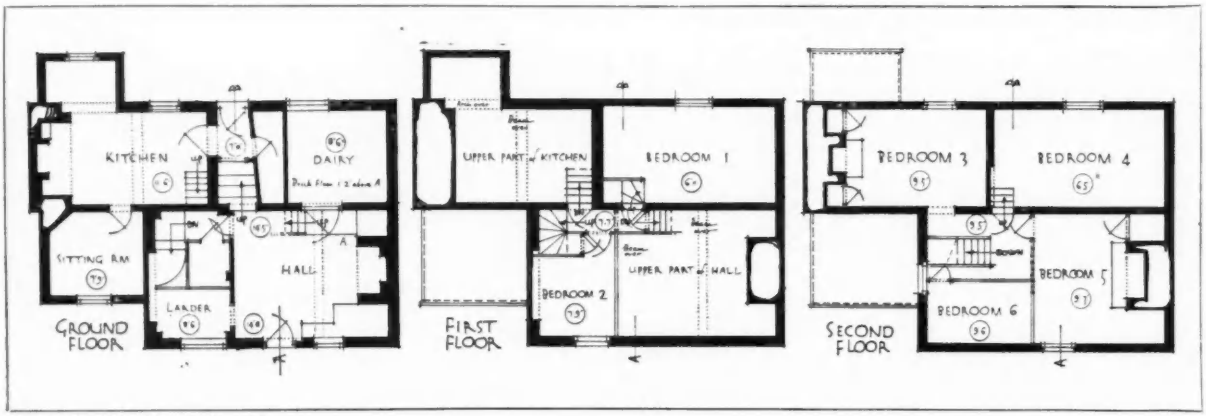
DESCRIBED BY H. AUSTEN HALL

MOST of us have, at some time in our lives, looked over an attractive gate and wished the house on the other side were ours. "I wonder if it is for sale?" and for no reason at all we usually answer our own question ourselves and go sadly upon our way.

But fortunately there are some people in whom wisdom does not linger, and when Mr. Maufe looked over his (future) gate upon the noble stable of Shepherd's Hill he decided upon instant action. Strangely enough, the house was for sale, and was promptly sold to him. Thereupon he entered upon one of the happiest experiences that can fall to an architect's lot, that of making a lovely old bit of brickwork into a house and a home for himself.

The early history of Shepherd's Hill is difficult to discover, but rumour says that a gipsy settled on this hill and became something of a shepherd king. The interesting ancient enclosure, with its deep moat all round its four square sides, which still exist in the valley, gives colour to this story. Later tradition says a great house was built, but that this was burnt down and that the existing house is only a wing of it. However, in 1740 Sir Robert Fagg, the third baronet of Wiston, built the fine stable block and used Shepherd's Hill as a hunting-box, driving over from Wiston in his coach-and-four, the coach being housed in the central arched portion, the wings stabling as many as sixteen horses.

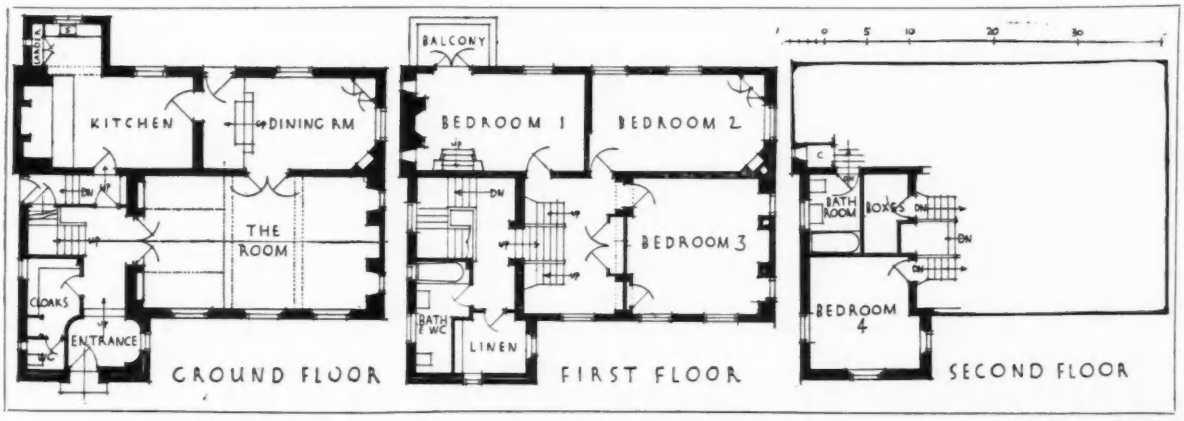
The land is partly in the parish of Hadlow Down and partly in Buxted, famed for having produced in 1543 the first English metal cannon. Iron cannon balls were recently found at Shepherd's Hill itself when making garden terraces.



The buildings consisted in 1926 of a small farmhouse in a bad state of repair, and very large stables and outhouses in which lay the real attraction for the architect. It was obvious to him that an approach through the great archway, where the coach used to stand, would be something of a thrill to be experienced whenever he came home. Something is added to one's daily life if a fine gateway becomes an intimate part of it. To develop its intrinsic dignity was not a difficult thing to do. Mr. Maufe has widened the gap between the low outbuildings that flank the main approach from the road, and made the arrangement

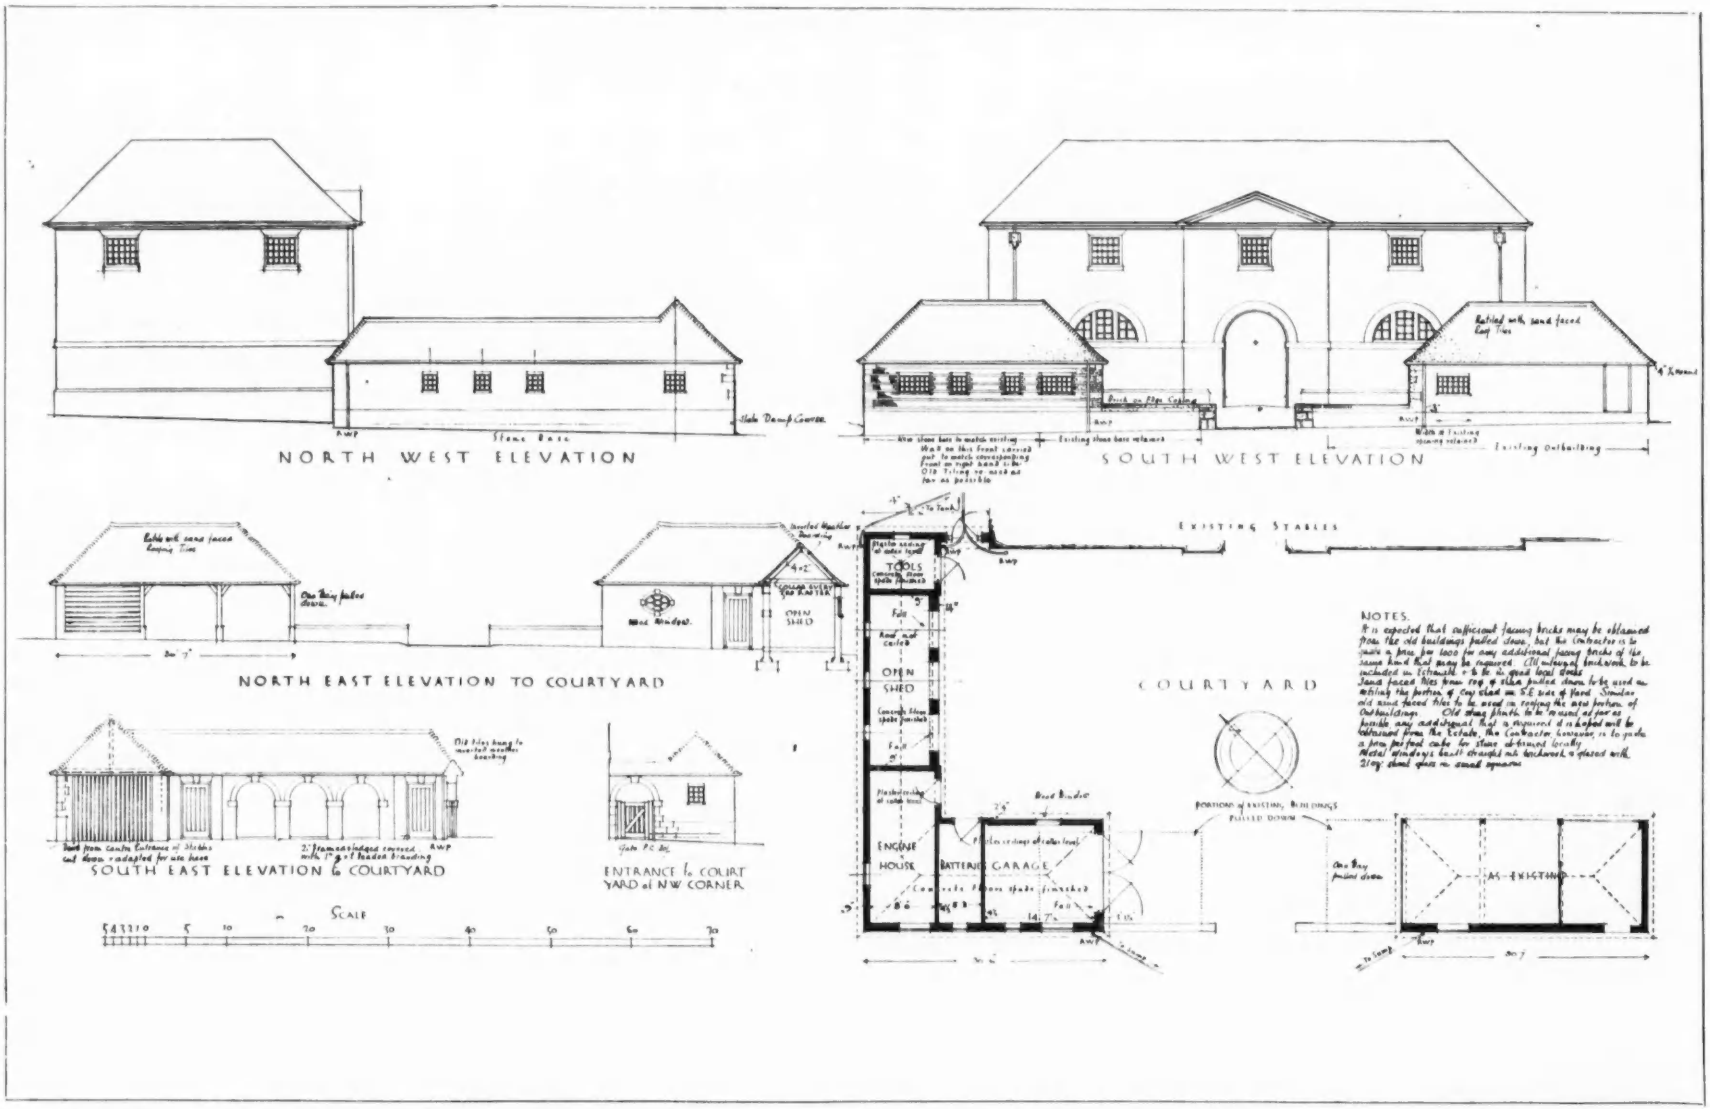
[*Continued on page 86*

Two views of the dining-room. That on the right shows the new south window, giving a view to the Downs. On either side of it shell alcoves have been formed in the splayed walls, lit by concealed electric lamps. Upon the specially designed writing cabinet stands a sculpture by Eric Gill. At the north end of this room are the steps, leading down from the kitchen doorway, seen in the other picture, which is taken through the folding-door opening of The Room, looking towards the garden door. The brick walls are whitewashed, the floor tiles are pale biscuit, and the curtains chalk-blue.

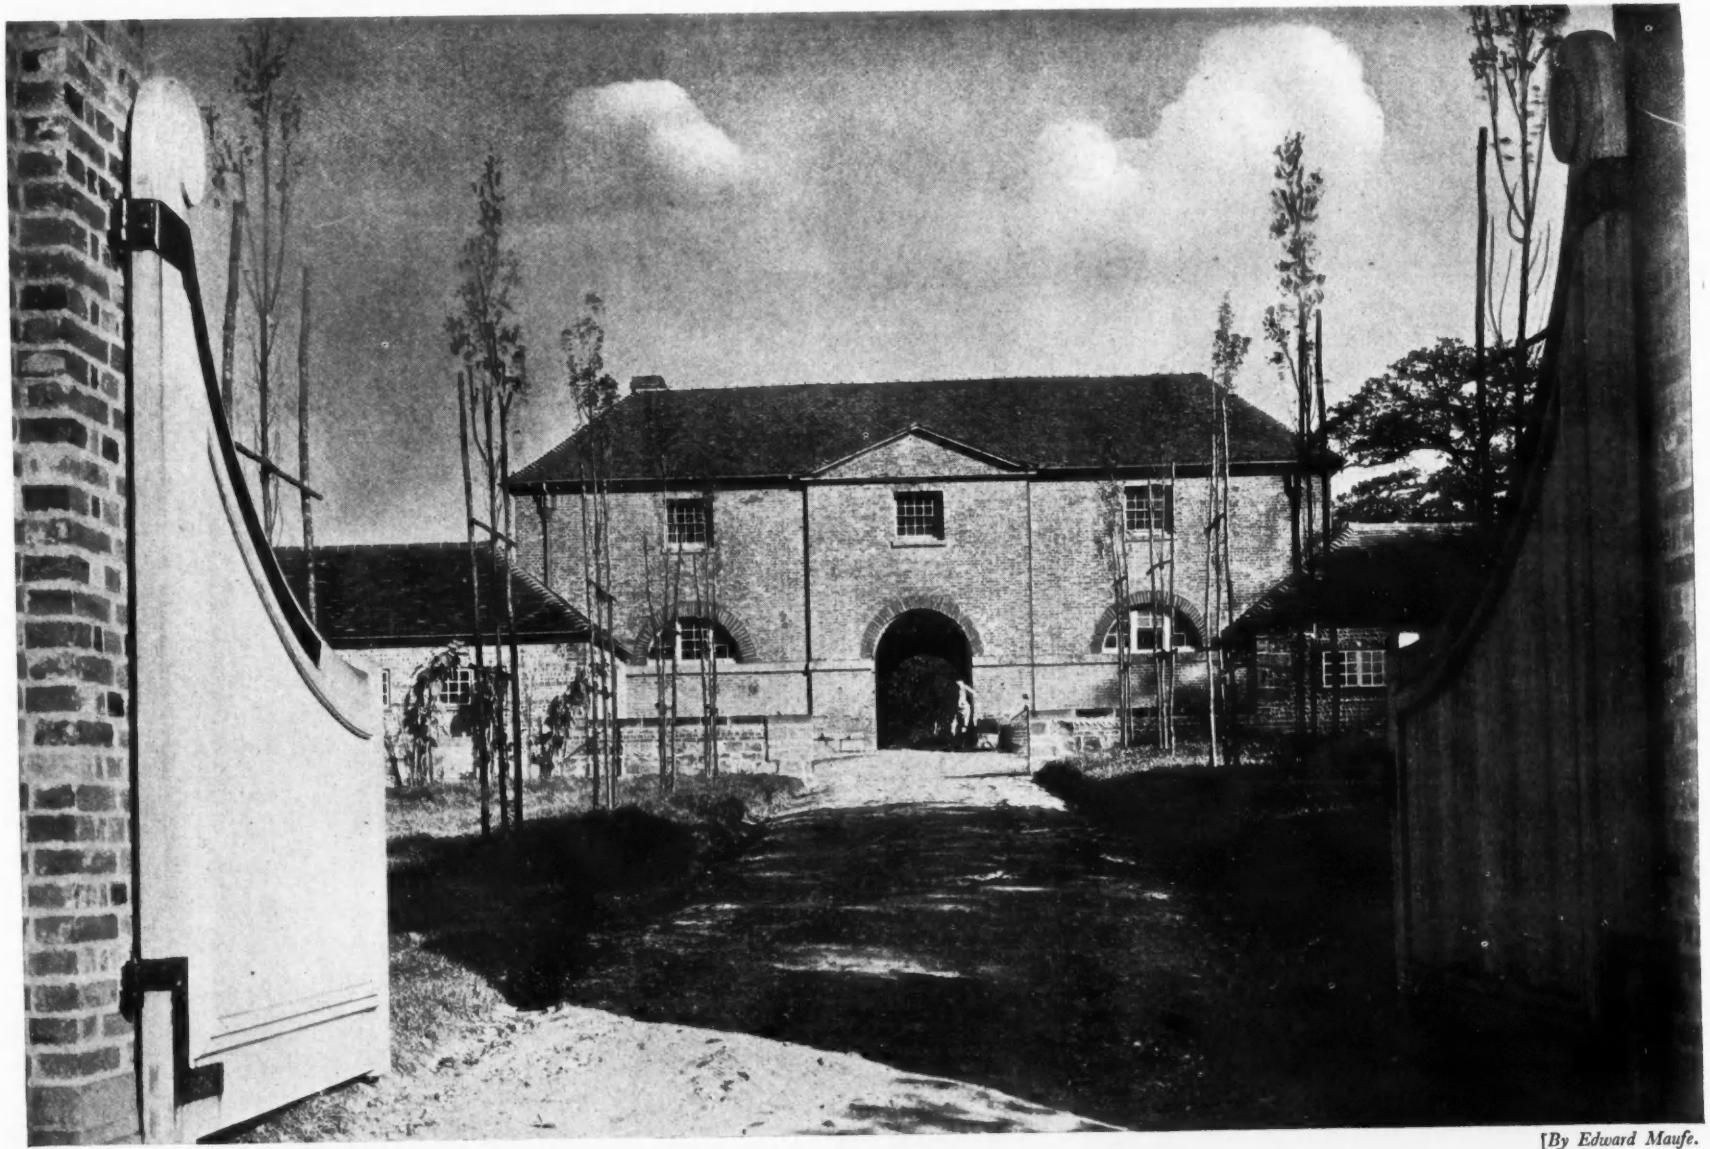


Shepherd's Hill, Buxted, Sussex.]

Plans of three floors of the house before alteration. It will be noted that the kitchen and the hall extended through two floors. The figures in circles show the original heights of the rooms.



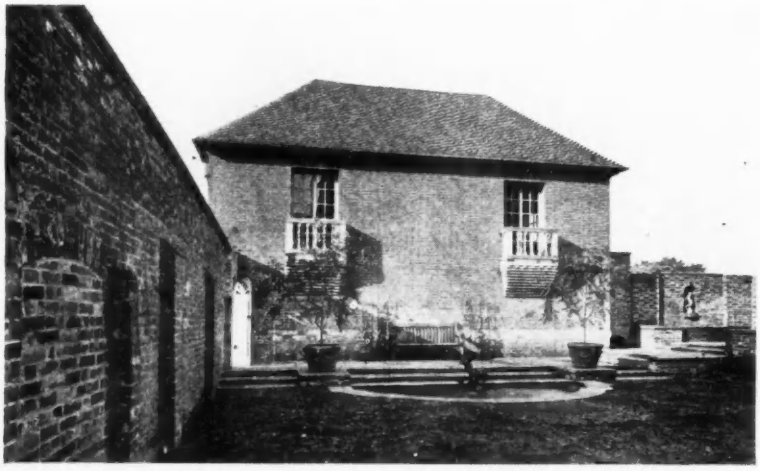
The Room, looking south, towards the new windows and the stone fireplace, the capacious hearth of which is adapted for a fire of logs, and showing the folding doors to the dining-room on the left. The old ceiling beam in the original hall has been preserved. The walls have been left with a roughish plaster texture, and, with the ceiling, are distempered grey-cream, while beige velvet curtains have been hung—a subtle contrast with the rather warm tone of the wide oak floor-boards. The table on the right is to the architect's design, made in English walnut, with a Swedish green top.



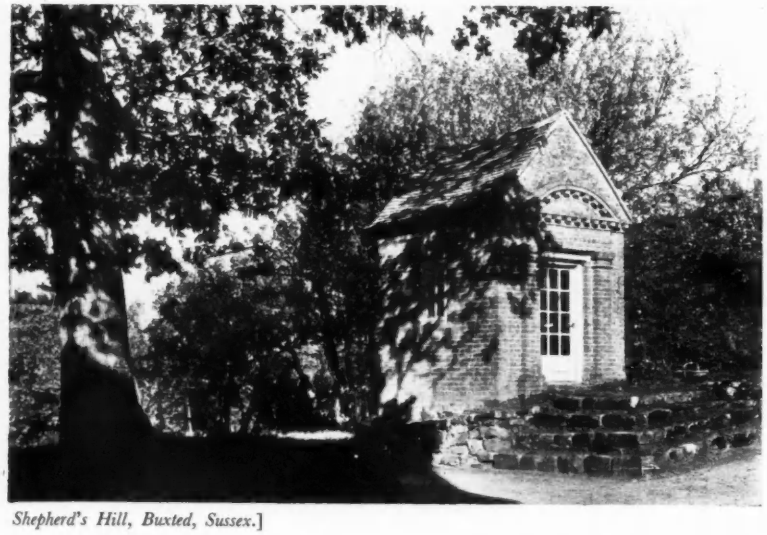
[*By Edward Maufe.*

In the reconstruction, the adjustment of the numerous floor levels has been a matter of nice calculation. In effect, two floors are given, instead of three, and many of the rooms gain in loftiness.

These drawings, by the architect, show elevations of both existing and new work in the stable block and courtyard, and, in black, plans of the new outbuildings. The central archway seen in the south-west elevation runs clear through the building, which was built in 1740 of fine red brickwork, since paled with lichen, and has a stone cornice and plinth.



[By Edward Maufe.



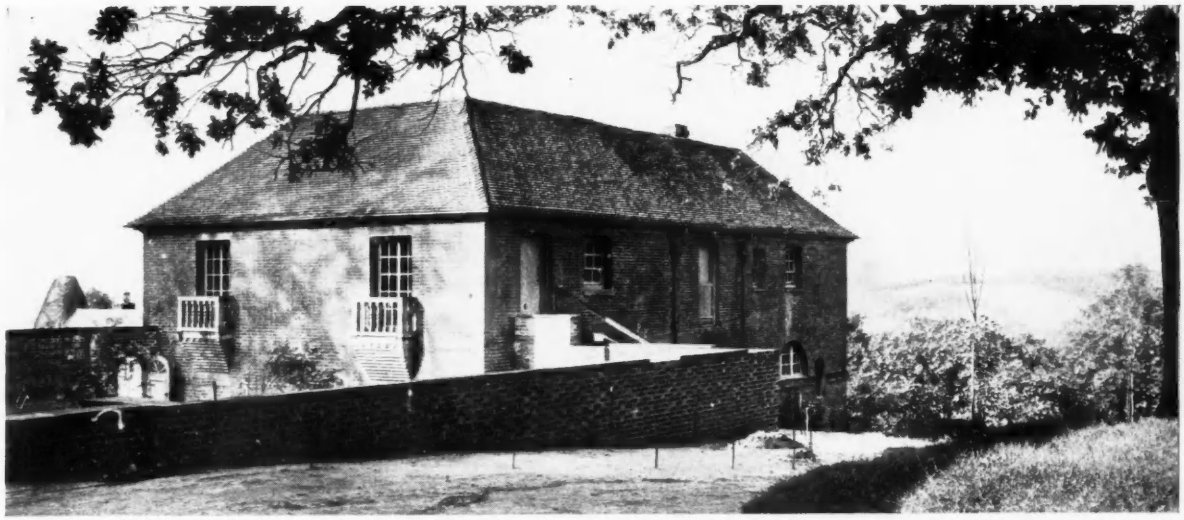
Shepherd's Hill, Buxted, Sussex.]

A general view of the stable block and courtyard, from the south-west. This is the chief entrance from the road, and has been emphasized by brick piers carrying a pair of specially-designed oak gates, which are unpainted and show darker than the photograph suggests. The stable itself remains as it was, but the garage on the left is new.

A new avenue, bordered by poplars, leads to the stable block. By comparison with the small view below, of the building in its old state, it will be seen that one bay of the outbuilding on the right has been cut off, while that on the left has been pulled down in favour of new work, re-positioned, to give a balanced design. On the extreme left is the oast-house ; the house lies to the right.

Shepherd's Hill, Buxted, Sussex.]

The new sunk walled garden, with its terrace and pool, seen in the upper of these views, has been formed between house and stables, where once were pigsties. The lower shows the charming brick building, dating from 1740, that was Sir Robert Fagg's privy—a two-seater—and is now used as a garden house.



The stables before alteration. The right outbuilding is of flint with brick bands ; the left one, asymmetrically placed, later, had poor brickwork.

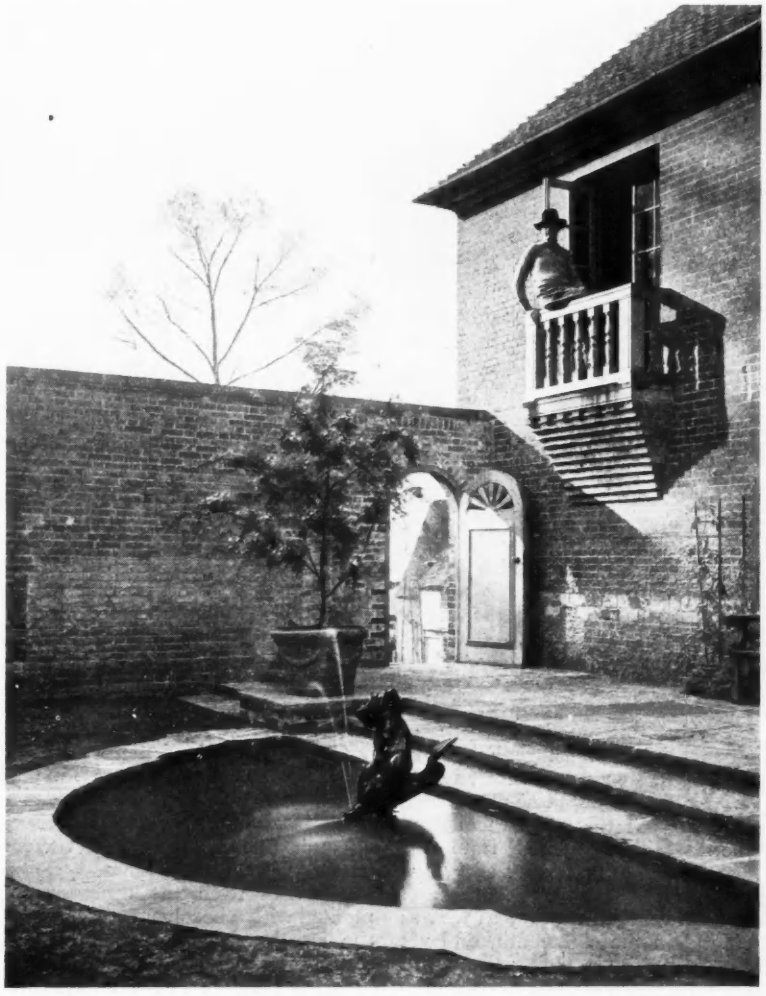
symmetrical with an interesting wall of flint and brick. The effect is completed with a new drive running between Lombardy poplars and approached through a new gateway with very tall brick piers which carry gates of unusual and interesting design.

Within the space contained by the outbuildings and the old stables is a small courtyard, with garage, a room for the lighting plant, and other useful outhouses.

It is quite evident that what remained of the house itself in 1926 was in no way worthy of this stable building, the only other obvious remains of the Fagg occupation being the fine brick privy, now a garden house, and certain definite plantings of yews and Spanish chestnuts.

In dealing with the stables, all that was necessary was to get the approach right. The house was a very different thing, and it certainly required more than average imagination to see what Mr. Maufe has seen in it—an odd little house, without any definite shape about it, and with windows that came and went in an unusual degree of uncertainty, indicative of the strange floor-levels within. But it has good brickwork and a tile roof. These elements of colour in splendid

This shows the same garden end of the stable block that is seen in the view on the facing page, but gives, in addition, some indication of the lie of the land and, on the left, a hint of the oast-house. The balconies are, of course, new ; and the down pipes have been redisposed. To reach the house from the entrance gates, one drives right through the stable archway, turns right, and so up the slope seen.



Under the old dispensation, pigsties, shown in the foreground, used to occupy an intermediate position between the stables and the dwelling house.

surroundings are in themselves so stimulating that any artist would be content with such a beginning.

Mr. Maufe wisely rebuilt the lower portions on the north side, and put his entrance and staircase here, with the sanitary work. This left the old part available for the living-rooms on the south side. By a stroke of genius he removed one floor entirely, thereby obtaining a living-room thirteen feet high, with new long sash windows overlooking the formal garden.

The staircase is placed on the axis of this large room, which is entered through folding doors. All this blending of the old and new in the plan has been most skilfully done, and a balanced and dignified relation is maintained between the staircase and the room. The effect is one of pleasant surprise, a quality with which all good design should be invested, but which is too rarely found. This living-room is the feature of the house, and is decorated with a degree of comfort and elegance that suggests the Great Room rather than the parlour—an architect's room essentially, with plenty of light and colour, in which modern furniture and decoration seem fit and inevitable. People with less knowledge would have preserved an eighteenth-century

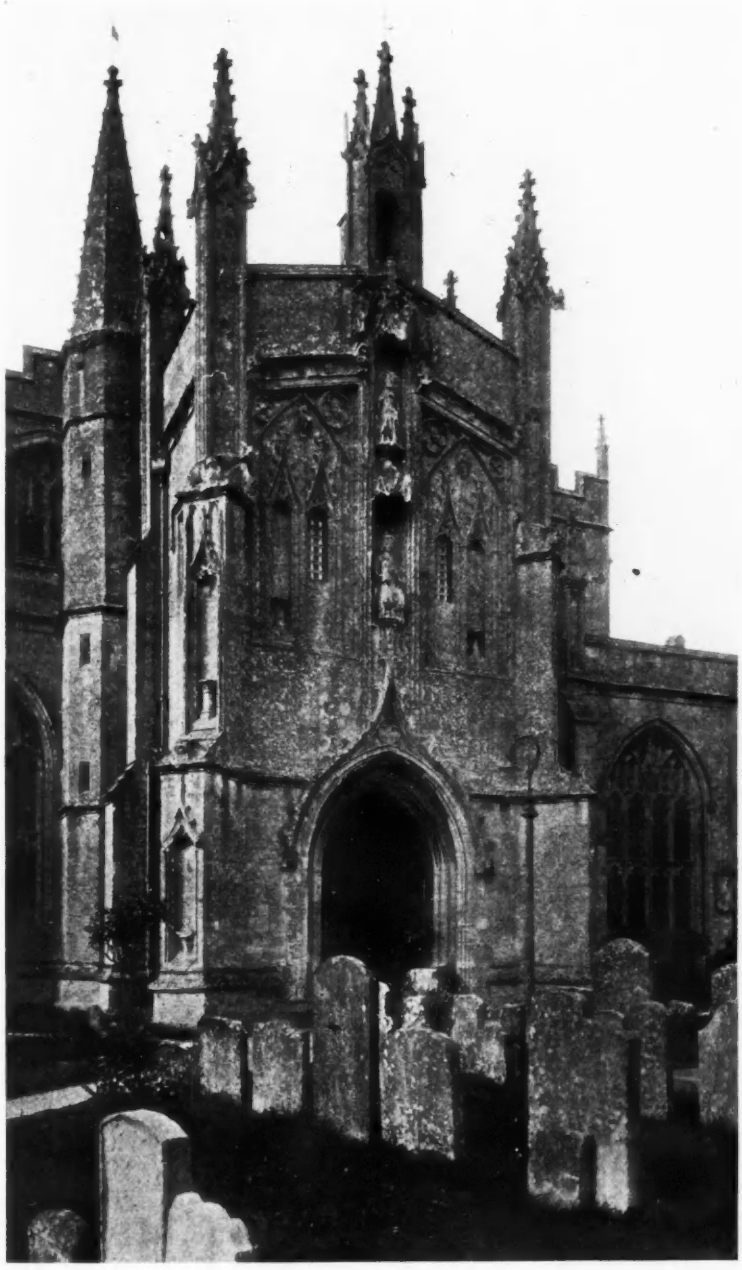
[*By Edward Maufe.*

A corner of the sunk garden, showing, through the new doorway cut in the old wall, the oast-house hard by the main gates. The pool, which can be lit by a submerged light at night, has a bronze dolphin-and-mermaid fountain by Carl Milles. The variation in the balcony profiles was accidental. (*See page 37 of this issue.*)

Shepherd's Hill, Buxted, Sussex.] [*By Edward Maufe.*

Opposite ends of the best bedroom. The steps on the left lead up to a bathroom. The curtains are oyster blue, the ceiling is pink, and the carpet grey. The recessed bed-head wall is finished in silver-leaf. Herein are fitted cupboards and bookcases, while in either jamb is a flush ground glass lighting panel, behind which are "sunshine" and ordinary electric bulbs.

character in all these accessories, but here we have life and light and line that are full of freshness combined with mature experience; a creation, not an echo.



The dining-room leads from the large room, and is pleasantly furnished with fixed shelving and cupboards at one end, and a raised dais at the other, giving access to the garden. The floor is in large yellow tiles. Here again the modern furniture gives a restful note, at once satisfying and inevitable —even that fine modern piece of sculpture seen in the picture, Eric Gill's "Head-dress," being completely at home. No one seeing these rooms now would want old things in them, and Shepherd's Hill is spared from the antique touch. The beauty of a good house is that it carries the graces of life in the twentieth century as well as ever it did in the eighteenth, and yet most of us persist in giving the "past period" accent to our rooms, regardless of plus-fours and dinner-jackets. By all means let us express a period, but while we dress as we do it will be this and not some other period that is expressed.

The immediate surroundings of the house are formal, with pleasant stone terraces and herbaceous borders. A feature is made of the space between the house and stables on the west side, where a sunk garden is formed, taking advantage of the natural levels. A delightful half-circular pool makes a setting for the dolphin and mermaid of Carl Milles. Overlooking the pool two balconied windows have been made in the side of the stable block, with attractive corbellings and oak balustrading. By flood-lighting the fountain and stable wall an interesting effect is obtained at night from the windows of the large room.

The vista from the dining-room is planted with a beech avenue continuing the old beech grove, and in this a statue is to be a feature. At present a stump does duty for the statue, but it gives a good idea of the size and placing that is desirable.

Planning and nurture of the gardens and lands is, indeed, what alone can prolong the savour of such an adventure. All is too briefly done, where building is concerned. The hand of Time may mellow bricks and mortar, but his touches are slow and imperceptible. A garden is a living thing, which grows under the eyes from year to year. Much planting of trees has already been done, but there is always more to do. And in the Book of the Trees of the domain is written the date and pedigree of every addition—a valuable record.

In Shepherd's Hill the old and the new are blended with complete success, and it is a good example of constructive propaganda in this particular countryside, carried out by a member of the Council for the Preservation of Rural England. Not only has the old been preserved from decay, but a new dignity has been added to it. The result is a work of art, and far more than this—a home, the work of two minds that know of no impediments.

ENGLISH PRECEDENT No. 97

SOUTH PORCH, NORTHLEACH CHURCH, GLOUCESTERSHIRE

This Church of SS. Peter and Paul was rebuilt about the middle of the fifteenth century at the cost of John Fortey, a wool merchant.

The fine porch of two bays, which escaped serious injury by the Puritans, has an elaborate groined roof and arcaded walls. Over the entrance are two large canopied niches with statues, the upper one representing the Holy Trinity and the lower one the Blessed Virgin and Child.

On either side of the lower niche is a window to the chamber over the porch, which is reached by the octagonal staircase with a crocketed spirelet.

LUXURY FLATS IN LONDON

Modern Tendencies in Four Examples

Stratton House occupies an historical site in Mayfair, and commands unobstructed views of the Green Park. Those towards the south include Buckingham Palace, the Houses of Parliament and the old-world buildings bordering the Park, while towards the north, on clear days, may be discerned the distant heights of London.

STRATTON HOUSE, PICCADILLY, W.

By W. Curtis Green

THE building of flats, especially "North of the Park," is now so prolific that the public may well ask who in the world is going to live there, and how can they afford the rents? The answer is that no clear statements of the cost of living in a house, with its upkeep, rates and taxes, servants and services, have been circulated by book or journal to the public, but they, as individual families, are finding out the cost for themselves. Having done so, these families take a flat without being told to, and if the budget is miscalculated by them they console themselves: less time involved in that all-embracing state, "house-keeping," less moneys involved in service.

By service is meant not only the engaging and retaining of servants, but also that troublesome thing, the family boiler, for the provision of hot water and central heating. That there are enterprising syndicates and companies who

The main entrance hall, looking south. At the end are two lifts. On the left are the entrance and vestibule from Stratton Street, and on the right, beside the lifts, is the staircase.

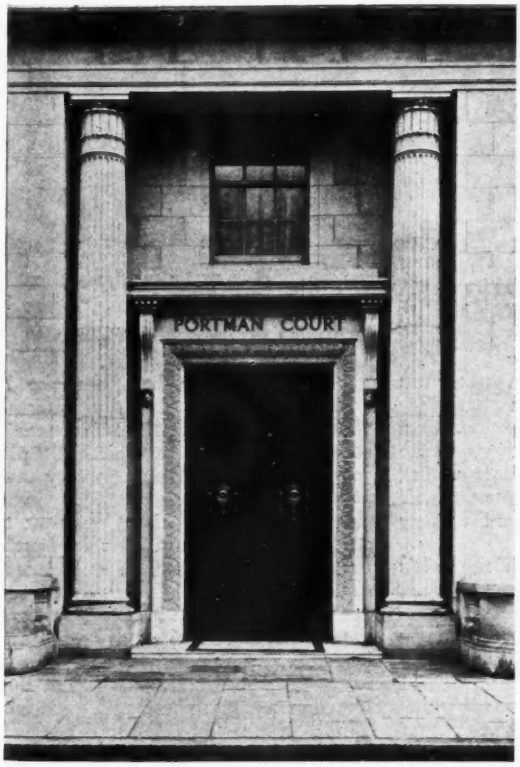
By W. Curtis Green

The north corner of the main entrance hall. To the right are the staircase and lifts.

know this little truth is obvious; that all these syndicates and companies will succeed in their various enterprises is less obvious. That their chance of success is dependent on a competent architect to design their buildings will become increasingly certain as the market slumps. Production of the more expensive type of flat is already somewhat ahead of demand.

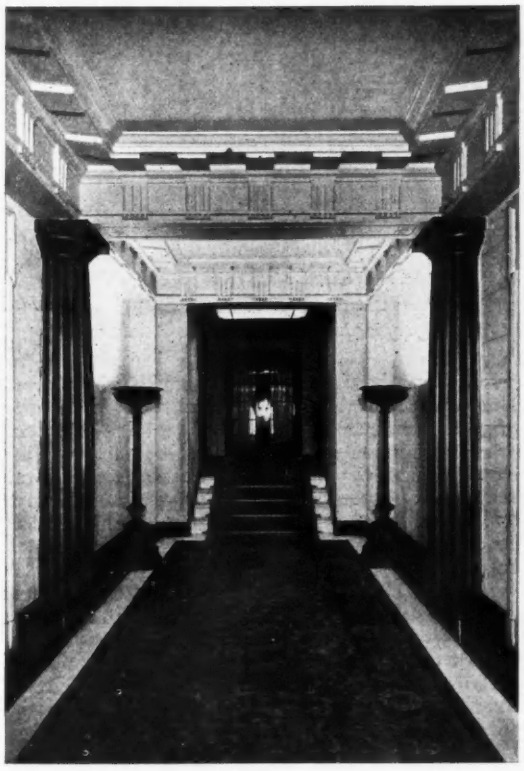
To the architectural profession it must be somewhat astonishing that so much capital can be confidently sunk in the erection of such permanently constructed buildings, for it must be



Orchard Court occupies the whole of the east side of Portman Square ; and Portman Court, illustrated on the facing page, part of the same rebuilding scheme, a considerable portion of the south side. Orchard Court will be ready for occupation in March next.

ORCHARD COURT, PORTMAN SQ., W.
By Messrs. Joseph

Portman Court, like Orchard Court, is faced in Portland stone and multicoloured bricks. It will be noted that both these buildings have zoned roof stories instead of the more prevalent mansard roof. A limited number of garages are provided for tenants' cars.



PORTMAN COURT, PORTMAN SQ., W.

By Messrs. Joseph

A near view of the entrance on the Portman Square front.

The main entrance hall. Behind the camera and to the right are staircase and lifts, and farther back to the right, the entrance vestibule. Beyond the doors seen are a lobby, staircase and lifts.

realized that this permanence meets only the rather vaguely defined needs and tastes of the present moment.

Large blocks of flats, such as are here illustrated, are erected and equipped as the " last word " in the flat of today. Well-produced booklets are circulated, setting out the various merits of the schemes, in which statements are made that nothing is omitted which could make these flats more up to date or more characteristic of the flat of " today."

But what about the flat of " to-morrow," and how soon will it come ? When will the public be demanding roof gardens and sleeping porches, and how soon may come a revolution both in incomes and ways of living, in taste and means of expression ?

The three large schemes illustrated here are all built on the steel frame construction system, which will allow of partitions being removed in future years and refixed as requirements dictate, but the chimney stacks for coal fires will certainly prove troublesome, especially in the case of Chiltern Court. Waves of modernism are already lapping the walls of our cities, and this word " modernism " is not so much a label for a passing fashion as a new form of expression in building. This form is firmly based on the requirements of our scientific and mechanical age, from which no reversion can reasonably be contemplated. There is, on the other hand, every indication of further intensive progress in the modernist direction.

Soon the maximum amount of daylight will be universally demanded for our rooms. We daily await the yet uncreated precautions against the noise of our streets and neighbours. Vacuum glass is not yet a practical possibility for our windows, and prevention of all the sound that is carried through the floors of our steel frame buildings, and along the metal pipes and conduits, is still impracticably costly and clumsy in method.

Washable and impervious materials will be demanded for our façades, and the cornices, mouldings and enrichments on which tons of soot are annually deposited in London will no doubt be substituted by more suitable means of ornamentation. Requirements in planning and internal arrangement of flats will certainly undergo considerable change in the next few years as we reach a more practical and simplified system of both living and service than is available at present.

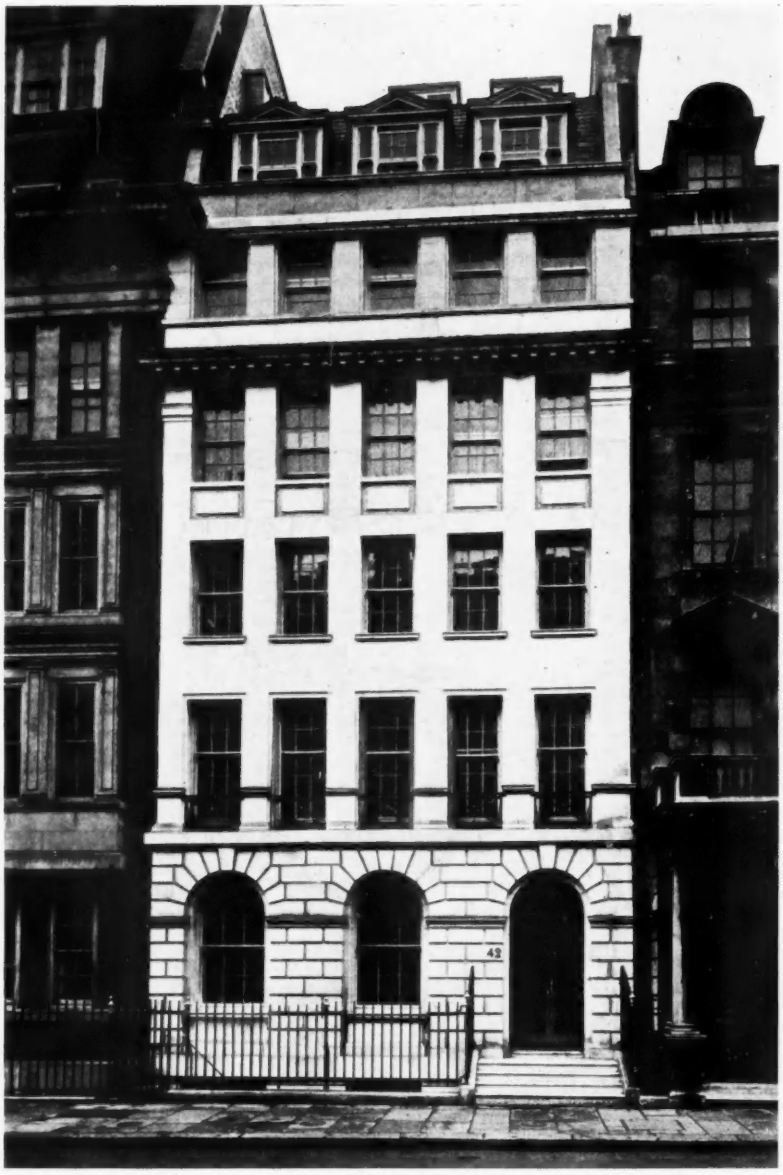
Pending the evolution of really satisfactory materials and forms of construction for the rebuilding of our city homes in the form of large multiple buildings, the public are demanding somewhere to live. Syndicates and companies are wanting investments for their money, and landowners are wanting buildings on their land. The architect, therefore, has to make immediate decisions in designing his buildings, and for his own peace of mind and security finds himself " playing safe " and not risking very much in experiment.

Building laws on the Continent are so less exacting than ours in London and the provinces that experiments, some of them amazingly courageous, are rife abroad, and it is very necessary for the English architect to keep himself informed and profit by such lessons. Many of these experiments show failure, but there are many instructive successes. There is no reason why the very

Chiltern Court stands on a site with frontages to Upper Baker Street (to the left of the picture), Marylebone Road and Allsop Road. This vast stone-fronted building contains 180 suites of flats, a restaurant, and a hairdressing saloon, etc.

CHILTERN COURT, MARYLEBONE RD., W.

By Charles W. Clark



The walls and floor of the entrance vestibule to the restaurant are faced in marble. The walls are grey in tone, with a black plinth, and the floor of alternate grey and white squares, with a black border. The handrailing to the stairs is in bronze.

By Charles W. Clark

The restaurant, looking towards the servery. On the right is the orchestra gallery. The ceiling is decorated with coats of arms of the counties and boroughs served by the Metropolitan Railway. Accommodation is provided for 250 guests.

The elevation of this building has been designed to maintain the character of the adjoining and surrounding property, and is faced with Portland stone.

No. 42 UPPER BROOK STREET, W.

By T. P. Bennett and Son

simplified apartment plan so common in Europe today should not be acceptable to the Englishman today, nor particularly the highly-compressed arrangement of "domestic offices" so popular in America.

These latter characteristics have been well attempted in Stratton House, wherein corridors are reduced almost to a minimum. They are not so well eliminated in Portman and Orchard Courts, though the planning is well compressed.

While the equipment is up to date in Chiltern Court, the planning and façade are on traditional English lines. It must be realized, however, that this block of flats, with rents ranging from £250 to £1,000 a year, caters for tenants somewhat different psychologically from those at Portman and Orchard Courts and Stratton House. This reference is not made disparagingly, but indicates the large section of the middle classes who are still strongly imbued with the national traditions, and who probably prefer to put up with long corridors in order to attain the strict privacy of their separate rooms. It is questionable, though, how long this attitude will last, and in the writer's opinion it is desirable by means of propaganda to remove it, since with its removal will, no doubt, vanish various insular prejudices which may be considered as standing in the way of progress.

It would not be fair to rush into any hasty criticism of Chiltern Court, since, built over the Underground station at Baker Street, many difficult problems were no doubt involved. The system of planning adopted, of a triple corridor all round the site, is disadvantageous to the flats and is also extravagant. This extravagance is proved in making a comparison in accommodation between a £900 flat in Chiltern Court and a £900 flat in Portman and Orchard Courts; the latter, apart from more attractive planning, by the elimination of corridors and closer connection between bathrooms and bedrooms, contains two more habitable rooms. The central or spinal corridor in Chiltern Court connects up the three main lifts and staircases, and provides access to the string of flats on either side of it.

These strings of flats consist mainly of a string of rooms bounded by a long private corridor, lit by the light-wells of the spinal corridors. The arrangement of this system of planning results in all habitable rooms being lit and ventilated on the outside walls, back or front. The site, no doubt, did not allow of lighting rooms on to a large inside court for the sake of quiet, but there is no doubt that this internal court system (where a large enough court can be arranged on a site) is the right solution for planning flat dwellings in our big cities today. If the court can be made large enough and attractive enough, the sacrifice of both aspect and street view is worth while.

Chiltern Court is by far the largest block of flats here illustrated, and contains 180 residences. The ground floor contains banks and shops, apart from the railway buildings. Two-and-a-quarter acres of storage room are contained in the sub-basement and mezzanine floors in the west wing.

Flats, from mansion flats to bachelor flats, occupy the first to the seventh floors, and thirty spare rooms for maids occupy the block facing on to Allsop Place. These rooms are connected by telephone with the various flats and are available for use of the flat tenants on extra payment.

As already described, the main spinal corridor on each floor gives access to the separate residences, and is approached by three main entrance staircases and lifts. The lifts being the recognized means of approach to the various floors, the staircases are not elaborately planned or decorated, and serve as escape stairs for fire purposes. Tradesmen's lifts, situated in the main corridor light-wells, serve all kitchens. There are no separate service staircases

[*Concluded on page 102*

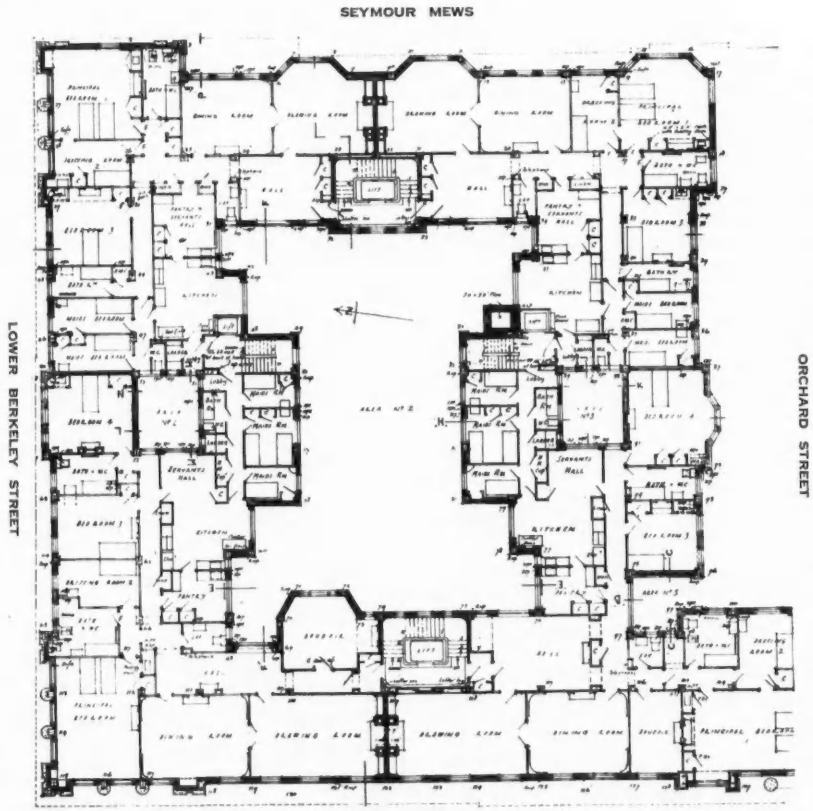
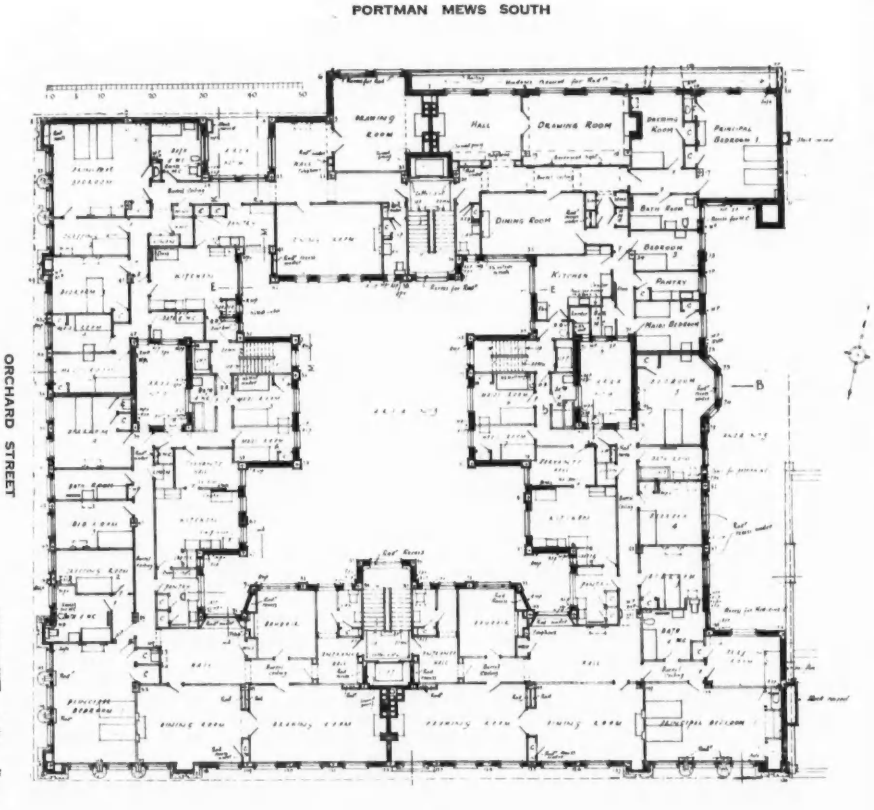
No. 42 UPPER BROOK STREET, MAYFAIR, W.

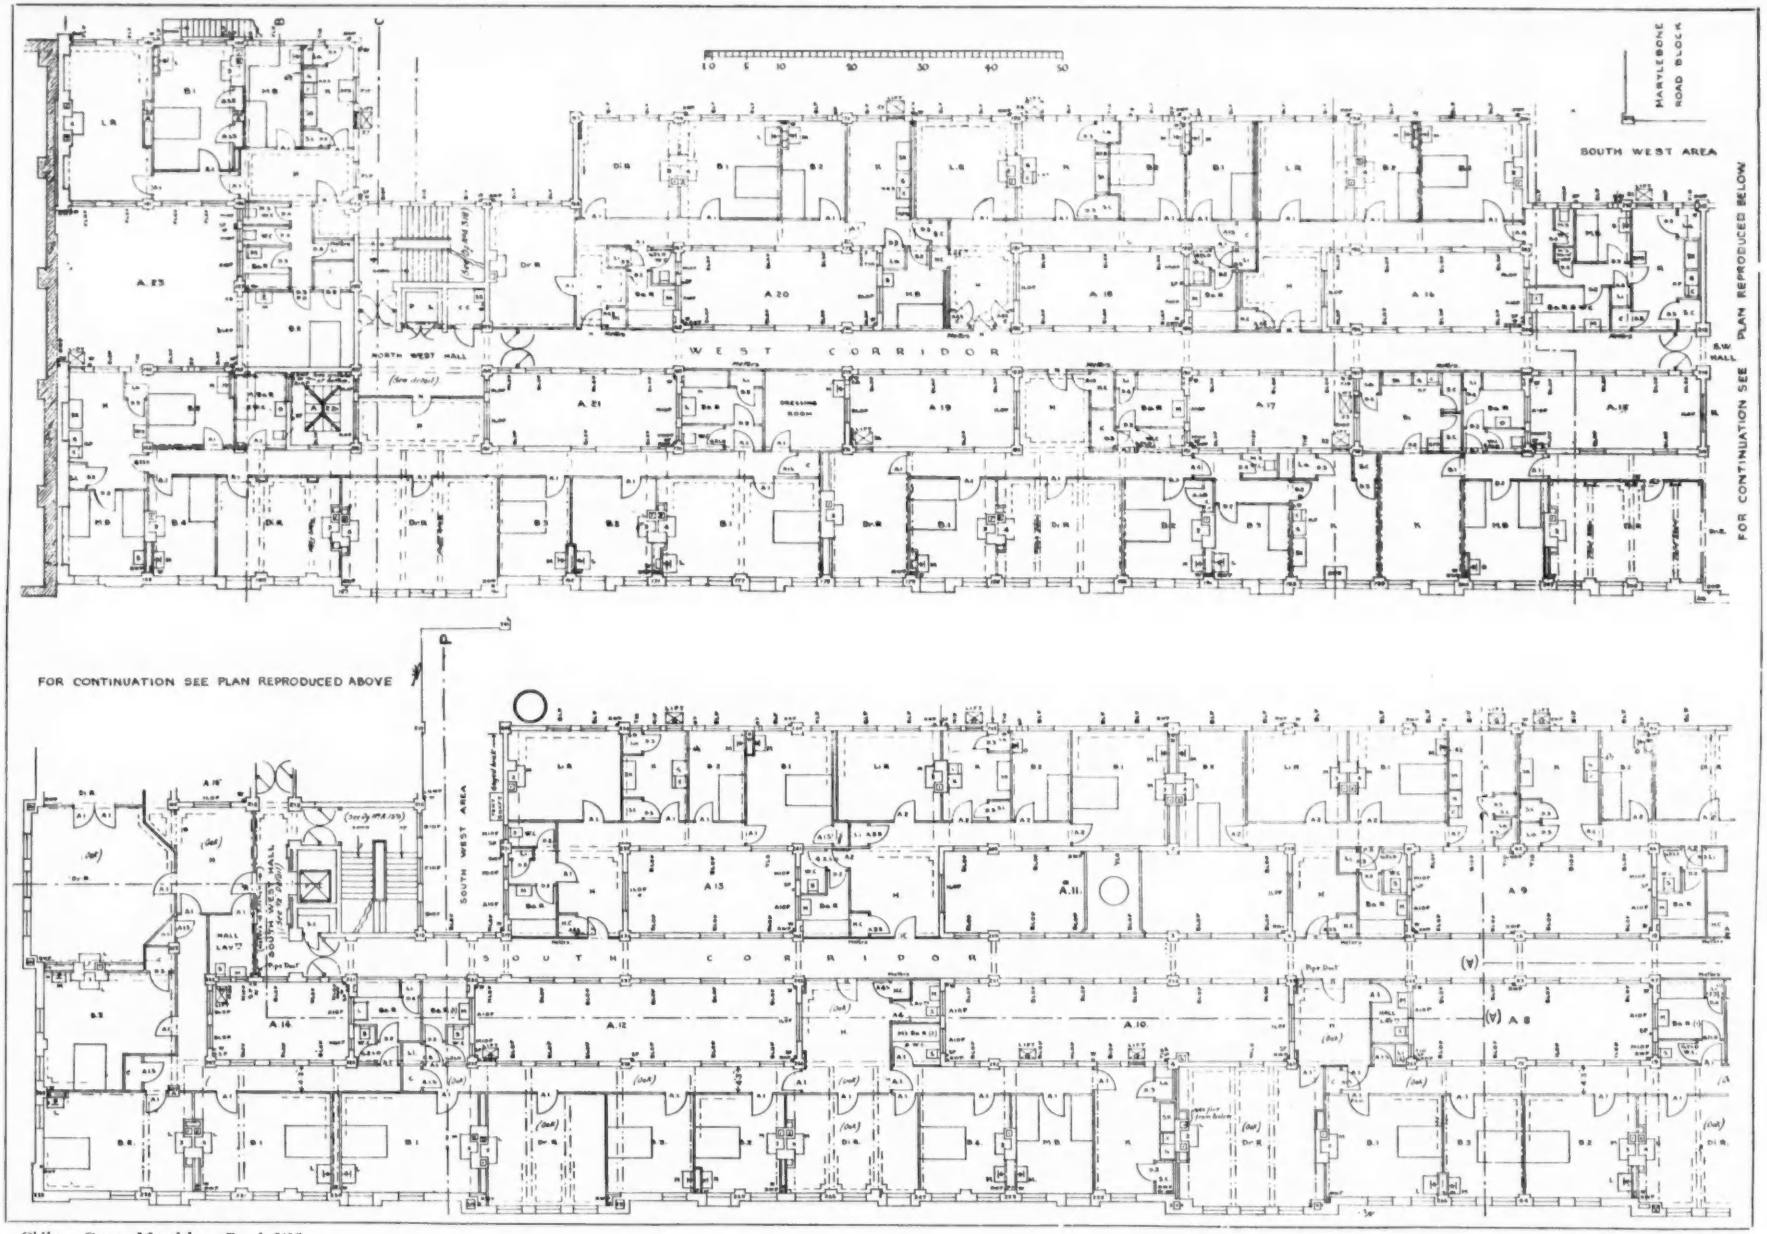
By T. P. Bennett and Son





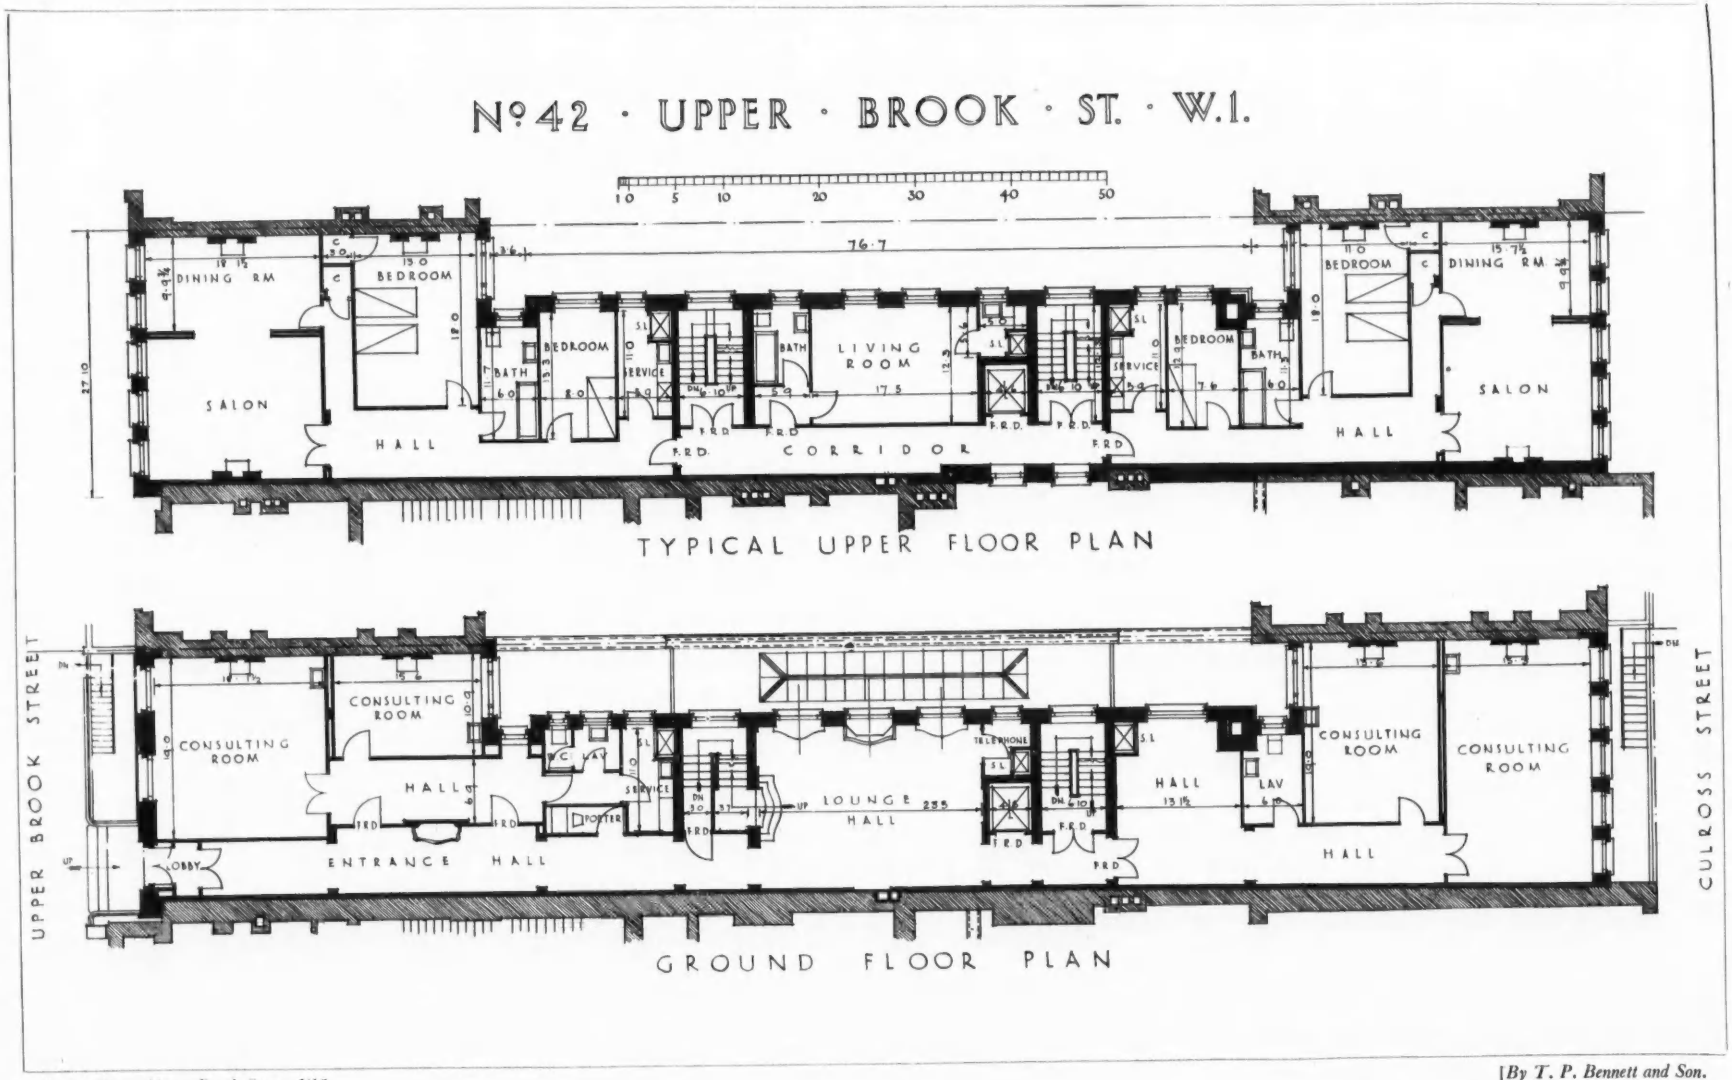
A view in a salon, looking through the folding doors, into the dining-room. The building has two elevations, one to Upper Brook Street, the other to Culross Street, and the flats have been planned with salons and dining-rooms to overlook one of these thoroughfares.

Stratton House, Piccadilly, W. [*By W. Curtis Green.*



The flats range in accommodation from three reception rooms, four principal bedrooms, two maids' bedrooms, and three bathrooms, to two reception rooms, three principal bedrooms, maids' double bedroom, and two to three bathrooms. All flats have separate entrances and lifts for servants and tradesmen, and are provided with a kitchen, pantry and larder. Among the modern features are panel heating, gas and electric cooking, and internal telephones.

Orchard Court and Portman Court, W.] [*By Messrs. Joseph.*



Typical upper floor plans, left, left half of Orchard Court and, right, of Portman Court. The accommodation varies from large flats, with seven bedrooms and three bathrooms, to small flats, with three bedrooms and two bathrooms. There are very large reception rooms. The best room suites are self-contained, and all kitchen quarters are cut off from the rest of the flats. Electric service lifts and internal service stairs are available for tradesmen and servants.

Chiltern Court, Marylebone Road, W.] [*By Charles W. Clark.*

The accommodation ranges from a ten-roomed mansion flat to a bachelor flat, comprising living-room, bedroom, bathroom and kitchen. In every flat a jewel safe is built into the wall in an unobtrusive position, and an automatic telephone is provided on which calls can be made to the porter, restaurant, hairdressing saloon, etc., in addition to outside calls. A wireless reception apparatus is installed in the building, and the principal rooms and kitchens in all the flats are equipped with plugs for loud speaker and headphones.

apparatus is installed in the building, and the principal rooms and kitchens in all the flats are equipped with plugs for loud speaker and headphones.

Service Flats, Upper Brook Street, W.] [*By T. P. Bennett and Son.*

The ground floor is planned to provide physicians' consulting rooms, each having a large reception and waiting-room, with cloakrooms, lavatory and service accommodation. There are six stories in addition to a basement. Seventeen service flats are provided, and on the top floor separate bedrooms and bathrooms, to the extent of sixteen rooms, for men- and maid-servants. A group of five small flats is arranged on the centre of the site, providing a large room, with a small service pantry and bathroom. In the basement are the service kitchen, staff accommodation, valet butler's room, maid's closet room, with separate closets for each flat, hot water and heating chamber, the caretaker's apartments and an office.

to these kitchens. Hot water, central heating and wireless are supplied to every flat, likewise a small built-in jewel safe. Lavatory basins, with built-in medicine cupboards, are provided in the best bedroom of each flat, and all floors are of wood blocks (in the reception rooms and halls of the best flats they are of oak). The building contains a large entrance lounge and a restaurant to seat 250 people, which is accessible both to the public and to tenants. In the basement of the Allsop Place wing is a banqueting room with spring floor for dancing, together with kitchen accommodation. Passenger lifts from all floors communicate with this room.

The general construction of the building is of steel frame throughout, faced on the main streets with Portland stone. The main cornice is of reinforced artificial stone. The mansard roof is of patent flooring, faced with Westmorland green slates. Water is provided by means of two artesian wells which feed three 14,000 gallon tanks, each tank being situated over a main staircase. The double walls between flats are constructed of partition blocks. Mr. C. W. Clark, A.R.I.B.A., is the architect responsible for the work.

Portman and Orchard Courts are two separate blocks of flats occupying a corner and a side of Portman Square respectively. Messrs. Joseph are the architects. Portman Court is a square block with a central service court. Four large family flats occupy each floor. They are approached by two main staircases and lifts. Large ground-floor entrance halls are also embodied. The rents vary from £750 to £1,300 per annum, inclusive of rates. Extra rooms are available for servants as also are a limited number of garages.

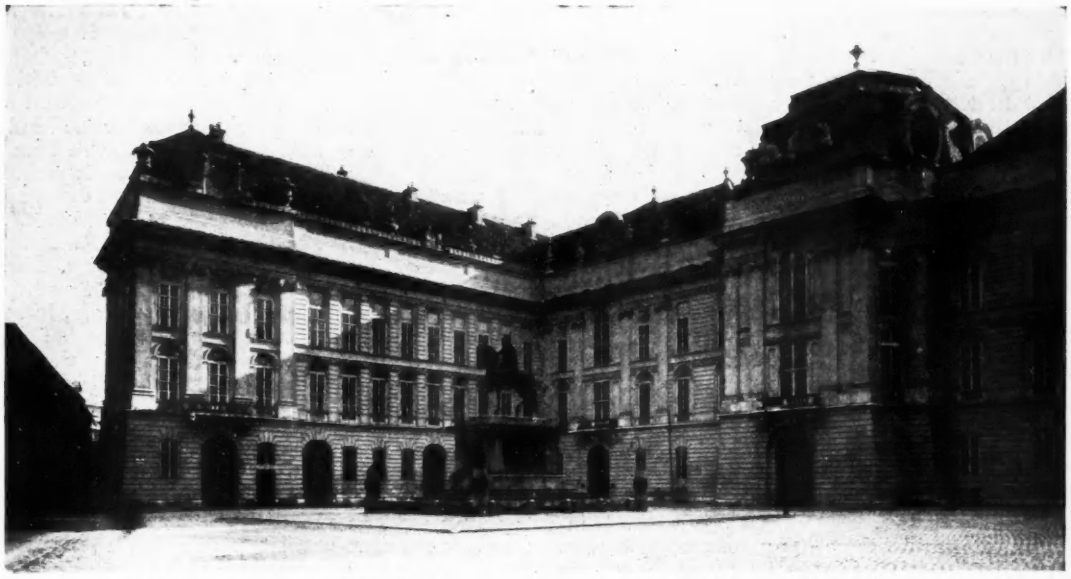
Orchard Court, which is roughly a double cube on plan, is bounded by thoroughfares, and contains two service courts and an open central court on which latter some main bedrooms face. The rents of these flats are approximately the same as those of Portman Court. There are eight flats on each floor, the general arrangement being a duplicated version of Portman Court. Service stairs and tradesmen's lifts communicate with the servants' quarters in each flat. Both buildings are equipped with every convenience. Shops and banks occupy the main ground-floor areas. The elevations are of multicoloured bricks, with Portland stone dressings. The design of the elevations might have been more successful had a modern style been adopted, since there is not enough set-back of wall to accommodate properly a column and pilaster treatment.

Stratton House, Piccadilly, designed by Mr. W. Curtis Green, A.R.A., is in the writer's opinion one of his most successful works. The façades of Portland stone keep their scale admirably throughout all their detail, and such detail is kept commendably simple. The building is planned with two main staircases and lift approaches. Four large flats are arranged on each floor, apart from various spare rooms on the upper floor, and the plans are well worthy of study. A series of small vestibule halls are arranged in place of corridors, giving to the flats an extremely pleasant character. The rents vary from £600 to £1,500 per annum, exclusive of 10 per cent. for service charges and exclusive of rates. The building is equipped throughout with every possible convenience, including a panel heating system and an extract system of ventilation.

No. 42 Upper Brook Street is a solution of an entirely different problem. On the site of a private house with a frontage of only 28 ft. has been designed by Messrs. T. P. Bennett and Son a collection of small service flats, with four consulting rooms on the ground floor. Excellent use has been made of the floor space available, allowing of a small flat back and front and a one-room apartment in the centre.

A very difficult problem was set for the elevation, in Portland stone, to conform in some way with the private house character of the street. It suffers rather heavily in the matter of scale with the buildings on either side, though a serious attempt has been made to keep the local character of the eighteenth-century houses. G. G. WORNUM.

SOME BOOKS OF THE YEAR



An Architect's Survey

BY GRAHAME B. TUBBS

ENGRAVED upon a book-plate that recently came into the possession of the writer were the words, "The Book Killed Architecture." The original owner was probably a man of pronounced mediævalist views, with whom it would be unwise to argue unless the night was yet young. Even then such a discussion would, more likely than not, be fruitless; in an article such as this it would be both futile and out of place. Whether books did or did not kill architecture, it is undoubtedly a fact that they created the professional architect—that is, the designer of buildings whose knowledge of principles and of details is derived from books rather than from the traditions of the mediæval master-builder. Books being the cause of the architect's existence, he would be ungrateful indeed if he did not treat them with veneration, if not with love.

The books of interest to architects published during the year are many, and among them are several of importance and many of interest. There are no works dealing with the philosophy of the art, although a revolutionary theory has been advanced as to the origin of Christian church architecture, and Sir Reginald Blomfield, R.A., has written a charming volume of architectural *Belles-Lettres*. The majority of the books published deal with the buildings of the past, notable among which are a new edition of "Garner and Stratton," a fine French monograph on the Acropolis, and a new history of Greek and Roman architecture. Besides these archæological works, there are treatises on special problems (such as Powys's *The Repair of Ancient Buildings*), on special types of buildings, and on individual materials, such as wrought iron, glass and stone. There are, as well, a good crop of collections of modern work, chiefly from the Continent, and some interesting Town Planning Reports.

Sir Reginald Blomfield's *Byways* consists of essays recording his impressions of those buildings in the South of France, in Central Europe, and in Scandinavia that he visited in his wanderings. They make delightful reading, because of their grace of style and of their writer's outspoken criticisms of the buildings he mentions. He has strong predilections and an independence of judgment that refuses to admire because it is the fashion to do so. Of his remarks about baroque (which he describes as "the architecture of the alcove"), *The Times* reviewer wrote that they reminded him of a bishop's description of his first visit to a night club! Sir Reginald seemed to be glad to come to the bracing air of the North, and his appreciation of Stockholm and its town hall and other new buildings is interesting reading; he says of the town hall that it is "the last word, not of architecture, but of the arts and crafts movement." Another book of architectural criticism, but of a very different sort, has been published this year, after remaining unknown for over 100 years. It is *The Lectures of Sir John Soane, R.A.*, that were delivered while he was Professor of the Royal Academy. Although his style is sometimes rather heavy, most of Soane's architectural judgments are sound and acceptable today, even if they would not have found favour fifty years ago.

From Byways : Leaves from an Architect's Notebook.] [*By Sir Reginald Blomfield* (*London : John Murray*).

Joseph-Platz, the courtyard of the Hofburg, Vienna ; with the monument of the Emperor, Joseph II.

The lectures, which are edited by A. T. Bolton, F.S.A., are very fully illustrated by 120 reproductions, selected from the 2,000 drawings that were specially made by Soane's pupils.

An ingenious German, Herr Blossfeldt, has given us *Art Forms in Nature*, which, although not exactly an architectural book, is nevertheless one of first-rate importance to architects, containing as it does a great deal that will prove most inspiring to the designer. It consists of a series of wonderful photographs of natural plant-forms, either life-size or enlarged or reduced. Many of the examples are of surpassing beauty, and some of them bear striking resemblance to forms familiar both in architecture and in the minor arts and crafts. It is such a good and original book that everyone wonders why he himself has not done it. If the architect is thrilled by Herr Blossfeldt's photographs, he will be equally amused and instructed by H. B. Creswell's *The Honeywood File*, which needs no recommendation to readers of THE ARCHITECTS' JOURNAL, as it appeared in these pages before being issued as a volume.

Although there have been no books of architectural biography published this year, a sumptuous volume of the *Work of Ralph Adams Cram* and his partners has appeared. This book contains illustrations of an immense amount of work designed by Dr. Cram, who is one of the outstanding personalities of American architecture. He has done for religious art in the United States what McKim did for civic architecture. Among his most important works are the completion of the Cathedral of St. John the Divine, New York; West Point Military Academy, and the new chapel to Princetown University.

The class of book that is most plentiful, apart perhaps from those which verge on the archæological, is that dealing with one particular type of building. There have been many such published this year. Two of them deal with the English country house, in which subject interest is unabated. They are *Recent English Domestic Architecture*, by H. de C. Hastings, and F. R. Yerbury's *The Small Modern English House*. The houses in the former are arranged in order of period, starting with those in mediæval or Tudor style and ending with T. S. Tait's scheme at Silver End. The other volume concludes with a series of photographs of modern furniture suitable for such houses, and their style, for the most part, follows the same trend as the houses they are designed to furnish. Complete interiors, both at home and abroad, can be studied in *The New Interior Decoration*, by Dorothy Todd and Raymond Mortimer, although in this case any design that has a hint of " period " is rigorously excluded, together with anything which while " claiming to be modern is only eccentric." While on the subject of the home, mention must be made of C. M. Villiers-Stuart's delightful book on *Spanish Gardens*. This is fully illustrated by pen-and-ink and water-colours and deals chiefly with old examples.

Sir Felix Clay's book *Modern School Buildings* is a classic, and those interested in this class of building will be glad to hear of the publication of a third edition. This has been completely rewritten and brought up to date by the inclusion of such modern innovations as open-air classrooms and more complete bathing facilities, and the latest type of equipment. Owing to exigencies of expense the section dealing with foreign schools has had to be omitted. This is a pity, since one would think that English designers have something to learn from abroad, especially from the post-war German schools.

From Germany come monographs on the only classes of building, excepting housing and municipal works, that have been erected there in any quantity since the war. They are cinemas, cafés and restaurants. The first is entirely given to the *Cinemas of Fritz Wilms*, which extend from huge " super " houses to quite small café cinemas. There is one point of interest to be noted, and that is that, except in a few cases, galleries have been avoided and all the seats put on one level. *Moderne Cafés, Restaurants und Vergnugungesstatten* gives many very striking modern examples, most of which are from Germany. The lighting arrangements are of the greatest interest, both technically and artistically. Examples of recent work by the municipalities of Germany, including houses, flats, banks, public conveniences and gymnasia, can be seen in *Städtebau Deutschlands*, while in *Nieuw Nederländsche Bouwkunst* post-war Dutch buildings can be studied. In the English introduction the author, Professor Wattjes, says of Holland, " The word ' modern ' has little sense there because no opposite tendency exists. It is used, if at all, only to designate those who fight the new architecture on behalf of the newest." This is quite true; in fact, if anyone wanted to put an " order " on a façade in Amsterdam (which is

most unlikely), he would probably have difficulty in getting the drawings "passed" by the authorities.

Much of the effect of the very "modern" work depends upon the use of glass, and Arthur Korn has written a book, *Glas in Bau und als Gebremschsgegenstand*, in which he shows the great importance of this material in many of the designs of such men as Mendelsohn, Bruno Paul and Le Corbusier, and how effectively it is used in various new forms. A Frenchman, Louis Barillet, has written a book, *Le Verre*, in which he reproduces examples of modernistic stained glass design, and various methods of using glass, in conjunction with modern metals, for all sorts of purposes hitherto undreamed of. *Le Luminaire et les Moyens Declairages Nouveaux* (Moreau) shows how glass and metal can be combined to produce interesting lighting fixtures.

By a curious coincidence there have been published during this year several books on wrought iron. The most comprehensive survey of the whole subject is by an American, and is G. K. Geerling's *Wrought Iron in Architecture*. He gives chapters to every country, but devotes most space to Italy and Spain, reproducing in these cases many excellent measured drawings, but in the sections on French, English, and United States ironwork he relies exclusively on photographs. Maxwell Ayrton and Arnold Silcock's *Wrought Iron* (Country Life) deals with English work only. There are many very fine photographs but few drawings, which is a pity. Tijou has a chapter to himself, and the transcripts of the relative building accounts at Hampton Court and elsewhere are printed. Italian ironwork is exhaustively treated in *Il Ferro Buttuto* by Corrado Ricci, a folio containing 556 plates from all periods. Modern French examples, giving the work of such modern masters of the craft as Edgar Brandt, Subes, and Schenck, show to what degree of delicacy and elaboration new alloys, worked by modern tools such as the acetylene blow-pipe, can be taken.

The next group is one that deals with the building crafts, and includes several good books. Messrs. Batsford have made an addition to their series of practical treatises in *Modern Practical Masonry* by E. G. Warland. New methods of machine working and the growth of steel framing for buildings have revolutionized the trade in some respects, and these new problems are dealt with in a clear and workmanlike way, but the importance of the study of the nature of the building stones and of the geometry of "setting-out" have not been overlooked. The book is clearly intended for the town mason rather than the man working in the country.

Each of the senior University Presses publish monographs on brickwork this year. From Oxford comes the late W. R. Jagger's excellent treatise, *Brickwork and its Construction*. In this handy book the subject is treated in a much more exhaustive way than is possible in an ordinary book on building construction; the scientific and artistic aspects are stressed. Nathaniel Lloyd's *Building Craftsmanship in Brick, Tile and Stone Slates* is illustrated by photographs rather than diagrams, and the subjects chosen include details of both old and modern work. The section on tile and stone slates is the most useful. The only book on woodworking is by J. F. Dousett, and is called *Stair Building and Handrailing*; it seems to be very complete, and should give the novice all he needs to be initiated into the mysteries of this complicated craft.

Specification is in many ways the best of construction books, as it is the most complete, and is kept up to date by constant revision. The 1929 issue has, as well as specifications for all trades, authoritative articles on "Baths and Wash-houses" and "The Planning of Large Kitchens," and the editor, F. Chatterton, writes about the new type of gasometer, which is polygonal on plan and of fixed height, and offers considerable architectural possibilities.

One of the most important books of the year comes under the head of construction, but it is more than a mere construction book, as it embodies the practical experience of fifty years of the Society for the Protection of Ancient Buildings. It is A. R. Powys's *The Repair of Ancient Buildings*. Mr. Powys restates clearly the ideals of his society to preserve old buildings, but to avoid making reproductions of damaged parts when this involves the destruction of what remains of the original work. He describes the best means of repairing stonework by tile and plaster, how to protect and repair old roofs and other carpentry damaged by decay or insects, and the best method of coping with the most common troubles that beset the architect who has to repair an old building. It is a book that cannot be too widely distributed, both among architects and those who have charge of ancient buildings.

Each year sees the publication of books about the buildings of almost every

Chipping Hill, Witham, Essex.

period of civilization. The earliest in point of time this year is *Les Temples de Karnak* by Georges Legrain, published in Brussels. This is a folio of 270 pages which is illustrated very fully by excellent photographs, many being details of carving, but oddly enough there is not a single plan. A work on the grandest scale comes from Paris, namely, the superb folio, *L'Acropole*, by Ch. Picard. In the text are inserted details of construction and conjectured restorations, but the body consists of a series of seventy-five collotype plates of general views and details of the Acropolis itself and all the buildings upon it, with the exception of the Parthenon, to which a separate volume has already been given. Another book of first importance is P. S. Robertson's *Handbook of Greek and Roman Architecture*, from the earliest times to the foundation of Constantinople, and it should be read by all interested in classic times.

A revolutionary theory as to the origins of Christian church architecture was propounded by M. Strygzowski in lectures he delivered at London University, which have been published in book form by Messrs. Batsford under the title of *Early Church Architecture*. His belief is that we should look for the beginnings of Christian architecture not to Greece and Rome, but to the almost vanished timber architecture of Northern Europe. It is a most fascinating theory and well developed in this important book. Timber architecture reminds one of the fine folio book of plates of the old domestic architecture of Normandy, which is largely of wooden construction. Raymond Quenedy has issued a second volume of his work *Normandie*. It contains plates of some really magnificent old buildings, both *manoirs* and town houses, in the Caen and Bayeux districts; what a chance for some French architect with sympathetic understanding, and architecturally unsophisticated, to adapt them to French country houses! The horrors of the Normandy coast form a sad example of what happens when the French architect of today "goes picturesque."

Garner and Stratton's standard work, *Domestic Architecture of England during the Tudor Period*, covers about the same time as the above, and it is interesting to compare the two in the new edition which has just been published. This is one of the standard books that is never likely to be surpassed either for its matter or for its *format*. Mr. Stratton has made considerable alterations in this edition: twenty new houses have been added, but none of the old examples have been omitted. The size has been slightly reduced and the houses advantageously regrouped according to the material of which they were made. This is undoubtedly one of the important architectural bibliographical events of 1929.

Basil Oliver's *The Cottages of England* is an excellent book, and one that fills a gap, as the whole field has never before been surveyed. He, too, groups his cottages according to material, and he has confined himself exclusively to cottages and has omitted the larger buildings such as farmhouses. The letterpress is excellently done, and the beautiful illustrations are chosen from the finest examples of the wealth of material which England still possesses. The fourth volume on *London*, of the Royal Commission of Historical Monuments, is given to the City, and includes St. Paul's Cathedral, the churches built before 1714, and the Temple. It is rich in plans and photographs and forms a mine of detail of the Middle Ages and the Renaissance and is really extraordinarily good value for a guinea. Another survey of a different kind is the Burlington monograph, *Georgian Art*, which is a general review of all aspects of art during the reign of George III. It makes one realize the homogeneity of every branch of art in the eighteenth century, a quality conspicuously lacking today. Can it be that our friend of the book-plate was right after all?

One of the most cheering things about the year's books is the indication of the interest taken in matters of social organization. It is clear that the good work of those societies that make public amenities their concern is having effect. Propaganda is still being effectively carried on, and an excellent example of it is Clough Williams-Ellis's *Cautionary Guide to St. Albans* (6d.). In it, photographs of this city are shown with good old and new buildings by the side of the most lurid examples of the untidy and the shoddy. These, together with the amusing running captions, should have a powerful effect and convince everyone that the terrible state of our towns is quite unnecessary and could be avoided by creating a demand for better things.

If the waste of effort and ugliness to which we are condemned by the lack of forethought of our forebears is to be avoided in the future, our towns must not be allowed to develop haphazard; many towns are already alive to the necessity for making proper arrangements for their expansion, and several Regional Planning Schemes have been prepared this year. The *North Middlesex* scheme includes the northern suburbs of London, parts of which are already densely populated, while the outer areas still remain semi-rural. The authors have made recommendations for retaining open spaces and forming stream-side parks, and advocate the reservation, for industrial development, of certain districts and the efficient planning and control of the parts that are still undeveloped. The *Thames Valley* scheme, prepared for the C.P.R.E., deals with the preservation of a very lovely part of the country that is being rapidly industrialized. The *West Sussex* survey attempts to co-ordinate the development of a group of seaside towns, while *The Future Planning of Wallasey* deals with a district that is the natural playground of Liverpool, but which has already been attacked by the bungalonic plague.

There are several good books for school use. *Architectural Drawing* (10s. 6d.), by G. D. Gordon Hake and E. H. Button, is intended for the student

during his first years and gives in handy compass good advice on shadows, lettering, perspective and sketching; and examples are reproduced from work by the foremost draughtsmen of the day. *Architectural Shadow Projection*, by J. M. Holmes, treats of this subject at greater length, his aim being to make the student master the principles rather than to give him a crib for all the most usual shadow forms. Messrs. Tiranti are to be congratulated on their reprint of Normand's *Parallel* of the Orders. This is one of the best books on the subject, and at six shillings is wonderfully good value; it has a substantial and pleasant binding, is of good paper, and the reproductions are excellent and to a large scale. G. B. T.

OUR COLOUR PLATES

"Adew Edinburgh, thou heich triumphand toun, within quhose boundis richt blythful have I bene": these lines of Sir David Lindsay (1530) that stand as one of the quotations before *Haunting Edinburgh*, by Flora Grierson (London: John Lane, the Bodley Head, Ltd., price £1 net), prepare one for surrender to the spirit of the ancient Scottish capital. It is clear that both the author and Katharine Cameron, who has supplied twenty-two illustrations—very well reproduced, sixteen in colour, of which one appears in this issue—have allowed its fascination to soak deep into their consciousness. More than that, they are able to convey it to the reader; imperceptibly, thus, he assimilates a vast quantity of historical allusions.

A History of British Water-Colour Painting (London: B. T. Batsford, Ltd., price 25s. net), from which our second colour plate is borrowed, is a new and revised issue of this closely-documented study by a scholar who, as Keeper of the Department of Paintings in the Victoria and Albert Museum, had unrivalled facilities for its preparation. Of its sixty-four coloured plates, not the least attractive are those devoted to miniatures. In his foreword, Sir Herbert Hughes-Stanton, R.A., President of the Royal Society of Painters in Water-colours, says that the art of water-colour painting dates from very early times if the work of the first miniaturists and illuminators is to be included. He adds that it is an art peculiarly favoured in England, though originating, as we know it, with the Flemings of the sixteenth century. The reproductions are of the first excellence, and the biographical appendix is most valuable.

Our third colour plate is a reproduction from Paul Sandby's picture of the river view from the old Somerset House Terrace, in the Victoria and Albert Museum, and is one of the many that have adorned the pages of *The Connoisseur*.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At Swedenborg Hall, 20 Hart Street, Bloomsbury, W.C.1. "Combustion, Wind and Flue Equipment." By C. A. Masterman, B.A., A.I.C., M.S.C.I., M.S.I.E. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS. Lancashire and Cheshire Branch. At the Engineers' Club, Albert Square, Manchester. "Some Problems in the Design of Modern Steel Frame Multiple Story Buildings." By V. H. Lawton, M.I.STRUCT.E. (Lantern Illustrations.) **7 p.m.**

THURSDAY, JANUARY 9

R.I.B.A., 9 Conduit Street, W.1. Meeting of the Science Standing Committee. **4 p.m.**

GOLDSMITHS' HALL, Foster Lane, E.C.2. "Modern Design and Decoration." By Howard Robertson, F.R.I.B.A., S.A.D.G. (Lantern Illustrations.) **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Ordinary Meeting. 6 p.m. Dundee Sub-Centre. At the University College, Dundee. "Lubrication." By G. H. Chalmers. **6 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Engineering Contracts, some Legal Problems affecting Structural Engineers." By E. J. Rimmer, M.ENG., A.M.INST.C.E. **6.30 p.m.**

SATURDAY, JANUARY 11

Sunrise, 8.3 a.m. Sunset, 4.13 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. First of Series of Six Non-Technical Lectures on Present-Day Architecture. "Architecture in Daily Life." By Howard Robertson, F.R.I.B.A., S.A.D.G. **3 p.m.**

MONDAY, JANUARY 13

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "The Work of the Building Research Station." By Dr. R. E. Stradling, D.SC., PH.D. **8 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Western Centre. Annual Dinner at Cardiff.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, S.E.1. Paper on "Oil versus Solid Fuels." By H. A. Leadbeater. Light refreshments at 6.30 p.m. **7 p.m.**

TUESDAY, JANUARY 14

INSTITUTION OF ELECTRICAL ENGINEERS. Scottish Centre. At the North British Station Hotel, Edinburgh. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. **7 p.m.**

WEDNESDAY, JANUARY 15

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. "Quality in Pottery." By Joseph Burton, A.R.C.SC.I. Professor H. E. Armstrong, PH.D., LL.D., D.SC., F.R.S., will preside. **8 p.m.**

L.C.C. CENTRAL SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. Continuation of a course of twenty-four lectures on the History of Architecture (Part I, Ancient). By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

THURSDAY, JANUARY 16

INSTITUTION OF ELECTRICAL ENGINEERS. Hampshire Sub-Centre. At University College, Southampton. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. **7.30 p.m.**

FRIDAY, JANUARY 17

ARCHITECTURE CLUB. A Supper-Discussion Meeting will be held at the Architectural Association, 34 Bedford Square, W.C.1. Topic: "The Charing Cross Bridge Scheme." 7.45 for 8 p.m. **8 p.m.**

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Smoking Concert to be held at Carr's Restaurant, 264 Strand, W.C. Tickets may be obtained from the Secretary.

LONDON SOCIETY. At the Royal Society of Arts, 18 John Street, Adelphi, W.C.2. "London's Parks and Open Spaces." By F. W. Parker, F.S.I. **5 p.m.**

SATURDAY, JANUARY 18

Sunrise, 7.57 a.m. Sunset, 4.24 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Visit to Tower Bridge. Meet at Superintending Engineers' Office, Tower Bridge, at 2.30 p.m. **2.30 p.m.**

UNIVERSITY COLLEGE, Oxford. Conference in the Hall. The Rt. Hon. H. A. L. Fisher, F.R.S., P.B.A., will preside. Exhibition of drawings by P. Wilson Steer, Sir Charles Holmes and Gilbert Spencer, open from 2 p.m. Tea 4.30 p.m. **2 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS. Midland Counties Branch. Annual Dinner at the Midland Hotel, Birmingham.

MONDAY, JANUARY 20

R.I.B.A., 9 Conduit Street, W.1. General Meeting. President's Address to Students. Criticism by Louis de Soissons, O.B.E., F.R.I.B.A., on work submitted for Prizes and Studentships. Presentation of Prizes. **8.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. South Midland Centre. At the University, Edmund Street, Birmingham. "Voltage Control of Large Alternators." By H. W. Taylor. **7 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." (Lecture I.) By Harold J. L. Wright. **8 p.m.**

TUESDAY, JANUARY 21

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. First of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. East Midland Sub-Centre. At the College, Loughborough. "The Breaking Performance of High-Power Switchgear and of a New Form of Quenched Arc Switch." **6.45 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Early Renaissance Sculpture." By L. O. Faraker. **12 noon.**

WEDNESDAY, JANUARY 22

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Architectural Lighting." By R. W. Maitland. **8 p.m.**

THURSDAY, JANUARY 23

INSTITUTION OF WELDING ENGINEERS, 30 Red Lion Square, W.C.1. At Birmingham. "Modern Improvements in Resistance Welding Machines." By C. A. Hadley.

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Setting out and erection of Multiple Story Buildings." Informal Discussion to be opened by G. F. C. Caswell. **6.30 p.m.**

FRIDAY, JANUARY 24

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. Ordinary Meeting. At the Chamber of Commerce Buildings, New Street, Birmingham. "New Underground Railway Offices, St. James's Park—Notes on Foundation and Erection." By M. J. C. McCarthy, A.M.INST.C.E. **6.30 p.m.**

SATURDAY, JANUARY 25

Sunrise, 7.50 a.m. Sunset, 4.36 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Second of Series of Six Non-Technical Lectures on Present-Day Architecture. "The House You Want." By R. Randal Phillips, Hon. A.R.I.B.A. **3 p.m.**

MONDAY, JANUARY 27

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Some Aspects of Contemporary Continental Decoration." (Lantern Illustrations.) By J. M. Holmes. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture II.) **8 p.m.**

TUESDAY, JANUARY 28

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. Second of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

MONDAY, FEBRUARY 3

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture III.) **8 p.m.**

R.I.B.A., 9 Conduit Street, W.1. Business Meeting. Election of Members. **8 p.m.**

TRADE NOTES

A record without parallel in the history of architectural development is presented by the advertisement pages xxi—xxxii of this issue. In these pages the London Brick Company and Forders, Limited, record by means of drawings by Mr. J. D. M. Harvey the outstanding jobs of the year in which both phorpres Flettons and other bricks have been employed.

Mr. Harvey's architectural renderings are known wherever English architecture is spoken of, and this series of thirteen drawings represents some of the most outstanding buildings in this country. The buildings illustrated are in London: Imperial Chemical House, by Sir Frank Baines; India House, by Sir Herbert Baker, A.R.A.; Sun Life Assurance Building of Canada, by Septimus Warwick; William Booth Memorial Buildings, by Gordon and Viner and Sir Giles Gilbert Scott; Royal Mail Steam Packet Building, by Sir Edwin Cooper; Stratton House, by W. Curtis Green; Seventh Church of Christ Scientist, by Paul Phipps; Times Furnishing Company, by Cecil J. Eprile; London School of Tropical Medicine, by P. Morley Horder and Verner O. Rees; Dominion Theatre, by W. and T. R. Milburn; Ideal House, by Gordon Jeeves and Raymond Hood; Flats in Portman Square, by Messrs. Joseph; and Chiltern Court, by Charles W. Clark. The importance of these buildings may be gauged by the fact that nine of them are illustrated in the editorial section of this special number.

Messrs. Rhodes Chains, Ltd., have sent us a copy of their new folder. It contains illustrations and prices of Greenwood's ventilators, which this firm are now controlling and marketing. This business has been taken over from the Greenwood Ventilating Co., Ltd., which was originally established by T. W. Greenwood in 1879. Greenwood's larder lights, ventilights and skylight ventilators are manufactured in cast iron, steel galvanized or copper, and are supplied ready to fix. They are claimed to provide efficient ventilation with lighting, and are being widely adopted in all parts of the country by leading architects, the London County Council, War Office and many important local authorities. Greenwood's ventilating windows cost nothing to fix: they are merely built in. The skylight ventilators may be used on any pitch of roof, and require no flashings or opening gear. Other designs include the new Permavent and Ventex skylights in copper or steel galvanized, movable louvres, while Hoppa vents and airbricks are catered for. Full details may be obtained from Messrs. Rhodes Chains, Ltd., 8–10 Charing Cross Road, London, W.C.2, and samples may be seen in the showroom.

A new brochure published by the Workington Iron and Steel Branch of The United Steel Companies, Limited, contains notes of the various grades and brands of pig iron made at the Cumberland Works, notably the "Distington," "Workington," and "Harrington" brands, together with some photographs of fractures, and complete analyses of all grades. With the aid of this brochure those who buy and mix pig irons either by fracture or by analysis can, it is claimed, determine the iron best suited to their uses, with a minimum of trouble. Copies of the Publication (W 109) can be obtained on request from the Publicity Dept., The United Steel Companies, Ltd., Sheffield.

THE BUILDINGS ILLUSTRATED

Following is a list of the specialists, general contractors and some of the sub-contractors for the buildings illustrated in this issue :—

Lloyds Bank, Liverpool (pages 40 and 44–48). General contractors, Wm. Moss and Sons, Ltd. Sub-contractors: Henderson and Glass, steel; Kleine Patent Fire-Resisting Flooring Syndicate, Ltd., floors; Diespeker & Co., Ltd., terrazzo; Samuel Elliott and Sons (Reading), Ltd., bank fittings; Henry Hope and Sons, Ltd., casements; Waygood-Otis, Ltd., electric lift; G. N. Haden and Sons, Ltd., heating; Docker Bros., Induroleum flooring; H. H. Martyn & Co., Ltd., gates; Mellowes & Co., Ltd., lanterns; Birmingham Guild, Ltd., wrought ironwork; W. J. Harries, Ltd., Sika waterproofing; J. C. Edwards, silver-grey bricks; Williams and Watson, Ltd., pavement lights and glazing; W. and R. Leggott, Ltd., locks; Gilbert Seale and Son, Ltd., stone carving.

National Institute of Medical Research (pages 48–51). General contractors, W. J. Mitchell and Son. Sub-contractors: Tyler and Freeman, electric light; Roberts, Adlard & Co., roof tiling; James Gibbons and Sons, metal windows.

House and outbuildings, Shepherd's Hill, Buxted, Sussex (pages 81–88). General contractor, The Ringmer Building Works. Sub-contractors: Benjamin Ware and Sons, Ltd., bricks and tiles; Vita Glass Marketing Board, glass; R. W. Brooke & Co., Ltd., flooring; G. M. Callender & Co., Ltd., Protex waterproofing materials; Young, Austen and Young, central heating; Bratt, Colbran & Co., and Candy & Co., Ltd., grates; Gillham and Jones, Bagues, Ltd., and Troughton and Young, Ltd., electric light fixtures; H. Pontifex and Sons, Ltd., sanitary fittings; James Gibbons, Ltd., door furniture; Crittall Manufacturing Co., Ltd., casements; Fenning & Co., Ltd., marble; Heal and Sons, Ltd., textiles; Tuke and Bell, Ltd., septic tank.

Stratton House, Piccadilly (pages 91, 92 and 98). General foreman, W. H. Medlam. General contractors, Holloway Bros. (London), Ltd., who were also responsible for the excavation, foundations, joinery and mantels. Sub-contractors: Caxton Floors, Ltd., reinforced concrete; London Brick Co. and Forders, Ltd., Fletton bricks; Farnley Iron Co., Ltd., blue bricks; The Middleton Fire Clay Works, glazed bricks; Redpath, Brown & Co., Ltd., structural steel; Caxton Floors, Ltd., fireproof construction; J. H. Sankey and Sons, Ltd., moler slabs; Rheocrete Pumice Stone Slab Co., Ltd., pumice partition blocks; T. and W. Farmiloe, Ltd., glass; Luxfer Prism Syndicate, Ltd., patent glazing; Hollis Bros. & Co., Ltd., parquet and wood-block flooring; Asbestos Cement Building Products, Ltd., "Decolite" floors to service portions of flats; H. J. Cash & Co., Ltd., central heating, gas-fitting, boilers, electric wiring, electric light fixtures, electric heating and ventilation, bells and telephones; John R. Venning & Co., Ltd., John Bolding and Sons, W. N. Froy and Sons, Ltd., and Leeds Fireclay Co., Ltd., sanitary fittings; Rhodes Chains, Ltd., chains and pulleys and window furniture; H. and C. Davis & Co., Ltd., iron staircases; George Rome & Co., Ltd., and George Jackson and Sons, Ltd., decorative plaster; Starkie, Gardiner, Ltd., and J. M. Pirie & Co., Ltd., metalwork; J. Whitehead and Sons, Ltd., Anselm Odling and Sons, Ltd., and Charles Walker & Co., marble; Carter & Co., Ltd., and Martin Van Straaten & Co., tiling; Heal and Son, Ltd., furniture; Waygood-Otis, Ltd., lifts.

Portman Flats (pages 92, 93 and 99). General contractors, Higgs and Hill, Ltd. Sub-contractors: South Western Stone Co., stonework; Blunt and Wray, Ltd., ironwork; Plastering, Ltd., plastering stuc; Crittall Manufacturing Co., Ltd., metal windows; Ragusa Asphalte Paving Co., Ltd., asphalt; Shaw's Glazed Brick Co., Ltd., terra-cotta; Young, Austen and Young, heating, hot and cold supplies; F. Braby & Co., Ltd., Eclipse pressed steel stairs; London Brick Co. and Forders, Ltd., bricks; Waygood-Otis, Ltd., lifts; Electrolux, Ltd., refrigerators; Portland Cement Selling and Distributing Co., Ltd., Holborough cement; A. Goldstein & Co., glazing; Caxton Floors Ltd., floors; Dorman Long & Co., Ltd., steelwork.

Chiltern Court, Baker Street, W.1 (pages 94, 95 and 100). Clerk of works, W. E. Fennemore; general foreman, J. Corfield. General contractors, Higgs and Hill, Ltd., who were also responsible for the demolition, excavations and foundations. Sub-contractors: S. W. Stone Co., Portland stone; Moreland, Hayne & Co., Ltd., structural steel; Vertigan & Co., oak wood block flooring; Hollis Bros. & Co. Ltd., pine wood block flooring; Dent and Hellyer, Ltd., plumbing, sanitary fittings, w.c. suites and staff lavatories, etc., kitchen suites and plumbing; Crittall Mfg. Co., Ltd., steel casements; Art Pavements and Decorations, Ltd., Anselm Odling and Sons, Ltd., Marbello, Ltd., G. Wright, and Marble Decorations, Ltd., marble work; Benham and Sons, heating and ventilation, kitchen cooking apparatus and boilers; The British Challenge Glazing Co., laylights, dome lights, copperlike glazing and lantern lights; F. Braby & Co., Ltd., letter chutes; A. Brown & Co., Carter and Aynsley, Ltd., R. Adams & Co. (Floor Springs), London Metal Warehouses, Ltd. (Firth Staybrite), and James Gibbons, Ltd., ironmongery; Medway's Safety Lift Co., lifts and ash hoist; Metro-Vick Supplies, Ltd., electric light fittings; F. A. Norris & Co., fire escape staircases; Plastering, Ltd., Plaster Decorations, Ltd., and G. The GUILDFORD Corporation Housing Committee has considered the request of the Health Committee to provide houses at low rents for the tenants of houses which the Health Committee proposes to close as unfit for human habitation, and has decided to view sites for the erection of such houses.

The GUILDFORD Corporation Housing Committee is to invite tenders for the erection of an additional forty-four houses at Stoughton recreation ground.

Plans passed by the GUILDFORD Corporation: Mortuary and V.D. department, Royal Surrey County Hospital, for the hospital committee; extension of generating station, Woodbridge Road, for the Corporation; workshop, Worplesdon Road, for Mr. R. E. Gash; garage, Woodbridge, for the Joint Hospital Board; shops, Worplesdon Road, for Mr. R. C. Whitemore; shops and offices, Woodbridge Road, for Mr. H. J. Foot; alterations and garages, "Oak Lodge," London Road, for Messrs. Crowe, Bates and Weekes; enlargement to accommodate 300 children, Ludlow Road schools, for the managers of St. Nicolas' school.

The NEWBURY Corporation has authorized the town clerk to make inquiries as to the possible acquisition of two sites in the borough, which it is estimated would together provide accommodation for the erection of 100 houses.

EASTERN COUNTIES

The CHELMSFORD Corporation is asking the L.N.E.R. to widen the railway bridge over New Street.

Plans passed by the CHELMSFORD Corporation: Additions, stairs, Market Road, for Eastern Garage, Ltd.; four houses, Lynmouth Avenue, for Mr. W. J. Wade; alterations and additions, shop premises, King's Road, for Chelmsford Co-operative Society; extensions, 91 High Street, for Mr. J. Dutton; Masonic headquarters, billiards room, bedrooms, etc., County Hotel, Rainsford Road, for Mrs. Butt's executors; extensions, Broadcast Research Buildings, Marconi Street for Marconi's Wireless Telegraph Co., Ltd.

SOUTH-WESTERN COUNTIES

The PAIGNTON U.D.C. has invited Mr. E. H. Ladbury to submit plans for a proposed public shelter and public conveniences at Preston Green.

MIDLAND COUNTIES

The BIRMINGHAM Corporation has leased land at Uplands and Oxhill Roads to Lady Reynolds, for the purpose of erecting twenty-five houses.

The Worcestershire C.C. has obtained land for the proposed reconstruction of Hampton Bridge, EVESHAM.

Of the 2,028 houses completed in the Borough of SMETHWICK, 498 have been built by direct labour. Arrangements are being made for the erection of a further 98 houses by direct labour, in addition to the 54 now in course of erection.

The Stoke-on-Trent Corporation has obtained sanction to borrow £21,000 for the erection of sixty-one houses on the Vivian estate, FENTON.

The Worcestershire Education Committee is seeking a loan for the purchase of a site at PERSHORE, for the erection of a senior school.

The Worcestershire Education Committee is to erect an elementary school for 800 at HALESOWEN, and has also prepared preliminary plans for improvements at the Council school at SIDEMOOR.

The Notts C.C. is to widen the bridge over the canal at TROWELL, at a cost of £5,000.

NORTHERN COUNTIES

The BARNSLEY Education Committee is seeking sanction to borrow £6,500 for extensions at the Grammar School.

The BARNSLEY Corporation has obtained sanction to borrow £69,660 for the erection of the new technical college.

Plans passed by the BARNSLEY Corporation: Eight houses, Carlton Road, for Messrs. H. and R. L. Potter; shop, Church Street, for Barnsley Chronicle, Ltd.; four shops, Market Hill, for Barnsley Arcade Co.; extensions, factory, Peel Street, for Messrs. T. Taylor and Sons, Ltd.; additions, Empire Mill, Stocks Lane, for Messrs. William Sugden and Son.

The BARNSLEY Corporation is discussing with the Ministry of Health proposals for the erection of a new laundry, the erection of a new block, and the extension of the administrative buildings at the sanatorium.

The BARNSLEY borough engineer has prepared revised plans for the erection of a welfare centre.

THE BLYTH Education Committee has included in the school programme provision of a central school and a department for infants at Princess Louise Road School.

The BOLTON Corporation has instructed Messrs. Bradshaw, Gass and Hope, the architects, to proceed with the preparation of bills of quantities, etc., so that tenders may be obtained for the town hall alterations, and extensions to the municipal buildings.

House, Luttrell Road, Four Oaks, Sutton Coldfield. Designed by Francis W. B. Yorke. The main front (left) and the garden side (right). The walls are of rustic bricks, with stone dressings; and steel casement windows have been fitted. The roof is covered with tiles. For ground floor plan, see page 109.

The BOLTON Corporation is acquiring approximately twenty-two acres of land at Lever Edge Lane for a housing scheme.

Plans passed by the BOLTON Corporation: Clubroom, Shepherd Cross Street, for United Sports Club; workshop and stores, Craddock Lane sidings, for Messrs. McCreath Taylor & Co.; house, Old Kiln Lane, for Mr. Paul D. Vincent; two houses, Regent Street, for Mr. W. Reddyhough; bungalow, New Church Road, for Mr. J. W. Noble; additions, Arkwright Street, for Direct Supply Co., Ltd.; extensions, Hill Mill, Temple Road, for Mr. Henry Crossley.

Mr. J. B. Walmsley is to develop the land in Blackburn Road, CHORLEY.

The CHORLEY Corporation has appointed a Baths Committee to take into consideration the question of the provision of public baths.

The HULL Education Committee has approved preliminary plans for the erection of one department of a school on the Bricknell Avenue site, providing accommodation for 400 junior and infant children.

The HULL Education Committee has passed plans for the erection of two departments of a school on the Pickering Road site for 400 junior and infant children in one department, and for 480 senior mixed children in the other department. Plans have also been approved for the erection of two departments of a school on the housing estate, Willerby Road, with accommodation for 400 juniors and infants, and 480 senior mixed children.

The HULL Brewery Co., Ltd., is to rebuild the Station Hotel on a new site in the vicinity of Paragon railway station.

The HULL Corporation Telephones Committee has obtained a site in West Lane, Hedon, for the erection of a sub-exchange. Tenders are to be invited.

Plans passed by the HULL Corporation: House, Cranbrook Avenue, for Mr. W. Close; two houses, Silverdale Road, for Mr. J. Taylor; four houses, Hall Road, for Mr. P. Buckle; four houses, Bricknell Avenue, for Mr. T. R. Barnett; two houses, Inglemire Lane, for Mr. H. Wilkinson; two houses, Bricknell Avenue, for Mr. H. Sanderson; offices, etc., Hessle Road, for the Corporation; ten houses, Inglemire Lane, for Mr. H. Wilkinson; fourteen houses, Gillshill Road, for Mr. R. Ashton; ten houses, Street No. 14, for Messrs. G. T. Spruit and Son; six houses, Waldegrave Avenue, for Mr. W. H. Dowell; house, Gillshill Road, for Mr. S. Bays; house, The Avenue, for Messrs. F. Sewell and Son.

At a meeting of the HULL Education Committee, the director submitted proposals for the erection of new premises for the accommodation of the Riley High School on a site in Cottingham Road. The Committee authorized the preparation of preliminary plans for the erection of the premises, with accommodation for 500 pupils.

The HULL Watch Committee has passed plans submitted by the owners of the Strand Picture House, for structural alterations to the building.

The LEEDS Corporation has sold a building site at the junction of Merrion Street and New Briggate to Phonophones, Ltd., for the sum of £5,000.

The LEEDS Corporation has appointed a Committee to consider the suggested utilization for branch library purposes of the Headingley, Sheepscar and Woodhouse Moor police stations.

The LEEDS Corporation is seeking sanction to borrow £48,000 for the reconstruction and renewal of Sheepscar, Stainburn Square and Kirkstall Road gasholders.

The LEEDS Corporation Parks Committee has approved the sketch plan submitted by the city engineer, of the proposed crematorium, chapels, cloister, etc., on the Cottingley Hall Estate, Elland Road.

It is stated that a site at the corner of Lime Street and Elliott Street, LIVERPOOL, is being prepared for the erection of a new cinema for Associated British Cinemas, Ltd. The estimated cost of construction and equipment is £200,000.

Provision for the building of eight new bridges and a viaduct, together with street improvements, at a cost of £800,000, is one of the features of a Bill shortly to be introduced into Parliament by the MANCHESTER City Corporation.

The OTLEY Urban Council is proceeding with a scheme for the erection of a hundred houses on the Westbourne Park estate, at the west end of the town. The Council has provisionally accepted a tender of £31,063 for the erection of the houses.

The RETFORD Town Council has adopted a recommendation of the Housing Committee to build twenty-eight houses on Leafield Road, Hallcroft Estate, Retford.

A block of property in RICHMOND, Yorks, for the erection of a cinema, dance hall with café, and an arcade of shops, to extend from Victoria Road to Newbiggin, has recently been purchased by a syndicate.

The RIPON Corporation has passed plans for extensions at the Diocesan training college.

THE RIPON Corporation is seeking sanction for a loan of £17,000 for the erection of houses on the Aismunderby estate.

At a meeting of the RIPON Corporation Housing Committee, the city engineer reported on his interview with the Ministry of Health officials as to the erection of a further forty-four houses. The question of erecting a different type of house was discussed, and the city engineer was asked to submit an alternative design.

The ROTHERHAM Corporation is to secure powers for the construction of a weir across the river Don.

The ROTHERHAM Corporation Gas Committee has approved the plans and estimate of £23,000 for the conversion of the present gas offices and adjoining buildings into new offices, shops, showrooms and workshops.

Plans passed by the ROTHERHAM Corporation: Steel framed building, Alsing Road, Meadowhall, for Messrs. Howell & Co., Ltd.; ten houses, Ledsham Road, for Mr. G. Bilton; four garages, Psalters Lane, for Mr. P. Wood.

The ROTHERHAM Corporation Housing Committee has decided to erect approximately seventy houses by direct labour at South Street, and has instructed the borough engineer to submit an estimate of the cost per house.

The SHIPLEY U.D.C. has had under further consideration the question of the provision of new public offices. The clerk has been instructed to submit the proposals in draft form to the Unemployment Grants Committee, with a view to ascertaining whether the Committee would be prepared to make a grant towards the cost of the building, if the Council decided to proceed with the scheme.

The TYNEMOUTH Corporation Baths Committee has asked the borough surveyor to prepare plans for baths and washhouses at the corner of Union Street and Church Way.

The WAKEFIELD Corporation has decided to erect fifty houses, by direct labour, on the Lupset estate.

The WAKEFIELD Education Committee has decided to proceed with a scheme for the provision of an open-air school.

The WAKEFIELD Corporation has decided to erect a further 150 houses on the Eastmoor estate.

The WAKEFIELD Corporation recommends proceeding with the scheme for the erection of a new bridge at Kirkgate.

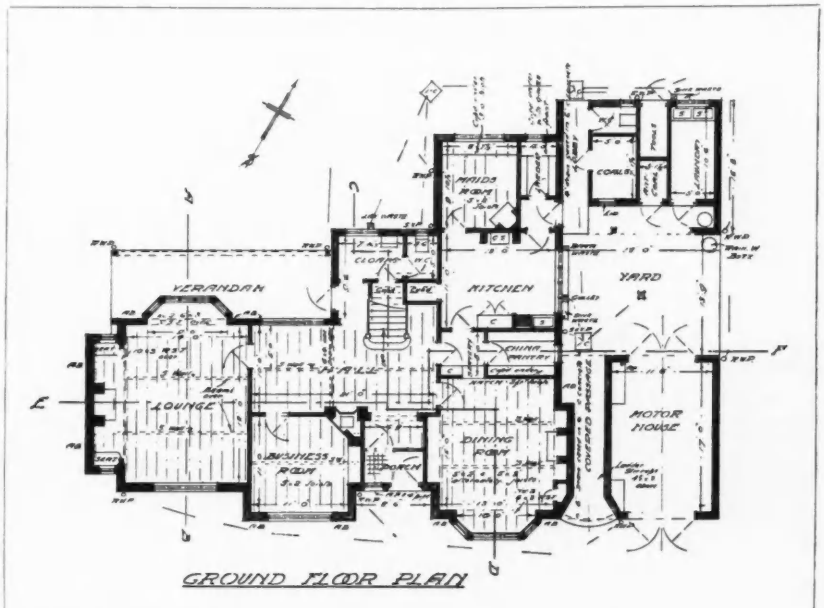
At a meeting of the WAKEFIELD Corporation the architect submitted a scheme for the utilization of Snapethorpe Hall, and instructions were given for the scheme to be referred to the General Purposes Committee.

Plans passed by the WAKEFIELD Corporation: Alterations, Redoubt Inn, Horbury Road, for Messrs. J. Tetley and Sons, Ltd.; three garages, Old Crown Yard, for Mr. A. Hampshire Lee; house, Horbury Road, for Mr. H. Dobson; shop, Kirkgate, for Messrs. H. Pickles and Son, Ltd.; four houses, Flanshaw Lane, for Mr. J. P. Firth; addition to boiler house, Christ Church schools, Thornes Lane, for Messrs. W. Wrigley and Son.

At a meeting of the YORK Corporation Estates Committee, it was reported that the city engineer has prepared preliminary plans of a public hall, and the Committee is considering the many questions which arise before it can report to the Council.

The YORK Education Committee has obtained sanction to borrow £12,000 for the erection of an elementary school at Tang Hall, and has also obtained sanction for a loan of £43,500 for the erection of 111 houses on the Tang Hall estate.

Plans passed by the YORK Corporation: New premises, Balfour Street, for Leeman Road W.M. Club; alterations, 83 Walmgate, for York Equitable Industrial Society, Ltd.; additions, Lawrence Lane, for the managers of St. Lawrence's School; loud speaker house, New Street, for Tower Picture Co., Ltd.; additions, Portland Street, for the governors of Bootham School; two houses, Millfield Lane, for Mr. J. Kilmartin; two houses, Winchester Grove, for Messrs. W. E. Puckering & Co.; additions, Coney Street, for Yorkshire Herald Newspaper Co., Ltd.; additions, Museum Chambers, for Mr. J. Pulleyn; additions, 5 and 5A Coney Street, for Messrs. J. B. Inglis and Sons; eight houses, Cornborough Avenue, for Mr. A. Temple; layout of estate, Acomb, for Mr. J. S. Barlow; house and shop, Manor Drive, for Mr. W. H. Edward; new road, Shipton Road, for Clifton Estate, Ltd.; four houses, Muncaster House Estate, for Mr. Denby Collins; twelve houses, Carr Lane, for Messrs. Simpson Bros.; sixteen houses, Manor Drive, Poppleton Road, for Mr. J. Sawdon; six houses, Moor Lane, Bishopthorpe, for Mr. W. J. Simpson.



SCOTLAND

The FALKIRK Dean of Guild Court has granted a warrant to British Cinemas, Ltd., for the conversion of the Grand into a talkie house. The reconstruction scheme will cost £12,000 and accommodation for 2,000 persons will be provided.

MISCELLANEOUS

Mr. M. Levy is to erect shops and flats on the site of 243, 247 and 249 Hanover Street, CAPE TOWN.

The Citizens Housing League Utility Co. of CAPE TOWN has prepared a scheme for housing at Maitland at a cost of £100,000.

House, Four Oaks, Sutton Coldfield.] [*Designed by Francis W. B. Yorke.*

Ground-floor plan. The hall beyond the porch gives on to the lounge, business-room, dining-room and kitchen. The dining-room is panelled in oak; a notable feature is the incorporation of the sideboard and silver cupboards in the panelling. On the first floor are five bedrooms, a bathroom and a storeroom.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given.

The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 4d. *per hour;* LABOURER, 1s. 4d. *per hour;* NAVVY, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Thames ballast, per yd.	0 10 0
Pit gravel, per yd.	0 15 0
Pit sand, per yd.	0 12 6
Washed sand, per yd.	0 13 0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2 8 0
Lias lime, per ton	2 0 0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1 3 0	*Trailer*	£0 15 0
3-ton motor lorry	3 15 0	*Steam roller*	4 5 0
Steam lorry, 5-ton	4 0 0	*Water cart*	1 5 0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0 1 6
SPREAD and level, including wheeling, per yd.	0 1 6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0 10 6
TRIMMING earth to slopes, per yd. sup.	0 0 6
HACKING up old grano. or similar paving, per yd. sup.	0 1 3
PLANKING to excavations, per ft. sup.	0 0 5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.	
IF left in, add to above prices, per ft. cube	0 2 0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0 2 1
DO. 6 in. thick, per yd. sup.	0 2 10
PUDDLING, per yd. cube	1 10 0
CEMENT CONCRETE, 4-2-1, per yd. cube	1 17 6
DO. 6-2-1, per yd. cube	1 12 6
DO. in upper floors, add 15 per cent.	
DO. in reinforced-concrete work, add 20 per cent.	
DO. in underpinning, add 60 per cent.	
LIAS-LIME CONCRETE, per yd. cube	£1 14 0
BREEZE CONCRETE, per yd. cube	1 7 0
DO. in lintels, etc., per ft. cube	0 1 6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0 3 9
FINE concrete benching to bottom of manholes, per ft. cube	0 3 0
FINISHING surface of concrete spade face, per yd. sup.	0 0 9

DRAINER

LABOURER, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* BRICKLAYER, 1s. 9d. *per hour;* PLUMBER, 1s. 9d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0 0 10
DO. *6 in., per ft.*	0 1 3
DO. *9 in., per ft.*	0 2 3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0 5 6
DO. *6 in., per yd.*	0 8 0
Portland cement and sand, see "Excavator" above.	
Leadwool, per cwt.	£2 0 0
Gaskin, per lb.	0 0 4½
STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft.	0 4 3
DO. 6 in., per ft.	0 5 0
DO. 9 in., per ft.	0 7 9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0 8 3
DO. 6 in., per ft.	0 10 3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 9d. *per hour;* LABOURER, 1s. 4d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour.*

London stocks, per M.	£4 5 6

CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0 0 7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0 3 6
DO. 14 ft. by 9 in. do., per ft. run	0 6 0
FLAUNCHING chimney pots, each	0 2 0
CUTTING and pinning ends of timbers, etc., in cement	0 1 0
FACINGS fair, per ft. sup. extra	0 0 3
DO. picked stocks, per ft. sup. extra	0 0 7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0 4 9
DO. in salt white or ivory glazed, per ft. sup. extra	0 5 6
TUCK pointing, per ft. sup. extra	0 0 10
WEATHER pointing, do. do.	0 0 3
TILE creasing with cement fillet each side, per ft. run	0 0 6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0 5 0
DO. 1½ in., per yd. sup.	0 6 0
DO. 2 in., per yd. sup.	0 7 0
If coloured with red oxide, per yd. sup.	0 1 0
If finished with carborundum, per yd. sup.	0 0 6
If in small quantities in finishing to steps, etc., per ft. sup.	0 1 4
Jointing new grano. paving to old, per ft. run	0 0 4
Extra for dishing grano. or cement paving around gullies, each	0 1 6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup.	0 0 7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0 8 0
DO. vertical, per yd. sup.	0 11 0
SLATE DAMP COURSE, per ft. sup.	0 0 10
ASPHALT ROOFING (MASTIC) in two thicknesses, ¾ in., per yd.	0 8 6
DO. SKIRTING, 6 in.	0 0 11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0 5 3
DO. DO. 3 in.	0 6 6
BREEZE fixing bricks, extra for each	0 0 3

MASON

MASON, 1s. 9d. *per hour;* DO. *fixer,* 1s. 10d. *per hour;* LABOURER, 1s. 4d. per hour; SCAFFOLDER, 1s. 5d. *per hour.*

Portland Stone:	
Whitbed, per ft. cube	£0 4 6
Basebed, per ft. cube	0 4 9
Bath stone, per ft. cube	0 3 0
Usual trade extras for large blocks.	
York paving, av. 2½ in., per yd. super.	0 11 0
York templates sawn, per ft. cube	0 7 6
Slate shelves, rubbed, 1 in., per ft. sup.	0 2 6
Cement and sand, see "Excavator," etc., above.	
HOISTING and setting stone, per ft. cube	£0 2 2
DO. for every 10 ft. above 30 ft. add 15 per cent.	
PLAIN face Portland basis, per ft. sup.	£0 2 8
DO. circular, per ft. sup.	0 4 0
SUNK FACE, per ft. sup.	0 3 9
DO. circular, per ft. sup.	0 4 10
JOINTS, arch, per ft. sup.	0 2 6
DO. sunk, per ft. sup	0 2 7
DO. DO. circular, per ft. sup.	0 4 6
CIRCULAR-CIRCULAR work, per ft. sup.	1 2 0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0 1 1
DO. circular, do., per ft. run	0 1 4
HALF SAWING, per ft. sup.	0 1 0

Add to the foregoing prices, if in York stone, 35 per cent.
DO. Mansfield, 12½ per cent.
Deduct for Bath, 33⅓ per cent.
DO. for Chilmark, 5 per cent.

SETTING 1 in. slate shelving in cement, per ft. sup.	£0 0 6
RUBBED round nosing to do., per ft. lin.	£0 0 6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1 7 6
YORK SILLS, W. & T., ft. cub. fixed	1 10 0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0 1 3
DO. 2½ in. thick, per ft. sup.	0 1 6

SLATER AND TILER

SLATER, 1s. 9d. *per hour;* TILER, 1s. 9d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* LABOURER, 1s. 4d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:	
Portmadoc Ladies	£14 0 0
Countess	23 0 0
Duchess	32 10 0

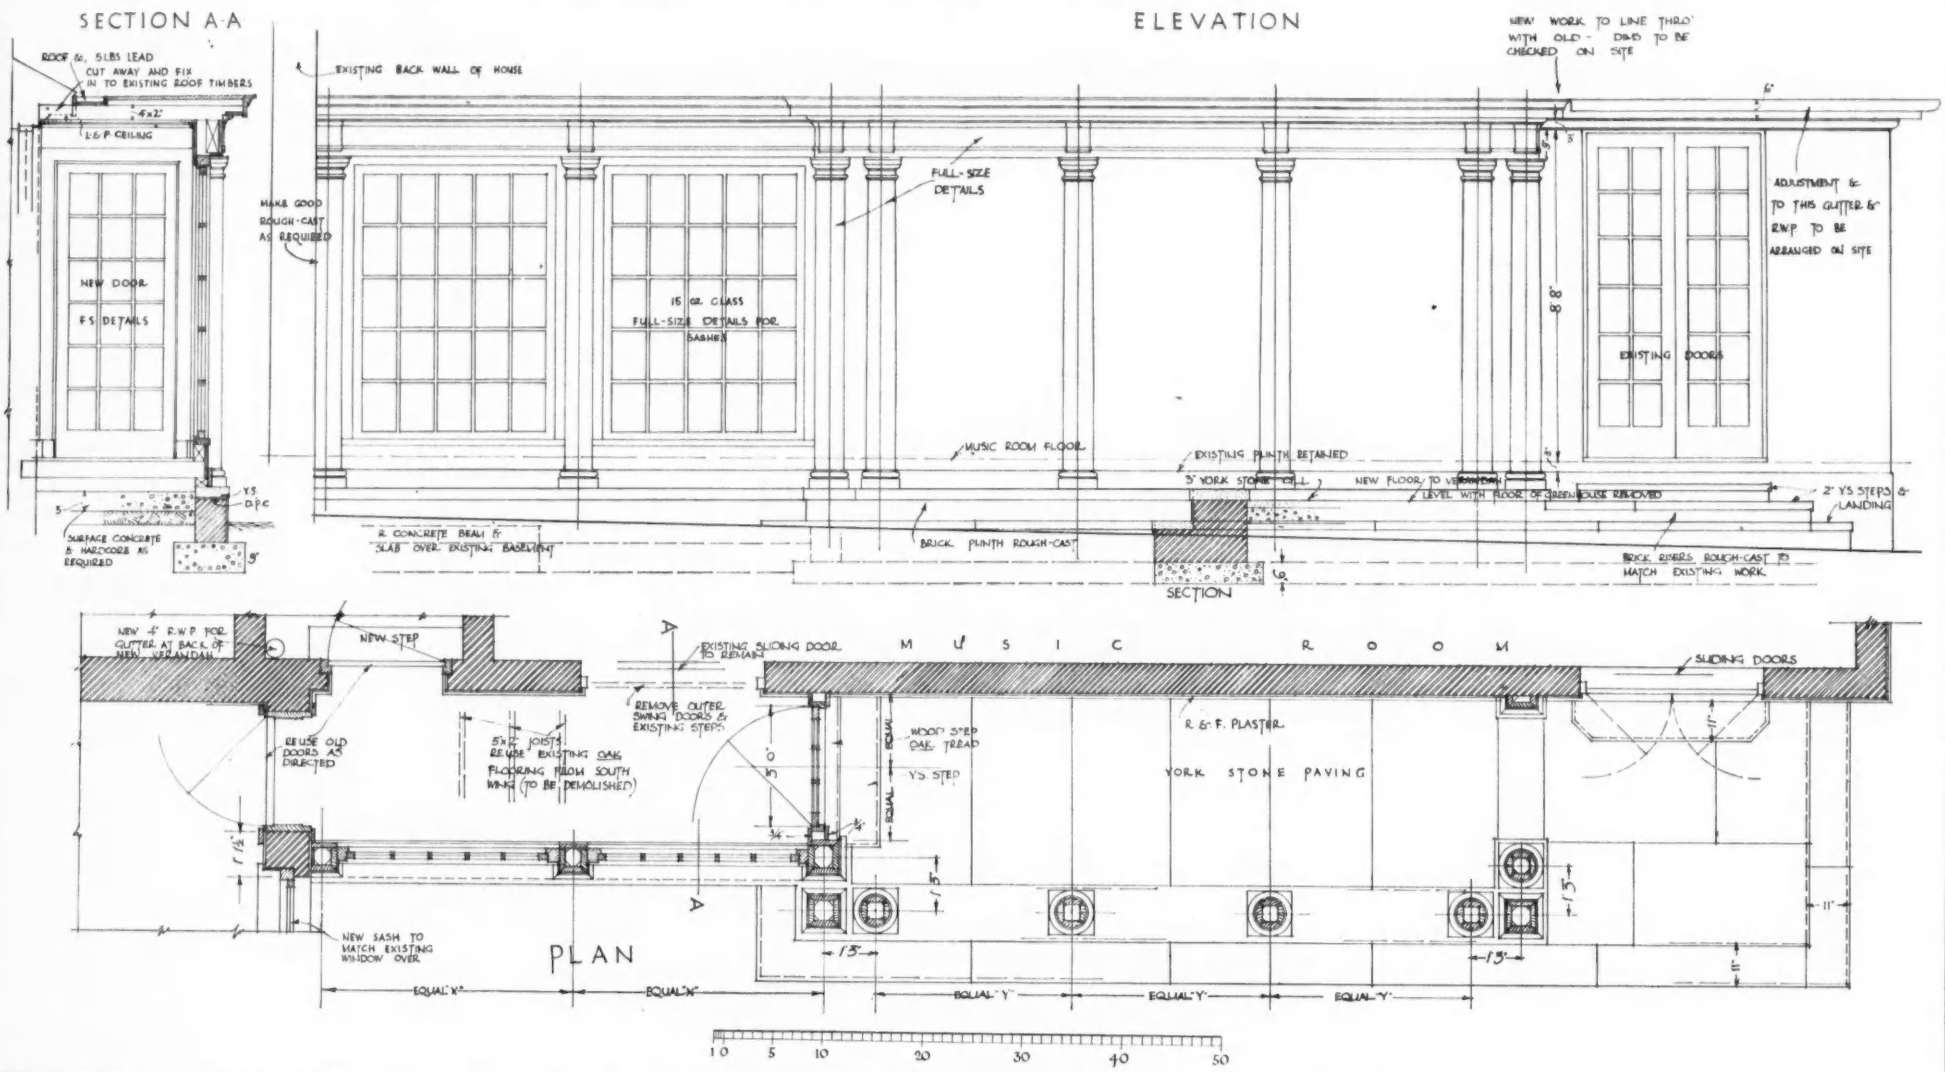
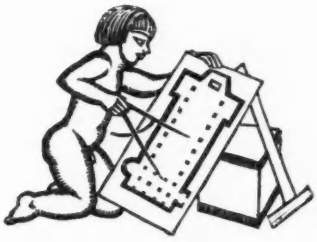
MARGINALIA: No. 3



NEW VERANDAH LEADING TO MUSIC ROOM: GODSTONE PLACE, SURREY.
By C. H. JAMES.

GODSTONE PLACE was originally an early-eighteenth-century house with a steep tiled roof, as a water-colour of about 1800, in the possession of the owner, clearly shows. Some time during the nineteenth century a third story was added, with low-pitched slate roof, and in 1901 further alterations were made which completely destroyed its original character. A little later a large music-room was built at a short distance from the house, to which it was linked by a hideous half-octagonal conservatory. Three years ago the present owners decided to endeavour to restore some of the original character to the house, and the whole of the 1901 additions were pulled down, as well as the octagonal conservatory.



The loggia illustrated was thought to be the most satisfactory way of linking the house to the music-room. It was obvious that the design had to be in accordance with tradition, but the structure being of wood, the Doric columns were made ten diameters high and the entablature is considerably reduced from the conventional pattern. The columns are built up of silver spruce. They have the normal entasis, but the corner posts and the pilasters are parallel. Plain triglyphs, slightly projecting, give relief to the frieze. For detail drawing see overleaf.

ALTERATIONS AT GODSTONE PLACE SURREY — DETAILS

NEW VERANDAH TO MUSIC ROOM

THE TIGER AMONG THE GOOSEBERRY BUSHES

"It was as though a tiger had sprung at him from among his own gooseberry bushes, for a newly finished building of his had fallen down."

—JAGO *v.* SWILLERTON AND TOOMER,
by KARSHISH, Part i.

IN some of the most engaging verses ever written Mr. Kipling told us the difference between "Children of Mary and Children of Martha." The latter, according to the poet, are the workers and the drivers of mechanical devices, and clean up the mess of the world, and make the way smooth for the Children of Mary to walk through dry-shod and star-gazing.

So far as the profession of architect is concerned, the idea that mankind is divided between dreamers and engineers constitutes a fallacy worthy of the late Mr. Geoffrey Scott's attack; for the architect belongs to both types. It is that which constitutes his special character. His work is not only the equivalent of seeing "that the clutch engages" with the Marthians, but also the equivalent of seeing with the Marians "the light that never was on land or sea." And the latter task is the more difficult, and needs the greater knowledge and concentration, and the deeper thought.

It is no wonder therefore that the architect is liable to make mistakes. He knows that he probably has never carried out a single work without some error of judgment, or without having to be responsible for someone else's inferior method. But these things he expects and does all he can to discount and forestall and make amends for. It is the further liability of being suddenly and unexpectedly overwhelmed by a great catastrophe which makes his life like that of a child in some gloomy household where Hell is a bright reality under a crust of righteousness so thin that it may at any time give way and let the soul half-way down to Tophet. Or to take the simile used by Karshish last week in his account of an arbitration case, the relation of which is continued in another column, at any moment the architect may be mauled by a tiger springing out of his own familiar gooseberry bushes.

The cruel and abnormal tempests of this winter have waked many of such tigers. But even without storm and tempest one such experience at least will come to almost every man in the profession, and teach him of the tiger in the gooseberry bushes. Once bit he will be twice shy of various things; and he will learn thoroughly all the "little things that matter" of which Mr. Edwin Gunn has written so admirably.

And there are worse things that happen. Perhaps he has designed a water-tank on the principle of rigid body statics, instead of on a basis of strain energy. If so, such a tank may burst and drown some innocent person, as has happened before. Or perhaps he has put up a boom which is not resilient, but in which the tensional members may take up compressive stresses and fall. Or, an even simpler case, his handrails may be too low and some careless person, slipping on the stair, fall into the stair-well and be killed. How then is the profession to avoid these shocking happenings? We fear that the practice of Architecture will never be fool-proof; but at least here is Karshish to help us to a vivid realization of the dangers.

Mankind is so constituted that a dull recital of duties or a monotonous iteration of warnings merely sends it to sleep. So Mr. Galsworthy gets us to improve the penal code by writing a play about it, just as Dickens abolished the debtors' prison by putting the hero of a picaresque novel into it. And in the same manner Karshish is going a long way towards curing the faults of architects and builders. He engages our attention; he distracts us from professional pride until he has us thoroughly interested—and off our guard, and then he suddenly makes us realize that we are all potential murderers—that it is we who by our negligence and errors of judgment have jeopardized the lives of immortal Irishmen like the O'Hara and of adorable Jane Porches, and have thinned the pockets of irascible but financially-sound clients like Colonel Jago.

(*A photograph of this detail is reproduced on the preceding page.*)

[*By Maurice Webb (Sir Aston Webb and Son)*

COMMERCIAL UNION ASSURANCE HEADQUARTERS: THE ENTRANCE HALL, WITH WAR MEMORIAL.

On entering from Cornhill, through the main doors seen on the right of this picture, the visitor receives an impression of space, light, and, particularly, of loftiness. For not only do the Corinthian pillars carry the eye upwards past the balcony that marks the mezzanine floor, but their bases are seen to rest upon a floor that, looking out over the balustrade, seen on the left, dominates the whole of the general office space, apparently by a good deal more than the three feet which is the actual difference in levels.

At the end of the hall to the right, on entering, is seen the war memorial, closing the vista here illustrated ; to the left, facing it, are a pair of passenger lifts. The memorial itself, a statue of quite modest proportions, was retrieved from the old building that collapsed in 1927, and has been re-set upon a pedestal in a niche specially designed. As a background, it has a stained glass panel, bearing the arms of the central and subsidiary companies, artificially lit from behind.

The bronze standard lamps are an essential feature in the scheme of decoration, which includes the inlaid design of the flooring, the fluting of the Ancaster stone pillars, and the carving of their capitals. The building is illustrated and described on pages 119-124.

NEWS & TOPICS

Recipient of a New Year knighthood: Sir Lawrence W. Chubb, Secretary of the Commons and Footpaths Preservation Society, and General Secretary of the National Playing Fields Association.

CHARING CROSS BRIDGE

IN the leading article in last week's issue the hope was expressed that this year there would be much liveliness on the architectural front. We have not had long to wait for evidence of this desired increase of militancy. That redoubtable architectural warrior, Sir Reginald Blomfield, has launched a new attack upon the official proposals for Charing Cross Bridge. In a closely-reasoned letter to *The Times* of January 10, he outlines an alternative scheme to form the new bridge and approaches, starting from a circus in the Strand, approximately opposite the south-east corner of the Charing Cross Hospital, and ending at a junction of Waterloo Road and York Road.

★

The advantages of this proposal are manifest. In the first place, it saves the whole of the immense cost of compensating the Southern Railway, Coutts's Bank, Gatti's Restaurant, the Old Vic, and other buildings. It saves all the new viaduct work, including the two objectionable tunnels. The bridge comes to ground on the Surrey side at the earliest opportunity, and it renders possible at a future date schemes for lowering the railway and placing the station underground. Sir Reginald's new bridge would provide a vista from the Strand right across the river, which would be of inestimable value at this point and, owing to the simplification of plan, and rectangulation of building sites, would offer the opportunities for architectural treatment lacking in the official scheme.

★

The last and exceedingly important point in favour of Sir Reginald Blomfield's suggestion is that the bridge and its approaches could be begun with the least possible delay. Probably not more than six months would be necessary to obtain the best design for the bridge in competition, and the whole work would be completed at probably one-third of the cost, and within one-third of the time, required for the official scheme. Sir Reginald Blomfield has done the only thing which was required to offer effective opposition to this latter, for he has produced an alternative which is practical, economical, and capable of being put into execution with the minimum of delay.

THE RELATIONSHIP OF SHOPS TO POPULATION

Dr. Raymond Unwin, in his lecture last week to the R.I.B.A. on Regional Planning and Greater London, gave some interesting figures showing the relationship of shops to population. In rural districts one shop for fifty persons is the average proportion. In large towns one for every one hundred persons is nearer, the shop being larger to cope with the increased shopping activity of urban dwellers. Similarly, if one grocer's shop would flourish among 1,000 head of population, a furniture dealer would do badly, and a sports dealer or a musical instrument store would fail for lack of custom, because the furniture dealer requires a population of 3,000 to keep him going, and either of the latter a population of from 10,000 to 15,000.

TOWN PLANNING OF BUILT-UP AREAS

Mr. W. Townend, reading a paper on Town Planning of Built-up Areas at the last meeting of the Surveyors' Institution, said that one of the greatest objections which can be urged against the application of existing town-planning law to built-up areas is that in far too many instances the final decision on points which may vitally affect the interests of owners is in the hands of the Ministry of Health. It seems certain that if the progress of schemes on unbuilt-upon land is slow, in view of the multiplicity of interests to be dealt with in built-up areas, the progress there will be still slower. For that reason legislation should be enacted only after the most careful consideration. There is serious danger both to the interests of the community and to property-owners and their tenants if the provisions of the Act of 1925 are merely to be adapted to a class of property for which they were never designed.

FLATS *v.* HOUSES

It seems more and more evident that the time is ripe for the re-development of towns. Which is to say, that having expanded the crudest interpretation of the garden-city idea over miles of defenceless country, we are led to see the wastefulness of these methods, and the need for making a fuller use of purely urban districts, many of which, antiquated and shoddy as they are now, present opportunities for new forms of development. These will follow the spirit of the L.C.C. type of flat-dwellings, or their more exalted counterpart, recently built over old property in Clapham, to the design of Messrs. Louis de Soissons and G. G. Wornum. Blocks of five- and six-story flats, beautifully built and standing in open grounds, quite possible owing to the economical use of ground, will turn the arid wastes of decaying stucco into well-ordered urbanity, in which lawns, flowers and trees will be found to have become an important factor. This is really no idle dream, but a distinct possibility.

BIRMINGHAM'S MILLIONS

Birmingham offers probably the best example of municipal ownership in the country. The conditions of the civic centre competition held a year ago proved less than usually onerous to competitors, because so much of the property falling within the radius of the scheme was already in the possession of the Corporation, and therefore free to be used for the most unrestricted form of development. Now comes news of a loan of nearly five million pounds on behalf of civic improvements, not in connection with the proposed civic centre, but for a variety of purposes, mainly housing, but including a new golf course, among sewerage, gas and water-supply schemes. This would point to a remarkable degree of confidence in the city's future, if one forgot for a moment the wisdom of so wide-spread a control over the growth of residential and other types of development, no matter what the future may bring.

ASTRAGAL

SIR LAWRENCE WEAVER: AN APPRECIATION

BY JOHN GLOAG

Sir Lawrence Weaver, whose lamented early death, from angina pectoris, after two days' illness, occurred in a nursing home on January 10, was born at Clifton, Bristol, in 1876, educated at Clifton College, and trained as an architect. He was twice married, and had two sons by his first wife, who was keenly interested in the Ashstead Potteries, and the training of ex-Service men in connection with this craft. Sir Lawrence was a valued contributor to this JOURNAL, *and the article printed elsewhere in this issue is one of two recently completed.*

IN this century it is not always possible to set a just value on a man's work and to estimate its significance to the world. A little bemused by historical memories, we are still prone to seek for our great ones, and sometimes to imagine that we find them, in the wordy, unreal world of politics; but some men, by the work they do, and the courage and inspiration they bring to its execution, leave no doubt in our minds regarding their worth to civilization; and great among such men was Sir Lawrence Weaver. By his death architecture loses a friend, and the cause of betterment in many branches of applied and industrial art is deprived of a practical champion.

His qualifications for advancing the interests of good planning and intelligent design were exceptional. His early training as an architect was followed by some fourteen years of experience in the administrative side of various manufacturing firms. In those years he recognized, as a manager and a director, the self-made difficulties that afflict British industry; he learned much concerning the artistic inhibitions of business men, and he created and perfected his technique of persuasiveness, which enabled him to deal so successfully with those respectably unimaginative occasions when boards or committees were strangling a new idea. Although he found commercial conservatism and other forms of stupidity intolerable, he realized that commerce and industry were seldom presented with intelligent reasons for improving their services and products. Speaking with the authority of a business man whose abilities were of a high order, he put the case to industry for the artist.

His work as a journalist and an author extended his influence, particularly in the architectural field. From 1910 to 1916 he was architectural editor of *Country Life*, and he was responsible for the publication of many finely-illustrated books which enlarged public interest in the traditional beauties of English building, and in such subjects as town-planning and house-planning. Books from his own pen included *Small Country Houses of To-day* (in two volumes); *Lutyens' Houses and Gardens*; an admirable history of English lead-

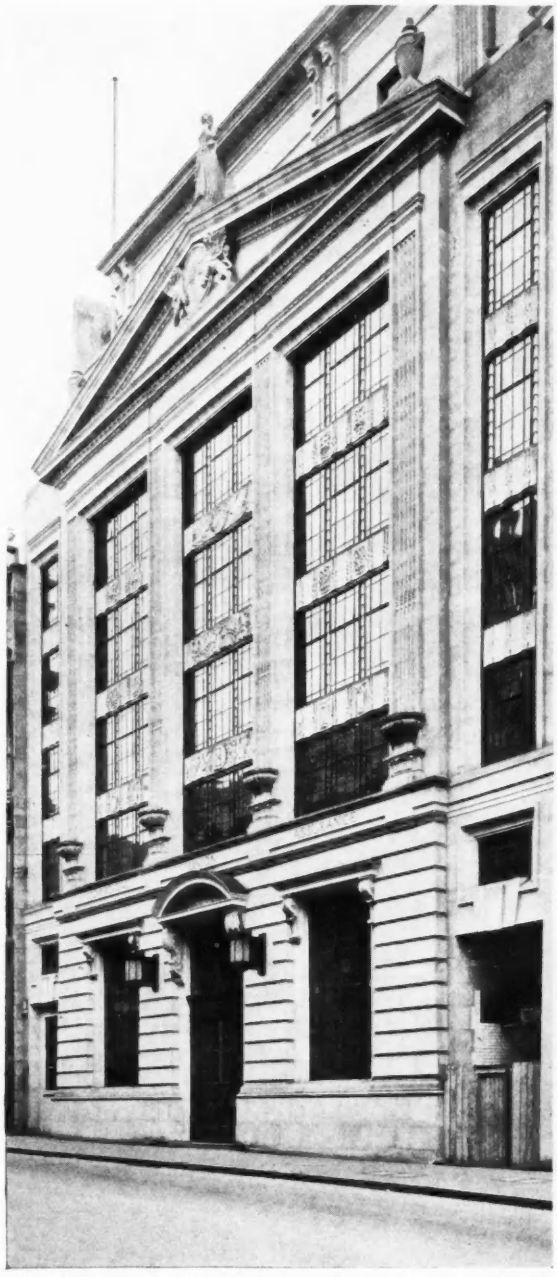
Sir Lawrence Weaver, K.B.E.
Born, 1876; Died, January 10, 1930

work; and a lucid and sympathetic study of Sir Christopher Wren

For Wren he had an unfading affection. He would talk of him as one talking of an intimate friend; and could give you an unforgettable picture of the architect of St. Paul's, so that thereafter Wren became for you a vivid character.

As a writer he had a vigorous style, saying what he had to say with a felicitous economy of words, and marshalling his thoughts in an orderly fashion. It was his gift for picking out instantly the salient points of any matter that made him a perfect chairman at a meeting; this gift, in alliance with his energy and his trained powers of persuasion, assured his success as an organizer. His ability to organize on a large scale was tested as Controller of Supplies (unpaid) in the Food Production Department in 1917. Following this post came other Government appointments, first Commercial Secretary to the Board of Agriculture, and then Director-General of the Land Department, and Second Secretary, Ministry of Agriculture, from 1919 to 1922. In 1920 he was created a Knight of the British Empire.

It was the British Empire Exhibition, and his appointment as director of United Kingdom exhibits (including the Palace of Arts) that brought all his powers and tastes into action simultaneously. It was followed some years later by another example of Weaver's effective liaison between designers and business interests, namely the Advertising Exhibition of 1927, in which the standard of design and display was unquestionably superior to that of any exhibition previously held in this country.



In 1925 he became a director of one of the largest advertising agencies, the London Press Exchange. But in spite of unceasing pressure of work, he found time to be president for four successive years of the Design and Industries Association, and when Mr. J. C. Squire retired in 1927 from the presidency of the Architecture Club, Weaver, who had been a most energetic member of the club since its inception in 1922, was elected its president. He could always find time to direct and inspire organizations that, in his view, were doing a good job of work, tidying up muddles or abolishing stupidities. He gave much time to the Ashstead Potteries, at which disabled men are trained to a craft. He was honorary treasurer of the Housing Association for Officers' Families, trustee of the Douglas Haig Memorial Homes, trustee of Chequers, and founder of the National Institute of Agricultural Botany.

One of his minor recreations illustrates the feeling he had for the work of the craftsman. He tried to keep one evening a week free, so that, in company with two old friends, he could retire to the attic of that pleasant house in Hamilton Terrace and there, under the instruction of an expert, practise the craft of bookbinding.

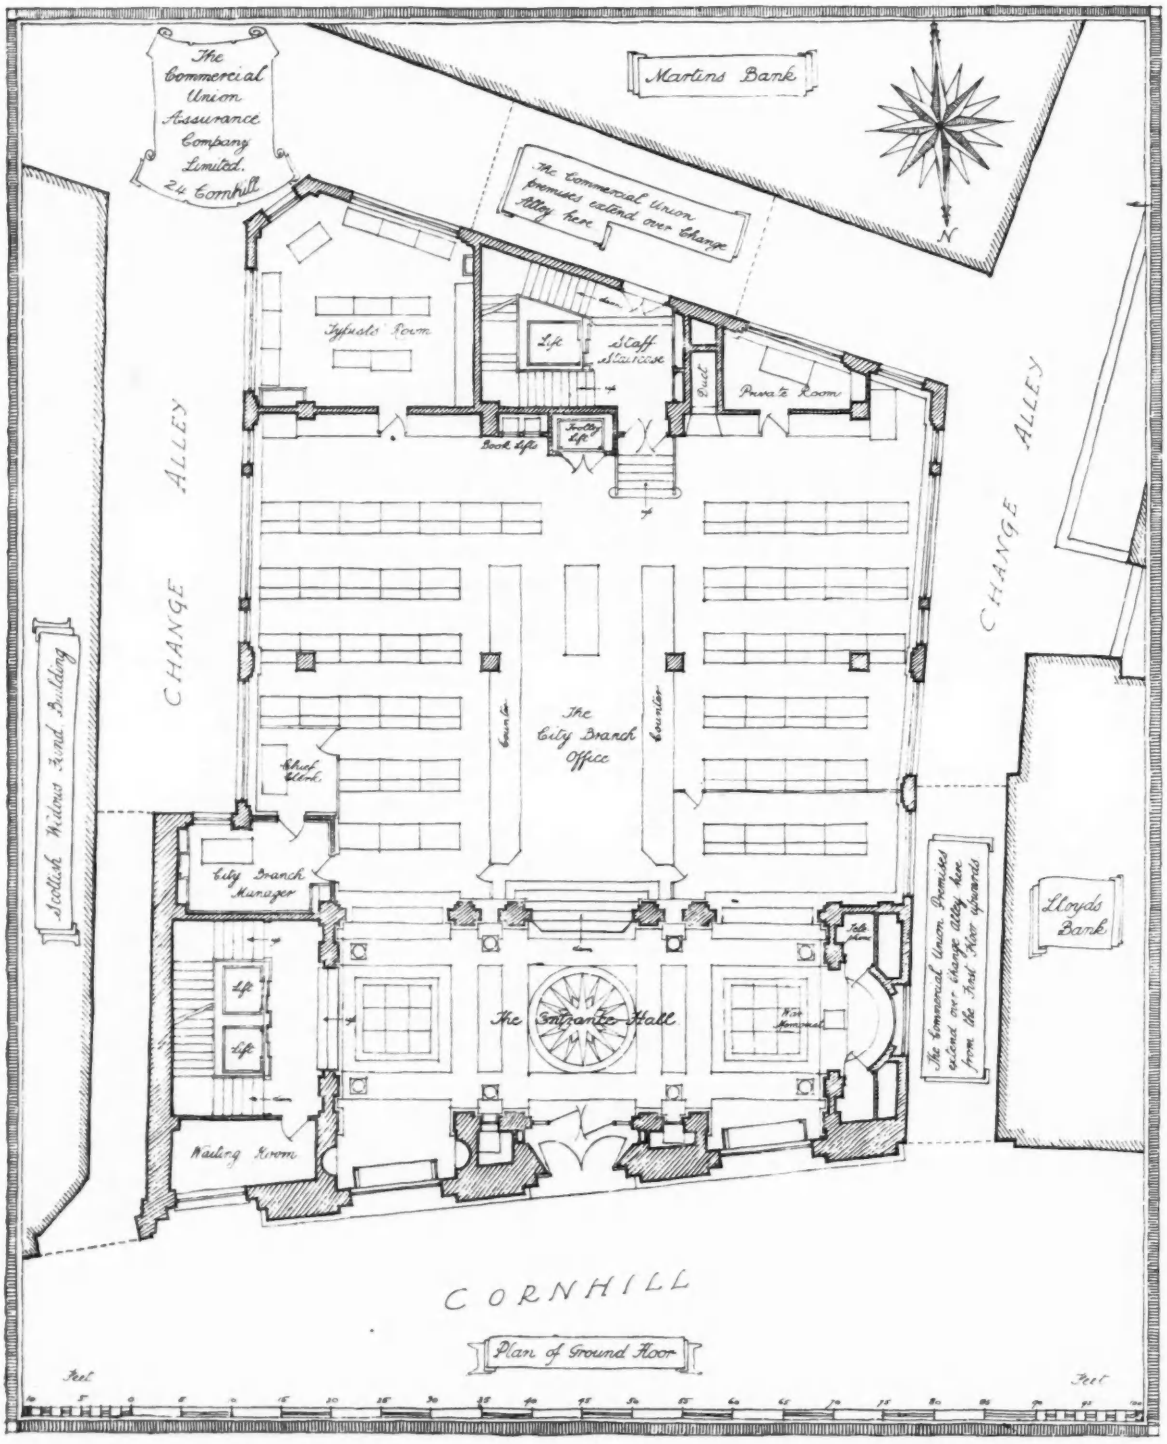
He has left the world better than he found it, for he had the courage of his good convictions, and the vigour and ability that could give them practical expression.

Prudence, with serpents, for wisdom, and a dove, for simplicity: the statue on the apex of the pediment (from a model).

The façade, to Cornhill, in Portland stone, is adorned with aprons spanning the windows, carved with emblems of the hazards of fire, life, and the sea, and with doors and other work in bronze. The sculptures, generally, are by Walter Gilbert, with whom has been associated his son Donald. The four vases are provided for flood-lighting.

One of the two vases, with the City's pigeons fluttering about them, sculptured for the sides of the pediment (from a model).

COMMERCIAL ASSURANCE



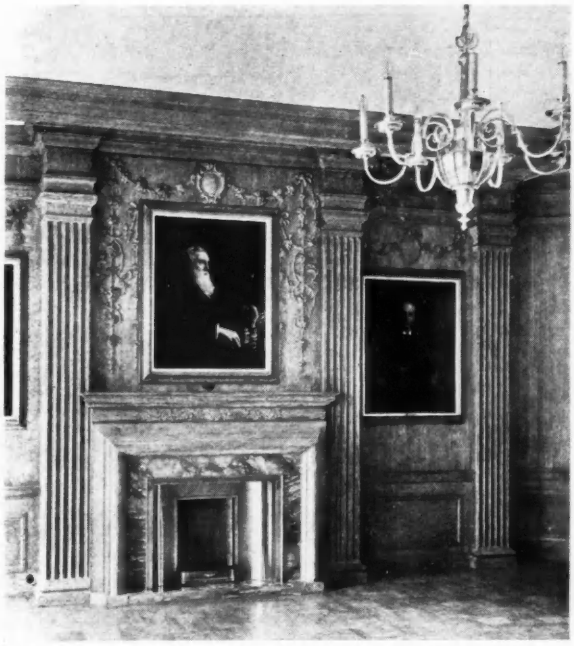
Cornhill, E.C.3.

DESIGNED BY
MAURICE WEBB
(Sir Aston Webb and Son)

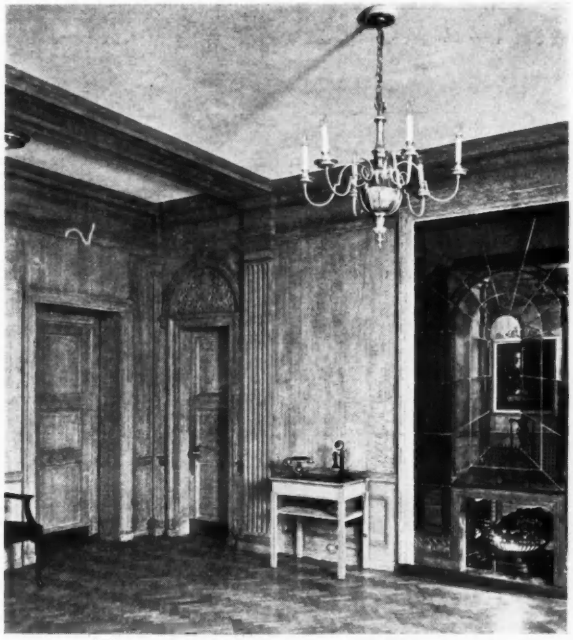
FEW citizens of London remained indifferent to the sensational collapse of the old Commercial Union building in Cornhill in August, 1927, and most architects must have speculated as to what manner of work would take its place. The sequel has now appeared in a rebuilt headquarters that reflects in every detail the dominating idea of service. When Mr. Maurice Webb, of Sir Aston Webb and Son, was consulted, he found that in the old building very nearly twenty per cent. of the ground-floor space had been occupied by walls and piers. For the company, then, the necessity of rebuilding has really been a blessing in disguise, since it gives them far more space, so much stronger are modern materials in relation to their dimensions. In addition the powers that be agreed to a straightening of Change Alley, which runs between the site and that of the new Lloyds Bank, so that it was possible to work on a plan very nearly rectangular.

The steel-framed building, faced with Portland stone, enriched with bronze windows and doors, and affording four floors below ground and seven above, has been erected in the short space of twelve months. The façade to Cornhill has decorative sculptured work both in stone and in metal carried out by Mr. Walter Gilbert in association with his son Donald. Four vases contribute to the composition by day, and by night release flood-lighting for the whole of the principal front above the first floor. Animals emblematic of every country where the company carries on business are taken as motives of adornment in the bronze work.

The entrance hall is carried up through the mezzanine to the first floor, and the remainder of the large working space supplied by the ground floor is sunk some three feet below it. By these means an impression of dignity is secured, and at the same time the office becomes an unusually light one. The working staff occupies the floors immediately above, leaving the comparative seclusion and quiet of the top floors for the boardroom and managerial suites. There is a fine board luncheon-room and a roof garden in proximity. A particular effect is produced in the entrance hall by the tall standard lights which lead the eye towards the war memorial, transferred from the old building and now placed on a special pedestal with a rich



Commercial Union Assurance Offices, Cornhill, E.C.3. [*By Maurice Webb (Sir Aston Webb and Son).*



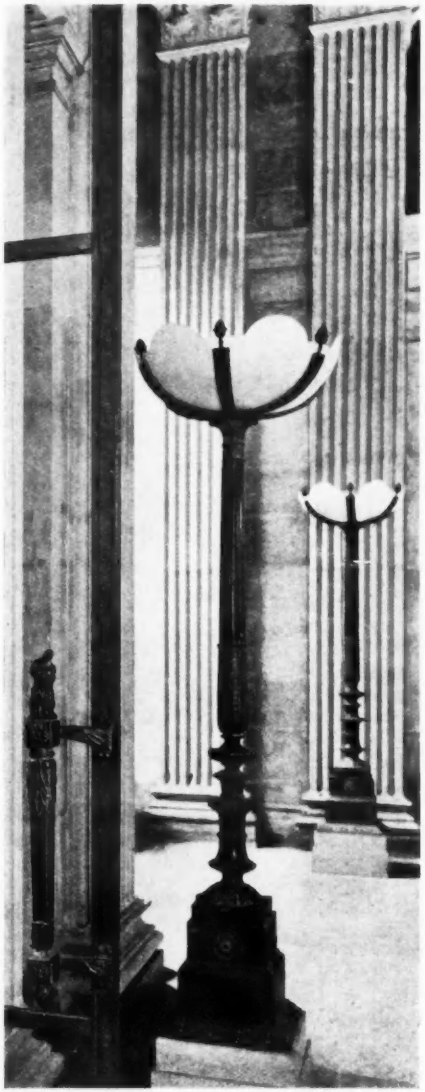
The architect's sketch plan of the ground floor. The general level is sunk about three feet below that of the entrance hall, an expedient that, besides having a psychological effect upon the entering visitor, has the practical one of securing an access of light, since the windows are carried to full height. Change Alley is spanned in places.

stained glass window in the niche behind, which is artificially lit. Wherever possible, materials of British or Empire origin have been employed; for instance, the boardroom suite is panelled in English oak, while Tasmanian oak is extensively used for flooring. Much of the office and lavatory fixtures are of teak from India, and tiles and bricks are British.

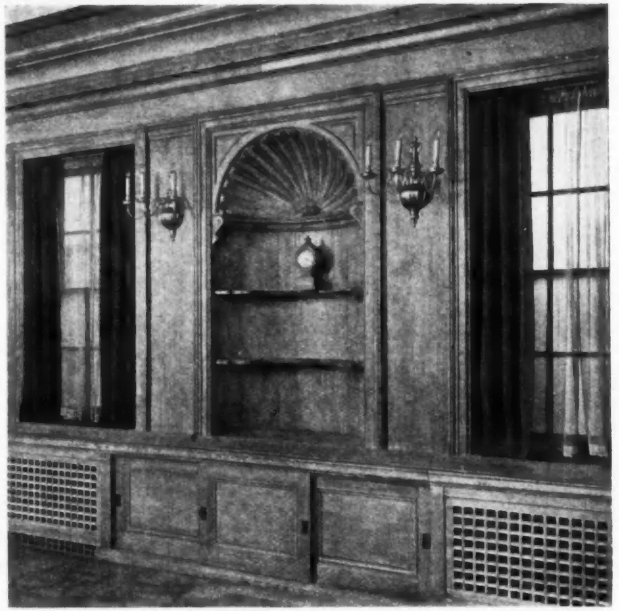
The heating installation is particularly interesting, since use is made of the electrical thermal storage system, by which current is taken from the mains during "off-load" hours.

Features illustrative of the careful detailing throughout the building are the fireplaces in the principal rooms. This one, in the board luncheon-room, on the sixth floor, is in Sienna marble. The panelling is in English oak, and the electrolier has a butter silver finish.

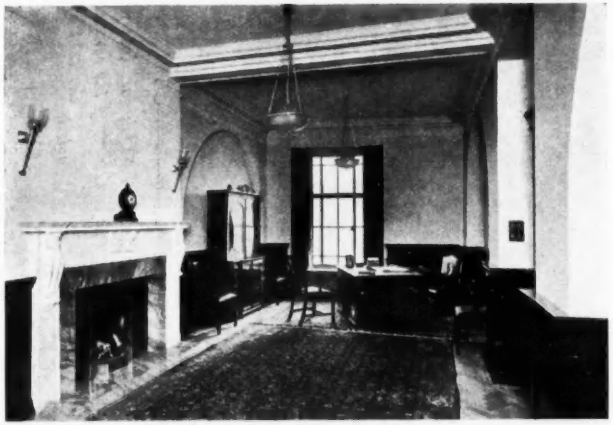
In the board ante-room of the directors' suite. The door seen on the left leads to the luncheon-room, that to its right, to the service room. The entrance to the board-room faces the mirror, in bronze and glass, above the recess, which houses an electric fire in a bronze bowl.



Commercial Union Assurance Offices, Cornhill, E.C.3. [*By Maurice Webb (Sir Aston Webb and Son).*



The board-room is panelled in English oak, into which portraits are framed. That shown, over the Ancaster stone fireplace, is of Roger Owen, a former chairman of the company. Lawrence A. Turner has been responsible for the carved enrichments: the coat of arms is coloured, and the lions are gilt.

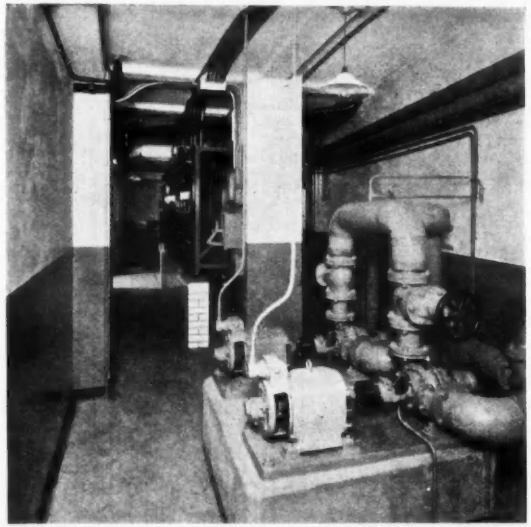


Corridor to the managerial suite of offices, on the fifth floor, looking towards the main staircase and lifts; both the skirting and the dado are in mahogany.

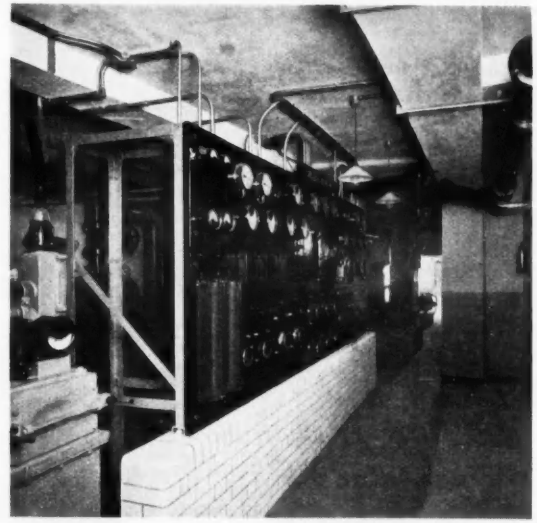
A near view of the bronze lamp standards in the main entrance hall. On the left is also seen a fragment of one of the bronze and glass inner doors, which are ornamented with small sculptured figures.

This sideboard is in the board luncheon-room, of which another view appears on the preceding page. The panelling is carried out in English oak, which is allocated to this suite.

The general manager's room. The fireplace is of pine, painted white, and Sienna marble. Mahogany is used for the joinery, in the managerial suite, and Tasmanian oak for the floor.

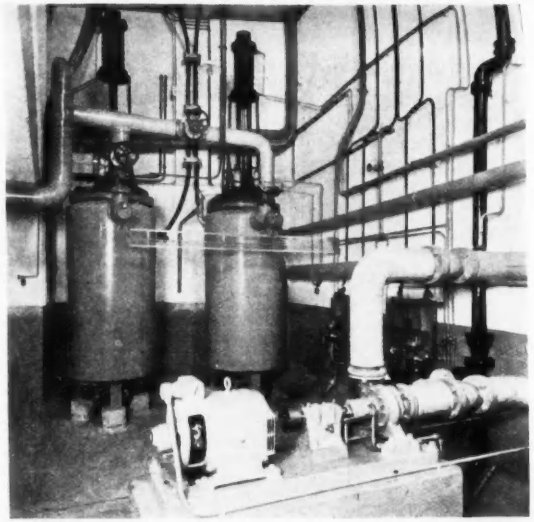


The general office of the life department, on the third floor. Here the furniture is of teak, the floor is covered with linoleum, and, as in other office spaces, the ceiling is finished with acoustic plaster.

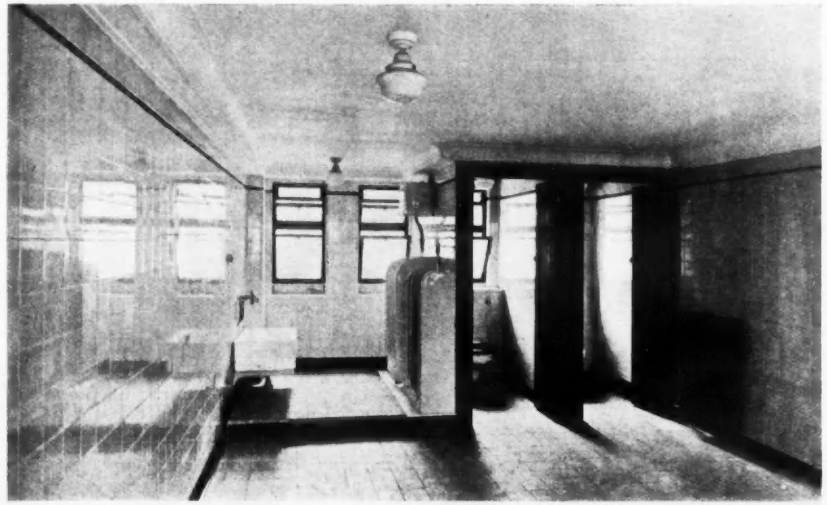


in the managerial suite, and Tasmanian oak for the floor.

with small sculptured figures.

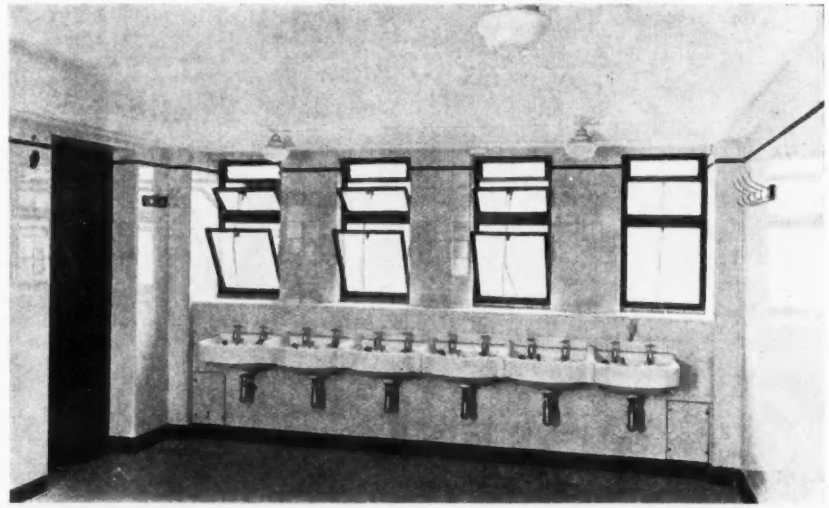


in other office spaces, the ceiling is finished with acoustic plaster.

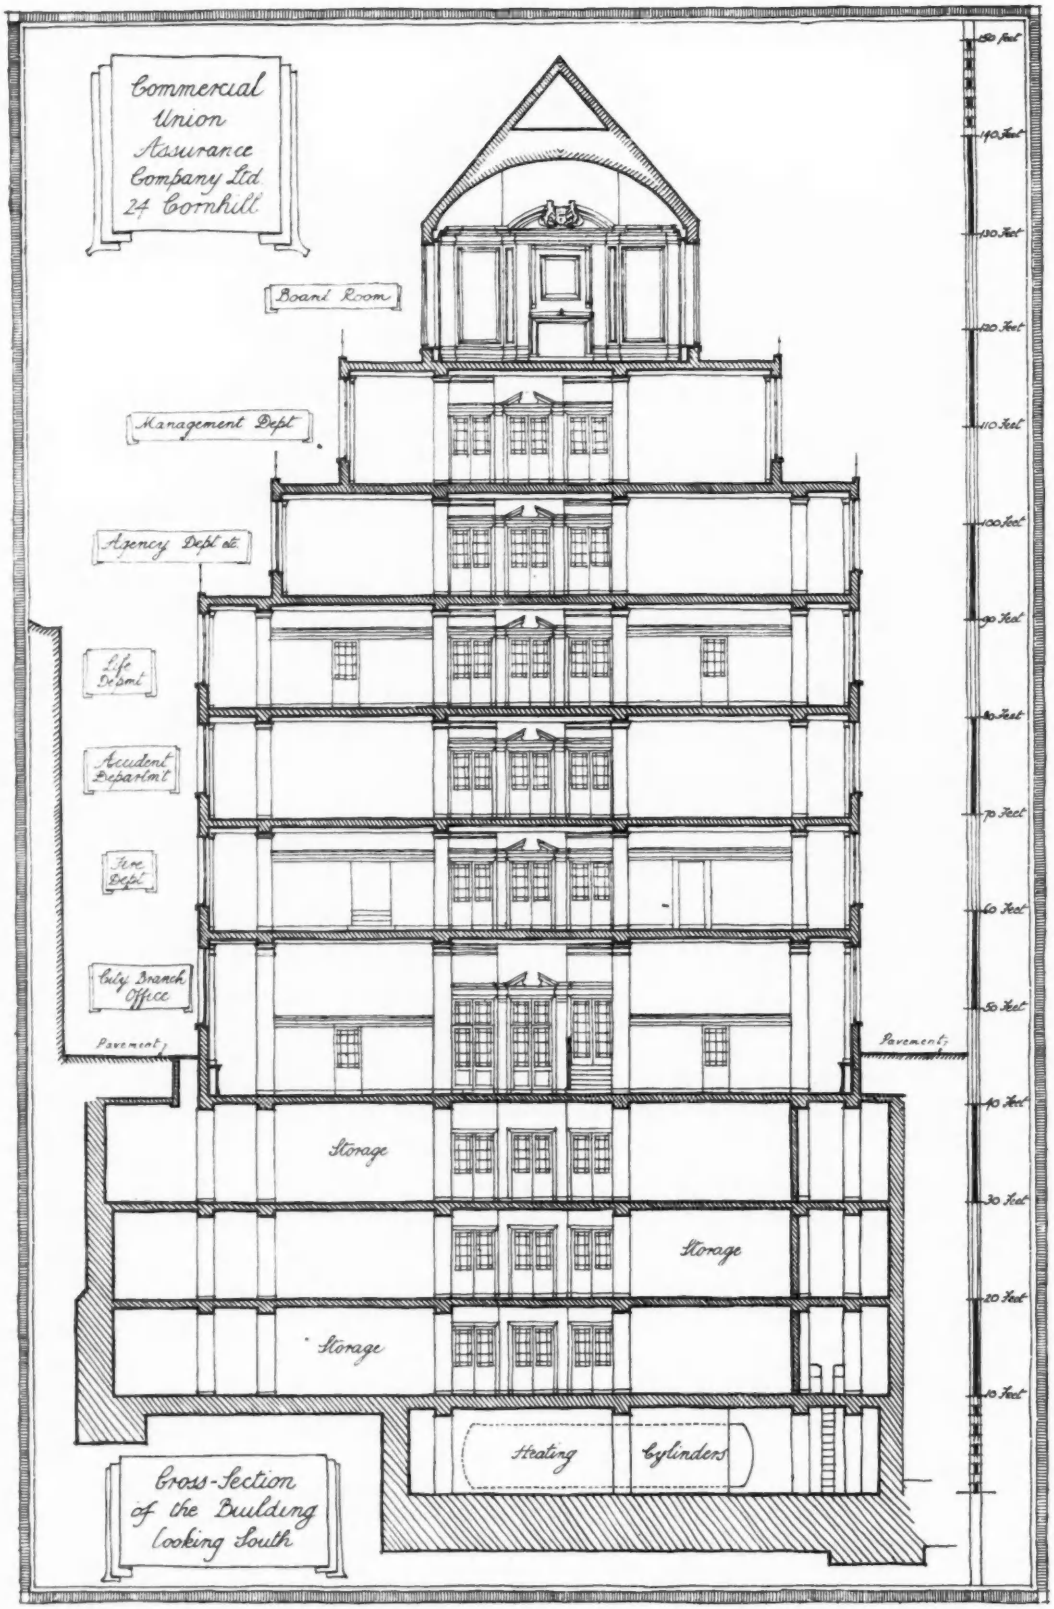


In the lowest of the four basement floors is installed the heating installation, which includes pumps and motors in duplicate for circulating the water between the thermal storage vessels and the radiator system.

The control board, from which can be regulated the whole of the heating and ventilating services to various sections, the temperatures prevalent in them being read from distance-recording thermometers.

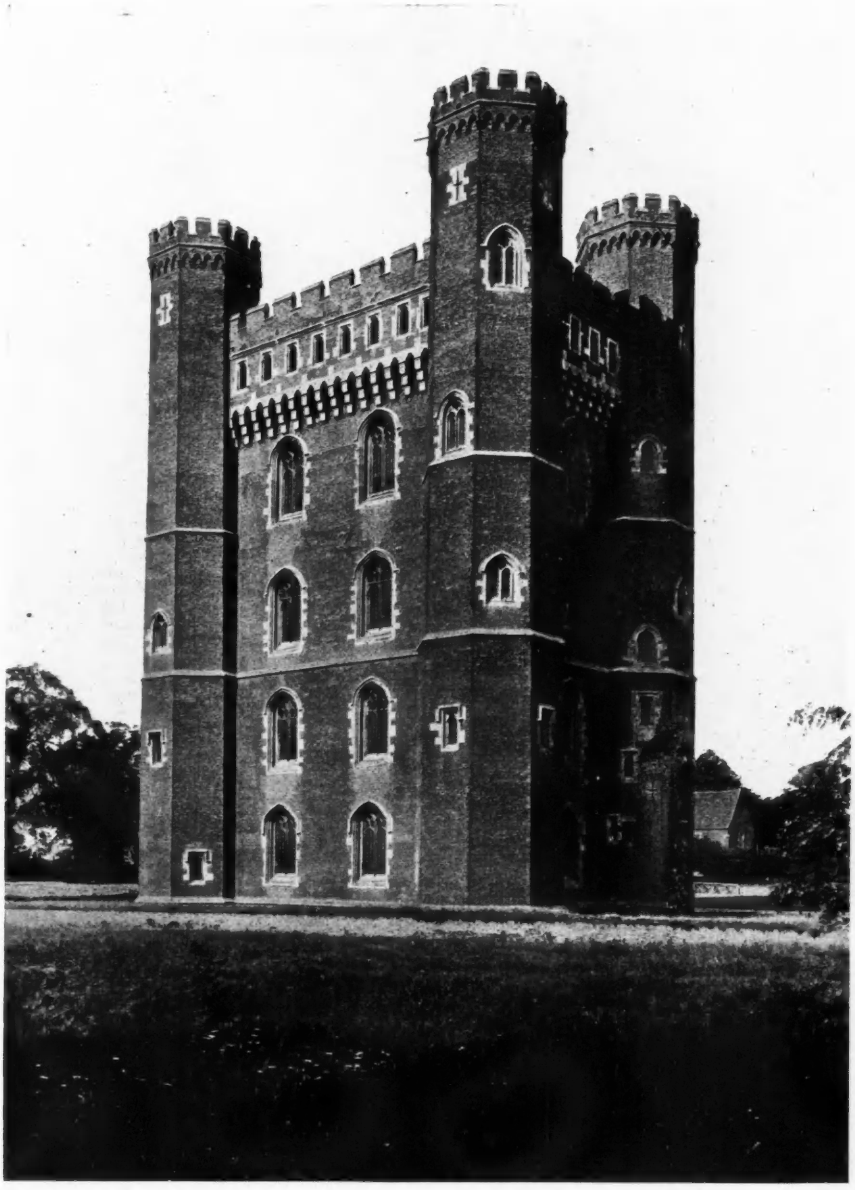


The electrode boilers are each of 375 KVA capacity, and take current by night (i.e. during "off-load" hours) at 2,180 volts (single-phase alternating). The heat is stored under automatic control.



Commercial Union Assurance Offices, Cornhill, E.C.3.]

A typical men's lavatory: the walls are covered with fireclay tiles, the floor with buff quarry tiles, and the joinery is of teak. Most of the plumbing is concealed.



[*By Maurice Webb (Sir Aston Webb and Son).*

A range of lavatory basins. In no other direction has recent advance been greater than in the perfection of apparatus of personal cleanliness.

Commercial Union Assurance Offices, Cornhill, E.C.3. [*By Maurice Webb (Sir Aston Webb & Son).*

The architect's sketch of a cross-section through the building. There are four floors below ground and seven above. The board-room enjoys the comparative seclusion from noise of the top floor, and a roof garden adjoins the luncheon room on the sixth. In proximity are the managerial quarters, and the lower floors house the office staff.

ENGLISH PRECEDENT No. 98

TATTERSHALL CASTLE, LINCOLNSHIRE

(Views from the south-west; and of the tower galleries)

For the Keep or Dongeon of the Castle, built by Ralph, Lord Cromwell, 1431-49, the bricks were not imported, as has been alleged so often, but were made at Boston and Edlyngton More (nine and eleven miles away) by one "Bawdwin the Docheman." The bricks used were of at least two sizes, one being the Flemish dimension—8 in. by 4 in. by 2 in.; the other a size commonly used in Holland—7½ in. by 3½ in. by 1½ in. Prices seem to indicate that even larger bricks were made for certain purposes.

It will be remembered that at Crockernend, Oxon, in 1417, Michael le ffleming and other ffflemings were employed making bricks for Stonor Court. Obviously, it was easier to import workmen than immense quantities of brick.

Two classes of workmen were employed at Tattershall Castle—"Brekemasons" and "Rugh Brekemasons." At this period much moulded brickwork was cut with a brick-axe (a tool superseded by the scutch), but simple chamfered bricks called squynchons (as for vault ribs) were often purpose-moulded as, indeed, also were more elaborate mouldings, which, however, sometimes had to be finished with the axe.

Although "brekemasons" are mentioned in the accounts, bricks are still called "tegulorum," and "waltyle" or even "tegulorum voc. waltyle."

—[NATHANIEL LLOYD.]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an Arbitrator brought by Colonel Jago, J.P., of Grastopen Manor, Midshire, jointly and severally against Swillerton and Son, builders, and Daniel Winkletop Toomer, F.S.I., architect, both of Nollingborough, for damages for the collapse of Grastopen Village Hall. Mr. Chawlegger, K.C., and a junior represent the plaintiff, Mr. Twistle the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. Mr. Chawlegger has just concluded his opening address and calls his first witness, the plaintiff himself.

ii: The Plaintiff Closes

COLONEL VIVIAN FANSHAWE JAGO, examined by Mr. Chawlegger, said that when he decided to build a village hall he asked advice from Mr. Toomer and afterwards instructed him to prepare plans and specification and bills of quantities and secure competitive tenders from certain builders. The tender of Messrs. Swillerton and Son for £3,819 12s. 6d. was the lowest and, under Mr. Toomer's advice, he accepted it. The hall was built and he had paid in all the sum of £3,750 to Swillerton, certified at different dates by Toomer on account of the contract work and certain extra work that had from time to time been ordered. He understood that there was a sum approximating to 5 per cent. of the total cost still to become due to the builder under the contract. He had also paid the defendant Toomer the sum of £175 on account of fees.

Counsel: After the hall was built, Colonel Jago, what happened?—It fell down. (*Laughter.*) Witness added that he did not see it go as he was in bed at the time, but he heard it, and went to the window, as he thought one of his hunters was lashing out in its stall. Witness was going on to state the reasons that had been given him for the collapse, when he was stopped by the Arbitrator. [*What a witness has been told cannot be given in evidence.*]

Witness was then examined by Counsel as to the details of his claim, which witness said was made up, as to the claim for £54, of the cost of repairing fence wall belonging to adjoining owner damaged by the collapse, and in meeting claims by gas company, and for waste of water, and employment of watchman; and as to £200, for delay in completion of his contract by the defendant Swillerton, who under his contract was liable for an agreed sum of £3 a week for delay; and in humiliation and annoyance in not being able to fulfil his ambitions in making use of the hall, or to satisfy the hopes he had, by certain promises, raised in other persons.

Cross-examined by Mr. Twistle on behalf of the defendant Swillerton, witness said he knew nothing of the defendant Swillerton's reputation as a builder. He had no complaint to make with the work before the collapse. He had had Mr. Toomer's assurance that the building was properly built and had no reason to think otherwise.

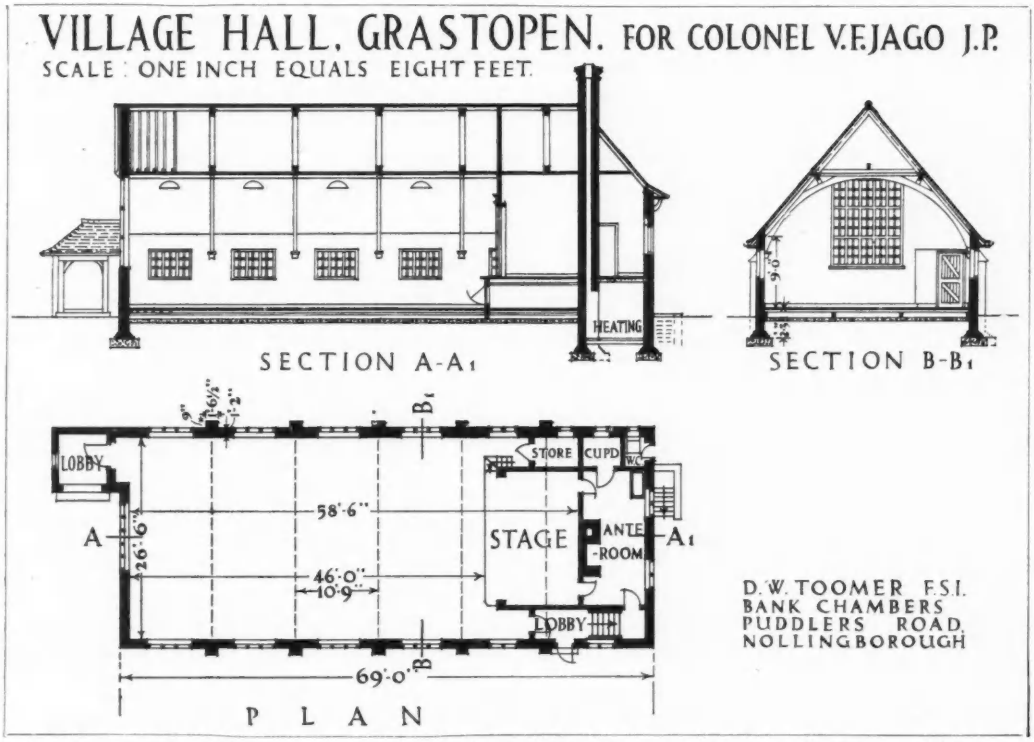


Figure one. Reproduction, on a scale of approximately $\frac{1}{2}$th of an inch to one foot, of the architect's $\frac{1}{8}$th-inch scale drawing of plan and sections of the hall that collapsed.

Mr. Fitfall, K.C., then cross-examined on behalf of the defendant Toomer :

Counsel : You knew Mr. Toomer personally before you appointed him as your architect ?—Yes, he built——

I said "personally." Was he not a member of the Rural District Council when you were Chairman?—Yes, formerly he was.

Did you know him also as a man of high reputation in his profession ?—Good reputation locally, certainly.

Had you previously employed him and known him to be a capable and conscientious architect ?—He built a garage for me. I considered him capable and conscientious, but scarcely a skilled designer.

I did not ask you that, sir, but I quite understand your wish to discredit Mr. Toomer.—I am merely answering your question. I do not consider Mr. Toomer capable as an architect.

At any rate, you were so completely satisfied of his capacity and integrity from actual knowledge of him and his work that you specially selected him to act for you as architect of this village hall in preference to anyone else ?—Yes.

Now, Colonel Jago, did you, or did you not, order Mr. Toomer to cover the floor of the hall with American maple?—I did not.

Now, witness, be careful, please.—Don't speak to me like that, sir.

The Arbitrator : Counsel is only warning you, Colonel Jago.—Witness : I won't stand it. No one is going to talk to me like that. He'd better know it at once.

The Arbitrator : I must call upon you to submit to my authority.

Witness : It's monstrous.

Mr. Pitfall : I should like to assure witness I meant no disrespect. The point is of great importance to my client, and I must have an exact answer.—You've had it.

Did not Mr. Toomer propose to you to use American maple?—He may have recommended it ; if so, I no doubt agreed, for I know nothing of these things.

Do you deny that Mr. Toomer told you that American maple was a tough, refractory wood ?—Yes, I do.

Do you swear that, Colonel Jago ?—Of course I swear it. Am I not on oath ? I have no memory of his saying anything, and if he said a wood was tough and refractory I should not know in the least what he meant.

I put it to you, Colonel Jago, that various alternative flooring boards were described by Mr. Toomer and discussed between you, and that you ordered your architect to use American maple ?—Anyone who says so is a liar.

The Arbitrator : Say "No."—All right, NO.

Counsel then cross-examined witness as to the details of his claim.

In reply to questions in re-examination by Mr. Chawlegger, witness said he knew nothing about building materials and never ventured to offer an opinion upon them, and had given his architect free discretion in all such matters.

Mr. Chawlegger then called PADRIG O'HARA, potato dealer. Witness's volubility caused great amusement.

Counsel : Now Mr. O'Hara—Please to remember the fifth of November.—I do that, sir.

The Swillerton treason and plot?—Sure I'll be after saying nothing against Mr. Swillerton. Isn't he a good customer of mine these six years ?

Were you, Mr. O'Hara, on the fifth day of November last year inside Grastopen Village Hall ?—I did be inside it till it was the way there was no insides to it at all, begor.

Did you leave quietly, Mr. O'Hara?—Is it quietly, and we all at tallywhack and tandem who would be first in it to be out of the Hall !

Just tell the Arbitrator exactly what happened.—Well, your worship, it's the way I was telling the gentlemen; there was a jollification after the annual benefit share out and by the same token the Squire—saving his honour's presence—loaned us the village hall and there were sandwiches and sausage rolls and porter and pork pies in it and beer and whiskey and all sorts. It did be eight o'clock when the tables were after being cleared away and all went soft and gentle as it might be cows going hither and thither about a road, and it milking time, till near closing, when Paul Garnish struck up "John Peel" for old times' sake and he, the boy, at it with both the hands of him, the way you would go to beat a carpet, your worship. "Yurrah, come on, now !" says I, letting a screech at Jane Porch and she standing by; and with that I grabbed the girl and sure the floor did be a fine spring dancing floor all at once, for the other dancing was just a whispering on the flat of your foot like nuns going up the aisle on Sunday, but when we started "John Peel" those new steel mattresses on the hire-purchase, and the diving board at the pool, and spring heel Jack and the devil knows what and all was in it. Sure wasn't it old Sam Jordan himself, your worship, and he bringing the pointer of the weigher at the Black Horse round to twenty stone with a rap like a pistol, lepping and cursing the way he did be blown up with gunpowder, and he hopping and slithering whether he would or no? And every time you gave a hoist to your toes there was bouncings a yard into the air if it was a foot, and the whole crowd going mad with the joy of it and yowling and capering and lepping and screeching the way you'd not hear the music, and not tell what minute was the next with all the spinning and whirling and spurring round and about there was to it, and by the same token weren't the very flags hung out on the roof timbers all bobbing and curtseying in time to "John Peel," and the walls wagging in and out and the picture of Colonel Jago—saving his honour's presence—flapping and jaggering against the wall ? But no one noticed anything amiss, your worship, with the shindy there was and the place going round like the horses at a fair, till just as I was bounding to the door of the retiring room where Gus held the tap, and it standing open—"Yurrah" I yells at Dave Porch, who did be there having a glass, and with that I gave a great stamp of my heels and the floor exploded under me and I rose in the air like a lark before him; and he, the boy, for the kindness he has for me, made a long reach out with the leg of him and hit me a kick in the backside that hoisted me maybe half a yard beyond the lift I had taken; and I drove up to the ceiling and tore away from my partner the way you'd separate two burrs, your worship, and he laughing at me. "Ye filthy blackguard," says I, letting a great yell the way he'd hear my words, for I love the boy. "I'll skelp ye, ye devil," I says, "I'll toe-hoist ye." And at that word the pipe shot forth from between my lips and I've never opened an eye on it since, your worship, for just then some of the windows went off with the glass splintering to the floor, and there came a female screech the way Mr. Billington's siren might be at your ear, and, glory be, there was the Colonel's brave village hall squandering down on top of us, with the walls cracked open and the roof creaking and splitting. "Get out of here," I yells, and with that there was one great rush and scramble to the door-opening and it plugged the way you'd drive a spile into a barrel, with women screeching and clawing and ribs cracking as you might be firing off pistols, and in that time, your worship, George Aitken scatted me a great scat with the bone of his elbow the way my nose was broke right in two pieces, and it all bloody and he like a brother to me. Sure a game of football would be a prayer meeting to what was in it that hour. The half of us were murdered entirely, your worship, and a wonder it is we are all alive and well at this day. Sure it's just the way I was telling the Colonel that the place went down hind end first like any old jackass and it getting ready to roll on the ground. When I was after travelling the distance to the road, there was my brave front wall standing up and the behind part all

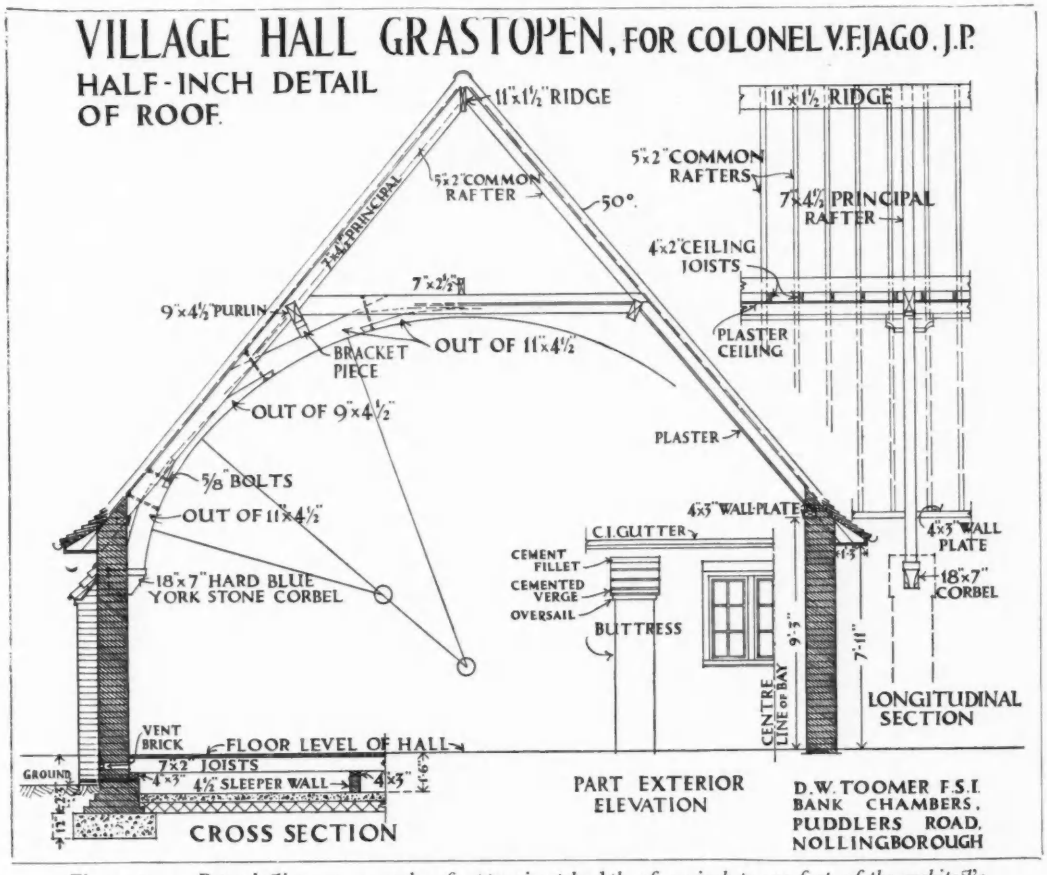

Figure two. Reproduction, on a scale of approximately $\frac{1}{8}$th of an inch to one foot, of the architect's ½-inch scale drawing of details of the village hall that collapsed.

straddling flat on the ground, and then, before you could tell it, something went with a screech the way you might be tearing a linen sheet athwart, and the front end lolled inwards and then, glory be, she went. It was a horrible sight, your worship, and it's myself would as soon be stone blind when I sees the likes of it again, and rather.

Under cross-examination by Mr. Twistle, witness denied that the proceedings were riotously uproarious. No one was drunk but "some might have drink taken." It was just two or three bottles of ginger beer he had had that excited him by inflating him to the lightness of a balloon so that he "rose to it like a bird," and Janet Porch with him. The reason the hall smelt of whiskey was just that two of the lads broke a bottle in the middle of the floor "each being wishful to take from the other."

Mr. Pitfall cross-examining: Now, Mr. O'Hara, how was it that during this quiet, orderly, village dance with its yowlings and screechings and leppings and caperings and kickings in the backside and struggles for the possession of bottles of whiskey, no one noticed the flags jumping and the walls wagging in and out?—Ah, listen to that now! Wasn't it all just a diversion?

And for the sake of the diversion you ignored the fact that the floor had buckled, and went on with your bounding and yelling till you brought the place down on your heads?—Ah, get along with you, sir! How would I be after knowing the floor was not the way a spring floor would be, and it driving me up against the ceiling and catching me again the way it might be my mother's arms? Sure if a man stood still that hour, wasn't he the one that would be the first to take a toss of the floor out through the window-pane?

The Arbitrator: I am obliged to you, Mr. O'Hara. Your evidence has given us a very vivid and complete idea of what happened.

Witness: Ah, not at all! Sure, you're very welcome, sir, and I'm very glad to be of service to the gentleman, and it's any day in the week I'd be giving a bit of evidence and think no more about it than be damned.

MR. RONALD SPOONTIDE, examined by Mr. Chawlegger, said he was a Fellow of the Surveyors' Institution and had been instructed by Colonel Jago, the plaintiff, to report on the cause of the collapse of the hall, for which purpose he had made a thorough examination of the ruins and of the drawings and specification. He identified plan and sections laid before him by Counsel (figures one and two). The hall was 46 ft. long and 26 ft. 6 ins. wide, inside dimensions, with a stage at one end and a retiring room or scullery behind the stage. The walls were solidly built of sound brick in good lime and cement mortar, and rested on adequate foundations. The walls were 14 ins. thick and the side walls stiffened with 18-in. piers, projecting 9 ins. spaced at 9 ft. 10 in. centres, to take the feet of roof principal braces, which rested upon stone corbels built into the piers. The plate taking the common rafters was 9 ft. 0 in. from the floor and the rafters were plastered on the underside up to a horizontal ceiling, 17 ft. 6 ins. from the floor, following the line of the top of the principal collars. The principals were braced with curved members bolted to collars and rafters so as to form an arched sweep from wall to wall, and the whole was properly framed, jointed and bolted and was of sound Swedish red; and from calculations he had made he found that the whole roof was

adequately timbered, braced and constructed.

The floor was of 4½-in. tongued and grooved American maple, secret-nailed to 7-in. by 2-in. red deal joists herring-bone strutted and spiked to 4-in. by 3-in. plates bedded on sleeper walls built against outside walls and on two intermediate sleeper walls running the length of the hall. There was a well-ventilated space between underside of floor and surface of concrete covering site, and the top of concrete foundations was 2 ft. 3 ins. below the floor. Witness then went on to describe the circumstances which, he found, had led to the collapse of the building.

The maple flooring, he said, had been properly laid with flooring cramps, the marks of which were visible on the joists, but the blocks used to line up the first board laid against one side wall, and the wedges driven between the opposite wall and the last boards so as to give these boards a close joint with the rest of the flooring, had been left in place instead of being knocked out before skirtings were fixed, It was this neglect to knock out the blocks and wedges which had caused the collapse. He had ascertained the floor was laid in June and the building finished at the end of August. American maple was supplied by merchants kiln-seasoned and thoroughly stoved, and was known as a particularly "strong" and refractory wood. After the floor was laid, the boards had absorbed moisture from damp air circulating in the space under the floor, and this had caused them to swell; and the presence of the blocks and wedges caused the accumulative expansion of the floor to bring an enormous horizontal pressure on the side walls of the hall. When the floor was danced on a moment came when the impact of some 320 dancers caused the floor to buckle, or rise upwards in the middle, so that it could expand to the dimensions required by the swelled boards by taking a curved line instead of a straight one. In doing this the joists were also bent and the intermediate sleeper plates lifted from their bed, the floor then being supported partly by the bearing of joists on the side sleeper plates, and partly by a lateral thrust of the flooring against the walls.

When once the floor was free to expand to its full dimensions the weight of the dancers operated by an enormous leverage to bring a horizontal thrust against the walls. He had formed the opinion that twelve couples might at any moment have their weight distributed on a strip of floor 12 ins. wide, from wall to wall, and he had made a diagram and calculations, produced (figure three), which showed that the horizontal pressure along line of floor against each foot run of walls was seven tons, giving a total of 320 tons distributed along each wall. He had also found, by calculating the weight of the wall and the position of its turning point (figure four), which was at the outer edge of the line of the top of the footings, that the moment of stability of the walls was 4½ ton-ins., and the upsetting moment no less than 126 ton-ins.; so that the weight of the dancers on the buckled floor would at once force the walls over except for the fact that they were held at the top by the resistance to outward spreading of the roof couple. In his clear opinion the springy character of the floor was due to the weight of the walls, which, with the leverage given by the turning point, was balanced against the weight of the dancers. The swing of the dancers rocked the walls, which at last cracked and gave way and let the roof down. As the tendency of the roof truss was to resist the walls falling outwards, the weight of the dancers operated to expand the roof principals, and these were opening and shutting in time with the music and, in fact, the whole building—weight of tiles and walls and elasticity of roof timbers—were all at work giving springiness to the floor.

Mr. Pitfall here said that so far as Mr. Toomer was concerned, he (Counsel) accepted the last two witnesses' accounts of the circumstances under which the floor collapsed, and did not dispute the allegation that the blocks and wedges between flooring and walls were, in fact, left in place. Mr. Twistle, on behalf of his client, said that he (Counsel) associated himself with his learned brother's acceptance.

The Arbitrator: That may shorten proceedings considerably.

Mr. Chawlegger: In view of the line taken by my learned brothers, it will be unnecessary for me to call the corroborating evidence I was prepared with.

Further questioned by Counsel, witness said that the peculiar characteristics of American maple were well known, and special precautions were necessary in using it. In his opinion, a builder who confined a maple floor over an open ventilated space, and an architect who sanctioned the work, were both negligent.

Cross-examined by Mr. Twistle on behalf of the defendant Swillerton, witness repeated that the hall had been well and carefully built, in strict accordance with the drawings and specification. All the materials were good of their kind. Pressed by Counsel, he said he had seen buildings better built, but agreed that better work had, in those cases, been specified. He could not name any building of the same character as this one in which drawings and specification had been more closely followed.

Counsel: In fact, Mr. Spoontide, this is the best performance of his contract by a builder you ever saw?—I do not say that.

You do say so, sir. You have just told me you never saw a better performance.—That is not the same thing as "the best performance."

The learned Arbitrator will appreciate the niceties of hair-splitting by which you seek to discredit Mr. Swillerton. Do not all buildings in some degree vary?—Certainly.

And though all buildings vary and you never saw better work than this of Mr. Swillerton's, you still deny that it was the best you ever saw?—I have not denied it was the best.

You neither deny nor admit! Come, come, Mr. Spoontide, please remember where you are.

The Arbitrator: Witness says the work was as good as in any other building of the same kind he is acquainted with. You must be satisfied with that, Mr. Twistle.

Counsel to Witness: Have you any reason to suppose that if the contract had called upon Mr. Swillerton to remove the blocks and wedges, he would not have removed them?—No.

His failure to do so, therefore, was due to his not having been given such instructions?—I suppose so.

Mr. Pitfall, cross-examining on behalf of the defendant Toomer, questioned witness on the diagrams and figures given by him in evidence, and then went on:—Tell me, Mr. Spoontide, as an expert in these matters, are the responsibilities of a builder limited by the instructions given him by an architect?—No. He is responsible for proper completion according to the full intent and meaning of his instructions.

Exactly. So, unless Mr. Swillerton was told to leave the wedges in, it was his duty to take them out?—Certainly.

Is that what you meant just now when you told my learned friend that the *failure* of Mr. Swillerton to remove the wedges was due to his *not* having been told to remove them? (The witness showed confusion and did not reply.)

In further cross-examination by Mr. Pitfall, witness admitted that he, in his practice as building surveyor, had never known a floor behave in this way, and had never heard of a similar case. The circumstances were surprising; he agreed that "entirely unprecedented" would not be too strong a word to describe them. Asked by Counsel how an architect could be considered negligent in not foreseeing what was "entirely without precedent" witness did not reply, but stated that he considered the architect should have directed the wedges to be removed.

He admitted, however, that he had never himself given such an order, as he would expect the builder to knock the wedges out. He did not agree that, in saying this, he was contradicting himself twice over. Counsel so twisted things about that he was tricked into contradicting himself. (Loud laughter, in which the Arbitrator joined.)

In re-examination by Mr. Chawlegger, he said that though an architect was only bound to give general supervision, he was responsible for such instructions and supervision as were necessary to secure that the whole work was properly executed. The builder was also responsible, within his instructions, for the soundness of the work, and he considered that Mr. Swillerton was negligent in not removing the wedges, and that Mr. Toomer was negligent in not seeing that they were removed.

Area of dancing floor: $46' \times 26'\ 6'' = 1{,}219$ *sq. ft.*

Maximum load on strip 12″ *wide*—24 *dancers* × 140 *lbs.* = 2,360 *lbs.* = 590 *lbs. central load on half floor.*

Crown of buckled floor: 6″ *above normal.*

Horizontal thrust at $x = \frac{13{\cdot}25 \times 590}{0{\cdot}5 \times 2240}$

$= 7$ *tons (nearly) per ft. run of wall.*

Total thrust on each wall = 320 *tons.*

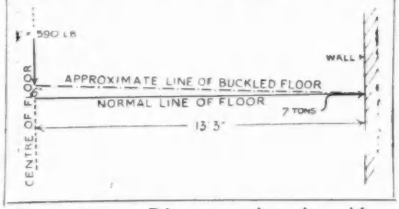

Figure three. Diagram, given in evidence by Mr. Ronald Spoontide, F.S.I., *showing computation of horizontal thrust of buckled floor.*

Mr. Chawlegger then called Mr. ALF. GROAG, Surveyor and Licentiate of the Royal Institute, who described himself as a "practical architect." In the course of his professional duties he had become well acquainted with the "bursting power" of American maple. Witness was of opinion that all builders and qualified architects and surveyors were acquainted with this power. He himself would make a particular point of seeing that wedges were taken out before skirtings were fixed.

Mr. Pitfall, cross-examining: What exactly do you mean, Mr. Groag, when you say you are a practical architect? Do you mean a practising architect?—That's right. I consider I am a practical man.

You concern yourself with facts rather than theory, is that it?—That's right, I'm practical.

That is, practically speaking, you practise as a practical practitioner. Is that right, too?—That's right—but I've done better out of pigs the last year.

That certainly sounds very practical, Mr. Groag. Now, will you tell me, speaking as a practising practical practitioner, what your practical experience of maple flooring has practically been?—I built a range of piggeries floored with maple, and the maple swelled when the pigs got on to it, and its bursting power threw one of the walls down.

And the pigs all escaped? Is that right?—That's right.

I thought so. I understand, Mr. Groag—correct me if I am wrong, for I have the misfortune not to be an architect—that if the pigsty had not collapsed, you would not now be wise to what you describe as the "bursting power" of maple?—No, I should not.

Did you consider it due to your negligence that the pigsty fell down, Mr. Groag?—Well, I know better now than what I did then.

Your practice makes you perfect, in fact?—That's right.

And do you consider that Mr. Toomer should have known of this bursting power?—Well, I know, don't I? I don't see why he hadn't ought to know, too.

Do you say that Mr. Toomer was negligent in not ordering the wedges to be removed?—Yes. That's right.

But, in doing the same thing, you were not negligent?—Well, I shouldn't do it now.

In re-examination witness said that he had since used maple flooring for piggeries successfully by leaving room for expansion. The piggeries were his own property and the maple floor was experimental.

MR. GEORGE PROSTODE, Managing Director of Prostode and Bonner, Ltd., timber merchants, said he supplied American maple flooring to the order of the defendant Swillerton. It was ordinary grade of good quality and suitable for flooring. American maple was seasoned by a special stoving process by the American firms who manufactured and exported the flooring, and witness took care to keep it dry or it would warp and wind. It was generally known as a tough and very "strong" wood and could only safely be used in dry situations. In his opinion omission to remove the wedges amounted to culpable negligence on the part of someone. He would himself at once notice the wedges, for a maple floor was always allowed room to expand when there was any chance of the wood getting damp.

Cross-examined by Mr. Twistle, witness said that he never issued warnings to buyers of maple, as he assumed buyers knew what they were buying. He had never heard of a floor behaving as this one had done, but he was not surprised. If the floor had not been danced upon he did not know what would have happened. He did not, in that case, think the pressure would be enough to knock the wall over or slide it across its bed. Pressed by Counsel, he admitted that except for the floor having been used for violent dancing he thought it would not have buckled: it would have remained flat, but in a state of high compression.

In re-examination, witness repeated that the wedges should have been removed, as, sooner or later, from one cause or another, the floor would be likely to buckle.

Mr. Chawlegger then called ALBERT RUMBLER, builders' labourer, who said he was employed for a time by the defendant Swillerton while Grastopen Village Hall was being built, but was "paid off."

Mr. Chawlegger: Do you remember the floor being laid?—'Course I remembers.

Do you remember Mr. Swillerton ordering the wedges between the flooring boards and walls to be removed?—'Course I do.

Can you recall in what words Mr. Swillerton gave that direction?—'Course I can.

What were they?—Take away them blurry wedgers.

Weight of wall per 12″ *run, in lbs.*

$=$ *brickwork:* $10'\ 6'' \times 1'\ 2'' \times 112 = 1{,}372$

roof: $5' \times 1' \times 12 = 60 = 1{,}432$

Moment of stability about

$A = \frac{1{,}432\ lbs. \times 7''}{2{,}240\ lbs.} = 4\frac{1}{2}$ *ton-ins.*

Upsetting moment about

$A = 7$ *tons* $\times\ 18'' = 126$ *ton-ins.*

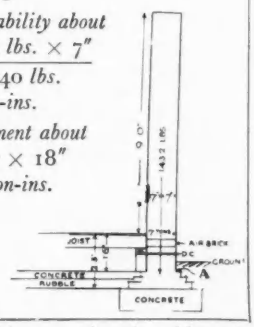

Figure four. Diagram given in evidence by Mr. Ronald Spoontide, F.S.I., *showing moments of stability and upsetting.*

The Arbitrator: I think, Mr. Chawlegger, that witness is scarcely in a fit state to give evidence. The trip to London has upset his moral equilibrium. If you wish, I will allow you to interpose him to-morrow. (*To witness*) Leave the room.

GEORGE TWISS, called and examined by Mr. Chawlegger, said he was a carpenter and had been temporarily employed by Mr. Swillerton, and was responsible for the laying of the floor of the hall.

Counsel: Did Mr. Swillerton give you orders to remove the blocks and wedges between the floor and walls after the boarding was laid?—Well, I don't know as what I exactly heard him say it in so many words.

Counsel: Remember where you are, and be careful what you say.

Mr. Pitfall: The learned Counsel is cross-examining his own witness.

Mr. Chawlegger: I am doing nothing of the sort.

Mr. Pitfall: I object that my friend is treating his witness as a hostile witness because he has not got the answer he wanted.

The Arbitrator: I think, Mr. Chawlegger, that you reprimanded your own witness. That, of course, is not allowable. I think Mr. Pitfall's objection is good.

Mr. Chawlegger: Why did you not take the wedges out?

The Arbitrator (*To witness*): You must be careful in your answers to the questions Counsel asks you.

Witness: Very well, then, I did take the wedges out. (Laughter.)

Mr. Pitfall: Mr. Arbitrator, I submit that as all parties are agreed that the blocks and wedges were left in, witness's evidence is worthless.

Mr. Chawlegger and defending Counsel having intimated that they had no further questions to ask the witness, the Arbitrator, addressing him, said: You can go, sir. I warn you if you are ever called upon to give evidence again, you must take care what you say, or it will be the worse for you.

Witness (*resentfully*): I was only being careful, the same as the gentleman told me to.

The Arbitrator: Leave the room.

Mr. Chawlegger said that he had no more witnesses to call and that that was his case; and the Arbitrator, at the request of Mr. Pitfall, who pointed out that it was then nearly twenty minutes to four and explained that he had been briefed only the night before, adjourned the reference till ten o'clock next morning, when Mr. Pitfall would open the case for the defence.

[*It is a little difficult to see why Mr. Chawlegger called the last two witnesses; but apparently the evidence they were expected to give was that Swillerton had himself noticed the blocks and wedges and ordered their removal. If this were proved it could be argued that Swillerton was, in fact, well aware of the risk of leaving them in, and that the collapse was therefore due to his negligence in not seeing that they were knocked out. The labourer Rumbler was apparently a drunken reprobate with a grudge against Swillerton or Twiss, or out for the lark of the thing; and Twiss, the carpenter, who had been in trouble for leaving the wedges in, was frightened by Counsel into being "careful" to exculpate himself.*]

(NEXT WEEK—iii: THE DEFENDANTS OPEN)

LAW REPORT

LIGHT DISPUTE: CLAIM FOR DAMAGES

Dorr v. *Austin. King's Bench Division. Before Mr. Justice Rowlatt*

THIS action arose out of the demolition of some old fishermen's cottages at Broadstairs and the erection of a house on the site which, it was alleged, interfered with the comfortable amenities of certain of the lower rooms of the plaintiff's house, against which the defendant's newly-erected house backed.

The plaintiff was Mr. G. F. Dorr, of Revelstoke Road, Wimbledon Park, S.W., who sued, as the owner of Arcadia House, Victoria Parade, Broadstairs, and the defendant was Mr. Percy Austin, of The Dingle, North Foreland, Broadstairs. The claim was for damages for alleged obstruction of access of light to ancient lights. Plaintiff said that when defendant erected his house in November, 1928, he built a wall 14 ft. higher than the wall of the cottages which formerly stood on the site. Plaintiff also claimed in respect of depreciation in the value of his property.

Defendant, by his defence, said in November, 1928, as the owner of Ada Cottages, Charlotte Street, Broadstairs, he pulled them down. They had a rear wall some 20 ft. 6 ins. n height. He erected in the place of the cottages the building now complained of. The new building had a rear wall some 6 ft. 6 ins. further to the west of the site of the old wall, and it was 34 ft. 6 ins. in height. He denied the plaintiff's allegation that the wall interfered with the light coming to the plaintiff's windows.

Mr. Charles Doughty, K.C., and Mr. T. Eve appeared for the plaintiff, and Mr. Morton, K.C., and Mr. Turnbull represented the defendant.

Mr. Moody, an architect, of Broadstairs, said the result of the defendant's new building was to make plaintiff's rooms, which were affected, less comfortable than before. The light now was an "annoying light," and one could not see anything. In addition, the new building had depreciated the value of plaintiff's house. The back room of the house was now used as an office, and this and the basement kitchen and rooms near were affected. He put the damages to these rooms at over £250. Witness expressed the opinion that the basement, including the kitchen, was now unusable.

Mr. W. H. Woodroffe, F.R.I.B.A., also gave evidence in support of plaintiff's case.

Mr. Arthur Greville Hiscoke, F.A.I., of Messrs. Cockett, Henderson & Co., estate agents, of Station Gates, Broadstairs, said the plaintiff had purchased the lease of the property and had paid a premium of £150 for it. There were about eight years of the lease to run when plaintiff purchased the freehold for £1,600. Witness valued the plaintiff's freehold premises at £3,000 before the defendant's house was erected. But, having regard to the obstruction caused by the defendant's property, he put the figure at £320 less, which he estimated was the amount of damage done.

Mr. P. J. Waldram, the daylight illumination specialist, was the first witness for the defendant. He said he visited Broadstairs on November 5 last and inspected the plaintiff's property. The effect of the defendant's building, by placing the obstruction farther away, would give the house more sky and reflected light to the greater part of the kitchen. The light to the kitchen was better than it used to be, being a diffusion of reflected light. The kitchen as a whole was not damaged by defendant's building. The office light was excellent. As long as a room had half its depth visible to the sky it was a well-lighted room. He saw practically no damage to plaintiff's building. On the supposition that there was damage, he put it at £50.

Mr. Wm. Leonard Dowton, an architect, of Dowton & Co., Rye Lane, Peckham, London, said that Ada Cottages were demolished in June, 1928. They were very old fishermen's cottages, built in split flint, with the roof tarred and black. In his opinion, the defendant's building in no way interfered with the comfortable user of the plaintiff's house as a whole.

His Lordship, in giving judgment, said the question was whether the ground floor and kitchen had been adversely affected by the defendant's building. If they had been, then the whole building was adversely affected. The basement was always a dark place, even before the cottages were pulled down. He had listened to a great deal of interesting and skilled evidence. As to the kitchen, he found that it had been seriously affected by the defendant's building. As regards the office, it was affected also, but in view of the fact that the room was let and the light fair, the damages would be very small. In spite of all the evidence for the defence, he thought that the defendant's building had had a great effect on the light of plaintiff's kitchen. He thought a fair figure for the damage was £125. Judgment for plaintiff for £125 and costs.

LAMINATED BOARD

Some Practical Details of the New Material

BY THE LATE SIR LAWRENCE WEAVER

NO new material that I know has created so marked a development in design as laminated board. The making of great panels and the whole art of veneering furniture and decorative interior woodwork are profoundly changed in technique. For many years now Germany has made very full use of laminated board, and the nature of the material explains some developments in German furniture design, which otherwise would be difficult to understand. But a new material brings with it new problems, however much it may solve old difficulties, and this is true of laminated board. Its technique of treatment is widely different from that of solid wood, and I have been at pains to discuss the new characteristics with men who, from large use of it, have built up experience of its ways.

Its chief value, perhaps, lies in the great possibilities it offers to safe veneering, not only of surfaces of normal size, but of those so large that no craftsman in the past would have faced the task. Some practical notes may therefore be of value to designers who need to bear in mind the dangers as well as the wider possibilities of a new material.

It is substantially, but not always and perfectly, true that the best laminated boards remain dead flat and free from internal movement. It is also true that the waterproof cement, used in building up the board, impregnates the thin laminations and seals the cells of the wood against the absorption of moisture. But the manufacture of the boards, as of everything else, is subject to a measure of human carelessness and error.

The best laminated boards are made of Gaboon mahogany, which comes from West Africa, and is called mahogany by courtesy, though it is not so botanically. It has many of the characteristics and the colour of true mahogany, but in its natural state is rather more absorptive. In any case it is not possible to ensure that the outer ply of Gaboon shall have wholly lost its liability to absorb some moisture. In the case of other approved brands the core is of Memel pine and the covering ply of alder, which is specially free from the liability to warp.

The best boards to choose are those in which the outer plies have the fewest possible joints, because such

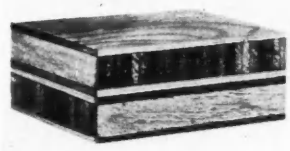

Figure one. A duplex laminated board, good for the veneering of very large surfaces.

joints are apt to be seen through the veneer, though often so faintly that they would not be visible unless the critic was looking out for them.

The best laminated boards are built up of denatured wood, but it would be unwise to regard them as being as impermeable as marble or metal. This is proved by the fact that the best results in veneering are only certain when the veneer is double. A good straight-grained veneer should be laid on the outer ply of the board with its grain at right angles to the grain of that ply. Some experts prefer that this intermediate veneer should have its grain at an angle of 45 degrees to the grain of the ply, but a right angle is the more common practice. The finishing figured veneer is then laid with its grain following the grain of the outer ply. Only those who have intimate knowledge of the behaviour of veneers can realize that defects may develop if there is any difference between the way that veneers are laid on the two sides of a board, whether that board be of solid Honduras mahogany or of laminated wood. It is bad practice to lay a veneer on one side only of a board, for its "pull" is bound to lead to distortion somewhere.

So important is it to reproduce exactly, on both sides of the board, the conditions of "pull" of the final veneer, that if the veneer on a table top, for example, is quartered on the upper face, it should be quartered in exactly the same way on the under face, even although it may never be seen.

Another important technical point arises on the veneering of unusually large panels. Laminated board is to be obtained as much as two inches thick. Some experts dislike so great a thickness because the pressure of a veneering press, powerful enough to deal with very large panels, may be great enough to cause some crushing of the laminated core if it is nearly two inches thick between the outer plies, especially if some laminations have gone askew. Mr. C. A. Richter, of the Bath Cabinet Makers' Company, Ltd., who has a long experience in using laminated board, tells me that he has found the best results, in very large work, from cementing together two threequarter-inch boards to form a carcass for double veneering on both sides, and that the pair of adjoining plies half-way through the double board so stiffens its fabric as to prevent internal crushing. I give an illustration showing how the two parts of this duplex board have their grains running at right angles (figure one). This still further reduces the remote risk of movement.

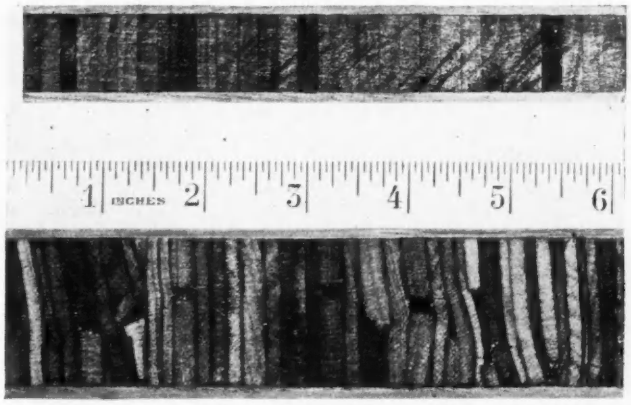

Figure two. A comparison of laminated core sections—the upper one regular, the lower one likely to cause defects in veneer laid upon it.

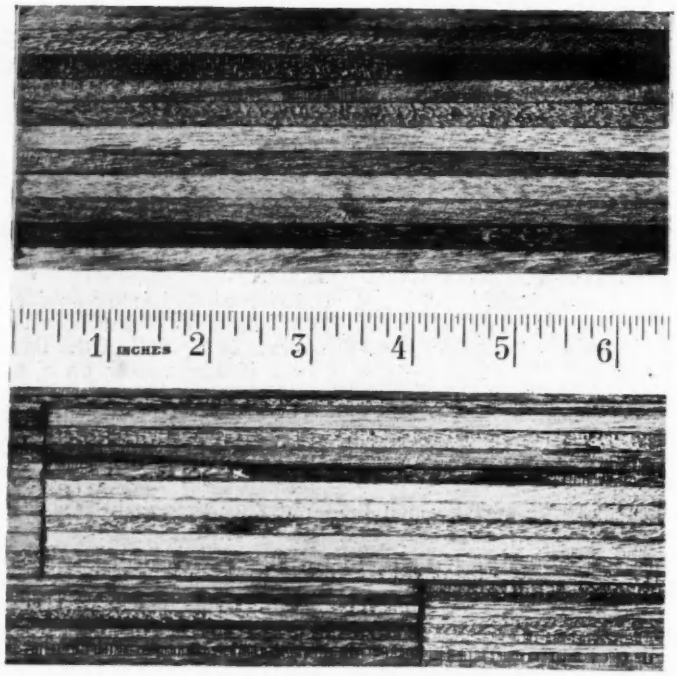

Figure three. A comparison of boards with the outer ply stripped off—the upper one with the laminations regular, the lower with defective jointing and laminations of varying widths.

The essence of safety in the use of laminated board is to ensure that the brand used has a perfect core. In some makes there is considerable carelessness in getting the laminations packed together solidly at right angles to the covering plies, with the results that gaps are left and there are distortions in the laminations. Figure two contrasts a board, perfect in this respect, with another revealing defects which are dangerous.

Veneer is an exceedingly sensitive material. It is not enough that the outer ply of the laminated board shall seem absolutely flat throughout its length and width. If there are cavities within the core, as illustrated by this bad example, there is a tendency for a sinking to develop in the outer ply, which carries with it, of course, the finishing outer veneer. This produces depressions, and even fractures, in the outer veneer, with the result that an otherwise perfect job will show distressing defects. But even without distortion of the laminations there may be cavities in the core owing to breaks in the laminations lengthwise of the grain, as is shown by figure three. It is therefore important that the brand of laminated board chosen shall be absolutely homogeneous in every direction, and free of cavities, whatever their cause.

One point must be plainly dealt with, and that is the rather undesirable variety in the quality of various brands

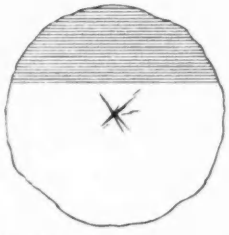

Figure four (A). *Veneers cut across the log. The slicing is very apt to "distress" the grain.*

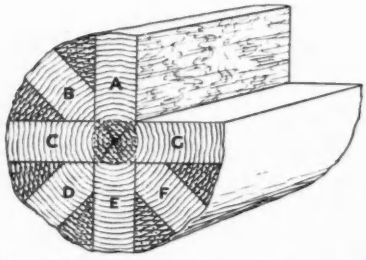

Figure four (B). *A log quartered into flitches (lettered) from which veneers are cut.*

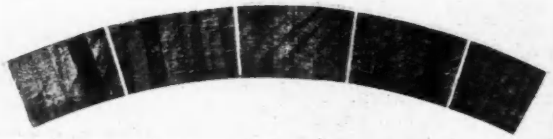
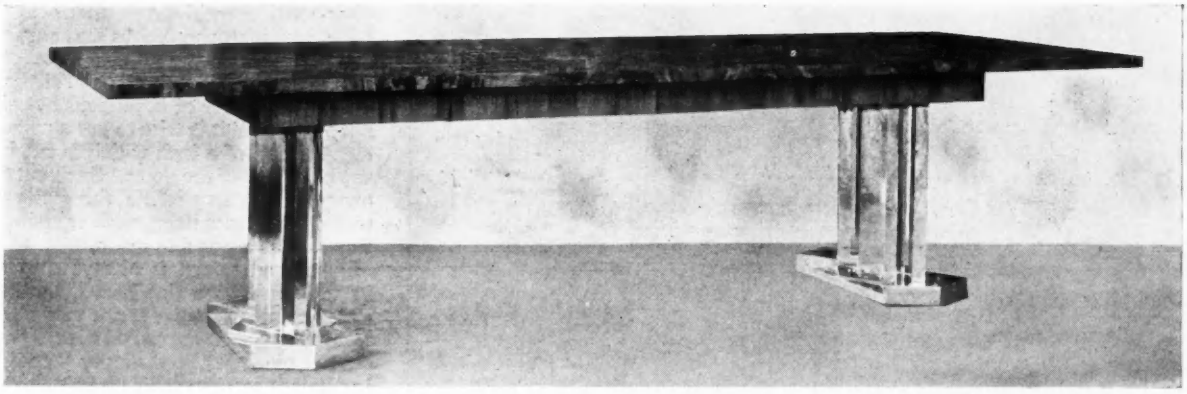
of laminated wood now on the market. For obvious reasons I mention none of them, but it has to be stated that not all are of sufficiently sound construction to ensure that fine veneers laid on them will always stand perfectly. There is no infallible way of discovering defects in the core of laminated strips contained between the two outer plies if they are not revealed on the outer edges of the board. Some careful and skilful users can, by tapping the boards, assure themselves that the adhesion is perfect all over. This test by tapping is applied at the factories before the boards are shipped, but it is not possible to rely wholly on that inspection. But I gather from cross-examining many users that the best of the brands rarely show the defect of hollows in the core, which becomes more and more rare as the technique of manufacture becomes increasingly perfect. After all, the best of solid Honduras mahogany is liable to the development of defects not visible when the veneer is laid.

Perhaps I may interpolate here a word on the making of veneers, because there is some confusion as to what is meant by veneers cut "on the quarter."

Mr. Leslie C. W. Jenkins—a past-master in the art of veneer cutting—has kindly given me the two accompanying sketches (figure four).

"A" shows veneers cut across the tree. It is almost impossible to employ this method, without the grain being "distressed" by the process of cutting. When the veneer is cut across "crown" or "heart," however well one side may be cut, the other side is sure to be "plucked" or "torn out." Not only does the cutting of a veneer across the tree result in a badly cut veneer, but in almost all cases, and particularly in oak, the veneer would be lacking in figure. "B" shows the log quartered into flitches which are marked A, B, C, D, E, F and G. The intermediate pieces and the "heart square" (cross-hatched on the sketch) are waste and the veneers are cut from the flitches (lettered). The circular lines on these flitches indicate the annular rings, and the lines crossing the circles, the medullary rays. In certain very hard woods the veneers need to be sawn, but the more ordinary method is to cut them from the flitches with knives on a slicing machine, much as a plane takes off a shaving. The knife always cuts the wood across the grain. The





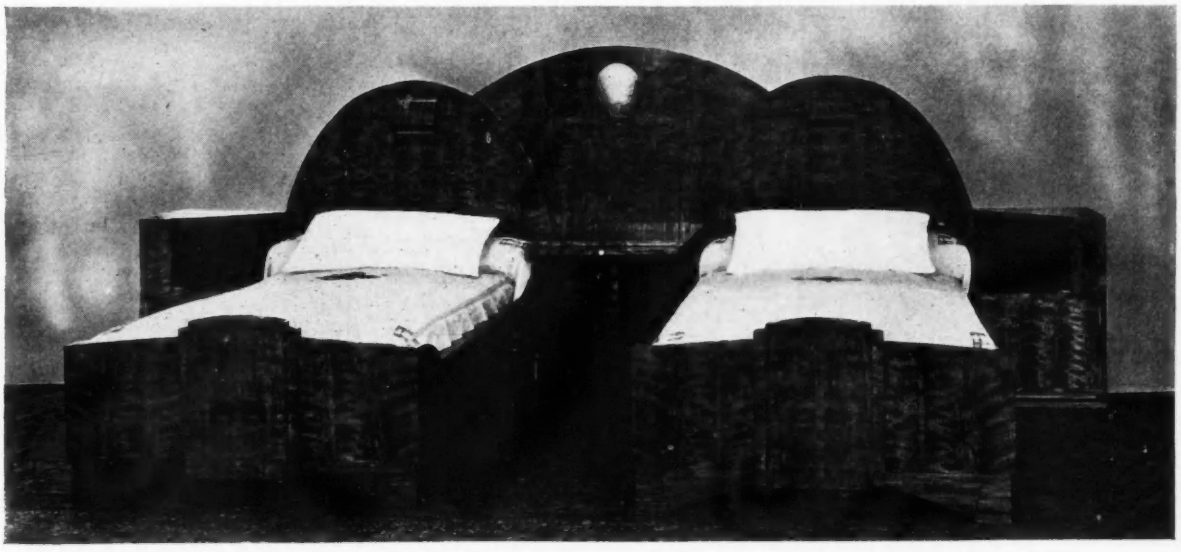


Figure five. Laminated board, divided and re-cemented for work that is curved on plan.

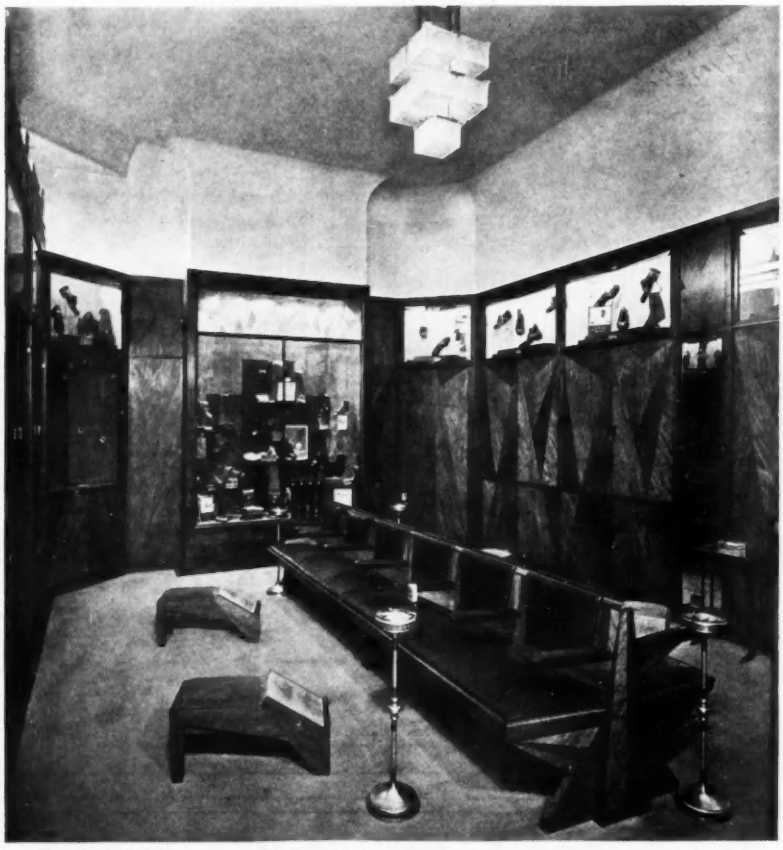

A dining-table of laminated board, veneered in walnut, with pedestals of stainless steel. Designed by Joseph Emberton.

sketch shows the heart in the centre of the log, but very often it does not stay in the centre but twists about throughout the length of the log, causing great waste in conversion.

Veneered laminated doors at the Royal Horticultural Hall. Designed by Easton and Robertson.

An important and encouraging feature of laminated board is that it is not susceptible to dry rot. I lately inspected some very fine panelling in a new building where, by some ill-luck, dry rot had made its appearance in hard wood stiles and rails, but the panels of laminated board were absolutely unaffected.

At first sight it may appear that laminated boards will not be as satisfactory as solid wood in respect to the *construction* of a piece of furniture or for architectural purposes. It is true that normal methods of dove-tailing, tenoning, etc., have to be modified, but practical joiners and cabinet-makers with whom I have discussed the question, seem to have no difficulty in devising new ways of making joints adequately strong for their purpose.

Mr. Tait has pointed out to me that the lift cars at Selfridges, which are built up of laminated panels butted together, have stood so well, despite the endless racket of their use, that there has not been a trace of cracking in the painted internal angles.

In the making of thin doors, e.g. for wardrobes, sideboards, etc., it is by some experts thought wise to provide the door with a solid edge about 1½ in. wide, to which the hinges and the lock can be attached, and this process is sometimes called "lipping." If, however, a thin door of laminated board is not "lipped" it is wise to use a mortice lock instead of a lock which is cut into the back face of the door. Such cutting away is apt to disturb the balanced pull of the outer plies, with warping of the door as a possible result.

Laminated board is always supplied in the trade as a flat board, but that does not mean that it is not very useful for work which is curved on plan. Such curved work is also done by "coopering," or it may be built up in 3, 5, 7 or more plys by moulding it on a wooden template, sometimes known as a "caul." It is, however, possible to use ordinary laminated board for this purpose by stripping off the outer plies, shaping it on a "caul," and double veneering it after it has been so shaped. Alternatively, the outer plies can be stripped off the core, which is then divided into pieces about 2 ins. wide. These are planed down to a wedge shape, reglued to form a board curved on plan (figure five), and then double veneered. This involves much less work for a furniture maker than building up a purpose-made laminated core.

I come now to the economics of the use of laminated board for the carcassing to be veneered.

The fair comparison is with the next best material, Honduras mahogany, which has stood the test of time in this relation. The cost of the mahogany itself in one inch boards of average widths and lengths may be taken at 1s. 2d. per superficial foot, to which should be added for sawing, jointing,

A red lacquered cabinet built of laminated board. Designed by T. S. Tait for his own house.

glueing up, planing, finishing, handling and waste, fifty per cent. This means that panels such as wardrobe doors, bedstead ends, etc., finished ⅞ths inch and ready for veneering, cost 1s. 9d. per square foot, and even this price assumes modern plant, and the handling of large quantities. It would probably be fairer to regard 2s. as the proper price, if wide boards are wanted.

The type of laminated board with which I am most familiar costs approximately 1s. 4d. per square foot. On the other hand, solid Honduras does not require double veneering as does laminated board, which means an extra 2½d. per square foot on each side for veneer, and the labour of veneering.

Broadly speaking, therefore, there is nothing between the prices of the best laminated board of Gaboon mahogany throughout and the best solid Honduras mahogany.

Having regard to the enormous advantages which attach to the best laminated board, it is easy to prophesy that it is only a question of time for Honduras mahogany to disappear from this particular use, except by such people as think that solid wood offers some kind of moral or sentimental advantage simply because it is solid. The accompanying illustrations show with what skill many well-known architects have made use of the opportunities afforded by this new material.

SOCIETIES AND INSTITUTIONS

PROFESSOR C. H. REILLY ON ARCHITECTURE

If the face of our towns and villages was to be saved from building horrors, said Professor C. H. Reilly in an address to the North of England Education Conference at Harrogate, school children must be taught to appreciate art, particularly architecture.

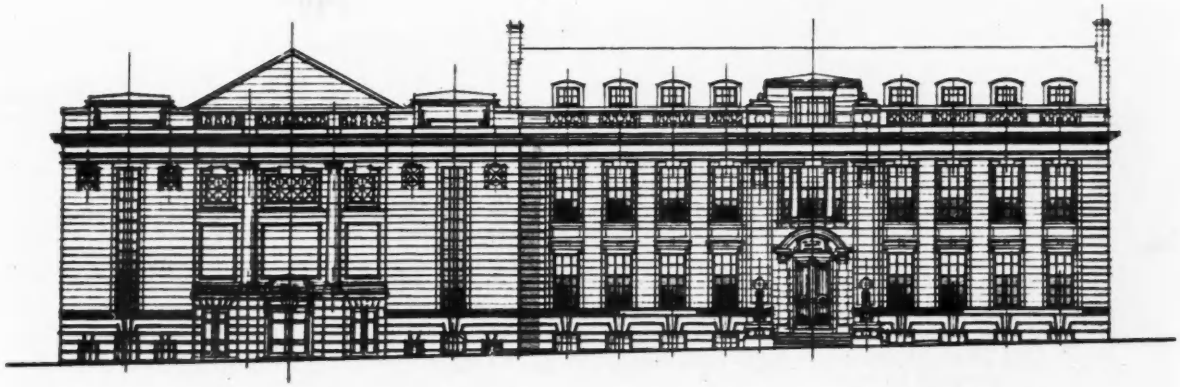
It was not sufficient merely to educate the architect, for today he was only responsible for one building out of every five erected. The rest were put up without his assistance.

The great need, therefore, he explained, was to improve the building taste of the mass of the people. Probably that taste was never so low as it was today.

If one walked from the centre outwards of any town or village, one could not help noticing the general drop in the level of taste of the ordinary dwelling-house the farther one went.

Referring to the need for improving public taste, he said the general level of taste could only be raised by the schoolmasters. It was fortunate that exercises in visual taste as differentiated rom literary taste had at last been introduced.

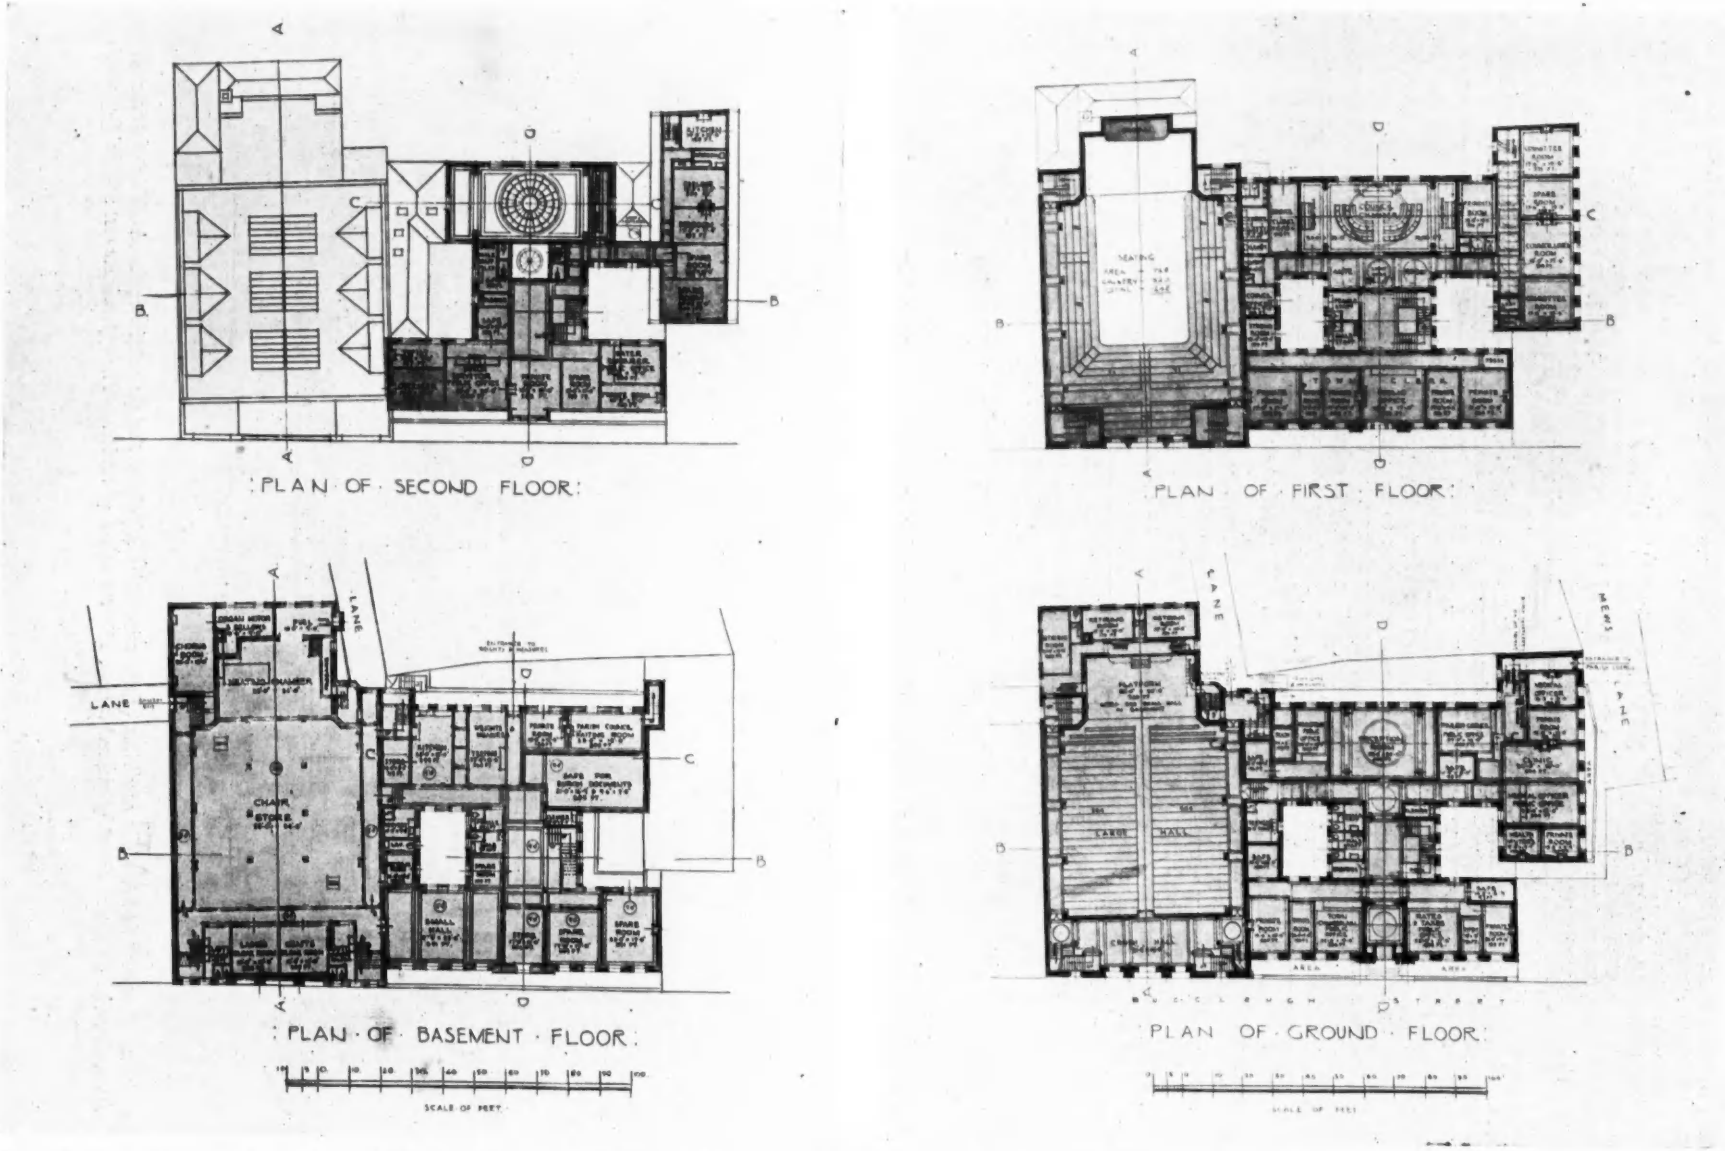
Last year 6,900 school children took to art—that was drawing plus a period in the history of architecture, painting and sculpture—in the Schools' Art Examination of the Northern Universities.



He said he hoped that a critical study of the visual arts would soon be part of the curriculum of all secondary schools.

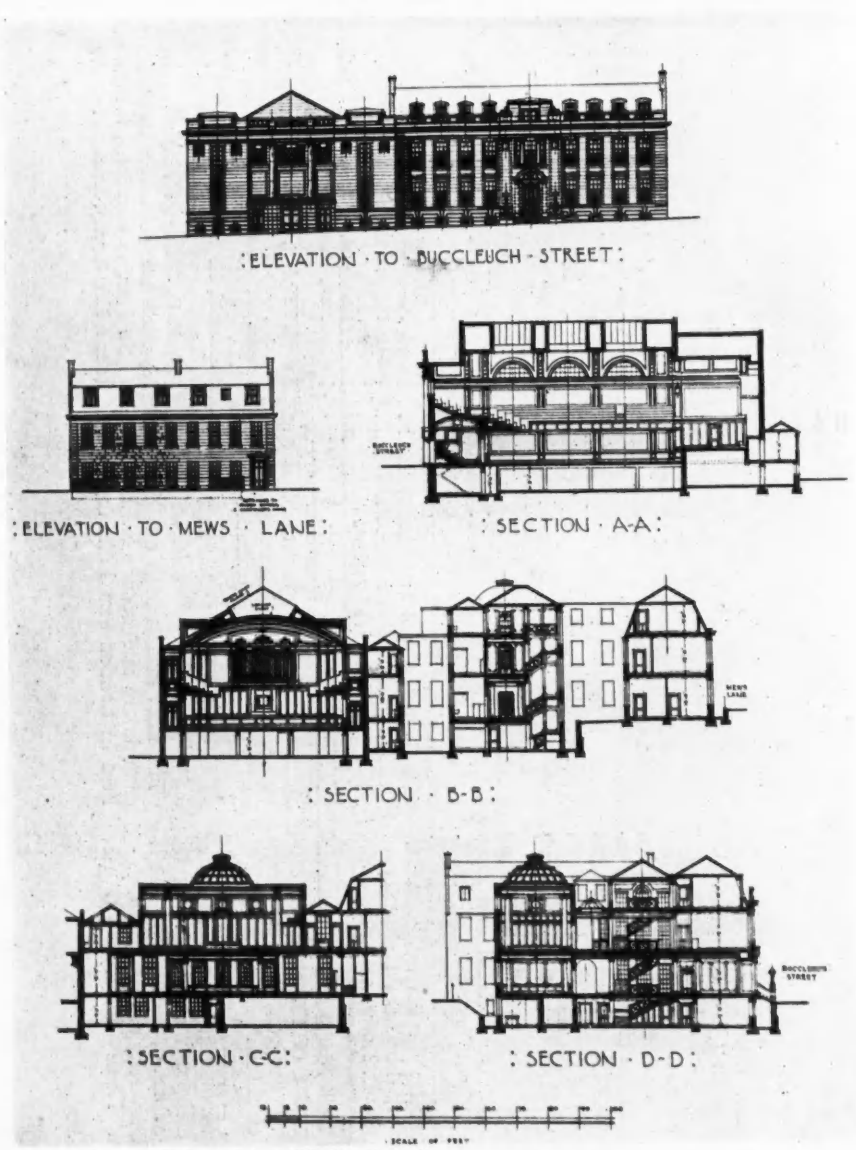
I.A.A.S. ANNUAL ELECTION

As a result of the annual election of the Incorporated Association of Architects and Surveyors to fill ten vacancies on the Council of the Association, the following members have been elected: Messrs. W. T. Bowman, O.B.E., M.I.STRUCT.E.; E. E. Bridge, L.R.I.B.A.; A. Casse, F.S.I., A.M.I.STRUCT.E.; A. W. S. Cross, M.A. (Cantab.); E. G. Culpin, J.P., L.C.C., M.T.P.I.; R. S. Gledhill; R. V. Hall, M.I.M. AND CY.E.; H. F. V. Newsome; R. I. Tasker, J.P., L.C.C., M.I.STRUCT.E.; L. J. Veit, F.S.I., M.I.M. AND CY.E. Major Tasker is the outgoing President.

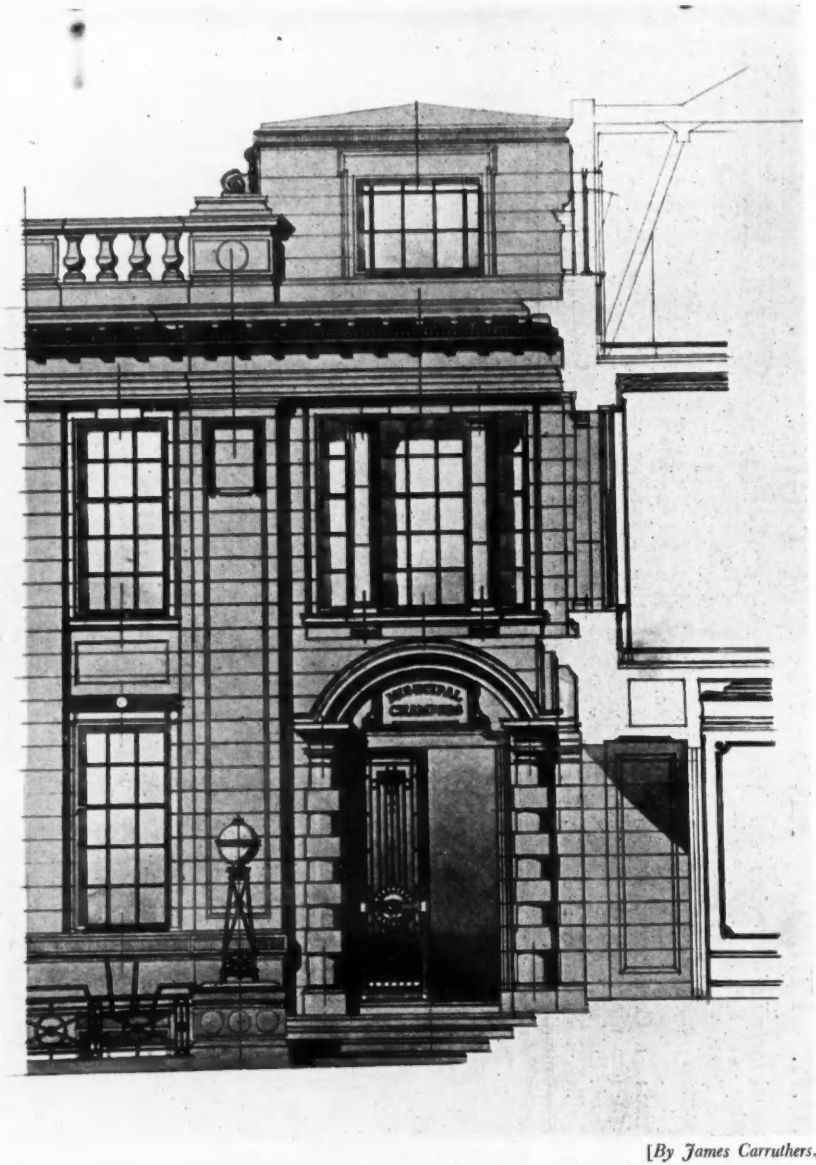


DUMFRIES TOWN HALL COMPETITION

First Premiated Design: By James Carruthers



: ELEVATION · TO · BUCCLEUCH · STREET :



Elevation to Buccleuch Street. The conditions of the competition stipulated that the exterior walls should be of Locharbriggs stone, those to Buccleuch Street of dressed ashlar, and the others of rubble. The approximate cost will be £45,000.

Plans of basement, ground, first and second floors. The accommodation includes a town hall to seat 1,250 persons and provided with stage and retiring-rooms; municipal offices; and a council chamber. The building is to be erected on the site of the old town hall, which was destroyed by fire.

Plans of basement, ground, first and second floors. The accommodation includes a town hall to seat 1,250 persons and provided with stage and retiring-rooms; municipal offices; and a council chamber. The building is to be erected on the site of the old town hall, which was destroyed by fire.

Dumfries Town Hall Competition: Winning Design. [*By James Carruthers.*

Sections and elevations, and detail of main front. The award of the assessor, Sir George Washington Browne, was as follows: First premium, £300, James Carruthers, Glasgow; second premium, £200, Hutton and Taylor, Glasgow; third premium, £100, H. T. Wright, Newcastle-upon-Tyne.

R.I.B.A. PRIZES AND STUDENTSHIPS

The annual award of the prizes and studentships of the R.I.B.A. was announced last week. The names of the successful competitors are as follows :

Tite Prize : a Certificate and £50 for Design (for the study of Italian architecture). Subject, "A Monastery." A. C. Collins, Melbourne, Australia. Honourable mention, E. F. Stacy, Department of Architecture, Northern Polytechnic; H. Banister, Liverpool School of Architecture, University of Liverpool; E. F. Starling, School of Architecture, University of London.

Soane Medallion : a Silver Medal and £150 for Design (for architectural study abroad). Subject, "A Sports Club." J. L. Martin, School of Architecture, Victoria University, Manchester. Honourable mention, S. E. T. Cusdin, Architectural Association, London.

Owen Jones Travelling Studentship and £100 (a Certificate and £100 for the study of ornament and colour decoration). Miss Kathleen A. Veitch, Architectural Association, London.

Royal Institute Silver Medal and £75 for Measured Drawings. Miss Sadie Speight, Manchester University School of Architecture (for measured drawings of "The Organ Screen in Greenwich Hospital Chapel," "Palazzo Municipale, Brescia," "Monte di Pietà, Brescia").

Royal Institute Silver Medal and £50 for an Essay. R. A. Duncan, A.R.I.B.A., Architectural Association, London (for an essay on "Science and the Art of Architecture"). Honourable mention, W. A. Eden, A.R.I.B.A., School of Architecture, University of Liverpool (for an essay on "John Carr, architect, of York, 1729–1807").

Henry Saxon Snell Prize (£100 for travel for the study of improved design and construction of hospitals, convalescent homes, and asylums for the aged and infirm poor). K. H. Read, A.R.I.B.A., the School of Architecture, the Polytechnic, Regent Street, W.1.

R.I.B.A. (Alfred Bossom) Travelling Studentship : Gold Medal and £250 (for the study of commercial architecture in America). Not awarded. Silver Medals : E. Forster, A.R.I.B.A., School of Architecture, University of London; H. B. Rowe, A.R.I.B.A., Newport, Mon.

Grissell Gold Medal and £50 (for the encouragement of the study of construction). Subject, "A Concrete Pavilion on a Pier." Not awarded.

R.I.B.A. Hunt Bursary—£50 (for the encouragement of the study of housing and town planning). T. M. Daniel, A.R.I.B.A., School of Architecture, University of Cambridge.

R.I.B.A. Neale Bursary—£70 (for the encouragement of the study and measurement of old buildings). W. A. S. Cormack, A.R.I.B.A., School of Architecture, Robert Gordon's Colleges, Aberdeen.

Arthur Cates Prize : a sum of £50. Not awarded.

Ashpitel Prize, 1929 (this is a prize of books, value £10, awarded to the candidate who has most highly distinguished himself among the candidates in the Final Examinations of the year). R. H. Brentnall, Royal West of England Academy, Bristol, School of Architecture.

R.I.B.A. Silver Medal for Schools of Architecture recognized for exemption from the Final Examination (this is awarded for the best set of drawings submitted at the annual exhibition of designs by students of Schools of Architecture recognized for exemption from the R.I.B.A. Final Examination). J. L. Martin, School of Architecture, Victoria University, Manchester. Honourable mention, W. Crabtree, School of Architecture, University of Liverpool.

R.I.B.A. Bronze Medal and £5 in Books for Schools of Architecture recognized for exemption from the Intermediate Examination (this is awarded for the best set of drawings submitted by students of Schools of Architecture recognized for exemption from the Intermediate Examination). A. G. Gibson, Architectural Association, London.

R.I.B.A. Prizes for Public and Secondary Schools (these are two prizes of £2 10s. each; one a prize for an essay of not more than 1,000 words, and one a prize for sketches or scale drawings of a building or part of a building. The prizes are offered for competition between boys and girls in Public and Secondary Schools). Prize for Essays : Miss Dorothy Pilgrim, of Notre Dame High School, Battersea. Competitors commended : George Richardson, Birkenhead Institute; A. C. L. Whistler, Stowe School; J. L. Carr, Castleford Secondary School. Prize for Sketches : H. I. Gordon, of Hymers College, Hull. Competitors commended : Raymond Bacon, Grammar School, Great Yarmouth; R. L. Young, Queen Mary's School, Walsall.

The Competition Drawings will be on exhibition in the R.I.B.A. Galleries, 9 Conduit Street, W.1, until January 20, 1930, inclusive, between the hours of 10 a.m. and 8 p.m.; Saturdays, 10 a.m. and 5 p.m. (Sundays excluded).

R.I.B.A. EXAMINATIONS

The Final Examination

The final examination qualifying for candidature as Associate R.I.B.A. was held in London and Edinburgh from December 4 to 12, 1929. Of the seventy-six candidates examined thirty-four passed (nine in Part 1 only) and forty-two were relegated. The successful candidates are as follows :

Boon, Geoffrey M.
Brenchley, Arthur R.
Brentnall, Ralph H.
Bright, George E.
Burrington, Thomas (Part 1 only).
Chaplin, John P. (Distinction in Thesis).
Cox, William J. P.
Dower, John G.
Duncan, David R.
Fisher, Roderick C.
Gillett, Margaret (Part 1 only).
Haskins, Allan D. A.
Johnson, Allan.
Kemp, Sidney J.
Kemp, William C. (Part 1 only).
McMullen, Alexander L.
Marrett, Eric M.
Maynard, Frederick J.
Neil, Charles W.
Orfeur, Ronald F.
Pickering, Charles E. (Part 1 only).
Price, Geoffrey L.
Priest, Alfred L. (Part 1 only).
Rea, Herbert F.
Robinson, Aubyn P.
Saunders, Victor C. L. (Part 1 only).
Segar-Owen, Godfrey J. S.
Shaw, Robert.
Shepherd, George H.
Soper, Stephen F. (Part 1 only).
Steele, Frank R.
Tassell, George E.
Thomas, Thomas W. (Part 1 only).
Wakeham, Philip O. G. (Part 1 only).

The Special Examination

The special examination qualifying for candidature as Associate R.I.B.A. was held in London and Edinburgh from December 4 to 10, 1929. Of the twenty candidates examined, six passed (one in Part 1 only) and fourteen were relegated. The successful candidates are as follows :

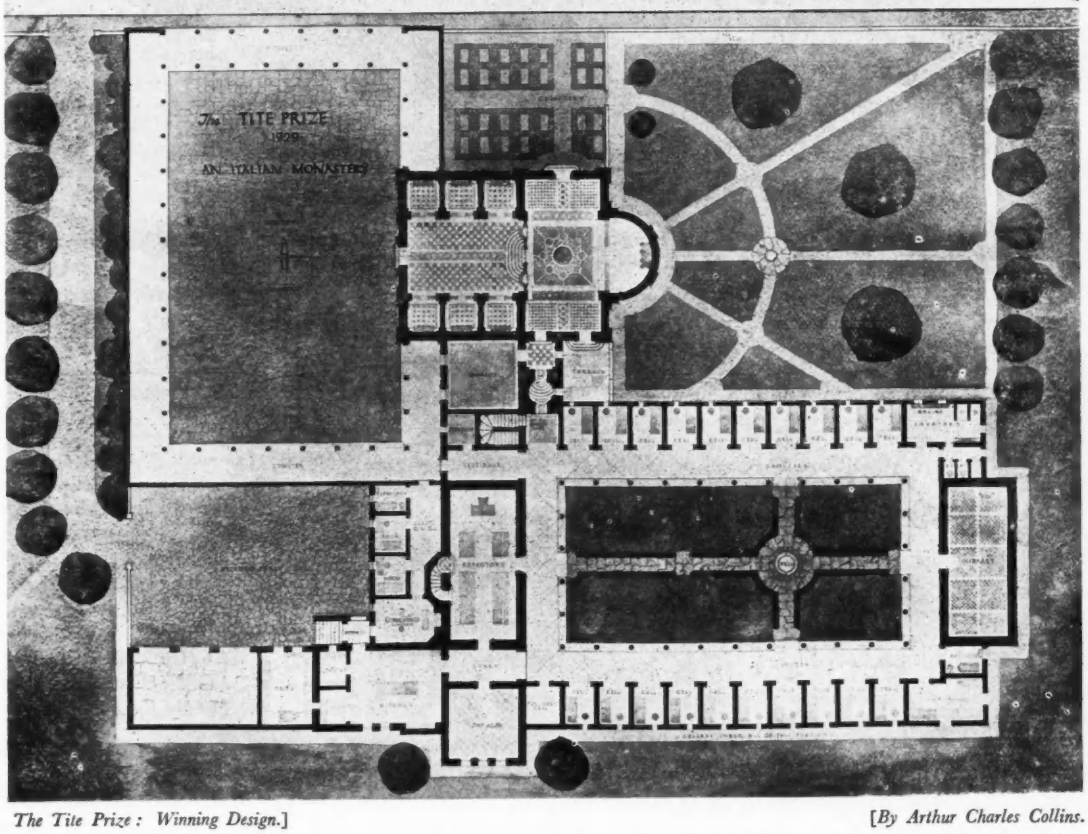
Duffy, Thomas.
Harris, Robert O. (Part 1 only).
Stanley, Leslie S.
Taylor, George S.
Wakelin, Richard N.
Young, William E.

The Examination in Professional Practice for Students of Schools of Architecture recognized for exemption from the R.I.B.A. Final Examination

The examination was held in London and Edinburgh on December 10 and 12, 1929. Of the sixty-seven candidates examined forty-four passed and twenty-three were relegated. The successful candidates are as follows :

Ashwell, Harold J.
Baillie, Ian.
Boger, Robin C. D.
Bradbury, Ronald.
Butler, Ronald McC.
Carr, David.
Carter, Edward J.
Cassells, George A.
Cowin, John N.
Cusdin, Sidney E. T.
Ellis, Harold H.
Freeth, Evelyn.
Grayson, Arthur B.
Harris, Leonard D.
Hillier, Norman B.
Hughes, John L.
King, Elizabeth S.
Kininmonth, William H.
Lavers, Ralph S.
Linfield, Guy R.
Macdonald, Alfred I. D.
Macdonald, Hugh S.
Martin, John L.
Matthew, Robert H.
Murray, James M.
Nisbet, John A. V.
Patker, Vithal M.
Penn, William H. M.
Phillipson, Beatrix J.
Porter, Herbert G.
Richards, James M.
Ross, Hugh M.
Roth, Stanley H. J.
Scott, Robert D.
Smeed, Charles W. J.
Smith, Charles H. B.
Smith, James.
Somake, Ellis E.
Sutherland, Stephen.
Tanton, Hubert J.
Webster, Patricia B.
Westerman, Albert E.
Wheeler-Carmichael, Samuel D.
Wilkinson, Harold H.

Mr. E. D. O'Connor, A.R.I.B.A., has moved his offices from 58 London Road, Leicester, to St. Martin's Chambers, 8 New Street, (also 2 New Street), Leicester.



Elevation from road

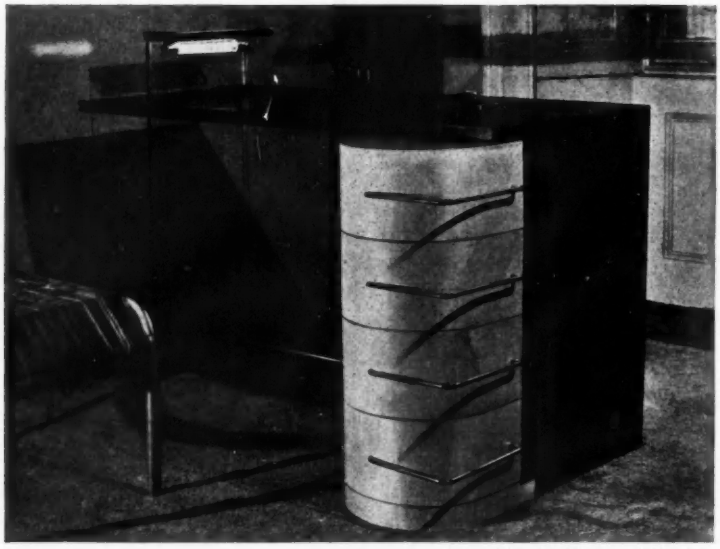
Elevation from Outer court

AN ITALIAN MONASTERY

The Tite Prize: Winning Design.] [*By Arthur Charles Collins.*

The subject set for the Tite Prize this year was a monastery. The winning of the prize by a young Australian architect is a direct result of the reform recently instituted by the R.I.B.A., whereby it has been made possible for Dominion architects to compete on equal terms with architects in Great Britain. For full list of awards see facing page.

THE ARCHITECTURAL REVIEW



"On the subject of furnishing a modern house there are two problems to consider: the problem of compromise with things as they are and the problem of creating a new thing." Thus writes Paul Nash in the January issue of *The Architectural Review* in an article on "Modern English Furnishing." One of the many illustrations of modern furniture which accompanies the article is reproduced on this page.

A description of Greatwood Hall, Lincolnshire, by Mr. Darcy Braddell, is published, together with illustrations and plans of the building.

The series of articles on "A History of the English House" is continued by Mr. Nathaniel Lloyd, and deals with the late seventeenth and early eighteenth centuries, with special reference to Sir Christopher Wren.

Mr. Raymond McGrath has contributed an article entitled "Light Opera," which is interspersed with illustrations of the Savoy Theatre.

There are many other illustrations in the *Review*, including a photograph and measured drawing of Newcastle House, Lewes.

[*From* The Architectural Review.

A desk in Coromandel and sycamore woods with a fixed strip light. The desk has one glass leg. Designed by Denham Maclaren.

COMPETITION NEWS

The R.I.B.A. announce: "The Competitions Committee desire to call the attention of members to the fact that the conditions of the competitions for the proposed new school, London Road, King's Lynn, for the proposed pleasure resort, Gosport, for the Ongar (War Memorial) Cottage Hospital, and for the Blomfield R.D.C. House Plans Competition, are not in accordance with the regulations of the R.I.B.A. The Competitions Committee are in negotiation with the promoters in the hope of securing an amendment. In the meantime members should not take part in these competitions."

THE BUILDINGS ILLUSTRATED

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

Commercial Union Offices, Cornhill (pages 119–124). General contractors, Trollope and Colls, Ltd. Sub-contractors: Redpath, Brown & Co., Ltd., steelwork; F. J. Barnes, Ltd., stonework; Geo. Rome & Co. (London), Ltd., plastering; Sulzer Bros., heating and ventilation; A. Williams & Co., wells; Haywards, Ltd., pavement lights and steel stairs; May Construction Co., Ltd., acoustic plaster; J. R. Pearson (Birmingham), Ltd., roof railing; Crittall Manufacturing Co., Ltd., steel windows; Diespeker & Co., Ltd., floor construction; Leeds Fireclay Co., Ltd., exterior wall tiling; Milner's Safe Co., Ltd., strong-room door; Leyland and Birmingham Rubber Co., Ltd., rubber paving; Art Pavements and Decorations, Ltd., Biancola wall linings; Purcell and Nobbs, kitchen equipment; Hollis Bros. & Co., Ltd., wood block flooring; Bratt Colbran & Co., Ltd., fireplaces; James Gibbons, Ltd., and Carter and Aynsley, Ltd., ironmongery; Waygood-Otis, Ltd., lifts; G. A. Harvey & Co. (London), Ltd., steel fittings; J. A. Lawford & Co., asphalt; Sturtevant Engineering Co., Ltd., vacuum cleaning.

Metropole Cinema, Victoria (pages 143–144). General contractors, Holliday and Greenwood, Ltd. Clerks of works, W. D. Mackenzie and E. Lathey. Sub-contractors: London Brick Co. and Forders, Ltd., 1,500,000 Phorpres Flettons bricks; Anselm Odling and Sons, Ltd., marble work; British Vacuum Cleaner and Engineering Co., Ltd., vacuum cleaner plant; Frank Burkitt, fire curtain and hydrants; Burn Bros., Ltd., sewage pumping-plant; Carter & Co., London, Ltd., tiling; J. Starkie Gardner, Ltd., decorative metalwork and balustrading; Haywards, Ltd., pavement lights; Siegwart Fireproof Floor Co., Ltd., pre-cast concrete roof; W. James & Co., Ltd., metal sashes and lantern light; Braby & Co., Ltd., metal ducts; H. Lazarus and Son, Ltd., seats, curtains, etc.; Leyland and Birmingham Rubber Co., Ltd., rubber flooring; E. Pollard & Co., Ltd., steel shutters; Rubery, Owen & Co., Ltd., steelwork; the Berkeley Electrical Engineering Co., Ltd., electrical work; J. W. Gray and Son, lightning conductors; Western Electric Co., Ltd, talking apparatus; B. Finch & Co., Ltd., sanitary goods.

Two houses, Hampstead Garden Suburb (pages 146–147). General contractors, Garsubil, Ltd. Sub-contractors: Keele Tileries, tiles; Falkirk Iron Co., grates; Wood, Russell & Co., Ltd., Sentry No. 1 boilers; Woodworkers, Ltd., joinery and mantels.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated, readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

323002. Concrete, Ltd., Ambrose, J. G., and Mathews, C. B. Concrete slabs or monoliths for the floors or ceilings of buildings and the like, and the method of producing and applying same.

321435. Palmer, H. S. Building blocks.

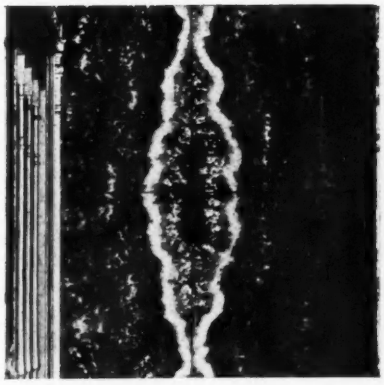
Messrs. Lewis Berger and Sons, Ltd., are giving a demonstration of new decorative materials at the Clarence Hotel, North Street, Brighton from January 20 till 22 inclusive (10 a.m. till 6 p.m.).

THE METROPOLE CINEMA, VICTORIA, S.W.

DESIGNED BY GEORGE COLES

THE Metropole Cinema has its main entrance in Victoria Street, immediately opposite the Victoria Station Underground Arcade. The auditorium is situated in Brewer Street, its longer axis being parallel to that street. The interior is designed and decorated in a freely-rendered Spanish Renaissance manner. Painted ceilings and textured wall surfaces characteristic of this style have been introduced in the vestibule, staircases, corridors and waiting spaces. Red onyx, Sienna marble, Portuguese skyros, coloured Spanish tiles and Spanish wrought ironwork assist the decorative effect of these rooms.

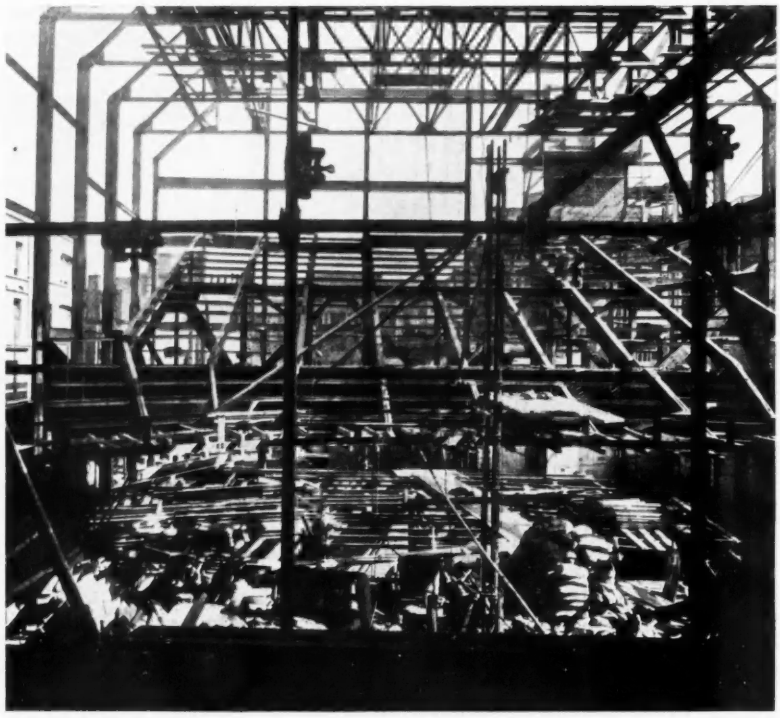
Fibrous plaster is the principal decorative material of the auditorium. Special attention had to be given to the design of the numerous grilles and bands of pierced ornament which the low-velocity downward heating and ventilating system demanded. The lower portions of the auditorium walls are panelled in walnut and the colour of this material has given the keynote for the general colour scheme of the hall, which consists of rich browns, orange, rose and gold, enlivened by a more sparing disposition of the primary colours. The modelled ornament of the proscenium frame is in gold on a background of bronze green. The curtains and hangings are also in gold and have been specially considered in relation to the elaborate decorative lighting effects which it is desired to use.



The organ chamber is placed in the roof, centrally on the long axis of the auditorium, the decorative organ console being on a lift so that it may be raised or lowered at will.

It was decided by the architect, Mr. George Coles, F.R.I.B.A., and the consulting engineer, Mr. E. W. Cook, A.M.I.C.E., M.I.STRUCT.E., to construct the cinema as an entirely steel-framed structure. A programme of work and strict time-table were prepared, agreed to, and ultimately adhered to by the various contractors. The order was placed on March 20, 1929, and the programme laid down allowed for all trades to complete their work and the cinema to be opened to the public on Boxing Day, December 26, 1929.

The main walls are composed of steel stanchions and beams supporting brickwork panels, the stanchions being arranged to support the roof girders and other heavy loads from the circle steelwork, etc., as required. The steelwork called for most accurate setting, as the main outer walls of the auditorium are not parallel, neither are they straight in themselves; moreover, on three sides the cinema butted up to existing buildings.



The façade to Victoria Street. It is the only building in London entirely faced with marble. The front is in Red African onyx, with dressings of white Piastra and yellow Sienna.

A "close up" view of a portion of the Red African onyx marble facing on the exterior of the main entrance.

The roofing is carried out in patent concrete tiles, asphalted over, and is supported on seven main roof girders of varying spans of about 82 ft. These weigh nine tons each. Connected to the top booms of these lattice girders are the secondary beams required for the concrete roof, and to the bottom booms the steel framing of R.S.J., tee and rod construction for the plaster work, which was carried out *in situ*.

A concrete floor is provided between two of the trusses at the proscenium end for the organ chamber in the roof. The steel framing for the plaster work required skilful workmanship, especially at the proscenium end, where it is curved both ways to follow the lines of the plaster.

A photograph of the steelwork. The contract was placed on March 20, 1929, and a programme of work was formulated to allow all trades to complete, and the cinema to be opened to the public, on December 26, 1929. The total weight of steelwork used, which was of British manufacture throughout, was approximately 550 tons.

There are two main girders, 81 ft. span, supporting the circle steelwork. One is of the lattice type, and the other of the plate girder type. These girders weigh nearly 30 tons each. Steel framing for a feeder passage and waiting-room is supported from the underside of the rakers, and here again great care was necessary with the intricate steelframing for the plaster work. The stage roof is framed to suit the lantern lights; and the grid, which is slung from the roof steel, is spaced suitably for the lifting gear operating the scenery. Practically the whole area of the grid is covered with a steel platform composed of small channels spaced at 5-in. centres.

The auditorium floor is curved and sloped immediately under the circle. It is steel framed for the total width of the cinema and a length of 35 ft., as the boiler house and plenum chamber are beneath it. The entrance hall is approximately at right angles to the theatre, and leads from Victoria Street. This is also steel framed, solid steel columns being used, with usual girders to floors. The restaurant over has a pitched roof, the main ties of the roof trusses being made semi-circular and framed to suit laylights and plaster. All the joints of the stanchions and bearing surfaces of steelwork were carefully machined, and all main connections site riveted.

Metropole Cinema, Victoria] *[By George Coles.*

The tea room; and the auditorium, looking towards the proscenium and one of the boxes. The building is of the combined theatre and cinema type, the stage being entirely equipped for the presentation of variety or dramatic performances. Seating is for about 2,000 persons, of whom 830 are accommodated in the balcony.

THE ARCHITECTS' DIARY

WEDNESDAY, JANUARY 15

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. "Quality in Pottery." By Joseph Burton, A.R.C.SC.I. Professor H. E. Armstrong, PH.D., LL.D., D.SC., F.R.S., will preside. **8 p.m.**

L.C.C. CENTRAL SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. Continuation of a course of twenty-four lectures on the History of Architecture (Part I, Ancient). By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

COUNCIL FOR THE PRESERVATION OF RURAL ENGLAND. Gloucestershire Branch, and the Gloucester Architectural Association. At the Municipal Art Gallery, Cheltenham. Exhibition of architectural drawings, including photographs and models. Until January 29. 10 a.m. till 5 p.m. (Wednesdays and Saturdays, 10 a.m. to 8 p.m.) **10 a.m.**

INSTITUTION OF CIVIL ENGINEERS, Great George Street, S.W.1. Informal Meeting. "Developments in Transportation by Cableways." By Professor Stephen Mitchell Dixon, M.A., B.A.I., M.INST.C.E. Mr. Thomas Henry Bailey will take the chair. **6 p.m.**

THURSDAY, JANUARY 16

WEST YORKSHIRE SOCIETY OF ARCHITECTS. At the Leeds College of Art, Vernon Street, Leeds. "Modern Tendencies in Architecture, Furniture, and Lighting Design." By G. S. Francis. (Lantern Illustrations.) **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. Hampshire Sub-Centre. At University College, Southampton. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. **7.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Maiolica." By Bernard Rackham, F.S.A. **5.30 to 6.30 p.m.**

FRIDAY, JANUARY 17

ARCHITECTURE CLUB. A Supper-Discussion Meeting will be held at the Architectural Association, 34 Bedford Square, W.C.1. Topic: "The Charing Cross Bridge Scheme." 7.45 for 8 p.m. **8 p.m.**

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Smoking Concert to be held at Carr's Restaurant, 264 Strand, W.C. Tickets may be obtained from the Secretary.

LONDON SOCIETY. At the Royal Society of Arts, 18 John Street, Adelphi, W.C.2. "London's Parks and Open Spaces." By F. W. Parker, F.S.I. **5 p.m.**

SATURDAY, JANUARY 18

Sunrise, 7.57 a.m. Sunset, 4.24 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Visit to Tower Bridge. Meet at Superintending Engineers' Office, Tower Bridge, at 2.30 p.m. **2.30 p.m.**

UNIVERSITY COLLEGE, Oxford. Conference in the Hall. The Rt. Hon. H. A. L. Fisher, F.R.S., P.B.A., will preside. Exhibition of drawings by P. Wilson Steer, Sir Charles Holmes and Gilbert Spencer, open from 2 p.m. Tea 4.30 p.m. **2 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS. Midland Counties Branch. Annual Dinner at the Midland Hotel, Birmingham.

MONDAY, JANUARY 20

R.I.B.A., 9 Conduit Street, W.1. General Meeting. President's Address to Students. Criticism by W. H. Ansell, F.R.I.B.A., on work submitted for Prizes and Studentships. Presentation of Prizes. **8.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. South Midland Centre. At the University, Edmund Street, Birmingham. "Voltage Control of Large Alternators." By H. W. Taylor. **7 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." (Lecture I.) By Harold J. L. Wright. **8 p.m.**

TUESDAY, JANUARY 21

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. First of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. East Midland Sub-Centre. At the College, Loughborough. "The Breaking Performance of High-Power Switchgear and of a New Form of Quenched Arc Switch." **6.45 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Early Renaissance Sculpture." By L. O. Faraker. **12 noon.**

ILLUMINATING ENGINEERING SOCIETY. At the Royal College of Music, Prince Consort Road, South Kensington, S.W.7. "The Art of Stage Lighting." By C. Harold Ridge. Light refreshments at 6.30 p.m. **7 p.m.**

WEDNESDAY, JANUARY 22

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Architectural Lighting." By R. W. Maitland. **8 p.m.**

LONDON SOCIETY, Lancaster House, St. James's Street, S.W.1. Visit to the Savoy Hotel Laundry, 19 Union Road, Clapham Road, S.W. **2.30 p.m.**

THURSDAY, JANUARY 23

R.I.B.A., 9 Conduit Street, W.1. Meeting of the Literature Standing Committee. **4.30 p.m.**

INSTITUTION OF WELDING ENGINEERS, 30 Red Lion Square, W.C.1. At Birmingham. "Modern Improvements in Resistance Welding Machines." By C. A. Hadley.

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Setting out and erection of Multiple Story Buildings." Informal Discussion to be opened by G. F. C. Caswell. **6.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Sculpture of the Renaissance." By Eric Maclagan, C.B.E., F.S.A. **5.30 to 6.30 p.m.**

FRIDAY, JANUARY 24

R.I.B.A., 9 Conduit Street, W.1. Meeting of the Finance and House Committee. **4.30 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. Ordinary Meeting. At the Chamber of Commerce Buildings, New Street, Birmingham. "New Underground Railway Offices, St. James's Park—Notes on Foundation and Erection." By M. J. C. McCarthy, A.M.INST.C.E. **6.30 p.m.**

SATURDAY, JANUARY 25

Sunrise, 7.50 a.m. Sunset, 4.36 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Second of Series of Six Non-Technical Lectures on Present-Day Architecture. "The House You Want." By R. Randal Phillips, Hon. A.R.I.B.A. **3 p.m.**

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS. Visit to London School of Hygiene and Tropical Medicine, Keppel Street, Gower Street, W.C.1. Meet at Main Entrance at 2.45 p.m. **2.45 p.m.**

LONDON SOCIETY, Lancaster House, St. James's Street, S.W.1. Visit to Sion College, Victoria Embankment, E.C.4. **2.30 p.m.**

MONDAY, JANUARY 27

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Some Aspects of Contemporary Continental Decoration." (Lantern Illustrations.) By J. M. Holmes. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture II.) **8 p.m.**

KING'S COLLEGE, London, W.C.2. Faculty of Arts. First of a course of nine public lectures to be held every Tuesday on "Italian Painting." By Percy Dearmer, M.A., D.D., HON. A.R.I.B.A. **5.30 p.m.**

TUESDAY, JANUARY 28

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. Second of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

THURSDAY, JANUARY 30

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Canaletto and Eighteenth-Century Venetian Landscape." By W. G. Constable, F.S.A. **5.30 to 6.30 p.m.**

SATURDAY, FEBRUARY 1

Sunrise, 7.40 a.m. Sunset, 4.49 p.m.

MONDAY, FEBRUARY 3

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture III.) **8 p.m.**

R.I.B.A., 9 Conduit Street, W.1. Business Meeting. Election of Members. **8 p.m.**

TUESDAY, FEBRUARY 4

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. Last of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

THURSDAY, FEBRUARY 6

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. At the Hotel Cecil, Strand, W.C. Annual Dinner and Reunion of the Institution. No tickets will be issued after Monday, January 27. 7 for 7.30 p.m. **7 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "The Raphael Cartoons." By A. P. Oppé. **5.30 to 6.30 p.m.**

SATURDAY, FEBRUARY 8

Sunrise, 6.32 a.m. Sunset, 5.51 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Third of a Series of Six Non-Technical Lectures on Present-Day Architecture. "The Creation of a Garden City." By Louis de Soissons, O.B.E., F.R.I.B.A., S.A.D.G. **3 p.m.**

MONDAY, FEBRUARY 10

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, Southwark, S.E.1. "Automatic Control in Heating and Air Conditioning Installations." By B. T. Wingfield. Light refreshments at 6.30 p.m. **7 p.m.**

TUESDAY, FEBRUARY 11

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. First of a course of three lectures on Electrical Transmission by Overhead Lines. (1) "The Mechanical Aspects of Overhead Transmission Lines, including Conductors, Insulators and Supports." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

THURSDAY, FEBRUARY 13

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Welding." By Major James Caldwell, M.INST.C.E. **6.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Early Italian Engravings." By Professor A. M. Hind, O.B.E., F.S.A. **5.30 to 6.30 p.m.**

SATURDAY, FEBRUARY 15

Sunrise, 6.16 a.m. Sunset, 6.3 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Visit to the Home Office Industrial Museum, Horseferry Road, Westminster, S.W.1. Meet at entrance. **2.15 p.m.**

MONDAY, FEBRUARY 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting. "The Thames Valley Preservation Scheme." By Professor Patrick Abercrombie, M.A., F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture I.) **8 p.m.**

TUESDAY, FEBRUARY 18

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Second of a course of three lectures on Electrical Transmission by Overhead Lines. (2) "Electrical Characteristics of Lines, Resistance, Inductants, Capacitance, Effects of Atmospheric Conditions on Insulation." By Charles W. Marshall, F.SC., M.I.E.E. **5.30 p.m.**

ILLUMINATING ENGINEERING SOCIETY, 32 Victoria Street, S.W.1. General Discussion on "Problems in Illuminating Engineering." Light refreshments at 6.30 p.m. **7 p.m.**

WEDNESDAY, FEBRUARY 19

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. Cantor Lecture, "Alfred Stevens: Architect-Sculptor-Painter." **8 p.m.**

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Honan Night. "Modern Architecture of Sweden." By B. B. Lewis.

THURSDAY, FEBRUARY 20

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Furniture." By H. Clifford Smith, F.S.A. **5.30 to 6.30 p.m.**

FRIDAY, FEBRUARY 21

LONDON SOCIETY. At the Royal Society of Arts, John Street, Adelphi, W.C.2. "The Royal Observatory, Greenwich." By Sir Frank Dyson, Astronomer Royal. **5 p.m.**

SATURDAY, FEBRUARY 22

Sunrise, 6.0 a.m. Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Fourth of a Series of Six Non-Technical Lectures on Present-Day Architecture. "Decoration and Furnishing." By G. G. Wornum, F.R.I.B.A. **3 p.m.**

TUESDAY, FEBRUARY 25

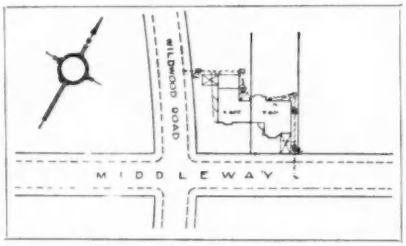
KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Last of a course of three lectures on Electrical Transmission by Overhead Line. (3) "Typical Transmission Lines in use in Great Britain: Characteristic Features of Low, Medium and High Voltage Construction." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

THE WEEK'S BUILDING NEWS

LONDON AND DISTRICTS

Shops and flats are to be erected on the site of 42, 43, 44 and 45 St. Mary Abbot's Terrace, KENSINGTON, to abut also upon Holland Road.

The London Electric, Metropolitan, District, Central London and City and South London Railway Companies Bill provides for the construction of a subway along the centre of Brompton Road, KENSINGTON, from a point about 30 yards west of Hooper's Court to a point just east of Hans Crescent, and for the construction of an underground booking-hall at the intersection of Brompton Road and Hans Crescent.



SOUTHERN COUNTIES

The EASTBOURNE Corporation Housing Committee is acquiring twenty-three acres of land for housing purposes.

The EASTBOURNE Corporation Sanitary Committee has received sanction to borrow £9,472 for the erection of Turkish baths.

Plans passed by the EASTBOURNE Corporation: House, junction of Northlam and Combe Road, for Mr. C. M. Wood (architect); two houses, Brodrick Road, Hampden Park, for Messrs. W. J. Cole and Sons; two houses, Victoria Drive, for Mr. A. Ford (architect); two houses, Brodrick Road, Hampden Park, for Messrs. A. and W. Kennett; alterations, 28–30 Seaside Road, for Mr. J. C. Bowley (architect), on behalf of Eastbourne Water Works Co.; house, Pashley Road, for Mr. H. H. Ford (architect), for Bexleigh Estates, Ltd.; addition to garage premises for the Southdown Motor Services, Ltd., Royal Parade; additions, Beachy Head Hotel, and additions to refreshment house, Victoria Drive, for Messrs. P. D. Stonham and Son (architects); two houses, Victoria Drive, for Mr. F. C. Benz (architect); house, Park Avenue, for Mr. C. Ford (architect); house, King's Avenue, for Mr. J. Nethercott; alterations and additions, "Arlington Arms," Seaside, for Mr. A. Ford (architect); house, Willingdon Road, for Mr. C. M. Wood (architect); alterations and additions, Sussex Stores, Terminus Road, for Mr. R. O. Slipper (architect); four houses, Fitzmaurice Avenue, for Mr. A. Ford (architect); alterations, 228 Seaside, for Mr. A. Ford (architect); depot premises, Moy Avenue, for Shell Mex, Ltd.; workshop, Fort Road, for Mr. G. E. Holditch (architect); ten houses, St. Anthony's Avenue, for Messrs. Scales and Baker (architects).

The OXFORD Corporation Housing Committee recommends the erection of fifty houses to re-house the people in cottages belonging to the Council, which are for the most part incapable of satisfactory repair within reasonable limits of expenditure.

Block plan of two houses, Hampstead Garden Suburb, illustrated below. Wildwood Road has been renamed Thornton Way.

The OXFORD Corporation is being asked to consider, in view of the necessity for a southern approach worthy of the city, to decide its policy with regard to that portion of St. Aldate's Street site remaining unpurchased or built upon. The Corporation is also being asked to consider the establishment of a public abbatoir for the city of Oxford.

Plans passed by the OXFORD Corporation: House, Victoria Road, for Mr. T. Walker; two houses, Botley Road, for Mr. S. L. Turner; house, George Street, Summertown, for Messrs. H. Martin and Son; house, Temple Street, Cowley, for Mr. P. J. Morris; house, Capel Close, for Mr. H. Thomas; house, Bickerton Road, Headington, for Messrs. Knowles and Son, Ltd.; house, Old Road, Headington, for Messrs. Benfield and Loxley; house, George Street, Summertown, for Messrs. Hunt and Church; two houses, Abingdon Road, for Mr. J. Laitt; house, Sandfield Road, for the Manor Estate Co.; two houses, Latimer Road, Headington, for Mr. H. Simmons.

SOUTH-WESTERN COUNTIES

The County Education Committee has acquired a site at CHELTENHAM for the proposed new premises for the Cheltenham Grammar School.

Plans passed by the CHELTENHAM Corporation: 102 houses, Pilley Crescent (amended plan), for Cheltenham Corporation; house, Hales Road, for Capt. J. L. Richardson; shop, Inkerman Gardens, Lansdown Road, for Mr. O. H. Goulding; additions, Hatherley Inn, Hatherley Road, for the Original Brewery Co.; two houses, Malvern Street, for the Cheltenham Corporation; bungalow, Longwood, Cleeve Hill, for Col. Aiken; house, West Approach Drive, Pittville, for Miss R. Armitage; house, Tewkesbury Road, for Mr. D. H. Neems; house, Prestbury Road, for Mr. J. Allen.

EASTERN COUNTIES

The Essex C.C. is being asked to instruct the county architect to complete, by direct labour, the construction of the new office building at CHELMSFORD.

The Essex Education Committee has obtained a site at GRAYS for the erection of a junior school.

The Essex Education Committee has passed amended plans for the provision of a senior school in Malvern Road, HORNCHURCH, to provide accommodation for 400 scholars, at an estimated cost of £18,756.

The Essex Education Committee has prepared sketch plans for the provision of 210 additional places at the LAINDON High Road council school, together with a building of light construction consisting of a full-size handicraft and domestic subjects room and two special classrooms for general practical work, at an estimated cost of £8,874.

The Essex Education Committee has acquired a site of five acres of land at ROCHFORD, for the erection of a central school.

The Essex Education Committee has acquired premises in Eastern Road, ROMFORD, for use as the district education offices.

MIDLAND COUNTIES

The BIRMINGHAM Corporation has acquired sites in Pershore Road, Cotteridge, and College Road, Warren Farm, for the erection of two branch banks.

The BIRMINGHAM Corporation Housing Committee proposes to erect further shops on housing estates at a cost of £51,000.

The BIRMINGHAM Corporation is to carry out a sewerage scheme for the Perry Village district, at a cost of £46,000.

The BIRMINGHAM Corporation has prepared a scheme for laying out land at Pype Hayes as a golf course at a cost of £7,500.

The BIRMINGHAM Corporation is to arrange for the provision of water supply to the Perry Bar area, at a cost of £27,250.

Two houses at the junction of Thornton Way and Middleway, Hampstead Garden Suburb. Designed by C. G. Butler. The walls are of brick, and wood casement windows have been fitted. The roof is covered with hand-made sand-faced tiles. Both houses are provided with garages, which can be seen on the extreme right and left of the picture.

The BIRMINGHAM Corporation is to carry out a sewerage scheme for the Perry Bar district, at a cost of £204,000.

The BIRMINGHAM Corporation is to seek sanction to a loan of four millions for housing.

The BIRMINGHAM Corporation is to extend the waterworks, chiefly in connection with the development of housing estates, at a cost of £200,000.

The BIRMINGHAM Corporation recommends an expenditure of an additional £300,000 for the augmentation of the Elan water supply.

The BIRMINGHAM Corporation has prepared a scheme for widening the Aldridge Road at Perry Bar, and the construction of a new bridge across the River Tame, at a cost of £86,000.

The BIRMINGHAM Corporation has made the following contracts for the erection of houses: 874 non-parlour, 28 four-bedroom type, and 352 three-bedroom type, on the Warren Farm estate, Messrs. W. J. Simms, Sons and Cooke, Ltd.; 216 parlour and 168 non-parlour at Harborne Estate, Housing, Ltd.; four shops and houses, Bordesley Green, Mr. B. S. White; three shops, Yardley Wood Road, Mr. E. M. Squire; eighteen houses, Acocks Green, and thirty-four, Billesley Common, Mr. C. Hougham; eighteen houses, Yardley estate, Messrs. George Smith (Birmingham), Ltd.; 127 houses, Stockland Green estate, Messrs. Morris, Jacombs and Sons, Ltd.; nine shops and houses, Yardley Wood, Mr. George Stubbings.

The COVENTRY Corporation Gas Committee is to provide a ring gas main, with feeder mains, round the city, at a cost of £110,000.

The COVENTRY Corporation is to erect 286 houses on the Hill Farm estate at an estimated cost of £86,600.

The COVENTRY Corporation Markets Committee has prepared a scheme for the construction of an arcade at the Smithford Street entrance to the Barracks, at a cost of £38,500.

The NORTHAMPTON Corporation has prepared a scheme for the construction of a main outfall sewer and sewage works, at a cost of £105,000.

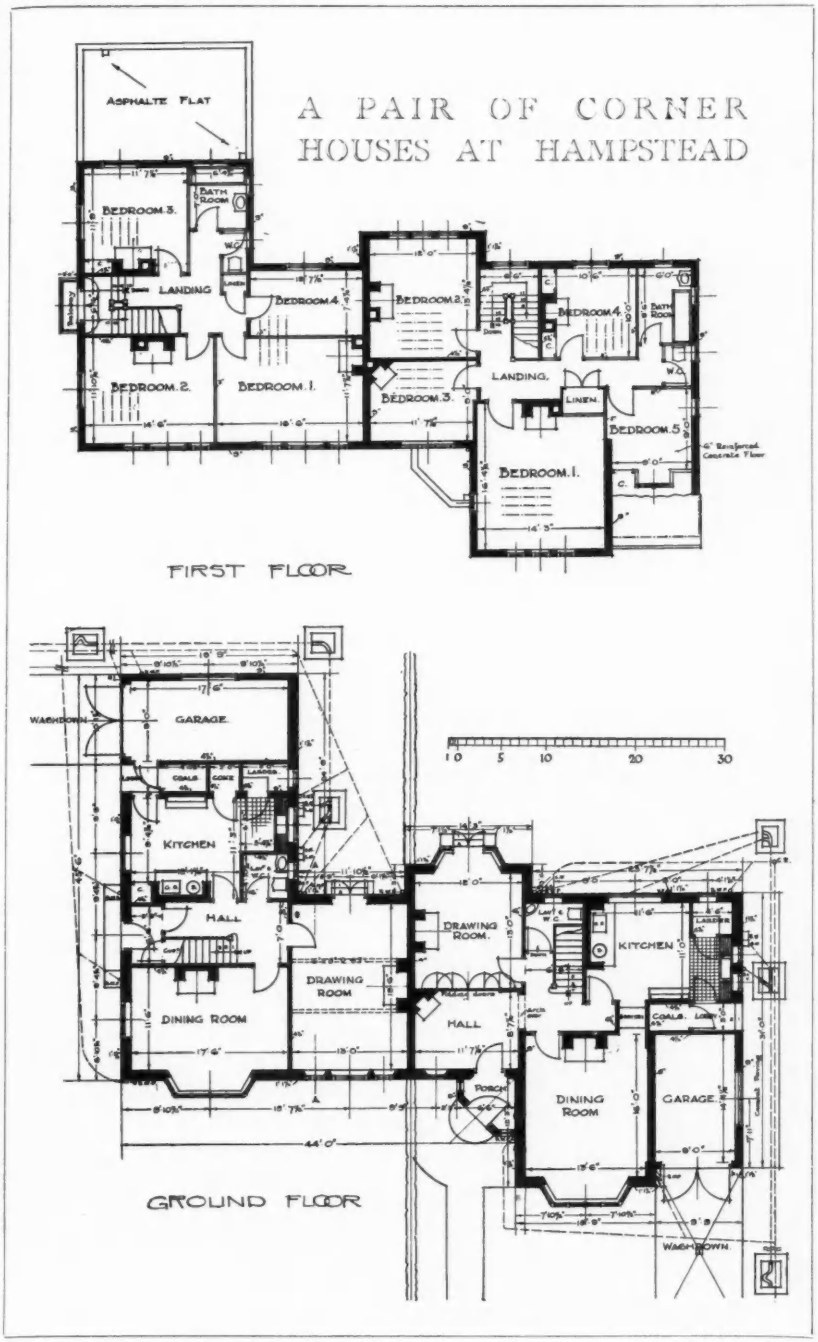
Plans passed by the NORTHAMPTON Corporation: Extensions to dairy, Ransome Road, for Northampton Co-operative Society, Ltd.; house, Forfar Street, for Mr. Barker; house, Forfar Street, for Mr. Oliver; house, Forfar Street, for Mr. Wilcox; house and shop, Birchfield Road, for Mr. P. H. Staughton; house, Holdfield Way, Weston Favell, for Mr. F. F. Ironside; house, Buttocks Booth Lane, for Mrs. M. V. Agutter; house, Buttocks Booth Lane, for Mr. J. R. Revitt; reconstruction of shop, 16–20 Gold Street, for Messrs. Montague Burton, Ltd.; three houses, Ardington Road, for Northampton Co-operative Society, Ltd.; extension to boot and shoe factory, Barry Road, for Messrs. J. Sears & Co., Ltd.; boiler house and chimney, Ransome Road, for Northampton Co-operative Society, Ltd.; four garages and one house, Brookland Road, for Mr. C. H. Rainbow; house and shop, Birchfield Road, for Mr. P. H. Staughton; extension of cinema hall, Alcombe Road and Grove Road, for Mr. Norfolk.

NORTHERN COUNTIES

The BIRKENHEAD Education Committee has approved sketch plans for the provision of a central school on the Tollemache Road site, and for the extension of the Temple Road central school.

Plans passed by the BIRKENHEAD Corporation: Extensions, Commercial garage, abutting on Beckwith Street; extensions to block printing workshop at tapestry works, Stanley Road; power pump house and re-erection of building, British Petroleum Co.'s depot, Corporation Road; alterations and additions, rear of house and shop, Woodchurch Road, Prenton; conversion of "Talbot House," Mather Road, into flats.

In a statement issued by the DEWSBURY Corporation it is recorded that new property to the value of £39,985 has been erected, or sanctioned for erection, by private enterprise in the borough in the past year. In 1929 forty-eight houses were built by private enterprise, the cost being nearly £25,000. There was an increase in the number of shops and business premises built last year, the number being sixteen and the value £5,850. Over seventy other buildings cost a total of £8,885. Since the Housing Act of 1923 subsidies for 362 houses have been granted by the Dewsbury Corporation, and the local authority's own housing enterprise has resulted in 788 houses, some of which have been completed in the past year. It is expected that the new Dewsbury and District General Infirmary will be completed during 1930, and another public building in prospect is the new Wheelwright Girls' Grammar School, already provisionally sanctioned.



The Transport Committee is urging the York Corporation to proceed with the erection of a bus garage at FULFORD, at a total cost of £19,000, of which £9,000 will be for buildings.

Plans passed by the OLDHAM Corporation: Alterations, "Auld Lang Syne" Inn, Manchester Road, for Wilsons Brewery Co.; plumber's workshop, rear of 27 Ashton Road, for Mr. W. E. Garside; garages and repair shop, Ripponden Road, for Mr. A. Gill; alterations, "Help the Poor Struggler" Inn, Manchester Road, for Messrs. Groves and Whitnall, Ltd.; alterations, "Pullet" Inn, Sholver Lane, for Oldham Brewery Co.; alterations to various blocks, Union Workhouse, for Oldham Board of Guardians; yarn cellar and card shed, Westhulme Street, for Werneth Spinning Co., Ltd.; six houses (amended plan), Elgin Road, for Messrs. J. Whitehouse and Sons.

At a meeting of the ROTHERHAM Corporation Highways Committee, the town clerk and borough engineer submitted a report with regard to the reconstruction of the bridges in Bridge Street. A scheme was approved provided that the cost to the Corporation does not exceed £10,000.

The SALFORD Corporation has purchased four acres of land at Lower Broughton for a re-housing scheme.

Plans passed by the SHEFFIELD Corporation: Two houses, Bents Road, for Mr. J. A. Wragg; four houses, Whirlowdale Crescent, for Mr. Wm. Croft; four houses, Elmham and Waverley Roads, for Messrs. W. and E. Sadler, Ltd.; two houses, Watt Lane, for Mr. T. J. Sanderson; ten houses, Carter Knowle Road, for Mr. A. J. Belton; two houses, Greystones Avenue, for Messrs. Wm. Malthouse, Ltd.; 145 houses, Longley Estate, for the Corporation; four houses and shops, Richmond Road, for Messrs. W. and E. Sadler, Ltd.; six houses, Endowood Road, for Mr. T. H. Bailey; two houses, Whirlow Grove, for Messrs. Dyson & Co.; four houses and sixteen garages, Dixon, Dorothy and Lennox Roads, for Mr. M. Simpson, junior; two houses, Whirlow Court Road, for Mr. C. G. Robinson; twenty houses, Ridgeway Road, for the Corporation; house, workshops, etc., Matthew Street, for the Watch Committee of the Corporation.

Two Houses, Hampstead Garden Suburb. [*By C. G. Butler.*

Ground and first-floor plans. The site is at the corner of Middleway and Thornton Way. In each house on the ground floor are dining- and drawing-rooms, kitchen and garage. On the first floor one house provides four bedrooms; the other, five.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given.

The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 4d. *per hour;* LABOURER, 1s. 4d. *per hour;* NAVVY, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
IF left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* BRICKLAYER, 1s. 9d. *per hour;* PLUMBER, 1s. 9d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. 6 in., *per ft.*	0	1	3
DO. 9 in., *per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. 6 in., *per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft.	0	4	3
DO. 6 in., per ft.	0	5	0
DO. 9 in., per ft.	0	7	9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0	8	3
DO. 6 in., per ft.	0	10	3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 9d. *per hour;* LABOURER 1s. 4d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour.*

London stocks, per M.	£4	5	6
Flettons, per M.	2	12	6
White facing bricks, per M.	5	0	0
Multi-coloured facings, per M.	7	7	9
Best red facings, per M.	7	7	9
Rubbers, 9½ in., per M.	12	0	6

BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0	5	3
DO. DO. 3 in.	0	6	6
BREEZE fixing bricks, extra for each	0	0	3

MASON

MASON, 1s. 9d. *per hour;* DO. *fixer,* 1s. 10d. *per hour;* LABOURER, 1s. 4d. per hour; SCAFFOLDER, 1s. 5d. *per hour.*

Portland Stone:			
Whitbed, per ft. cube	£0	4	6
Basebed, per ft. cube	0	4	9
Bath stone, per ft. cube	0	3	0
Usual trade extras for large blocks.			
York paving, av. 2½ in., per yd. super.	0	11	0
York templates sawn, per ft. cube	0	7	6
Slate shelves, rubbed, 1 in., per ft. sup.	0	2	6
Cement and sand, see "Excavator," etc., above.			

HOISTING and setting stone, per ft. cube	£0	2	2
DO. for every 10 ft. above 30 ft. add 15 per cent.			
PLAIN face Portland basis, per ft. sup.	£0	2	8
DO. circular, per ft. sup.	0	4	0
SUNK FACE, per ft. sup.	0	3	9
DO. circular, per ft. sup.	0	4	10
JOINTS, arch, per ft. sup.	0	2	6
DO. sunk, per ft. sup.	0	2	7
DO. DO. circular, per ft. sup.	0	4	6
CIRCULAR-CIRCULAR work, per ft. sup.	1	2	0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0	1	1
DO. circular, do., per ft. run	0	1	4
HALF SAWING, per ft. sup.	0	1	0

Add to the foregoing prices, if in York stone, 35 per cent.
DO. Mansfield, 12½ per cent.
Deduct for Bath, 33⅓ per cent.
DO. for Chilmark, 5 per cent.

SETTING 1 in. slate shelving in cement, per ft. sup.	£0	0	6
RUBBED round nosing to do., per ft. lin.	£0	0	6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1	7	6
YORK SILLS, W. & T., ft. cub. fixed	1	10	0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0	1	3
DO. 2½ in. thick, per ft. sup.	0	1	6

SLATER AND TILER

SLATER, 1s. 9d. *per hour;* TILER, 1s. 9d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* LABOURER, 1s. 4d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:

Portmadoc Ladies	£14	0	0
Countess	23	0	0
Duchess	32	10	0

Old Delabole	*Med. Grey*	*Med. Green*
24 in. × 12 in.	£42 11 3	£45 1 0
20 in. × 10 in.	31 4 3	33 0 6
16 in. × 10 in.	20 18 0	22 4 9
14 in. × 8 in.	12 1 0	12 16 3

Green Randoms, per ton	£8	3	9
Grey-green do., per ton	8	3	9
Green peggies, 12 in. to 8 in. long, per ton	5	13	9

In 4-ton truck loads, delivered Nine Elms station.

Clips, lead, per lb.	£0	0	6
Clips, copper, per lb.	0	2	0
Nails, compo, per cwt.	1	6	0
Nails, copper, per lb.	0	2	2
Cement and sand, see "Excavator," etc., above.			
Hand-made tiles, per M.	£5	18	0
Machine-made tiles, per M.	5	8	0
Westmorland slates, large, per ton	9	0	0
DO. *Peggies, per ton*	7	5	0

SLATING, 3 in. lap, compo nails, Portmadoc or equal:

Ladies, per square	£4	0	0
Countess, per square	4	5	0
Duchess, per square	4	10	0
WESTMORLAND, in diminishing courses, per square	6	5	0
CORNISH DO., per square	6	3	0
Add, if vertical, per square approx.	0	13	0
Add, if with copper nails, per square approx.	0	2	6
Double course at eaves, per ft. approx.	0	1	0

SLATING with Old Delabole slates to a 3 in. lap with copper nails, at per square.

	Med. Grey	Med. Green
24 in. × 12 in.	£5 0 0	£5 2 0
20 in. × 10 in.	5 5 0	5 10 0
16 in. × 10 in.	4 15 0	5 1
14 in. × 8 in.	4 10 0	4 15

Green randoms	£6	7	0
Grey-green do.	5	9	0
Green peggies, 12 in. to 8 in. long	4	13	6
TILING, 4 in. gauge, every 4th course nailed, in hand-made tiles, average per square	3	17	6
DO., machine-made do., per square	3	7	6
Vertical Tiling, including pointing, add per square	18s.	0d.	
FIXING lead soakers, per dozen	£0	0	10
STRIPPING old slates and stacking for re-use, and clearing away surplus and rubbish, per square	0	10	0
LABOUR only in laying slates, but including nails, per square	1	0	0
See "Sundries" for Asbestos Tiling.			

CARPENTER AND JOINER

CARPENTER, 1s. 9d. *per hour;* JOINER, 1s. 9d. *per hour;* LABOURER, 1s. 4d. *per hour.*

Timber, average prices at Docks, London Standard, Scandinavian, etc. (equal to 2nds):			
7 × 3, per std.	£22	0	0
11 × 4, per std.	30	0	0
Memel or Equal. Slightly less than foregoing.			
Flooring, P.E., 1 in., per sq.	£1	4	6
DO. *T. and G., 1 in., per sq.*	1	4	6
Planed boards, 1 in. × 11 in., per std.	30	0	0

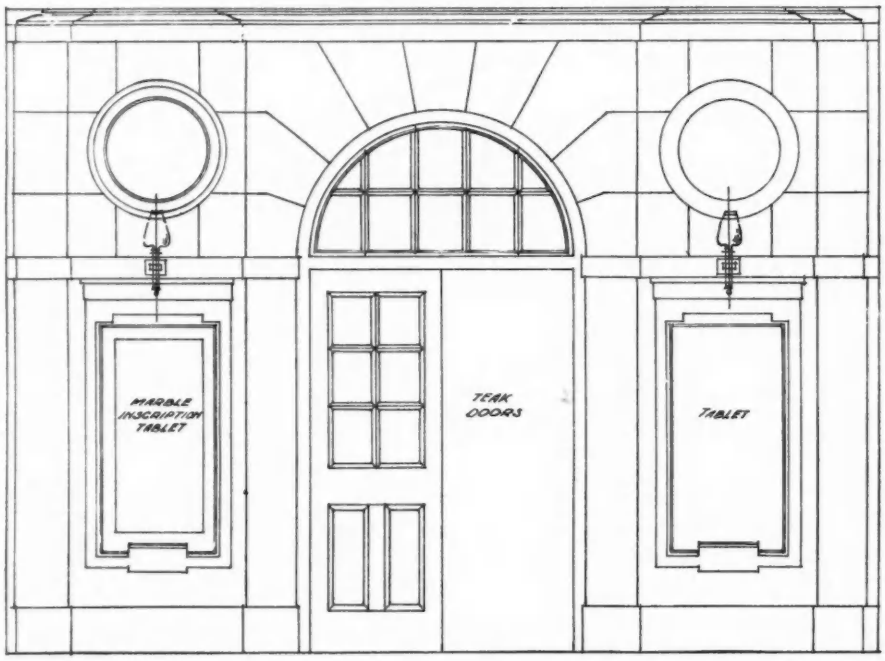
ENTRANCE HALL:
NATIONAL DEPOSIT FRIENDLY SOCIETY'S HEADQUARTERS,
QUEEN SQUARE, BLOOMSBURY, W.C.

By

W. H. ANSELL

THIS is the marble-lined Entrance Hall on the Great Ormond Street side of the National Deposit Friendly Society's Head Offices, Queen Square, W.C.



As the area available was limited, the marble work was kept broad yet delicate in detail, mouldings of any kind being omitted. The materials used were Roman marble cube mosaic for the floor, with Swedish green margins. The wall skirtings and outer surrounds of the panels are in Tinos marble, the pilasters, inner surrounds, and cappings are in Swedish green G 3 marble. The wall-lining above the capping is of Piastraccia, with roundels of Escalette, having Swedish green surrounds. The colour scheme is light and cool, with the greens predominating, a little warmer colour being provided by the Escalette.

The electric light fittings are of bronze, and all the woodwork is of teak. Since the photograph was taken, the panels have been filled with tablets bearing commemorative lettering. The woodwork was carried out by the general contractors for the building. The architect's drawings of the plan and an elevation are reproduced on the next page.

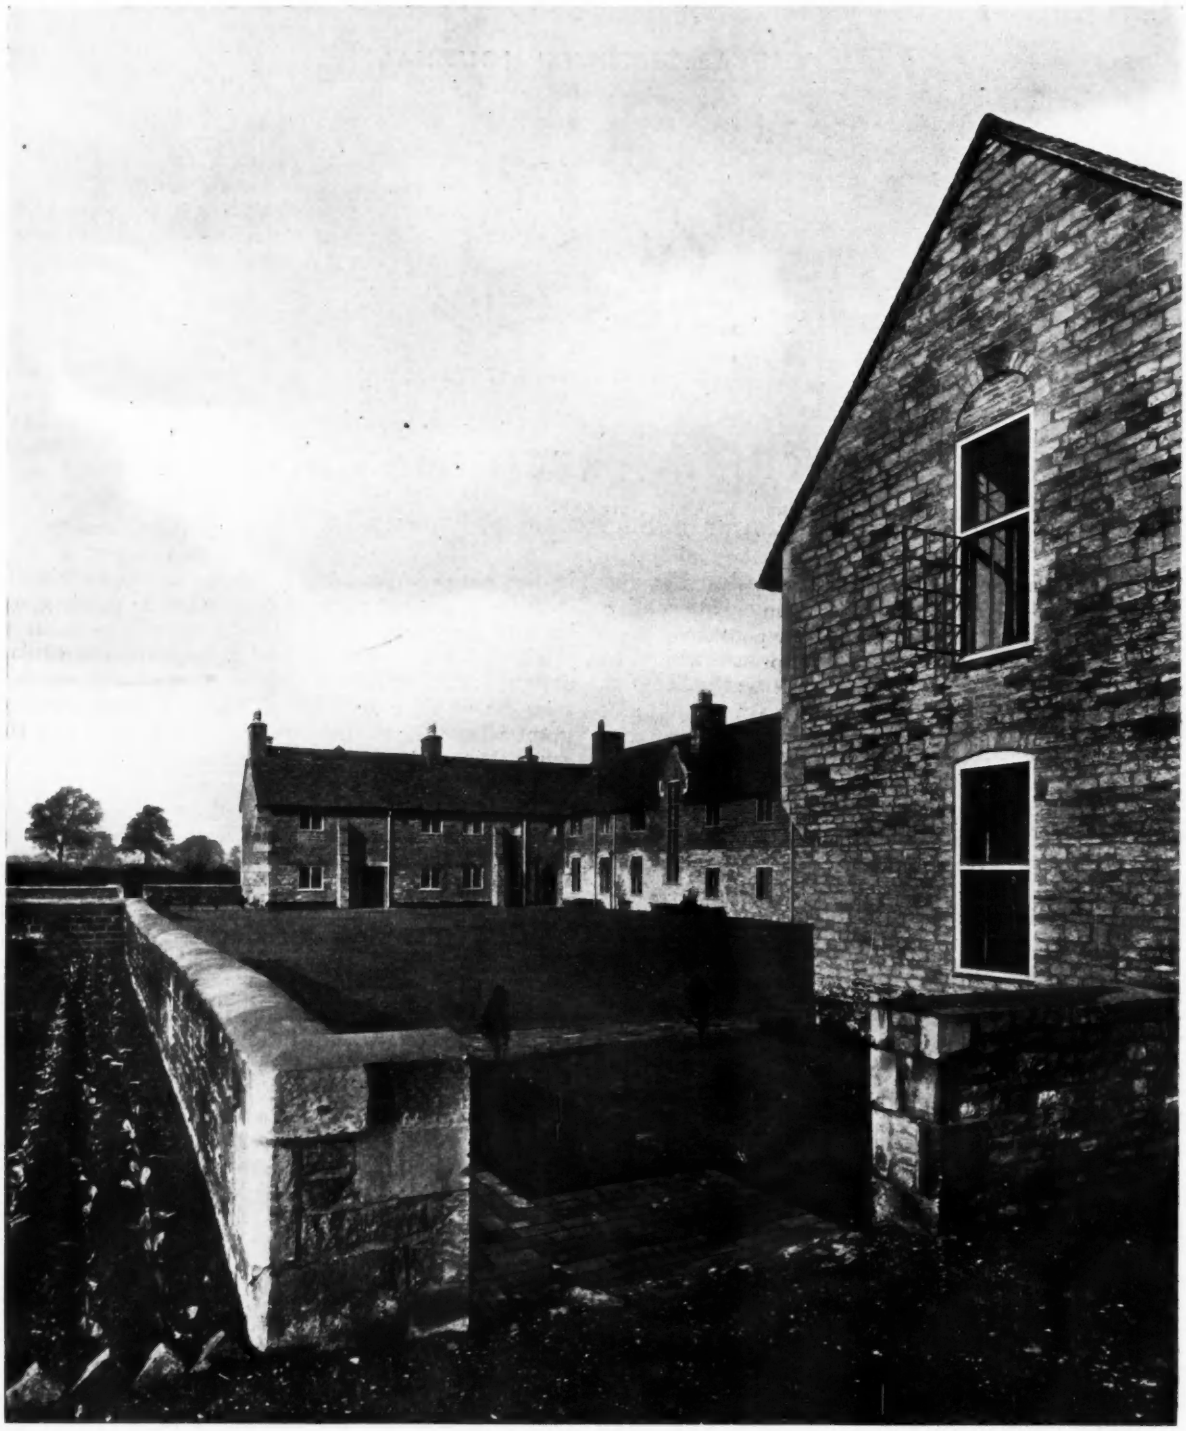
ABBEY SACRISTY RECOMMENDATIONS

The Committee favour a Suggestion Advanced in these Pages



THE Report of the Committee appointed by the Dean of Westminster to consider alternative proposals for the Abbey Sacristy has now been published, and must give very great satisfaction to everybody who was concerned to preserve the beauties of Westminster Abbey. The problem was admittedly a difficult one, and no blame attaches to the Dean and Chapter because they did not in the first instance arrive at a perfect solution of it.

The first proposal to build the Sacristy on the site between St. Margaret's Church and the Abbey had the merit of simplicity, and it apparently satisfied the practical conditions admirably. But there were serious objections to it on æsthetic grounds, and it may be well to recapitulate these, for, as the Dean of Westminster is careful to state, the Committee appointed by him was merely an advisory one, and the ultimate decision rests with him and his Chapter, who are still at liberty to return to their first proposal, should they think fit to do so. It is not anticipated, however, that they will neglect the advice of a body which includes in its number not only men possessing the authority of the Presidents of the Academy and the Royal Institute of British Architects, who may be trusted to give full value to the æsthetic aspect of the problem, but the venerable Archbishop Davidson, whose ripe experience enables him to speak with authority upon all matters concerning the etiquette and requirements of Church ceremonial.

A new Sacristy was obviously needed in order that the precious vestments and other ecclesiastical objects of value could be adequately stored, and it was also desirable that space should be found for the various dignitaries to assemble before taking part in important religious functions. It was argued, plausibly enough, that every great church must grow, and the history of our cathedrals provides ample evidence of this process, whereby new generations of worshippers have left their mark upon its fabric and have added to it in a manner which has enhanced rather than impaired its architectural beauty. Why, therefore, should this process have not been allowed to proceed still farther in the case of Westminster Abbey and result in the erection of a new Sacristy jutting out from the main body of the Church ?

The answer is that, while a building may be so designed that without sacrificing its organic unity it may be possible to erect a wing at some specified point where there already exists a projection or some other element in the plan which could be regarded as an æsthetic junction between the original building and the addition to it, there is a strict limit to such a process; and in Westminster Abbey this limit had already been reached. King Henry VII's Chapel and the Western Towers, which have been cited as justification of the policy of modifying the form of a church, are in a quite different category from that of the Sacristy as originally designed by Mr. Tapper. For, unlike the latter, they shared the same axis as the main body of the church, and were an extension and additional emphasis of an existing symmetry. But little bits of buildings jutting out here and there from the historic façades of the Abbey deserve to be described as architectural carbuncles, and the prolonged agitation, which, it is now hoped, has led to the complete abandonment of the original proposal for a Sacristy on the north side of the Abbey, will have served its purpose if it for ever rules out the possibility of their appearance in the future.

The solution now recommended by the Committee closely resembles one that was first put forward in this JOURNAL. It will be remembered that of the two alternative sketch plans for a new Sacristy submitted by Mr. Trystan Edwards, and published in our issue of December 4, the second was a scheme for the utilization of the area, now described, in the Report, as "the Poets' Corner site." The Committee has, however, supplemented this proposal by the suggestion that a new Sacristy erected here should communicate by staircase and underground passage with the crypt of the Chapter House, which would provide all the additional accommodation required. A solution so obviously sensible and satisfactory is surely worthy of immediate acceptance by the Dean and Chapter.

[*By W. G. Newton and Partners.*

THE TAMING OF A SHREW

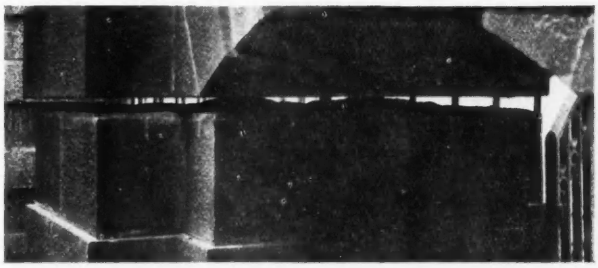
The garden front of Constable's Boarding House, Uppingham School, after remodelling. The garden was previously occupied by a collection of old buildings (*see page 159*). *When these were demolished the footings of some of the old walls were left standing about three feet above the ground to form the garden wall.*

NEWS & TOPICS

THE UNWANTED BRIDGE

NOT one word was spoken in favour of the official scheme for Charing Cross Bridge during a discussion, lasting over two hours, at a meeting of the Architectural Club in London last Friday night. Mr. W. R. Davidge said it was unthinkable that such a scheme could be adopted; and Mr. Arthur Keen, chairman of the Thames Bridges Conference, hoped everyone would do his best to prevent it being carried out. Mr. Ewart G. Culpin, L.C.C., said he believed the parents of the scheme were getting ashamed of it, and he hoped it would be buried in a dishonoured grave. There were rumours, he said, that if the abortion was opposed they would be threatened with the demolition of Waterloo Bridge. If that were true, it would be a cowardly action.

★



Mr. D. S. MacColl said he thought that no one who was not unhappily mixed up with the scheme was in favour of it; and Professor S. D. Adshead urged that further meetings should be organized and held to bring together the strongest possible opposition. The scheme is costly, bad architecturally, not properly town planned, and undesirable in every way. Its only likely possibilities were pointed out by Mr. J. C. Squire, who presided—namely, the creation on the Embankment of the largest grotto in the Empire, and, in Belvedere Road, of a new "Clovelly."

AN UNPREMEDITATED CANTILEVER

Mr. Mackenzie Trench, in sending me the views of the gateway at New Scotland Yard, reproduced on this page, writes: "The pier in question is the south detached pier of the west entrance to the private roadway, leading from Whitehall and Derby Street. It has been slowly settling during the last three years, but has shown the most marked signs during the past eighteen months or so. The photographs do not show quite distinctly that the pier has settled entirely clear of the granite above, but such is the case. I have had a wire passed through, and there is no point of contact anywhere between the upper and lower portions. Some small measure of support is afforded, however, by the substantial iron road gate. The weight of the granite forming the cantilever above the open joint is in the neighbourhood of twenty-nine tons. It is particularly interesting to note that this entrance gateway was built later than the police-station building adjoining, and the granite now forming the cantilever was built in at a later date. The building-in must have been very satisfactorily executed."

One of the gate-piers at New Scotland Yard, in which a gradual subsidence has left the arch, weighing some 29 tons, suspended cantilever-wise.

A near view of the New Scotland Yard subsidence, showing that there is no point of contact between the pier and the masonry arch it originally supported.

MORE WORK FOR ARCHITECTS

The raising of the school age from fourteen to fifteen, and the transference of the control of poor law institutions from boards of guardians to county councils will both entail a great deal of new building; the first to accommodate the new class of scholars, and the second to replace many of the old-fashioned, unhealthy and badly-ventilated institutions. The President of the R.I.B.A. has written, very opportunely, to the President of the Board of Education and to the Minister of Health, urging the necessity of properly-qualified architects being employed in the carrying out of this big programme.

AMERICA'S ITCH FOR ANTIQUES

I am inclined towards sympathy for the itch to possess beautiful things which sends Americans over to Europe on the spy-out. I have a mental picture of hungry souls in mid-western towns crying out for all the genuine ripe old products of antiquity; and I feel that their souls should be satisfied, and their empty museums and galleries filled. Granted this, there must be drawn some line beyond which sympathy may rightly give place to annoyance, as when some landmark, filled with all the rich associations of place and time, is filched away before one's eyes to furnish some new inglorious American niche.

ALAS, FOR GOG AND MAGOG!

Exactly such a case is the recent disappearance from Cheapside of Gog and Magog, the mechanical figures that struck the hours under their deep niche above the clock-shop of Sir John Bennett. If one felt that their transference opened up glorious vistas of new usefulness one might concede so much towards the advancement of culture in the west. But I can't believe it, and our loss, more easily

estimated, is very real. It is indeed time that we stopped this sale of national heirlooms. It is bad for our morale.

ARE WE BECOMING AMERICANIZED ?—

Mr. Shaw Desmond, writing to *The Daily Telegraph*, recently voiced somewhat the same plaint, but in a manner rather less sympathetic towards America, and it must be said, with the support of much inaccurate argument. Looking upon advertisements up and down the countryside, and upon a number of other things which he in common with others would wish away, he finds in these things signs of a steady Americanization of England. This is unfair, because England invented the first open-air poster, "Use Pears' Soap," and Wales invented the jerry-built house, neither of which is exportable, alas !

—AND DRIFTING INTO COLLECTIVISM?

Further, Mr. Desmond finds with dismay that we are drifting into a state of "collectivism." He need not despair on this account, for the poster and the jerry-built house, both of which disfigure England and America alike, are the result of individualism, and the "collectivism" towards which we definitely *steer*, and not drift, is one of the sure cures for those horrid types of selfish exploitation of "collective" resources. Public opinion, which has at

What material is this? Astragal feels inclined to offer a prize, not exceeding sixpence, for the first correct description he receives of this untouched photograph. The solution will be published next week.

last been whipped into action through the furious energies of architects, and every other type of public-minded citizen, is becoming the instrument wherewith these present scourges will be laid low, but that same public is led, and coaxed, and driven to see the truth of things. It certainly does not lead.

CONSERVING THE THAMES

Work is to be started on the new Thames and Wey drainage schemes early in the season. Though primarily intended to drain an area of low-lying land adjoining the River Wey, the probable increased outfall of these waters into the Thames has brought to maturity even more costly schemes for widening and deepening the channel of the parent river. At some points these operations are likely to alter its character. In particular the new channel which will short-circuit its winding course between Shepperton and Walton may quite easily rob the fine, flat meadows of much of their charm, especially if its direct line is marked by anything more rigid than willows or poplars. If bungalows were allowed to settle there, miles of river would never survive the indignity.

★

There is danger of losing a particularly fine mass of trees at Hampton Court Bridge if river-widening at this point is not carried out with a view to preserving amenity; while at several other places it will require all the skill of the Thames conservators and the authorities alike to avoid damaging the beauty of the banks.

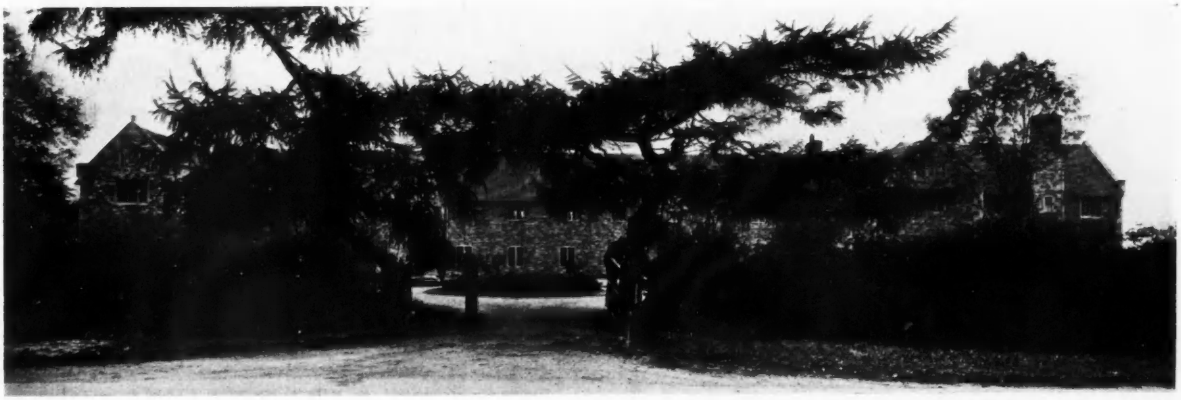
SYON HOUSE A SEWAGE WORKS?

The objections to the establishment of a sewage-disposal works over part of Syon Park have a strong basis of fact, if it can be proved that the proposed works are to occupy any but a fairly narrow strip adjoining the length of the Hounslow Road, well out of sight of Kew Gardens, and behind the heavy plantations of strange trees for which the park is justly famous. Syon House, standing amid its half-wild meadows, offers one of the rarest views within a wide radius of London. It is so properly the handmaiden of Kew Gardens themselves as to appear, to all who love them both, indissolubly linked in service. Let me confess at once that the thought of Syon House coupled with a sewage works disposes me to curse Middlesex county without more ado, as a blockhead incapable of dealing with anything so beautiful. Nevertheless, I am all against any kind of misinformed public railing, and until the true facts are at hand I will hold invective in leash. The Duke of Northumberland's most spirited letter of protest should stiffen the sense of public anger with which such thoughtless proposals have been greeted. What best can be done with these priceless possessions that come into the hands of the public is another matter, and one that must be given a great deal of thought ; for it must be confessed that in these things we have as yet little real aptitude, being, as it were, too museum-minded.

THE KIND OF HOUSE WOMEN LIKE

The Daily Mail recently organized a competition among its women readers, who were invited to answer a questionnaire of an architectural character. The entrants to the competition were asked to specify in detail their conceptions of an ideal house under seven separate headings : site and position; materials; accommodation of rooms; kitchen; floors, doors and windows; internal decorative treatment; and special fitments. No women architects were eligible to compete for the prizes, which range from £250 to £10. This certainly marks a stage in the democratization of architecture. There is no doubt that it will be possible to draw some useful conclusions from the answers given to the questionnaire, which will at least show some concensus of opinion as to certain elements in the design of the small house. The field is indeed well trodden, and it would be surprising if any of the answers show any originality or reveal new suggestions as to the planning of the type of house, in respect of which one would imagine that every possible combination and permutation of rooms has already been tried. But architects are sincerely anxious to become acquainted with the feminine point of view concerning every aspect of domestic plan, and will follow the result to be seen at the "Daily Mail" Ideal Home Exhibition, with very great interest.

"TO MURDER MORTAR"



All hail to "Cheapside," who, writing to *The City Press* about lay critics of architecture, resurrects the following trenchant lines by the Rev. — Bramston :

"Sure wretched Wren was taught by bungling Jones
To murder mortar, and disfigure stones.
Who in Whitehall can symmetry discern?
I reckon Covent Garden Church a barn,
Nor hate I less the vile cathedral, Paul,
The choir's too big, the cupola's too small."

ASTRAGAL

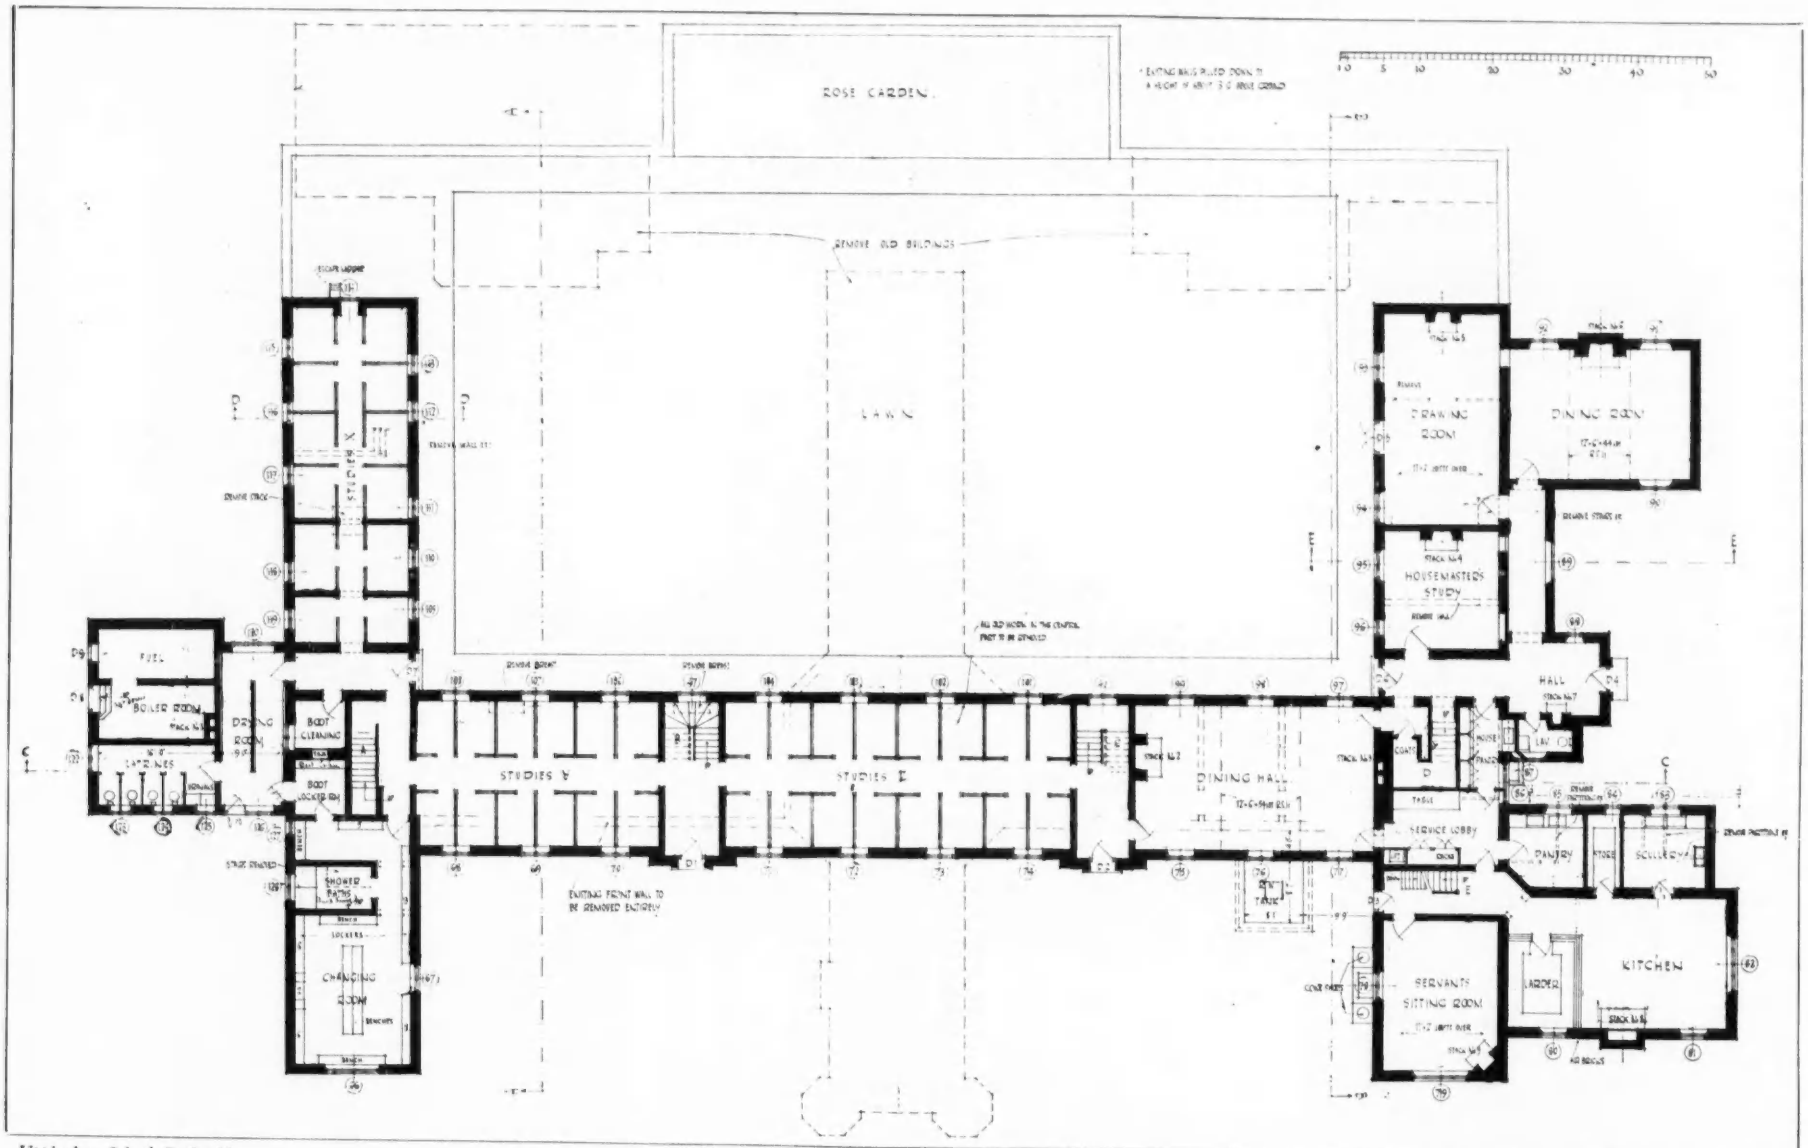
UPPINGHAM SCHOOL REDIVIVUS

FROM DESIGNS BY W. G. NEWTON AND PARTNERS

The new main front, looking from the roadway. The skilful manner in which the building has been remodelled makes it difficult at first for the mind to establish a connection—a sequence of cause and effect—between the new and old main façades illustrated below.

THREE notable improvements have been made at Uppingham School: one: the remodelling of an old institutional building to form the new Constable's boarding-house; two: the diversion of a public footway and the demolition of some old house property to open up a new quadrangle; and three: the erection of a football pavilion.

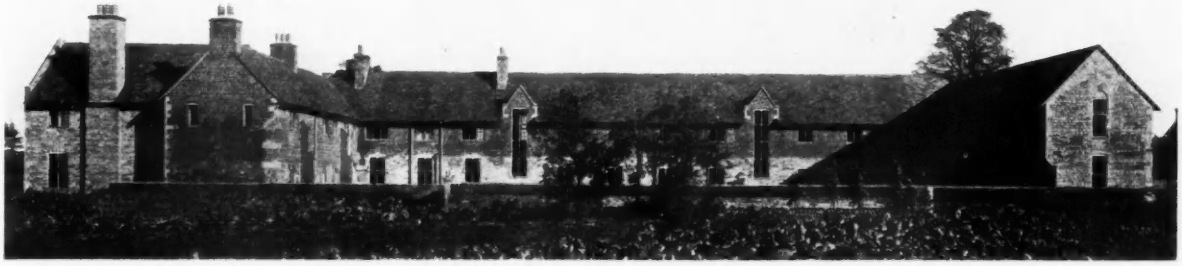
In the first case the architects were faced with an old building, imbued and burdening the air with an atmosphere of deplorable gloom: a phantasmagoric conception, in which the roof seems lashed into unconquerable fury; like a bed of waters, seamed and scarred into a thousand conflicting channels, burst into frenzied convulsion. At the back of the institution was a riot of miserable buildings. In plan the main building took the form on both the front and back elevations of a letter E.



The old institution before remodelling took the form in plan of a letter E on both the main and the garden fronts. In addition to its dismal atmosphere it presented a particularly untidy sky-line.

The main front, looking from the forecourt. The centre projecting portion of the old institution was demolished, the front wall rebuilt, and a new roof added. The two doorways lead to the studies. That on the right also gives on to the dining-room, the three windows of which are seen immediately to the right of it on the ground floor.

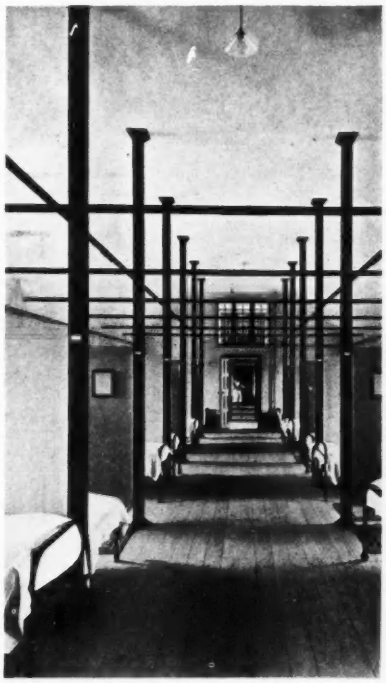
CONSTABLE'S BOARDING HOUSE BLOCK



Uppingham School, Rutland.]

The architects' drawing of the ground-floor plan. It acts as a useful guide in retracing the steps by which the remodelling has been carried out. The dotted lines show the disposition of the old buildings which have been removed. The new building now comprises on the ground floor the accommodation shown.

CONSTABLE'S BOARDING HOUSE BLOCK



[*By W. G. Newton and Partners.*

On the remodelled garden side the layout includes a lawn and rose garden, illustrated on page 154. Previously these were covered with the curious imbroglio of old buildings shown below.

An examination of the plans and photographs show with what skill the architects have solved an extraordinary riddle. The old buildings forming the centre arm of the E have been pulled down entirely on both fronts, making the whole plan roughly H-shape, and a new front wall has been erected to the main elevation about 4 ft. in advance of the old one. Little, if any, alteration seems to have been made to the design of the end wings of the old building, but the removal of the centre projecting portions, the addition of a new roof of simple outline, and the rearrangement of the chimney-stacks has enabled the architects to produce a building of considerable dignity and charm, with wall surfaces unbroken on the main front, save for the windows and the projecting doorways, gabled at top-story height, leading respectively to the studies and dining-room.

At the back the collection of old buildings has been demolished. Some of the exterior walls, forming part of the footings of these old buildings, have been pulled down only to a height of 3 ft. above the ground to form a wall to the rose garden and lawn. This, the back elevation of the building, has been treated in a similar manner to the main front. Internally the building has been replanned to meet the special requirements of the school.

The dormitories are planned with a central corridor, on either side of which are placed the cubicles for the use of the scholars.

The second improvement, the formation of a new quadrangle, also involved the demolition of some old property. It further involved the closing of part of a highway and the diversion of a footpath.

The original footpath ran along the north side of the old school-house studies and the south and west sides of the old buildings. The demolition of this old property has allowed the pathway to be set back about 54 ft. to the north, thus providing a new quadrangle and at the same time opening up pleasant vistas. A portion of the old studies to the west was taken down to accommodate a new garden house, and seating and other desirable amenities have been provided.

The football pavilion, the third improvement, provides seating accommodation for fifty spectators and standing for 230. All the seating is planned in the centre hipped portion of the pavilion, which provides for 30 persons on the ground floor, and 20 in the gallery. On either side is a covered wing, each giving two tiers of standing accommodation for 75 spectators. At the back is the changing-room, with a bath, 11 ft. 6 ins. long, 9 ft. 6 ins. wide, and 2 ft. 3 ins. deep.

The interior of the changing room, looking towards the bath, which is approached by steps. The bath is 11 ft. 6 ins. long, 9 ft. 6 ins. wide and 2 ft. 3 ins. deep. On two sides of the changing room are benches with boot racks under. Portions of these are seen in the foreground of the illustration.

THE FORTHCOMING RURAL HOUSING BILL

Provisions the Government should include

BY PHILIP HURD

AS the Government have in preparation another Housing Bill for rural areas it is opportune to examine the state of rural housing, to estimate the help given by past enactments, and analyse present problems.

Two conditions must be noticed as governing any schemes that are to be of practical value in rural areas. The first factor is the wage of the agricultural worker, which averages out at about 32s. a week, and clearly necessitates that the rental of the cottage should be low, i.e. not more than 3s. 6d. or 4s. a week. The second factor is that the nature of the rural worker's occupation necessitates his living near his work, and it follows from this that each farm has, really, its own little residential group. Clearly the effect of both these conditions is to differentiate rural from urban housing problems; for while in a town we can reasonably expect a wage-earner to pay 10s. or so a week for his house, and moreover to live in a residential district away from his factory or office, in the country the wage-earner cannot pay more than 4s. weekly for a cottage, which must of necessity be near his work.

Four schemes have been devised by post-war Governments to deal with this shortage of houses in rural areas. Under the Addison scheme (1919) the rent of Council houses was usually 7s. 6d. per week plus rates, and such a rent was clearly beyond the means of the ordinary farm-worker. The Chamberlain scheme (1923) chiefly benefited the owner-occupier class, and the contribution made by this Act to the housing of the agricultural worker was practically nil. Under the Wheatley scheme (1924) the rates of the Exchequer subsidy now are :

1 : In the case of houses erected in non-agricultural parishes, £7 10s. per house annually for forty years.

2 : In the case of houses in agricultural parishes, £11 per house annually for forty years.

The subsidy for the local rates is in both cases £3 15s. per house annually for forty years.

Under this Act 14,487 houses have been erected in agricultural parishes up to September 30, 1929, and the rents of these houses have varied from 5s. to 8s. a week plus rates. The second Chamberlain scheme — the Housing (Rural Workers) Act of 1926— does not attempt to provide for new houses, but provides grants and loans to owners who will carry out re-conditioning or reconstruction work costing not more than £150. Up to September 30 last, assistance had been promised under the Act in respect of 2,200 dwellings. This Act is only available for applications received by local authorities before October 1, 1931.

Although both the decline in arable cultivation and the greater use of labour-saving machinery have lessened the shortage of housing in some rural areas, notably in East Anglia, we find that where the 1924 and 1926 Acts have been sluggishly administered there is still a considerable shortage, which necessitates both overcrowding, and the housing of farm-workers at some distance from their work. Perhaps more than any other the 1926 Act has suffered from political misrepresentation and local apathy; yet where the local authorities have put their hands to the task, enlisting the help of those closest to the problem, it has worked excellently.

In Devonshire, where this Act has been used by the County Council in close co-operation with the Rural District Councils, 500 of these old cottages, many of architectural merit, are being re-conditioned at a county rate cost of one-sixth of 1d. in the pound for twenty years. In Shropshire the Clerk to the Atcham R.D.C. testifies that the Act has enabled him to maintain " those glorious black-and-white thatched cottages and make them infinitely better than any we could build under the Housing Acts." He should know what he is talking about, yet opponents say of the Act that none of the expected results has materialized.

It is true that in some counties a curious prejudice has prevented the Act from having effect, but where this prejudice has been overcome, as in Devonshire, the results have been more than satisfactory. Before leaving the subject of this 1926 Act, it might be instructive to note that when re-conditioned or reconstructed these cottages generally have :

1 : A properly lighted and well-ventilated food storage.

2 : A wash-house and furnace pan.

3 : Adequately ventilated bedrooms (not insisted upon where two large bedrooms are available).

4 : A suitable water supply—wells rendered safe from surface pollution and fitted with a pump (except in special circumstances and subject to stringent conditions, rainwater is not accepted as suitable for drinking or culinary purposes, nor, except as a supplementary supply, is it accepted for flushing purposes unless storage capacity is ample).

5 : A separately lighted and ventilated w.c. or earth closet.

6 : Wash-up sink, not in living-room.

7 : Slating laid to a four-inch lap (asbestos slating, if used, to be blue, to harmonize with surrounding country. This applies to Devonshire in particular).

8 : All bare cob walls protected by plastering finished rough-cast or stucco.

9 : Concrete or other approved paving round all external doors.

10 : All necessary repairs carried out.

Mr. Greenwood could, of course, add a compulsory clause to existing Acts, but practical objections rule this out. One thing is fairly certain—he will tackle the tied-cottage problem. The Government regard the tied-cottage as one of the most serious evils of village life, for by this system any labourer working on a farm may, on dismissal by his employer, be evicted from his cottage in order to make room for the succeeding farm labourer.

Put baldly thus, the system sounds harsh, but when we realize how important it is for the farm labourer to live near his work and place this importance beside the small number of cases that have not been settled by the exercise of good will, the system appears in a different light, and we cannot feel certain that interference will not endanger the integrity of the ideal scheme. But what evil there is in the tied-cottage system mainly arises through shortage of houses, and there appear to be three possible means of mitigating this shortage, which Mr. Greenwood may or may not embody in his new Housing Act. First, the public authorities might be compelled to house their own employees so that school teachers, postmen, the police, roadmen and others would be removed from the present competition for houses; secondly, the subsidy might be increased for rural houses; and thirdly, the £11 grant under the Wheatley Act (1924) might be made available for houses erected in any part of a rural district, provided that such houses were exclusively reserved for occupation by a carefully defined class of agricultural and other rural workers.

Two points, however, Mr. Greenwood must not miss : he will not be easily forgiven if he forgets for one moment to " preserve rural England," nor will his Act, however carefully prepared, be of any practical value unless he can devise means of diplomatically forcing sluggish county and rural district councils to co-operate efficiently.

THE NEW CHARING CROSS BRIDGE

Its Effect upon Unemployment Considered

IT is not intended to criticize here the planning and design of any scheme for the new Charing Cross Bridge. Dealing chiefly with the L.C.C. scheme the aim of this article is to discuss the probable effect it will have upon unemployment in the London district.

Statistics show us that, roughly, a little under five per cent. of the total of skilled and a little over ten per cent. of the total of unskilled workers in the building trade were on the unemployment lists in London during October. The figures for November are seven per cent. and eleven per cent. respectively, a seasonal and not abnormal increase. Five per cent. is looked upon as the normal figure of unemployment, the word normal in this case meaning that five per cent. might be expected in view of the nature of the employment involving frequent breaks between leaving one job on its completion and the finding of another, bad weather, holidays and sickness. It might be expected that the ratio of unemployment among the unskilled would be the same as that among the skilled, whereas it is more than twice as great.

There are various reasons for this discrepancy, the principal being that the wages are higher than in other trades. At present wages are 1s. 4½d. per hour. Besides, no occupation can be healthier, conditions of employment are favourable to the men, and then there is the lure of the supposed delights of London life. These advantages attract men from far and near, so that the unskilled labour market is always overstocked. Moreover, many self-styled building labourers are nothing of the sort, as many a foreman knows to his annoyance.

There has been of late great activity in the London building trade. There are signs that this activity is slackening. That means a swelling of the number of unemployed, for the men who are attracted to London do not return to the place from whence they came when work slackens; they stay, hoping for better times. Should there be any considerable falling-off of trade, the Charing Cross scheme would be unable for some time to give any compensating relief worth mentioning.

The work in connection with the L.C.C. scheme consists of:

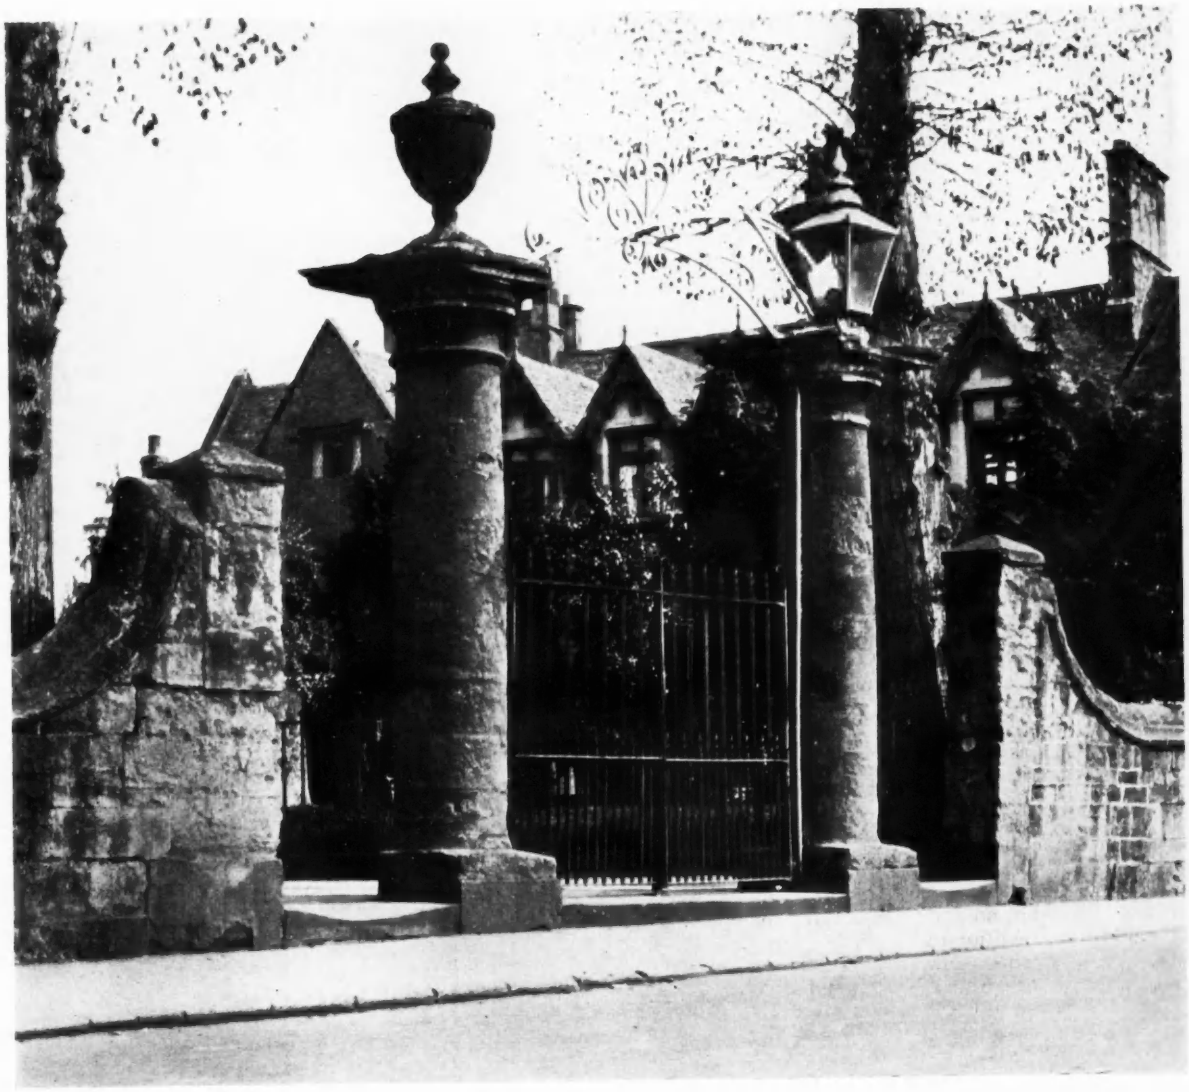
a: Demolition of existing buildings.
b: Formation of new roads and diversion of old
c: The new railway station.
d: Temporary bridge and approaches.
e: Demolition and rebuilding of the bridge.
f: New workmen's dwellings.

It also involves new buildings to replace those expropriated. These are not included in the scheme.

The buildings to be pulled down cannot be handed over to the housebreakers and people cannot be expelled from their houses, their shops, offices, warehouses and workshops all at once.

No one can walk through the condemned area without feeling that the execution of the scheme must be accompanied by much inconvenience, hardship and distress; poor folk must be turned out of their homes, many a small business whose owner has worked for years to establish a connection must be destroyed and the tradesmen forced to start afresh; workers will lose their places and join the ranks of the unemployed. Some mitigation of these hardships can be had by advancing slowly step by step. The promoters of the Bill know that progress cannot be rapid, for they put October 31, 1935, for the cessation of powers of compulsory purchase, and October 31, 1940, for the completion of the work outlined in the Bill. Even so, the greatest care must be taken to prevent injustice in dealing with the expropriated, who should not suffer that others might benefit.

Not until the rehousing question is settled can work on the new station begin, and not until the new station is built and the railroad work in connection finished can the new bridge be started. As far as can be gathered from the map, about 1½ miles of new streets will have to be formed on the Surrey side only (including the tunnelled portions), and about two miles of new frontage built.



The cost of the scheme as estimated by the engineers is £14,660,000, including expropriation, compensation and all expenses, so that we may put the actual builders' work at, say, £10,000,000, to which may be added £7,000,000 for the cost of rebuilding along the new frontages and elsewhere, making a total of £17,000,000 to be spent in ten years, or an average of £1,700,000 a year. The labour required for this would be about £700,000, which last is the figure that interests us, as it deals with London labour only, that involved in providing materials being employed elsewhere. This £700,000 may be divided into £450,000 for skilled and £250,000 for unskilled labour, giving employment for 2,300 artisans and 1,600 labourers as an average. At first the total employed would be below the average, the proportion of unskilled being larger than that of the skilled. Then, as building proceeded, the number of workmen would exceed the average, the proportion of skilled men rising until towards the end the total number would drop and the proportion of skilled men would continue to rise.

Every new job necessarily must reduce unemployment in the particular trades interested, but the effect in the London district is complex for reasons already given, so the percentage of unemployed remains nearly stationary. And this is no ordinary job; it will cause disturbance far greater than usual, and consequently unemployment in trades other than building, to such an extent that it is doubtful whether in the immediate future it may not increase rather than diminish unemployment as a whole.

The many schemes which have been devised for dealing with the bridge problem may be divided into two categories (with variations in each), viz.: those that provide for the removal, and rebuilding on the south side, of Charing Cross station, and those that retain the station in its present position and rebuild the bridge. Schemes under the latter category would cause less disturbance and consequent unemployment than those under the former. Whether they would be better in the long run is another matter. Of the ultimate benefit to London of a well-considered scheme there can be no doubt, but the full benefit will be reaped by the growing and future generations. Our immediate problem is so to carry out the scheme that it will inflict the least possible hardship upon the present generation. The factors in the problem are:

a: The additional employment caused by the work.
b: The unemployment caused by the disturbance.
c: The additional labour attracted to London;

and the problem is, will (a) be greater or less than (b) + (c)? Whatever the answer may be, and whatever the scheme may be, it is obvious that it will not go very far towards settling the unemployment trouble in London.

ENGLISH PRECEDENT No. 99

GATE PIERS, BANBURY CHURCH, OXFORDSHIRE

These massive Doric columns, surmounted by beautifully shaped urns, form a unique entry to the churchyard. They are of local Hornton ironstone.

The apparent extravagant overhang of the abacus is due to the whole thing being worked on the skew—a rare precedent. The gas engineer's later contribution to the composition is the reverse of illuminating.

—[C. M. G. ARMSTRONG.]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an arbitrator, brought by Colonel Jago, J.P., jointly and severally against builder and architect, for damages for the collapse of a village hall. Mr. Chawlegger, K.C., and a Junior represent the plaintiff; Mr. Twistle, the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. The first day's hearing concluded the case for the plaintiff. Mr. Pitfall, who was briefed only at the last moment, has arranged a conference with his client, Toomer, before the second day's hearing, when Pitfall has, with Twistle, to open the defendants' case.

iii: The Defendants Open

TOOMER had been waiting nearly half an hour when Mr. Pitfall—with him Mr. Wrackem—and a clerk, carrying a bag of papers, appeared. Mr. Pitfall was engaged for some time instructing his clerk, but when he gave his attention to *Jago and Toomer* it was at once clear that, by some amazing process of analysis and absorption, he had got to the bottom of the whole business and made himself master of all the ramifications of the case; so that the questions he asked Toomer referred to just those details which Toomer had always felt to lie at the root of the matters in dispute, although he had never been able to hold Bosson to them. Pitfall's nervous tension and acute concentration was almost terrible; yet his self-control seemed perfect and his methodical orderliness of mind, unswayed. The patience with which he probed the lumbering processes of Toomer's fat brains was remarkable. He seemed, in a tired way, cheerful; and he and Wrackem together pursued an obscure joke as they burrowed among the papers.

"We'll put it across old Chaw this time," Pitfall said: but he showed no concern whatever for Toomer's plight, nor the least sympathy for his heavy dejection.

The parties took their seats at the table punctually, and the lawyers exhibited the same cheerful relish as on the previous day. The arbitrator then called on Mr. Pitfall to open the defence. As Pitfall was senior to Twistle, being a K.C., while Twistle was a Junior, it had been arranged between them that Pitfall should present the issue joined by Swillerton and Toomer in common, namely, that neither of them was liable. He had also, as we know, to urge, on behalf of Toomer, that the failure of the building was due to Swillerton. To ordinary mortals this might seem a hopeless position for an advocate; but to barristers and judges who can argue and give verdict, concerning the married, that A has committed adultery with B, but that B has not committed adultery with A, there is no difficulty about the matter whatever.

Mr. Pitfall, whose earnest, compelling manner and alluring incisiveness of utterance was in marked contrast to the charming and almost indolent assurance of Chawlegger, opened his defence by claiming credit for the defendants for the whole of the accommodating concessions and agreements, lightening the task of the arbitrator, which Chawlegger had held out as a special merit of the plaintiff. He then went on to demolish Chawlegger's opening tribute to his client:—I think, Mr. Arbitrator, that my learned friend might have spared you his flapdoodle—yes, sir, flapdoodle—about the Squire, the benefactor of villagers, the good angel of his tenants. The facts are, that the plaintiff's fortuitous elevation to the rank of Colonel in the A.S.C. so inflated his self-importance that, shortly after the war, he turned Jago's Candle Works into a Limited Liability Company, moved well out of range of its familiar smells and, without more ado, became one of my learned friend's Old English Squires. Sir, the plaintiff is a shallow, presumptive man—as one who vaunts his temporary military rank needs must be; he is a rich man—as a successful manufacturer needs must be; he vaunts open-handedness—as a wealthy *parvenu* aspiring to social importance needs must do; he is a benefactor to the village he has bought—as a man who has no other means but his purse of winning the respect of his humble neighbours and usurping the position of country gentleman, needs must be: *but*, Mr. Arbitrator, you have seen the plaintiff; you have heard him giving evidence from that chair; you have observed his demeanour under cross-examination, and it is not necessary for me to suggest to your mind that he is an arrogant man, inflated with self-importance, whose vanity leads him to condescend to those who are cowed by his pretensions, but does not deter him from toadying those who take him at his true valuation, nor from crushing by his wealth and power those who incur his animosity by refusing to be either cowed or flattered. The defendants, Mr. Arbitrator, are in this unfortunate but honourable situation.—I must ask your protection, sir: the plaintiff has for some time been grimacing at me. I protest against these attempts by the other side to disconcert me, and put me out of countenance.

Colonel Jago: It's monstrous.

The Arbitrator: As long as you remain in the room, Colonel Jago, you must control yourself. I suggest you should not look at Counsel. I will see that he does not go too far.

Mr. Pitfall then went on to give an enthralling sketch of Toomer's history and credentials, and of the esteem in which he was held both professionally and as a man; and described how he had risen by his own unaided efforts, enforced by integrity, capacity and hard work, from a humble position on the staff of the engineer of the Municipal Council to be one of the most highly esteemed and most distinguished among the consulting architects and surveyors of Nollingborough.

It may occur to you, Mr. Arbitrator—Counsel went on—that, for a man earning his daily bread in a precarious profession in a restricted area beset by rivals, it requires no little courage to repulse opportunities for settlement offered by a rich and powerful adversary, and, rather than submit to injustice, face the notoriety, distress, loss of time, cost and risks of an action at law. Mr. Toomer is not a man, Mr. Arbitrator, whatever my learned brother may say——

Chawlegger: I have not questioned Mr. Toomer's courage——

Pitfall: ——*may* say hereafter, to flinch from what his self-respect demands, through fear of consequences. My client, sir, while yet a mere boy, distinguished himself in an act of physical courage which was acknowledged by a certificate of the Royal Humane Society and by an inscribed watch, the gift of the members of the church

choir to which he belonged, presented to him on a public occasion by the Bishop of the diocese— I notice my learned friend ostentatiously looking at his watch.

Mr. Chawlegger : I am consulting the time.

Mr. Pitfall : My friend's consultations are ill-timed. He should consult decorum.

Mr. Chawlegger : Certainly, if my learned friend will lead.

Mr. Pitfall : Counsel knows perfectly well that I am doing so. I am leading for the defendants.

Mr. Chawlegger : Then I suggest that my friend should open his case.

Mr. Pitfall : And I suggest, Mr. Arbitrator, that my learned friend should withdraw *his*—— (indicating the open watch-case which Chawlegger had thrust out on the table).

Arbitrator : Come, come, Mr. Pitfall, get on, if you please. You are wasting time.

I shall not, sir—(Mr. Pitfall continued) —detain you many minutes, for the evidence called by the learned Counsel on the other side so well presents the defendants' case that my own witnesses will have little to do but enforce the evidence that has already been given. For what are the facts? The plaintiff, a rich, powerful and domineering man, a Colonel and a Justice of the Peace, engages the services of an architect and builder of relatively humble station, but of high reputation in the locality, to build for him a village hall ; and this rich man, whose only use for his riches is to get his own way, imposes an overbearing arrogance upon his architect, and, among other martial commands, orders a certain kind of flooring of which, among others, his architect has given him a particular description. As the result of laying that flooring in the way it, and other flooring, is usually laid, the building finally collapsed. But why did the building collapse? It collapsed because the plaintiff allowed a horde of his drunken and disorderly friends callously to knock the place down. The buckling of the floor was *not* the cause of the collapse of the building. I will show that all could have been made safe merely by removing the blocks and wedges, or cutting away one board down the length of the room. The floor would then have sunk back secure and free on its proper bearings and remained level, rigid and true; and I submit, sir, with confidence, that the whole extent and amount of the damage which the plaintiff can by any arguments, however strained, hope to lay to the account of the defendants, is limited to what would have been the cost of releasing and restoring the floor in this way. The collapse of the building was due to the wilful, mischievous ill-usage of the hall by the plaintiff in promoting therein a beastly, drunken orgy. I will show that, for that purpose, he sent to the hall a free gift of whiskey.

Arbitrator (to Colonel Jago) : I have already said, Colonel Jago, that demonstrations cannot be allowed. You must behave yourself, sir.

Mr. Twistle, on behalf of his client, the defendant Swillerton, said he (Counsel) entirely associated himself with the remarks of his learned friend in his contention that the collapse of the hall was due to the mischievous and wanton act of the plaintiff after the floor had buckled; that the buckling of the floor would not have happened except for the excessive and improper strain put upon it, and that the buckling could readily and safely have been restored by his client if he had been given an opportunity of doing so. The behaviour of the floor in buckling was unprecedented and could not have been foreseen, and it would be given in evidence that his client performed his duties according to recognized practice in the building trade in leaving the wedges and blocks in position. It was his duty to abide by that recognized practice unless he was otherwise instructed by the architect; but he received no such instructions, and he (Counsel) would show that the architect must have been aware of this recognized practice; that he could have informed himself by observation or by inquiry of what was being done; that he raised no objection to the blocks and wedges being left in place, and that, by his formal approval of the work in the granting of the final certificate, he specifically signalized his approval of what had been done.

Mr. Pitfall said he would first call the Rector of Grastopen, as the reverend gentleman, who had come expressly to London to give evidence, was in attendance.

The Rev. HOLROYD AVERIL, in reply to Counsel, said that he knew the defendant, Toomer, intimately.

Counsel : Is he a man highly esteemed by all who know him ?—Oh, most.

Conscientious and capable, and thoroughly to be relied on ?—I should be very sorry to think otherwise.

Not the sort of man who would take his obligations lightly ?—Indeed, no. He was always most good to his mother when she was with us.

You were, I think, Mr. Averil, at the Village Hall on the evening of the collapse ?—That is so, yes ; but providentially, I left before it fell.

How was it you came to leave ?—I felt I could no longer be of service—I regret to say.

Do you mean the proceedings got out of hand?—Yes, I am afraid so—after the dancing began.

Was there much drinking?—Yes, unfortunately; it was most regrettable.

Did you see anyone drunk?—I cannot truthfully state that, I am thankful to say. I noticed no one who could not stand upright.

Were the proceedings noisy and roystering ?—They certainly were. I was much distressed. Whiskey was being freely distributed among the dancers. Even women were partakers. I was truly shocked.

Did you find out who was paying for the whiskey ?—Yes, it was generally known that Colonel Jago had sent in two dozen bottles.

Did you expostulate with him?—Yes, I wrote to Colonel Jago. I felt it my duty to do so.

Did he reply?—No, I regret to say.

From what you saw before you left, do you agree that the scene in the hall was little better than a drunken orgy? —No, I could not truthfully so describe it ; but there was great noise and excitement. A bottle of whiskey was broken on the floor and the smell was very strong. Two men took off their coats to fight, but peacemakers persuaded them to shake hands. They are, in fact, both worthy men. After that, I felt my presence could serve no useful purpose—as I could not control the proceedings I felt that by remaining I should appear to be countenancing them.

The floor had not buckled at the time you left ?—No. Nothing of that sort had happened.

The witness was then cross-examined by Mr. Chawlegger, who asked the witness : Do you consider that Colonel Jago's act in wishing that his friends and neighbours should drink his health, on the occasion of this yearly celebration, was reprehensible ?—No. I think it was ill-judged.

Do you know how many drinks of whiskey go to a bottle?—I have no idea.

Do you consider one ordinary dram for each guest an allowance calculated to promote a beastly, drunken orgy?—I really can express no opinion. I have never, I am thankful to say, made use of such words.

Counsel then asked : Does the rectory garden, Mr. Averil, adjoin that of the hall ?—That is so.

And have you quarrelled with Colonel Jago owing to his objection to your persisting in burning rubbish in such a way that the smoke interferes with his enjoyment of his garden?—No, sir, I have no quarrel with any man, I am thankful to know.

I put it to you, Mr. Averil, that you are not on speaking terms with Colonel Jago ?—Colonel Jago knows that I should always only be too glad to speak with him at any time. It is most

painful to me that my neighbour should avoid me.

And yet you annoyed Colonel Jago by pouring volumes of your stinking smoke into his rose garden?—Colonel Jago objected to the smoke, and perhaps I ought at once to have removed the burning of garden rubbish to another position; but as Sir Geoffrey Dollart, the previous tenant, had made no complaint, I thought a friendly remonstrance might serve to bring Colonel Jago and myself together. After I received Colonel Jago's reply, which threatened legal proceedings, I did as he wished.

And ye: you tell me you have no quarrel with Colonel Jago; no ill-feeling against him.—None, sir, I can truthfully say.

I put it to you, Mr. Averil, that you are hostile to Colonel Jago and resent his influence in the village, and have come here to satisfy your enmity by bearing witness against him?—Sir, your readiness to infer base motives does you greater discredit than you impute to me. I do indeed very deeply regret Colonel Jago's influence in the village, for I believe it to be a bad influence; and it distresses me to notice that his activities are often directed to thwarting the ambitions of his Rector for the spiritual well-being of his flock. I had no wish to speak on a matter so painful to me, but you, sir, have chosen otherwise. I have come here in the exercise of what I deem to be my duty, to testify to facts within my knowledge to the end that justice may be done.

Mr. Chawlegger: I hope, Mr. Arbitrator, the witness — the reverend gentleman—only right I should explain to Mr. Averil that it is Counsel's duty to ask such questions as—I hope the reverend gentleman will accept that no aspersions are—were intended.

Mr. Pitfall (re-examining): I understand, Mr. Averil, that there was cause of estrangement between you and Colonel Jago before the matter of rubbish-burning arose?—Must I, Mr. Arbitrator, answer that question? I had much rather not do so.

The Arbitrator: I think you must.

Witness: To me it appears to have no bearing on the matter in dispute.

The Arbitrator: Counsel is entitled to ask the question, and you must answer it.

Chawlegger: I object that the matter is irrelevant.

Pitfall: My learned friend himself raised it, and I claim, sir, my right to rebut. (The Arbitrator disallowed the objection.)

Witness: Yes, it is true. There was a previous cause—which was, in fact, the first and sole cause of my estrangement from Colonel Jago.

Counsel: Will you please tell the Arbitrator what it was?—The seats in the church are free, and were so long before I was inducted. I deem it so important that social rivalries and class distinctions should not invade gatherings together for holy worship, that I felt unable to concede to Colonel Jago what I had denied to others, namely—a private pew for his sole use. Colonel Jago resented my refusal, although I explained the reason for it, and adopted the custom of sending his butler and certain other servants directly the church was opened, to tenant the coveted pew. Shortly before, or after, the service began, Colonel Jago and his family would enter and occupy the pew, his servants taking other seats or even leaving the church. This proceeding, repeated every Sunday, I considered to be unseemly; and I also learned that a certain section of the congregation resented it, and were organizing a rival party to forestall Colonel Jago's servants. It, therefore, became necessary for me, with the support of the churchwardens, to stop the proceeding. Since that time Colonel Jago has, much to my grief, absented himself from his parish church.

The Arbitrator: We are obliged to you, Mr. Averil, for coming here today.

The defendant, DAVID WINKLETOP TOOMER, was then called and questioned by Mr. Pitfall as to his credentials and qualifications, and the nature and extent of his experience as a practising architect and surveyor. In reply to Counsel, witness stated that he received definite instructions from the plaintiff to floor the hall with American maple. The interview, when Colonel Jago gave him this instruction, was shown in his diary (produced) to have been on December 7 of the year before the hall was built. He had kept an appointment with Colonel Jago to obtain his final instructions before proceeding to prepare the contract documents, and he produced his notes taken in Colonel Jago's presence on that occasion, among which the words "floor — American maple" appeared.

Mr. Pitfall: Had you previously used American maple?—Previously? Previously to what?

To your interview with the plaintiff?—Do you mean previously to my interview with him on December 7?

Counsel: You interpret me exactly, Mr. Toomer.

Witness: No——I mean yes. You mean similar flooring to that used in the hall, don't you? Then, no. Previously to building the hall I had used maple flooring nailed to fillets let into a concrete foundation.

Counsel: You therefore knew of its propensity to swell?—Yes, I knew that—if it got damp, that is.

So that when you mentioned maple as a possible flooring for the hall in your interview with Colonel Jago on December 7, you knew the risk of its swelling?—Yes. But——

The Arbitrator: Finish your answer to the question.

Witness: Well, the maple flooring I laid on the concrete got damp owing to the concrete not being quite dry.

Counsel: In the previous case you speak of, did the floor swell and buckle?—You mean when the boards were laid on concrete?

Yes, you comprehend me perfectly, Mr. Toomer.—No, the maple flooring couldn't buckle the concrete, could it?

What happened then?—The boards curled up at the outer edges and drew the nails. I had the floor cleaned off—planed down flat. I had to do that three times——

Counsel: At any rate you——

The Arbitrator: I think you interrupted the witness, Mr. Pitfall.

Witness: Well, I was going to say that I had to have the floor cleaned off three times——

The Arbitrator: You have already told us that.

Witness: Yes, I think I said it, but I mean I had to have the floor cleaned off three times, and then, when I had had the floor cleaned off three times, the rebates of the grooves that take the tongues were nearly cut down to nothing, and they broke away and came up in splinters when the floor was danced on.

The Arbitrator: And the splinters pricked the dancers, and stuck in their feet?—Yes—at least I suppose they did—I mean I suppose the splinters did.

The Arbitrator: At any rate the dancing stopped?—Oh, yes. They had to stop dancing, they couldn't go on dancing—could they?

Mr. Pitfall: Thank you, Mr. Toomer. That is what I wanted to know. It was, you say, firmly in your mind when you saw Colonel Jago on December 7 that American maple would swell if it got damp?—Yes.

And you told him it was a risky thing to use?—Yes, I told him maple was a strong and refractory wood.

And in spite of that he ordered you to lay the floor of the hall with this maple wood?—Yes, he did. He told me to, or else I should not have done it.

Counsel then asked: Did you describe in your specification or show in your drawings the blocks and wedges between flooring and walls?—No. You see——

Please confine yourself to answering my questions, Mr. Toomer. Are the blocks and wedges necessary as part of the permanent structure of a building?—No, they are not.

If they had been a necessary part of the permanent structure you would, I take it, have drawn or described them?—Yes.

Are such blocks and wedges merely one of alternative methods a builder may use in laying a floor ?—Yes. He may if he——

Never mind that. Am I right in understanding that the use of blocks and wedges is entirely a matter of the builder's choice to suit his convenience? —Yes.

So that unless you happened to be in the building at the moment when skirtings hiding the blocks and wedges were being fixed, you would have no reason to suppose that blocks and wedges were there ?—That is exactly what I have been telling Mr. Bosson all along.

The Arbitrator : Answer the question, Mr. Toomer.

The witness seemed in confusion as to what the question was, and Counsel repeated it. Witness's answer then was—No.

Mr. Chawlegger, cross-examining : I gather you have had particular experience of maple dancing-floors, Mr. Toomer ?—Yes. I think I have.

You are an authority—an expert on the subject—a dancing-floor specialist, in fact ?—Well, I know more about it than most, I dare say.

Do you think a village hall is a likely building to be used for dances ?—Yes, I do.

So that you recognized that, as an architect, it was incumbent on you to see that in Grastopen Village Hall the floor was suitable for dancing ?—Yes. I suppose so.

We have heard you say that on December 7 you were well aware that maple was liable to swell. Will you swear that you warned Colonel Jago of that danger?—No, I dare say I did not put it that way.

What way did you put it ?—I said it was a strong and refractory wood.

So we have heard. Will you tell me why Colonel Jago decided, under your advice and with your approval, to use maple wood ?—It is a hard, clean wood, and cheap—that is why, I think.

And at that interview you undertook, as the responsible architect, to lay down a satisfactory dancing-floor of maple ?—Well——

Do not prevaricate, sir. Did you undertake to do so or did you not ?—Yes. I suppose I did.

Now, Mr. Toomer, having undertaken to lay a maple floor for dancing on, and knowing well that maple is a tough, refractory wood liable to swell irrepressibly—even to the tearing up of the nails that hold it—and that it must be free and not constrained, how was it that in your specification—the detailed exactness of which we all greatly admire—you did not give any direction to the builder on this important point ?—I suppose I must have overlooked it—there are so many things to think of. One cannot remember everything.

Mr. Twistle, cross-examining on behalf of the defendant Swillerton, asked : Are you aware that it is a common practice for such blocks and wedges as we are speaking of, to be used as fixings for the skirtings ?—Yes. That is sometimes done.

So that such blocks and wedges may, and frequently are, made a part of the permanent structure of a building?—Yes. I suppose they are.

Mr. Pitfall, re-examining : Had you any reason to suppose, by analogy, by hearsay or by experience, that air circulating against maple flooring would cause it to swell ?—No. I had not.

Did your specification direct that the blocks and wedges should be used as fixings for skirtings ?—No. Proper grounds are specified.

Will you turn up the direction to use proper grounds in this copy of your specification so that the Arbitrator may read it ? (Witness did so.)

Mr. Pitfall, addressing the Arbitrator, said that as his next two witnesses would be heard at some length, and as it was then eleven minutes to one o'clock, perhaps it would suit the learned Arbitrator's convenience to take the luncheon adjournment at once.

The Arbitrator, with the acquiescence of other Counsel, accordingly adjourned the hearing till two o'clock.

(NEXT WEEK—IV : THE DEFENDANTS CLOSE.)

ARCHITECTURE IN DAILY LIFE

BY HOWARD ROBERTSON

THE first of a series of six non-technical lectures on Present-day Architecture was given recently at the Architectural Association.

Mr. Howard Robertson, F.R.I.B.A., lecturing on "Architecture in Daily Life," said that architecture, which to a certain extent had stagnated for many years, was now taking a forward movement in response to the spreading demand that it should satisfy the needs of the day and correspond to our daily life.

It was in the designing of the house that the architect had the freest hand. The house had always reflected the domestic requirements of the day and expressed the taste or culture of its time. In the Victorian age it became rather corrupt, which he attributed largely to the influence of Ruskin with his passion for the Gothic. The house was then overloaded outside and inside. It was pretentious and seemed to express side-whiskers and a certain pomposity in living. It was perfectly frank in its badness. The present architectural style was for clean, simple exteriors, notable for their severe lines. It despised any conscious reproduction of the past. For the first time light had begun to be appreciated. The same expression of the mechanical line was seen in the furniture and fittings.

He said that the comfort of such rooms depended on whether they found reflection in the minds of the occupants. The illustrations of domestic architecture which he showed on the screen were, in the main, German. One might miss from them, he said, the flavour of softness. There was an absence of decoration. The walls were without pictures. But there was beauty, he thought, in their fine and simple lines, and they excelled in domestic comforts and conveniences.

Referring to the paucity of bathrooms in English houses, Mr. Robertson said he was inclined to think that the great reputation the Englishman got for cleanliness was owing to his having a tub brought up to his bedroom when on the Continent. But when he was asked to pay for a bathroom he would not do it, and people had to queue up, or take one the night before, or go without. The lack of ordinary decent comforts had caused a revolution, not only in plan, but in exteriors, and the desire for more mechanical efficiency, in keeping with that of the outside world, had turned our thoughts to cleaner, harder, and more mechanical exteriors.

Speaking of bureaucracy, he said the Office of Works was proposing to take over a great deal of the work previously done by architects in open competition. The reason given was that an official body could carry on its own work better, as it knew its own business. But the dangers were enormous. Individuality would rapidly disappear, and architecture would become not an art, but simply a job, like the Post Office, and probably in a few years be badly done.

Such schemes as that of Charing Cross Bridge were of great public interest. Here was a great scheme for arranging London bridges, and vitally affecting its traffic; and yet the public knew nothing about it, and were not consulted. That was an instance of what might happen when the Government took charge of all these questions.

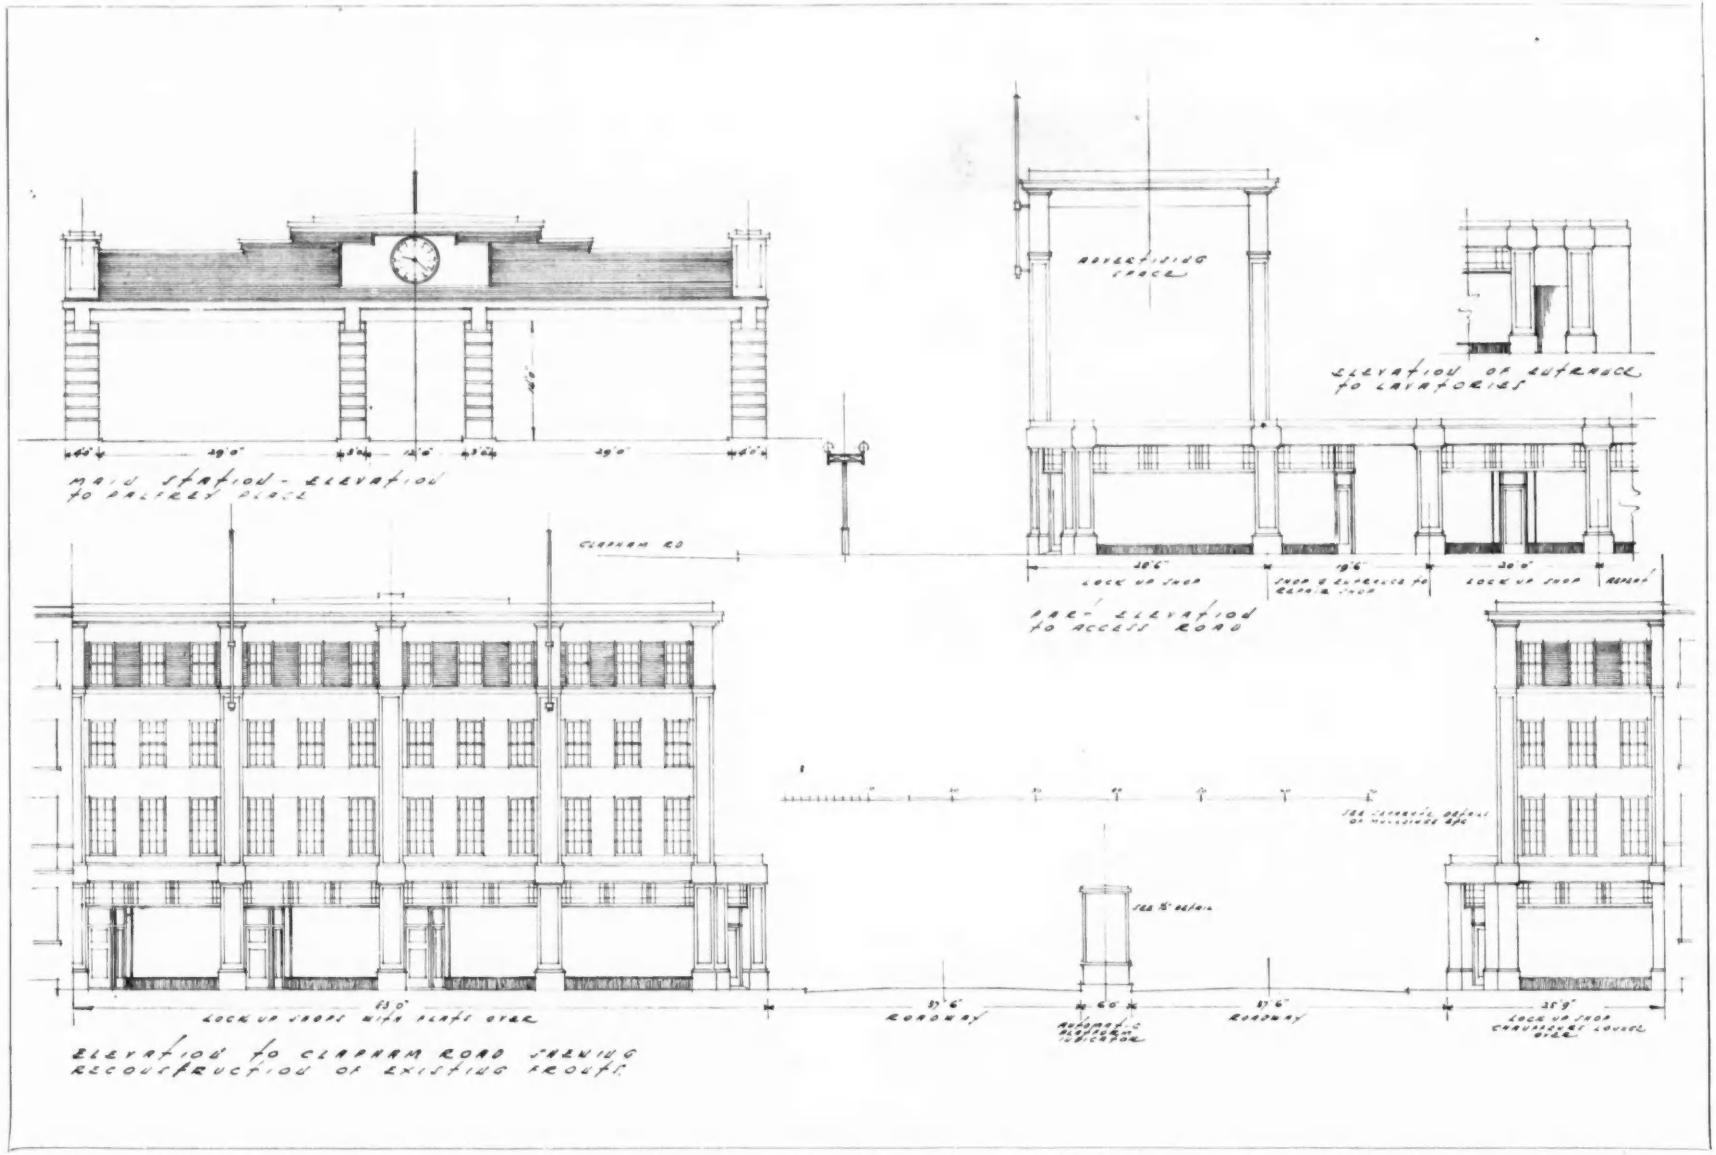
A LONDON MOTOR COACH TERMINUS

DESIGNED BY EDWARD W. WALLIS

A general view of the approach road, 80 ft. in width, leading from Clapham Road to the station. It is flanked on either side by booking offices, restaurant, shops, etc. Upon the central island is a kiosk, with automatic arrival and departure indicator.

HERE is illustrated a sign of the times: one of the first motor coach termini to be erected in London. The object of the originators of the station was to provide for the coach-travelling public the same facilities and comfort as they enjoy when using the railways. Recognizing that the present system of picking up in the open in side streets is inadequate and unsatisfactory in many ways, their conception was a terminus whence and whither coaches would run to and from all parts of the country with the precision of a railway time-table.

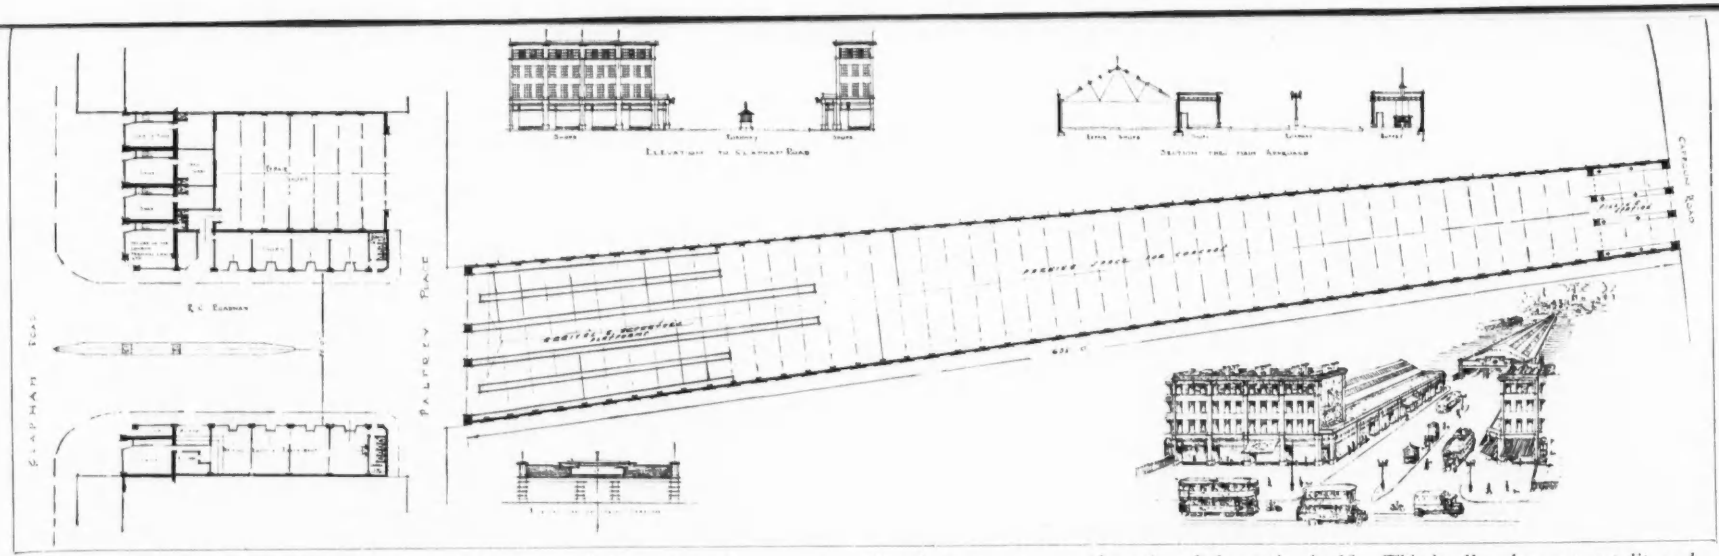
Whilst in the light of the experimental experience already gained the scheme as it stands is no doubt susceptible of improvement in many ways, it must be remembered that hitherto there have been little or no data to work upon. Undoubtedly in the future coach stations will be as highly organized as the modern railway terminus.



The main station, which stands back from the main road approximately two hundred feet, is 635 ft. in length by an average width of 75 ft., and is entirely covered in and top-lit. It is divided into three sections. At the rear is a filling station of 20,000 gallons capacity; in the centre is a parking space for 250 coaches; in the front are the departure platforms to which they will move up at their scheduled times. These platforms will take thirty to forty coaches at one time, and it is estimated that when the station is in full running order, 400 coaches will leave per day, and a like number arrive. The station is electrically lit at night with high-powered lamps, whilst the clocks both inside and out are electrically synchronized.

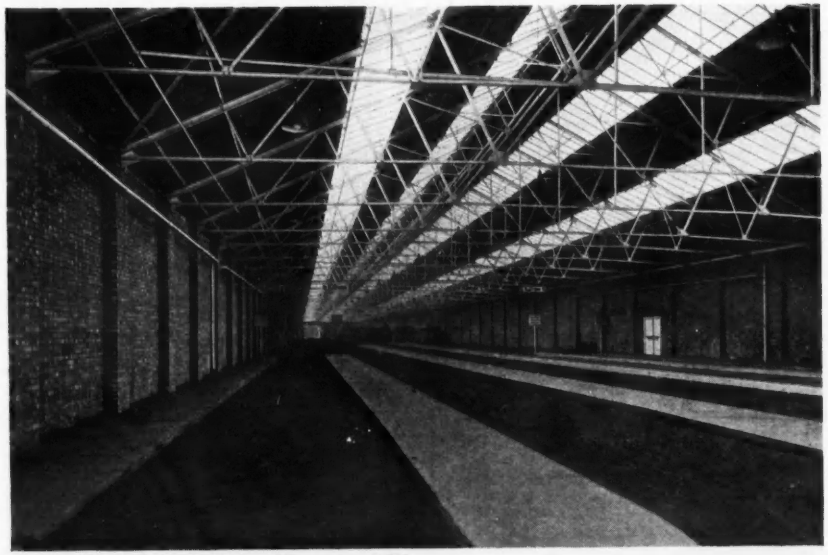
The station is approached from Clapham Road by an access road eighty feet in width, flanked on one side by a restaurant and quick-service buffet, and on the other by lock-up shops and booking-offices. On an island in the centre of this road is an automatic arrival and departure indicator, from which the passenger can tell the time of the departure of his coach and the platform. There is also attached to the station a large shop, where washing down and repairs can be carried out.

The main elevation to Clapham Road consists of lock-up shops on the ground floor, with drivers' rest rooms and dining-rooms, offices and flats on the upper floors. There is also a small hotel to provide accommodation for drivers of long-distance coaches not returning the same day. Whilst the main station, repair shops and buildings fronting on the access road are new, the Clapham Road front is merely a reconstruction of existing old premises. The whole of the work has been faced with white Portland cement stucco, with the exception of the pediment over the main station, which is in machine-made, multicolour Dorking bricks.



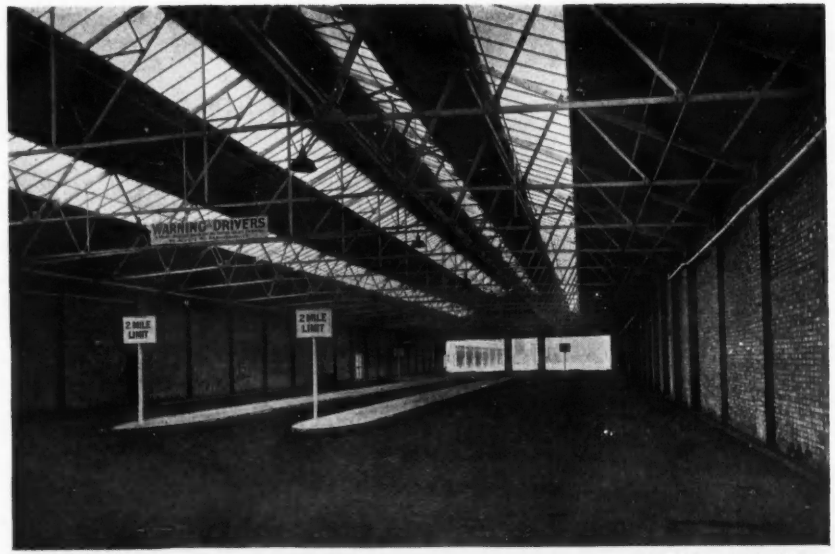
Plymouth Competition

The R.I.B.A. Competitions Committee call attention to the fact that the conditions of the Competition for designs for the Sunday School for the First Church of Christ Scientist, Plymouth, are not in accordance with the Regulations of the R.I.B.A. They are in negotiation with the promoters in the hope of securing an amendment. In the meantime Members should not take part.



The architect's elevational drawings of the various buildings and appurtenances. The shops and offices, with residential flats above, facing on Clapham Road, are previously existing premises, refaced, with provision for advertising spaces, and reconditioned; those bordering the access road leading to the station proper are new. Among the latter ranges of buildings special provision has been made for waiting-rooms, lavatories, and a buffet, for the use of passengers, and offices for the use of the company.

buildings special provision has been made for waiting-rooms, lavatories, and a buffet, for the use of passengers, and offices for the use of the company.



The central plan indicates the large extent of the accommodation, representing an area of 635 ft. by an average of 75 ft., of the station itself. This is all under cover, top-lit, and includes ten platforms for over 300 buses to pick up and set down passengers. The surrounding sketches give aspects of two elevations, a section, and a bird's-eye view indicating the situation and layout of the station.

London Terminal Coach Station, Kennington, S.E.]

Inside the building, looking towards the inner end, where a filling station of 20,000 gallons capacity is provided. The notice-boards show, on one side, "Passengers not allowed beyond here," and, on the other, "2-mile limit."

[By Edward W. Wallis

Looking from within towards the main entrance. Ten platforms are provided, each to take 30 to 40 coaches, and it is estimated that 400 per day will leave, and as many arrive, when the station is fully working.

LITERATURE

MODERN ARCHITECTURE AND OLD FURNITURE

IN assuming that modern art is dangerous and decadent, and as temporary a phase as was *l'art nouveau* of pre-war days, Mr. Adams-Acton is either curiously prejudiced or very far-sighted. Whether or not he is prejudiced will, I think, be obvious; but if he is far-sighted, the ordinary reader could with perfect justice say that he has allowed his eyes to wander so far towards the horizon as to lose all cognizance of what is going on around him.

Mr. Adams-Acton sets out to provide us with a book containing the best models of furniture and architecture, from which we may learn to recapture the grace and charm of other days, and, bravely assuming, as he does, that modern art is "Jazz" and "a fashionable craze," his intention is logical enough. The trouble is that in his eagerness to find this excuse for writing his book, he has failed to explore the field of modern work with sufficient thoroughness to convince his reader that his view of modern work is just.

Had he desired elegance coupled with modernity, we know that he could have found it easily enough in Denmark or Sweden, while if it were sane but charming domestic work that he wanted, what could be more easily and abundantly seen in England today? Yet he neither mentions Denmark nor Sweden nor explores the field of England's modern work beyond a glance at (1) a marble staircase in Park Lane (designed we are told in the presence of King Edward), (2) the gardens at Moor Close, (3) a Westminster Bank, and (4) a "Gothic" billiard room in a country house—an unhappy choice of examples which, apart from being markedly unrepresentative of current work in England, cannot truthfully be said to be either useful or wholly domestic.

He reveals the traits, indeed, which one has for some reason come to connect with those who dote unduly on the antique. Of these traits, lack of pure judgment is perhaps the most prominent. That the unsuitability of incorporating a Tudor interior in a French house should pass unnoticed—with approval, in fact, since it is set out by the author himself—is significant enough, but when we find him assuring us that a man is a better artist than his predecessors, because many of his figures "which were carved *to meet the requirements of architecture*" happen to be "complete in themselves," we begin to wonder whether Mr. Adams-Acton has any precision of mind at all, ignoring as he does here a prime factor in the judging of architectural decoration. After the recent discussion that has raged round the figures on the Underground building at St. James's Park Station, perhaps this indiscretion seems more glaring than it would otherwise have done; but that chance circumstance is no cause for leniency, as we find in addition that his appreciation of furniture is often unduly warped by considerations of age, rarity or historic sentiment.

That the book contains much interesting information, many good photographs both of collectors' pieces unlikely to be seen publicly, and of good examples of architecture (though the series is patchy in this respect) makes one regret very keenly that the material could not have been utilized in some more plausible form, or by an author whose sense of fitness would at least have eradicated the unfortunate taint of "Art-dealerism" from the text, which at present is a strange medley of historical data, professional knowledge of furniture—the part in which the author is most at home and most interesting—and quite amusing gossip, ending up with avuncular advice to those wishing to become good buyers and sellers of antique furniture—a whole not very shapely from a literary standpoint and inevitably pregnant with irrelevances.

If I am wrong, and Mr. Adams-Acton is justified in his condemnation of modern domestic art, then for the sake of convincing his opponents he would have been wise to have appended a series of the best modern examples to show how bad, by comparison with antique models, modern work is. Abuse alone carries little weight, and since no such comparison is facilitated, many will remain unconvinced of the decadence of current work, and will therefore fail to appreciate his excuse for the publication of the book, however interesting the incidental information and photographs may be.

The production of the volume is admirable: would that the book itself were more worthy of the trouble that has been expended upon it!

H. P.

Domestic Architecture and Old Furniture. By Murray Adams-Acton. £2 2s. Geoffrey Bles.

CANTERBURY AND ROCHESTER

THE nature of a guide-book may be said to be determined by its readers. A thirst among European travellers for accurate information, readily accessible in the order of its importance to those engaged, as most European travellers are, in skimming the cream from the best of everything that remains to be seen, has produced Baedeker.

This guide under review may be assumed to be addressed to a section of the English public that takes a semi-professional interest in the history of ecclesiastical architecture; and is led rather by the archæologically-minded clergy, than by architects. It is written largely by clergymen, who,

A view of Rochester Cathedral.

[*From* Canterbury] and Rochester, with Minster in Sheppey.]

Canterbury Cathedral and the Prior's Gate.

[*From* Canterbury and Rochester, with Minster in Sheppey.]

armed with a working knowledge of church architecture and something more of history, are exactly fitted to describe the churches they know so well, in the terms best understood by their readers.

There is, in this well-established relationship between author and reader, an exchange of enthusiasm which makes even the baldest catalogue of monuments more readable than the condensed information of Baedeker. It is as though we were being taken over the church by its cultivated rector instead of by a rapacious sacristan; and once one can be sure that we are being accurately informed, there could be no more charming way of imbibing knowledge.

As a pocket guide, I find that a great deal of detailed information, both architectural and historical, has been set down in very readable form; so that, relying only upon my memory, I have found it possible to read with interest what is written for the visitor who stands in the presence of the thing described. Good plans and maps, together with excellent photographs and a workable index, make easy the way. These things are half the battle in preparing a guide book. They engender confidence and trust in the reader.

From the description of Canterbury, its cathedral and its several churches, there emerges a very clear picture of the mediæval city of the great pilgrimage, which makes the guide more than usually interesting as a book, as it must heighten the enjoyment of the reader-visitor. I missed some fitting eulogy of the Norman work on the choir transept of Canterbury. It is worthy of the visitor's attention by reason of its fine proportions, and because there is enough of it to reconstruct the character of a whole earlier cathedral.

That is a matter of taste, and taste runs commonly away from Norman to the more properly English. Be that as it may, the omission detracts little from a guide which very clearly maintains the high level of scholarship demanded by a series of which Messrs. Bell, the publishers, may be justly proud.

LET US TIDY UP

THE proper solution of the litter problem will have to produce a reorientation of the public mind towards the parks and pleasant places where the many take their ease, before the morning after Bank Holiday will look upon green grass instead of a distressing harvest of torn newspapers and broken bottles. The civic mind runs sluggishly on Bank Holidays. Families are large, and the day too short to look forward to tomorrow. Nothing, therefore, but a strong, inborn sense of responsibility will make the poor parents of active families see that the pitch they leave behind them on Hampstead Heath is clean and tidy.

Mr. H. H. Peach, untiring in every effort to drown ugliness and untidiness, has produced the little pamphlet, the subject of these few words, and has addressed himself to children and to their teachers. What better way of making tidiness instinctive? And how more naturally than through the agency of rhymes and doggerel, puns and disarming slogans?

This, for instance, lends itself with great effect to family and communal chanting :

> Banana skins and luncheon scraps,
> Orange peel and choc'late wraps,
> Broken bottles, torn rags,
> Kodak cases, paper bags,
> Cigarettes, and matches spent,
> Cardboard plates, and papers rent,
> Tins, and suchlike odds and ends,
> Spoil this place for other friends.

—and this, from among a collection of litter notices, strikes the right note of firmness :

> A littered landscape is a shame to England.
>
> Orange peel and papers, bury them or take them home.
>
> Bottles and tins, remove them. Left about or lightly buried,
> They are a danger to man and beast.
>
> Clear up before you leave. Others will thank you.

Slogans I like least. They tend towards rudeness : "Clear up before you clear out" would spoil a place for me. Yet I know that desperate states call for desperate remedies.

Mr. Peach reminds us that the beastly habit of spitting was cured by public opinion. So will the litter problem be cured if we persevere.

BUILDING DEFINITIONS AND FORMULÆ

AMONG the series of booklets, *Definitions and Formulæ for Students*, published by Sir Isaac Pitman and Sons, Ltd., is one of particular interest to architectural and building students. It has appeared from the pen of Mr. Thomas Corkhill, and provides a useful reference of building definitions and formulæ carefully selected by the author, to make the widest appeal to both student and worker. The booklet is arranged in the following six sections : Definitions, mensuration, trigonometry, structural formulæ, domestic engineering, memoranda. It should prove a useful refresher for the student preparing for examinations, and a handy reference book for the workshop or the office to tide over difficulties when textbooks are not available.

LAW REPORTS

INCORPOREAL RIGHTS : COURT OF APPEAL JUDGMENT

Stumbles v. *Whitley. Court of Appeal. Before Lords Justices Scrutton, Greer, and Slesser*

This appeal raised an important question as to whether, where a lease of business premises included incorporeal rights over other premises, the court to which application was made for a new lease under the Landlord and Tenant Act, 1927, had jurisdiction to include in the lease similar incorporeal rights, or could only grant a lease of the corporeal hereditaments without those rights.

The appeal was by the defendant from a judgment of a King's Bench Divisional Court in favour of the plaintiff.

Mr. Barrington Ward, K.C., for the appellant, stated that by a lease dated September 28, 1921, made between the defendant and Mr. Arthur Bidwell, and Mr. A. Rees, the Royal Sands Hotel at Slapton, Devon, and certain fishing rights on Slapton Ley, were demised to Mr. A. Bidwell and Mr. A. Rees for seven years from March, 1922, at rents of £110 a year for hotel and summer fishing rights and £55 for winter fishing rights. The full benefit of that lease and the hotel goodwill were vested in the plaintiff by assignment. In March, 1928, the plaintiff, as tenant, gave notice to the defendant, as landlord, that he required a new lease to be granted to him from the date of the expiration of the lease, on the ground that he would be entitled to compensation under the Landlord and Tenant Act, 1927, but that the sum which could be awarded to him under Section 4 of the Act would not compensate him for the loss that he would suffer if he removed and carried on his business on other premises. The matter had gone before a referee and then before a county court judge, who refused to adopt the referee's report because he found that the fishing rights were not " premises " within the Act. Ultimately the matter came before the Divisional Court, who held that where a hotel was let with fishing rights, and where on the termination of the tenancy the grant of a new tenancy was ordered by the tribunal under the Act, the tenant was entitled to have the fishing rights included in a new lease. His client appealed from this decision, and counsel contended that the fishing rights did not form part of the " premises " within the meaning of the Act; that on the strict construction of the word " premises " it could not apply to an incorporeal hereditament as a fishing right.

The Court held that the Divisional Court arrived at a right conclusion and dismissed the appeal. Mr. Topham, K.C., for respondent, was not called upon to argue.

Lord Justice Scrutton, in giving judgment, said the purpose of Part I of the Act in question was to compensate tenants for improvements and goodwill. Where there were cases where that would not be a sufficient remedy, the Act provided that the tenant could serve on the landlord a notice requiring a new lease to be granted to him of the premises at which the trade or business was carried on. It had been argued that " premises " in the Act could not include an incorporeal hereditament like a fishing right. In his opinion the construction of the word " premises " in the Act related to the whole subject-matter of the lease including the fishing rights in question.

Lord Justices Greer and Slesser concurred.

POSSESSION—LEASE OF LAND—TENANCY

Ladies' Hosiery and Underwear, Ltd., v. *Parker. Chancery Division. Before Mr. Justice Maugham.*

The plaintiffs, the Ladies' Hosiery and Underwear, Ltd., sued Mr. H. A. Parker and Mrs. H. Parker, of Bradmore Lane, King Street, Hammersmith, for a declaration that the company was entitled to possession of a strip of land at the rear of shop premises known as 18 King Street, Hammersmith.

The plaintiffs asserted that the tenancy, if any, of the defendants was at the most a weekly tenancy. The defendants claimed to be yearly tenants of the property and to be entitled to be given six months' notice to quit, expiring on October 12 next following the notice.

The land was part of property in King Street comprised in a lease dated December 22, 1838, for a term expiring on September 29, 1923, and had been let by an agreement dated October 10, 1914, at a rent to be paid weekly, to Mr. Parker for three years by a Mr. Jenkins, an underlessee, whose term expired on May 9, 1923. Mr. Parker remained in possession after his tenancy had expired, paying the rent, first to Mr. Jenkins, and after March 25, 1923, at Mr. Jenkins's direction, to the Midland Bank, who had meantime become the owners of the leasehold reversion expectant on Mr. Parker's tenancy.

The plaintiff company on October 16, 1920, acquired from the owner of the reversion to the lease of 1838, and subject to that lease, a lease of 18 King Street, and the land at the rear for fifty years from September 29, 1920. About September, 1925, the plaintiff company's managing director interviewed the defendants, who understood from him that their occupation would be allowed to continue, and went on paying the rent to the bank. Notice to quit was given later. The defendants claimed that rent had been paid to the bank as agents for the owners of the land behind 18 King Street, and that the company was estopped, by the interview of September, 1925, from asserting that the rent was not paid to the bank as its agent.

His lordship held that the plaintiff company were entitled to possession of the land and that the holding over after the termination of the agreement of October 10, 1914, would have resulted only in a weekly tenancy.

CORRESPONDENCE

ELM AND WEATHER BOARDING

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—I should like to refer to the increasing use by architects of waney-edged elm and oak boarding as sheeting for the outer walls of houses.

Any fad, however grotesque, can find its followers, and the originator of this particular craze has, in my humble opinion, done a great disservice to the picturesque. A material that is quite congruous in company with the naturally curved or irregular details of a timber-built country barn may become positively offensive when associated with the more precise horizontality and verticality of the lines of an ordinary domestic building.

I express this personal view in the hope that it may find some support in more influential quarters.

W. BEESTON

TWO WELL-KNOWN FIRMS AND RURAL PRESERVATION

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—Messrs. J. C. Eno, Ltd., have forwarded to the Council for the Preservation of Rural England a copy of a resolution passed at a recent meeting of their Board of Directors. The resolution is as follows :

" That it be a direction to the advertising department that posters or outdoor signs should not be placed in positions where they would spoil, or tend to spoil, the beauty or amenities of their surroundings."

This follows closely upon the decision by Messrs. Shell Mex, Ltd., to remove any of their signs which may be a disfigurement.

The attitude to this problem displayed by two such well-known firms is deserving of the widest publicity.

H. G. GRIFFIN, Secretary,
Council for the Preservation
of Rural England.

ART IN ADVERTISING

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—An act of kindness is generally beset by attendant dangers. But your recent practice, or the practice of your advertisers, almost compels me to take the risk and the liberty of pointing out to you that your advertisement pages, if you persist in your present course, will soon rival in interest the substance of your Journal.

To take a more serious line, Sir, and drop my mock finger-wagging attitude, I want to tell you that the advertisements in THE ARCHITECTS' JOURNAL often give me a great deal of pleasure. And this is due, Sir, in no small degree, and I think I am far from being alone in this opinion, to the delightful drawings of Mr. J. D. M. Harvey. Advertisements intended to appeal to discriminating men—I refer, of course, to your numerous readers—will always succeed better through the art of pleasing than by bombast and assertiveness.

You have only yourself, or Messrs. London Brick Co. and Forders, Ltd., to blame, Sir—to take an instance from your New Year issue—if I am led to spending my time with Phorpres Flettons instead of perusing Rates of Wages, Prices Current, or the many articles and essays for which I originally paid my subscription.

JAMES BURFORD

SOCIETIES AND INSTITUTIONS

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS

At a meeting of the Council of the Association, Alderman Ewart G. Culpin, L.C.C., F.I.A.A., M.T.P.I., was elected President of the Association for the ensuing year. The retiring President, Major R. I. Tasker, and Mr. Alfred Stephens Cross, M.A., F.I.A.A., were elected Vice-Presidents of the Association.

ARCHITECTURAL DECORATION AND COLOUR

Mr. J. M. Holmes, A.R.C.A., of the Architectural Association, delivered a lecture at a meeting of the Architectural Association of Ireland, on "Architectural Decoration and Colour."

Mr. Holmes dealt with design generally, with interior decoration, and more particularly with the use of colour in decoration. Colour, he said, was bound up with the subject of form and pattern in decoration, whilst decoration itself was bound up intimately with design. He gave a short outline of the manner in which ideas in construction and design change.

The lecturer compared Victorian ideas with the modern tendencies. Victorian decoration could be said to have been rational, because it was the conscious expression of the Victorian outlook. But what was the outlook of the present day? It seemed to him that the touchstone of modernism was the desire to do away with pretence in all aspects of life.

THE INVENTION OF CONCRETE

Sir Banister Fletcher, P.R.I.B.A., at the Central School of Arts and Crafts on Wednesday last, delivered a lecture (the first of a series) on Roman architecture of Classic times.

He first drew attention to the influence which affected Roman architecture during the time when the world-wide Empire of Rome was at the zenith of her greatness. The Romans, he said, had an abundance of building materials at their disposal, and an expanding Empire gave birth to a variety of building needs, to meet which the Romans invented a new composite material, which was made up of broken stone and Pozzolana cement and poured like a household jelly into moulds and left to set. Then the wooden casing was removed, and the concrete remained hard and rigid.

The invention of this material was the outstanding fact in the structural aspect of Roman architecture; for this quality of rigidity made it possible to cover great areas with domes or vaults of concrete.

"IMPRESSIONS OF AMERICA"

In a talk to the Harrogate Rotary Club on "Impressions of America" Dr. H. P. Thompson, of Harrogate, said the silhouette of the skyscrapers of New York as seen from the sea was neither hideous nor beautiful, but interesting and suggestive of the power and determination of the American people. The height of the buildings made the streets sunless.

He said that the joy of collecting antiques had entered the bones of American women, and that in the near future it would take all the ingenuity of the antique dealers of Europe to satisfy the demand. Americans appeared to have no regard for the beauty of the countryside, which was littered with dumps of old motor-cars, while the roadsides were covered with blatant advertisements.

WEST YORKSHIRE SOCIETY OF ARCHITECTS

Mr. G. S. Francis delivered a lecture before the above Society on "Electric Lighting in relation to Modern Tendencies in Architecture." Mr. G. H. Foggitt presided.

Mr. Francis remarked that architecture of the past reflected, in external form, the spiritual character of its age, and in like manner, if it is to be true, modern architecture must reflect in its forms the dynamic spirit of contemporary thought and action. In former times, he said, men lived by faith, and the interior illumination of their buildings was rightly described as a "dim religious light"; but to-day men have to live more by the light of intellect, which prompts them to increase the quality and quantity of illumination in their buildings.

THE HENRY SAXON SNELL PRIZE

The Henry Saxon Snell prize is awarded by the Council of the Royal Sanitary Institute at intervals of three years, the funds being provided by the legacy left by the late Henry Saxon Snell (Fellow of the Institute). The prize this year (1930) will consist of fifty guineas and the Medal of the Institute, and is offered for an essay on "Improvements in the Sanitary Provisions of Schools." The essay, to consist of not more than 5,000 words, must be delivered on or before August 30, 1930, addressed to the Secretary of the Royal Sanitary Institute, 90 Buckingham Palace Road, London, S.W.1.

CAST CONCRETE PRODUCTS ASSOCIATION

The first annual meeting of the Cast Concrete Products Association was held at the Royal Agricultural Hall. Major F. G. P. Gedge extended a hearty welcome to the members, a number of whom had shown their keenness by travelling all night in order to be present at the Association's first birthday. He thought the large number present was a matter for congratulation, when it was remembered that a year ago there were only seven members, but in the twelve months membership had grown to twenty times that number.

The Chairman referred to the recognition the Association had received, and complimented the different subcommittees on the work that had been carried out to improve and establish the quality of certain precast units and for their researches into the crazing of cast stone; also the Executive Committee for registering the Association's Trade Mark, which implies a general undertaking on the part of members to supply goods of a high standard of quality; and, when specifications have been adopted, could be used on the actual products.

The report and provisional accounts were adopted, and Messrs. Crewdson, Youatt and Howard were re-elected as the Association's auditors.

In Messrs. Carter and Co.'s advertising Column, "An Architecture of Speed," appearing on page xxiii of our last issue, the name of Messrs. Wallis, Gilbert and Partners, the architects concerned, was inadvertently omitted from the reference to factory buildings designed by them.

OBITUARY

A. E. OWEN

We regret to record the death of Mr. A. E. Owen, principal of Messrs. Rubery, Owen & Co., which occurred on December 30.

Mr. Owen had been ill for a few weeks, and, although it was realized his condition was serious, there was great hope of his recovery. He took a deep personal interest in his works, and was known personally to numbers of the firm's customers.

The business will be carried on under the same management, and on the principles established by Mr. Owen; and in accordance with his wishes his two sons are entering the business.

TRADE NOTES

Concrete—The Spirit of the Age, is a practical record of some of the most important work of the Trussed Concrete Steel Company, Ltd., reinforced concrete engineers. Many illustrations of buildings of widely different design are illustrated, including factories, mills, warehouses, water towers, tanks and reservoirs, gantrys, bunkers and hoists, bridges, wharves and jetties, stands and pavilions, theatres and institutions, swimming baths and municipal buildings. The whole booklet bears convincing evidence of the successful blending of the practical and æsthetic qualities of a material that is taking up its position as the spirit of the industrial age. Much of the work illustrated was designed by prominent London and provincial architects.

Several changes are announced in the directorate of Messrs. Sissons Brothers & Co., Ltd., varnish, paint and enamel manufacturers. Mr. Geo. H. Dawson, joint managing director, who has been connected with the firm for over thirty-seven years, retired on December 31. New directors appointed are Mr. J. D. Bissland and Mr. R. C. Sissons; the latter is the only surviving son of the late Mr. Harold H. Sissons, a former chairman of the company. The new Board will be constituted as follows: Messrs. T. B. Sissons, chairman; O. H. Sissons, vice-chairman; and J. A. Dew, managing director; and Messrs. J. D. Bissland and R. C. Sissons, directors.

Messrs. O'Brien Thomas & Co., Ltd., have sent us a copy of their new catalogue No. 54, of fireplaces, cooking apparatus, domestic hot-water installations and sanitary appliances. In it are illustrated a large number of designs, covering every conceivable appliance for heating, cooking and sanitation. In heating there are interesting fireplace suites for the office or home, suitable for coal, gas, or electric fires, and various accessories, such as curbs, companion stands, fire-screens, and mantel registers. There are also many designs of combination grates, anthracite stoves, school grates, and domestic boilers, each with its own particular advantages to the user. A copy of the catalogue will be sent post free to any architect or builder on application to Messrs. O'Brien Thomas & Co., Ltd., at 17 Upper Thames Street, London, E.C. 4.

The report of the directors of the Sussex Brick Co., Ltd., was presented to the shareholders at the second annual meeting, held at Horsham recently. A balance of £9,686 2s. 5d. was brought forward from the previous year. The profit for the year ending September 30, including rents, dividends and interest received, amounted to £44,631 5s. 10d., against which, as directors' remuneration, taxation and interest paid has been charged a sum of £11,712 4s. 6d., leaving available for dividends, etc., £32,919 1s. 4d. Out of this there was paid an interim dividend of 4 per cent. less tax on the preferred ordinary shares on April 30, £4,800; and an interim dividend of 7½ per cent. less tax on the deferred shares was paid on May 31, £6,000. The balance to the credit of the profit and loss account on September 30 was £31,805 3s. 9d. The Directors recommend that this balance shall be disposed of as follows:—Final dividend of 4 per cent., less tax, on the preferred ordinary shares, paid October 31, 1929, £4,800; to pay a final dividend on the deferred shares of 15 per cent., less tax (making 22½ per cent., less tax, for the year), £12,000; to employees' welfare and staff bonus, £1,500; to depreciation reserve, £5,000; carry forward, £8,505 3s. 9d. During the year, the Company acquired the assets and undertakings of Messrs. Thos. Mitchell and Sons (Guildford), Ltd.

THE BUILDINGS ILLUSTRATED

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:—

Constables, Uppingham (pages 154 and 157–164). General contractors, Gee, Walker and Slater, Ltd. Sub-contractors: Wenham and Fowler, casements and hot water; J. Glenn & Co., electric light. Uppingham Quadrangle and Football Pavilion. General contractors, A. Dalby. Sub-contractors: Wenham and Fowler, casements and hot water; J. Glenn & Co., electric light.

London Coach Terminal Station (pages 173–175). General contractors, Hickman (1928), Ltd., who were also responsible for the demolition, excavation, foundation, dampcourses, asphalt, concrete blocks, reinforced concrete, bricks, fireproof construction, roofing felt, partitions, glass, patent flooring, ventilation, plumbing, sanitary fittings, door and window furniture, casements, rolling shutters, fireproof doors, plaster, metalwork, joinery, marble, tiling, and shop fittings. Sub-contractors: Adamite Co., Ltd., Atlas White Portland cement stucco used to all elevations (the adjoining shops and the buildings which flank these shops were also executed in Atlas White Portland cement stucco); Smith Walker, Ltd., structural steel; G. R. Speaker & Co., main station roof; H. Hope and Sons, Ltd., patent glazing; Pruden and Pope, electric wiring and electric light fixtures; Synchronome Co., Ltd., clocks.

House in Sheffield (pages 182 and 183). General contractor, D. Hancock. Sub-contractors: C. H. Gillam and Sons, joinery; Gibbs, sand-faced roofing tiles; Corrie and Sons and Aquaheat Co., plumbing, hot-water services and central heating; Crittalls Manufacturing Co., Ltd., metal windows; Vita Glass Marketing Board, glass.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full published specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

262. International Copperclad Co. Metallized roofing - elements. January 3.

64. Marechal, F. E. Mortar, concrete, etc. January 1.

SPECIFICATIONS PUBLISHED

311270. Rauwald, F. Box moulds for concrete constructions.

323203. Rosenberg, A. Therapeutical buildings and structures.

COMPETITION CALENDAR

February 28.—The Accrington Corporation invite architects of British nationality to submit designs in competition for new Police and Fire Stations which it is proposed to erect on a site in Manchester Road, Accrington. Assessor: Herbert J. Rowse, F.R.I.B.A. Premiums: £250, £150 and £100. Conditions of the competition, together with a plan of the site and all particulars may be obtained from William Henry Warhurst, LL.B., Town Clerk, Town Hall, Accrington. Designs to be submitted before February 28.

April 28.—Messrs. Josiah Wedgwood and Sons, Ltd., invite designs in competition for a Wedgwood Vase, to be made in commemoration of the Bicentenary of the Birth of Josiah Wedgwood, which will be celebrated in 1930. The vase is intended as a centrepiece, and may be either a simple vessel decorated in relief and colour, or an architectural composition embodying ornamental adjuncts in the round. It should not exceed eighteen inches in height, though to this dimension not more than six inches may be added for a pedestal or plinth. The decoration is to be by means of ornament applied to a ground of contrasting colour, as is the custom in this manufacture. Assessors: Philip Connard, R.A., W. Reid Dick, A.R.A., H. S. Goodhart-Rendel, F.R.I.B.A., and Frank H. Wedgwood. Premiums: £100, £50 and £25. Full particulars may be obtained on application to the Secretary, Messrs. Josiah Wedgwood and Sons, Ltd., Etruria, Stoke-on-Trent. Latest date for submission of designs: April 28.

THE ARCHITECTS' DIARY

WEDNESDAY, JANUARY 22

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Architectural Lighting." By R. W. Maitland. **8 p.m.**

LONDON SOCIETY, Lancaster House, St. James's Street, S.W.1. Visit to the Savoy Hotel Laundry, 19 Union Road, Clapham Road, S.W. **2.30 p.m.**

COUNCIL FOR THE PRESERVATION OF RURAL ENGLAND, Gloucestershire Branch, and the Gloucester Architectural Association. At the Municipal Art Gallery, Cheltenham. Exhibition of architectural drawings, including photographs and models. Until January 29. 10 a.m. till 5 p.m. (Wednesdays and Saturdays, 10 a.m. to 8 p.m.) **10 a.m.**

L.C.C. CENTRAL SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. "Town Planning and Forums of Ancient Rome and the Empire." By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

THURSDAY, JANUARY 23

R.I.B.A., 9 Conduit Street, W.1. Meeting of the Literature Standing Committee. **4.30 p.m.**

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. Exhibition of Books on Architecture from the Leeds Public Library, and an Address by R. J. Gordon, Librarian. **7 p.m.**

INSTITUTION OF WELDING ENGINEERS. At the Chamber of Commerce, 95 New Street, Birmingham. "Modern Improvements: Electric Resistance Welding Machines." By C. A. Hadley. Followed by a Discussion. (Lantern Illustrations.) **7 p.m.**

SATURDAY, FEBRUARY 1

Sunrise, 7.40 a.m. Sunset, 4.49 p.m.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE ASSOCIATION OF ARCHITECTS. Dinner of the Northampton Branch at the Angel Hotel, Northampton. **6.45 p.m.**

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. Manchester and District Branch. Visit to works of J. G. Wagstaff, Ltd., Dukinfield.

MONDAY, FEBRUARY 3

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture III.) **8 p.m.**

R.I.B.A., 9 Conduit Street, W.1. Business Meeting. Election of Members. **8 p.m.**

TUESDAY, FEBRUARY 4

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. Last of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

WEDNESDAY, FEBRUARY 5

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. "The Appreciation of Public Art in England Through the Ages." By Dr. Tancred Borenius.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE ASSOCIATION OF ARCHITECTS. Annual Meeting at Northampton. **4 p.m.**

THURSDAY, FEBRUARY 6

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate: "That the Architectural Beauties of England be Preserved." Affirmative, E. J. Storry. Negative, G. B. Stickney. **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. At the Hotel Cecil, Strand, W.C. Annual Dinner and Reunion of the Institution. No tickets will be issued after Monday, January 27. 7 for 7.30 p.m. **7 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "The Raphael Cartoons." By A. P. Oppé. **5.30 p.m.**

FRIDAY, FEBRUARY 7

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. "The Historical Background of Italian Art." By Professor Edmund G. Gardner. F.B.A. **5.30 p.m.**

SATURDAY, FEBRUARY 8

Sunrise, 6.32 a.m. Sunset, 5.51 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Third of a Series of Six Non-Technical Lectures on Present-Day Architecture. "The Creation of a Garden City." By Louis de Soissons, O.B.E., F.R.I.B.A., S.A.D.G. **3 p.m.**

MONDAY, FEBRUARY 10

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, Southwark, S.E.1. "Automatic Control in Heating and Air Conditioning Installations." By B. T. Wingfield. Light refreshments at 6.30 p.m. **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, North-Eastern Centre. At the Armstrong College, Newcastle-on-Tyne. "Recent Developments in the Protection of Three-Phase Transmission Lines and Feeders." By T. W. Ross and H. G. Bell. **7 p.m.**

TUESDAY, FEBRUARY 11

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. First of a course of three lectures on Electrical Transmission by Overhead Lines (1) "The Mechanical Aspects of Overhead Transmission Lines, including Conductors, Insulators and Supports." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

ARCHITECTURAL SOCIETY, University College, Gower Street, W.C.1. Centenary Appeal. The Society presents: R.U.R., by Karel Capek, in the College Gymnasium. Tickets, 3s. 6d. and 2s. 4d. (Also February 12 and 13.) **8 p.m.**

THURSDAY, FEBRUARY 13

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Print Making and Collecting." By W. M. Keesey, M.C., A.R.I.B.A., A.R.C.A., A.R.E. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Welding." By Major James Caldwell, M.INST.C.E. **6.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Early Italian Engravings." By Professor A. M. Hind, O.B.E., F.S.A. **5.30 p.m.**

SATURDAY, FEBRUARY 15

Sunrise, 6.16 a.m. Sunset, 6.3 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Visit to the Home Office Industrial Museum, Horseferry Road, Westminster, S.W.1. Meet at entrance. **2.15 p.m.**

MONDAY, FEBRUARY 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting. "The Thames Valley Preservation Scheme." By Professor Patrick Abercrombie, M.A., F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture I.) **8 p.m.**

TUESDAY, FEBRUARY 18

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Second of a course of three lectures on Electrical Transmission by Overhead Lines. (2) "Electrical Characteristics of Lines, Resistance, Inductants, Capacitance, Effects of Atmospheric Conditions on Insulation." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

ILLUMINATING ENGINEERING SOCIETY, 32 Victoria Street, S.W.1. General Discussion on "Problems in Illuminating Engineering." Light refreshments at 6.30 p.m. **7 p.m.**

WEDNESDAY, FEBRUARY 19

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. Cantor Lecture, "Alfred Stevens: Architect-Sculptor-Painter." **8 p.m.**

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Honan Night. "Modern Architecture of Sweden." By B. B. Lewis.

THURSDAY, FEBRUARY 20

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate: "That under the present system of Competitions in England, the progress of Architecture is being retarded." Affirmative, J. G. Sidebottom. Negative, T. F. Firth. **7 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Furniture." By H. Clifford-Smith, F.S.A. **5.30 p.m.**

FRIDAY, FEBRUARY 21

LONDON SOCIETY. At the Royal Society of Arts, John Street, Adelphi, W.C.2. "The Royal Observatory, Greenwich." By Sir Frank Dyson, Astronomer Royal. **5 p.m.**

UNIVERSITY OF LONDON, UNIVERSITY COLLEGE, Gower Street, W.C.1. "The Infirmary of the Mediæval Monastery, with special reference to the Abbey of Westminster." By Professor Percy Flemming, F.R.C.S. (Lantern Illustrations.) **5.30 p.m.**

SATURDAY, FEBRUARY 22

Sunrise, 6.0 a.m. Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Fourth of a Series of Six Non-Technical Lectures on Present-Day Architecture. "Decoration and Furnishing." By G. G. Wornum, F.R.I.B.A. **3 p.m.**

MONDAY, FEBRUARY 24

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Designing for the Film." By Lawrence Irving. 8 p.m. Exhibition of Film Settings (until March 22). **8 p.m.**

TUESDAY, FEBRUARY 25

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Last of a course of three lectures on Electrical Transmission by Overhead Lines. (3) "Typical Transmission Lines in use in Great Britain; Characteristic Features of Low, Medium and High Voltage Construction." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

THURSDAY, FEBRUARY 27

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Social Life and Art in France during the Eighteenth Century." By Professor A. E. Richardson, F.R.I.B.A., F.S.A. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Ferro-Concrete Cooling Towers." By T. J. Grueritte. **6.30 p.m.**

FRIDAY, FEBRUARY 28

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. Ordinary Meeting. At the Chamber of Commerce Buildings, New Street, Birmingham. "Types of Movable Bridges." By J. D. Vaughan, M.SC., A.M.INST.C.E. **6.30 p.m.**

THE WEEK'S BUILDING NEWS

LONDON AND DISTRICTS

Plans passed by the COULSDON U.D.C.: Completion of church, St. James's, Riddlesdown, for the Rev. C. V. Rowe; house, Byron Avenue, for Mr. C. L. G. Morgan; three houses, Hilltop Road, Whyteleafe, for Messrs. E. O'Sullivan, Ltd.; five shops, Whyteleafe Estate, for Messrs. O'Sullivan, Ltd.

The HACKNEY B.C. has prepared a preliminary scheme for extending the town hall at a cost estimated by the borough engineer at £150,000.

The L.C.C. Housing Committee is to prepare improvement schemes for unhealthy areas in HACKNEY, and for the provision of re-housing accommodation on the sites.

Plans passed by the HACKNEY B.C.: Workshop, 140 King Edward's Road, for Mr. J. Krasner; factory, Wilton Road, for Messrs. J. Pritchard and Son; building, rear of 49-55 Paragon Road, for Mr. W. G. Chapman; building, Fremont Street, for Mr. E. Murray; building, Exmouth Place, for the Commercial Motor Transport Co.

The LEWISHAM B.C. is seeking sanction to borrow £9,750 for the erection of disinfecting and cleansing stations at the Wearside Road depot.

Plans passed by the LEWISHAM B.C.: Nine houses, Clarendon Road, for Messrs. McCulloch and Kingslake; eighteen houses, Boveney Road, for Messrs. Wm. The CHESTERFIELD Corporation has asked the Baths Committee to consider the erection of public baths in the Stonegravels area.

The CHESTERFIELD Education Committee has forwarded the plans to the Board of Education for the completion of the reconstruction of Highfield Hall.

Plans passed by the CHESTERFIELD Corporation: Three houses, School Board Lane, for Miss E. Clarke; two houses, Brocklehurst Piece, for Messrs. W. and E. Dolphin; new Crooked Spire Inn, Church Lane, for Brampton Brewery Co.; alterations, Turf Tavern, Holywell Street, for the Chesterfield Brewery Co,. Ltd.; office, off Wharf Lane, for Shell Mex, Ltd.

The West Riding Education Committee has approved revised plans for the erection of a secondary school at HARROGATE, at a cost of £72,000.

The West Riding Education Committee is proceeding with extensions at HEMSWORTH secondary school at a cost of £11,755.

Another large section of the scheme of new buildings for the University of LEEDS will shortly be commenced, plans having now been approved for the new building to accommodate the Department of Chemistry—Inorganic, Organic and Physical. This Chemistry building stretching, when completed, from the Physics Department to Woodhouse Lane, will, together with the mining block at right angles to it, form the north elevation of the new scheme. The east elevation will run alongside Woodhouse Lane for a distance of about 180 feet and at its lower end another wing, containing a number of large laboratories, will reach back a distance of 240 feet towards the Physics building, and will form the southern side of the rectangle of which the complete building will consist. The erection of certain portions of the Chemistry block is being postponed, but even with this omission the building shortly to be started will have a floor space of some 95,000 square feet. At the moment, bills of quantities are being prepared, but it is expected that tenders will be invited in about two months' time.

Plans passed by the MANCHESTER Corporation: Alterations to bank, 90 Cross Street, John Dalton Street and Four Yards; alterations, 82 Market Street and Sickle Street; rectory to church of Our Lady and St. Thomas, Balmain Road, Gorton; store, Hope Street, Gorton; additions to works, Birch Street, City Road, Hulme; additions to offices, Sparkle Street, Store Street, Ancoats; shops, offices and restaurant (amended plan), Quay Street; eighteen houses, Chain Road and Symond Road, Blackley; club, Mauldeth Road and Burnswick Road, Withington; additions to bakery, Farmside Place, Levenshulme; eight shops and houses, Burnage Lane, Burnage; market hall and four shops, Barlow Moor Road, Chorlton-cum-Hardy; twelve shops and houses, Barlow Moor Road, Maitland Avenue, West Didsbury; seven houses, Meltham Avenue, West Didsbury; shop and house, Nuthurst Road, Moston; eight shops and houses, Burnage Lane, Burnage; seven houses, Barlow Moor Road, Chorlton-cum-Hardy; 638 houses, West Didsbury Housing Estate; twelve shops and houses, Barlow Moor Road, West Didsbury.

The MANCHESTER Corporation has obtained the general approval of the Minister of Health to the Corporation's programme for the erection of a further 10,000 houses, and the Housing Committee has authorized the preparation of a further plan, showing a detailed layout of portions of the estate to accommodate approximately 10,000, at Wythenshawe.

The West Riding Education Committee has obtained a site in Syndale Road, NORMANTON, for the erection of a senior school.

The OLDHAM Corporation proposes to secure land centrally situated, as a site for the erection of a municipal workshop for blind people.

The Central Electricity Board has obtained a site at Slacks Valley, OLDHAM, for the erection of a substation.

The PONTEFRACT Education Committee is to erect an elementary school for 420 children.

The Board of Education has approved plans of new buildings for the PONTEFRACT King's School, at a cost of £30,920.

The SALFORD Corporation is being asked to consider the advisability of promoting a Bill to enable the Corporation to erect an exhibition hall on the cattle market site.

The SHEFFIELD Corporation has arranged for the provision of housing accommodation for 782 families on the Spring Street area.

The SOUTH SHIELDS Corporation is negotiating for land at East Jarrow for a housing scheme.

On behalf of the Riverside Tenants Co., Messrs. J. H. Morton and Son, architects, have prepared plans for the erection of forty-six tenement houses at Hardings Bank, SOUTH SHIELDS.

The SOUTH SHIELDS Corporation has instructed the borough engineer and the medical officer of health to prepare an improvement scheme for a slum area.

Plans passed by the STRETFORD U.D.C.: Fourteen houses, Ruskin and Wordsworth Roads, for Messrs. Smith and Allcock, Ltd.; house and shop, Ming Street, for Mr. J. A. Hardy; 130 houses, Barton and Melville Roads, for Mr. J. W. Maunders; alterations, Lyceum Theatre, for Mr. W. Stansfield; additions, Gorse Hill School and Victoria Park School, for the Stretford Education Authority; additions, Chester Road, for Messrs. Colmore Depot, Ltd.; office, Ashburton Road, for Messrs. Brown and Tawse.

The SUNDERLAND Corporation is considering plans for the enlargement of the mental hospital.

The Manchester Education Committee is to erect a school for 750 pupils at WITHINGTON, at an estimated cost of £21,000.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given.

The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 4d. *per hour;* LABOURER, 1s. 4d. *per hour;* NAVVY, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* SCAFFOLDER, 1s. 5d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

	£	s.	d.
Broken brick or stone, 2 in., per yd.	0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

	£	s.	d.
Portland cement, per ton	2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1 3 0	*Trailer*	£0 15 0
3-ton motor lorry	3 15 0	*Steam roller*	4 5 0
Steam lorry, 5-ton	4 0 0	*Water cart*	1 5 0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
If left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1s. 4d. *per hour;* TIMBERMAN, 1s. 5½d. *per hour;* BRICKLAYER, 1s. 9d. *per hour;* PLUMBER, 1s. 9d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

	£	s.	d.
Stoneware pipes, tested quality, 4 in., per ft.	0	0	10
DO. *6 in., per ft.*	0	1	3
DO. *9 in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. *6 in., per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft. 0 4 3
DO. 6 in., per ft. 0 5 0
DO. 9 in., per ft. 0 7 9

CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0	8	3
DO. 6 in., per ft.	0	10	3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

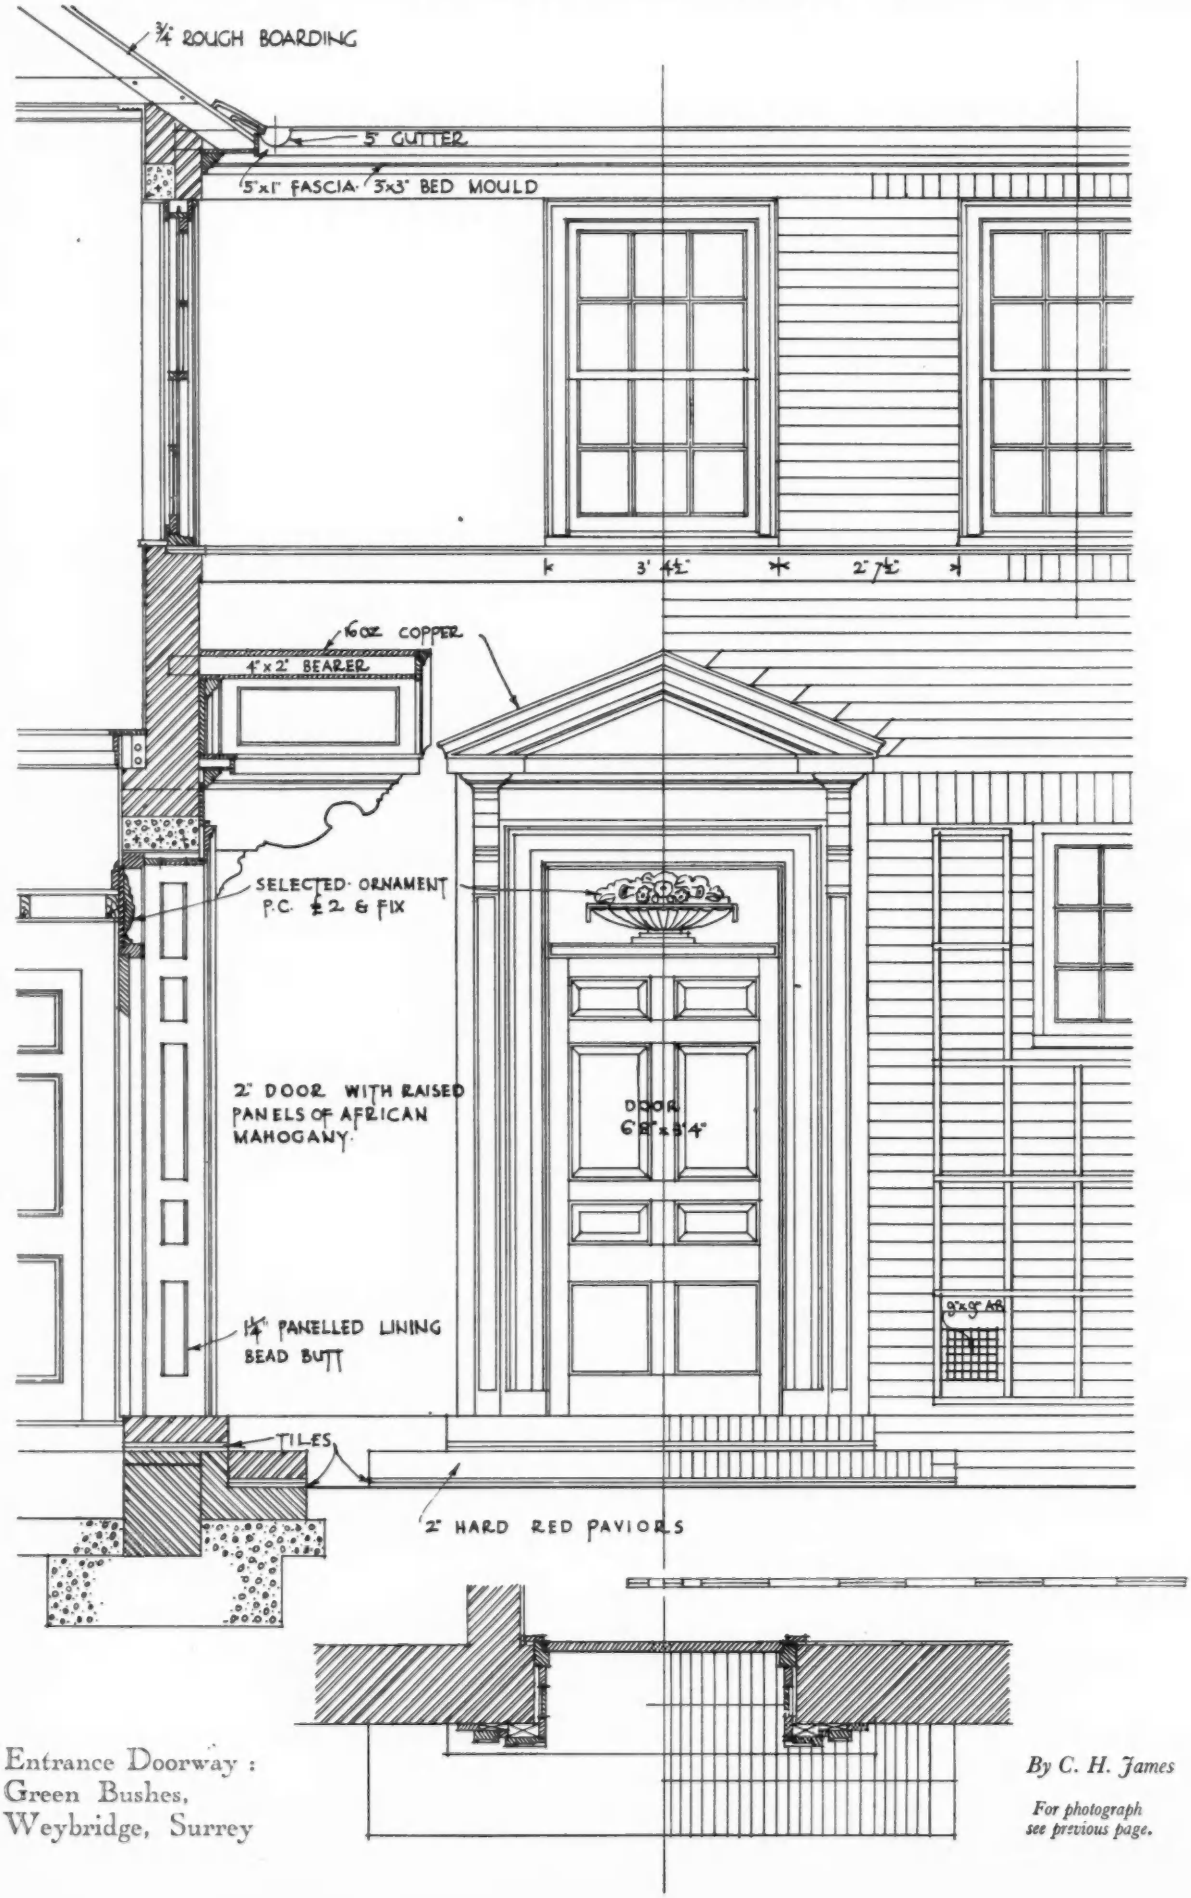
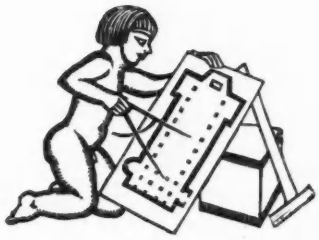
Green Bushes, Weybridge:



The Garden Front

HOODED DOORWAY: GREEN BUSHES, WEYBRIDGE, SURREY
By C. H. JAMES

THE house was built of London stock bricks, heavily distempered, creamy white, the joints of the brickwork being dinged, i.e. not pointed but dragged over to give that velvety texture which is so pleasant in old colour-washed brick buildings. The plinth is tarred up to floor line. The walls are 14 inches thick on the ground floor and 9 inches above, and the 9-inch work has proved perfectly satisfactory from the point of view of keeping out the weather, owing to the distempering and the widely projecting eaves.



The doorway itself is constructed entirely of wood, and the attempt to give shelter without providing any direct support to the hood necessitated care in the design of the brackets. The blind panel over the door was intended to contain a low relief carving, but this, as is so often the case with decorative details, was omitted for the sake of economy. The hood is covered with copper, and the door painted viridian green. For working drawing, see overleaf.

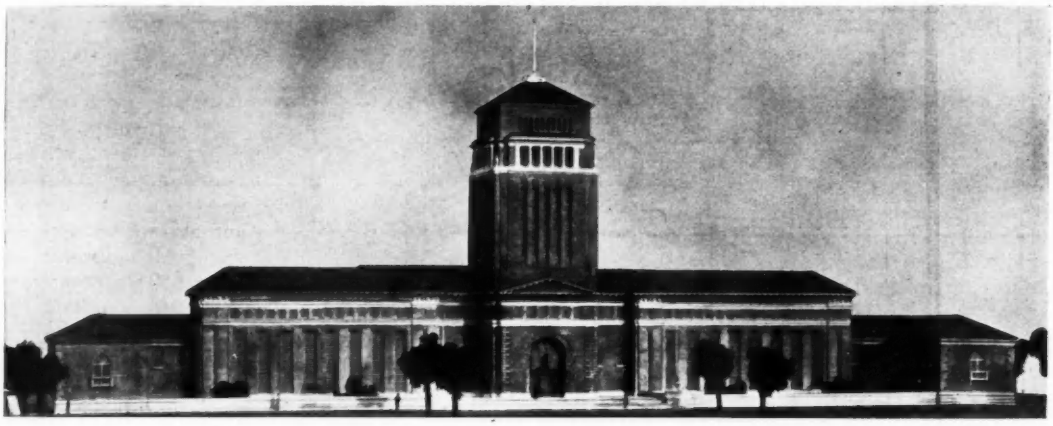
OLYMPUS UNCHALLENGED BY OLYMPIA

"If the accepted design for the proposed new home of the R.I.B.A. were to be in the style of Olympia, the august institution would be split from top to bottom. But there is an obvious difference between an exhibition hall and a building intended to express for a hundred years or more the cultural status of a great profession."



THERE could be no more appropriate place for what may be described as "experimental architecture" than an exhibition hall. For often the objects displayed in such a hall themselves partake of this experimental character, and the very term "exhibition" calls to one's mind something temporary and transient. Even the most convinced respecter of tradition, therefore, will welcome the new Olympia designed by Mr. Joseph Emberton, because it provides a means of "trying out" certain architectural ideas which, even if not all can be expected to agree with them, are deserving of our respect.

Of course, if by some strange dispensation of fortune it came about that the accepted design for the proposed new home of the Royal Institute of British Architects were to be in the style of this Empire Hall at Olympia, the august institution would be split from top to bottom and there would be formed a rival society, not entirely composed of senior members, who would decline to acknowledge allegiance to a body which had deliberately housed itself in such a building. There need be no mistake about that. But the new Olympia carries no challenge to Olympus. No bones will be broken over it, for there is an obvious difference between an exhibition hall designed to give satisfaction to an individual company, and a building which is intended to express for a hundred years or more the cultural status of a great profession. At Olympia we may all relax, for we know that if the logic expressed in its design is but a part of that architectural logic by which a great building may be informed, the fact is not of too solemn significance.

"Logic" is, indeed, a magic word, and when we are told that the design of the new Olympia is logical we are immediately prepared to accept it with enthusiasm. Too long has there been an entirely unjustifiable divorce between art and logic. We are getting tired of the word "taste," and we are longing for something more secure, more unalterable, more worthy of our intellectual respect. We listen with profound approval when Mr. Emberton explains to us that every element in the immense new building which he has just designed is justified in reason.

Let instances be cited. The long horizontal slits of windows which in so many continental designs are the purest affectation, are here due to the fact that exhibition stalls are placed right up to the external walls, and, consequently, windows, if they are to be of practical use, need to start high up, and their vertical dimensions being thus truncated, they must be as wide as possible in order to serve their utilitarian purpose of providing the maximum of light. Modern concrete construction makes possible a very wide window with few supports to the upper soffit or transom; consequently, these horizontal windows may be almost continuous. In the uppermost story, which may be, and here is, top-lit, there is no need for the horizontal slits of windows, and so they are omitted. Inside the building near the entrance there is a small light well which reaches to the bottom floor, and this provides a justification for three tall, narrow, vertical windows in continuous rectangles, which pass across the floor levels at the centre of the façade. The escape staircases at the lateral extremities of the building provide another occasion for a different treatment of fenestration, so here we find the corner windows with which the works of M. Le Corbusier have made us so familiar. The long marquise which protects the entrances, of course, explains itself.

It sometimes occurs that the opinions of an architect about his own building do not exactly coincide with those of his more vociferous friends who acclaim its virtues in the Press. With regard to the new Olympia, we have been assured by these latter that it represents a very truthful expression of use and structure, and in so doing fulfils all the requirements of architecture. It need not be supposed that Mr. Emberton himself is ready to stand sponsor for this very stale Victorian fallacy. One of the distinctions of the design of the new Olympia is that it has an æsthetic quality over and above its utilitarian virtues.

CAMBRIDGE UNIVERSITY LIBRARY:
PHOTOGRAPHS OF THE NEW MODEL.

Sir Giles Gilbert Scott had caused some modifications to be embodied in the new model, prepared to illustrate his design of the library building, which was exhibited in the Senate House, Cambridge, last week for the purposes of general discussion. They include larger dimensions for the courts; and more windows. These photographs, showing the main front, the tower, and (on the facing page) the view from aloft, therefore give the scheme in its latest form.

NEWS & TOPICS

The keystone to the central window in Melbourne Place of the new Melbourne House (see pp. 199–201) is a sporting gesture to the occupants of Australia House, across the road.

THE PARLIAMENTARY PROGRAMME

BOTH Houses of Parliament reassembled, after the Christmas Recess, on Tuesday, January 21. The present Session is likely to be one of the longest and most critical of recent times. It began at the end of June last, and is not likely to end until late in July of this year. To the already overloaded Ministerial programme must now be added the certain prospect of a comprehensive measure dealing with slum clearance. That such a Bill will be introduced before many weeks have passed is evident from the replies to questions already put in the House of Commons. Indeed, it is known that the outlines of the Bill have now been almost agreed on. One of its main features is expected to be something in the nature of bigger grants to local authorities for slum clearance schemes, with greater elasticity in procedure.

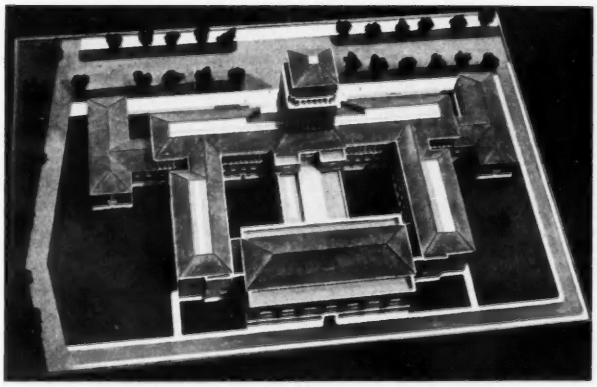
★

It has long been realized that the problem of the slums is closely bound up with that of town-planning, and it is probable that the new Bill will deal with both these aspects of the matter. Rural housing, too, is likely to receive Ministerial attention. For some time past there has been considerable dissatisfaction among members of all parties at the slow progress made under the Rural Housing Act passed by the late Government, and efforts will be made to remove some known causes of delay.

★

But, in addition, there are several other Bills, of lesser importance, perhaps, from the national point of view, but of peculiar interest to readers of this JOURNAL, which will come under review during the coming months. There is the Architects' Registration Bill—now almost one of the "hardy annuals" at Westminster; the Bill for the Preservation of London Squares; and the London County Council Private Bill dealing with the Charing Cross Bridge scheme. Of these three measures, the second is assured of a comparatively smooth passage, although the vexed question of compensation may cause some trouble. The Architects' Registration Bill is not taken really seriously on this occasion. Unless its progress is attended by some entirely unexpected good fortune, its late introduction makes it extremely unlikely that it will ever reach the Committee stage this Session. As to the Charing Cross Bridge scheme, the acute controversy that has been raging between the experts will now be continued in Parliament.

THE BAD BRIDGE SCHEME



The Westminster City Council has joined the volume of protest against the L.C.C. Charing Cross Bridge scheme by adopting a recommendation to present a petition against the L.C.C. Bill. Westminster have a special grievance in not being consulted over the matter at any time in the course of the secret conferences out of which this bad bridge scheme was born; but apart from their just claim to a say in what so much affects them, they rightly ask where the southern river embankment is to come in the scheme, and also why it appears that this great approach to the centre of the capital is bent weakly in mid-flight because the Southern Railway want their station in a certain position. Altogether, the Westminster City Council's proposal is a formidable affair, and a very present help in this, our time of trouble.

SPORTING APPEAL IN A KEYSTONE

At Melbourne House, I am edified to observe that the keystones are not carved with representations of Father Thames, or Pallas Athenae, or figures symbolical of Agriculture or Algebra or Grief. Indeed the keystone to the central window opening in Melbourne Place, here reproduced, is not symbolical of anything at all. It is merely a sporting appeal to the occupants of Australia House, on the opposite side of the road, to remember that, whatever may eventually happen to The Ashes, during the year when Melbourne House was erected A. P. F. Chapman's team put up rather a good show in the Antipodes.

SOOT, SULPHUR AND STONE

The Report on Smoke Abatement issued by the Science Standing Committee of the R.I.B.A. produces striking evidence of the disintegrating effects occasioned by injurious chemicals carried in smoke and other fumes in the air of cities. The damage is due mainly to sulphur, but this, united with soot, increases the injurious effect by concentrating the acids and making the whole adhesive. It has been computed that a clean atmosphere would halve the expense of upkeep of public buildings and monuments, which amounts to millions of pounds when replacements and the short expectation of useful life are taken into consideration. It should be enough to know that 595 tons of soot are deposited yearly over every square mile of surface in the City of London.

A photograph of the model of Cambridge University Library, taken from above, to show the plan. (See also facing page.)

"What material is this?" It was taken from this photograph, by Paul Fripp, exhibited by the Royal Photographic Society, and here reproduced by his kind permission.

WELL-MANNERED ADVERTISEMENTS

The most interesting feature of the Oxford Conference on "the New English Countryside" was an appeal by Sir Lawrence Chubb to Oxford Colleges to do all they could to control advertisements. The colleges own many acres of land, and they could lay it down as a first principle that no land should be sold or let unless under a covenant binding the purchaser never to allow the land to be disfigured by ugly advertisements. This does not seem to ask too much of such cultured institutions.

★

Sir Lawrence also announced that it has been arranged between the Scapa Society and Sir Harold Bowden that all the Raleigh Cycle Company's thousands of road signs are to be altered from the present staring blue and yellow to a quiet green and black lettering, and that no new sign is to be erected until both site and sign have been submitted to the Society. This is a wise and public-spirited action which cannot help but bring in other great advertisers into the select body of well-mannered manufacturers.

MY SIXPENCE, I THINK!

The overwhelming majority in favour of regarding the mystery photograph of last week's JOURNAL as an example of old valley tiling that has sunk on its timbering nearly makes me think it was. But as you will see from the all-inclusive picture of brother turkey, of which last week's snippet was but a wing portion, Nature is up to tricks again; and my sixpence stays with me. Mr. Paul Fripp, who took this excellent photograph, thought tiles a very near guess; for, after all, he asks, what are feathers for but to throw off the rain?

LOCAL BANK NOTES

The Midland Bank has been holding an Exhibition of Historical Material recently in its magnificent new premises in Poultry. The story of a great bank is part of the social history of the country, and throws light upon that not merely from a financial, but from a very human aspect as well. This is especially so where a bank, like the Midland, has absorbed a great many smaller and private banks all over the country. Relics of these were among the most interesting exhibits. There were prints and engravings, deeds, ledgers, old drafts and notes, etc. There was a pair of pistols used in carrying money between York and Ripon. A picture of Leyland's Bank showed Mr. Leyland's Georgian mansion, with bank adjoining. A Coventry tombstone records the burial of "Little Lowke & Co." Bank notes were issued by the country banks, and were considered locally as more reliable than those of the Bank of England. They were printed from finely lettered copper plates, and bore in one corner a beautiful little engraving of some local building or scene. One of these, from Lincoln, is reproduced here.

ASTRAGAL

A beautiful engraving of Lincoln Cathedral embellishes this old country bank note, one of the exhibits in the Midland Bank's collection of historical material.

OLYMPIA 1929

Extensions to the Exhibition Halls

DESIGNED BY JOSEPH EMBERTON

Empire Hall, illustrated on this and the following five pages, is now approaching completion, and part of it will be used for the first time, conjointly with Olympia, to house the London section of the British Industries Fair, to be opened on February 17. It is the first multi-storied exhibition building to be erected in this country. The horizontal treatment of the façade provides permanent fixings for advertisements of the various exhibitions. At night the building is to be flood-lit from the marquise.

The main staircase, from the ground floor. The masses of black and cream Biancola are treated in a simple and logical manner, and the decoration, as in the remainder of the building, is bold and restrained. Handrails are of stainless steel.

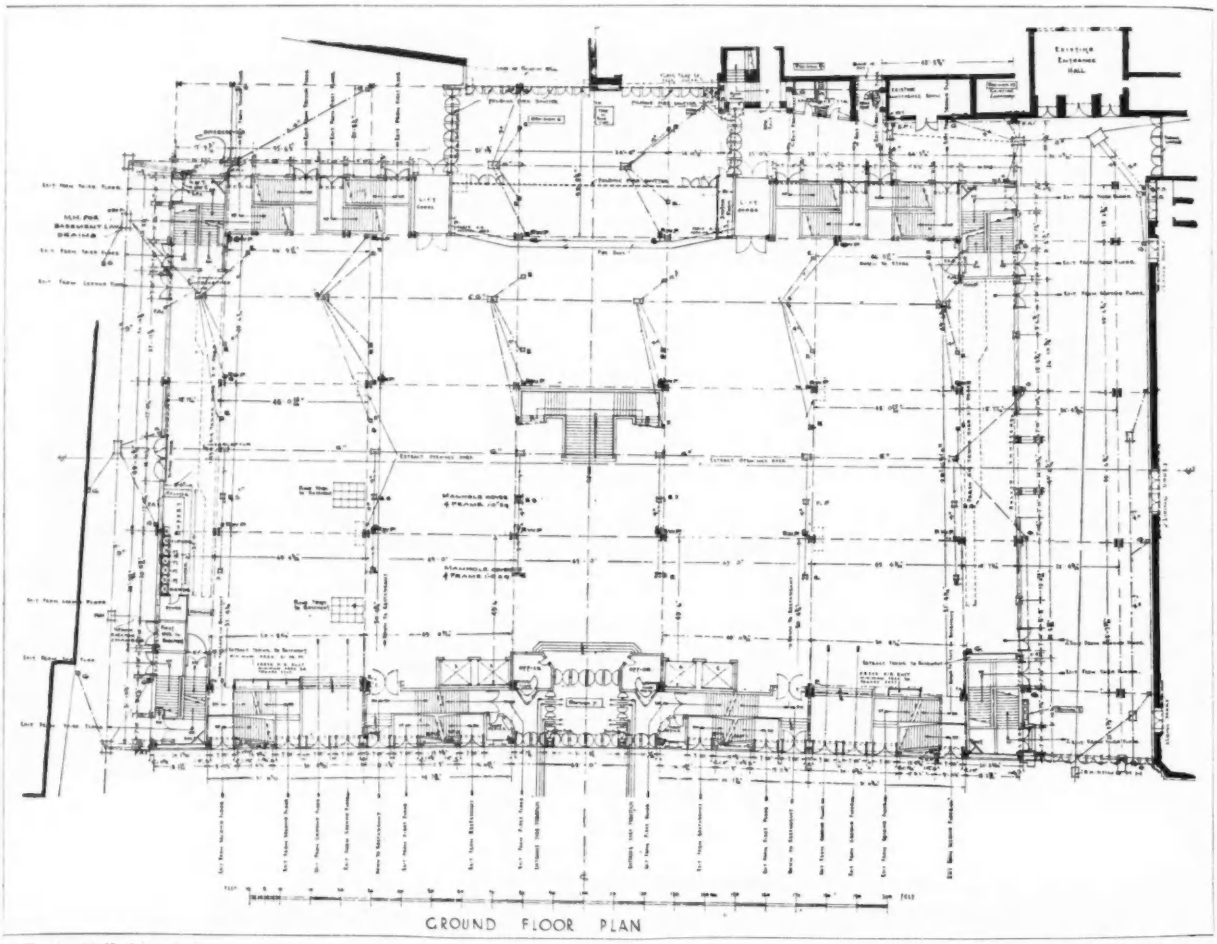
OLYMPIA 1929

Extensions to the Exhibition Halls

DESIGNED BY JOSEPH EMBERTON

ON March 30, 1929, the leases expired of the four pairs of semi-detached houses which occupied the site on Hammersmith Road on the west of the dance hall, and which had been originally acquired by Olympia (1912), Ltd., for extensions. For some time considerable feeling had been apparent in London amongst exhibition promoters of the need of further accommodation for trade exhibitions. The existing halls at Olympia were much the best-equipped for the purpose, but they were almost entirely engaged for the whole year. It had also become obvious that the British Industries Fair would have to find a new home, as the White City provided very inadequate accommodation for the vastly-growing annual trade Fair. There existed in London no building other than the White City which could offer anything like the space required. For the last Fair the organizers let an area more than twice the available floor area in the existing Olympia buildings, and the demand for space showed a constant increase each year.

Olympia, however, was the most conveniently situated building which came within a reasonable distance of satisfying the requirements of the British Industries Fair, but the site on Hammersmith Road, available for development, represented only approximately a quarter of the size of the existing halls. Therefore, to solve the problem, it became essential that a multi-storied building should be developed. Hitherto no exhibition building has been allowed to be erected in this country over one story in height, with the exception that very subordinate galleries on an upper floor have been permitted in certain cases. The erection of a multi-storied building, therefore, necessitated compliance with the exacting requirements laid down by the London County Council Theatres Committee, with regard to the provision for the safety of the public in cases of fire or panic.



The arrangement of the staircases in the four corners of the building

Empire Hall, Olympia.] [*By Joseph Emberton.*

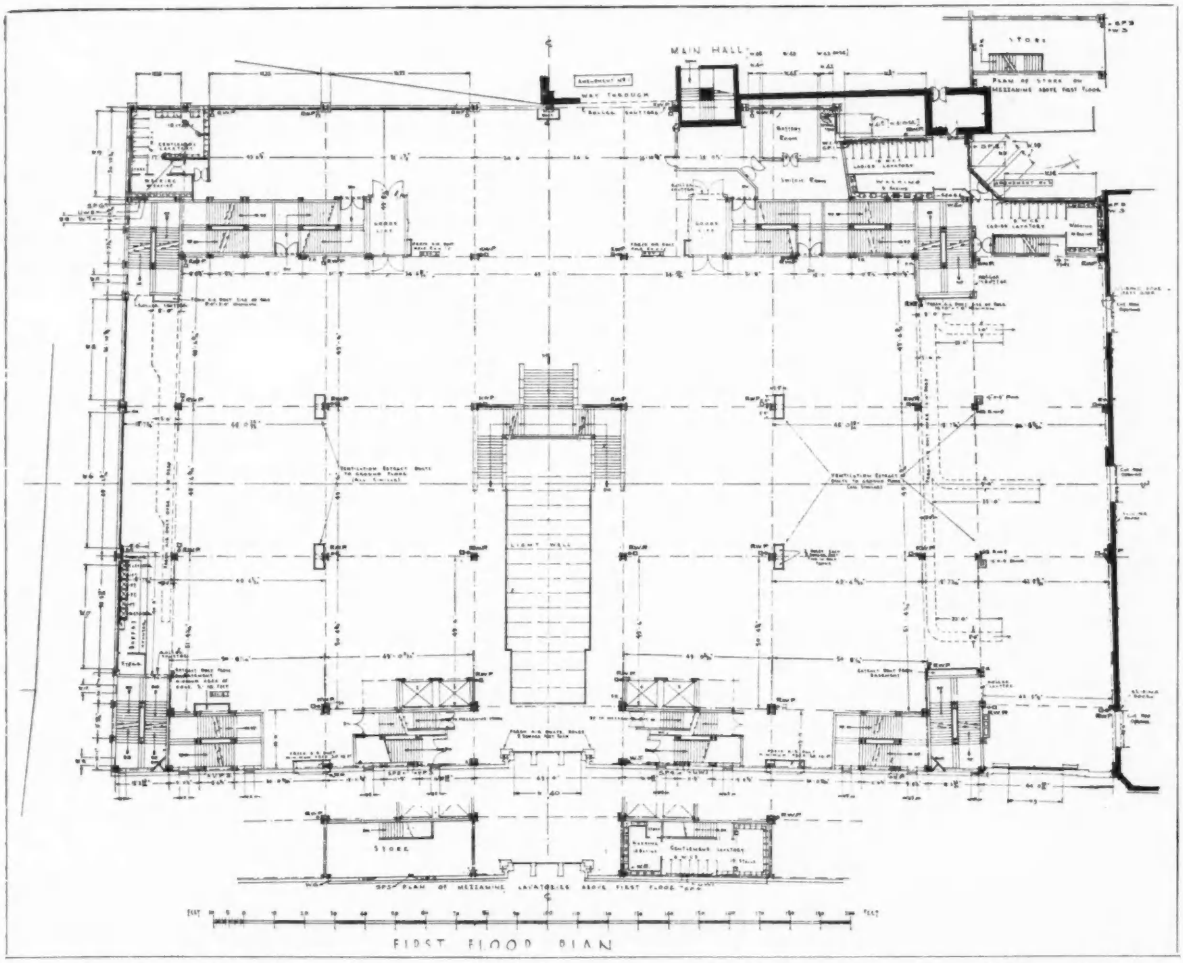
Two views of the main staircase, from upper floor levels. It faces a rectangular well, passing through the whole of the floors and placed with its long axis on the centre line of the main entrance. On entering the building the staircase and well immediately arrest attention. The well is designed to be hung with signs to give publicity to the various exhibits in the building, and to make the value of the sites of the exhibition stands on all floors as equal as possible.

Empire Hall, Olympia.] [*By Joseph Emberton.*

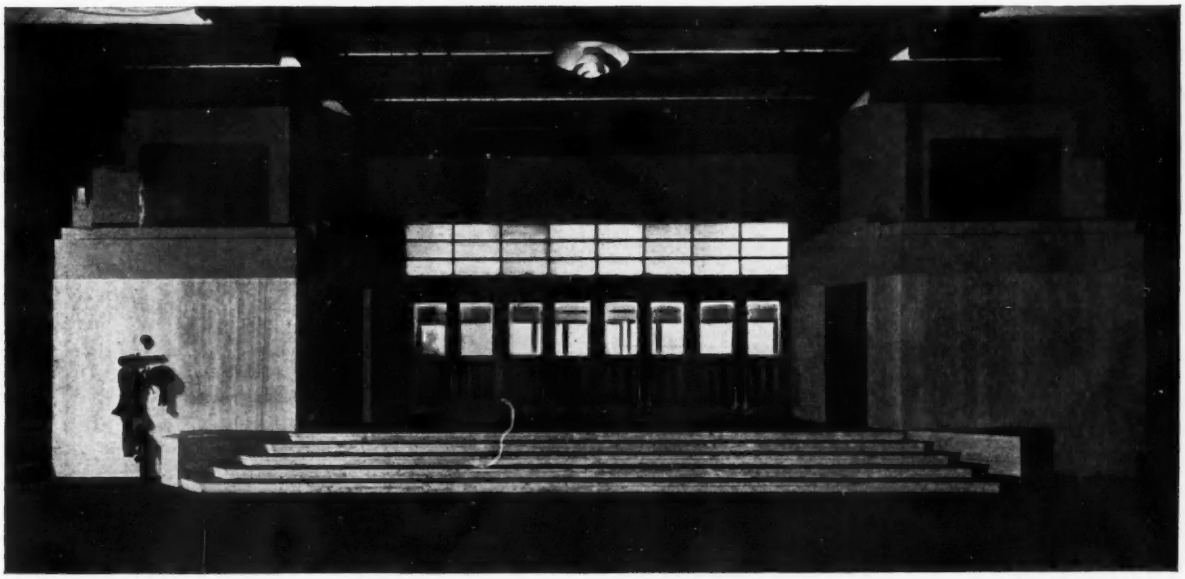
Ground-floor plan. Olympia already had two large halls for spectacular shows. The problem confronting the architect therefore was to provide on a limited site a maximum of unrestricted floor area for trade exhibitions, served by adequate arrangements for the safety of the public, and first-class inter-communication between its various floors and the existing halls.

determined the form of the elevation, for since exhibition stands of approximately 11 ft. high would be placed around the external walls within the building, light could only be introduced above this height and below the ceiling. This produces the rather unusual type of fenestration. The long low windows have been placed around the outside walls of the building wherever possible, and have only been omitted where interrupted by the staircase blocks.

This accounts for the first- and second-floor windows on the Hammersmith Road front not terminating the one under the other, for the former is interrupted by the staircase going to the second floor and the latter by the staircase going to the third floor.



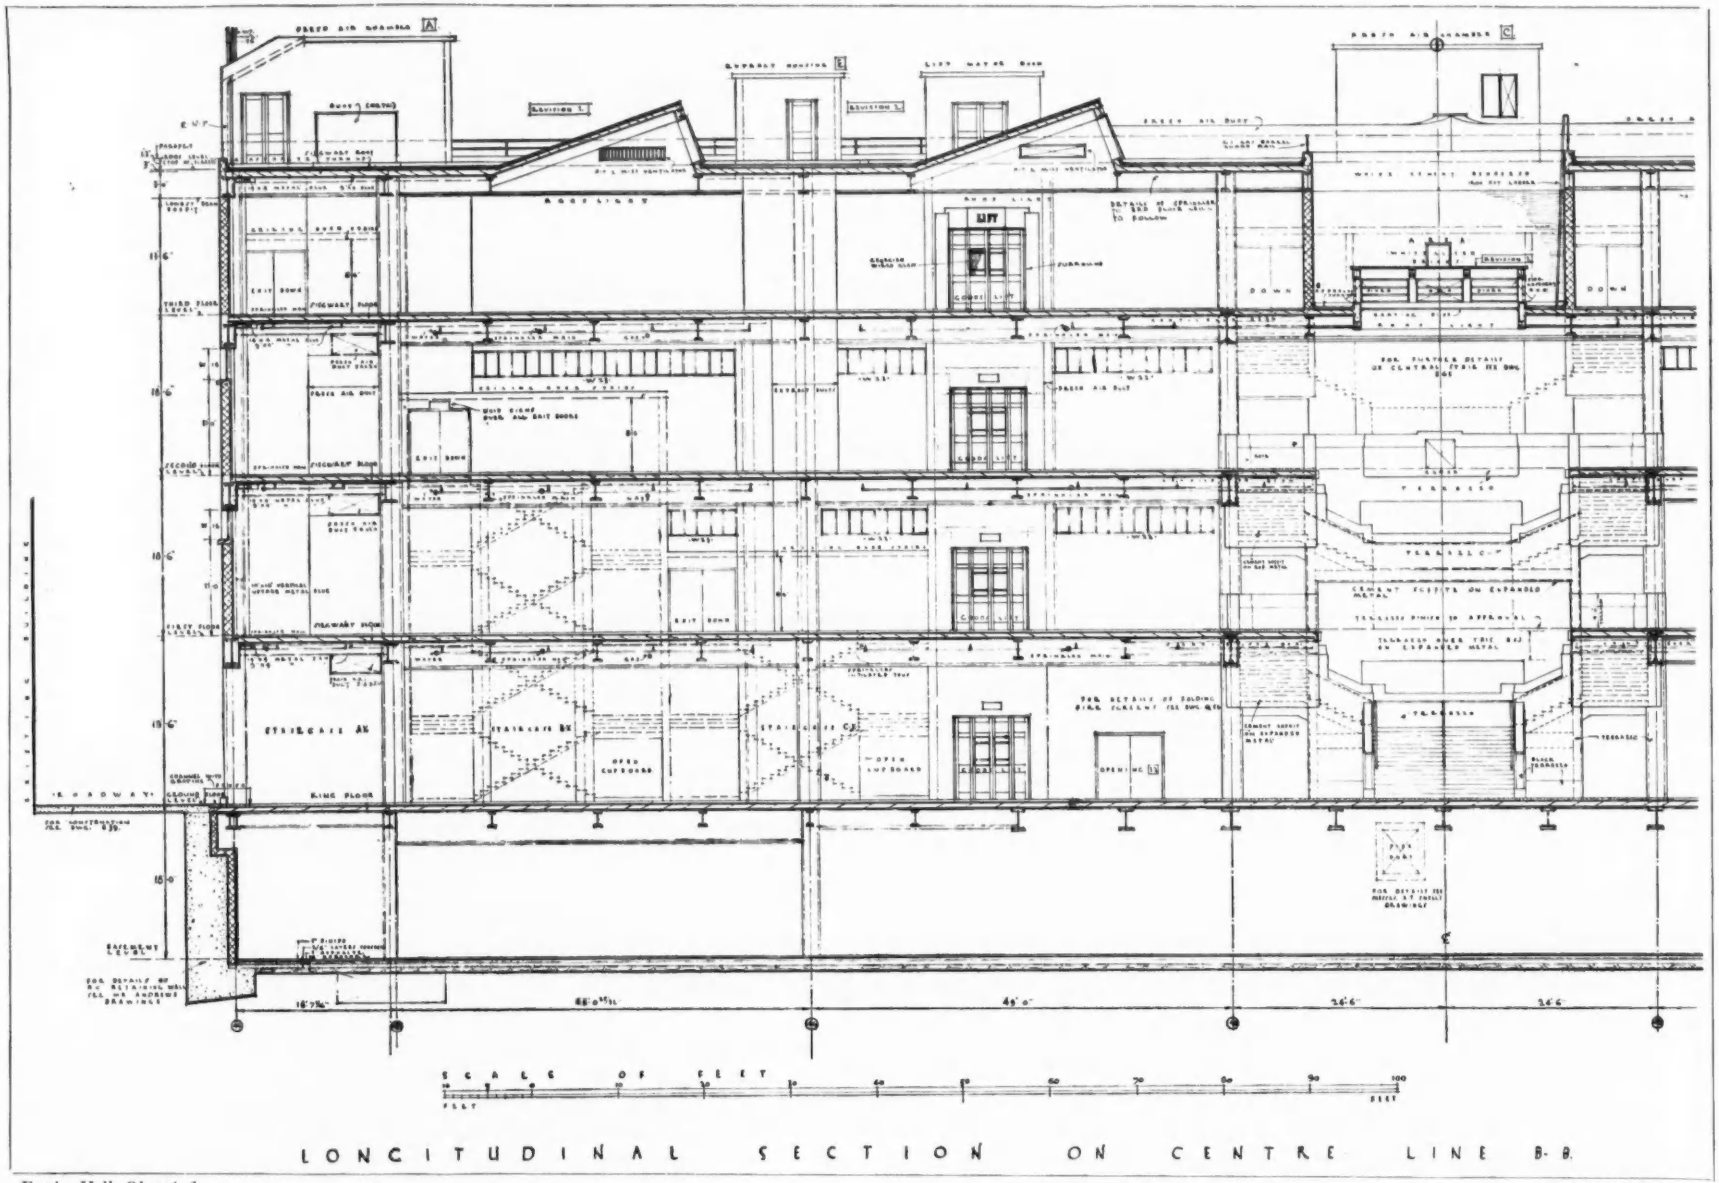
To introduce as much light as possible to the centre of the hall from these horizontal windows, a new type of prismatic glass has been used. This is a combination of lens and prism, and deflects the rays of light, which would otherwise strike the floor immediately under the windows, into the centre of the building. The building is a steel-framed structure, carrying considerable loads over maximum economical spans of 50 ft. The stanchions and beams in the external walls and staircases have been encased in concrete, but the main beams have been left uncased. Fire sprinklers are provided.



The gates of one of the two goods lifts. Each lift will take the largest motor-car, and can be converted to carry approximately sixty people.

The date fixed for the completion of that portion of the building required for the British Industries Fair was January 13, 1930. The work was begun on April 1, 1929. It was found that the steel would have to be erected at the rate of 500 tons per week if the contract was to be carried out in schedule time, whereas 100 tons is regarded as a very good week's work in the ordinary way. The work was ultimately completed to the hour. Four thousand drawings were prepared for the design and detailing of 7,400 tons of steel.

Adequate lavatory accommodation, equipped with eleven complete installations of gas-heated water supply apparatus, is provided.



First-floor plan. Electric light and power, gas and drainage, are arranged with the maximum of accessibility, and can be connected to exhibition stands in any part of the building. Two passenger lifts are placed on either side of the main entrance (see ground-floor plan on facing page). Each accommodates thirty people and has a speed of 400 ft. per minute.

Empire Hall, Olympia.] *[By Joseph Emberton.*

The main entrance doors, looking from the interior of the exhibition hall. Immediately behind the camera are the rectangular light well and the main staircase. Beyond the doors is the vestibule, in which are turnstiles, leading from Hammersmith Road. To the left and right of the steps are offices, and immediately adjoining, the passenger lifts.

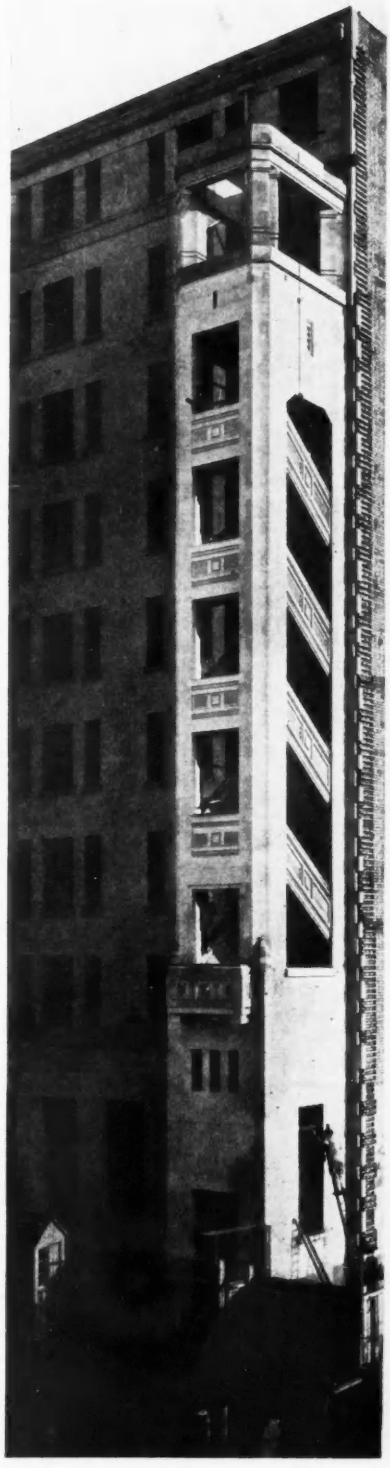
Empire Hall, Olympia.] [*By Joseph Emberton.*

Left-hand part of longitudinal section. It was necessary to provide for escape direct from each floor to the street, and eight fire-resisting staircases on each floor, apart from any staircases required for intercommunication purposes, were placed in what was obviously the most convenient position, namely, the four corners of the building (see plans on previous pages). In order to effect economy in floor space, two staircases, interlaced one within the other, were placed against each wall, otherwise the staircases on the ground floor would have occupied half the floor space.

KINGSWAY ARCHITECTURE: MELBOURNE HOUSE

FROM DESIGNS BY
TREHEARNE & NORMAN

A view, in detail, of the entrance doorway facing to Aldwych. The building is faced in Portland stone.

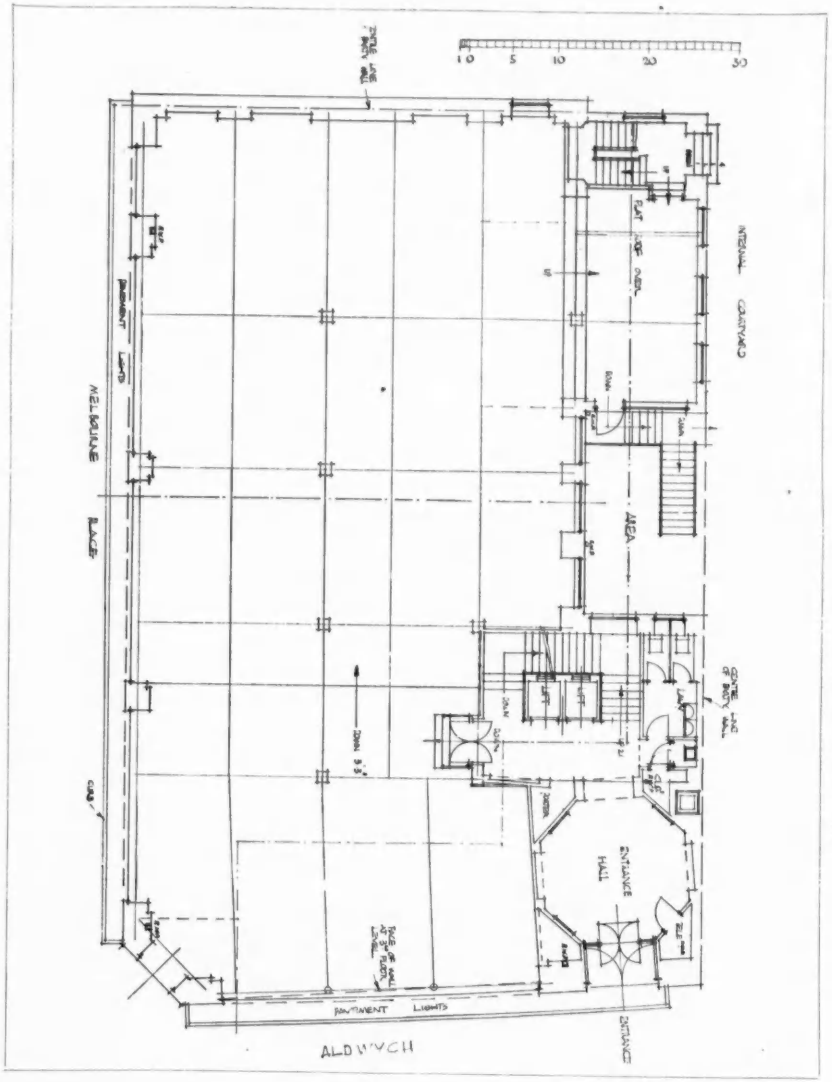


AS the actual existence of commercial buildings in London has now been recognized in the best artistic circles (writes a candid observer), it may safely be assumed that architects who specialize in the design of that particular class of structure need no longer fear that they are committing a grave breach of professional etiquette in mentioning the fact without blushing.

The evolution of the Kingsway type of commercial building has a very simple explanation. It registers the revolt of the modern man of business against the Victorian tradition that there's no place like home. Kingsway has advanced and prospered in spite of the criticisms of theorists and æsthetes, and the fact that a similar type of building has developed all over London indicates that people prefer to conduct their business under comfortable conditions rather than in catacombs, cells, dungeons or attics.

It has been stated that modern commercial buildings possess no individuality. Their elevations have been dismissed, rather curtly, as "slick tee-square stuff." Anonymous experts who tell the world about architecture in the popular newspapers have on occasion rallied to the attack with such vehemence that the accepted engineering calculations for counteracting wind pressure against buildings have, for the moment, seemed inadequate.

The main entrance hall, looking, through the archway, to the stairs and lifts. It is given symmetrical architectural treatment. On the left is an office direction board.



For the normal steel fire escape stairs this graceful and unique concrete structure is substituted.

effect economy in floor space, two staircases, interlaced one within the other, were placed against each wall, otherwise the staircases on the ground floor would have occupied half the floor space.

Melbourne House, Aldwych, W.C.]

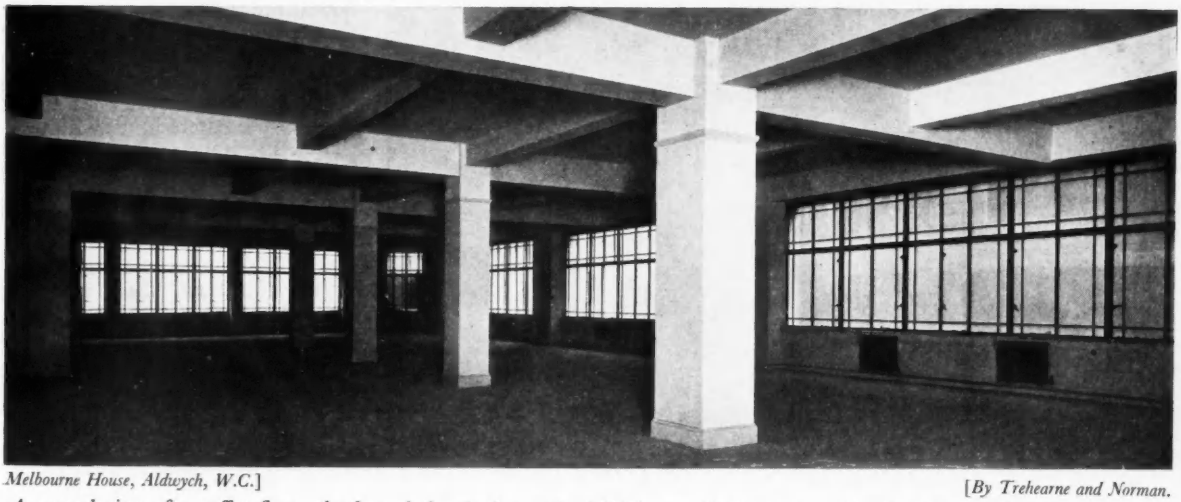
This photograph indicates the frontages to Melbourne Place and to Aldwych, intersecting it, on the left, with, on the splayed corner, an entrance. The shop premises on the ground floor will be finished as they are let off to tenants.

[*By Trehearne and Norman.*

The architects' drawing of the plan, at ground-floor level. The building has been expressly designed on all floors to facilitate such subdivision as future tenants may require. Octagonal in shape, the entrance hall is distinctive.

The modern commercial building has been evolved on the assumption that people who spend a considerable portion of their lives in offices may reasonably be expected to demand cleanliness, daylight, air, a seasonable internal temperature, adequate and decent sanitary accommodation, efficient lifts, alternative means of escape from the premises in case of fire, artificial light and power, easily accessible public telephone and letter boxes, synchronized clocks, and facilities for the prompt preparation of cups of tea at about 4.0 p.m. daily.

In a very short time any office building that does not meet most of these requirements may quite conceivably possess individuality, but it will not possess tenants.



Melbourne House is erected to the maximum height at present permitted under the London Building Act 1894, and is faced with Portland stone on all elevations. Every window in the building can be opened and properly cleaned without endangering the lives of window cleaners. Surprisingly, the fire escape staircase to the internal courtyard has been designed and constructed in stone as an architectural adjunct, and is not a mere excrescence in cast iron of standard sections.

At Melbourne House, in defiance of the unwritten laws of the Classic tradition, the enrichment of the elevations is devoid of acanthus leaves and skulls of oxen and beads and reels.

Anybody who really does doubt whether the modern commercial building possesses individuality may here find that even a call bell-push in a passenger-lift enclosure can be distinctive, and that the possibilities of individuality of design are not exhausted even though the medium is just a panel of fire-resisting glazing in an office door.

That the opportunity for giving individual expression in design and decoration has not been killed by modern conditions, for those who can turn them to account, is shown in this approach to lift space, etc. The entrance hall is on the left.

Melbourne House, Aldwych, W.C.] [*By Trehearne and Norman.*

A general view of an office floor—the first—before letting and subdivision. Unlike some modern London buildings farther west, this one is particularly light: there are windows on three sides of the space here photographed.

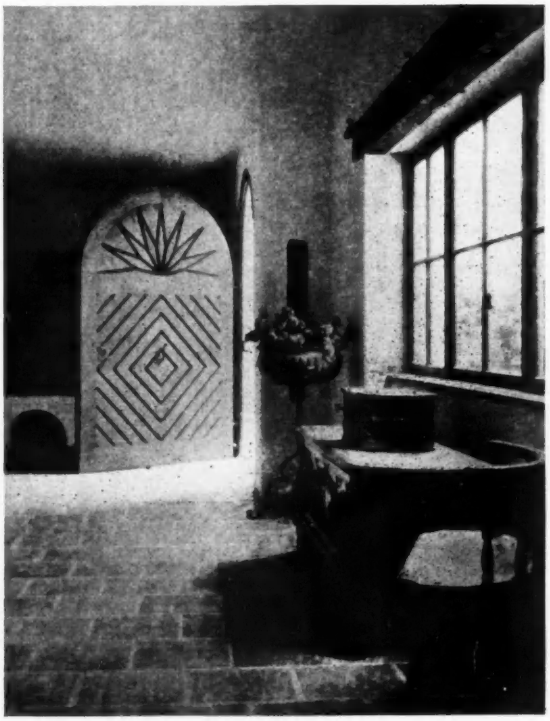
The self-contained servants' quarters, and the arch-pierced wall connecting with the villa.

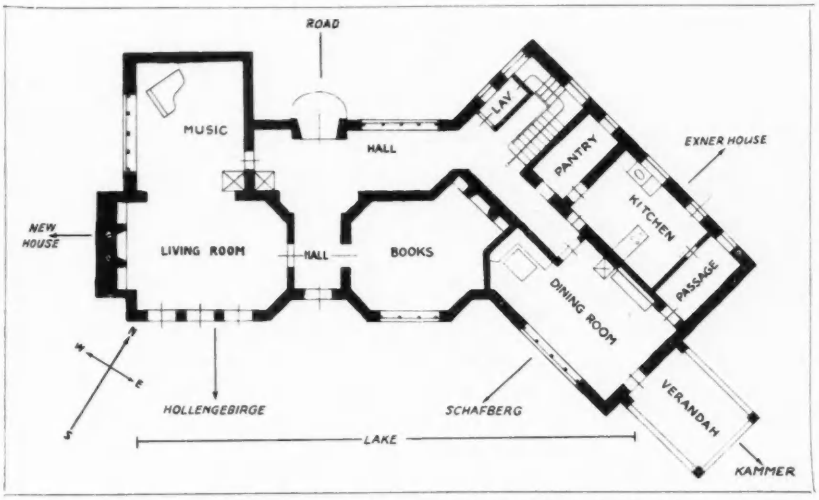
THE ROMAN VILLA: AUSTRO-AMERICAN STYLE



(*Architect: Dr. Karl Zwiauer*)

DESCRIBED BY JOHN GLOAG

ECONOMIC and social conditions in Austria today permit the building of great blocks of dwellings for the housing of what are usually termed "workers." Vienna is being girdled with these masses of flats. In the last two years fresh areas have been put under brick and concrete, and now, across the Danube, fronting the green levels that protect the city from inundation and afford a sun-bathing park for thousands of people, scaffolding still partially conceals what will be a mile-long cliff of gaunt buildings with streaming horizontal lines, designed to accord with the austere canons of the inhumanist school of architecture. However delightful such structures may appear to the disciples of Le Corbusier, their robot modernism is an offence in the proximity of a city still delightfully dominated by the gracious manners of the baroque architects.



Quasi-baroque iron bell-pull, wrought by the local smith.

Interior of the entrance-hall, with the front door open, to show the effect of its simple design. To the left is a glimpse of a tiled stove.

There is so little building being done in Austria, apart from these socialistic shockers, that private domestic architecture acquires exceptional interest because of its rarity; and that interest is intensified when such work represents intelligent modernism and is unmarked by an anxious concern for novelty. There is something soothing and sane about the deliberate rejection of all things, new or old, that happen to be insipid or ugly, and a house expressive of such sanity has just been completed for an American owner on the north shore of the Attersee, near Litzlberg.

The Americans are acquiring a taste for villas in Europe. Generally they like them flavoured with age, accepting quite often with remarkable enthusiasm houses that are mere decrepit shells, into which these new Romans fit their ornate plumbing, their refrigerators, heating systems, and all the mechanism of one-hundred-per-cent. U.S.A. comfort. They seldom build from the beginning, for they are still inclined to regard Europe as "the land of Readymade," inhabited (to borrow another of Kingsley's labels) by the race of "Doasyoulikes." Incidentally, flapdoodle, which grew wild in that pleasant land described in "Water-Babies," is carefully cultivated all over

The architect's ground-floor plan of the Villa Lindenhof, indicating the manner in which the aspects of the principal rooms have been made to command views over the lake and countryside.

the Continent for the consumption of Americans by people who have houses to let or to sell. But to build in a country as lovely as Austria is a tempting experiment, and this particular house by the Attersee is the pleasant result of yielding to such temptation.

The site was acquired for the beauty of its surroundings. Behind it is the gentle shoulder of a hill topped with pine woods; and east, south and west is the turquoise lake, walled with wooded hills and backed with blue mountains: every prospect pleases, and only a little of the local building is vile. Fortunately, an abundance of trees buries the bungaloids that small purses and even smaller minds have propagated.

The Austrian architect of the house was receptive of the idea of complete collaboration with his client, and the plan was made on the site where the shape and aspect of each room could be discussed. Essentially it is a house planned from the inside. Its rooms enjoy an easy spaciousness, derived partly from large windows each placed for the view it commands, and partly from the client's objection to box-shaped rooms, which led to the making of many alcoves and comfortable recesses.

The ground floor accommodates on the western side a large L-shaped music-room, with a south wall composed of french windows. This room had to be insulated so that sound could not carry from it. A tiled hall separates it from other rooms, and this hall extends the full width of the house and branches away towards the curving staircase. Kitchen and dining-room are at the eastern end, and the dining-room opens out upon a loggia whose arches make cool frames for the vivid hues of the lake and its background of mountains. Between the dining-room and the hall, and facing south, is the long library, with a big recessed fireplace and a dado of bookshelves. On the north side there is a courtyard, with a garage and servants' quarters, linked to the house with a wall pierced by a graceful archway through which runs the drive.

The first floor has bedrooms which all contrive to command views of the lake, two of the eastern bedrooms sharing a balcony that is the roof of the loggia. There is a third floor of bedrooms, formed in the roof, with big dormers that admit a lot of light.

Below the ground floor is a group of cellars, approached by a stairway that is carried beneath the tall staircase window. Here the still-room, store-room, wine cellar, laundry and the electric water-heater are accommodated.

The plans were settled, and they achieved all they were intended to achieve, producing finally a shape like an L, with the small member forming an obtuse instead of a right angle with the long member. It was then that the client began to be curious about the appearance of the house, and the question, "What is it all going to look like?" was answered by the making of a paper model from the scale plans. Not until then had the æsthetic significance of elevations been considered. This does not imply a casual disregard of the matter; but the function of each room, the relations of the different rooms to each other, and the making of the cool tunnels that were to connect those rooms—namely, the curving hall on the ground floor and the corridor that corresponded to it on the floor above—had absorbed the entire attention of the designers of the house.

A steady concern for the individual fitness of each room and the skilful association of such individual claims in the plan does not have an adverse effect upon the exterior. This house shares with the smaller houses of Stuart and Georgian England the look of comfortable invitation, the enduringly hospitable air that is the special and splendid quality of English domestic architecture. The creation of such a benign atmosphere is beyond the power of the inhumanist school; but in this

On the first floor, at the top of the main staircase, the intersections of the vaulted ceilings introduce interesting features into the design.

house it has been attained without any conscious striving.

With the exception of a few minor alterations the paper model was followed when the house was built. The walls are of hollow bricks coated with chalk plaster (*thränenputz*), giving a rough texture and a dazzlingly white surface. The roof, with its huge overhanging eaves, is covered with red tiles (made locally at Linz), and each tile has a pierced nose on the under side through which zinc wire is passed and anchored to nails in the rafters. Cement of gravel, chalk and cowhair is used for binding the overlapping joints of the tiles on the underside.

The ceilings throughout are of reinforced concrete, made in one piece. The floors in the principal rooms have larch frames and pine boards, finished with a solution of wax in benzine. This finish is also adopted for the window frames and sills, which are of oak, except in the dormers, where fir is used. The windows have external sills of zinc. Most of the doors are of rough-sawn pine, burnt with a benzine torch and scrubbed with a hard brush, so that the charred grain stands out and presents a much harder surface than pine merely stained and polished could afford. This burnt, brushed surface is then treated with the wax and benzine solution. The doors of the music-room and library are of oak. There is no paintwork at all.

The interior decoration is simple. The rough-cast plaster walls are in a low tone of cream; all the woodwork is waxed; colour comes from textiles, and in daytime from the intense tones of the lake, woods and mountains, of which each window makes a moving picture.

The metalwork fittings for doors, and such things as window guards, light brackets, bell brackets and balustrading, are sturdy pieces of smith's work, most of it being based on traditional patterns and hand-made, locally. Everywhere iron is used. In most Austrian villages there is a capable smith who works quite unconsciously in a traditional fashion; even the iron brackets and bandings on farm carts and hand barrows represent shapely memories of baroque design.

In the hall and in the long, wide corridor on the first floor are wall fountains sunk in circular-headed niches made of Untersberg red marble, with water issuing from lion masks. This is typical local marble work, to be found in nearly every *gasthaus* in that part of the country.

The house is furnished with Italian, French and Austrian country-made things in oak and walnut, chiefly of eighteenth- and early nineteenth-century origin, although there are some much earlier pieces. The simplicity of the decoration and the restraint of the furnishing enable the shape and agreeable proportions of each room to be fully appreciated. Everywhere a mellow understanding of form and colour is apparent. As an æsthetic collaboration between the ideas of that ancient home of good taste, Austria, and those belonging to that land of eager experiment, America, it has attained a character that makes the best of both interesting worlds—the old and the new.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

On the day on which Parliament reassembled Sir Kingsley Wood asked the Prime Minister if he could make a statement as to the Government's proposals on slum clearance.

Mr. MacDonald replied that it was hoped that a Slum Clearance Bill would be introduced at an early date.

Two days later Major Nathan asked the Minister of Health when he anticipated that the Government's projected Bill as to slums would be passed into law; and whether meanwhile he was refusing to consider and approve housing schemes submitted by local authorities.

Mr. Greenwood said he could not add anything to the statement made by the Prime Minister on the subject of the first part of the question. As regarded the second part, no schemes for providing new houses were being delayed in his department by the expectation of the new Bill; but in the case of slum clearance schemes he had n some instances suggested that in view of certain difficulties which had arisen it would be better to await the proposals which he hoped shortly to submit to the House.

Major Nathan asked if the Minister could give any indication of the delay that would be involved, in view of the hardship that would be incurred by the working-class population.

Mr. Greenwood: It is very difficult to calculate that. In so far as there are any delays in slum clearance schemes now, they have arisen out of decisions of the Court which must be put right by Parliament.

Sir K. Wood: Is not the present position this, that slum clearance schemes have been stopped and housing progress decreased during the last few months?

Major Nathan asked if the Minister would consider the introduction of declaratory legislation to overcome, in a very short space of time, the difficulties to which he had referred.

Mr. Greenwood: It is much more preferable to deal with the matter in a general Bill.

Mr. Snowden informed Sir A. Sinclair that the present intention was that the proposed slum clearance legislation affecting England and Scotland should, if possible, be dealt with in the same Bill.

Mr. Simon asked the Minister of Health if he would state the average cost of non-parlour houses completed during each quarter year since the beginning of 1924.

Mr. Greenwood said that particulars as to the average cost of houses completed during the periods mentioned were not available, but the following statement showed the average price of non-parlour houses included in contracts let by, or in direct labour schemes of, local authorities in England and Wales during each of the quarter-years in question.

	Quarter ended			
	March.	June.	Sept.	Dec.
Year	£	£	£	£
1924 ..	398	413	424	441
1925 ..	438	439	443	444
1926 ..	442	435	443	448
1927 ..	425	412	403	407
1928 ..	368	356	360	354
1929 ..	339	349	343	349

Sir A. Sinclair asked the First Commissioner of Works whether, in view of the opposition, not only in Edinburgh but throughout Scotland, to his proposal that only one design for the buildings on the Calton Jail site—that of the chief architect of his department—should be submitted to the Scottish Fine Art Commission, he would consent either to hold an open competition or himself to appoint an architect, after consulting the Commission, the Edinburgh Corporation, and representative bodies interested in the architecture and amenities of the city.

Mr. Lansbury replied that the decision to entrust the design of the buildings on the Calton Jail site, Edinburgh, to the chief architect of his department was taken nearly two years ago, and he was not prepared, at this late stage, to reverse that decision, either in favour of an open competition or an independent architect. The policy of selecting an architect for important national buildings by open competition had been adopted only in four cases during the last 150 years. In only one instance had the successful design been carried into execution. The appointment of an independent architect would not appear to meet the objection to the consideration of only one design to which Sir A. Sinclair referred.

ARCHITECTS' ADVISORY PANELS

The Urgent Need for Extended Publicity

BY E. MAXWELL FRY

Some time ago systematic inquiries were originated by THE ARCHITECTS' JOURNAL *as to the working of the panels of architects, originally called into existence two years ago, to give advice to landowners about the reconditioning of cottages, and later charged with extended activities. A great number of replies to our questionnaire was received from all over the country, and the overwhelming majority disclosed a disappointing state of affairs. "We have no report on the work of the panels for the very simple reason that we have had no work to do." So ran one answer; and too many others were like unto it, though there were gratifying exceptions.*

For the benefit of our readers, the whole of the letters we have received have been digested, and the position has been reviewed by our special commissioner, in the light of last week's meeting, where it was the subject of discussion.

DURING the last few years, extraordinary efforts have been made by various organizations to combat the spread of bad building and the general spoliation of the country. The methods employed have varied: some aiming at the widest forms of publicity, others making use of quieter channels. By one means or another the public has become faintly cognizant of the baser forms of the evil, and is possessed in part with the seeds of a desire to reform its ways, and to do what it may be taught is the right thing to do.

It is recognized that the battle-front of those who wage war against ugliness is widespread. Dealing with so strong and so mobile a force as ugliness, there is need for the exercise of the full art of war: for strategy and tactics; heavy artillery and sniping. In the end, the continuous battery of publicity, delivered through every opening which the public Press may offer, will break down the resistance of ignorance, but in the meantime there is a deal of work to be done under cover of this barrage.

In a quiet sector of the line, a desultory action is being maintained by a body which we shall call the Advisory Panels. Little enough is known of them by the general public, and not very much by the intelligent professional public, yet for two years they have tried to maintain a difficult position with but little support, and if they have met with but scant success it is not to be wondered at.

In the first place, they were called into existence to give assistance to owners and others in the reconditioning of old cottages, under the Rural Workers Housing Act of 1928. Their scope was therefore limited in its intent, and narrowed, further, by the relative unpopularity of the Act with which they were yoked. For the greater part they remained dormant, and hardly rose to the point of failing. In one or two districts, however, where active and enthusiastic men have had power to invoke the workings of the Act and zeal enough to carry others with them, many old cottages have been reconditioned, and a deal of other useful work put in hand. In successful practice the panels have found it possible to widen the scope of their assistance to include building generally, and even the wider interpretation of the word "amenity." This is the system at its best. Generally it has done little or nothing.

Returning to the working of the scheme: it was intended that the panels should be composed of architects, landowners, builders, and a member of the local council; and that they should be called in by the council to give advice on matters pertaining to the Act in question, so that the delicate job of making old work serve new generations might not suffer through lack of knowledge or artistic perception. The reconditioning of a cottage was not to cost more than £100, so that there was no question of remuneration for the professional services of architects.

Established to give assistance to owners in the working of the Rural Workers Housing Act of 1928, they found themselves, yoked with a not very popular measure, being led into a hard world that was ignorant of their purpose in life, and sceptical of the power of the particular Act to do what was intended of it. Whatever success these panels could hope to come by lay, therefore, in the individual efforts of their members to convince owners, builders and local authorities that their services could be of value.

The existence of the panels was brought to the notice of local authorities by pamphlets issued on one or two occasions, and these pamphlets actually tended to widen the range of subjects upon which the panels might be consulted: this, as the result of a decision to make them more generally useful.

Such was the extent of the introduction which prepared the way. It was not much, and, as may be well imagined, few elected members saw fit to engage in a battle for the right where everything depended upon their own courage and wit. It was left to those who had much public spirit, time, energy, and sometimes opportunity, to force their way into the surveyors' offices and the council rooms in search of work to do. The rank and file did not make the attempt.

That those who got busy found work to do only proves what heavy tasks may be undertaken by a spirited minority. It would be unfair to say that the panels have been entirely ineffective. Where they set about their job in good spirit, which is to say, where there has been one man to give direction and impetus to their movements, much has been done. In Devon, a purely rural county, the reconditioning of cottages has been carried out on a large scale. Here, be it noted, a small fee paid to the local surveyor for each successfully completed job has made the way easier.

Again in Hampshire, where the energetic County Architect has realized what valuable help lay waiting to be used, the scope of the panels' consultative work has been made to include even a re-designed village hall. In Oxford and Cambridge, both districts that can produce a certain body of cultured support, there is a similar story of good work performed.

But what is the true position over the

length and breadth of the country? It has been found that, generally speaking, the panels, having been nominated and convened, sat wondering what deeds they were to be called upon to do; and, having pondered the subject for a while, went about their jobs and let the matter drop.

The local authorities, on their part, carefully filed away one or two little pamphlets relating to Architects' Advisory Panels and Rural Housing, and went about *their* job, which, as we all know, consisted of giving assent to the erection of all sorts of buildings that passed the by-laws but contravened every ordinary law of decency.

This was the position last week, when at a conference of members of the panels, held on the R.I.B.A. premises, Mr. Greenwood, the Minister of Health, gave his blessing, his promises of help, and his very sound advice. If the system is to be made a success, and it will be generally agreed that such advice as architects may give to small builders and others outside the architectural strata is well worth the giving, then the members of panels who are asked to spread the gospel in difficult country should be given more than the assistance of a Parliamentary legal machine and a few pamphlets. The world is not full of enthusiasts, and the devil of ugliness works constantly, blithely and well.

"To-day," said Mr. Greenwood, "you must tell the world everything. Publicity is an important factor in success, and knowledge must be spread by publicity." It is unfortunate that we live in a world where mass opinions are reflected by newspapers, wireless and advertisements. But it is true. And the inverse is also true; for just as we have to suffer the affliction of man's sentimentality delivered through the mighty organs of publicity, so also we may deliver counterblasts through the same loud speaker. And through lesser trumpets.

Printing exists to propagate ideas, and the printed word is a wonderful messenger to send before one. A manufacturer wishing to place a new invention—let us say, a vacuum-cleaner—upon the market, pays money to an advertising firm to compile a whole chain of advertisements, pamphlets and well-designed brochures. These are most carefully arranged to follow one another, so that an introduction is made, maintained, strengthened, embellished, and so finally cemented in bonds of interest that when ultimately the well-groomed young man calls at the door he literally plucks the orders like ripe figs from the tree.

No true comparison is possible between the profits of such a campaign and that which the panels must pursue. Yet there is a great difference also between the cost of an advertising campaign and that of a series of simple pamphlets setting down the points which we know so well will make the difference between good building and bad. It is wrong to expect that very many architects will go about this work without some such encouragement, or that one can widely enlist the services of laymen without some definite basis of policy.

The work of the panels, once started and firmly established in several districts, must be envisaged as something that will grow and become important and necessary. It is started by architects, but it should, I think, become less the work of architects, as soon as the best type of public person is encouraged by the propaganda, by the well-defined policy and by the constant backing of the C.P.R.E., to take over the management of the panels. The architect should be left as consultant to the panel instead of direct consultant to the local authority. It is suggested that the convener of the panel should be a layman, and this is indeed the direction in which the system should move.

There is a great deal of work for the panels to do, even when their work is limited, as the work of such an organization should be limited, to rural areas. The county council has become a new authority in the land, and it is here perhaps that one may find a likely and an economical channel through which to approach the lesser authorities. Ultimately, it is to the surveyors that the panels must address themselves. The local surveyor is the executive official of the council. He it is who goes through the plans submitted for consideration, makes notes and forms decisions. When the plans reach the council they are often as good as passed, because the surveyor is a trusted official whose advice is commonly taken. He is also most commonly a reasonable person, Mr. Spinlove's experiences notwithstanding, and sufficiently alive to the trend of public opinion to accept advice when it is well intended and properly understood, especially when the need for it is reinforced with all the help which can be given by such influential bodies as the C.P.R.E., the R.I.B.A., and by the Minister of Health himself. The surveyor is a very important link in the chain.

On the other hand, it is to architects that the sponsors of the scheme must address *themselves*. For, as it has been seen, the country is by no means covered by active panels, and many of the districts already covered are much too large to be dealt with by a handful of men operating from an urban centre. Most architects are fairly busy people; not entirely apathetic, but disinclined to thrust themselves forward into affairs which they half-understand. There is, too, a certain fear that the work involved might arouse suspicions in their fellows and neighbours of interests not entirely altruistic. The position must be made clear therefore, that architects are very much needed to give direction to the work of the panels, and to set and keep them on the path of greatest usefulness; and that the panels will become an important factor in so raising the standard of building that architecture will rather come into its own again, than architects be defrauded of their bread and butter by voluntary workers.

This brings us back to the organization of the scheme and to its organizers. It seems a great pity that a scheme from which so much has been hoped should have been allowed to be successful in only a few localities over a period of two years. Two bodies, the C.P.R.E. and the R.I.B.A., together set the machinery in motion and gave it its preliminary impetus. The R.I.B.A. apparently provided the architects and the C.P.R.E. the machinery, initiative and spirit. Looking at the results, one may venture to suppose that the R.I.B.A. was the sleeping partner. And when one knows that the secretaries of many panels took no action over the whole period, and were half-ignorant of what was expected of them, one cannot think that the other partner was too fully alive. Nor is there question of disparagement in the suggestion that when an attempt to make use of the services of architects in this useful capacity is once entered upon, every form of weakness places the profession in an invidious position and lowers the value of work performed by architects in their ordinary professional capacity. The C.P.R.E. is looking after a number of things, and its funds are limited, but it must surely be in the position to circularize its own members and provide them with knowledge of what the panels can do, and it is hard to believe that money cannot be found to impel a wider dissemination of the policy upon which rests the work of the panels.

As the Minister of Health stated in his address to the Conference, we are much too inclined to hide our light under a bushel.

The work which the panels can perform can be made one of the really effective means of moulding an educated opinion among those who are able to be responsible for the best amenities of the countryside, but in order to gather this body of opinion, much more active, more scientific and more public steps must be taken, first by the organizers, and in the course of time by the members of the panels themselves.

ENGLISH PRECEDENT No. 100

ROYAL CRESCENT, BATH

The successful development of the centre of Bath led inevitably to extensions in the direction of the steep hills which surround the town.

This crescent was the first of a series of hillside terraces rising one above another. It was begun in 1676 by the younger Wood, and is built in the form of a great half-ellipse, using the superimposed order with fine dignity.

The first view of the great mass, swinging round the compass of a whole little valley, is an architectural experience of the first order. —[E. MAXWELL FRY.]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an arbitrator, brought by Colonel Jago, J.P., jointly and severally against builder and architect for damages for collapse of a village hall. Mr. Chawlegger, K.C., and a Junior represent the plaintiff; Mr. Twistle, the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. Defendants have opened their case on the second day of hearing, and Mr. Pitfall intimated, just before the adjournment for luncheon, that his next two witnesses would give important evidence.

iv: The Defendants Close

WHEN, at two o'clock, the arbitrator took his seat at the head of the reference table, Mr. Twistle at once called JOHN ROBERT SWILLERTON, who said he was an experienced builder and carting contractor. His firm had held a good reputation in Nollingborough for more than fifty years. His father had put him to the joinery, and he was a joiner by trade and thought he understood as much about wood, both as a buyer and practical man, as anyone in the country. He looked after all his own work and spent most of his time going round his various jobs. He had often used American maple before, and never had any trouble with it. He had heard Mr. Toomer give evidence of the curling up of the boards laid on concrete, but if that had been his (witness's) job it would not have happened, for he would have well tarred the concrete before he laid the boards. He had used maple under the direction of another architect to floor a skating-rink, and it was a first-class job. In that case the architect ordered the maple to be nailed down on a floor of deal boards, and, in his opinion, that was the proper way to lay such a floor. No architect had ever before directed him to lay a maple floor on joists same as Mr. Toomer ordered at Grastopen Hall. He had carried out Mr. Toomer's instructions to the letter. He generally used blocks and wedges to bring flooring up close and true, and didn't hold with anyone who objected, as he had worked that way all his life and had no call to regret it. He might sometimes have used the blocks and wedges for fixings, but that was not his general way, and he didn't see how it could be done as a regular thing. The blocks and wedges were often knocked out, as they came in the way of the skirting grounds. He did not know any other reason for knocking them out. He had never known a floor behave as this one, nor heard of the like; but the buckling of the floor was a small matter to put right. He would not have gone for to knock out the wedges; his way would be to cut a board or two out near about the middle of the floor and let her settle back and knock the wedges out after, and then fit new boards in where the old had come out. He reckoned it a one-day's job for four men and it would have cost him, maybe, £3 10s. It was the jumping about and larking on the buckled floor that did the harm, and that was no affair of his. It was a wicked thing to misuse a building that style, and them as was responsible had ought to pay for it.

Witness, cross-examined by Mr. Chawlegger, agreed that he was responsible for building according to the true intent and meaning of the drawings, specification and instructions prepared and given by the architect, and, in addition, for doing all that was necessary to complete the building in a sound and workmanlike manner, although every detail of the work might not be specifically described, drawn, or ordered. He also agreed that dancing was an ordinary and proper use for a village hall. When asked whether he considered he had constructed the hall in a sound and workmanlike way for the purpose of dancing, witness said he "didn't see there was much to complain about."

Cross-examined by Mr. Pitfall, witness was asked :

Were the blocks and wedges shown on drawings, or described in specification or otherwise, ordered by the architect ?—No.

Were they a part of the necessary permanent structure of the building ?—No. They were not.

They were, then, put in by you for your temporary convenience in carrying out the work: they were what engineers call "false work"?—It is no call of mine what engineers say. Blocks and wedges is good enough for me, and that's what they are.

They were in the nature of tools ?—Well, that's a nice thing to say to a builder.

Arbitrator : Answer the question.

Witness : No, of course they were not tools.

Counsel : I said in the *nature* of tools. If they had been of iron specially made for the purpose, would they not have been taken out ?—I never heard tell of such a thing. Just any bits of wood will serve.

Bits of wood which are not worth the trouble of taking out, you mean ?—No, they are not.

Did you order them to be taken out ?—No. I had no call to.

If you had thought the floor would swell and set up a condition likely to cause buckling, you would have had the wedges knocked out ?—Well, I wouldn't go looking for trouble, would I ?

And yet you told your Counsel just now that you knew as much about the characteristics of different woods as anyone in the country ?—Well, and I say so. There never was a floor that carried on like this one at Grastopen.

Re-examined by Mr. Twistle, witness agreed that as a builder, and under the terms of his contract, he accepted no responsibility for what was altogether unprecedented and beyond experience. He had exactly carried out the architect's instructions in accordance with the established principles of sound building, which was all the architect could require of him; and if the architect wanted something different it was his duty to say so. He looked to the drawings and specification to direct him in all matters not according to established custom; and an architect prepared those documents on that understanding. Where different instructions were not given, it was always understood that established custom was intended. If an architect specified a material which had special characteristics known to him by his own particular experience, it was his duty to warn the builder.

Mr. Pitfall then called Mr. ARIC BUCKSTEAD RANDEGGER, A.M.I.C.E., Lecturer on Statics and Dynamics at Gallow's College.[1]

Examined by Mr. Pitfall, witness gave

[1] The author is indebted to Mr. A. S. E. Ackermann, B.SC. (Engineering), F.C.G.I., A.M.I.C.E., well known as an expert witness in the Courts, for the elucidation of the problem presented by this witness.

particulars of his credentials and qualifications, and stated that he had heard the evidence of Mr. Spoontide and had examined the diagrams and calculations put in by that witness.

Counsel: Do you, Mr. Randegger, agree with Mr. Spoontide's evidence?—Only in parts.

In what particulars do you differ?—In most particulars except his general conclusion regarding the so-called "springiness" of the floor. I agree that the whole building—weight of walls, floor and roof, and the elasticity of the roof-bracing—was, at the moment before the collapse, all involved in the springy action of the floor.

Area of dancing floor: 46′ × 26′ 6″ = 1,219 *sq. ft.*

Maximum load on strip 12″ *wide*—24 *dancers* × 140 *lb.* = 2,360 *lb.* = 590 *lb. central load on half floor.*

Crown of buckled floor: 6″ *above normal.*

$$\text{Horizontal thrust at } x = \frac{13{\cdot}25 \times 590}{0{\cdot}5 \times 2240}$$

= 7 *tons (nearly) per ft. run of wall.*

Total thrust on each wall = 320 *tons.*

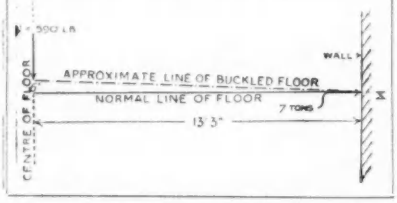


Figure three. Diagram, given in evidence by Mr. Ronald Spoontide, F.S.I., showing computation of horizontal thrust of buckled floor.

Counsel: I hand you the diagram (figure three) prepared by Mr. Spoontide to support his evidence that a force of seven tons represents the outward horizontal thrust, on each foot run of each side wall, produced by the weight of the dancers. Do you accept the diagram and the figures?

Witness: I neither accept the figures Mr. Spoontide makes the basis of his calculation, nor his method of dealing with those figures, nor his result.

Counsel: Will you tell me why?

Witness: He assumes a load of twenty-four dancers on a strip of floor 12 ins. wide and 26 ft. 6 ins. long—which is nearly one dancer to a square foot—and draws a triangle of forces (using the dancers' weight as the vertical load) in order to get the thrust along each 12 in. run of walls. In this he is guilty of three separate errors: one, twenty-four dancers is wrong; two, he is wrong in regarding their weight as a dead weight; and, three, he is wrong in his method of arriving at the thrust due to that weight.

It is true—witness continued—that at any moment twenty-four dancers might be upon a strip 12 ins. wide, but we are concerned with an *average* load and an *average* thrust, for the floor being continuous along its edges the thrust would be distributed along the wall. Mr Spoontide spoke of 320 dancers—that is impossible. I have danced in a ball-room which was so congested that dancing was difficult, and I found that the number dancing represented one to each 4·5 sq. ft. of floor area. The floor area in the present case is 1,219 sq. ft., so that allowing 4·5 ft. for each dancer we get 270 dancers. The dance in progress in this case, the "gallop," could not, however, be danced under such congested conditions, and I consider 200 the maximum figure that can be assumed. This represents one dancer to each 6 sq. ft. of floor area, or rather fewer than 4·5 dancers to each 12 in. cross strip of floor, which, allowing the high value of 140 lb. as the weight of each dancer, gives a total distributed load of 630 lb. on the 12 in. strip, which represents a central force, due to the load on half the strip, of 157·5 lb. The weight of the floor may be left out of account, but this 157·5 lb. is a live load, and must be augmented to represent the equivalent dead weight due to the impact of the dancers. A reasonable equivalent figure would be three times the live load of the dancers, giving an equivalent central dead load of 472·5 lb.

Counsel: That is, you say Mr. Spoontide's figure of 590 lb. is greater than the weight actually was?—Yes, twenty-five per cent. too great.

Now, Mr. Randegger, as regards the horizontal thrust on the wall: Do you agree with Mr. Spoontide's figure of seven tons?—No, I do not. It is a ridiculous figure. It is about seven times what it could have been.

How do you explain that, Mr. Randegger?—The reason is obvious: he has regarded the floor as absolutely rigid—more rigid than cast steel. He has made no allowance for the lateral elasticity of the floor.

Counsel: Will you tell the arbitrator, Mr. Randegger, what the facts are, in your opinion?—Witness: The first point is that the elasticity of the floor would greatly reduce the apparent horizontal thrust on the wall, calculated in the manner Mr. Spoontide has adopted. A piece of material of any given dimensions, on being compressed a certain amount, can offer only a certain resistance depending on its modulus of elasticity, and if this is known the resistance can readily be calculated. The modulus of elasticity at right angles to the grain of American maple is, so far as I know, not on record, and I have not made experiments to determine it; but the lateral compression of maple for a given load has been determined. It has also to be remembered that the small amount of moisture in the boards when they are laid; the amount of pressure brought to bear on them by the flooring cramps; the amount of moisture absorbed after the floor was laid, and the effect of that added moisture in causing the boards to expand, are all contributory in establishing the conditions which existed in the floor when it buckled; and some of these data it would now be impossible to ascertain. The facts upon which I base my opinion are that even if the expansion of the floor, due to moisture, had not been resisted by the walls, it would not have been more than 0·75 of an inch for the half strip of floor we have been considering. This I have derived from my own experiments.

Now—witness continued—it is agreed that the floor bulged 6 ins. This would allow an expansion of rather more than 0·1 in. Thus the reaction of the side walls could, at the most, have caused a compression of the flooring boards of about 0·6 in. in the half length of strip. This strip being 12 ins. wide, and the boards $\frac{7}{8}$ in. thick, gives an area of 10·5 sq. ins. of wood in compression. The length in compression is 13 ft. 3 ins. The combining of these data with the modulus of lateral elasticity of the wood gives—if the floor had not buckled, or if it had been forced flat again after buckling—a lateral, or horizontal, thrust of about one ton for the strip, instead of seven tons arrived at by Mr. Spoontide. I find that the live load, even after trebling it for shock, was totally inadequate to flatten the floor all over, when once it had buckled.

Counsel: So you arrive at a total thrust along the whole length of wall of 46 tons, as against Mr. Spoontide's figure of 320 tons?—Yes.

Now as regards Mr. Spoontide's evidence of the moment of stability and the upsetting moment of these walls; I hand you this diagram (figure four) and the calculations given in evidence by him. Do you agree his figures, Mr. Randegger?—Partly, yes; that is, I practically agree his moment of stability.

Counsel: Will you please tell the arbitrator with what you do *not* agree?—Witness: The turning point of the wall is fixed by Mr. Spoontide at the outside of the joint immediately above footings. That is well enough for an elementary exposition of the principles of upsetting moments in walls, but, actually, the angle of the bricks at the turning point would spall off or crush when the weight of the wall was thrown over upon the angle. In addition to this objection, a wall is not a rigid slab; it is elastic, it will bend; and should such a wall be forced over, the deflection would be distributed among a number

of joints and there would be a slight compression of the mortar joints and bricks on the outside, and a slight expansion of them on the inside. The fulcrum would be more likely to be at the point where the plane of the outside face of the wall meets the top of the concrete foundation.

Counsel: In what respects do your results differ from Mr. Spoontide's?—Witness: There are small differences in my estimates of weight of materials, but these are of little consequence: I have taken the dead weight of roof at 15 lb. per square foot, and brickwork at 120 lb. per cubic foot, as against Mr. Spoontide's 12 lb. and 112 lb. My chief difference is that—for the reason just given—I take the lever arm of the upsetting moment to be 27 ins. instead of 18 ins. and the maximum thrust to be one ton *if* the buckled floor were completely flattened; but my calculations show that the live load would *not* so flatten the floor, therefore the thrust would be less than one ton and consequently the upsetting moment must have been something less than 27 ton-ins. compared with Mr. Spoontide's 126 ton-ins.

Counsel: That is to say, the weight of the dancers would not push the wall over?—No, it could not do so.

If Mr. Spoontide were right in his statement that the moment of stability was $4\frac{1}{2}$ ton-ins. and the upsetting moment 126 ton-ins., would the weight of the dancers have pushed the wall over?—No.

Counsel: Please explain your answers, Mr. Randegger.—Witness: The material thing is the distance through which the thrust can act. What I mean to express is that, as the wall yields to the thrust, the boards expand—that is, the amount by which they are (or could be) compressed becomes less, and therefore their thrust becomes less until, if and when there is no compression, there is no thrust. The upsetting moment being greater than the moment of stability, the wall will *begin* to be pushed over, and as long as the thrust is sufficient it will go on being pushed over until the centre of gravity of the wall is vertically over the turning-point, when instability will be reached and the wall will topple over: but the fact is that the maximum thrust does *not* continue, so that, for the reason just given, the wall is not pushed over. It is common ground that the maximum distance through which any thrust could act from the centre of the floor towards each wall was—disregarding the compression of the wood—less than 1 in., and even this travel would only carry the wall over 2·5 ins. measured at the height of its mass centre; whereas it would have to be pushed over 7 ins. at this point before instability was reached.

Counsel: If, as you say, Mr. Randegger, the weight of the dancers could not have thrown the wall over, to what do you attribute the collapse of the building?—Witness: To the synchronization of the rhythmic impact of the dancers with the natural period of vibration of the walls. It is well known that if even a small force is applied periodically to a body, and this period is the same as the natural period of vibration of that body, then the amplitude of the vibrations or oscillations of that body get larger and larger. This, in my opinion, is what happened to the walls; and when once the amplitude was such that a vertical line through the mass centre of the wall fell beyond the base—which happened when the mass centre had been pushed over 7 ins.—the wall was bound to topple over. The roof principals, however, by opposing the outward movement of the top of the walls, resisted their tendency to overturn.

Counsel: How do you explain, then, Mr. Randegger, that the building collapsed?—Witness: I have made calculations from the drawing (figure four) showing in detail the construction of the roof principals. I find that though the bracing of the roof was sufficient for its purpose and that any slight outward thrust was met by the pier abutments at the point of support of principals, yet the position of the collar tie, and the consequent leverage which any outward movement of the walls would bring against it, was such that directly there was a tendency for the walls to move outwards—in fact, directly the value of the piers as an abutment was nullified by the push of the floor—the bolts through the joint of the collar and principal rafter would shear through the tenon, the collar tie would yield, and the roof would spread and help push the walls over. I disagree with Mr. Spoontide when he says "the walls gave way and let the roof down." The periodic outward pull of the top of the wall on the feet of the principals—due to the dancing—broke the tie of the collar by shearing. Directly the tie broke, the forces tending to tear the principals apart were increased—the roof spreading by its own weight—and pushed the walls over.

Counsel: I understand you to say, Mr. Randegger, that neither the buckling of the floor, nor the standing and irregular moving about upon the floor of the persons present, would have caused the walls to move?—That is so. The floor in its buckled state under those conditions would have supported the weight of the persons in the hall.

I also understand you to say that nothing but continued violent dancing, synchronizing with the natural period of vibration of the wall, could have caused the collapse?—Continued energetic and synchronous dancing. Yes, that is so.

Mr. Chawlegger (cross-examining): I understand you consider yourself an expert, Mr. Randegger?

Witness made no reply.

The Arbitrator: Answer the learned Counsel's question, please.

Witness: He has asked no question; he has only told me he understands I consider myself an expert.

The Arbitrator to Counsel: Please put your question, Mr. Chawlegger.

Counsel: Are you an expert?—In what, do you mean?

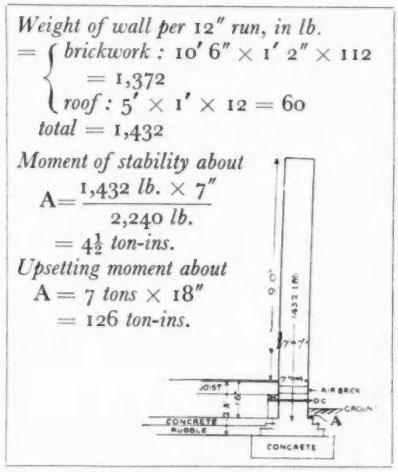

Figure four. Diagram given in evidence by Mr. Ronald Spoontide, F.S.I., showing moments of stability and upsetting.

Counsel: In the design and calculation of buildings?—No. I am not an expert in building-design, and I am certainly not an expert in the calculation of buildings, as I do not know how buildings can be calculated and have never attempted to calculate one.

Counsel: Don't quibble, sir. Answer the question.—I have answered it.

The Arbitrator: I must ask you, Mr. Randegger, to do your best to interpret Counsel's questions as he intends.

Witness: I shall be glad to do so, sir, if Counsel will honestly apply himself to get the information he wants; but as he obviously wishes merely to discredit my standing as a professional man and throw confusion—and not light—upon the evidence I have given, I am not prepared to help him by assuming his meaning when he puts questions which are frankly nonsensical.

The Arbitrator: I must ask you not to make speeches, sir. Your last words were most improper.—Then I withdraw those words, Mr. Arbitrator, and leave you to substitute any others which convey to you the same meaning. I have come here as a professional man of a certain standing who has made the

The north side of Fore Street, Hatfield. Reproduced from a measured drawing by Mary B. Crowley

fundamental principles of some branches of engineering a life-study, and I do not see why——

The Arbitrator : I cannot let you go on, Mr. Randegger. I will see that Counsel does not overstep the mark.

Counsel (*acidly*) : May I be permitted to inquire of you, Mr. Randegger, whether you are aware that authorities differ widely on the matters upon which you have, in your evidence, been laying down the law ?—Certainly you may.

The Arbitrator : Answer the question, sir.—I have done so.

The Arbitrator (to Counsel) : Repeat it, Mr. Chawlegger.

(Counsel did so.)—Witness (to Counsel) : Certainly, you may do so.

The Arbitrator : That is no answer, sir.

Witness : Pardon me, Mr. Arbitrator, the learned Counsel asks me if I will permit him to put a particular question. I answer, Yes, certainly, I will permit him to do so.

The Arbitrator : Mr. Randegger, I cannot allow any more of these verbal prevarications. Mr. Chawlegger, you will help me if you put your questions in a direct way.

Counsel : Is it a fact that authorities differ widely as to the matters adduced by you in evidence ?—If you refer to the actual ascertained facts of the dimensions and methods of construction of the building, I answer, No. If you refer to the principles of physical science which I have used in arriving at my conclusions, No. If you refer to my *application* of those principles to this particular case, I still say, No; but if you refer to the discretion necessary to arrive at approximations where the facts are not all ascertainable, and to logical deductions and points of opinion, I answer, Possibly, and to a limited extent, Yes.

Counsel : So that is your opinion, is it ?—You asked me for my opinion. If you had wanted someone else's opinion, you should have said so.

The Arbitrator : That was a most unnecessary remark.

Witness : Are you referring, sir, to the learned Counsel's gibe?

The Arbitrator : No, sir. I was referring to your own comment. I cannot allow these thrusts at Counsel.

Witness : I submit, Mr. Arbitrator, that I am here expressly to give my opinion. If the opinion of some other——

The Arbitrator : I cannot listen to you, Mr. Randegger. Mr. Chawlegger, please continue your cross-examination.

Witness : I protest, Mr. Arbitrator, that Counsel is not cross-examining, but merely trying to humiliate and discredit me with jaded sneers, the stale stock-in-trade of his profession, which he will hire out to another client tomorrow.

Mr. Chawlegger : This is intolerable.

The Arbitrator : I have seriously to warn you, Mr. Randegger. Your last remark was most outrageous. You must apologize to Counsel.

Witness : I shall be glad to do so, Mr. Arbitrator, if the learned Council will withdraw his own offensive comment.

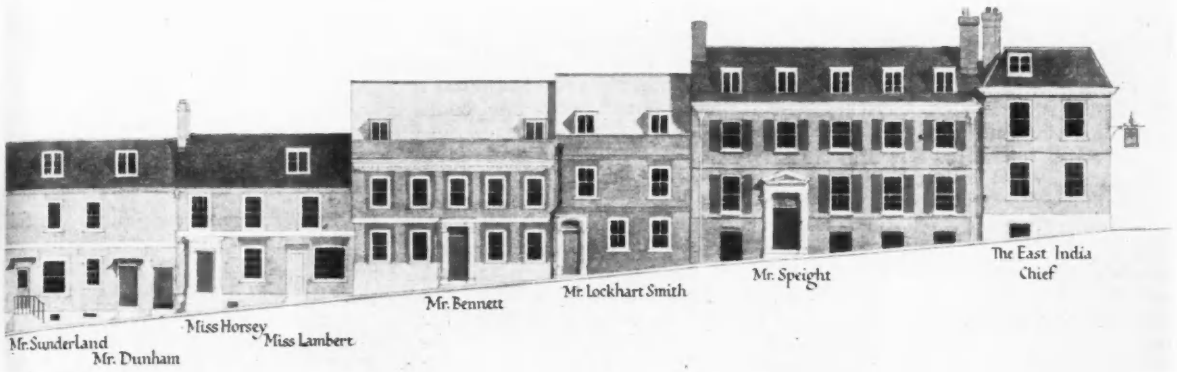
The Arbitrator : I can allow no conditions. A full apology and withdrawal is due to the learned Counsel. I am sure he will accept that apology if it is frank and sincere.

Witness : Mr. Chawlegger, I wish fully to withdraw anything I have said which has offended you and to tender my sincere regret that you galled me into retort. May I hope, sir, that you will respect *my* vocation now you know that I can better you in *yours*.

The Arbitrator : Mr. Randegger, this is all most deplorable. It is impossible to go on like this. I must appeal to you, and I will appeal to Mr. Chawlegger—whose self-control is commendable—to come to an understanding. I can assure Mr. Randegger that he will best serve the defendants' interests by taking no notice of the form in which questions are put to him; and I would suggest to Mr. Chawlegger that, in view of the witness's very particular dislike to a certain form of question, learned Counsel would serve his client best, and also oblige me, by adopting a form to which Mr. Randegger will not object.

Witness : I object to no questions that are honestly directed to testing my evidence. I welcome cross-examination. I am here expressly to elucidate technical points—so far as I am able.

The Arbitrator : That is a frank and reasonable statement. I am sure that Mr. Chawlegger will consider it to be so.



Mr. Chawlegger : Certainly. No one regrets this unfortunate interlude more than I do. I can assure Mr. Randegger that my questions were framed without any offensive intention.

Mr. Randegger : I quite understand that. I fully accept what the learned Counsel says, but——

The Arbitrator (*hastily*) : Well then, let's get on. Mr. Chawlegger, will you please resume your cross-examination.

Counsel : Why have you, in your calculations, not taken into account the piers built into the walls ?—Witness : They certainly had some effect in stiffening the walls, but they did not prevent the walls from moving beyond the point of stability. In the circumstances, the security they gave was immaterial, and as any allowance made for them would merely require a little greater violence on the part of the dancers to throw the wall down, I was not helping the defendants' case in ignoring the point.

Counsel : You said that the roof

and John Brandon-Jones. The names under the various houses are those of the present residents.

principals tended to prevent the walls falling over?—Witness: Certainly.

Counsel: But you do not state the extent of this tendency?—Witness: It would be a difficult matter to calculate—almost impossible; and as the only effect of such evidence would be to point to a greater violence in the assault on the walls, I felt entitled to leave it out.

Counsel: One point more. You spoke of the pendulum effect of the wall—the natural period of vibration, you called it—synchronizing with the rhythmic period of the impact of the dancers?—Yes.

Counsel: Do you know what the "period" of the wall was?—No.

Counsel: What grounds have you, then, for saying that it synchronized with the beat of the dance?—This ground—that the travel of the upsetting thrust was too small to push the walls over without the increasing swing due to synchronization. In no other way could the wall have been made to rock beyond its position of stability.

Counsel: How do you know that the normal thrust would not have moved the walls far enough to overcome the collar tie, and cause the roof to spread?—For the reasons given in my evidence in chief.

Counsel: Have you calculated the amount of the pull necessary to cause the bolt to shear through the collar tenon?—Yes.

Counsel: And therefore you know the amount of outward pull at feet of principals necessary to cause the shear?—Yes.

Counsel: You said just now that it was impossible to calculate the outward pull exerted by the wall on the feet of principals and due to synchronization?—Yes.

Counsel: How, then, can you say that the outward pull of the walls caused the tenon to shear, when you do not know what that pull was?—I find that the principals would fail by shearing of the tenon, because that was by far the weakest link in the chain. The amount of outward pull at the feet of the principals (additional to their normal thrust) necessary to produce the shear, was so small as to be set up directly the resistance of the abutment piers was substantially reduced by their outward swing. I know that it was, in fact, substantially reduced; and, in my opinion, the pull of the walls led to the giving way of the collar tie.

Mr. Twistle intimated that he did not wish to cross-examine; and Mr. Pitfall, waiving his right to re-examine, then told the Arbitrator that that closed his case. The Arbitrator said it was then too late to hear Counsel, but that he would resume for that purpose at ten o'clock the following morning.

(NEXT WEEK—V.: MR. PITFALL'S CLOSING ADDRESS.)

LITERATURE

GRUNDFORMEN DER EUROPÄISCHEN STADT

THIS book on the history of the town plan deals with a subject that has already been handled both specifically and in works on the general aspects of town planning, but it does—by adopting a new system in its examination of the question—bring a freshness into these studies, and offers a viewpoint that has a value of its own. Instead of regarding the subject as one to be dealt with purely chronologically, the author divides the types of town plan into three main groups, and traces the development of each of these through the ages, justifying his method by evidence that they all date from prehistoric times down to the present day.

The first type is that of the irregular plan not predetermined, but dominated by the nature of the site and the accidents of gradual development on the lines of least resistance. This form of city is illustrated by examples, such as the hill-top towns of archaic Greece, the old strongholds of the Italian Peninsula and of the Gauls, after which we naturally come to the numerous examples dating from the Middle Ages, closing with a reference to the romanticism that produced the tower groups of Bologna, Siena, and other Italian cities, which the author sees paralleled in the present attitude towards the skyscraper in America.

The next type reviewed is the city on a definite rectangular plan, which was adopted by the peoples of Egypt and Mesopotamia, but of which the examples from early times given here are all drawn from the plans by the Greek Hippodamos and his followers, thence passing by a natural transition to the Roman "Camp" and "Colonial" plans and on to the "Bastides" and other examples of mediaeval rectangular planning, which are followed by the towns laid out in Central Europe for "colonies" of religious refugees. These were planned with a very large central square, usually affording a site for the church and sometimes for other public buildings. This chapter closes with a note on the adoption of the rectangular plan by the United States.

The third group is less capable of exact classification. It may be termed the geometric, and includes some rectangular planning, though ostensibly concerned with radial plans and circular or polygonal city groups. An interesting investigation traces the circular type back to at least as far as the

Hittites, while reference is made to Greek descriptions of towns on more or less circular lines. There seems no doubt that in early times the tribal villages throughout Europe had their defences aligned as nearly on a circle as the formation of the site allowed, and some of these still remain as towns in Italy and Spain, while elsewhere the lines of mounds and ditches may be traced. Whether these medieval examples inspired the architects Averlino and Scamozzi to prepare their plans for ideal cities in circular form with radial streets, or whether these were based on first principles, can hardly now be determined, probably only the first hint came from what they could see on some Italian hill. At any rate, Scamozzi's Palma Nuova shows a complete spider's web plan, and it is curious that his so-called "Ideal" plan is less logical in that the polygonal star of the fortifications is filled with rectangular plotting, as was also the case with the plan of Mannheim, laid out in 1606, though here the fortress, enclosed in a subsidiary polygon, originally had a radial plan before it was removed in 1689, some thirty years before the Palace was built on its site.

Neu Breisach, planned by Vauban in 1699, is on the lines of Scamozzi's "Ideal" city, but at Karlsruhe, commenced in 1715, the radial lines dominate the plan. Other examples of radial planning are taken from Paris, Versailles, and Rome. At this point the author diverges from his hitherto well-defined course to study various architectural features in the city plan, and here will be found the only two instances taken from this country, namely, Sir Christopher Wren's plan for London—in which he makes the slip of referring to the Royal Exchange as the Bank of England—and the Woods' planning at Bath.

These latter pages would, it may be suggested, have been better employed in tracing the influence of the various types of historic plan on the planning of the later eighteenth century and the first half of the nineteenth. The author ignores all the important later developments, and though of course he is entitled to end where he chooses, it would have rounded off his studies to have carried them on for another century or so.

A MAP OF CAMBRIDGE

AN interesting and exceedingly useful little map, showing a bird's-eye view of Cambridge, is the first of a series of maps which are being published by Messrs. George Philip and Son, Ltd., entitled "The 'Wayabout' Series of Pictorial Maps."

The drawing has been prepared and drawn by Mr. G. Spencer Hoffman, M.A. (Cantab), and is reproduced in black-and-white. The streets and houses are shown in remarkable detail, while churches, colleges, public and other important buildings and all noteworthy features are clearly recognized.

COMPETITION FOR NEW HOSPITAL CENTRE AT BIRMINGHAM

SOUTH ELEVATION OF HOSPITAL.

SOUTH ELEVATION OF MEDICAL FACULTY BUILDING.

THE WINNING DESIGN:
BY LANCHESTER AND LODGE

Two elevational drawings from the set of sixteen submitted by Lanchester and Lodge, of London, and awarded the first place in this competition, which was limited to twelve selected architects, all acknowledged experts in hospital design. Other awards were: Second, S. N. Cooke, Birmingham; third, Charles E. Elcock, of Elcock and Sutcliffe, London; fourth (two designs placed equal), Pite, Son and Fairweather, London; W. and T. R. Milburn, Sunderland. H. Percy Adams was the assessor. *Further particulars appear on the next page.*

COMPETITION NEWS

BIRMINGHAM HOSPITAL CENTRE

To Lanchester and Lodge has been awarded the first prize in this limited competition, which was assessed by H. Percy Adams, F.R.I.B.A. The new blocks, which are estimated to cost about £1,000,000 to erect, are intended to occupy a site adjacent to the Edgbaston buildings of Birmingham University, and include a central chapel, with wings accommodating surgical and medical wards, out-patients' and paying patients' departments, etc., and comprising the main hospital building. The main axis runs from north to south, with nurses' home on the highest ground, then the hospital, and nearest to the entrance from the University, stretching across the site, with a main façade of over 600 ft., is the medical faculty building, with the library overlooking the road leading to the University. This main axis meets the road leading from the University at an angle of approximately 60 degrees. Two of the architects' drawings of the winning design are reproduced on the previous page.

THE PAVILION OF LIGHT

Following are the prize-winners in the principal sections of the competition, organized by *The Daily Mail* and the General Electric Company, Ltd., in connection with the "Pavilion of Light" to be erected at the Ideal Home Exhibition. The competition called for designs for the decoration, furnishing and lighting of a lounge, a dining-room, a bedroom, a nursery, a kitchen and a bathroom, and also for designs for individual lighting fittings.

Lounge.—1st prize, 100 guineas—A. J. Taylor and A. C. Fare, F. and A.R.I.B.A., Bath, in collaboration with Charles A. Richter, John Parkinson Hully, and E. G. Hayward, Bath.

Dining-room.—1st prize, 100 guineas—Raymond McGrath, B. ARCH., A.R.I.B.A., Cambridge.

Bedroom.—1st prize, 100 guineas—Raymond McGrath, B.ARCH., A.R.I.B.A., Cambridge.

Nursery.—1st prize, 100 guineas—Miss F. Barker, A.R.I.B.A., Blackheath, S.E.3.

Bathroom.—1st prize, 50 guineas—A. S. Falconer, Falconer, Cross & Co., Ltd., Newcastle-on-Tyne.

Kitchen.—1st prize, 50 guineas—Karl Wilkinson, A.M.INST.C.E., Wilkinson and Son, Eastbourne.

The general quality of the designs submitted in each section was good. While it cannot be said that all prize-winners utilized to the full the adaptability of electric energy, the winning designs, in general, show commendable originality of thought.

CORRESPONDENCE

ART IN ADVERTISING

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—It has always seemed to me that the advertisement pages *should* equal in interest the editorial pages. I know of advertisers who would give their heads for a notice in, say, your leading article—but it is within the power of any firm to turn their page into something as good as the leading article itself.

Sketches such as those by Mr. J. D. M. Harvey, to which Mr. Burford drew attention last week, are, I take it, what any editor would be pleased to accept. The advertising facts accompanying them are news which any architect would be interested to read. Here we get the perfect advertisement. TILL

READERS' QUERIES

PANTILE ROOFS

E. C. M. writes: *Can a pantile roof of 50 degrees pitch be constructed thoroughly watertight without going to the expense of felt and boarding? In addition to the difficulty of making the side laps weather-tight I have heard it said that the excessive amount of water concentrated in the hollows percolates through the tiles themselves.*

There are many old roofs of pantiling up the north-east coast which appear to be thoroughly watertight though entirely without boarded or felt underlining, and many of these are entirely exposed beneath so that the under-surface of the tiles can be seen from below. There is no question that these tiles are satisfactorily non-porous. There are equally, however, many recent instances where direct penetration is the only possible explanation of proved leakages. I should hesitate to place faith in pantiling without underlining of some sort, which need not be more costly than the old expedients of strip-lathing and mortar fillets, or reeding and bedding. E. G.

DEFECTIVE DRAINS

C. S. writes: "*Trouble is being experienced with the drains at a caretaker's house and schoolroom attached to a church by backflow from the public sewer.*

"*The local authorities, a short time ago, put in a valve to stop the nuisance, but it does not appear to be effective. They now state that the owners must take up the drains, raise the level of the yard and all fittings, and put in a new drain. Plans were submitted and passed and the drains tested and approved by the local authority when the buildings were erected.*

"*Can you inform us on these two points: 1: Is there an effective valve which can be put in the drain to stop the backflow? 2: What is the position of the authority who approved the drains and who say they can do no more in the matter?*"

1: It is presumed that the backflow of sewage or storm-water comes through the gulleys and there is a special ball-valve gulley designed to prevent this. It is provided with a floating copper ball which is forced against an india-rubber seating which automatically prevents flooding.

2: Drainage plans are submitted to local authorities in accordance with bylaws made under the Public Health Acts for the purpose of determining whether the drains are "of such size and materials, and at such level and with such fall as on the report of their surveyor may appear necessary for efficient drainage."

The local authorities are the sole judges of what constitutes a sufficient drain, including the gradient to which it should be laid; and the plans having been submitted and passed, it would appear that the responsibility of abating the nuisance rested with the local authority. N. H.

CLEANING OAK FURNITURE

W. T. B. writes: "*With reference to my query, published in your issue for December 4 last, I stated that I had recently purchased some well-made and substantial oak furniture which has been exposed to the weather, and has in consequence become soiled. Could you advise me as to the best way to clean it, and to fetch up the surface to the natural oak colour?*

"*I should like to point out that it is the actual surface of the oak that has become 'soiled' with the weather, but unfortunately, for lack of definite information on my part, your expert has assumed that the surfaces have been polished, and that it is the* polish *that has become 'soiled' by the weather.*

"*The question I should like to ask your expert is, What is the best way of setting to work to clean actual bare oak surfaces that have been 'soiled' by the weather? The surfaces are quite sound and good.*"

Had W. T. B. enclosed a photograph it would have been of very great assistance to me in giving further advice, as I should have knowledge of the type and form of the actual furniture.

However, it appears to be a case of cleaning off, which is best done with glass-paper and a cabinet scraper. Knowledge of the method of use and sharpening (or burring of the edge) of the scraper is necessary, otherwise its use is liable to cause more harm than good. Possibly he can get a joiner to instruct him if he does not know; and of course its use is confined to plain flush surfaces. Very likely the oak will clean up by the use of sheets of glass-paper alone.

No. 1 first and finally No. 0 used over a large cork pad. For turned work, glass-paper backed on to canvas and torn in thin strips is necessary. Papering off should be concluded by rubbing with the grain. J. C. R.

SOCIETIES AND INSTITUTIONS

INSTITUTION OF STRUCTURAL ENGINEERS BRONZE MEDAL

Mr. A. H. Legat has been awarded the Institution of Structural Engineers, Midland Counties Branch, Bronze Medal, together with the L. Lister Kaye award of £7 7s. for his paper on "The Design and Construction of a Modern Factory in Reinforced Concrete," read before the Midland Counties Branch during the session 1928–29.

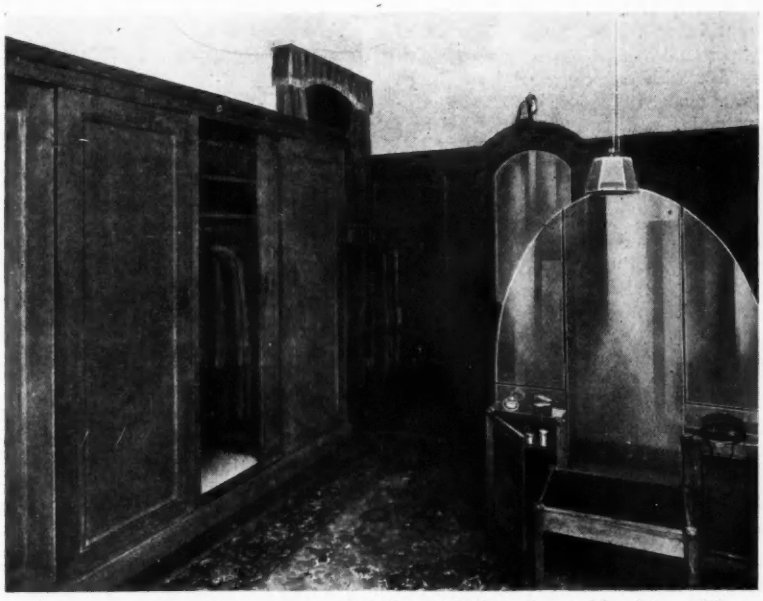
WEST YORKSHIRE SOCIETY OF ARCHITECTS

Mr. Gordon, the Leeds City librarian, in addressing a meeting of the above Society on "Architectural Literature," said that they were living in an age of paper and printing, as well as of electricity. A mere collection of books did not make a library until they had been codified and catalogued; and, further, until the scope of the literature provided was clearly brought to the notice of those interested in particular branches of art or technique. It was only possible to bring books into notice and into circulation by publicity. Formerly such tactics were regarded as undignified; but, happily, that idea was dying out.

Mr. G. H. Foggit, who presided, proposed a vote of thanks to Mr. Gordon. Colonel H. W. Barker seconded.

THE FORUMS OF ROME

Lecturing on "Roman Architecture" at the Central School of Arts and Crafts on Wednesday last, Sir Banister Fletcher, P.R.I.B.A., described the plan of ancient Rome on her seven hills, with the famous Forum Romanum in the central valley. The Capitoline Hill dominated this public meeting-place on one side and the Palatine Hill, with its Imperial Palaces, on the other. The Forum Romanum was the heart of Roman civic life, and held much the same position as the Acropolis of ancient Athens. With the growth of the city, he explained how successive Emperors, eager to ingratiate themselves with the people, built other Forums for the people which rivalled in size, but never in importance, the old Forum Romanum of the citizens. All these Forums were monuments to their Imperial founders and ornaments to the city.



STYLE IN SCULPTURE

At a meeting of the Arundel Society in the Manchester Art Galley, Mr. Eric Gill delivered a lecture on "Style in Sculpture."

The characteristic modes of presentation among modern sculptors, he stated, might be classified as the commercial, the academic, and the revolutionary or independent. The commercial was that kind of goods which were supplied to order by means of middlemen—shopkeepers and contractors. The middleman having no personal interest in his work—he stood for service, not art—he was happy to supply whatever he was asked for, provided it were profitable.

The academic, he said, was that kind of goods turned out by the schools. Here the evil was not that of commercial degradation; it was rather a case of intellectual decay.

Revolutionary and independent sculpture was revolutionary in both senses of the word. It was both a turning back, a return apparently to normal things, and it was a revolt against commercialism and the academic. The fact that such sculptures were a revolt against stylistic imitation did not prevent the unthinking critic from attempting to find a label for them.

A Compactom fitment scheme in one of the flats at Chiltern Court, Marylebone, W.1.

TRADE NOTES

The principal bedrooms in all the flats in Chiltern Court, Marylebone, are equipped with Compactom patent medicine cabinets built flush in the walls above the basins, where the mirror-faced doors form an ideal toilet adjunct. The interiors of these cabinets are opal-lined and have neatly designed galleries for bottles, etc. Crystal knobs, mirrors, studs and nickel spring locks complete the attractiveness of these fitments. In the ladies' cloakroom a great many clothes had to be properly housed in a comparatively small space, which, at the same time, had to be kept attractive.

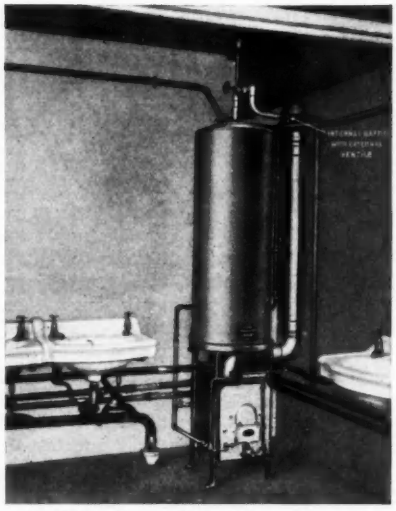
The restaurant at Chiltern Court seats 250 people, and each diner has a properly-labelled hanger for every garment. An extraordinarily ingenious arrangement has been devised whereby additional clothing fitments, which are not normally required, may, by a touch of the hand, be extended across the window embrasures and brought into immediate use. The equipment of the cloakroom, carried out by Messrs. Compactom, includes not only the clothing fitments, but all the panelling and two uniquely fitted dressing tables. The whole work is executed in the modern spirit, in an elegant but restrained design. All the timber is Austrian oak, lime finished. Apart from the above contract work, which was executed under the direction of Mr. C. W. Clark, A.R.I.B.A., Messrs. Compactom have also been favoured with orders from tenants of the flats already occupied, for their well-known clothing cabinets and for complete fitment schemes.

Electrical Installation Work Good and Bad, published by the Electrical Contractors' Association (Incorp.), discusses the need for electrical "safety first," emphasizes the value of a sound installation, and gives examples of the cost of good and bad work. In the foreword the General Council have noted with grave concern the large amount of really dangerous electrical work now being executed throughout the country, and regards it as a duty to place before architects, and consumers of electrical energy generally, a statement in clear and non-technical terms concerning the principal points to be observed and the pitfalls to be avoided, in order that the maximum benefit may be derived with safety and security.

Mr. Walter Tapper, A.R.A., in the preface says: "I do not hesitate for one moment to give every support to the main contentions put forward in this interesting publication dealing with good and bad electrical installation work. The outstanding frankness

and sincerity of the following pages have brought home to me the significance of the 'personal contact' that we establish every day with our electrical installations and our modern domestic electrical equipment, and I am confident that a clearer appreciation of all the possibilities of this great public service and domestic help will be to the immediate good of the entire community."

Messrs. J. H. Sankey & Son, Ltd., Canning Town, have published an illustrated folder concerning "Sankmar" plastic paint, their latest speciality. It is claimed to be a reliable medium for giving interior decoration on walls or ceilings in permanent relief. "Sankmar" is a fine white powder which is mixed with water to a plastic paste. It is applied with a brush to any surface—wall board, plaster, cement, concrete, breeze or wood. It is then textured by the fingers, palm of the hand, scraper knife, comb, crumpled paper, sponge; or stippled with a hair, wire or rubber brush. After texturing (when wet) a celluloid plane is dragged over the surface to remove sharp points. "Sankmar" will normally dry over-night and then "Sankmar" surfacer is brushed on. This fills up the pores, making the surface ready to receive paints, colours, etc. After the surfacer has dried, any paint, lacquer, scrumble or graining colour of reputable manufacture can be used to give the finished colour effect. A copy of the folder, with, if desired, a small sample panel (free) showing a "Sankmar" texture, can be obtained from Messrs. J. H. Sankey and Son, Ltd. At their Westminster headquarters (9A, Tothill Street, S.W.1) the firm show a room of the Tudor period finished throughout in "Sankmar."



The accompanying illustration shows a "Victor" gas-heated hot-water supply apparatus, eleven of which have been installed in the first portion of the new lavatory equipment in Empire Hall, the new extension of Olympia. Each lavatory has a series of about eleven hand-basins situated on the various floors, and for each suite a "Victor" apparatus, with an insulated storage cylinder of 35 gallons capacity, is provided. The storage is of special construction, tested to 75 lbs. pressure, equal to 150 ft. head (nominal). One of the outstanding features of the apparatus is the new snap-action positive-control thermostat, which extinguishes the gas at the burner, leaving only the pilot-jet for re-ignition automatically when the water cools. The thermostat opens up whenever water is drawn, thus replenishing the supply as occasion may demand, without attention. The boiler unit, being separate, and connected to the cylinder (or tank), with flow and return pipes, delivers the high-temperature water the "Victor" boiler circulates to the top of the storage, and it is immediately available at the taps.

The Automobile Association have recently issued a booklet of seven-day drives radiating from Paris, each specially "logged" by experts. Illustrated by a chart, these tours have been individually selected to make some specific appeal, i.e. historic, architectural, scenic, etc.

THE BUILDINGS ILLUSTRATED

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue :—

Empire Hall, Olympia (pages 193-198). General contractors : James Carmichael (Contractors), Ltd. Sub-contractors : Dorman, Long & Co., Ltd., steelwork; Francis Polden & Co., Ltd., electrical; J. H. Nicholson & Co., heating; Richard Crittall & Co., Ltd., ventilation; The Hoffmann Sprinkler Co., sprinklers; Siegwart Fireproof Floor Co., Ltd., floors; Stuarts Granolithic Co., Ltd., granolithic; Emerson and Norris, Ltd., stonework to main elevation; Limmer and Trinidad Lake Asphalte Co., Ltd., asphalt; Carter & Co. (London), Ltd., terrazzo and sanitary fittings; J. Starkie Gardner, Ltd., metalwork to canopy, etc.; Fenning & Co., Ltd., marble, etc., to main entrance; London Brick Co. and Forders, Ltd., bricks; Crittall Manufacturing Co., Ltd., windows; Waygood-Otis, Ltd., goods lifts; Express Lift Co., Ltd., passenger lifts; Ewart and Sons, Ltd., copperwork; Le Grand, Sutcliff and Gell, Ltd., and Thos. Firth and Sons, "Staybrite" for turnstiles; Chance Bros. & Co., glass; London Sand Blast Decorative Glass Works, Ltd., ornamental glass; J. W. Gray and Sons, Ltd., lightning conductors; James Gibbons, Ltd., door furniture, etc.; Luxfer, Ltd., pavement lights; Brunswick Metal Casement Co., roof lights and patent glaxing; J. A. King & Co., Ltd., flat roof lights; General Electric Co., Ltd., floodlighting; Davey, Paxman & Co., Ltd., boilers; Thomas Potterton, Ltd., domestic gas hot-water system; Burn Brothers (London), Ltd., drainage; Benjamin Electrical Co., electric light fittings.

A "Victor" gas-heated hot-water supply apparatus, eleven of which have been installed in the lavatory accommodation in the Empire Hall, Olympia.

Melbourne House, Aldwych (pages 199-201). General contractors : Rice and Sons, Ltd. Sub-contractors : Lindsays Paddington Ironworks, Ltd., constructional steelwork; Diespeker & Co., Ltd., hollow-tile and concrete floors; Frank Mortimer, Ltd., Portland stone facings; Cooper, Wettern & Co., Ltd., granite dressings; Limmer and Trinidad Lake Asphalte Co., Ltd., asphalt to roofs, etc.; Stuarts Granolithic Co., Ltd., concrete stairs; James Gibbons, Ltd., metal windows and ironmongery; Walter Macfarlane & Co., cast-iron gutter; Luxfer, Ltd., pavement lights and skylights; Benham and Sons, Ltd., heating and hot-water supply systems; Gilbert Seale and Son, Ltd., carving; J. W. Gray and Son, Ltd., lightning conductor; Birmingham Guild, Ltd., metal fascias and outside lamps; Smith, Major and Stevens, Ltd., passenger lifts; Haywards, Ltd., lift enclosure and balustrades; Matthew Hall & Co., Ltd., sanitary works; Leeds Fireclay Co., Ltd., sanitary fittings; Francis Polden & Co., Ltd., electrical installation; Smith and Ansell, Ltd., and Metro-Vick Supplies, Ltd., electric fittings; Morris, Singer & Co., bronze entrance doors, cast lead work to roof, and decorative glass work; Art Pavements and Decorations, Ltd., marble work and wall tiling; F. W. Clifford, internal decorative work.

House at Cuffley (pages 220-221). General contractors : Allen Fairhead and Sons, Ltd. Sub-contractors : Dorking Brick Co., facing bricks.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

1030 Commin, F. J. Composite sheets or tiles for building. January 10.

THE ARCHITECTS' DIARY

WEDNESDAY, JANUARY 29

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. "Circular Temples and Basilicas, or Courts of Justice of the Romans." By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

COUNCIL FOR THE PRESERVATION OF RURAL ENGLAND, Gloucestershire Branch, and the Gloucester Architectural Association. At the Municipal Art Gallery, Cheltenham. Exhibition of architectural drawings, including photographs and models. Until January 29. 10 a.m. till 5 p.m. (Wednesdays and Saturdays, 10 a.m. to 8 p.m.) **10 a.m.**

INSTITUTION OF CIVIL ENGINEERS, Great George Street, S.W.1. Students' Meeting. "Highways, and a Survey of Future Developments." By A. H. Kennard, STUD.INST.C.E. H. Howard Humphreys, M.INST.C.E., will preside. **6.30 p.m.**

THURSDAY, JANUARY 30

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Scottish Castles." By E. M. W. B. Hughes (Mrs.), A.R.I.B.A., F.S.A. **7 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Canaletto and Eighteenth-Century Venetian Landscape." By W. G. Constable, F.S.A. **5.30 to 6.30 p.m.**

INSTITUTION OF WELDING ENGINEERS. At the Chamber of Commerce, 95 New Street, Birmingham. "Modern Improvements: Electric Resistance Welding Machines." By C. A. Hadley. Followed by a Discussion. (Lantern Illustrations.) **7 p.m.**

SATURDAY, FEBRUARY 1

Sunrise, 7.40 a.m. Sunset, 4.49 p.m.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE ASSOCIATION OF ARCHITECTS. Dinner of the Northampton Branch at the Angel Hotel, Northampton. **6.45 p.m.**

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. Manchester and District Branch. Visit to works of J. G. Wagstaff, Ltd., Dukinfield.

MONDAY, FEBRUARY 3

R.I.B.A., 9 Conduit Street, W.1. Business Meeting. Election of Members. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Cantor Lecture. "Three Master Etchers: Rembrandt, Meryon, Whistler." By Harold J. L. Wright. (Lecture III.) **8 p.m.**

TUESDAY, FEBRUARY 4

ARCHITECTURE CLUB. Meeting of the Executive Committee, to be held at Oswald P. Milne's office, 64 Wigmore Street, W.1. **5.30 p.m.**

KING'S COLLEGE, Strand, W.C.2. Department of Civil Engineering. Last of a course of three lectures on "Bridges and Bridge-Construction." By C. H. Lobban, D.SC., A.M.INST.C.E. **5.30 p.m.**

WEDNESDAY, FEBRUARY 5

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. "The Appreciation of Public Art in England Through the Ages." By Dr. Tancred Borenius.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE ASSOCIATION OF ARCHITECTS. Annual Meeting at Northampton. **4 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, Lancashire and Cheshire Branch. At the College of Technology, Manchester. Ordinary Meeting. Paper by Joseph Kershaw. (Subject will be announced later.) **7 p.m.**

THURSDAY, FEBRUARY 6

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate: "That the Architectural Beauties of England be Preserved." Affirmative, E. J. Storry. Negative, G. B. Stickney. **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. At the Hotel Cecil, Strand, W.C. Annual Dinner and Reunion of the Institution. **7 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "The Raphael Cartoons." By A. P. Oppé. **5.30 p.m.**

FRIDAY, FEBRUARY 7

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. "The Historical Background of Italian Art." By Professor Edmund G. Gardner. F.B.A. **5.30 p.m.**

SATURDAY, FEBRUARY 8

Sunrise, 6.32 a.m. Sunset, 5.51 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Third of a Series of Six Non-Technical Lectures on Present-Day Architecture. "The Creation of a Garden City." By Louis de Soissons, O.B.E., F.R.I.B.A., S.A.D.G. **3 p.m.**

MONDAY, FEBRUARY 10

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, Southwark, S.E.1. "Automatic Control in Heating and Air Conditioning Installations." By B. T. Wingfield. 7 p.m. Light refreshments at 6.30 p.m. **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, North-Eastern Centre. At the Armstrong College, Newcastle-on-Tyne. "Recent Developments in the Protection of Three-Phase Transmission Lines and Feeders." By T. W. Ross and H. G. Bell. **7 p.m.**

TUESDAY, FEBRUARY 11

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. First of a course of three lectures on Electrical Transmission by Overhead Lines (1) "The Mechanical Aspects of Overhead Transmission Lines, including Conductors, Insulators and Supports." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

ARCHITECTURAL SOCIETY, University College, Gower Street, W.C.1. Centenary Appeal. The Society presents: R.U.R., by Karel Capek, in the College Gymnasium. Tickets, 3s. 6d. and 2s. 4d. (Also February 12 and 13.) **8 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Scottish Centre. At the Royal Technical College, Glasgow. "The Visit of the Institution to France." By W. B. Hird. **7.30 p.m.**

THURSDAY, FEBRUARY 13

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Print Making and Collecting." By W. M. Keesey, M.C., A.R.I.B.A., A.R.C.A., A.R.E. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Welding." By Major James Caldwell, M.INST.C.E. **6.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Early Italian Engravings." By Professor A. M. Hind, O.B.E., F.S.A. **5.30 p.m.**

FRIDAY, FEBRUARY 14

TOWN PLANNING INSTITUTE, General Meeting at the Caxton Hall, Caxton Street, Westminster, S.W.1. "The Systematic Treatment of Road Signs." By H. V. Lanchester. F.R.I.B.A.

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. At the Chamber of Commerce Buildings, New Street, Birmingham. Discussion on "Bracing for Wind and Vibratory Forces" to be opened by W. Smith. **7 p.m.**

SATURDAY, FEBRUARY 15

Sunrise, 6.16 a.m. Sunset, 6.3 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Visit to the Home Office Industrial Museum, Horseferry Road, Westminster, S.W.1. Meet at entrance. **2.15 p.m.**

MONDAY, FEBRUARY 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting. "The Thames Valley Preservation Scheme." By Professor Patrick Abercrombie, M.A., F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture I.) **8 p.m.**

TUESDAY, FEBRUARY 18

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Second of a course of three lectures on Electrical Transmission by Overhead Lines. (2) "Electrical Characteristics of Lines, Resistance, Inductants, Capacitance, Effects of Atmospheric Conditions on Insulation." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

ILLUMINATING ENGINEERING SOCIETY, 32 Victoria Street, S.W.1. General Discussion on "Problems in Illuminating Engineering." Light refreshments at 6.30 p.m. **7 p.m.**

WEDNESDAY, FEBRUARY 19

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. Cantor Lecture, "Alfred Stevens: Architect-Sculptor-Painter." **8 p.m.**

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Honan Night. "Modern Architecture of Sweden." By B. B. Lewis.

THURSDAY, FEBRUARY 20

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate: "That under the present system of Competitions in England, the progress of Architecture is being retarded." Affirmative, J. G. Sidebottom. Negative, T. F. Firth. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "The Ancient Guilds and their Halls." By Allen D. Walker. (Lantern Illustrations.) **7.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Furniture." By H. Clifford-Smith, F.S.A. **5.30 p.m.**

FRIDAY, FEBRUARY 21

LONDON SOCIETY. At the Royal Society of Arts, John Street, Adelphi, W.C.2. "The Royal Observatory, Greenwich." By Sir Frank Dyson, Astronomer Royal. **5 p.m.**

UNIVERSITY OF LONDON, UNIVERSITY COLLEGE, Gower Street, W.C.1. "The Infirmary of the Mediæval Monastery, with special reference to the Abbey of Westminster." By Professor Percy Flemming, F.R.C.S. (Lantern Illustrations.) **5.30 p.m.**

SATURDAY, FEBRUARY 22

Sunrise, 6.0 a.m. Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Fourth of a Series of Six Non-Technical Lectures on Present-Day Architecture. "Decoration and Furnishing." By G. G. Wornum, F.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

MONDAY, FEBRUARY 24

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Designing for the Film." By Lawrence Irving. 8 p.m. Exhibition of Film Settings (until March 22). **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture II.). **8 p.m.**

TUESDAY, FEBRUARY 25

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Last of a course of three lectures on Electrical Transmission by Overhead Lines. (3) "Typical Transmission Lines in use in Great Britain: Characteristic Features of Low, Medium and High Voltage Construction." By Charles W. Marshall, B.SC., M.I.E.E. **5.30 p.m.**

THURSDAY, FEBRUARY 27

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Social Life and Art in France during the Eighteenth Century." By Professor A. E. Richardson, F.R.I.B.A., F.S.A. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Ferro-Concrete Cooling Towers." By T. J. Grueritte. **6.30 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Timber Architecture in Old Houses and Churches." By Philip M. Johnson, F.S.A., F.R.I.B.A. (Lantern Illustrations.) **7.30 p.m.**

FRIDAY, FEBRUARY 28

R.I.B.A., 9 Conduit Street, W.1. London Architecture Medal, 1929. Latest date for submission of nominations.

The West Riding Education Committee has selected MEXBOROUGH as the most suitable centre for the erection of the proposed new mining institute.

The OSSETT Corporation is considering proposals either for the erection of new premises in Station Road, or improving the present public library.

The West Riding C.C. Health Committee reports that plans of the proposed sanatorium for women and children at SCRIVEN are in course of preparation.

The SHEFFIELD Corporation Housing Committee has prepared schemes for the reconstruction of two unhealthy areas.

Plans passed by the SOUTH SHIELDS Corporation: Alterations, Palace Theatre, Frederick Street, for Messrs. W. and T. R. Milburn (architects); stables, Imeary Street and Imeary Grove, for Mr. S. J. Stephenson, on behalf of Messrs. Ringtons, Ltd.; flats, Madeira Terrace, for Mr. Howard Hill.

At a meeting of the SOUTH SHIELDS Corporation Quay Committee, the borough engineer reported on a scheme for the extension of the Mill Dam Quay, the total cost of which, together with the necessary dredging of the river, and the provision of a crane for modern requirements, he estimated at between £20,000 and £25,000. He suggested that before going into the details of the scheme the Unemployment Grants Committee be approved on the question of making the maximum amount of grant in aid of the scheme, and the town clerk was asked to communicate with the Unemployment Grants Committee as suggested.

The Trafford Park Estates, Ltd., has prepared a scheme for an arterial road across TRAFFORD PARK.

The WEST RIDING C.C. is to reconstruct Apperley Bridge over the River Aire, at a cost of £16,000.

The WEST RIDING Education Committee has prepared a school building programme to cost £1,627,000.

The WEST RIDING County Council has approved of six schemes for the abolition of level crossings and six schemes for the reconstruction of weak bridges, estimated to cost £343,900.

The WEST RIDING County Council reports that the total estimates approved for the carrying out of Calverley and Horsforth new road and bridges amount to £168,589, which include the sum of £9,000 for the construction of a bridge over the Leeds and Liverpool Canal and the adjoining estate roadway. In addition there are various other items which have been taken into account, and in order to complete the works satisfactorily it will be necessary to provide a further sum of £465, making a total estimate of £169,054.

The Manchester Education Committee is to erect an elementary school at Mauldeth Road, WITHINGTON, at a cost of £21,500.

WALES

On behalf of the MERTHYR Corporation, Messrs. L. G. Mouchel and Partners are preparing a scheme for bridging the River Taff on the Abercanaid road.

The SWANSEA Corporation has decided to proceed with relief schemes amounting to £526,532.

Plans have been prepared by the Picton Cinema Company for the erection of a cinema, cafés and six shops at Picton Place, St. Helen's Road, SWANSEA.

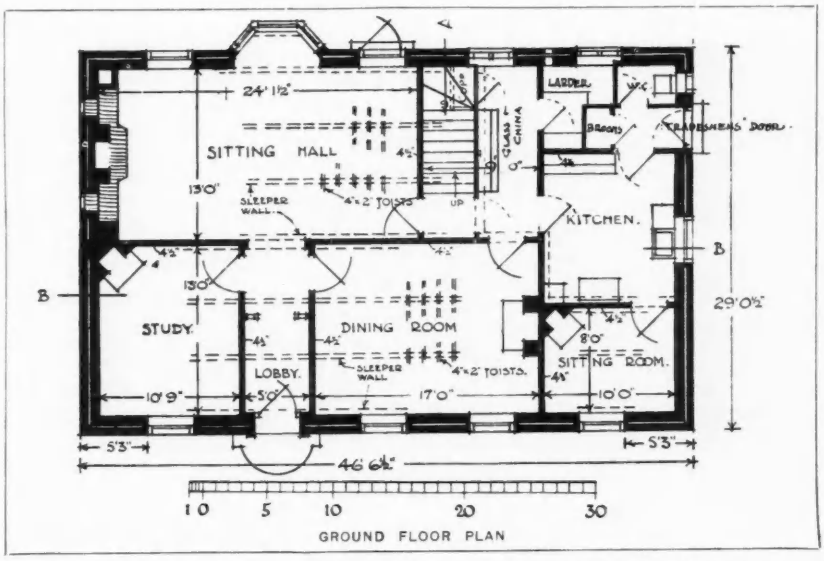
SCOTLAND

The GLASGOW Education Committee is to erect an elementary school in Langrig Road.

The GLASGOW Corporation recommends the duplication of water mains at a cost of £150,000.

The GLASGOW Corporation Health Committee suggests a site near Shieldhall Road, for the erection of the proposed maternity hospital.

The GLASGOW Corporation has adopted a scheme for the improvement of areas in Calton district, showing the erection of 318 dwelling houses.



The GLASGOW City engineer has prepared plans for the transfer of Gorbais Library, from premises belonging to the baths department, to a new building to be erected on the site at South Portland Street and Norfolk Street, at an estimated cost of £23,000.

Messrs. Alexander M'Lellan, Ltd., are to erect eighty terrace houses in Aoudhouse Road and Holburn Road, Newlands, GLASGOW.

The GLASGOW Education Committee has obtained a site at Parkhouse for the erection of an elementary school.

The GLASGOW Corporation Housing Committee recommends the tender of Messrs. Henry Boot and Sons (Scotland), Ltd., £226,412, for the construction of 784 houses at Carnwadric, Pollockshaws.

The GLASGOW Corporation has asked the city engineer to prepare plans for the erection of baths and wash-houses at Barrowfield Street, Mile End, at an estimated cost of £38,000, and at Avenuepark Street, North Kelvin, at an estimated cost of £32,000.

House, Ridgeway, Cuffley. Designed by Williams and Cox. Ground-floor plan. On the first floor are five bedrooms and a bathroom. A photograph of the exterior of the building is reproduced on page 220.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given.

The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 4d. *per hour*; LABOURER, 1s. 4d. *per hour*; NAVVY, 1s. 4d. *per hour*; TIMBERMAN, 1s. 5½d. *per hour*; SCAFFOLDER, 1s. 5d. *per hour*; WATCHMAN, 7s. 6d. *per shift.*

	£	s.	d.
Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.
RETURN, fill, and ram, ordinary earth, per yd. £0 1 6
SPREAD and level, including wheeling, per yd. 0 1 6
FILLING into carts and carting away to a shoot or deposit, per yd. cube . 0 10 6
TRIMMING earth to slopes, per yd. sup. 0 0 6
HACKING up old grano. or similar paving, per yd. sup. 0 1 3
PLANKING to excavations, per ft. sup. 0 0 5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.
IF left in, add to above prices, per ft. cube 0 2 0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup. . 0 2 1
DO. 6 in. thick, per yd. sup. . . . 0 2 10
PUDDLING, per yd. cube 1 10 0
CEMENT CONCRETE, 4-2-1, per yd. cube 1 17 6
DO. 6-2-1, per yd. cube 1 12 6
DO. in upper floors, add 15 per cent.
DO. in reinforced-concrete work, add 20 per cent.
DO. in underpinning, add 60 per cent.

LIAS-LIME CONCRETE, per yd. cube .	£1	14	0
BREEZE CONCRETE, per yd. cube .	1	7	0
DO. in lintels, etc., per ft. cube . .	0	1	6

CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube 0 3 9
FINE concrete benching to bottom of manholes, per ft. cube 0 3 0
FINISHING surface of concrete spade face, per yd. sup. 0 0 9

DRAINER

LABOURER, 1s. 4d. *per hour*; TIMBERMAN, 1s. 5½d. *per hour*; BRICKLAYER, 1s. 9d. *per hour*; PLUMBER, 1s. 9d. *per hour*; WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. *6 in., per ft.*	0	1	3
DO. *9 in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. *6 in., per yd.*	0	8	0

Portland cement and sand, see "Excavator" above.

Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft. . . 0 4 3
DO. 6 in., per ft. 0 5 0
DO. 9 in., per ft. 0 7 9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft. 0 8 3
DO. 6 in., per ft. 0 10 3
Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 9d. *per hour*; LABOURER 1s. 4d. *per hour*; SCAFFOLDER, 1s. 5d. *per hour.*

London stocks, per M.	£4	5	6

TUCK pointing, per ft. sup. extra .	0	0	10
WEATHER pointing, do. do. . .	0	0	3
TILE creasing with cement fillet each side, per ft. run	0	0	6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0	5	0
DO. 1½ in., per yd. sup.	0	6	0
DO. 2 in., per yd. sup.	0	7	0
If coloured with red oxide, per yd. sup.	0	1	0
If finished with carborundum, per yd. sup.	0	0	6
If in small quantities in finishing to steps, etc., per ft. sup. . . .	0	1	4
Jointing new grano. paving to old, per ft. run	0	0	4
Extra for dishing grano. or cement paving around gullies, each . .	0	1	6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup	0	0	7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0	8	0
DO. vertical, per yd. sup. . . .	0	11	0
SLATE DAMP COURSE, per ft. sup. .	0	0	10
ASPHALT ROOFING (MASTIC) in two thicknesses, ¾ in., per yd. . .	0	8	6
DO. SKIRTING, 6 in.	0	0	11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup. . .	0	5	3
DO. DO. 3 in.	0	6	6
BREEZE fixing bricks, extra for each .	0	0	3

MASON

MASON, 1s. 9d. *per hour*; DO. *fixer*, 1s. 10d. *per hour*; LABOURER, 1s. 4d. per hour; SCAFFOLDER, 1s. 5d. *per hour.*

Portland Stone:			
Whitbed, per ft. cube	£0	4	6
Basebed, per ft. cube	0	4	9
Bath stone, per ft. cube	0	3	0
Usual trade extras for large blocks.			
York paving, av. 2½ in., per yd. super.	0	11	0
York templates sawn, per ft. cube	0	7	6
Slate shelves, rubbed, 1 in., per ft. sup.	0	2	6

Cement and sand, see "Excavator." etc., above.

HOISTING and setting stone, per ft. cube	£0	2	2
DO. for every 10 ft. above 30 ft. add 15 per cent.			
PLAIN face Portland basis, per ft. sup.	£0	2	8
DO. circular, per ft. sup. . . .	0	4	0
SUNK FACE, per ft. sup.	0	3	9
DO. circular, per ft. sup. . . .	0	4	10
JOINTS, arch, per ft. sup. . . .	0	2	6
DO. sunk, per ft. sup.	0	2	7
DO. DO. circular, per ft. sup. .	0	4	6
CIRCULAR-CIRCULAR work, per ft. sup.	1	2	0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0	1	1
DO. circular, do., per ft. run . .	0	1	4
HALF SAWING, per ft. sup. . . .	0	1	0

Add to the foregoing prices, if in York stone, 35 per cent.
DO. Mansfield, 12½ per cent.
Deduct for Bath, 33⅓ per cent.
DO. for Chilmark, 5 per cent.

SETTING 1 in. slate shelving in cement, per ft. sup.	£0	0	6
RUBBED round nosing to do., per ft. lin.	£0	0	6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1	7	6
YORK SILLS, W. & T., ft. cub. fixed .	1	10	0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0	1	3
DO. 2½ in. thick, per ft. sup. . .	0	1	6

SLATER AND TILER

SLATER, 1s. 9d. *per hour*; TILER, 1s. 9d. *per hour*; SCAFFOLDER, 1s. 5d. *per hour*; LABOURER, 1s. 4d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:

Portmadoc Ladies				£14	0	0
Countess				23	0	0
Duchess				32	10	0
Old Delabole	*Med. Grey*			*Med. Green*		
24 in. × 12 in.	£42	11	3	£45	1	0
20 in. × 10 in.	31	4	3	33	0	6
16 in. × 10 in.	20	18	0	22	4	9
14 in. × 8 in.	12	1	0	12	16	3
Green Randoms, per ton				8	3	9
Grey-green do., per ton				7	3	9
Green peggies, 12 in. to 8 in. long, per ton				5	13	9

In 4-ton truck loads, delivered Nine Elms station.

Clips, lead, per lb.	£0	0	6
Clips, copper, per lb.	0	2	0
Nails, compo, per cwt.	1	6	0
Nails, copper, per lb.	0	2	2

Cement and sand, see "Excavator," etc., above.

Hand-made tiles, per M.	£5	18	0
Machine-made tiles, per M.	5	8	0
Westmorland slates, large, per ton	9	0	0
DO. *Peggies, per ton*	7	5	0

SLATING, 3 in. lap, compo nails, Portmadoc or equal:

Ladies, per square	£4	0	0
Countess, per square	4	5	0
Duchess, per square	4	10	0
WESTMORLAND, in diminishing courses, per square	6	5	0
CORNISH DO., per square	6	3	0
Add, if vertical, per square approx.	0	13	0
Add, if with copper nails, per square approx.	0	2	6
Double course at eaves, per ft. approx.	0	1	0

SLATING with Old Delabole slates to a 3 in. lap with copper nails, at per square.

	Med. Grey			Med. Green		
24 in. × 12 in.	£5	0	0	£5	2	0
20 in. × 10 in.	5	5	0	5	10	0
16 in. × 10 in.	4	15	0	5	1	0
14 in. × 8 in.	4	10	0	4	15	0
Green randoms				6	7	0
Grey-green do.				5	9	0
Green peggies, 12 in. to 8 in. long				4	13	6

TILING, 4 in. gauge, every 4th course nailed, in hand-made tiles, average per square	3	17	6
DO., machine-made do., per square .	3	7	6
Vertical Tiling, including pointing, add	18s.	0d.	
per square.			
FIXING lead soakers, per dozen .	£0	0	10
STRIPPING old slates and stacking for re-use, and clearing away surplus and rubbish, per square . . .	0	10	0
LABOUR only in laying slates, but including nails, per square . .	1	0	0

See "Sundries" for Asbestos Tiling.

CARPENTER AND JOINER

CARPENTER, 1s. 9d. *per hour*; JOINER, 1s. 9d. *per hour*; LABOURER, 1s. 4d. *per hour.*

Timber, average prices at Docks, London Standard, Scandinavian, etc. (equal to 2nds):

7 × 3, per std.	£22	0	0
11 × 4, per std.	30	0	0
Memel or Equal. Slightly less than foregoing.			
Flooring, P.E., 1 in., per sq. . .	£1	4	6
DO. *T. and G., 1 in., per sq.* . .	1	4	6
Planed boards, 1 in. × 11 in., per std.	30	0	0
Wainscot oak, per ft. sup. of 1 in. .	0	1	6
Mahogany, Honduras, per ft. sup. of 1in.	0	1	4

CENTERING for concrete, etc., including horsing and striking, per sq. .	2	0	0
TURNING pieces to flat or segmental soffits, 4½ in. wide, per ft. run .	0	0	4½
DO. 9 in. wide and over per ft. sup. .	0	1	2

[*continued overleaf*

CARPENTER AND JOINER: *continued*

SHUTTERING to face of concrete, per square	£1	10	0
DO. in narrow widths to beams, etc., per ft. sup.	0	0	6
USE and waste of timbers, allow 25 per cent. of above prices.			
SLATE BATTENING, per sq.	£0	12	6
DEAL boarding to flats, 1 in. thick and firrings to falls, per square	2	10	0
STOUT feather-edged tilting fillet to eaves, per ft. run	0	0	6
FEATHER-edged springer to trimmer arches, per ft. run	0	0	4
STOUT herringbone strutting (joists measured in), per ft. run	0	0	6
SOUND boarding, ⅞ in. thick and fillets nailed to sides of joists (joists measured over), per square	2	0	0
RUBEROID or similar quality roofing, one ply, per yd. sup.	0	2	3
DO., two-ply, per yd. sup.	0	2	6
DO., three-ply, per yd. sup.	0	3	0
TONGUED and grooved flooring, 1½ in. thick, laid complete with splayed headings, per square	2	5	0
DEAL skirting torus, moulded 1½ in. thick, including grounds and backings, per ft. sup.	0	1	0
TONGUED and mitred angles to do.	0	0	6
WOOD block flooring standard blocks laid herringbone in mastic:			
Deal 1 in. thick, per yd. sup.	0	10	0
DO. 1¼ in. thick, per yd. sup.	0	12	0
Maple 1¼ in. thick, per yd. sup.	0	15	0
DEAL moulded sashes, 1¾ in. with moulded bars in small squares, per ft. sup.	0	2	6
DO. 2 in. do., per ft. sup.	0	2	9
DEAL cased frames, oak sills and 2 in. moulded sashes, brass-faced pulleys and iron weights, per ft. sup.	0	4	6
MOULDED horns, extra each	0	0	3
DOORS, 4-panel square both sides, 1¼ in. thick, per ft. sup.	0	2	6
DO. moulded both sides, per ft. sup.	0	2	9
DO. 2 in. thick, square both sides, per ft. sup.	0	2	9
DO. moulded both sides, per ft. sup.	0	3	0
DO. in 3 panels, moulded both sides, upper panel with diminished stiles with moulded bars for glass, per ft. sup.	0	3	6
If in oak, mahogany or teak, multiply 3 times.			
DEAL frames, 4 in. × 3 in., rebated and beaded, per ft. cube	£0	15	0
Add for extra labours, per ft. run	0	0	1
STAIRCASE work:			
DEAL treads 1¼ in. and risers 1 in., tongued and grooved including fir carriages, per ft. sup.	0	2	6
DEAL wall strings, 1¼ in. thick, moulded, per ft. run	0	2	0
If ramped, per ft. run	0	4	6
SHORT ramps, extra each	0	7	6
ENDS of treads and risers housed to strings, each	0	1	0
2 in. deal mopstick handrail fixed to brackets, per ft. run	0	1	6
4½ in. × 3 in. oak fully moulded handrail, per ft. run	0	5	6
1½ in. square deal bar balusters, framed in, per ft. run	0	0	6
FITTINGS:			
SHELVES and bearers, 1 in., cross-tongued, per ft. sup.	0	1	6
1¼ in. beaded cupboard fronts, moulded and square, per ft. sup.	0	2	9
TEAK grooved draining boards, 1¼ in. thick and bedding per ft. sup.	0	4	6
IRONMONGERY:			
Fixing only (including providing screws):			
To DEAL—			
Hinges to sashes, per pair	0	1	2
Do. to doors, per pair	0	1	7
Barrel bolts, 9 in., iron, each	0	1	0
Sash fasteners, each	0	1	0
Rim locks, each	0	1	9
Mortice locks, each	0	4	0

SMITH

NEW WING AND ARCADED LOGGIA AT CUT MILL, BOSHAM, HAMPSHIRE

By DARCY BRADDELL AND HUMPHREY DEANE

THE design for the end of the new wing illustrated here was largely influenced by the fact that a disused mill-stream turned the whole site into an island. The stream was fed from a canal or "cut" at a higher level, which turned the mill wheel, and then went to sea. When the new wing was built for Captain and Mrs. H. M. Harwood, it was sited right over the mill-stream, and so it became necessary to provide a way round the end of it into the garden which lay at the back. This was effected by making the end of the wing into an open arcaded loggia. This bridged over the stream and at the same time acted as a support to Mrs. Harwood's writing-room above, which has a lovely view down the stream and over the waters of Bosham Harbour.

The materials used are flint, dressed with red brick, and the roof is tiled. All the tiles were old ones, taken off a dilapidated shanty that stood on the site, and most of the bricks, too, are old. For working drawing, see overleaf.

Darcy Braddell and Humphrey Deane.]

THE MODERN DON QUIXOTE

"Behold! a giant am I,
Aloft here in my tower."

—LONGFELLOW

SENTIMENT for the preservation of things obsolete clings tenaciously, and has been known to put up a winning fight even against common-sense and logic. As Astragal records in this week's issue, the interest in old windmills, largely aroused by press correspondence, has resulted in a concerted movement to preserve at least some of the more picturesque of these structures still existing in Great Britain. It is not amiss, therefore, to examine the motive on which such activities are based.

Is the object to prevent the untimely decay of something useful; to preserve something which has an instructional and educative value for future generations; or to retain a feature of beauty on our landscapes?

It would be unkind to suggest the existence of a reactionary sentiment which clings to anything old (and even ugly) as a protest against the rate of modern progress. Is the disuse of the old-fashioned windmill, then, untimely? Reason says it is not, or it would not have occurred. It is quite correct to maintain, as some protagonists do, that the windmill is still the cheapest form of power producer, since the source of the power is free and the mechanism necessary is simple. Yet are we compelled to admit that in its old form it is not efficient, in that the return in power obtained is inadequate for the cost of construction and maintenance. Also, the day has gone when the conditions of life permitted man to wait calmly and patiently on the vagaries of the wind in order to carry on his work.

So far as instructional value is concerned, it is doubtful whether the old windmill stands for anything, save an example of what to avoid in aero-dynamics. There is left, then, the question of beauty; but is the old windmill a thing of beauty? Well—yes, sometimes! Beauty in such matters is largely a question of association; and in the abstract, divested of their environment, many things are merely curious that once seemed beautiful. It is questionable whether the associations which made the old windmill beautiful will survive the next generation or two.

If the picturesqueness of the windmill demands that it be preserved, then let us see that it is preserved complete and as an operating mechanism. There is something morbid about the habit of clinging to the dilapidated remnants of things we have outgrown. When utility has ceased and beauty has been destroyed by the inroads of time and weather, such things become merely objects of aimless curiosity.

It may be incongruous to associate the old and the modern (though that is a normal procedure in all progress), but if the old windmill has a real artistic value let us retain its general form, but call in the aid of modern aero-dynamics to modify it to do its work efficiently. The electric generating station has, like a modern Quixote, tilted destructively against the windmill, but without destroying it as a potential power producer. Wind power has been the subject of considerable engineering progress of late years, but even the modern wind motor is only a step on the way.

It is not difficult for anyone who has watched the development of aircraft propeller design to visualize a big development in the future, in which self-regulating aerofoils will take the place of the old mill sails or "swifts" and tap nature's vast wind power supply far more effectively. The electrical and mechanical engineer will each contribute a share to the scheme for harnessing, converting and storing a little of this vagrant energy, and so place at the disposal of man a force which at present "bloweth where it listeth," often to man's distress rather than his comfort. The only section of the problem that has not yet been solved economically is that of power storage, so that an erratic supply may be converted to a regular one. Even this is not essential to the effective use of a modern windmill for water pumping.

Would it please our preservation societies to see every country house equipped with its windmill, almost a replica of the old type, operating an electric storage plant? This would meet the claims of utility and beauty alike, though resuscitation of the windmill to economic utility would probably rob it of interest to many who now sentimentalize over it. Still, that may happen.

LONDON'S HIGHEST COMMERCIAL BUILDING [*By J. J. Joass.*

Royal London House, to be opened today by the Lord Mayor of London.
Further illustrations and descriptive notes appear on pages 234 to 240.

NEWS & TOPICS

THE ABBEY SACRISTY: COUNTER-ARGUMENTS

THE Dean and Chapter of Westminster Abbey are displaying reluctance to adopt the recommendations of the Advisory Committee on the question of the Sacristy, and it looks as if efforts are being made to prepare public opinion for a possible rejection of the scheme advocated by the Committee. Yet the counter-arguments advanced are not convincing. Writing in *The Morning Post* last week, Mr. Reginald Grundy contended that the proposed Sacristy on what is known as the Poets' Corner site would mask the Chapels of St. Edmund, St. Thomas the Martyr, and St. Benedict by a permanent masonry structure. In reply, it may be pointed out that the Sacristy on this site need not come up to the level of the bases of the windows, being in fact not as high as the tall plinth of the chapels. The very existence of such a Sacristy would not be suspected by anybody who looked at the Abbey from the direction of Parliament, and could in fact only be seen by those traversing the narrow yard near the Poets' Corner entrance. If it be insisted upon that the Sacristy or part of it should be on ground level, no more inconspicuous place could have been chosen than the Poets' Corner site. In comparison with this modest little building, which would nestle between the buttresses at a part of the Abbey invisible from any vehicular thoroughfare, the Sacristy as originally proposed would be highly obtrusive; and if the Dean and Chapter should decline to adopt the Poets' Corner site on the ground that it would obstruct the view of the Abbey they are indeed straining at a gnat, having previously displayed a great eagerness to swallow a camel.

★

Another argument employed to discredit the scheme recommended by the Advisory Committee is that the structure of the Abbey might be endangered by the projected cutting of a passage through the 17 ft. of masonry on the north side of the Chapter House crypt. But surely this is the twentieth century, and what our mediæval forefathers might have hesitated to attempt, architects and engineers of today could carry out with perfect safety. At any rate, the question should be put to expert constructors to decide whether the difficulties attendant upon cutting the proposed passage are or are not insurmountable.

The windmill at Haverhill, Suffolk, now for disposal, is unique in possessing a fifty-foot iron vane-wheel.

★

The third objection, that the Committee's scheme would necessitate the removal of the monument to John Dryden and involve the enlargement of a thirteenth-century doorway in the south wall of the chapel of St. Benedict, carries a little more weight. It may be remembered, however, that the scheme for the utilization of the Poets' Corner site, as proposed by Mr. Trystan Edwards and illustrated in THE ARCHITECTS' JOURNAL for December 4, 1929, showed how a covered entrance to the Abbey from the Sacristy could be achieved, without piercing the walls of St. Edmund's Chapel or disturbing any of the monuments at the Poets' Corner, by the simple method of planning a covered lobby which would unite the entrance to the Sacristy with the doorway to the south transept. The altar frontals and other ecclesiastical objects which could with difficulty be taken up and down stairs could be stored in the Sacristy and taken into the Abbey by the existing entrance. The crypt of the Chapter House would provide a larger area in which some of the other functions of the Sacristy could be discharged. This is perhaps not the perfect, the ideal scheme, but can the Dean and Chapter suggest a better?

Looking upwards at the sails of the Union Mill, at Cranbrook, Kent, built in 1814 by Henry Dobell. It is still in use, but threatened.

WINDMILLS AS NATIONAL MONUMENTS

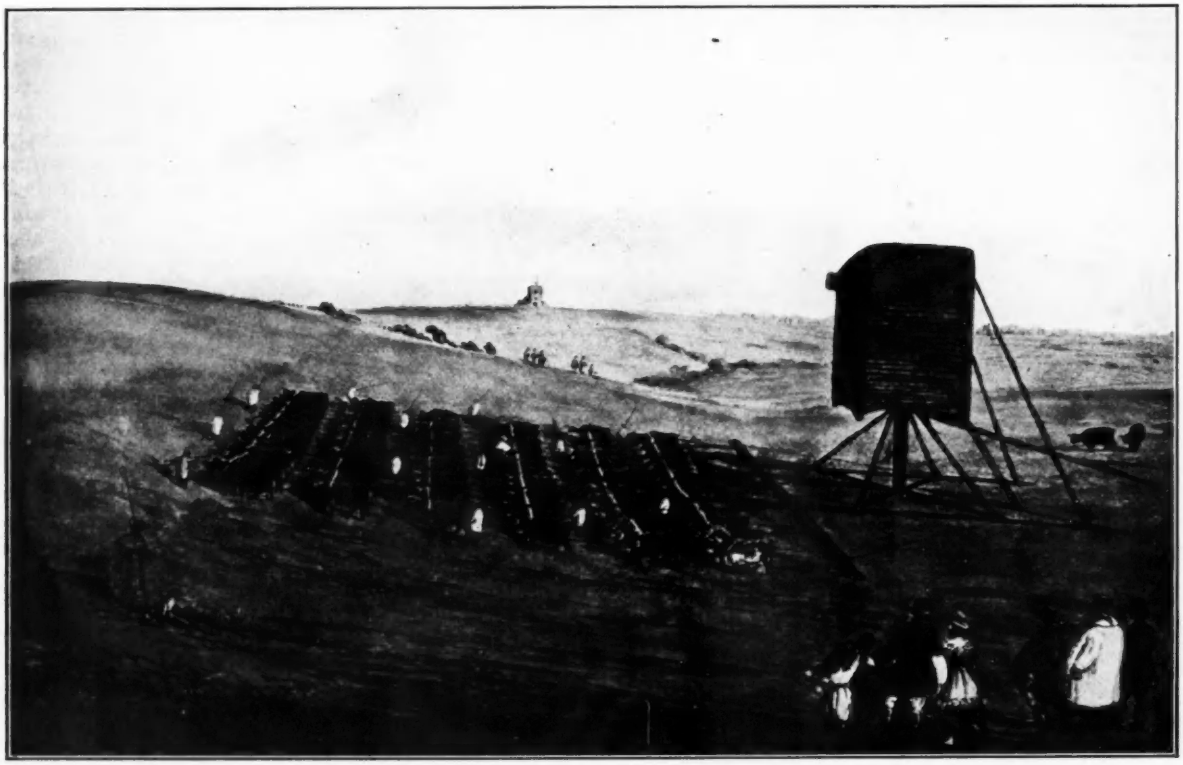
The Society for the Protection of Ancient Buildings has intimated its wish to compile a record, with photographs, of all the windmills still standing in the British Isles, and eventually to write a book on the subject. It also hopes to raise a fund so that a few carefully selected mills in different parts of the country can be repaired and kept as national monuments. The cost of repairing a mill is very large, and

there are few millers who can earn enough today to undertake such expensive repairs. So one by one the windmills close down—a fate which is imminent in regard to the Union Mill, Cranbrook, here illustrated—and almost always they are sold for the price of the timbers, or else allowed to rot until they fall. Two or three fine mills now on the market are threatened with destruction. Such is the case of that at Haverhill in Suffolk, also illustrated. It is the only one in England having a circular iron wheel instead of the ordinary sails, and is an eight-storied tower mill, 70 ft. high, built in the late sixties by one Ruffle, grandfather of the present owner. The wheel is 50 ft. in diameter, and has 120 vanes each 5 ft. long and 1 ft. wide. Two other mills with somewhat similar wheels were built about the same time, but neither of these exists now.

★

The moving of a windmill from one place to another was at one time fairly common. The third illustration shows the removal of a mill in 1797 from the present site of the Bedford Hotel in Brighton, to Dyke Road, a distance of four or five miles. It was dragged over the Downs by 86 oxen, two being kept in reserve. The older of the two mills still standing on the South Downs at Clayton, and familiar to users of the London-Brighton road, was moved there from Preston. They tried to drag it up the hill with horses, but broke the tackle time and again, because the horses "snatched," so oxen were substituted and with their steadier pull the mill was drawn to its new site without further difficulty. Tradition has it that elsewhere two mills stood side by side on a hill until the miller came to the conclusion that there was not enough wind to work both the mills so close together. One of them was therefore moved to the other side of the hill, where it could have the undivided attention of the wind.

A LEAD FROM THE CITY CORPORATION



The following resolution, which Mr. William Foxton is to move at tomorrow's meeting of the City of London Corporation, is worth quoting at length :

"In order to harmonize and bring into effective relationship any work, or the acquirement of any specific article in which design, form, colour, fitness and artistic merit is an important consideration in connection with the activities of the Corporation, and to remove the chaotic policy now existing, it be referred to the Special Committee to consider and report as to the best means of dealing with such matters in the future."

I wish this brave resolution the success it deserves and more consideration than it may hope to get. Its adoption might well lead the wealthy city back to the days when it acquired, as a matter of course, objects now regarded as above price.

BUNGALOID BREAKFASTS

Colonel Bressey, principal technical officer to the Ministry of Transport, has discovered what I believe to be an "original" first cause of the development of bungaloid growths, ribbon-wise, along our arterial roads. "Cookery," he says, "is the fundamental question which dictates the form assumed by all suburban development"; and goes on to paint an idyllic picture of dwellings grouped about a central green, with a communal dining-room and cookhouse, were the principle of individual kitchens to become susceptible of sacrifice. It may well be so, but as long as the Englishman's home is his castle—and perhaps that time is, indeed, passing—I do not see him going "out" for his breakfast. ASTRAGAL

SPANISH MISSIONS IN S.W. AMERICA

BY L. F. EDWARDS

THE ruins of the Spanish missions of the south-western States of the American Union—Texas, New Mexico, Arizona, and California—represent all that is left of the greatest spiritual development of architecture on that material continent. Alone among the architectural developments of the New World—with the possible exception of the religious architecture of the pre-Columbian peoples—the Spanish missionary churches bear the stamp of an intense spiritual fervour and, although varying almost universally in detail and even in general design, they have all, nevertheless, about them the influence of the land of their creators and still more of their faith.

Present-day America (the United States, that is) in search of its ancient national heritage, having exhausted the colonial tradition—the traditions of the days of the covered wagon and the Mississippi steamboat, and the traditions of the War of Independence—is now searching farther with commendable insight and genuine reverence into the work of its Spanish predecessors; and the more light modern interest and research throws upon their activities the more Protestant and Anglo-Saxon America is bound to admire them.

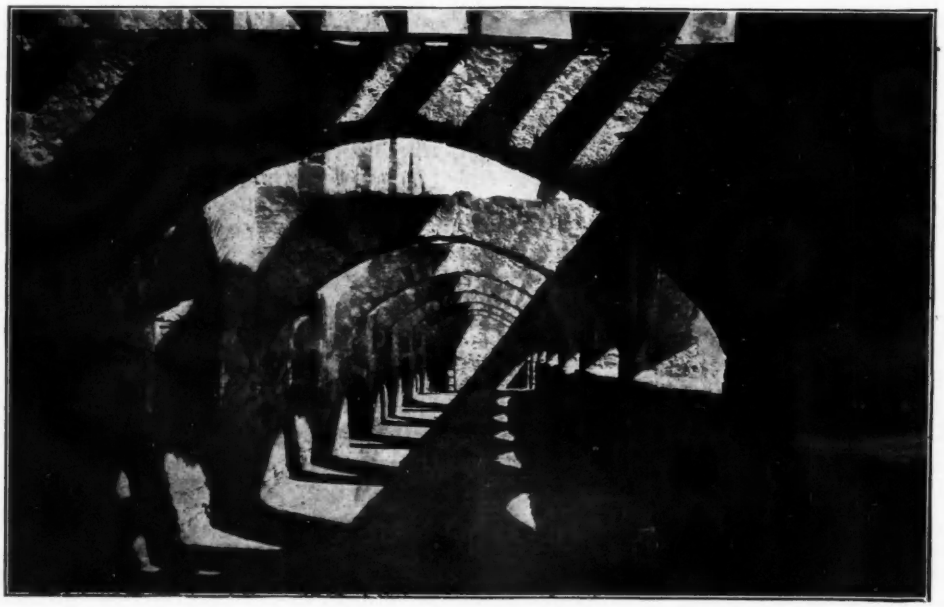
This interest, however, this reverence have come almost too late. Indian revolts at the close of the seventeenth century, Mexican disestablishment and persecution in the nineteenth, and the roving Ford-carried souvenir-hunter of the early twentieth have left of most of these fine old churches but a heap of ruins. Earthquakes have damaged many that man has spared.

Some score or so, however, have survived; many because they are even now still in use as parish churches; and their beauty and suitability to the hot, dusty, arid climate of the south-west have drawn the attention of American architects to them and have developed a new style of domestic architecture, particularly in California, adapted from the spacious living-rooms and cool, closed gardens of the missions—a school of architecture of which the modern examples are far better known and admired in this country than the originals from which their design was taken.

These churches were built, as a rule, of adobe brick by convert labour, under the direction of the missionary-priest in charge of the district, who was not generally an architect, and merely adapted the design that he considered most suitable and familiar for a church, school, living quarters, and, inevitably, a closed garden, often cloistered. They therefore differ widely in detail, and naturally enough many of them are strongly reminiscent of Mauro-Spanish work. Others, perhaps the most interesting group, in the New Mexico district, have been strongly influenced by the architecture of the Pueblo Indian buildings; and this Pueblo-Mission style is beginning to exert the same influence on modern domestic architecture, in Arizona and New Mexico, as the Spanish-Mission style has already done in California.

Naturally enough, also, these fervent but uninstructed architects did not always build solidly or craftily; and so, although the dry climate of the south-west is in itself a preservative (mummied bodies of the Pueblo Indians having been preserved in caves for thousands of years), neglect, exposure, occasional storms, earthquakes, and frequent pillagers are gradually destroying them. Some, like the Tumacacori and Los Angeles de Guevavi, are mere heaps of sun-dried brick. Still others, for example San Fernando in Texas, San Luis Obispo de Tolosa and Santa Clara de Asís in California, have been almost as irreparably destroyed by the earnest efforts of misguided "renovators." The New Mexico missions, having been in

The Mission of San Juan Capistrano, California, now in ruins, showing the old garden. A walled-in garden was an indispensable adjunct to the mission stations of the south-west.



[*From* Spanish Missions of the Old South-West.

almost continuous use as parish churches, have mostly survived.

As a rule the churches themselves were severe in style, the greatest ornamentation being devoted to the campanile, which is a marked feature of all mission architecture, and cruciform in shape, although the miscellaneous outbuildings often obscure this fact from the outside. Lighting, as a rule, was from the top, windows being few and small. For interior decoration the missions relied largely on the work of talented Indian converts, although, in Texas, the famous Spanish artist Huisar did some fine work. Occasionally, fine paintings were brought from Europe, including several Murillos, an original Cimabue—"The Annunciation," and Rafael's "St. Michael and Lucifer," both these last in the San Miguel Chapel at Santa Fé.

For defence, all the principal mission buildings, the church, baptistery, mortuary, storehouses, school, etc., together with the beautiful mission garden, were enclosed within a high patio wall; the "visitas," or occasional chapels served from the missions, were undefended. Most of the mission gardens have disappeared, the finest remaining being those of San Juan Capistrano and Santa Barbara, in California, into the latter of which no woman may enter save a reigning queen or the wife of the President of the United States. It was badly damaged two years ago by earthquake.

One cannot leave the subject of the south-west missions without a reference to the Archæological and Historical Museum at Santa Fé, New Mexico. This museum, dedicated in 1917, is a composite of six of the old mission churches—the San Estevan, the San Felipe, the San Buenaventura, the Laguna, and the Pecos—blended together to make an harmonious whole.

Cloister arches of the San José de Aguayo Mission, Texas, one of the only two in the entire south-western territories having two-story cloisters, and the finest building in this State.

[*From* Spanish Missions of the Old South-West.

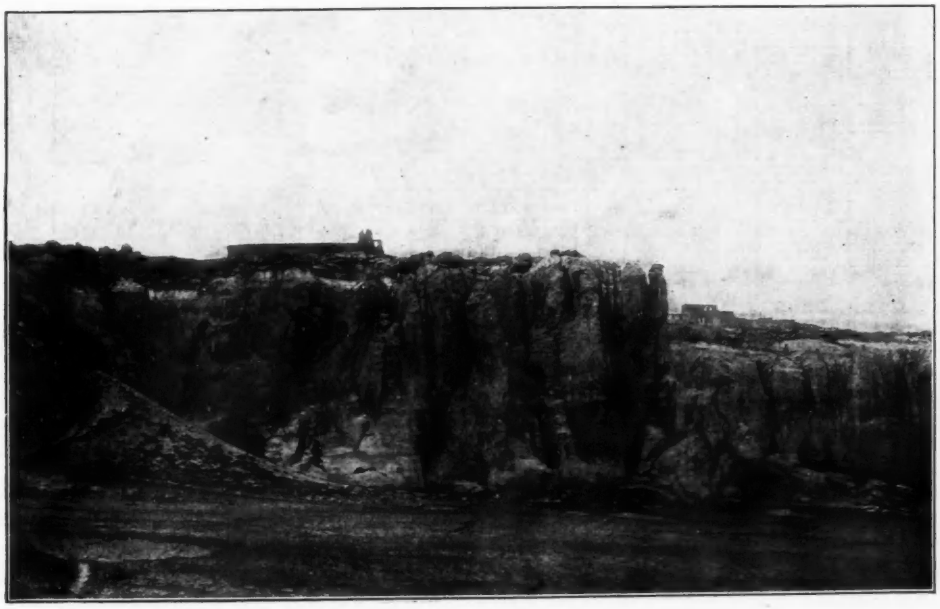
In it is housed a wealth of Indian work and relics collected from the missions and the pueblos, and it will not only suitably commemorate the lives and sacrifices of these fratres and their converts, but will perpetuate their beautiful and original architectural style long after their own churches have inevitably crumbled to dust.

In probably the most beautiful book published in the last few years—and, incidentally, a mine of information on the Spanish missions and the Spanish Fathers—Miss Willa Cather, in *Death Comes to the Archbishop*, speaks of the Acoma pueblo church, built on the top of the 400-ft. precipitous Acoma mesa:—

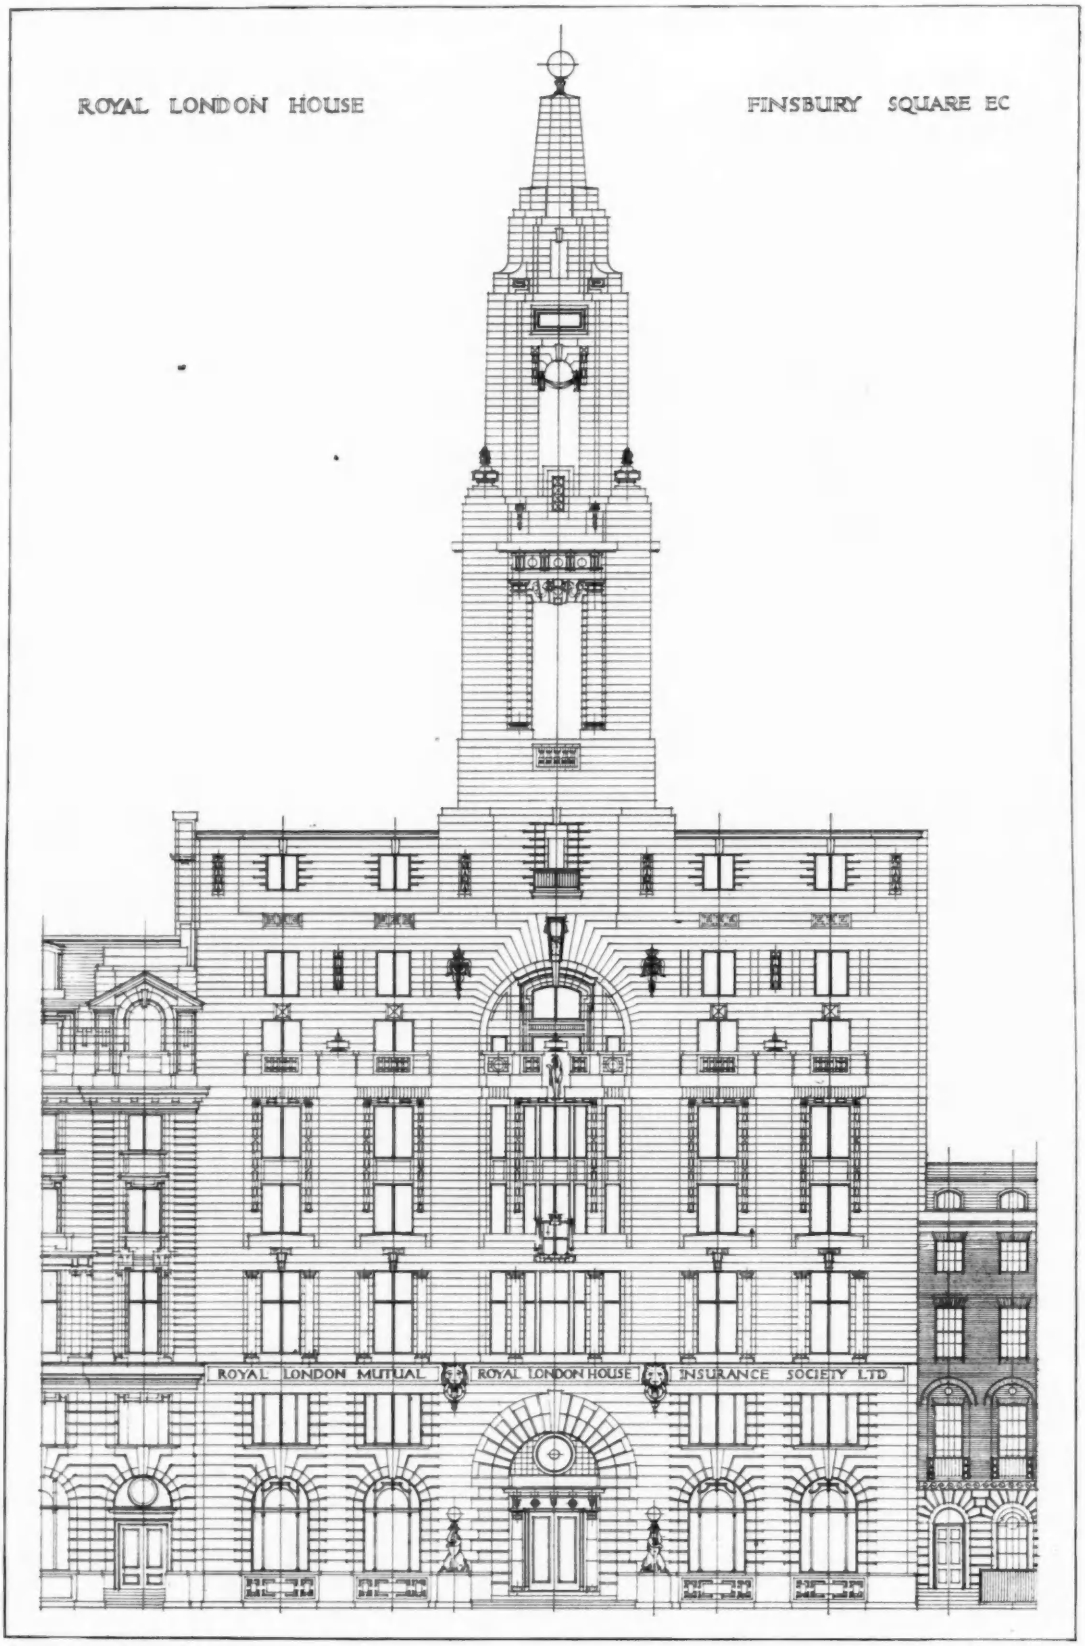
". . . It was built early in sixteen hundred, by Fray Juan Ramirez, a great missionary, who laboured on the Rock of Acoma for twenty years or more. . . . It was Father Ramirez, too, who made the mule trail down the other side—the only path by which a burro can ascend the mesa, and which is still called *El Camino del Padre*.



". . . Every stone in that structure, every handful of earth in those many thousand pounds of adobe, was carried up the trail on the backs of men and boys and women. And the great carved beams of the roof—Father Latour looked at them with amazement. In all the plain through which he had come he had seen no trees but a few stunted pinons. He asked Jacinto where those huge timbers could have been found.

" ' San Mateo mountain, I guess.'

" ' But the San Mateo mountains must be forty or fifty miles away. How could they bring such timbers? '



" Jacinto shrugged. ' Acomas carry.' Certainly there was no other explanation."

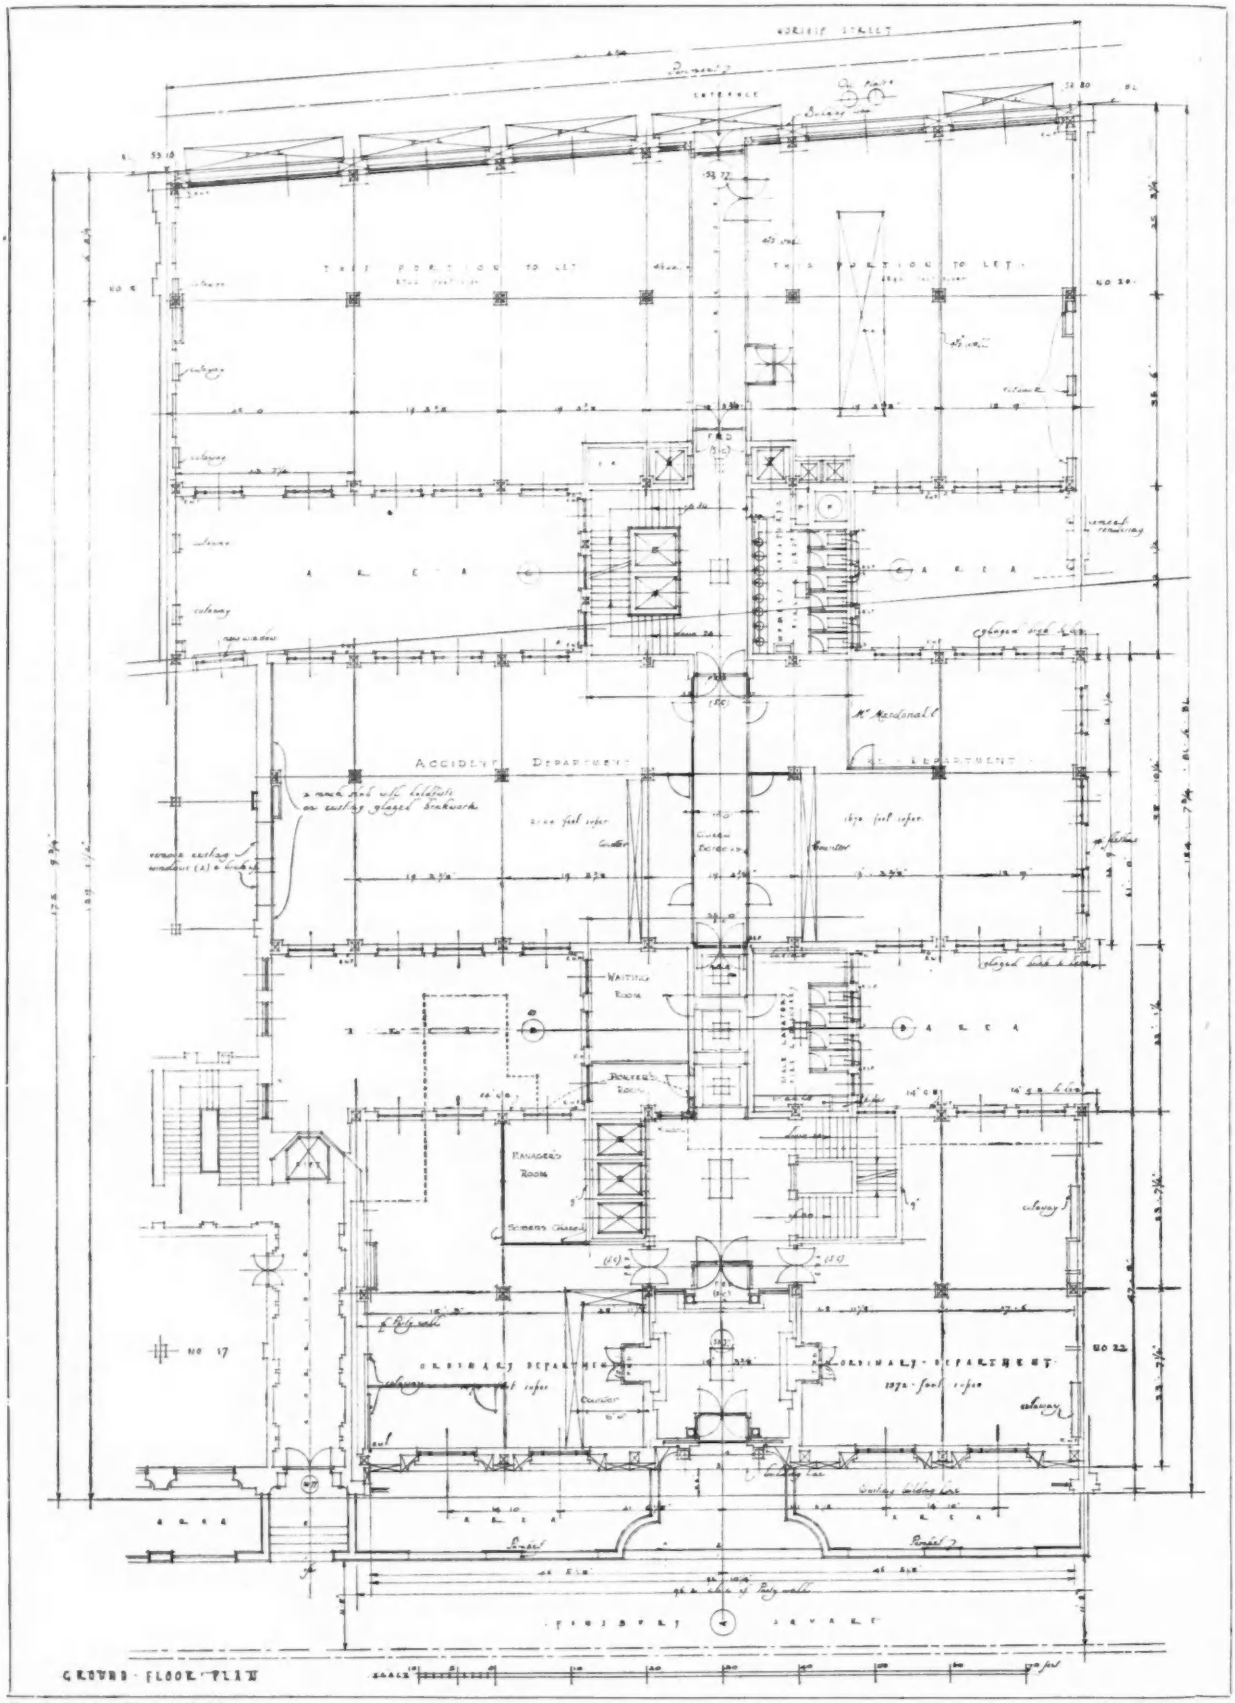
Royal London House, E.C.] [*By J. J. Joass.*

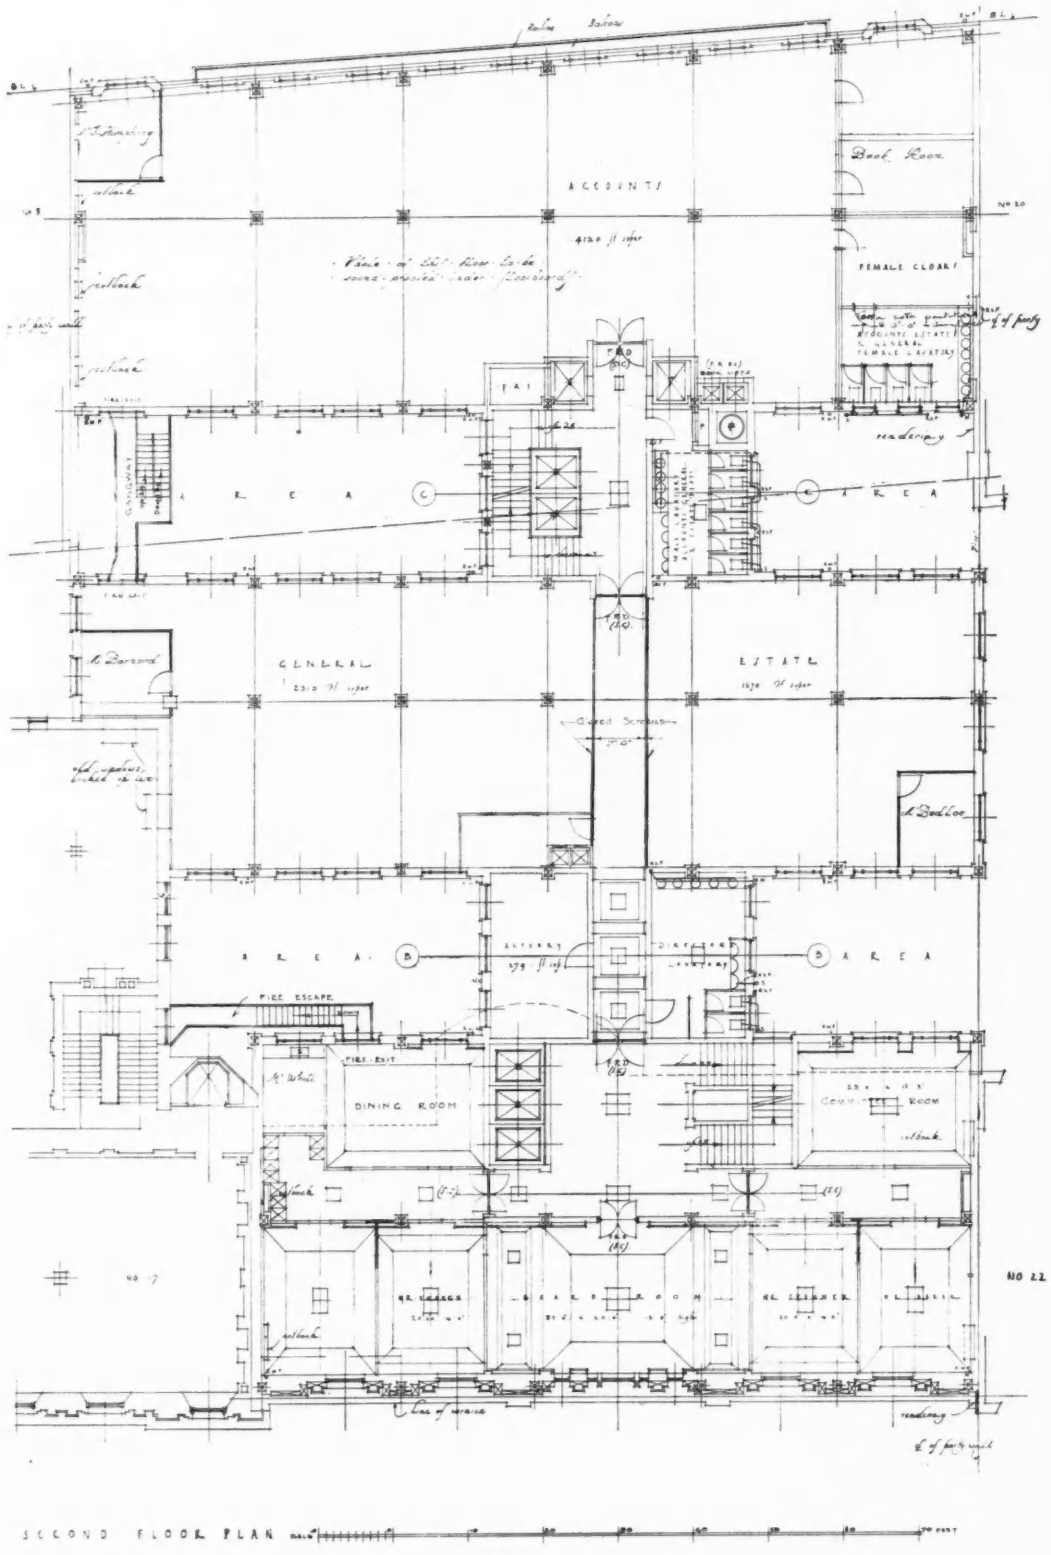
The architect's drawing of the principal elevation to Finsbury Square. The building forms the first section of the new headquarters of the Royal London Mutual Insurance Society. When completed the Society's premises will occupy the whole of the north side of the Square.



A view of the main façade, looking up from the roadway in Finsbury Square towards the tower, which is crowned by a figure representing Mercury, the God of Prudence. The total height of the building from the basement floor to the top of the tower is 250 feet.

ROYAL LONDON HOUSE

DESIGNED BY J. J. JOASS



TODAY, February 5, the Lord Mayor of London will formally open the first section of the new headquarters of the Royal London Mutual Insurance Society in Finsbury Square, E.C. Building work has been in progress for two years. The building now completed extends from Finsbury Square to Worship Street, and presents several unique features which are remarkable even among the giant structures now arising in London.

In the first place, it is the highest commercial building in London. The top of the tower is 250 ft. above the

Royal London House, E.C.] [*By J. J. Joass*

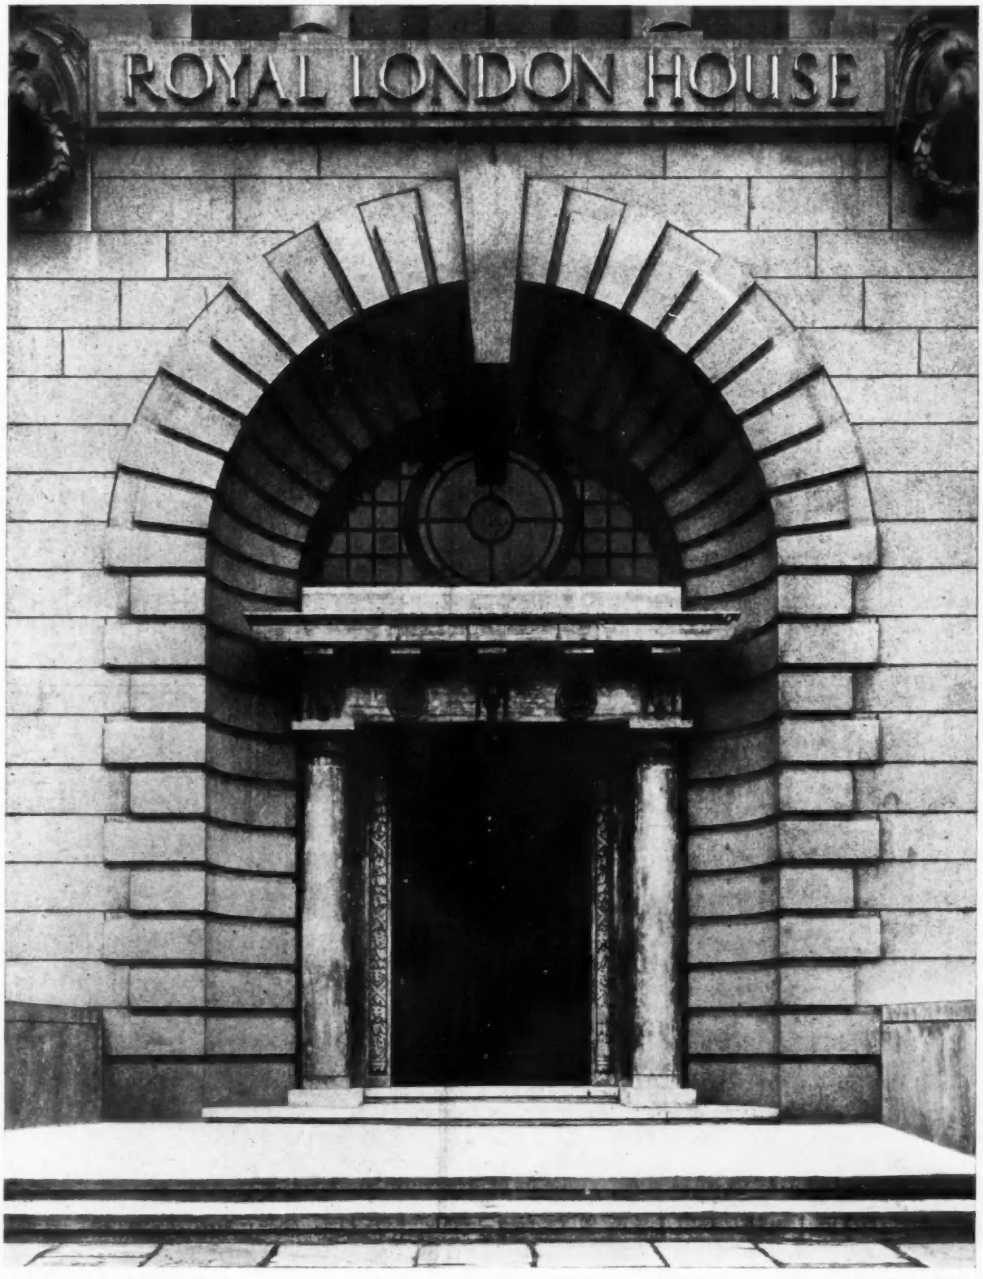
Ground-floor plan. There are two entrances to the building, one from Finsbury Square, on the main front, the other from Worship Street at the rear. The former leads through an entrance-hall, built and roofed in solid marble, to the main staircase; the latter to a subsidiary staircase. There are twelve lifts.

Royal London House, E.C.] [*By J. J. Joass*

On the second floor is the directors' suite, planned on the main front, and including a boardroom, a committee room, directors' rooms, and a private dining-room. Photographs of two of these rooms appear on page 240. A restaurant and recreation rooms for the staff are provided on the seventh floor.

basement floor, and is surmounted by a figure of Mercury, the God of Prudence. This figure was exhibited in the Royal Academy this year, and was much admired by the critics. The roof of the main structure is 125 ft. above the basement floor, and that of the centre block 135 ft.

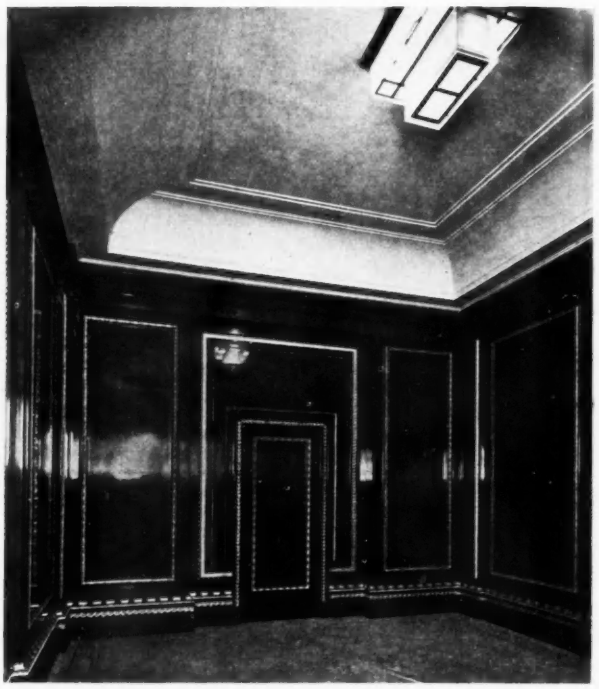
Internally, the building provides 150,000 sq. ft. of floor space, equal to $3\frac{1}{2}$ acres; and an occupant of a room in the highest floor can reach the entrance in less than two minutes, owing to the efficiency of the lifts, of which there are twelve. With the exception of the marble which is Travertine, the whole of the materials used in the construction of the building are British. In the entrance hall the walls are not marble-lined, as is customary in commercial buildings, but they are built, and the ceiling is vaulted, in solid blocks of marble of great thickness. The bronzework in the entrance hall is also of massive construction. The main front doors weigh two tons, and



Royal London House, E.C.] [*By J. J. Joass.*

A view of the tower, looking up from the roof of the main building, 135 ft. above basement floor level, towards the figure of Mercury. The entire building, including the tower, will be floodlit at night, and provide London with a new landmark, visible from the suburbs and surrounding country.

are finished with an antique green surface, as in the ancient Roman examples.



Every means have been adopted to increase the efficiency and health of the occupants, including the installation of an apparatus for supplying ozone to every room, and the glazing of all the windows with vita glass. Warming is by radiation from the walls and ceilings, effected by twenty-three miles of embedded pipes; and water is obtained from artesian wells, 250 ft. deep. The office equipment is entirely of enamelled steel. The electric light fittings are of translucent glass and bronze. They are of British design and workmanship, and are equal, if not superior, to the finest productions of the French. They are designed on a new basis, and comprise a series of pressed glass pelmets, with glass soffits, repeating the forms and planes of the ceilings and walls. In fact, the fittings in the main rooms resemble a reversed coffered ceiling in glass.

Royal London House, E.C.] [*By J. J. Joass.*

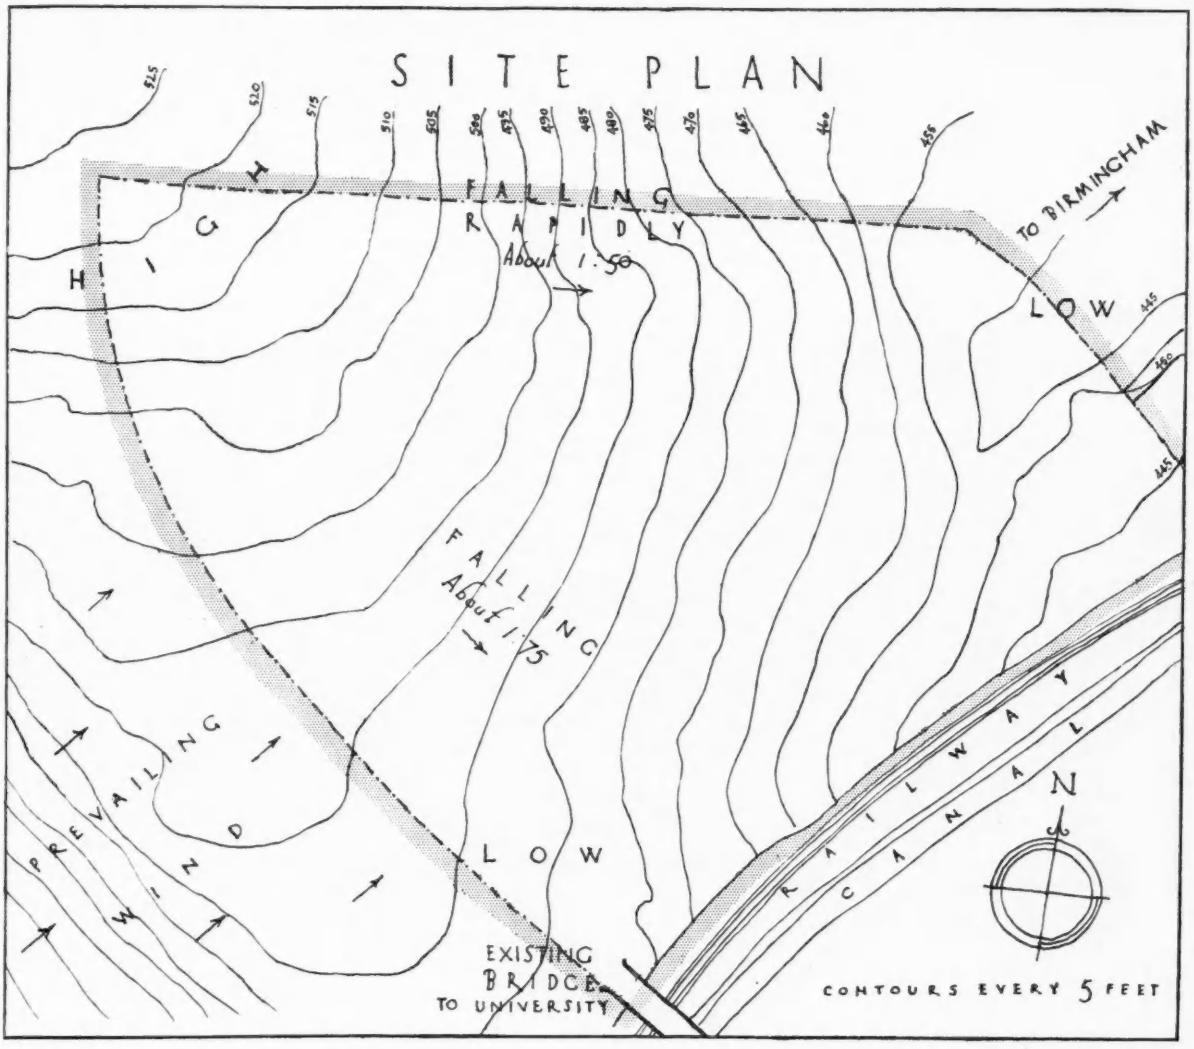
The main entrance doorway from Finsbury Square. The doors are of bronze, and weigh two tons. They are in two halves, each sliding back into the reveal, as shown on the ground-floor plan reproduced on page 236. Beyond these doors is a small bronze vestibule, with bronze swing doors leading to the entrance hall.

The committee room and a director's room, of which there are four. They are panelled in Cuba mahogany, with decoration in gold leaf, and have oak parquet floors, with walnut borders. The committee room will be fitted with stained-glass windows. Some of these are shown in the photograph.

Royal London House, E.C.] *By J. J. Joass.*

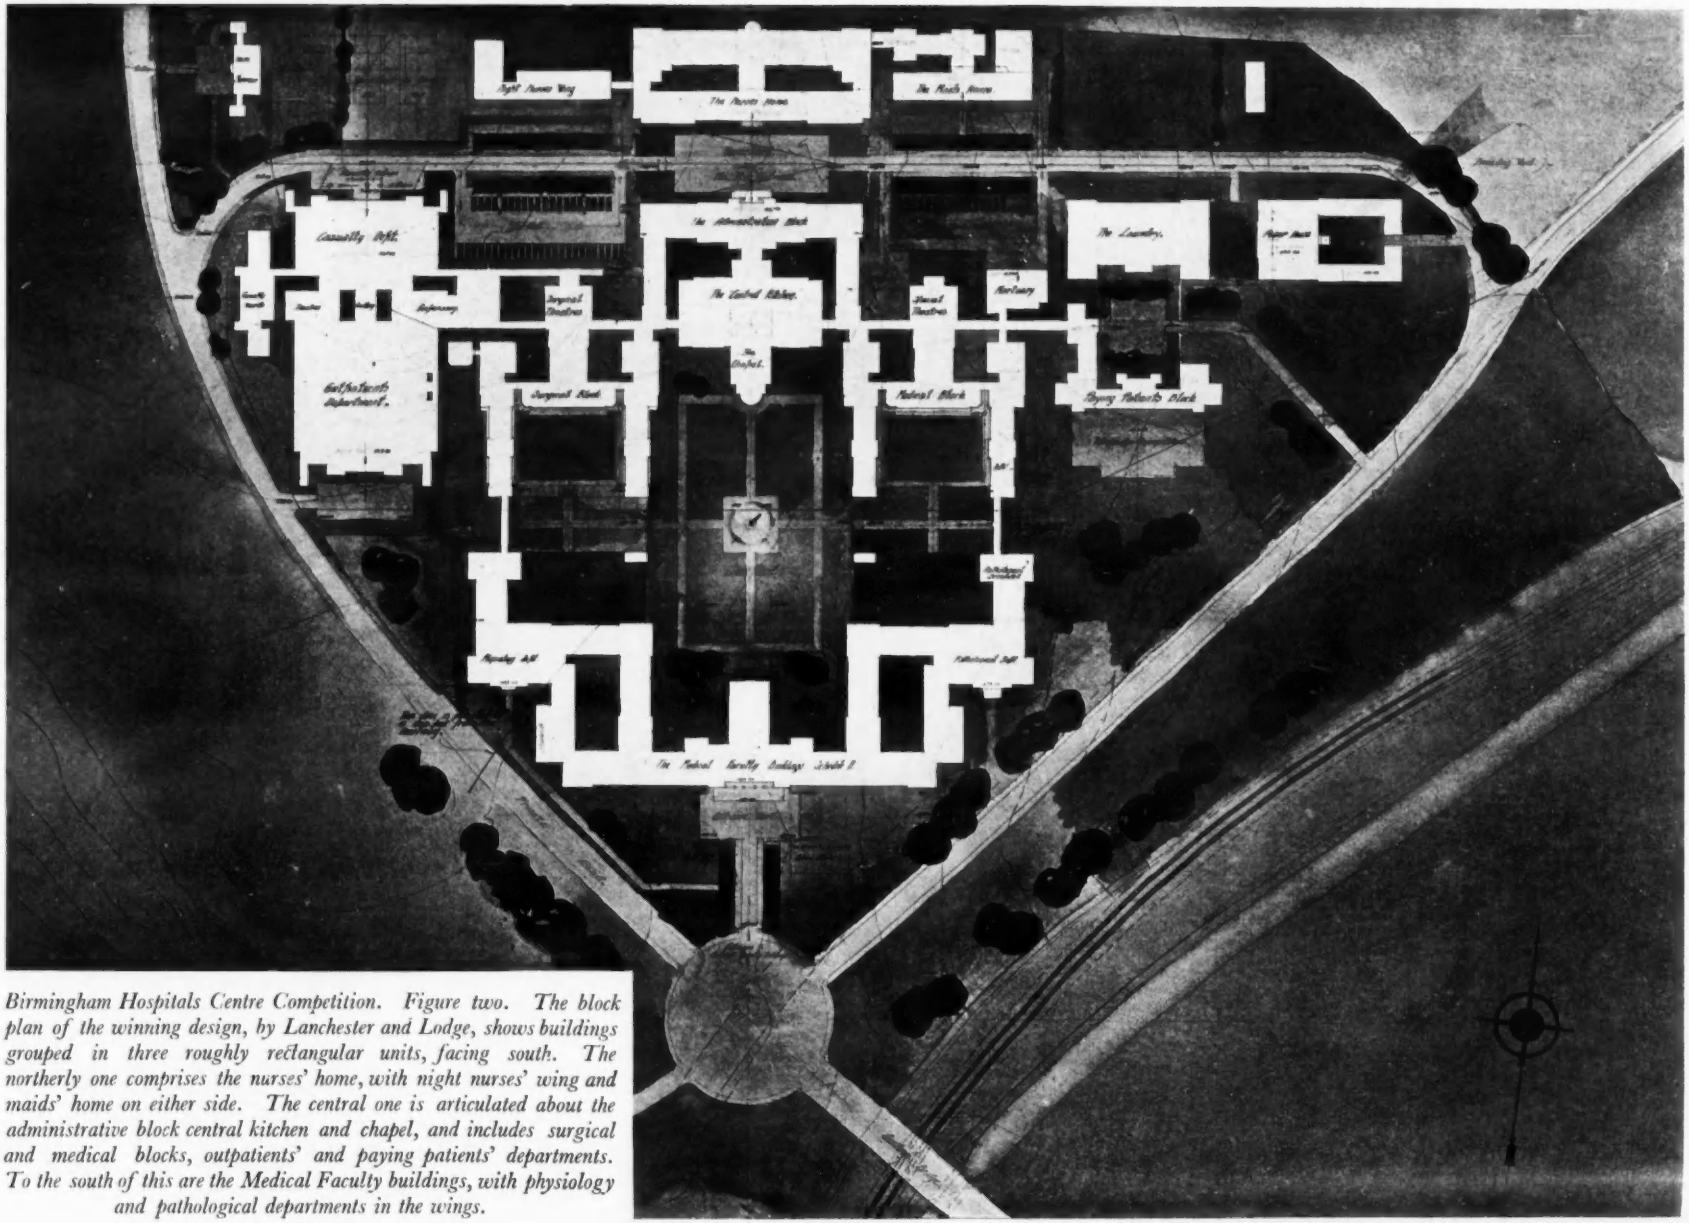
The main staircase; and a detail of the principal corridor on the second floor. The staircase balustrade is of bronze from ground to second floor, and above of cast iron, with bronze handrails. Walls and floors of the landings and corridors are of marble. The walls of the staircase are of marble; the stairs of composition. The door, with the semicircular fanlight, is of teak.

BIRMINGHAM HOSPITALS CENTRE, EDGBASTON



Some Deductions from the Plans of the Placed Competitors

BY E. MAXWELL FRY

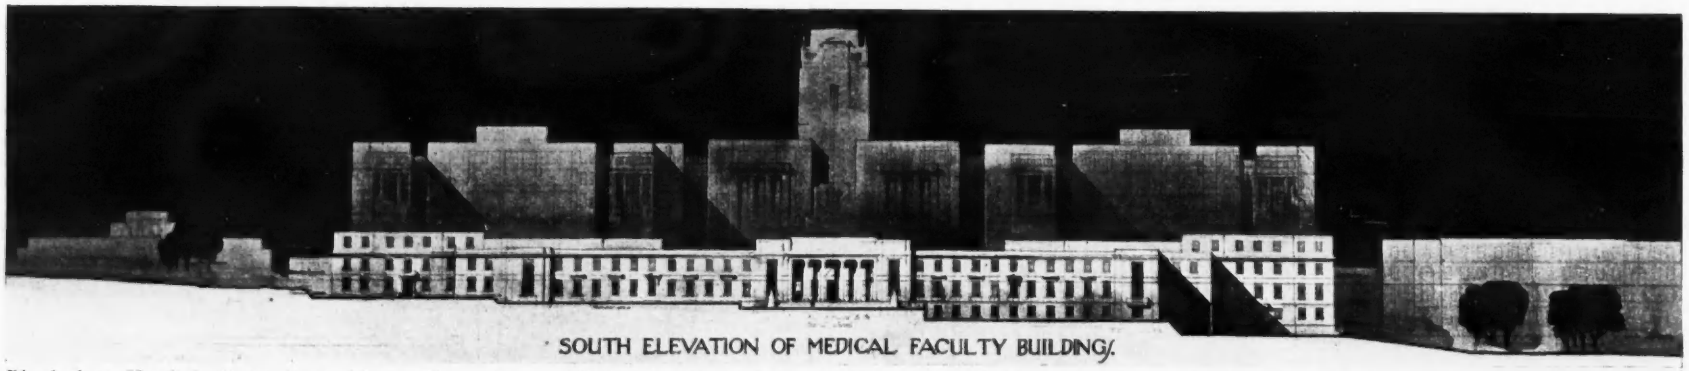


Of all the subjects for competitions, a hospital may be considered the most important. Moreover, by its mere size—the scheme is estimated to cost £1,000,000—that to be discussed below, and further next week, must command attention. As it happens, this competition, the result of which was announced in last week's issue, has been exceptionally productive of ideas meriting the closest study.

THE amount of building involved in this great hospital design, if measured only by the superficial area it covers, must place it among the largest of its kind. When its magnitude is further stressed by the vertical expansion of six stories, the scheme takes on the dimensions of a small town, with this difference, that where a town is a largely decentralized and diffuse organism, this pulsates with the nervous, circulatory and respiratory systems of a highly centralized organization.

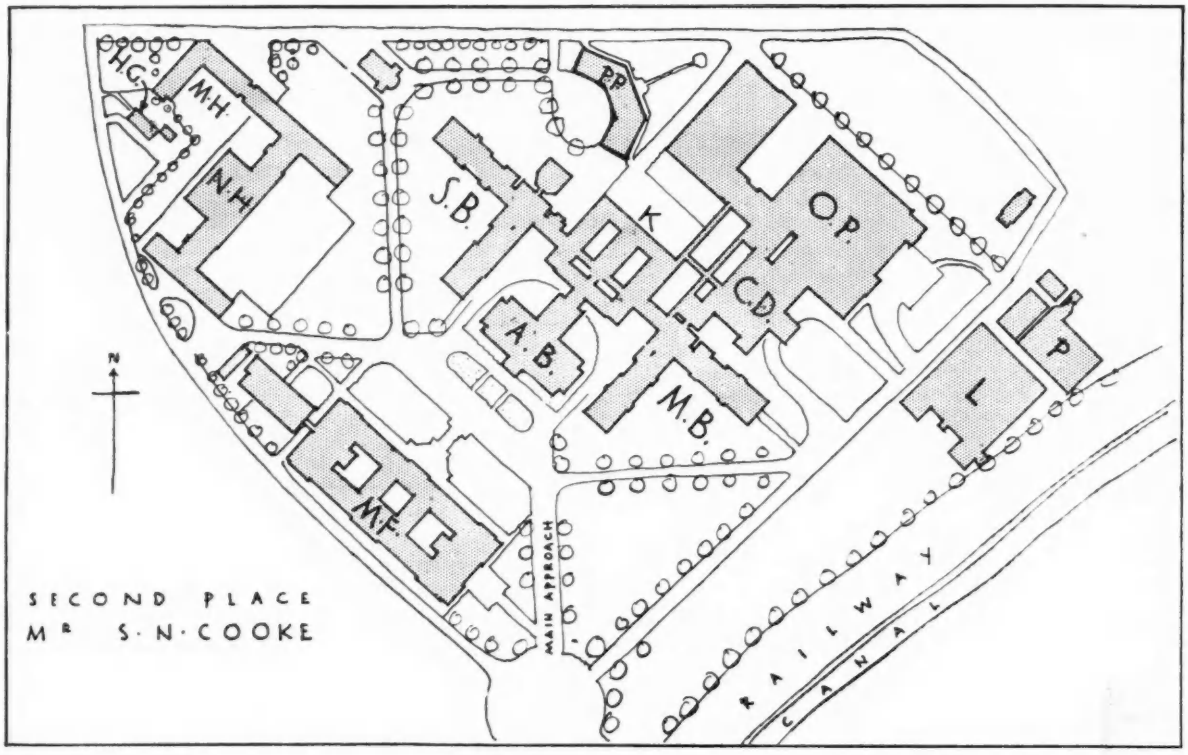
The judging of a competition limited to twelve architectural firms of high standing and specialized knowledge is by its nature a matter for long and detailed examination—an examination so much more minute than is possible to the outside observer, that I do not propose to attempt to do more than

Birmingham Hospitals Centre Competition. Figure one. Sketch plan of the bare site, with contour lines indicated, to illustrate the problems set by the physical conditions.



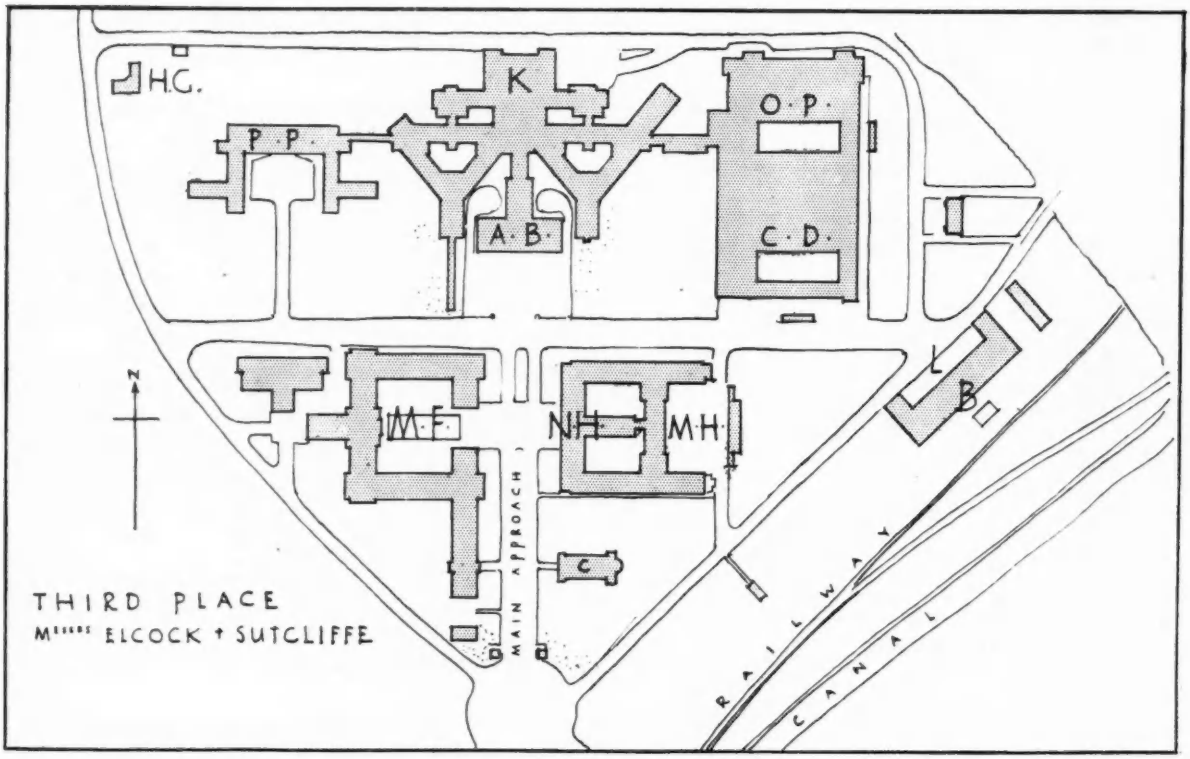
Birmingham Hospitals Centre Competition. Figure two. The block plan of the winning design, by Lanchester and Lodge, shows buildings grouped in three roughly rectangular units, facing south. The northerly one comprises the nurses' home, with night nurses' wing and maids' home on either side. The central one is articulated about the administrative block central kitchen and chapel, and includes surgical and medical blocks, outpatients' and paying patients' departments. To the south of this are the Medical Faculty buildings, with physiology and pathological departments in the wings.

and pathological departments in the wings.



SOUTH ELEVATION OF HOSPITAL.

Birmingham Hospitals Centre Competition. Figure three. Hospital elevation of the winning design, by Lanchester and Lodge. The elevation serves to prove how the great mass of the buildings overcomes the natural rise of the ground. This aspect, taken across the courtyard immediately south of the main hospital block, shows levels dropping across from left to right. On the left are out-patients' and casualty departments, single-storied buildings ; and on the right the paying patients' block, rising to several stories, so as to make an effective balance of weight. This balance is achieved with no loss to the full working of the scheme, for by taking the out-patients' and casualty departments on the high land a system that resembles the "gravity feed" system of a modern factory enables corridors to lead away from these blocks, where patients are admitted and examined, to reach the ground and first floors of the medical and surgical blocks, with a slight ramp down in the one case and up in the other, but without stairs to either. It should be noticed that the gardens, shown on section immediately in front of the hospital block, are immune from any but foot traffic, and may be used for recreational purposes by the medical staff, or by convalescing patients. Apart from these obvious uses, they will provide a very pleasant green foreground, out of sight and hearing from the main traffic of the hospital, the arrival of ambulances, and the passage to and fro of crowds of people. It is something of an achievement to have produced such a quiet and ordered open space in the midst of such complicated problems.



SOUTH ELEVATION OF MEDICAL FACULTY BUILDING.

Birmingham Hospitals Centre Competition. Figure four. Medical Faculty Building elevation of the winning design, by Lanchester and Lodge. This inclusive elevation shows the Medical Faculty buildings lying on low ground in front of the main hospital block. These buildings are quite low and have only been allowed to block what might have been the main axis of the administrative block of the hospital because there will be an effective visual axis over the top of the buildings to the tower of the administrative block and its flanking masses. The whole range of buildings will be visible from the entrance near the railway bridge, but as it is obvious that there must be many entrances to a hospital, and that a single great approach would be used by few of the many who have business there, the first glimpse of the whole scheme must be allowed to take the place of the grand approach, and the road divided to lead directly to the many departments into which the hospital is partitioned. On the far side of the scheme, where the circulatory roadway reaches the entrance to the administrative block, there is a restatement of symmetry, and an echo of what was visible for a moment at the entrance gate. It is difficult to imagine now the effect that this mass of buildings is to produce on the observer when it is completed. It has all the appearance of a large mountain range, scarred by deep fissures, where the light courts separate blocks of wards, the tower a peak, and the Medical Faculty buildings a foothill lying in the plain below.

seek to enumerate, in as vivid language as I may find, the larger problems that were presented to the competitors by the site and programme, and the manner in which these found solution in the brilliant design of the winners, Messrs. Lanchester and Lodge.

THE SITE

As will be seen from the diagram (figure one) the site is on ground that rises fairly rapidly in the north and more gently in the south. The slope is across the site, roughly from west to east, and will be seen later to be capable of a vital bearing on the problem.

A railway and canal pass from S.W. to N.E. as one of the fixed boundaries of the scheme, and there is access by an existing bridge over both from the University, which lies at walking distance in the direction of Birmingham. A further road, either existing or proposed (I do not know which), meets the site somewhere at its N.E. end. The centre of Birmingham is some miles away, but trams pass about three-quarters of a mile distant, on the main Bristol Road.

The prevailing wind is indicated as being south-westerly; and the north point should be noted.

DEDUCTIONS FROM CONDITIONS OF THE SITE

I do not want it to be thought that the following deductions fly to the mind on seeing an empty site. They do not. But some of them have affected the various designs, and all of them the winning design.

First : The low ground calls for the power-house, because of the returns to boilers. This choice is reinforced by the south-westerly wind which will blow the smoke off the site.

Second : The Medical Faculty (a knowledge of the various buildings required must be presupposed) should be within walking distance of the University, and should not occupy the high land, which is needed for the hospital proper.

Third : The main wards must catch direct sunlight, and the cleansing action of the south-westerly wind must be made use of.

Fourth : The entrances are fixed at the bridge and at N.E. end of site.

Fifth : The land slopes, as the diagram shows. Is this to promote a symmetrical arrangement or otherwise ? Can it be made to help, or is it a definite hazard?

There are other factors bearing on the design, some, perhaps, quite important ones; but those enumerated can be traced as we go through the various drawings.

HOW THE VARIOUS CONDITIONS WERE SATISFIED

Looking at the winning block plan (figure two) one sees, first, the power-house, its position low on the site and to leeward. Next, the Medical Faculty buildings, near the main entrance, and again on low ground. (For elevation, see figure four.) In addition, these buildings are low; they offer no obstruction to light or air. Then there is the general aspect of the hospital blocks, facing south (see figure three), and defining certain axes and main lines of the scheme, while they also bite into the south-west wind, as it were. The entrances are defined; and, finally, one must pay homage to the uncanny skill with which the slope of the ground has been overcome by the weight of the symmetrical arrangement of the great blocks, and then turned most brilliantly into one of the greatest assets the site could present.

Again, these solutions by no means produce a design just because the problems posed are all satisfied by this design. It might not, for instance, have seemed feasible to drive the fine road across the top of the scheme; or to have split the main motor roads; or to have provided no access direct to the administrative block; or to have placed the out-patients' and casualty blocks where they are.

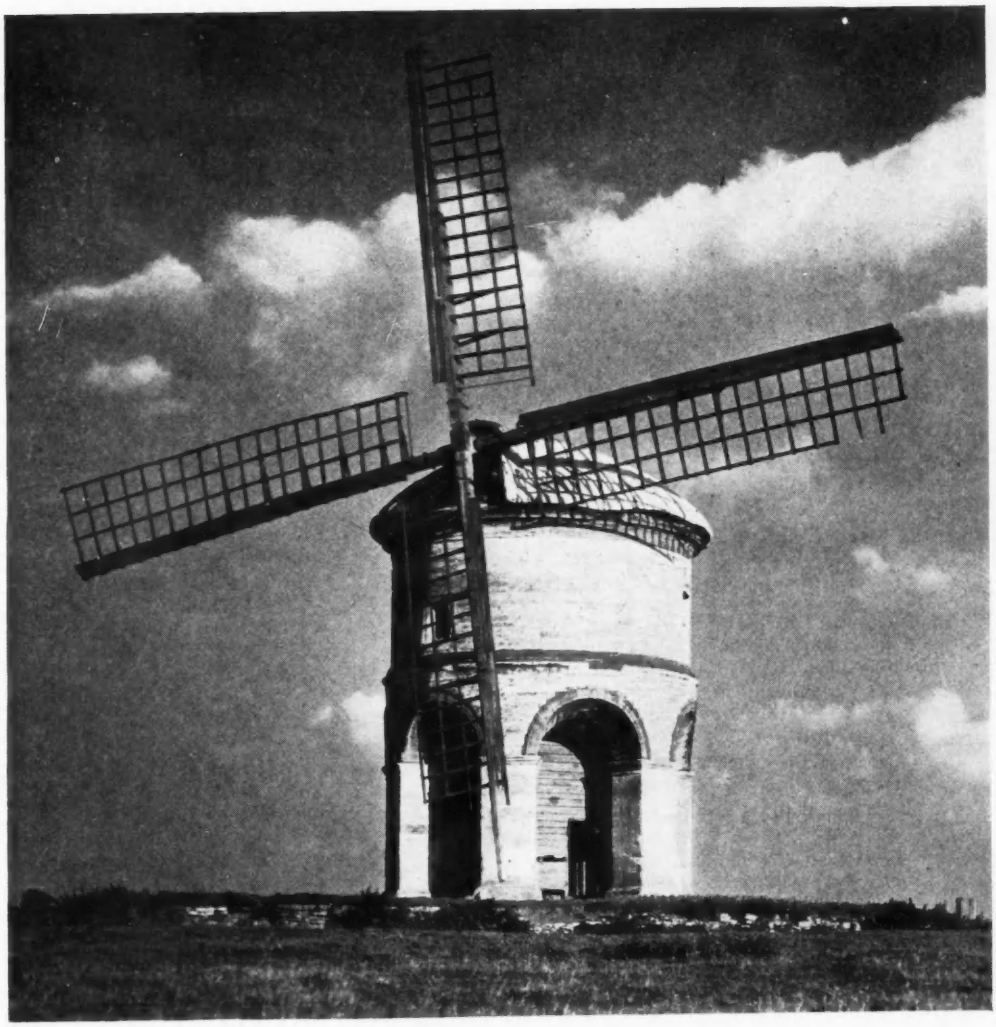
Looking at some of the other designs, reproduced for the sake of clearness in diagram form (figures five to eight), many solutions are seen to be possible, and many of the conditions may be fulfilled with no ideal plan emergent. A study of these plans will be repaid, even at the small scale which lack of space enjoins, but as I have my reasons for leaving them undiscussed, it may now prove of more value to enter with some detail into the workings of the one design which has most cause to concern us.

(*To be concluded next week. Readers are advised to keep this issue by them, as the illustrations here given will be referred to again.*)

Architects' Advisory Panels

To the Editor, THE ARCHITECTS' JOURNAL

SIR,—The C.P.R.E. Advisory Panel meeting at the R.I.B.A. on January 23, opened by the Minister of Health, certainly cleared the air regarding work accomplished by the advisory panels set up by the ex-Minister of Health. The panels were appointed primarily to work grants under the Housing (Rural Workers) Act, 1926. Afterwards it was arranged that they were to assist rural local authorities in preparing schemes under the Town Planning Act, 1925.



The results reported on January 23 were negligible. The Hampshire, Oxford, Cheltenham and Cambridge panels had between them helped to improve the elevations of some cottages designed by builders, and Hampshire had ventured to speak its mind to a multiple shop. No panel could point to work accomplished ten miles from the convener's office. Yet the length of one panel district is 140 miles. Altogether there are twenty panels; sixteen had nothing to report. Mr. Greenwood blandly remarked : " The better the cause, the slower the progress." Some members of the conference thought that a reduction in the area of each panel would give better results. Others pinned their faith on compulsory legislation. Most seemed to think that a new and better Town Planning Act should be forthcoming from the Ministry.

In the meantime the audience dwindled away and the discussion devolved on the precise legal difference between a tribunal and a panel. Professor Adshead solved the problem. The meeting sent a heartening message to Mr. R. S. Young, M.P., and dispersed.

The truth is that the members of district councils and the men who ribbonize our highways do not read C.P.R.E. propaganda and have never heard of the C.P.R.E. and the advisory panels. The C.P.R.E., in spite of a magnificent Press, is still in the clouds and has not come down to rural England. The Council has made no effort to bridge the gulf between speculative builders and architects. Yet everyone who motors ten miles along an *A* road, a *B* road, or even a country lane, realizes the desperate necessity. The great speculative syndicates have professional advisers of a kind. The little man who acquires an odd acre has no one to whom he can turn. In the aggregate it is the little man who vandalizes more. There are many architects willing to help, but they cannot offer their services or quote a scale of fees until the R.I.B.A. authorizes a scale and settles the machinery for bringing the scale to the knowledge of the little builder.

It is obvious that the right to help and the right to advertise the fact must sooner or later be granted—if not to individual architects, at any rate to properly constituted panels.

HASTWELL GRAYSON

ENGLISH PRECEDENT No. 101

WINDMILL, CHESTERTON, WARWICKSHIRE

The English landscape has few objects so picturesque as the old windmills, now, alas! fast disappearing. These windmills are essentially buildings in the vernacular and possess no claims to architectural quality—certainly none to classicism. The mill at Chesterton, in Warwickshire, is of very different character. Built of stone, it stands on six piers, the intervals between which are spanned by semicircular arches, the base and capital mouldings of which demonstrate the refinement and ability of the designer, as also do those of the band below the drum. The backs of the arch voussoirs are stepped. The mill has a lead-covered domed top. Notwithstanding the difficulty of designing an arcade circular in plan, of so small a radius, the effect produced is remarkably satisfactory. There is a brick archway in the neighbourhood, which may have been designed by the same hand.

The smaller view was taken at a later date, when the wooden structure inside the arches, which was essential to the working of the mill, had been removed. The building has been scheduled by the Office of Works. —[NATHANIEL LLOYD.]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an arbitrator, brought by Colonel Jago, J.P., jointly and severally against builder and architect, for damages for the collapse of a village hall. Mr. Chawlegger, K.C., and a Junior represent the plaintiff; Mr. Twistle the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. The second day's hearing has concluded the defendants' case, and counsel have now to address the arbitrator in the interests of their respective clients.
Though the case related is true to life in every particular, the characters named are fictitious.

v: Mr. Pitfall's Closing Address

THERE was a tense suppression in the air when the arbitrator entered, bowed to Counsel and others present, who, as usual, stood to receive him, and took his seat at the head of the table. The tough of the fight, when the whole resources of Counsels' learning, acumen, resource, wit and eloquence would be called for, was at hand; and the awareness of the rival advocates, as they concentrated on the supreme effort it was their honour and pride to make for their clients and in professional emulation, disallowed the light interchanges that had introduced the proceedings on the previous days. By the rule observed in civil actions, as distinct from criminal prosecutions, Mr. Chawlegger had the privilege of presenting the plaintiff's case in the last speech made to the arbitrator. Accordingly, it was Mr. Pitfall, as senior advocate for the defendants, who first spoke. He slightly turned his chair towards the arbitrator, his papers in the charge of the faithful Wrackem—who sat by his shoulder ready to prompt him with figures and with facts—and, leaning forward with folded arms resting on the table, addressed the arbitrator with an air of easy precision and clarity, as though he had merely to elucidate a matter of common knowledge; but, as he went on, earnestness enforced his logic, and conviction gave incisiveness to his plea that both law and justice entitled his client to an award. His emphasis stopped short of gesture; but at particular points he put forward his hand, while he held the arbitrator's eye, and tapped impressively on the table with his finger.

Sir! (Counsel began) this, as you have heard, is the case of a village hall erected for a building-owner under contract by a builder to the designs of an architect. Shortly after the hall is built it collapses, and the building-owner claims damages, jointly and severally, against the builder and the architect, for negligence.

The main facts are not in dispute. It is common ground that the relations of building-owner, architect and contractor had been duly set up; that the work had been certified by the architect as having been completed; that the collapse occurred before the expiration of the term within which the builder was responsible to make good defects; that the cost of reconstruction is £3,127; that no defect contributory to the collapse was notified to the architect or builder by the building-owner previous to the collapse; that the plans, specification and instructions prepared by the architect and supplied to the builder were efficiently drawn, and that the builder gave due attention to those directions and built soundly and well.

Mr. Chawlegger: My learned friend is going too far. My submission is that the defendant Toomer's directions were neither complete nor efficient.

Mr. Twistle: I wish, sir, on behalf of my client, to associate myself with the submission of my friend.

Mr. Pitfall: My friend on the other side said, in his cross-examination of my client, that he greatly admired the detailed exactness of my client's specification: I am glad to know that my friend is now reduced to swallowing his own words and clutching at this straw. If he thinks it will support him he is welcome to it.

The Arbitrator: Please proceed, Mr. Pitfall.

These main facts, sir—Counsel continued—are not in dispute, and all parties are, in addition, agreed as to the circumstances of the collapse. It is common ground that the floor was laid with boards of American maple-wood, forced up close with flooring cramps; that blocks and wedges, placed between the marginal boards and the walls, were left in place; that damp air circulating under the floor caused the boards to take up moisture and swell; that this led to an aggregate expansion of the whole floor which brought an enormous pressure upon the side walls; that consequent on its state of compression the floor buckled when danced on, and that the dancing on the floor after it had buckled resulted in the collapse of the building. On the showing of these facts, sir, the plaintiff contends that it was an implied obligation of my client to direct the removal of the blocks and wedges and to satisfy himself that they had been removed, and that the defendant builder, independently of any instructions given to him, was responsible for the removal of the blocks and wedges, and that therefore the failure of each, or both of them, to secure the removal of blocks and wedges amounts to legal negligence; that the collapse of the hall was due to this negligence, and that therefore the defendants, or one of them, is responsible to him in damages for the collapse.

The defendants, sir, on the other hand, contend, first, that the omission to remove the blocks and wedges did **not** amount to legal negligence; secondly, that the omission to remove wedges was **not** the cause of the collapse of the building; and, thirdly, that the collapse was due to the wilful or negligent act of the plaintiff. On behalf of my client, Mr. Toomer, I further contend that, even if negligence on the part of the defendants should in any degree appear, my client is completely exonerated as against the defendant builder.

From what I have said, sir, you will perceive that the crux of the case lies in what **does** in fact constitute legal negligence, and what does **not** in fact constitute legal negligence; and upon the application of that **rule** to the particular circumstances you are investigating.

It is not, sir, necessary for me to remind you that we are here concerned only with **legal** negligence—that is to say, with that kind of negligence which is called culpable or blameable negligence, and in regard to which a claim for damages alone can lie. The nature of negligence, as the law recognizes it, has been fully expounded by learned judges whose pronouncements have determined its interpretation in its many aspects under a vast number of contingencies.

I will, sir, submit that in no single one of these several aspects can a charge of negligence be shown to lie against the defendants.

First, sir, I call your attention to this obscure, artificially-prepared flooring material, American maple, which the supplier, called as witness for the plaintiff, told you was delivered by him to the builder kiln-seasoned and prepared for laying, as received from the American manufacturer. Now, sir, it was laid down by Mr. Justice Erle in *Turner* v. *Garland and Christopher* that if an architect is to employ, out of the ordinary course, some novel thing in which he has not experience, **failure of that thing is still consistent with his skill.** In the case quoted, the defendant architect, who had used a new patent roofing substance which failed, got the verdict. In the present case, sir, my client used, not a roofing, but a **flooring** material; and if American maple, by reason of being a natural substance—however obscure and however artificially prepared—cannot be patented, it is still so new in experience that the plaintiff—in spite of the urgent need he had to bolster up his claim with evidence of a common knowledge—could produce as witness only that amazing person who described himself as a practical architect licensed by the Royal Institute of British Architects to keep pigs.

The Arbitrator: As a Fellow, and Member of the Council, of the Royal Institute, I must venture to correct you, Mr. Pitfall. The Royal Institute does **not** license architects as pig-keepers.

Mr. Pitfall: I stand corrected, sir, and tender my profound apologies for having misstated the witness's credentials; I **should** have said—a pig-keeper licensed by the Royal Institute of British Architects to practise as architect.

The Arbitrator: That, Mr. Pitfall, is even worse.

Counsel: I agree, sir, it is a bad lookout for my friend, whichever way it is put. I can only say that I am content to put it whichever way my friend prefers. He will, I am sure, appreciate the spirit in which that offer is made.

Mr. Chawlegger: He does—perfectly.

Mr. Pitfall: The learned arbitrator will understand my difficulty.

The Arbitrator: I suggest that the learned counsel may safely leave his difficulty unsolved.

Mr. Pitfall: I bow to your ruling, sir, and will content myself by saying that the only person the plaintiff could find to prove common knowledge of the nature of maple flooring was an amazing person who is **either** an architect licensed by the Royal Institute to keep pigs, **or** a pig-keeper licensed by the Royal Institute to practise architecture—but as to **which,** plaintiff's counsel, who called him, can offer no opinion—and who spoke of the "bursting power" of American maple. I submit, sir, that the use of that expression, "bursting power," by a witness put forward as an expert, not only marks that witness as an ignorant charlatan, but totally discredits the plaintiff's contention of common knowledge. You will, sir, I think agree with me, that on a point so essential to the plaintiff's case as this proving of common knowledge, no pains were spared to find evidence of the fact; yet the only witness my friend has been able to produce is one obscure archipigkeeperteet. You observed, sir, how completely and immediately that witness broke down under my cross-examination, and I submit that the evidence he gave not only failed to show common knowledge but was conclusive proof of the **absence** of common knowledge.

The timber merchant called by my friend admitted in cross-examination that he had never known a case of a maple floor buckling; and you heard the plaintiff's own expert surveyor, who had investigated the whole of the contingent facts, agree that, so far as he knew, the behaviour of the floor of Grastopen Village Hall was **"entirely unprecedented."** Sir, I submit that my client did, in fact, use in this floor a "novel thing" of which not only he, but no one else, had due experience; and that under the pronouncement of the learned judge I have just quoted, the buckling of the floor was still consistent with skill on the part of both defendants, and that therefore no case of negligence can lie against them. I also submit that in admitting that the buckling of the floor was entirely unprecedented, the plaintiff admits common knowledge to be an impossibility.

But, sir, I am not going to tax you to balance the scales of justice entrusted to you, with this weighty fact **alone.** Negligence, sir, to be actionable, must consist **either** in one or more acts of gross negligence, **or** in habitual acts of trivial negligence. **What** is this gross act—**what** are these habitual trivial acts, the plaintiff depends on to sustain his plea of negligence? It has been successfully argued—and I, sir, do now urge, as the **only** safeguard against the destruction of any architect by any wealthy and arrogant employer—that when an architect advises a client to the best of his ability, and the client elects to act on that advice, and the advice turns out not to have been, in the particular circumstances, the best that could have been given, **then,** in that case, the architect ought **not,** in justice, to be penalized. It is for **you** to decide, sir, in what terms my client warned the plaintiff of the uncertain and refractory nature of American maple of which—as he told you in evidence which my learned friend did not attempt to traverse in cross-examination—he had some knowledge; but whatever words my client may have used at that interview, it is abundantly clear that the use of American maple was debated between the plaintiff and my client; that my client's advice was tempered by knowledge of maple and by knowledge of the plaintiff's needs; that my client definitely submitted his proposal to the plaintiff and, as an exact and careful man, noted on the spot the instructions that the plaintiff did there and then **give to him.** You, sir, have seen the note my client made on that occasion, and can remain in no doubt that he acted at that interview with **circumspection, forethought,** and **conscientiousness;** and I submit, sir, that, merely because the carefully-qualified advice he then tendered did not, as it chanced, prove the best possible in the circumstances, the plaintiff is **not** entitled to place upon the shoulders of my client the unknown risks which every building-owner has to face when he elects to build, and force him to pay £3,000, because a carpenter, having **no conceivable reason** for knocking out a wedge, did not knock it out.

I must **now,** sir, in the interests of my client, as distinct from those of the defendant Swillerton, submit, that even **if**—for some reason of which I am entirely unaware—a suggestion of imperfect foresight on the part of the defendants may conceivably dwell in your mind, my client **must,** nevertheless, be still entirely and completely exempted from any such implication—as I will now ask your leave to show.

The obligations of an architect to the building-owner and his duty to the builder, sir, consist in supplying the builder with complete instructions by means of drawings, specifications and otherwise, to the end that all parts of the materials and details of labours required in the construction, and their methods of use, shall be clearly defined, so that the builder shall know exactly what is required of him; **but,** sir, those instructions do **not** include, and are not **supposed** to include, and cannot **possibly** include, and would awaken the builder's resentment if they were **made** to include, directions—other than exceptional and special directions—as to the **tools** the builder shall handle, or his method of employing them. My client duly drew and described the foundations for, and the arrangement of, the floor boards; and directed they should be laid up close with a special device called "flooring cramps," and

then cleaned off smooth, and afterwards finished with skirtings fixed to special strips of wood nailed to the walls above the floor and which, in the building trade, are called "grounds." The blocks and wedges were not described in the specification nor shown on the drawings because they formed no part of the **permanent building.** They were what engineers call "false work"—that is, work fixed temporarily to enable the permanent structure to be erected, **or,** alternatively, they were in the nature of tools, or implements. It was entirely a matter of the builder's choice and convenience whether he would use such blocks and wedges or adopt some other way of achieving the purpose they served of lining up the first board laid and forcing the last close up to their neighbours. You heard, sir, the defendant Swillerton admit to me in cross-examination, that if these blocks and wedges had been of iron—had they, that is to say, been, **in fact,** implements—he would have removed them; and he did **not** remove them because, though they served the purpose of tools, they were—being merely bits of unwanted wood—not worth preserving. I submit, sir, not only that my client did not order blocks and wedges to be used, but that he was, as architect, not concerned to know whether they were used or not used; that he had no means of knowing they **were** used, and if he **had** known it he could still not have known they were being left in place **unless** he had chanced to visit the building during that short time the carpenters were at work fixing the skirtings over the wedges; and it is, sir, as you have noted, **not** the use of the wedges, but the **leaving of them in place,** which is the point of negligence insisted on by my friend. By no showing can my client be held responsible for the use of these wedges.

Mr. Arbitrator, I submit with perfect confidence, but with the greatest respect, that I have answered the specific grounds upon which the plaintiff urges negligence. **But,** sir, if I now remind you of the pronouncements which establishes the **general principle** of what **does** and what does **not** constitute legal negligence, you will, I believe, hold that, quite apart from the particular points I have laid before you, the defendants are—and must be, under the general rule—**entirely** exonerated and exempted from any implication of negligence.

First, sir, I have to call to your mind that legal negligence on the part of architect or builder exists **only** when it can be shown that structural defects have arisen which are due—on the part of the builder—to defective workmanship or materials, and—on the part of the architect—to faulty design or lack of supervision. Of **what** fault in design, sir; of **what** defective work; of **what** lack of supervision is my client guilty? The plaintiff's own witness, as well as the eminent engineer whom I called—and whose impartial analysis impressed everyone in this room—alike paid tribute to the completeness and competence of my client's design and the soundness of the builder's work; and my learned friend—although he now wishes to forget it——

Mr. Chawlegger: He wishes nothing of the sort.

Mr. Pitfall:——who **even now** has no wish to forget it, commended the detailed exactness of my client's specification. Of what faulty supervision is my client guilty? As architect he was responsible for general supervision **only;** and general supervision has been more particularly defined as **inspecting the work at appropriately limited intervals.** No evidence whatever has been produced by my learned friend—who in his desperate position would have clutched eagerly at any such support—that the intervals between my client's inspections were **unduly** long; and you have heard it given in evidence, sir, that my client could not possibly have known that blocks and wedges were being used **unless** one of his visits of inspection had chanced to coincide with the laying of the last of the floor boards, and **even then,** sir—and I ask your permission to stress the point—my client would have had no reason to know—or even suppose—that the wedges would be left in place unless his visit had chanced to coincide with the **act of fixing the skirtings;** that is to say, the only intimation he could possibly have had that the wedges were being hidden by the skirtings was the remote—almost impossibly remote—chance, that he should walk into the hall at the **exact hour** during which the wedges were in the process of being so hidden. It is upon the failure of this almost impossibly remote chance of a coincidence that the plaintiff bases a claim for negligence, and, I fancy, Mr. Arbitrator, with an equally impossibly remote chance of success.

Mr. Arbitrator, I feel that you will realize the **enormous** importance to my client of establishing himself with you on this point of negligence, and that you will allow me to remind you of the definition of legal negligence which has stood for seventy years, and still stands, as the authoritative pronouncement on the subject. The words I shall read to you, sir—said counsel, taking an open volume passed into his hands by his faithful junior—will not be unfamiliar to you. They are those of that learned and revered judge, the late Baron Alderson, and formed part of his famous judgment in *Bligh* v. *The Birmingham Waterworks Company*, and I submit, sir, that even if you dismiss from your mind the **whole** of the particular points destructive of the plaintiff's case which I have already represented to you, these authoritative words of his lordship on the general question will entirely demolish the impudent contentions of the plaintiff. The learned judge's words are as follows——

Mr. Chawlegger: What are you reading from?

Mr. Pitfall handed a book to Mr. Chawlegger—who glanced at it and returned it—and then proceeded to read as follows:

"Negligence is an omission to do something which a reasonable man, guided upon those considerations which ordinarily regulate the conduct of human affairs, would do; or doing something that a prudent or reasonable man would not do."

Sir, in **what** has my client omitted to do what a reasonable man **would** do? **What** has he done that a prudent and reasonable man would **not** do? I submit, sir, that the plaintiff has brought no tittle of evidence to show that my client has not throughout acted in all ways as a prudent or reasonable man guided by those considerations which ordinarily regulate the conduct of human affairs **would** act—and **more,** sir; I submit that no evidence you have heard has in the least degree brought into question the meticulous conscientiousness, thoroughness, capacity and integrity displayed by my client throughout the whole course of this unfortunate history. **But,** sir, the learned judge whose memorable words I have just read to you says more: he says that mere omission is not actionable unless a duty is imposed upon the person omitting. **What** duty, sir, in seeing that the wedges were removed, was imposed upon my client, and **when** and **by whom** was it imposed? His lordship further says that responsibility and obligation must **precede** the omission—that is to say, sir, the fact of a failure afterwards occurring does not, in itself, establish an anterior responsibility—and that damages arising from it **must be proximate and flow directly from it.** I call your attention to those last words, Mr. Arbitrator, as exactly applicable to the buckling of the floor. **If** my client can be held responsible for the wedges being left in—and I submit, sir, that I have abundantly shown that he can in **no way** be so held—he still is not responsible for the buckling of the floor **unless** the buckling was proximate to and flowed directly from the omission to remove the wedges. I submit, Mr. Arbitrator, that there is here no case of "direct proximate flowing from." If the buckling had occurred while the hall was not in use, or while it was

being applied to any kind of use **appropriate** to a village hall, I do **not** dispute that "direct proximate flowing from" could be maintained; **but,** sir, you have, I think, heard some particular evidence of the use to which Grastopen village hall was put. The plaintiff's own expert timber merchant said that he did not think the floor would have buckled if it had not been heavily danced on; another of the plaintiff's witnesses told you of how the floor remained normal through a long evening of dancing and jollification by a crowd of hearty villagers; and the rector of the parish, whose evidence, sir, must have impressed you as conclusive, made clear that those earlier scenes of jollification and dancing were so noisy, drunken and boisterous that he felt it incompatible with his office to remain in the place. It was **only,** may I remind you, when Bob Garnish started "John Peel" with both the hands of him slamming the piano the way you, sir, it was supposed, would go to beat a carpet, and **only** when the crowd numbering—according to the plaintiff's expert witness, three hundred and twenty persons—began to dance a "gallop" with screechings and leppings the way they did be blown up with gunpowder, that the floor buckled. Sir, there was here no "direct proximate flowing" of cause, in the hidden wedges, to effect, in the buckling of the floor, such as can **alone** make my client—even if he were responsible for omission to remove the wedges—responsible for the buckling of the floor. For all any of us in this room know, there may be scores of village halls in this country that would collapse, as Grastopen village hall collapsed, if they were subject to the same unfair test, but they never **have** been, and never **will** be, so tested.

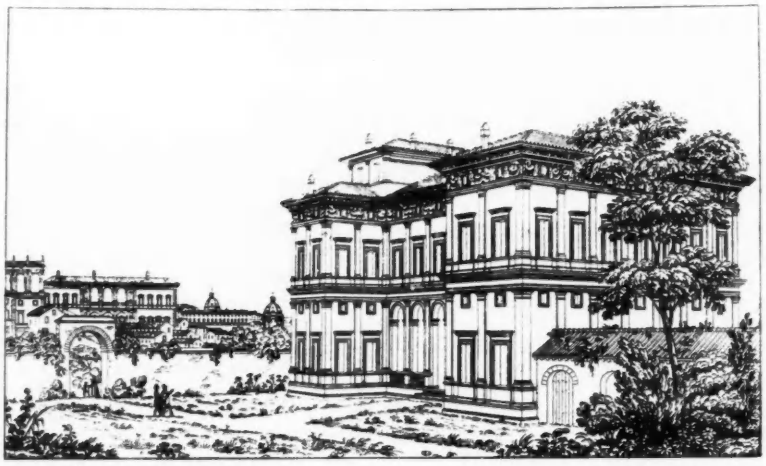
But, sir—to pursue the impossibility of my client's responsibility one step further—if my client **had been** fully and solely responsible for the buckling of the floor, what would be the **extent** and **degree** of that responsibility? It would, sir, have been almost negligible. I submit that, by a well-established principle, the building-owner is estopped from recovering from the defendants, or either of them, a larger sum than it would have cost to set right the defect at the time the defect revealed itself. To contend otherwise is to say that if a builder carries out faulty work in a roof which the architect fails to condemn, and if subsequently a defect appears and the water gets in, and if, thereafter, the building-owner neglects to notice, or chooses to disregard, the leakage of water so that the decorations of the house are damaged, **then,** in that case, the building-owner can claim from the architect and builder the cost of redecorating. Such a contention is not only invalid in law and in justice, but ludicrous; yet, sir, that, **that** is the contention by which alone my learned friend can make good the plaintiff's claim. In contending that the defendants, or either of them, are liable for the collapse of Grastopen village hall—even supposing they, or one of them, is responsible for the buckling of the floor—he is asking you to say, sir, that a builder who overlooks a displaced roofing tile is liable for the redecoration of the house if the owner chooses to refrain from notifying the defect until the leakage has damaged the decorations. The buckling of the floor was a defect comparable to the displaced tile; the collapse of the building was comparable to the wilfully permitted ruin of the decorations; **and,** sir, it follows that, by neglecting to duly notify the architect and builder of the buckled floor, the plaintiff is estopped from recovering from the defendants, or either of them, a larger sum than it would have cost to make good the defect; and the cost of so making good the floor was stated by the defendant builder to be the insignificant sum of seventy shillings—an estimate which, as you observed, my learned friend did not dispute.

Sir, I will say no more on the subject of this negligence which the plaintiff imputes to the defendants, for I believe that you have no wish, sir, to hear me further on that point.

The Arbitrator: As to that you must use your own judgment, Mr. Pitfall.

(NEXT WEEK—VI: MR. PITFALL ENDS, AND MR. TWISTLE ADDRESSES THE ARBITRATOR)

LITERATURE



THE BUILDINGS OF ROME

AN attractive and valuable recent addition to the bookshelf of the architectural student or scholar is the edition of Letarouilly's series of drawings of "modern" as distinct from "ancient" Rome, issued by Messrs. Tiranti in six volumes, of which the book before us is the second. It is pleasantly produced and not unwieldy for reference, and is excellent value for three half-crowns.

The somewhat curious effect of the mingling of the language of the author, the language of the capable translator, Mr. Arthur Broadbent, and the languages of both ancient and modern Rome, may appear at first as a defect. On second thoughts, however, one realizes that it serves as a reminder of the threefold contribution to the work—fourfold, in fact, when one includes the Latin of Vitruvius, quoted here and there in the book. In this connection there is an obvious slip in the printing of the dust-cover, on which the two final volumes of the set are announced as dealing with "Eglises et Convents," an unfortunate bilingualism. In the descriptive text, moreover, a building is sometimes "palace," sometimes "palazzo." But these are minor inconsistencies which do but stress the international interest of the buildings of the Renaissance period in the "eternal city."

It is perhaps somewhat tiresome to have the descriptive letterpress referring to both the first and second volumes arranged together at the end of volume ii, but the generous supply of plates and information fully compensates for any small inconvenience.

Having made these few comments, one

From Edifices de Rome Moderne.] [*By Paul Letarouilly.*

The exterior and garden entrance of the Farnese Palace, Rome.

New Bridge, which carries the Witney - Abingdon Road: it was built about 1250, probably reconstructed in the 15th century, and repaired in 1801. The width is 15 feet 2 inches between parapets; the headway 14 feet.

[*From* The Thames Valley from Cricklade to Staines.]

may record whole-hearted appreciation of the volume. The words " Description of Plates " are hardly adequate to indicate the importance of the text. It is rather an " Explanation," which was Letarouilly's word. For the amount of historical and structural information, ably translated or adapted, and suitably condensed by the English translator, is not limited to mere examination of the drawings themselves. An example of the ample and wide nature of the descriptions is the detailed " Preliminary Note " on the Farnese Palace.

In the drawings themselves Letarouilly's inimitable supplementary detail and the figures standing, sitting, gesturing or sauntering beneath painted ceilings or in columned vestibules, provide not merely a necessary standard of scale, but also an indication of human life and purpose without which no edifice, ancient or modern, has any right or reason to exist. CALCIUM CHLORIDE AS A PROTECTION AGAINST FROST

A SUMMARY of the extensive literature previously existing in a variety of publications on the effect of employing calcium chloride or sodium chloride as a protection for mortar or concrete against frost has been made by Dr. W. N. Thomas and published as a special report by the Building Research Board. This summary shows that, although a great deal of experimental work has been done in the past by different investigators, there still remains a considerable amount of uncertainty, and often the results are, apparently, at variance. These variations, says Dr. R. E. Stradling, Director of Building Research, in the prefatory note, may be due occasionally to the differences in the test conditions, but it is suspected that the causes are of a more fundamental nature.

The exact significance of the variations has not been determined, and the Building Research Station has not, so far, been able to devote its attention to the study, which is evidently necessary, of the more fundamental aspects of the reactions involved. The report, therefore, does not purport to present new information on the effects of the salts. It is somewhat in the nature of an extended bibliography, and is published in its present form for the convenience of those who desire some information on the subject from the Building Research Station.

The Use of Calcium Chloride or Sodium Chloride as a Protection for Mortar or Concrete against Frost. By W. N. Thomas, M.A., D.PHIL., A.M.I.C.E. Department of Scientific and Industrial Research. Building Research Special Report, No. 14, H.M. Stationery Office. Price 9d. net.

A.A.S.T.A. POCKET DIARY

FOR the eighth successive year the Association of Architects, Surveyors and Technical Assistants issues its pocket diary for 1930, containing, in addition to the miscellaneous data common to such little books, much of a purely technical character. The tables, formulæ, etc., are revised from year to year, voluntarily, by assistants earning their livelihood in the professions represented; and " if," as the foreword remarks, " there are any defects, the blame must be attributed to subscribers who were asked to forward their criticisms and, unfortunately, neglected to do so."

THE THAMES VALLEY FROM CRICKLADE TO STAINES

THIS book is to be welcomed as an example of the regional report " in the grand manner." Not only are the writers who have contributed to its preparation all well known as masters of the respective branches of the subject, but the maps and illustrations are good in themselves and well chosen to enhance the descriptions. They include reproductions of old drawings, topographical sketches by Professor Adshead and numerous photographs, while the maps are particularly well rendered in view of the subjects dealt with.

John Buchan in his preface gives a picturesque sketch of the Thames valley in past ages. He points out that in early times the river offered little advantage except as a boundary, and that it was only in the Middle Ages that it reached its zenith as a route for travel and commerce. It was shorn of some of its glory by the destruction of the numerous religious houses along its banks, but continued as a useful and pleasant waterway until recent times.

As is made clear in the subsequent sections of the book the degradation of the Thames valley began about the middle of the last century by the intrusion of ill-designed railway bridges into the landscape, and later on by the erection of numbers of villas and bungalows along the banks and even on several of the islands. The report speaks temperately and dispassionately of these accretions, as it is realized that it would be impolitic to express the disapprobation that the lack of style and general triviality of these structures would justify. The river is, after all, the playground of the Londoner, and it would be unfair to put obstacles in the way of its use, but with good organization and skilful planning the beauties might have been preserved and the demands for recreation adequately met.

Reference is made to the increased accessibility of the more remote reaches owing to the advent of the motor-car, but it may be pointed out that had it not been for this, the river would be in far worse case today than it actually is. Up to some twenty-five years ago river activities were increasing rapidly, little bungalows were being erected everywhere, and the Thames as a pleasure highway was becoming overcrowded. With the motor opening up other alternatives, things slackened, and for some years before the war the numbers on the river rapidly diminished, and they have never since reached the old figures. What things would have looked like by now, but for the motor-car, is probably beyond imagining, and many reaches that now remain untouched might have been ruined beyond redemption.

To return to the main object of the report, which is to lay down a line of action in respect of the preservation and enhancement of the beauty of our premier river. With this in view it deals with the question of bridges, which are carefully described and many of them illustrated by photographs. With the exception of Brunel's bridge

at Maidenhead the railway bridges are not commended. There are also brief references to roads and footways, as well as to the present and possible industrial developments along the Thames valley. Another chapter deals with the character of the landscape, the trees that flourish and those to be planted with a view to maintaining the general scenic harmony.

Part II of this publication is devoted to recommendations as to the elimination of existing disfigurements, and protection from further ones in the future. Little can be said as to many of the more modern villas, but the frailer bungalows offer the hope that by the time their ephemeral life is ended, public taste may have improved. It is pointed out that the boat-houses and boat-building sheds constitute one of the major disfigurements of the river, and, as they are a necessary adjunct to its life, should be designed to avoid damaging the amenities. The multiplicity of overhead wires is noted as damaging some of the views, and fears are expressed as to the possible results of the activity of the Electricity Commissioners if their proposals are not carefully watched and where necessary challenged.

The methods of protection afforded by the goodwill of enlightened owners, by regional planning and by town planning schemes and by-laws, are outlined, and by the aid of the very explicit set of maps a very valuable general plan for zoning and reservations along the river banks is defined. In determining this scheme the view taken is that it is not so much a case for large public open spaces as for reservations in favour of such uses as will preserve the general character of the scenery. In order to encourage this preservation it is suggested that land scheduled as private open spaces might be exempted from death duties. Other areas, where unrestricted development would be injurious, might be dealt with as "agricultural" or "rural" zones, with regulations appropriate to these.

The numerous suggestions and demands put forward by the authors cannot be reviewed in detail, but they are almost invariably sound and in many cases claim urgent attention lest the opportunity should slip by and another eyesore make its appearance on the banks of our noble river.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

MR. GREENWOOD informed Mr. Day that on January 1, 1930, there were 25,096 houses under construction in England and Wales under the Housing Act of 1924, and that 32,133 houses were included in schemes approved for financial assistance under that Act. No houses completed after September 30, 1929, were eligible for financial assistance under the Housing Act of 1923. Considerable numbers of houses—38,298 during the last six months for which figures were available—of a rateable value not exceeding £78 (or £105 in the Metropolitan Police District) were, however, being erected without financial assistance from the State. The discontinuance of a subsidy under the Act of 1923 led not only to an acceleration of building before that date, but also to a consequent reduction in the number of houses being built after that date. Recent figures of the proposals submitted by local authorities showed, however, that the number of houses to be built was again increasing. Though he realized that the need for new houses had not as yet been met, he was not, in the circumstances, dissatisfied with the progress that was being made.

Sir Kingsley Wood asked the Minister of Health if he would state the average area of parlour and non-parlour houses, respectively, excluding flats, in contracts let by or in direct labour schemes of local authorities for each month from November to date.

Mr. Greenwood informed Sir Kingsley Wood that the following statement showed, for various months in question as regarded England and Wales, the number of houses completed, and the number authorized but not completed under the Housing Acts of 1923 and 1924 :—

Month.	Number of State-assisted Houses :			
	Completed during the month.		Authorized but not completed at the end of the month.	
	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.
1929.				
Sept...	26,377*	8,967	—	51,912
Oct...	—	2,278	—	51,131
Nov...	—	4,555	—	51,642
Dec...	—	3,674	—	57,229

* This figure might be subject to adjustment.

Mr. Greenwood said that as regarded houses to be built in England and Wales the figures were as follows : For November 1929, parlour houses, 894 sq. ft.; non-parlour houses, 749 sq. ft. For December 1929, parlour houses, 937 sq. ft.; non-parlour houses, 801 sq. ft.

The number of houses of a rateable value not exceeding £78 (or £105 in the Metropolitan Police District) erected during the six months ended in September last without State assistance was 38,298.

Sir Kingsley Wood asked the average price of parlour and non-parlour houses let by or in direct labour schemes of local authorities during each of the months June and December, 1928, and June and December, 1929.

Mr. Greenwood said the following statement gave the desired particulars as regarded houses to be built in England and Wales :—

Month.	Parlour Houses.	Non-Parlour Houses.
1928.	£	£
June	426	356
December ..	429	338
1929.		
June	404	355
December ..	404	370

Mr. Greenwood informed Sir Kingsley Wood that the number of dwellings completed at December 31, 1929, under the Housing (Financial Provisions) Act, 1924, in agricultural parishes in England and Wales was 15,594.

Up to September 30 last, the latest date for which figures were available, assistance had been promised under the Housing (Rural Workers) Act in respect of 2,200 dwellings in England and Wales. Work had been actually commenced on 2,034 of those, and completed on 1,402.

Mr. Greenwood further informed Sir Kingsley Wood that in England and Wales work had been in progress since May last on eighty-nine slum clearance schemes, three of which, involving the provision of re-housing accommodation for 697 persons, were completed by September 30 last. Eight schemes of this kind had been submitted during the period in question, none of which had yet been confirmed.

Major Elliot asked what was the number of houses authorized under the various heads of the 1923 and 1924 Acts in October, November, and December in 1928 and in October, November, and December in 1929, respectively.

Mr. Greenwood said the following statement gave the desired particulars :

Month.	No. of State-assisted Houses authorized in England and Wales during the month under the	
	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.
1928.		
October..	3,996	3,271
November	3,356	4,778
December	6,261	3,643
1929.		
October..	—	5,497
November	—	5,066
December	—	9,261

Mr. Lawson informed Sir Kingsley Wood that the following table showed the numbers of insured persons, aged 16 to 64, classified as belonging to the building industry recorded as unemployed in Great Britain :

1928.	Number.	1929.	Number.
March 26 ..	87,964	March 25..	101,069
June 25 ..	77,869	June 24 ..	67,742
Sept. 24 ..	91,845	Sept. 23 ..	84,585
Dec. 17 ..	120,715	Dec. 16 ..	135,983

Mr. Greenwood informed Mr. Wellock that the number of local authorities in England and Wales who were erecting houses by direct labour at January 1, 1930, was forty-seven, and the number of houses which they had already erected or were erecting by direct labour at that date was 21,164. The figures for January 1, 1928, were forty-six local authorities and 7,528 houses.

Mr. Lovat-Fraser asked the Chancellor of the Exchequer if, in drawing up his Budget, he would consider the desirability of putting a tax on works of art exported from this country to other countries.

Mr. Snowden said that the suggestion had been noted.

Mr. Bracken asked the First Commissioner of Works whether he had submitted the design for the building to be erected on the Calton site in Edinburgh to the Fine Arts Commission; and whether he had consulted with the Commission regarding the selection of the architect.

Mr. Lansbury said that the answer to both parts of the question was in the negative. The plans of the proposed buildings would be finished early in February, but they would not be submitted to the Fine Arts Commission until a scale model of the buildings, which the Commission had requested to be furnished, had been prepared.

Messrs. Elcock and Sutcliffe, chartered architects, have removed their offices to Adam House, 60 Strand, London, W.C. 2.

SOCIETIES AND INSTITUTIONS

TITE PRIZE AND VICTORY SCHOLARSHIP, 1930

THE preliminary competitions for the Tite Prize and the Victory Scholarship will be held in London and at centres in the provinces on Thursday, March 6, and Friday, March 7, 1930, respectively.

Forms of application for admission to the preliminary competitions may be obtained from the R.I.B.A., 9 Conduit Street, W.1. The closing date for the submission of forms of application is Saturday, February 22, 1930.

A LIVERPOOL STUDENTS' COMPETITION

Members of the Liverpool School of Architecture have been invited to submit, in competition, designs for the Owain Glyndwr Memorial Hall, which is to be built by the inhabitants of the village of Glyndyfrdwy, Merionethshire. A party of fifty students, accompanied by Professor C. H. Reilly, visited the site recently. A prize will be awarded to the author of the design which is adjudged best suited to its purpose and to be within the available means of the residents.

It is hoped to make a start on the memorial during the spring.

THE HOUSE YOU WANT

The type of house wanted was a little place in the country or with semi-country surroundings, said Mr. Randall Phillips in his lecture on "The House You Want" at the Architectural Association, the second of a series of non-technical lectures. The plan and interior arrangements should have primary consideration, but probably that would be given to the outside appearance, and the question would virtually be whether to choose the old English or Georgian type.

He said that there was nothing equal to a thatched roof. It kept a house warm in winter and cool in summer. If properly made it should not need attention for twenty years. It was a mistake to think that thatch was inflammable. Any danger to it would come from within the house and could be avoided by a lining of asbestos material.

The majority of people would choose some form of brick house more or less in the Georgian style. They might be daunted when they saw the architect's plans by the bareness of the exterior, but that could be remedied in a few years by the growth of creepers or trees. The most economical type of house was one of oblong form with an unbroken roof.

It was commonly supposed that a bungalow was cheaper to build than a two-story house of the same number of rooms, but except in the case of a very small example the bungalow would probably cost more. As an example that a bungalow need not be a disfigurement, Mr. Phillips illustrated on the screen a picture of a delightful little bungalow set among trees and flowers.

Regarding the interior of the house, the lecturer emphasized the importance of the kitchen or the kitchen-scullery, and showed various labour-saving arrangements, such as sinks with commodious draining-boards set at a slight angle, and various types of service hatches between kitchen and dining-room. He strongly advocated the addition to the kitchen of a small alcove furnished with a table and settles.

INDIAN ARCHITECTURE

The earliest architectural work extant in India exhibits the influence of Persia, said Mr. H. V. Lanchester in a lecture on "Indian Architecture," delivered at Sheffield University.

Southern India, he said, had a gradually developed architecture originally embodying such features as timber construction, thatched roofs and the Buddhist groups of monastic cells. These latter, the basis of the decorations of the pyramidal "vimanas" (temples) and "gopurams" (temple gateways), sometimes rise to a height of 200 feet. The finest example of this style was, probably, the rock cut temple of Kailasa at Ellora (A.D. 800), unrivalled throughout the world for its skilful contrast between sculptured and plain surfaces, and the consequent distribution of light and shade. This style of work has remained the fixed tradition of Southern Indian temple architecture to the present day, though modern work is almost purely repetitive.

Mr. Lanchester also spoke on the Hindu traditions for planning towns, and gave examples showing how the great temple formed the focus of the plan and the rectangular main street line provided for the annual sacred procession. Other points dealt with were the organization of the system of tanks and the use of these in relation to religious observances.

Domestic architecture in stone and in timber was also described and some idea given of the general character of the towns and the variations due to local conditions, the term local being used in its broadest sense, India being less a nation than a continent, with its numerous racial groups and its sixty major languages.

ROMAN CIRCULAR TEMPLES

Sir Banister Fletcher, P.R.I.B.A., lecturing at the Central School of Arts and Crafts, described the Roman circular temples, which, he said, were of peculiar interest to the whole Christian world, as prototypes of the first Christian baptisteries, just as the Roman basilicas or courts of justice were probably of the Early Christian churches. These were among the many instances in architectural evolution in which Christian forms were based on pagan originals, and they helped us to realize that architectural styles were not divided into watertight compartments, but evolved one from another, according to the changing needs of civilization.

Of all the circular temples in Rome, he said, the little Temple of Vesta had the greatest attraction for English people. It was the symbol of that united family life which the old Romans, like the modern English, regarded as the unit of the State. In its simplicity of plan, with its central altar-fire, it stood in the Forum Romanum at the centre of civic life, as a reminder of the sacredness of the Roman hearth.

THE INDUSTRIAL DESIGNS COMPETITION

Particulars of the seventh annual open competition of industrial designs to be held at the Imperial Institute, South Kensington, London, S.W., in June, 1930, have now been issued, and can be obtained from the secretary of the Royal Society of Arts, John Street, Adelphi, London, W.C.2. Intending competitors must apply to the Secretary of the Society between May 1 and May 10 for the necessary entry forms, the last day for receiving entries being May 26. In all scholarships and prizes amounting to nearly £1,900 are offered in connection with the 1930 competition.

The Royal Society of Arts offers a prize of £25 for designs for the decoration and furnishing of a dining-room in a small modern suburban house, and a prize of £20 for a set of black-and-white drawings of architectural subjects. Three scholarships will also be awarded—a travelling scholarship of the value of £100 in the section of architectural decoration or textiles, offered by Mr. James H. Hyde; one of £75, offered by the Tootal Broadhurst Lee Company, for designs suitable for weaving or printing, intended for dress or furnishing materials; and the Art Congress Studentship of £50 for practising craftsmen or designers, founded by the late Sir William Cuthbert Quilter.

Among the other competitions, for which prizes ranging from £5 to £50 are offered, are the following: In the architectural decoration section: for designs for a metal screen for a small church, glazed screen for a fashionable hotel, fireplace, anthracite stove, tile or faience-surround for a wood mantel opening, electric light fitting,

and a wooden litany desk. In the furniture section: for designs for the furniture for a first-class saloon cabin for a liner trading to the Far East; and the furniture and furnishings for a modern lounge.

CORRESPONDENCE

ART IN ADVERTISING

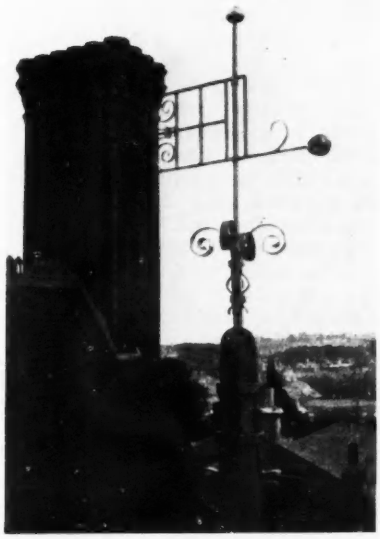
To the Editor of THE ARCHITECTS' JOURNAL

SIR,—Both Mr. Burford and "Till" have missed the point.

It is, that the paper is bought for the editorial matter. If the advertisements are to be read, they must be of *greater* interest than the editorial matter for which the paper was bought.

This is the goal to which the good advertisement now makes.

G. H. H.



A NORMAN SHAW BUILDING

To the Editor of THE ARCHITECTS' JOURNAL.

SIR,—The directors of Lloyds Bank propose to rebuild their premises at Farnham, Surrey, which will necessitate pulling down the existing building.

Now, we know that any new premises that Lloyd's Bank put up will be all that can be desired from an architectural point of view, and no doubt they contemplate a sober Georgian building in brick and tile, of domestic character, which will harmonize with those eighteenth century buildings with which Farnham is so well endowed and of which its inhabitants are so justly proud and jealous.

It is true that the building to be demolished is a relatively modern one—I am not sure when it was built, but within the last sixty years—yet it is no ordinary building of its period, being an early example of the work of Norman Shaw. Actually, it is his first important building, and when we compare it with the appalling productions of the same period we realize what a departure it was from current practice, and it helps us to understand what we owe to Norman Shaw (as, also, to Philip Webb) as a pioneer who led us back out of the wilderness of Victorian rubbish to good traditional architecture. Without Norman Shaw there would have been no Eden Nesfield, no Ernest George, no Horace Field, no Edwin Lutyens, as we know and respect them, for each and all of them received material influence through the work of Norman Shaw. It is true that we have all travelled far since Shaw designed the bank premises at Farnham; we should not, now, produce the same kind of thing or indulge in the same licence in our details; because Shaw's work was only a

View on the roof of Lloyds Bank, Farnham, an early example of the work of Norman Shaw, showing the elaborate design of the brick chimneys.

stage in the progress towards better architecture, and we have passed that stage. Shaw, like Webb, was a master of materials. Without overlooking traditional uses, which he assimilated, he designed original combinations, amongst which his chimneys are remarkable. Although we should hesitate to design brick chimneys having the amount of detail of the one illustrated and should demur were it suggested that elaborate carved panels should be introduced or the cap broken up into a multitude of little turrets, we cannot but respect the man who was able to design these, and particularly to have done so when he did.

As Shaw's first important building and as an example of his original and fertile mind, this is an important document in the archives of architecture.

Were it a piece of parchment upon which this was recorded, it would be guarded jealously, be valued highly and, probably, sold by auction for a great price and taken to America. If anyone suggested that such a document should be destroyed, he would be regarded as a philistine, if not actually a madman. Does the fact that the document (the value of which I do not think can be doubted) is of bricks and mortar actually affect the principle? I do not think it does, and I do most humbly but seriously suggest that the directors of Lloyds Bank (to whom architecture already owes so much) should again consider the matter from the points of view that I have ventured to set forth.

NATHANIEL LLOYD

TRADE NOTES

The whole of the paint for the Sydney Harbour Bridge, illustrated in our New Year issue, was supplied by the Sydney factory of Messrs. Lewis Berger and Sons, Ltd., and was made to the specification of Dr. J. J. C. Bradfield.

Messrs. Ruston and Hornsby, Ltd., of Lincoln, oil engine manufacturers, have received instructions to put in hand nine Ruston marine auxiliary oil engine generating sets, each of 306 kw. According to information available, they will be installed (three sets per vessel) on board three motor cargo liners, to be built for the New Zealand Shipping Co., Ltd. Each auxiliary engine will be a 5-cylinder unit working on the Ruston principle of airless injection, and capable of developing 450 b.h.p. at 270 r.p.m. or 500 b.h.p. at 300 r.p.m., and will drive a D.C. dynamo supplied by the General Electric Company.

The first shipment of a 5,000-ton order of "Ferrocrete," the rapid-hardening Portland cement, is now on its way to New York, U.S.A. The cement is required for the construction of river foundation work for the assembly and shipping plant of the Ford Motor Company, at Edgewater, New Jersey. In addition to its being rapid hardening so as to speed up the work, it was essential that the cement should give a watertight concrete. It is significant that the order should come to England in view of the fact that America produces annually over seven times the quantity manufactured in this country.

In a new booklet issued by Messrs. Benham and Sons, Ltd., are diagrammatic details of the Panelite system of heating, and drawings showing the application of the system to various types of patent floors. The system provides for panel or radiant heating in which the heating pipes, although embedded into the surfaces of the walls, ceilings or floors of a room or building, are accessible for repairs or renewal without cutting away the concrete in which they are buried. A Panelite heating coil consists of a system of metal tubing of wrought iron, copper or the like, formed in the shape of a continuous grille, having inlet and outlet for connecting up to a central hot-water system. Round the metal tubing a loose covering or outer tube is fitted of U-shape, of a somewhat similar substance to the finishing plaster surface of the wall or ceiling. A feature of the system is that in new buildings practically all work is carried out on top of the shuttering provided to receive the concrete, and is therefore claimed to be simple and inexpensive to instal. The system is practically complete immediately the shuttering is removed from the finished concrete.

On Saturday, January 25, the annual staff dinner of Messrs. Francis Polden & Co., Ltd., electrical contractors, of 56 Cannon Street, was held at Anderton's Hotel, followed by a concert and dance. The

toast of the Chairman was proposed by Mr. Lamport, who congratulated Mr. Polden on the continued growth of his organization. Mr. Polden in his reply paid a tribute to the cordial co-operation given him by both the office and outdoor staffs. Mr. Gill, the Secretary, was heartily thanked for the arrangements made for the evening.

The new electric washing-machine, the "Hera," recently introduced by Messrs. L. G. Hawkins & Co., Ltd., should, owing to its low price, achieve considerable popularity. It is, in fact, likely to become included as standard equipment in moderately-priced homes on new housing estates. It takes, it is claimed, only fifteen minutes to soak, boil (if desired), wash and rinse thoroughly $6\frac{1}{4}$ lbs. (weighed dry) of assorted washing. The cost of this, it is said, is less than one halfpenny for electric current in most districts. It is claimed that soaking, washing, boiling and perfect rinsing can be done in the machine itself without carrying hot or cold water, and without carrying clothes into the boiler and back again into the rinsing basin.

The Cement Marketing Company, Ltd., of London, has received an order from Norton, Griffiths & Co., Ltd., the contractors, for the whole of the cement requirements for raising the Assouan Dam a further 28 ft. It is anticipated that at least 100,000 tons will be called for. The original dam was 2,150 yds. long, 130 ft. above its foundation and 23 ft. wide at the top. It accumulated 234 million gallons of Nile water for irrigation, by means of which about half a million acres were rendered cultivable. In 1911 work was commenced on raising the dam by 23 ft., thus rendering another million acres arable. The second raising is expected to take three years to complete.

The caption under the illustration of a Compactom Fitment, on page 217 of our last issue, should have read: Part of the Compactom Fitment and furnishing scheme in the ladies' cloakroom of the restaurant at Chiltern Court, Marylebone, W.1.

OBITUARY

JOHN HALL

We regret to record the death of Mr. John Hall, chairman of the British Reinforced Concrete Engineering Company, Limited, which occurred suddenly on January 14, at his home, Charnes Hall, Stafford. Mr. Hall was also chairman of Messrs. Hall and Pickles, Limited, iron and steel merchants of Manchester, and of the Chatwood Safe Company, formerly of Bolton, now at Shrewsbury.

Within recent years Mr. Hall organized the removal of the British Reinforced Concrete Engineering Company, Limited, and the Chatwood Safe Company to their present addresses, building new works of the most modern type, with which were associated housing schemes for the accommodation of the employees. He also built model houses on his own estate at Broughton in Staffordshire.

He took a great interest in technical education, and a few years ago fully equipped a handicraft centre at Croxton, which he handed over to the county education authorities. He was an enthusiast in connection with the general use of electricity for domestic and industrial purposes.

THE BUILDINGS ILLUSTRATED

Following is a list of the specialists, general contractors and some of the sub-contractors for the buildings illustrated in this issue:

New Offices for the Royal London Mutual Insurance Society, Ltd., Finsbury Square, E.C. 2 (pages 234-240). General contractors, Walter Lawrence and Son, Ltd., who were also responsible for the demolition, excavation, foundations, dampcourses, concrete blocks, reinforced concrete, plaster and joinery. Clerk of works, L. T. Buckley; general foreman, F. H. Marsh. Sub-contractors: Lawford & Co., Ltd., asphalt; Brookes, Ltd., glazed bricks; Beebys Brick Co., Ltd., flettons; South-Western Stone Co., Ltd., stone; Emerson and Norris, Ltd., artificial stone; Moreland Hayne & Co., Ltd., structural steel; Hollis Bros. & Co., Ltd., flooring; Diespeker & Co., Ltd., terrazzo w.c. partitions and wall linings; United Waterproofers, Ltd. (formerly Waterex Co., Ltd.), waterproofing materials; Rosser and Russell, Ltd., central heating, boilers, and ventilation; Higgins and Griffiths, Ltd., electric wiring, electric light fixtures and bells; Matthew Hall & Co., Ltd., plumbing; Shanks & Co., Ltd., sanitary fittings; Carter and Aynsley, Ltd., door furniture; Crittall Manufacturing Co., casement windows; S. W. Francis & Co., Ltd., rolling shutters; Chubb and Son Lock and Safe Co., Ltd., fireproof doors and strong-room safes; Haywards, Ltd., iron staircases; J. Starkie Gardner & Co., Ltd., and W. T. Allen & Co., Ltd., metalwork and bronze work; J. A. Stevenson, carving, stonework, etc.; J. Whitehead and Son, Ltd., marble; Waygood-Otis, Ltd., lifts; Acme Flooring Co., wood block flooring in basement; J. Freeman and Son, granite works: Samuel Williams and Sons, Ltd., strong-room walls; A. Williams and Son, artesian well, air lifts and plant; G. Jackson and Sons, Ltd., plastering; Morris Singer & Co., bronzework; Turpin's Parquet Floor Joinery and Wood Carving Co., flooring; J. L. Emms, art lead; Kleine Patent Fire-Resisting Flooring Syndicate, Ltd., staircases; J. A. King & Co., Ltd., lantern lights in areas, "Glascrete" on main roof, "Ferro-Glass" for pavement lights in forecourt and rear of buildings, and the floors throughout with the "King" centerless flooring system.

House at Seal, Sevenoaks, Kent (pages 260-261). General contractor, A. W. Wright.

COMPETITION NEWS

February 28.—The Accrington Corporation invite architects of British nationality to submit designs in competition for new Police and Fire Stations which it is proposed to erect on a site in Manchester Road, Accrington. Assessor: Herbert J. Rowse, F.R.I.B.A. Premiums: £250, £150 and £100. Conditions of the competition, together with a plan of the site and all particulars may be obtained from William Henry Warhurst, LL.B., Town Clerk, Town Hall, Accrington. Designs to be submitted before February 28.

April 28.—Messrs. Josiah Wedgwood and Sons, Ltd., invite designs in competition for a Wedgwood Vase, to be made in commemoration of the Bicentenary of the Birth of Josiah Wedgwood, which will be celebrated in 1930. The vase is intended as a centrepiece, and may be either a simple vessel decorated in relief and colour, or an architectural composition embodying ornamental adjuncts in the round. It should not exceed eighteen inches in height, though to this dimension not more than six inches may be added for a pedestal or plinth. Assessors: Philip Connard, R.A., W. Reid Dick, A.R.A., H. S. Goodhart-Rendel, F.R.I.B.A., and Frank H. Wedgwood. Premiums: £100, £50 and £25. Full particulars may be obtained on application to the Secretary, Messrs. Josiah Wedgwood and Sons, Ltd., Etruria, Stoke-on-Trent. Latest date for submission of designs: April 28.

Mr. E. G. R. Miles, a second-year student of the School of Architecture, University of Liverpool, won the first prize in the competition for electric fittings for the "Pavilion of Light," promoted by the General Electric Co., Ltd., and *The Daily Mail*.

A new table lamp which has been designed and made at the works of Messrs. Hailwood and Ackroyd, Ltd., at Morley, near Leeds. The light in this table lamp is contained in the conical base, which is of "Hailglass," being frosted and sandblasted with a design in keeping with the modern style of the lamp. The statuette symbolical of "light" is six inches high and finely modelled. Both figure and base are cast in bronze with a rich dark finish, forming a pleasing contrast to the glass portion and, when not in use as a lamp, the whole forms a striking ornament for the table.

THE ARCHITECTS' DIARY

WEDNESDAY, FEBRUARY 5

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. "Roman Architecture." By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

THE WEEK'S BUILDING NEWS

LONDON AND DISTRICTS

The BARKING Education Committee is to erect an elementary school for about 200 children at Hurstbourne Gardens.

Plans passed by the BARKING U.D.C.: New streets and 1,416 houses, Becontree Estate, for the L.C.C.; extension to factory, Creeksmouth, for Messrs. De Pass Fertilizers, Ltd.

The BATTERSEA B.C. recommends the acquisition of the St. John's College site, where the Housing Committee estimates it will be possible to erect blocks of buildings comprising 270 tenements.

The Surrey Education Committee is to consider the provision of secondary school accommodation for the BEDDINGTON and WALLINGTON districts.

The Surrey Education Committee is acquiring a site at CHEAM for the erection of a central school.

In connection with the new baths at Manor Road, CLAPHAM, the Wandsworth B.C. recommends foundation and preliminary works at a cost of £8,185.

In connection with the proposal of the L.C.C. to erect tenements for persons working in Central London on four sites at CLAPHAM, STREATHAM, PECKHAM and STAMFORD HILL, the Housing Committee has decided to obtain estimates from selected firms.

The Croydon Corporation has approved revised plans for the extension of the THORNTON HEATH baths, at an estimated cost of £30,000.

The CROYDON Corporation has asked the borough engineer to prepare estimates for roads and sewers for the extension of the Waddon Estate, where about 500 houses are to be erected.

The CROYDON Corporation has instructed the borough engineer to prepare plans and estimates for the construction of roads and sewers, and the erection of forty-four houses at Downsview Road.

Plans passed by the CROYDON Corporation: Thirty-five houses and thirty-three garages, Maryland Road, and eleven houses, Springfield Road, for Messrs. J. T. Keen and Sons; store, 24 Dover Road, for Mr. C. H. Ridge; conveniences, Shirley School grounds, Wickham Road, for Mr. H. W. Spinks; shops and showrooms, 78–81 North End, for Messrs. Davis Emanuel and Smart; ninety-two houses, Hambrooke Road, for Messrs. Steel and Howes; alterations and additions, St. Luke's Church, Woodside, for Messrs. Burnand and Pickett, Ltd.; offices and store, Croydon General Hospital, for Messrs. Berney and Son; five houses, Farley Road, for Mr. G. W. Peachey; twenty-one garages and workshop, Fairholme Road, for Mr. A. J. Healey; alterations and additions, The Brewery, Surrey Street, for Messrs. Page and Overton's; fourteen houses, Pilgrims Close, twenty-one houses, Brickfield Road, and twenty houses, Carolina Close, for Mr. R. Pierson; twenty-four houses, High View Close, for Mr. J. Maclaren Ross; thirty-two houses, West Way, for Messrs. M. Brown and Sons (Bournemouth), Ltd.; eight houses, Biggin Hill, for Messrs. Thomas and Sons; garage and workshop, High Street, for Mr. E. Pressey; warehouse, St. James's Road, for Messrs. A. H. Allen & Co.; additions and office, Waddon Mills, for Mr. J. T. R. Wildman; eighty-nine houses, Benet and Norton Gardens and Stanford Road, for Messrs. Truett and Steel; bank, South End, for Mr. T. M. Wilson; factory additions, Brighton Road, for Messrs. Fairweather and Ranger; twenty-five houses, Grove Road, for Mr. A. Duckit; twenty-six houses, Lodge Avenue, for Mr. R. B. Manser; nurses' home, Mayday Road and London Road, for Messrs. Berney and Son; aeroplane hangar, Addington, Surrey, for the Horseley Bridge Engineering Co.

The CROYDON Education Committee is to proceed with the erection of three new schools in Gonville Road, Thornton Road and Mitcham Road, and the enlargement of five schools in Long Lane, Tavistock Grove, Rockmount Road, Ingram Road and Stanford Road.

Messrs. R. J. MacKenzie and Sons, Ltd., are to lay out four streets on the Horn Park estate, ELTHAM.

Plans passed by the HACKNEY B.C.: Pavilion, rear of 69 Stamford Hill, for Mr. J. Abraham; one-story shops, forecourts of 210-2 Mare Street, for Mr. F. T. Ford; two-story workshop, rear of 140 King Edward Road, for Mr. J. Krasner; addition to factory, 7 and 9 Belfast Road, for Messrs. F. Dod & Co.; block of dwellings, Shore Place, for Messrs. Rowley Bros.; factory, Wilton Road, for Messrs. J. Pritchard and Son; rebuilding, "Cock Tavern," 315 Mare Street, for Mr. A. E. Sewel; additional story, factory premises, 47 and 49 Hackney Grove, for Messrs. T. Gates and Sons; laundry, Anton Street, for Mr. C. G. Smith.

On behalf of the United Dairies, Ltd., Mr. F. T. Dear is to erect premises at Earl's Court Road, KENSINGTON.

Messrs. Murrell and Piggott, architects, are to erect buildings on the site of 197–205 Brompton Road, KENSINGTON.

The Surrey Education Committee has acquired a site on the Dysart estate, KINGSTON, for the erection of new buildings for the Tiffin Girls' School.

The Surrey Education Committee is to acquire a site in Poplar Road, MERTON, for the erection of an elementary school.

The L.C.C. has leased sites on the St. Helier estate, MORDEN, for the erection of Roman Catholic and Wesleyan churches.

The Surrey Education Committee has obtained from the L.C.C. sites on the St. Helier estate, MORDEN, for the erection of four elementary schools and a secondary school.

The L.C.C. is to further widen High Street, NOTTING HILL GATE, at a cost of £116,500.

The Kent Education Committee is to erect an elementary school in Days Lane, SIDCUP.

The L.C.C. Theatres Committee has passed plans for the reconstruction of the Elephant and Castle Theatre, SOUTHWARK, and the Pavilion Theatre, WHITECHAPEL.

The SOUTHALL-NORWOOD U.D.C. is to enlarge the open-air swimming bath in Southall Green recreation ground, and erect an indoor bath in Southall Park.

In connection with the construction of the section of the North Circular Road at SOUTHGATE, the Middlesex C.C. has made an agreement with the L.N.E.R. for the construction of bridge works at a cost of £140,000.

The Middlesex C.C. has voted £36,410 for the erection at the SPRINGFIELD Mental Hospital of new accommodation for female nurses, the erection of two houses for medical officers, and a house for the engineer.

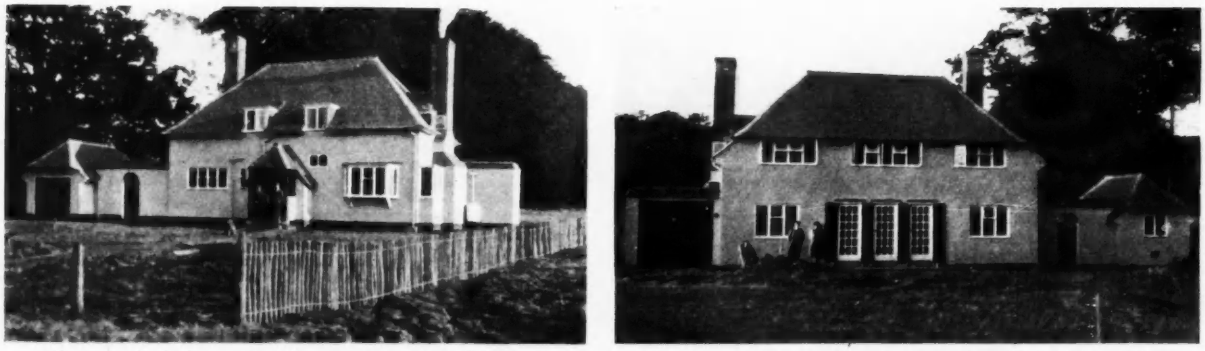
Plans passed by the ST. PANCRAS B.C.: Extension, 54 Tottenham Street; alterations to covered market, Euston Road, by Mabledon Place; building, 41 West Hill, Highgate; building, rear of 16 Albert Road; building, 236–240 Pentonville Road; building, corner of Johnson Street and Stibbington Street; building, 303–305 Euston Road.

Plans passed at STREATHAM: Forty-six houses, Romeyn Road and Leigham Court Road, for Messrs. F. T. Wooding; two houses, de Montford Road, for Mr. S. Loden; house, Abbotswood Road, for Mr. A. Soden.

The Surrey Education Committee has decided to proceed with the erection of a central school at SURBITON.

The WANDSWORTH B.C. has approved the route of the proposed by-pass road between York Road and Putney Bridge Road.

The WANDSWORTH B.C. is to obtain tenders for the erection of a new maternity home on the site acquired for the purpose in Grove Road, Clapham Park, in accordance with plans prepared by Mr. R. J. Thomson, F.R.I.B.A.



SOUTHERN COUNTIES

Plans passed by the BEXHILL Corporation: Two houses, Holmesdale Road, for Mr. J. E. Maynard; addition, Caledonia School, Clavering Walk, for Mr. Marshall Wood; house, Richmond Grove, for Messrs. Callow and Callow; two bungalows, Knebworth Road, for Mr. H. Steward; house, Westville Road (amended plan), for Mr. F. J. Tomline; house, Mayo Lane, for Mr. C. Purser; addition to chauffeur's house, "Baskerville," Bedford Avenue, for the Rt. Hon. Lord Marks; two bungalows, "The Byeway," for Mr. G. E. Matthews; house, De la Warr Road, for Mr. E. Bunce; new church, Cantelupe Road, for Messrs. Davidson, Son and Sherwood, for the First Church of Christ, Scientist; bungalow, Pebsham, for Mr. J. Tanner.

The Surrey Education Committee has approved sketch plans for the erection of a new block of buildings at the GUILDFORD Grammar School, at an estimated cost of £19,260.

Plans passed by the GUILDFORD Corporation: House, Boxgrove Avenue, for Mr. W. R. Stirling; two houses, Grantley Road, for Mr. W. R. Stirling; additions to masonic suite and dance hall, the Lion Hotel, for Best's Brewery Co., Ltd.; forty-four houses, Shepherd's Hill, for the Housing Committee; alterations to shop, North Street, for Messrs. E. and B. Colebrook; new estate, Worplesdon Road, for Mr. J. M. Rutter; alterations and additions, 187 High Street, for Messrs. Hewett and Lee.

Plans passed by the HERNE BAY U.D.C.: Rebuilding baths and café, St. George's Parade, for Mr. R. Messenger; bungalow, Pier Avenue, for Mr. Stewart; two houses, Canterbury Road, for Mr. Line; bungalow, Station Road, for Dr. Gaitskill; house, Fleetwood Avenue, for Mr. H. Pettman; house, Station Road, for Mr. Wilson; two bungalows, Albany Drive, for Mr. H. Pettman; alterations to baths, East Cliff, for Mr. Cottew; twelve houses, Herne Avenue, for Messrs. C. H. H. Kenworthy, Ltd., on behalf of the Herne Bay Estates, Ltd.

House at Seal, Sevenoaks, Kent. Designed by W. J. Durnford. The entrance front (left) and the garden side (right). The walls are 11 inch hollow, and built of Fletton bricks, finished externally and internally with cream distemper; metal casement windows, with leaded lights in wood frames, have been fitted. The roof is covered with hand-made sand-faced tiles. On the extreme left of the main front a garage has been provided.

The Hampshire Education Committee is to erect a school of the standard type, to serve the parish of MILTON, with accommodation for approximately 120 children, and capable of extension to accommodate a further forty children.

The OXFORD Corporation is to obtain premises in the districts of Wolvercote, Headington, Cowley and Iffley for the establishment of library centres.

The OXFORD Education Committee has purchased land for the extension of the East Oxford council school.

The Hampshire Education Committee is to erect a school at TITCHFIELD to accommodate approximately 300 children, junior, mixed, and capable of extension to accommodate approximately a further 320 children.

SOUTH-WESTERN COUNTIES

The WEYMOUTH Education Committee is to erect a central school for 500 boys at a cost of £21,000.

EASTERN COUNTIES

The CHELMSFORD Education Committee has decided upon the erection of a senior school to accommodate 400 girls and 400 boys in Lady Lane; a junior school to accommodate 400 girls and 400 boys on the same site; a school for 640 infants on the Boarded Barns Estate, and a school for 320 infants in the vicinity of Trinity Road.

Plans passed by the CHELMSFORD Corporation: Four houses, Lynmouth Avenue, for Mr. H. R. Tapp; alterations to bank premises, High Street, for Lloyds Bank, Ltd.; new ward block, outpatients' and casualty wing and additions to nurses' home, Chelmsford and Essex Hospital, London Road, for the governors; two houses, Vicarage Road, for Mr. H. R. Tapp; alterations to shops, 28 and 29 High Street, for Messrs. J. G. Bond, Ltd.; public-house, "The Sandford," Sandford Road, for Messrs. Charrington & Co., Ltd.; offices and covered bus park, Duke Street, for the National Omnibus and Transport Co., Ltd.; house and office, Ransford Road, for Mr. J. C. Pryke.

MIDLAND COUNTIES

The Stoke-on-Trent Corporation Baths Committee has instructed the city surveyor to prepare a scheme for the provision of public baths on the site of Pratt's Works, FENTON.

The Stoke-on-Trent Corporation is to purchase four acres of land at Weston Road and twenty-three acres of land at Uttoxeter Road, MEIR, for housing purposes.

The NORTHAMPTON Corporation Housing Committee has decided to develop the St. David's site, and has instructed the borough engineer to prepare a layout which is to provide for the ultimate demolition of the branch library and other buildings fronting Kingsthorpe Road, and the erection of houses thereon.

Plans passed by the NORTHAMPTON Corporation: Five garages, off Osborne Road, for Mrs. W. J. Rushton; two-story foundry, Balfour Road, for Northampton Foundry Co., Ltd.; house, Vicarage Lane, Kingsthorpe; alterations, Campbell Street, for the Cinema De Luxe Syndicate; extensions, Exchange Cinema, The Parade, for Gaumont British Picture Corporation, Ltd.; extension of cinema (amended plan), Grove Road and Alcombe Road, for Mr. Norfolk; warehouse, St. John's Street and Fetter Street, for Wilkinson Leather Co.; four houses, Park Avenue South, for Messrs. A. Glenn and Sons, Ltd.; alterations and additions, "Castle Inn," St. James's Park Road, for Northampton Brewery Co., Ltd.; club, Bailiff Street, for the committee of the Vocal and Instrumental Club; enlargement of concert room, Wood Street, for the trustees of Fanciers' Club; alterations and additions, shop premises, Abington Street, for Mr. F. Salmon; four garages, Kettering Road, for Mr. C. H. Rainbow; building, Clarence Avenue, for Messrs. H. Holloway and Sons.

The STOKE-ON-TRENT Corporation Baths Committee has decided to inspect the Stoke Gasworks with a view to the provision of a site for public baths in the Stoke area.

The Stoke-on-Trent Corporation Housing Committee has purchased a portion of Swan Lane allotments, TRENT VALE, for housing purposes.

The WALSALL Corporation is to purchase premises in Bloxwich Road, Leamore, for the purpose of a branch library and reading room.

NORTHERN COUNTIES

Plans passed by CHORLEY Corporation: Nine houses, Letchworth Drive; eleven houses, Collingwood Road, and two shops, Claremont Avenue, for Messrs. J. W. Lee, Ltd.; sewers, and layout, for Gillibrand Estates, Ltd.; additions, to bleachworks, Common Bank, for Chorley Bleaching Co., Ltd.; reconstruction of bus garage, Eaves Lane, for Ribble Motor Services, Ltd.; stores, Millfield Road, and two bungalows, Blackburn Road, for Messrs. J. W. Lee, Ltd.; house, Brock Road, for Mr. John Withnell, junr.; house, Walgarth Drive, for Mr. E. Pomfret.

The CHORLEY Corporation has asked a subcommittee to continue negotiations for the acquisition of land suitable for the erection of houses for letting, and to report on the matter as soon as possible.

The North Riding Education Committee is to erect a public elementary school in the parish of CLIFTON, for about 400 children.

Plans passed by the SHIPLEY U.D.C.: New streets and lay-out, Moorhead Lane, Moorhead Crescent, Moorhead Grove, Moorhead Avenue and Ashfield Road, for Messrs. Wm. Pitts and Sons; houses and shops, Bingley Road and Ashley Road, for Mrs. A. Foulds; alterations to bank premises, Briggate, for Messrs. Lloyds Bank, Ltd.; bank premises, Otley Road and Dale Street, for Messrs S. Firth & Co., Ltd.

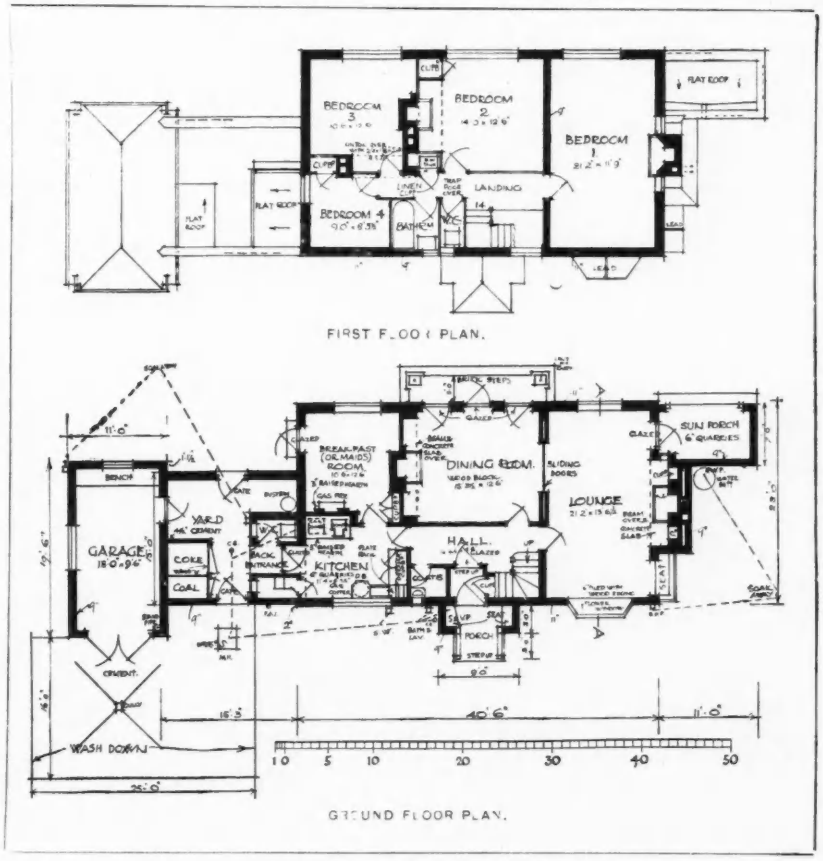
The TYNEMOUTH Corporation has accepted the offer of Mr. Hector Jewels for the purchase of the remainder of the building sites on the west side of Links Road.

Plans passed by the TYNEMOUTH Corporation: Alterations and additions to works, Bell Street, for Messrs. Hays and Gray; officers' quarters, Tynemouth Union Institution, Preston Road, for Mr. W. Stockdale, for Tynemouth Guardians; alterations to business premises, Hudleston Street, Cullercoats, for Mr. W. Stockdale; alterations, Martin's Bank, Bedford Street, for Messrs. Dixon and Bell; alterations, "Northumberland Arms" public-house, Bedford Street, for Messrs. J. Oswald and Son, for Newcastle Breweries, Ltd.

The YORK Corporation Housing Committee is to obtain tenders for the erection of thirty-nine houses of two- and three-bedroom type in Tuke Avenue. The Committee is to erect further two-roomed houses on the Hope Street site when it is cleared.

Plans passed by the YORK Corporation: Joiner's shop, Spen Lane, for Messrs. Fairweather & Co.; joiner's shop, Vine Street Estate, for Messrs. J. Terry and Sons, Ltd.; mission room, Lawrence Street, for the vicar and churchwardens of S. Lawrence's Church; conversion to hotel, Tang Hall, for Messrs. J. J. Hunt, Ltd.; extensions, Mount School, Dalton Terrace, for the Education Committee; alterations, 5 and 7 Lendal, for Messrs. W. Rowntree and Sons; additions, Thomas Street, for Sheppee Motor Co.; new shops and offices, Piccadilly, for Messrs. W. Dove and Sons, Ltd.; additions, White Swan Hotel, Piccadilly, for Mr. C. Walker; lay-out of land, Acomb Road, for Messrs. Backhouse, Ltd.; bungalows, Temple Lane, Copmanthorpe, for Mr. A. Bennett; bungalow, road off Acaster Road, Copmanthorpe, for Mr. W. H. Oates; bungalow, Cinder Lane, Monk Stray, for Mr. A. Varey.

WALES



The MERTHYR Corporation has decided that the attention of the Housing Committee be directed to the large number of hovels within the borough, with a view to the Ministry of Health again being approached for sanction to a loan for the erection of houses.

SCOTLAND

The GLASGOW Corporation Housing Committee has approved plans for the layout of the cleared area at Calton.

The GLASGOW Corporation Streets Committee recommends schemes for the reconstruction of ten bridges and aqueducts across the Forth and Clyde Canal.

The GLASGOW Corporation Street Committee has prepared the following schemes: Reconstruction of the King's Bridge, £20,600; reconstruction of the bridge carrying Craigton Road over the L.M.S. railway, £20,600; reconstruction of the bridge carrying main street, Pollokshaws, over the River Cart, £15,000; bridge over the River Cart at Crookston and diversion of road, £25,000; reconstruction of bridge carrying Barrhead Road over the Levern Water, £15,000; and reconstruction of bridge carrying Barrhead Road over the Brock Burn, £15,000.

House at Seal, Sevenoaks, Kent. Designed by W. J. Durnford. Ground- and first-floor plans. The ground floor is covered with stained redwood blocks, with the exception of the kitchen, coats and entrance lobbies, which are paved with red quarry tiles. The whole of the door and window furniture is in bronze. Dutch tiles have been used for the majority of the fireplaces.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

	£	s.	d.
Broken brick or stone, 2 in., per yd.	20	11	6

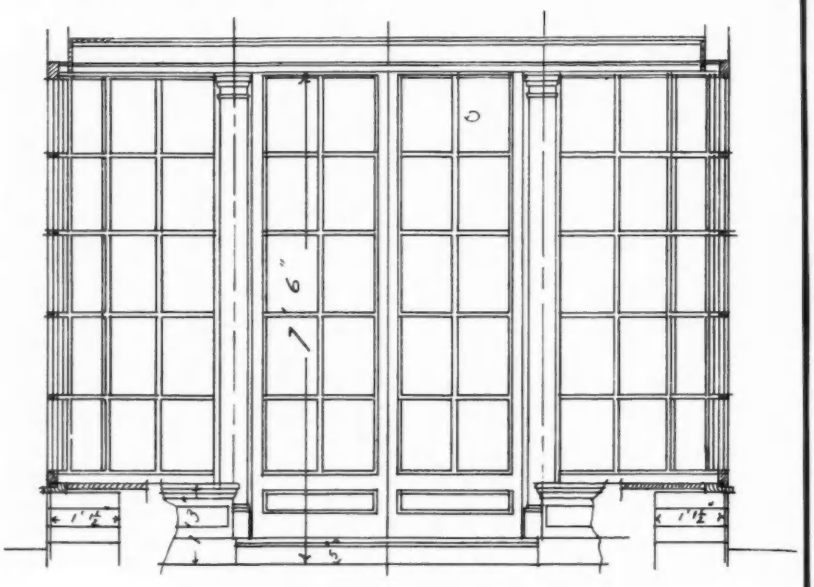
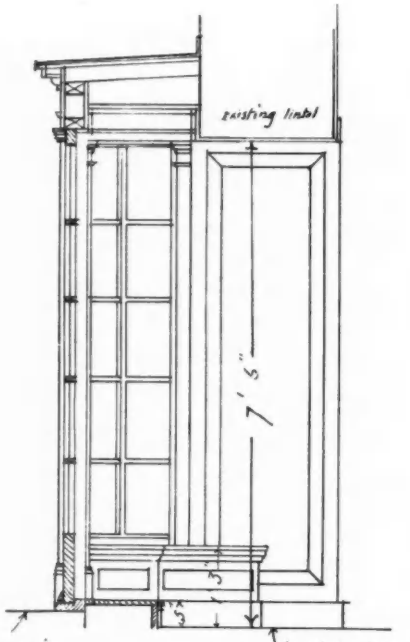
NEW BAY WINDOW TO DINING-ROOM: LOO WATER, HEACHAM, NORFOLK

BY



LOUIS DE SOISSONS and G. GREY WORNUM

THE subject of this photograph and the architects' working drawings reproduced on the following page is an addition, one of many made, from time to time, to what was at some remote period a farm house, built of the local Carr stone. The photograph shows, in addition to the new dining-room bay, a portion of the window lighting the kitchen adjoining.



The bay to the dining-room itself, is constructed of wood, with a lead top, and opens on to a small formal stone-paved garden, with the water garden seen in the right foreground. Here, too, though not shown, a feature has been made of an old lead pump, found lying derelict, to which a modern iron stand has been added.

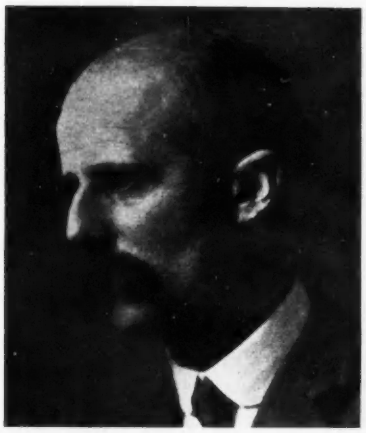
THE EXPERT WITNESS

"*A madman and a fool are no great witnesses.*"
—GERMAN PROVERB

THE expert witness is commonly held in little esteem. Small dignity and scant respect are accorded him; he is the target of easy gibes, and the tormented victim of the agility of barristers and of slighting disparagement of judges.

The reason for this is not far to seek. A man who calls himself an expert, who poses as an authority and who affects infallibility, instantly provokes in the wholesome human breast a violent impulse to challenge his pretensions and deny his claims. The term "expert witness" is, in itself, condemnatory, for simple honesty and not alert dexterity is the part of a witness; and we are reminded that this particular kind of witness is handsomely fee'd for holding the views he professes, and that if he held other views not he, but another, would be earning three guineas an hour for staring out of windows or otherwise waiting attendance on the law. The expert witness's existence depends on ability to beat off attack, and maintain, against all comers, the particular point which constitutes his side's "case," but directly he lends himself to any such purpose he becomes, not an expert witness, but an expert advocate, and this no judge will tolerate. An expert witness commonly elucidates technical matters of which a judge can have no knowledge, and any suspicion that the expert is using this advantage to direct the judge rightly awakens strong resentment. Thus the expert witness is regarded jealously by the Bench, and is subject to the most drastic disembowelling devices known to the Bar—and the Bar, be it said, knows all there are.

The position of the expert witness in building disputes is particularly ignominious, for architects and surveyors are not called to testify to scientific or even technical points; they are usually required, as persons of special experience and trained judgment, to support a particular opinion, and to establish the fact, or otherwise, of trade or professional custom. In all such cases there must obviously be conflicts of opinion, even among men best qualified to determine the question in debate; but these unavoidable disparities are aggravated to the point of hopeless confusion by the fact that there is not one standard of building practice, but many, and that the customs affiliated to them vary in a fantastic degree. Constructional devices, methods of craftsmen, qualities of material perfectly appropriate to a soundly-built Tiddlerton shop, would be entirely inadmissible in Regent Street.



In the fictitious arbitration cause, *Jago* v. *Swillerton and Toomer*, which is now drawing to a close in our pages, an amusing picture is given of three kinds of expert witness. We first see a witness to common knowledge of a special wood, who is a self-acclaimed architect, nourished, as Licentiate, in the bosom of the Institute. This man is an ignorant charlatan whom cross-examination instantly overwhelms with ridicule and contempt. The next expert is an ordinary, competent, workaday provincial building surveyor, who testifies to the ascertained facts of the collapsed building and demonstrates the cause of the collapse by diagrams and calculations, showing the weights, stresses, and moments of stability and overturning involved, according to recognized textbook methods. He contradicts himself under cross-examination, nor in this is he merely the victim of the verbal ingenuities of Counsel. Last, there appears on the scene a figure which the author probably regards as a type of what an expert witness should be. Randegger—for so he is named—says to the Arbitrator: "I object to no questions that are honestly directed to testing my evidence. I welcome cross-examination. I am here expressly to elucidate technical points—so far as I am able." Randegger is also depicted as perfectly capable of defending himself under cross-examination, and, in fact, beats Counsel at his own game. That is the right attitude for an expert witness, and if all adopted it the expert's claims would be widely respected instead of, as now, acknowledged by loud sniffs.

AT THE SIGN OF THE HOWITZER:
ARTILLERY HOUSE, WESTMINSTER

A study of the new block of office quarters, recently erected in Artillery Row, a quiet backwater off Victoria Street, from the designs of the architects, Sir Aston Webb and Son, and Harvey A. Dawson. Further photographs, drawings, and a description, appear on pages 271-4.

NEWS & TOPICS

D. S. MacColl, whose retirement from vice-chairmanship of the National Arts-Collections' Fund draws the accompanying tribute from Sir Reginald Blomfield.

D. S. MACCOLL'S RETIREMENT

THE announcement that D. S. MacColl has retired from the executive and vice-chairmanship of the National Art-Collections' Fund will be received with real regret by all who care for works of art independently of fashion and market values. There is a constant tendency for the control of these associations to slip into the hands of connoisseurs and dealers, and the loss of the services of an artist of the accomplishment and discriminating knowledge of MacColl is a serious matter. Sir Reginald Blomfield sends me the following notes, which will be of particular interest to my readers :—

★

I have known him, as it seems, from time immemorial—anyhow, since I made his acquaintance fresh from winning the Newdigate at Oxford, at the outset of what has proved a brilliant career as a scholar, a writer and an artist. We next came together in the early days of THE ARCHITECTURAL REVIEW. The REVIEW began in a curious way. MacColl was the first editor, but an advisory committee of some dozen architects was formed, and the proprietors of the REVIEW used to give us an excellent lunch at the Savoy, at which we discussed buildings to be illustrated and current architecture. About this time the New English Art Club came into existence, with Steer, Charles Furse and Sickert as protagonists, and other clever young men whose enthusiasm swept away their critical judgment in its rush, but also did much to wake up English art from the comatose condition into which it had lapsed in the 'eighties and 'nineties. MacColl, with his admirable gift of style, was their spokesman and champion, and he attacked the walls of Jericho—in other words, the Royal Academy—with characteristic zest. Lord Curzon organized his Commission of Enquiry, and held a sort of inquest on the Royal Academy, chiefly distinguished by its gross partiality as against that body.

★

About fifteen years ago I made a careful critical analysis of the report of that Commission, and came to the conclusion that, though reforms were necessary, as they are bound to be from time to time in any academic body, the charges made against it were exaggerated and the jury was packed. Artists, as a rule, are not very articulate, and make bad witnesses. It is not their job. And it really required a person more open-minded and sympathetic towards art than the chairman of that Commission to get at the real facts. Moreover, the Academy had against it a redoubtable adversary in the person of D. S. MacColl, though even then he was not wholly bigoted. I can recollect a criticism of his of a book violently attacking the Academy, in which he remarked that even Academicians don't lurk behind the umbrella stand in order to slay their enemies, and since then he has admitted that academies properly directed have their use and even their necessity.

★

Like all good fighting men, he has mellowed with age. Perhaps meditations among the beautiful things of that Wallace Collection, which he directed with such admirable insight, may have widened and strengthened a keen critical sense, and convinced him that all wisdom does not reside either with this or with any other generation. Quite recently MacColl retired from the Royal Fine Arts Commission for reasons of health. Here too, we, his colleagues, greatly regretted our loss. The power of speech and of writing, the ability to give expression to critical views is, unfortunately, seldom found among artists, with the result of that unfortunate cleavage which removes the control of the arts from those who practise them into the hands of those who talk of them. I think I am right in saying that on the Board of the National Gallery there is not a single practising artist, an anomaly impossible in any country but England. It is good news that MacColl intends to fight for the preservation of that countryside that we love, but I hope he will not deprive us of his invaluable help in all those matters of art which very seriously affect the amenities of our civilization.

THE FORM OF RICHMOND BRIDGE

It is good to hear that Maxwell Ayrton has put forward a final emendation to his design for the bridge over the Thames at Richmond. The last design preserved some relics of the four massive towers that were prominent in the first design. This process of elimination, which leaves the bridge with no towers at all, is a difficult one, and it is matter for congratulation that Mr. Ayrton takes his work seriously enough to revise his ideas more times than once. After all, his contribution to the amenities of a very beautiful portion of the Thames will be both considerable and lasting.

A DUTCH MANSION IN TRAFALGAR SQUARE ?

It is announced in the press that Sir Herbert Baker is to design a building in the style of an old Dutch mansion for the Union of South Africa, and on a portion of the triangular block of Regency stucco buildings which are shortly to be demolished, alas ! I find the prospect of an old Dutch mansion in Trafalgar Square very alarming, and can entirely appreciate the feelings and admire the good taste of those London authorities who may insist, according to Sir Herbert Baker, that he uses the same kind of stone as that in the adjacent buildings. I hope that they will not only insist that this new building shall be built in the same materials as the other fine buildings already there—the National Gallery and Canada House—but that they will further point out that in the capital city the publicity value of a Dutch colonial six-story building is to be weighed against other more truly civic virtues. We are a wide-flung Empire, and if there is to be a building in the local vernacular of each and every unit of it the capital city is like to become an overdone Wembley. I hope that South Africa and Sir Herbert Baker will think again.

MASS-PRODUCED ARCHITECTURE FOR U.S.S.R.

Men of the two Unions—of America and of Russia—have given each other the "once-over," as I believe it runs, in the language of the former; with the result that Albert Kahn, Inc., of Detroit, become consulting architects to the U.S.S.R. This is astonishing news for more reasons than one. In the first place, I should have thought it dead against Soviet principles to make any appointment of the kind. Again, the work contemplated is so colossal in extent—the programme for this year alone runs into £380,000,000—as to tax the capacity for design of any ten super-men. Lastly, I permit myself to wonder how the money will be found to pay for it all. Possibly the Soviet State Note Printing Works—however!

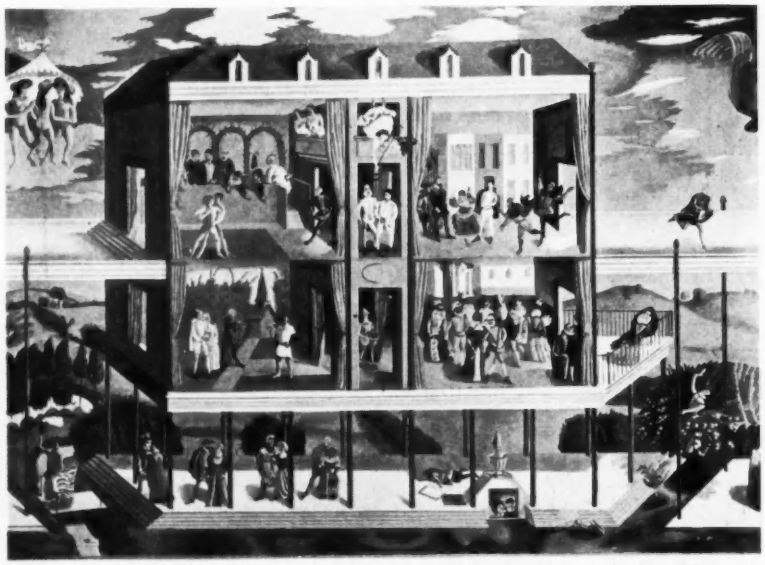
★

What's in the contract is, of course, the concern of Moritz Kahn, who negotiated the stupendous deal on behalf of the firm. Indeed, it is clear enough that he regards the whole affair, designing included, as a bit of "big business." "We are given," so runs an interview, "an opportunity to produce in the building industry the same high efficiency that has made American motor-car manufacture the marvel of the world." We are invited to visualize a single member of the firm—for their interests at home must not be interfered with—proceeding to Moscow with a staff of twenty-five specialist assistants, there to help organize a designing bureau of 4,500 polyglot architects and engineers (but "selected principally from Soviet Russia"). In two words, this spells mass-produced architecture.

★

By no other means would it be possible to cope, in five years, with four motor-car factories, and the like; nine plants for farm machinery; six asbestos, corundum and graphite factories; two locomotive works; 15 tool, typewriter and cash register works; 24 cement factories; 126 saw mills; 13 clothing factories; 35 spinning mills; 15 woollen mills; 106 woodworking plants; 27 glass factories; 113 shoe factories; 15 paper mills; 56 food product works. Certainly, Albert Kahn will have to be very much "Inc."

CIRCULAR HALL FOR CHURCH HOUSE



The new assembly hall to be built in a courtyard of Church House, Westminster, is to be a circular building. It is considered by churchmen that the circular chamber is not only practical, but typifies the unity of the Church; clergy and laity being assembled in one round-table conference. It is actually in strict accord with Church tradition, chapter houses being as often round as not.

HOMAGE TO MR. BASIL OLIVER

Mr. Basil Oliver was present last week at a gathering of brewers, architects and University dons which came together to pay homage to the "Rose and Crown," the public-house which Mr. Oliver designed and which has been honoured with the R.I.B.A. bronze medal for the best building in Essex, Cambridge and Hertfordshire in 1928. The building was fully illustrated in THE ARCHITECTS' JOURNAL for November 27 last. The "Rose and Crown" well deserves the replica of the medal which has been fixed to its wall, and that a building small in size and of honest, unpretentious appearance should be so honoured will prove the right sort of incentive towards good design in smaller street architecture.

MURAL ART AT MORLEY COLLEGE

Sir Joseph Duveen has again proved himself a most generous and wise patron of the arts. It will be remembered that he provided money and space for a young man to paint mural decorations for the refreshment room of the Tate Gallery, and now he has repeated the experiment at Morley College, London, where three young painters have decorated the refreshment room and the hall with an extraordinarily interesting and lively series of mural paintings. Mr. Edward Bawden and Mr. Eric Ravilious have between them completed the decorations for the refreshment room. These are of mixed subjects: interpretations of Shakespeare's plays, boarding-house satire, the sad muses, and many reflections upon the modern scene. When one thinks what impetus is given to the art of mural decoration by the unusual perspicuity and generosity of Sir Joseph Duveen, one may look forward to the day when architect and painter may combine to find the right spaces for decoration beforehand.

Mural decoration at Morley College. Out of many Theatres, this one is shared between "As You Like It" and "Romeo and Juliet," scenes from which will be recognized. In the centre division Britannia is descending to crown Shakespeare and Ben Jonson

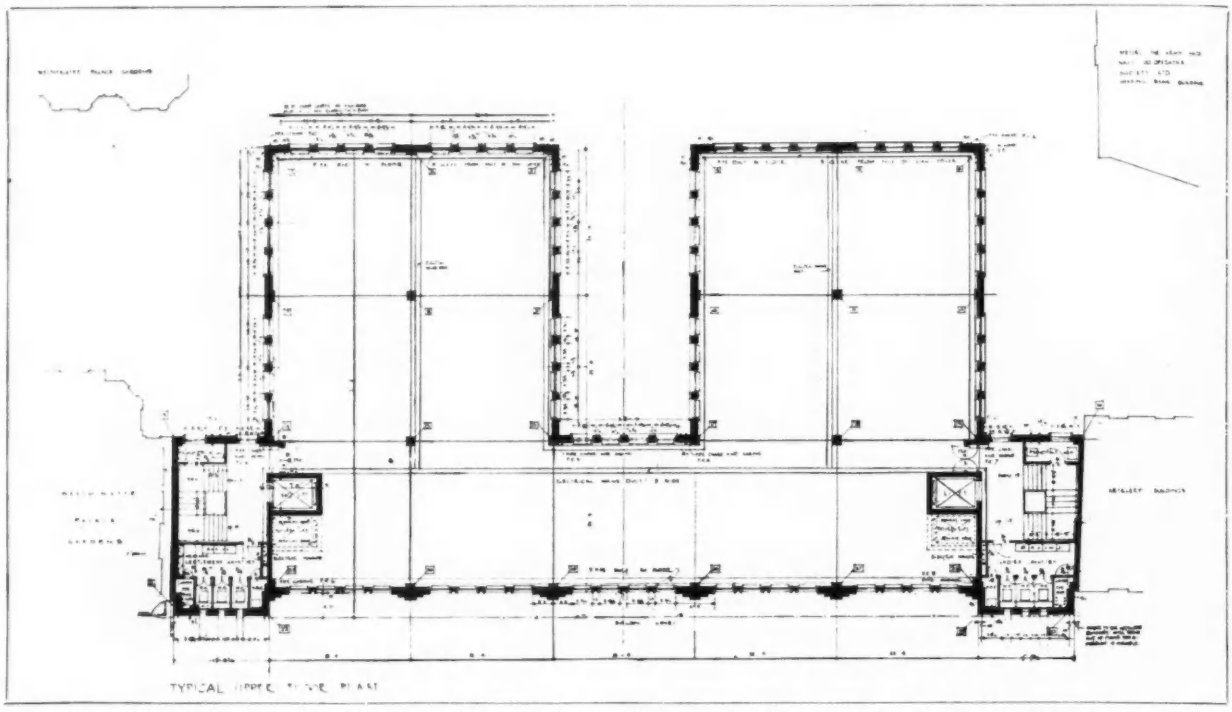
SUBWAY FIRE RISKS

The subway explosions which have done so much damage in London during the last two years are half forgotten, though the causes remain. The City Coroner's report raises the question of fire risks again. It is recommended that all subways should be permanently wired for lighting under the I.E.E. Rules, eliminating all portable lighting; that lead should be used in preference to asbestos for the covering of cables; and that the inadvisability of associating gas and electric cables in the same subway should be considered. There will probably be a Government inquiry into the whole series of problems raised by the dangers which lie so close under our feet and wheels.

ASTRAGAL

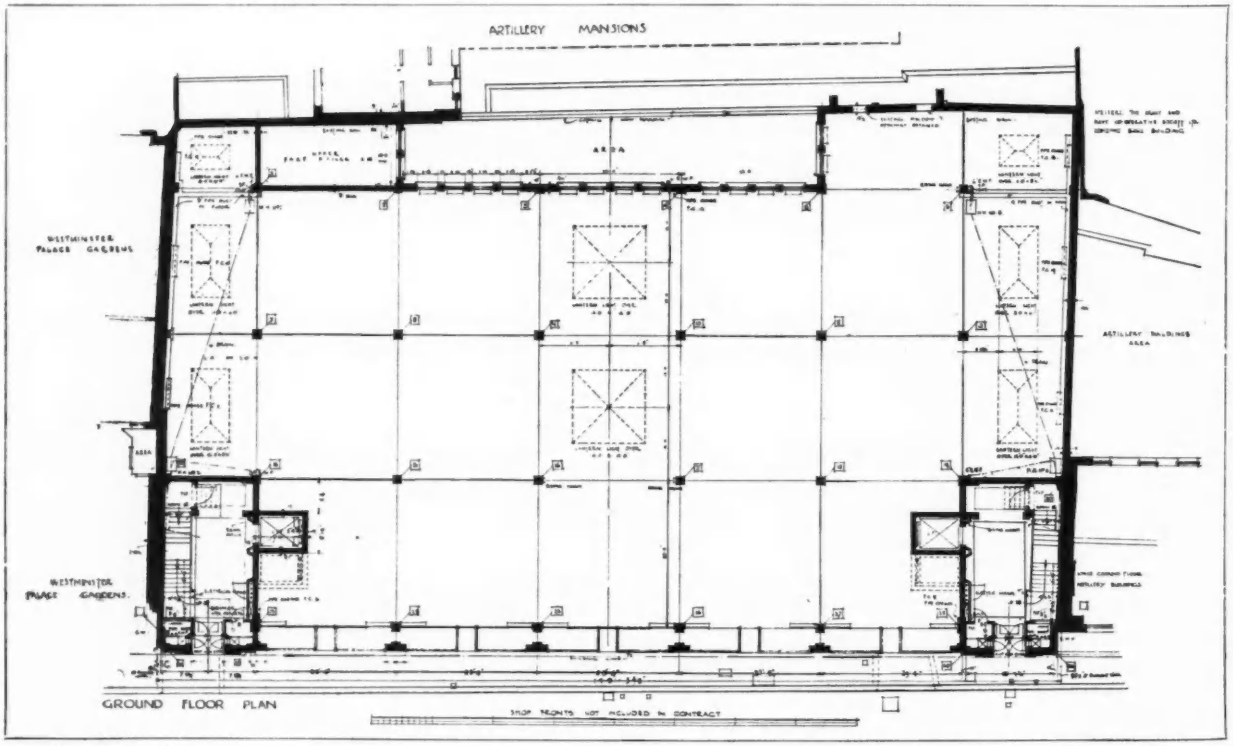
ARTILLERY HOUSE: AN OFFICE BUILDING IN WESTMINSTER

DESIGNED BY SIR ASTON WEBB AND SON, AND HARVEY A. DAWSON



A general view of the front of the building to Artillery Row. Shop-fronts on the ground floor will be the concern of individual tenants. The office accommodation on the remaining floors is of a most up-to-date character. It is interesting to note that the adjoining buildings on either side were found to be slightly out of plumb.

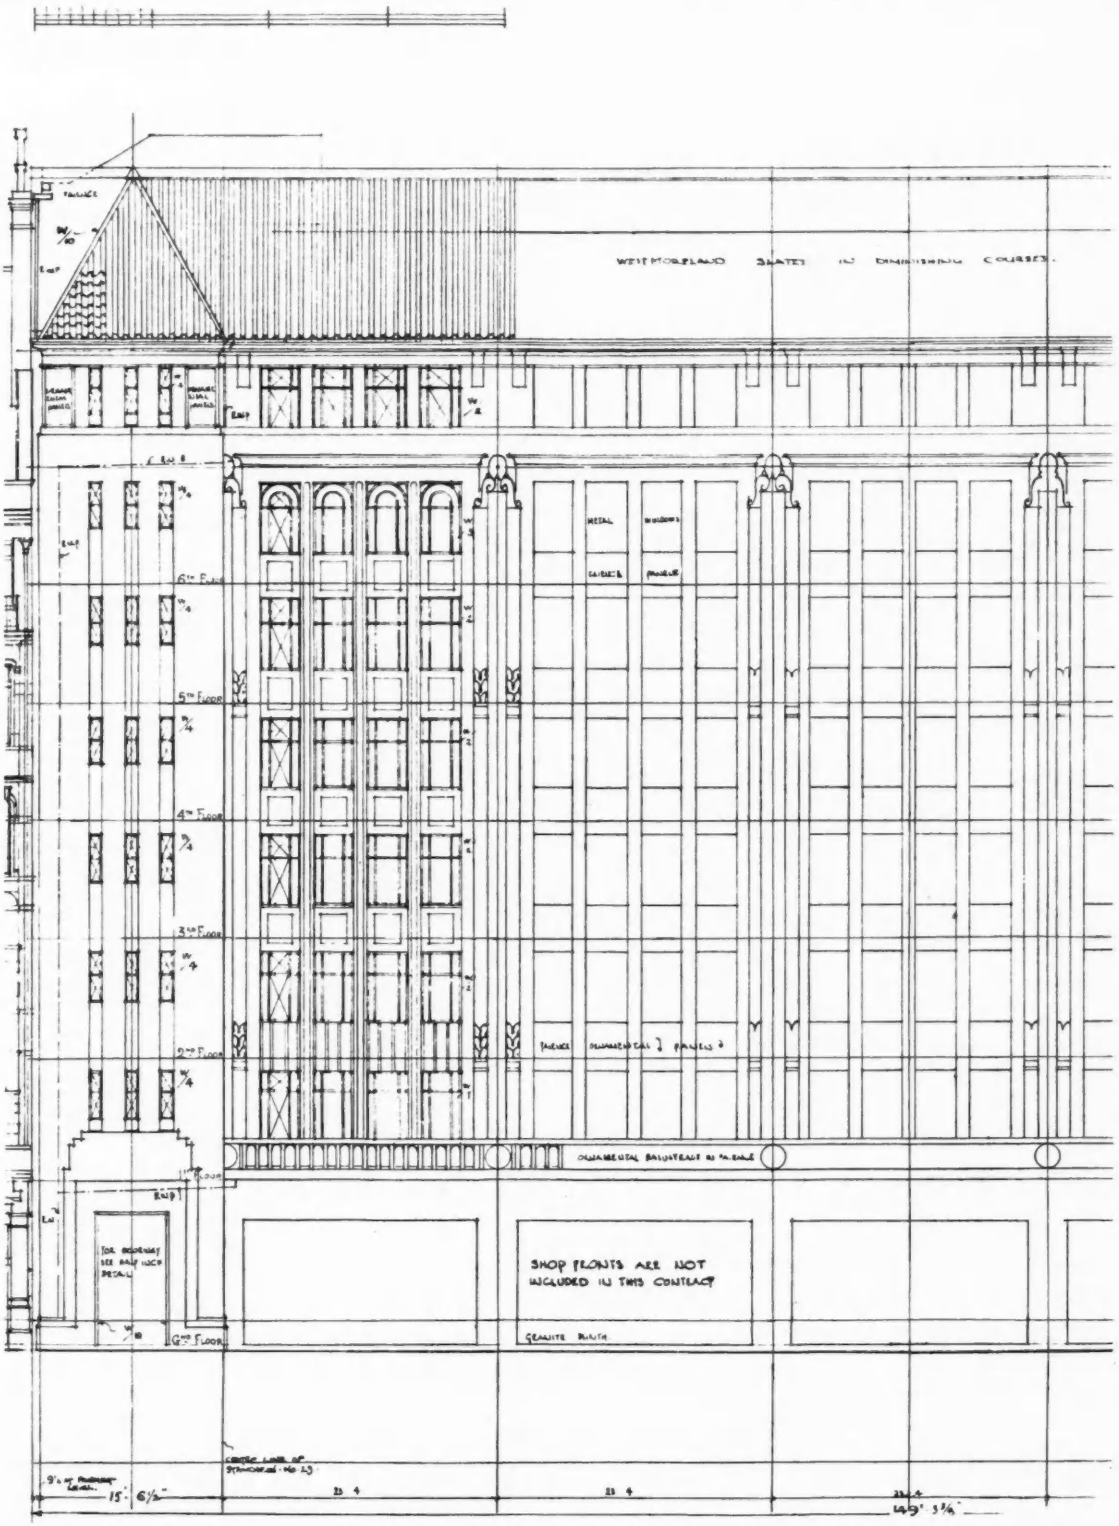
ARTILLERY HOUSE, the subject of these notes, and the accompanying photographs and architects' drawings, represents an enterprise, speculative, in the sense that it was erected to stimulate a potential demand for office accommodation, in a quiet vicinity otherwise given over to residential premises, rather than to meet existent and specific requirements. It occupies a rectangular site, vacant for some years, in Artillery Row, facing the eastern side of the Army and Navy Stores, just off Victoria Street.



This is a region not hitherto rich in architectural character, and the aim has been to supply at once a challenge to the eye of the passer-by and working quarters attractive to the inhabitant, when gauged by the most modern standards of comfort and convenience. Straightforward requirements; yet the manner in which they have been met discloses that mingling of taste and ingenuity which is the very stuff of workaday architecture.

The eye is undoubtedly taken by the perfectly symmetrical façade, a great Gothic-seeming window, stretching in five bays, divided by buttresses cunningly sheered and tapered, between two tower-like elements, whose narrow, deep, vertical reveals convey a suggestion of lancet fenestration. Buff faience, sometimes deeply moulded, clothes the steel framework on this front, but elsewhere brick forms the outer skin. The steeply pitched roof is covered with rough Westmorland slates. In the two towers, as their very form—although they do not overtop the main roof—and the two arched entrances at their bases suggest, are housed the means of communication from floor to floor—a staircase, a shaft for two lifts, a pipe-duct, an electric cable duct, and lavatories. On the ground floor is a series of shop spaces with, over the shop-windows themselves and concealed by a balustrade of some depth, upper lights that can be opened for ventilation. Above mount seven identical floors, while an eighth, with a range of rooms running the length of the street frontage, is contained and concealed within the roof, being lit from the back. Below ground there is a commodious basement.

The building's outward promise of light rooms is more than redeemed. A glance at the plans will show how this has been brought about. On the ground floor only a small area has been reserved to supply light to the basement, but, above first-floor level, not only does the planning assume a



The architects' drawing of a typical upper floor, taken at second-floor level. This shows how the planning is built up from a rectangular unit. There are five such in the range to the street; the limbs are, each, two wide and two deep; the area is one wide and two deep. Vertical communications are concentrated in two tower-like structures at the lateral extremities.

Artillery House, S.W.] [*By Sir Aston Webb and Son, and Harvey A. Dawson.*

Comparison of this ground-floor plan with that reproduced above will make clear the setting back of the upper floors which allows of various ground-floor sections being top-lit by the lanterns indicated. Here only a small area is left at the back for lighting the basement, the whole of the remainder of the site space being utilized for shop accommodation.

Artillery House, S.W.] [*By Sir Aston Webb and Son, and Harvey A. Dawson.*

A portion of the architects' drawing of the street elevation, a photograph of which is reproduced on page 268. There are a basement; a ground floor, designed for shops; seven upper floors, identical in dimensions; and an eighth, in the steeply-pitched roof, this range of rooms being lit from the back. The building is intended to be let off in office accommodation.

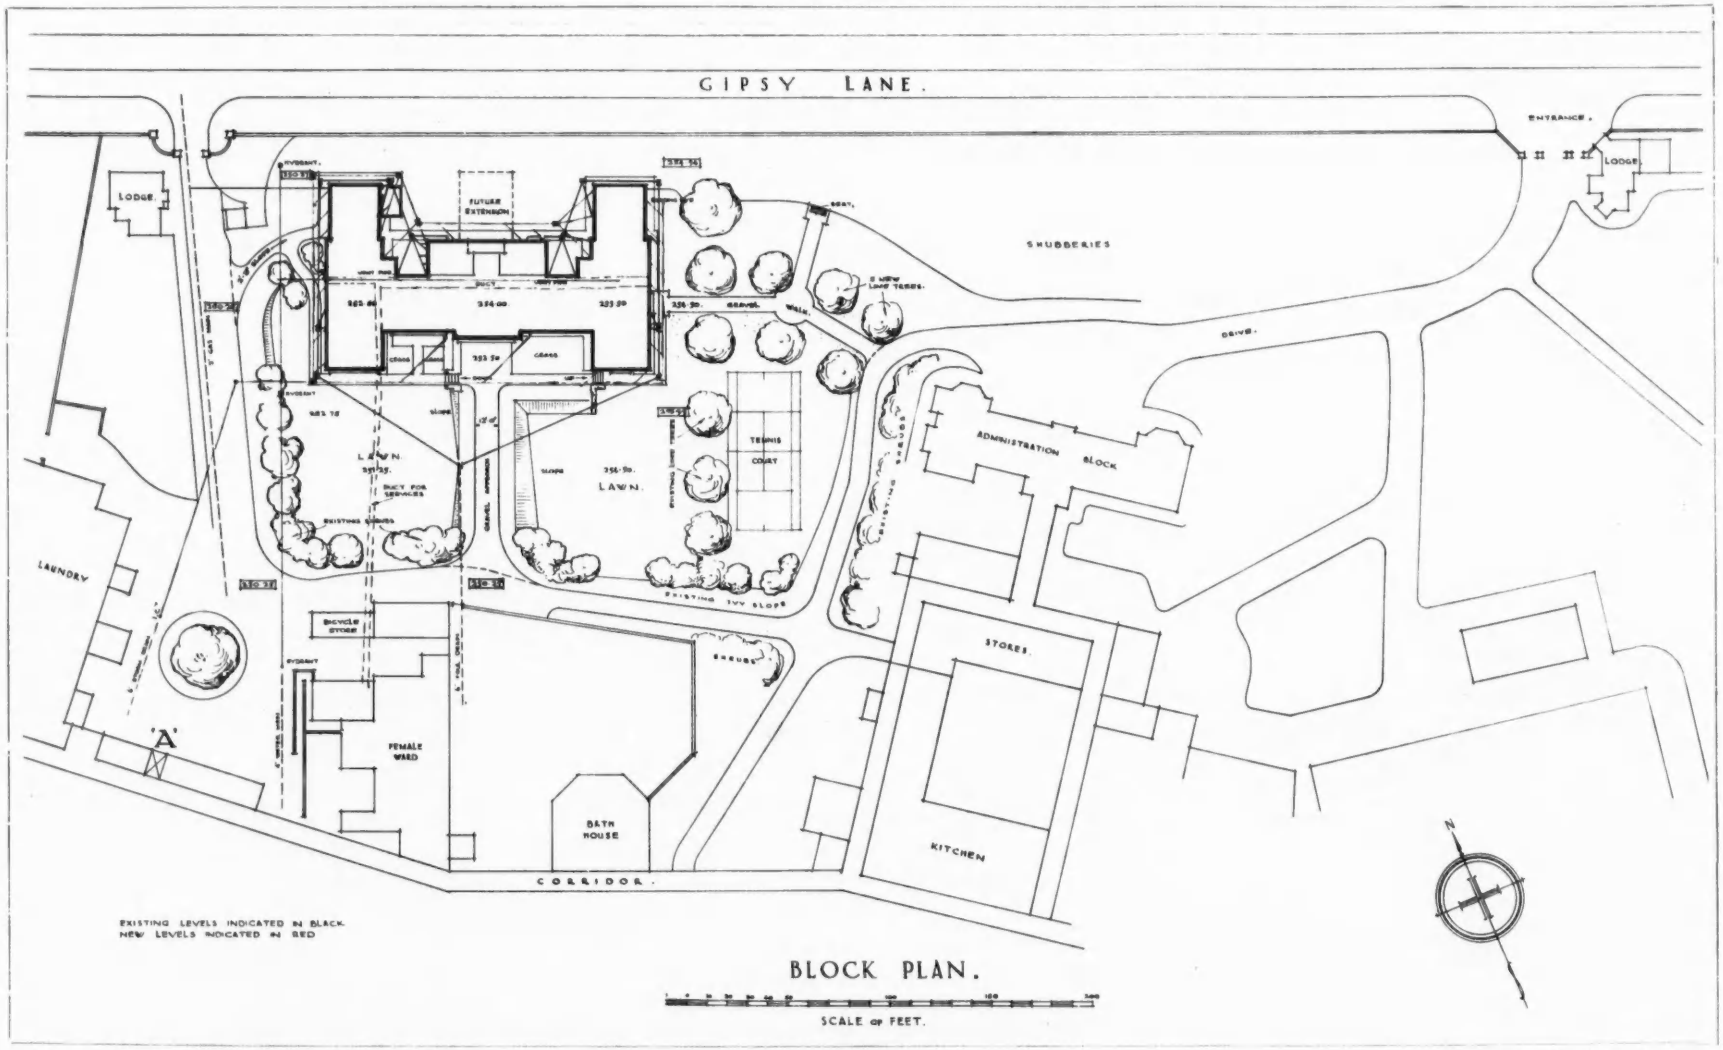
Artillery House, S.W.] [*By Sir Aston Webb and Son, and Harvey A. Dawson.*
A near view of one of the entrances, showing details of the faience modelling, including the "artillery" emblem above the arch.

U-shape with a central area separating the two limbs, but by means of setting back on all but the street front substantial areas have been created around the whole block. The result is that every floor can be lit and ventilated from all sides. The lights have, in fact, been carried right up to ceiling level; and standard metal casements are employed throughout. The roofs of the limbs are flat, and the rooms on their top floors have augmented height, and, in one case, a dome—obviously a prospective board-room. Moreover, where the central and side areas occur, lanterns light the ground floor rooms.

If quiet and light are two essentials of modern office accommodation, heating runs it close. This function is discharged by a water system served by vast insulated storage cylinders in the basement, electrically heated during "off peak" hours, in accordance with the most modern practice.

LEICESTER COMPETITION RESULT

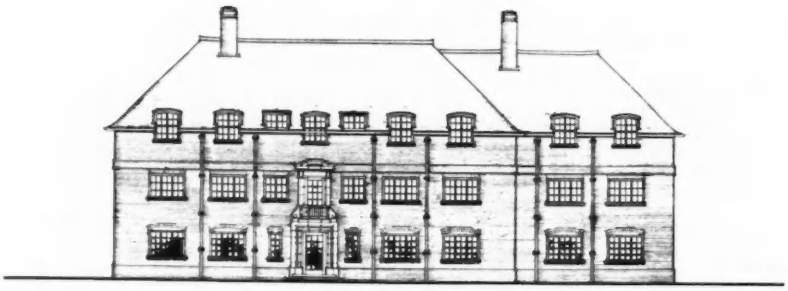
THE Leicester Corporation Mental Hospital Committee invited members of the Leicester and Leicestershire Society of Architects to submit designs for a nurses' home at the mental hospital. Premiums of £100, £75, and £50 were offered. Fourteen sets of designs were received, from which the assessor, Mr. J. Kirkland, F.R.I.B.A., has made the following awards :



First, T. Trevor Sawday.
Second, Stockdale, Harrison and Sons.
Third, F. H. Jones.

The scheme provides for the erection of a three-story building on a site adjacent to the entrance of the old building on the Gipsy Lane boundary of the estate. Accommodation was asked for four officers and seventy nurses, with a separate bedroom for each; a dining-room, sitting-rooms, reading-room, recreation room, etc.

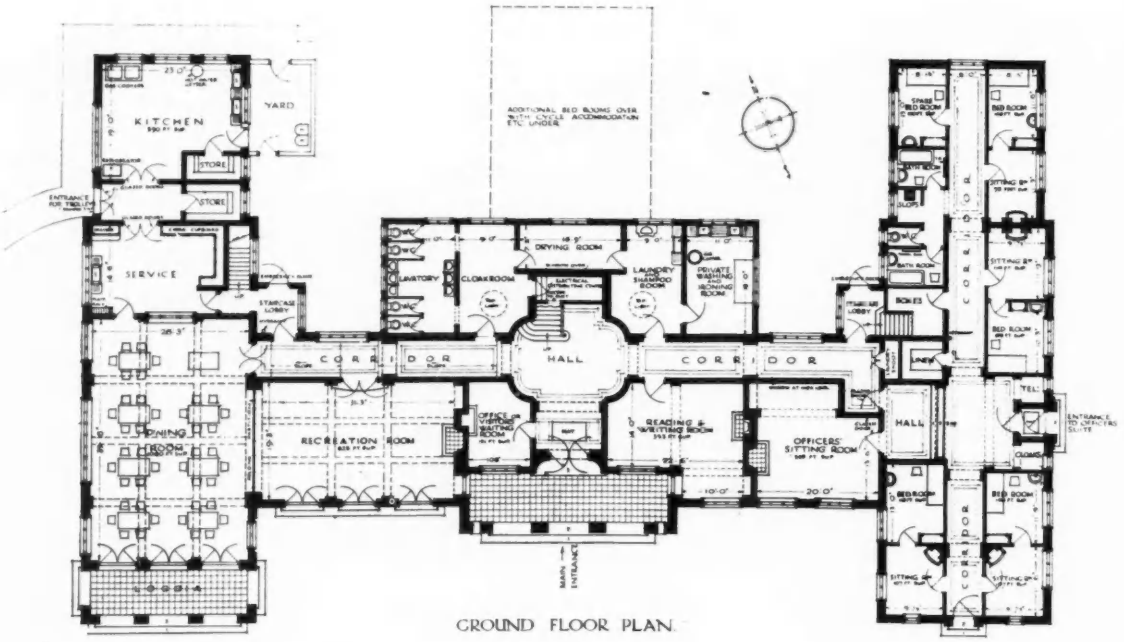
The author of the winning design has carefully planned the building to comply with the aspect and natural gradients of the site. The gradients have enabled him to restrict the ground-floor bedrooms and sitting-rooms of the officers' section to an economical height, and at the same time to increase the height of the larger rooms in proportion to their size, but still to maintain the first floor at one level.



Although one additional staircase to the main central staircase might be considered sufficient for the number of nurses accommodated, two further emergency staircases have been provided, thus giving quick exit from either wing. Night nurses' bedrooms are arranged on the second floor of the eastern wing and are self-contained.

The cost of the scheme is estimated at £22,618.

Leicester Nurses' Home Competition : Winning Design.] [*By T. Trevor Sawday.*



The proposed nurses' home is shown on the north-west corner of the block plan, adjacent to Gipsy Lane. The officers are given a separate entrance, on the south-east front, to their bed and sitting rooms, in convenient proximity to the main north-east lodge entrance and administration block. The entrance for the nurses is in the centre of the south-west elevation. It is approached by a wide sloping walk leading off the existing drive, and bounded on either side by the lawns. It is assumed that meals will be brought along the corridor from the main kitchen to the point marked "A" on the block plan, and thence to the kitchen or service room (see plan on page 276) by way of the drive leading to the north-west lodge gates. The use of this entrance by the nurses would of course give readier access to their home, but it is understood that at present the main lodge entrance only is to be used by them.

Leicester Nurses' Home Competition: Winning Design.] [*By T. Trevor Sawday.*

An extension to provide additional bedrooms, etc., is planned to open off the main central staircase on the first and second floors. This would provide space on the ground floor (see facing page) for cycles and other storage, and could be erected without any disturbance to the Home. Kitchen and larders could be extended both to the north and east.

Birmingham Hospitals Centre Competition: The Winning Design.] [*By Lanchester and Lodge.*

Figure nine. The general layout of the nurses' home block and the administration block, showing the relative positions of all the sections, the interworking of which is discussed, in the article continued from our last issue on the facing page, from the point of view of circulatory systems. The winning competitors, recognizing the prime importance of easy circulation, have indicated the various flows by arrows on several of their drawings. This particular figure illustrates the first circulation—that which brings into the hospital all persons and materials concerned in its functions. A second car park is provided to the east, corresponding with the westerly one here named. The kitchen (in the basement) is situated between the administration block and the chapel.

BIRMINGHAM HOSPITALS CENTRE, EDGBASTON

Further Deductions from the Winning Designs

BY E. MAXWELL FRY

In this conclusion of the article begun last week, the intricate circulatory systems provided in the winning architects' scheme are discussed in detail.

THE winning design is spread over a large area; indeed, it may be accounted a defect that the larger units of the hospital are strung out along a central corridor 900 ft. long. This entails a great deal of unnecessary walking on the part of the staff, and it means that connected departments are too far-flung for economical running. These are the defects of an open treatment, and they are accentuated rather than otherwise by the vertical treatment of the hospital blocks with which they are combined.

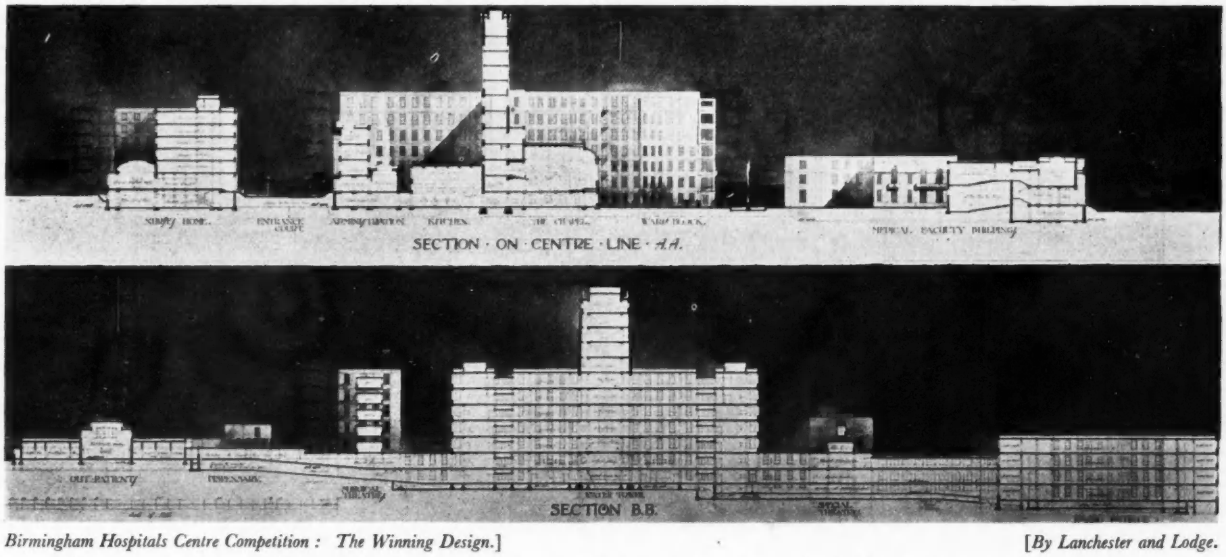
In other respects the layout adopted by the winners, who have arrived at many of the good points evolved by other competitors, is fused with a more imaginative reading of the practical conditions of the competition and of the possibilities of the site.

Messrs. Lanchester and Lodge have quite definitely stressed the importance of circulation by indicating with arrows the various movements and flows that dictate the detailed planning. It may be possible to arrive at a better idea of how the plan will work by examining these as a series of tabulated circulations than by merely scattering haphazard remarks.

FIRST CIRCULATION

Turning to the block plan which appeared in last week's article (figure two), one sees very clearly that, once the attempt to make a fine central approach is abandoned, everything must be approached from the outer circumference. This undoubtedly adds yards to every travel, but, as we have seen, it creates the quiet central gardens, and at once establishes a certain spiritual quality in the design, which, since the building is to last a long time, is well worth having.

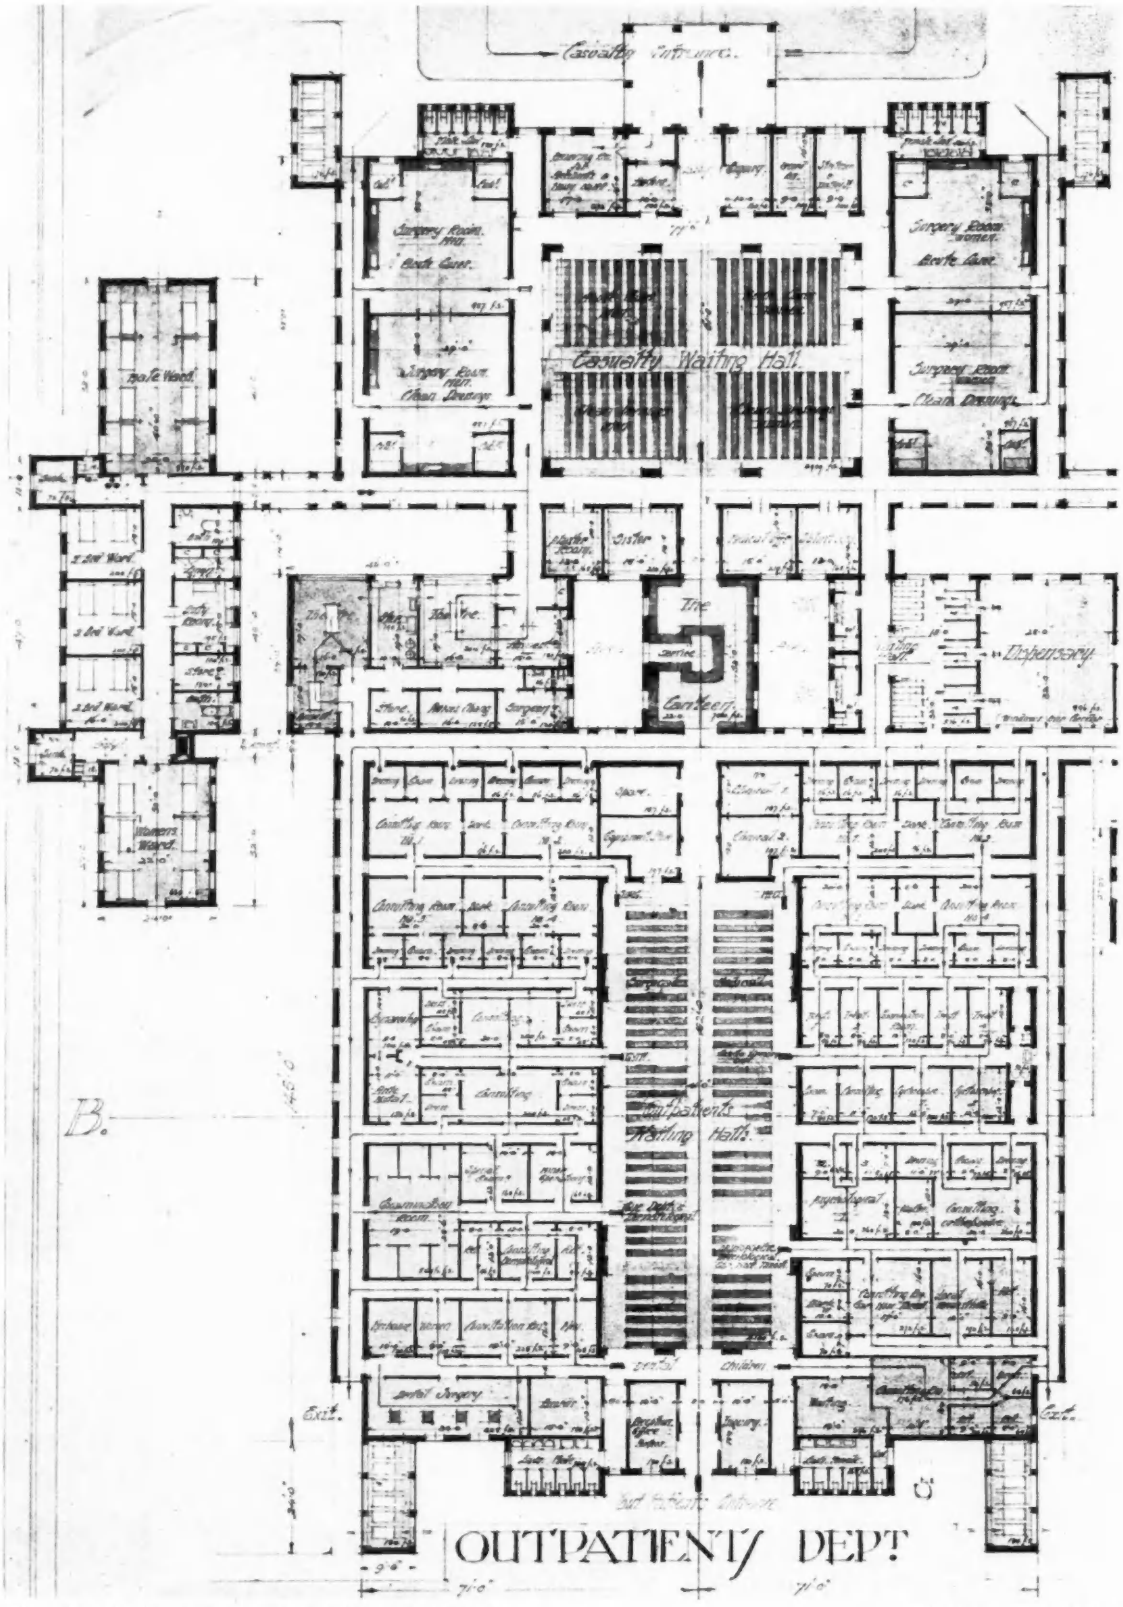
Thus from the circumferential roadway all departments are reached, and it should be noted that each is supplied with a separate little forecourt, out of the traffic stream. On each side of the main entrance on the north roadway are two car parks (figure nine) holding about sixty cars between them.



This is the primary circulation bringing into the hospital everybody and everything connected with it.

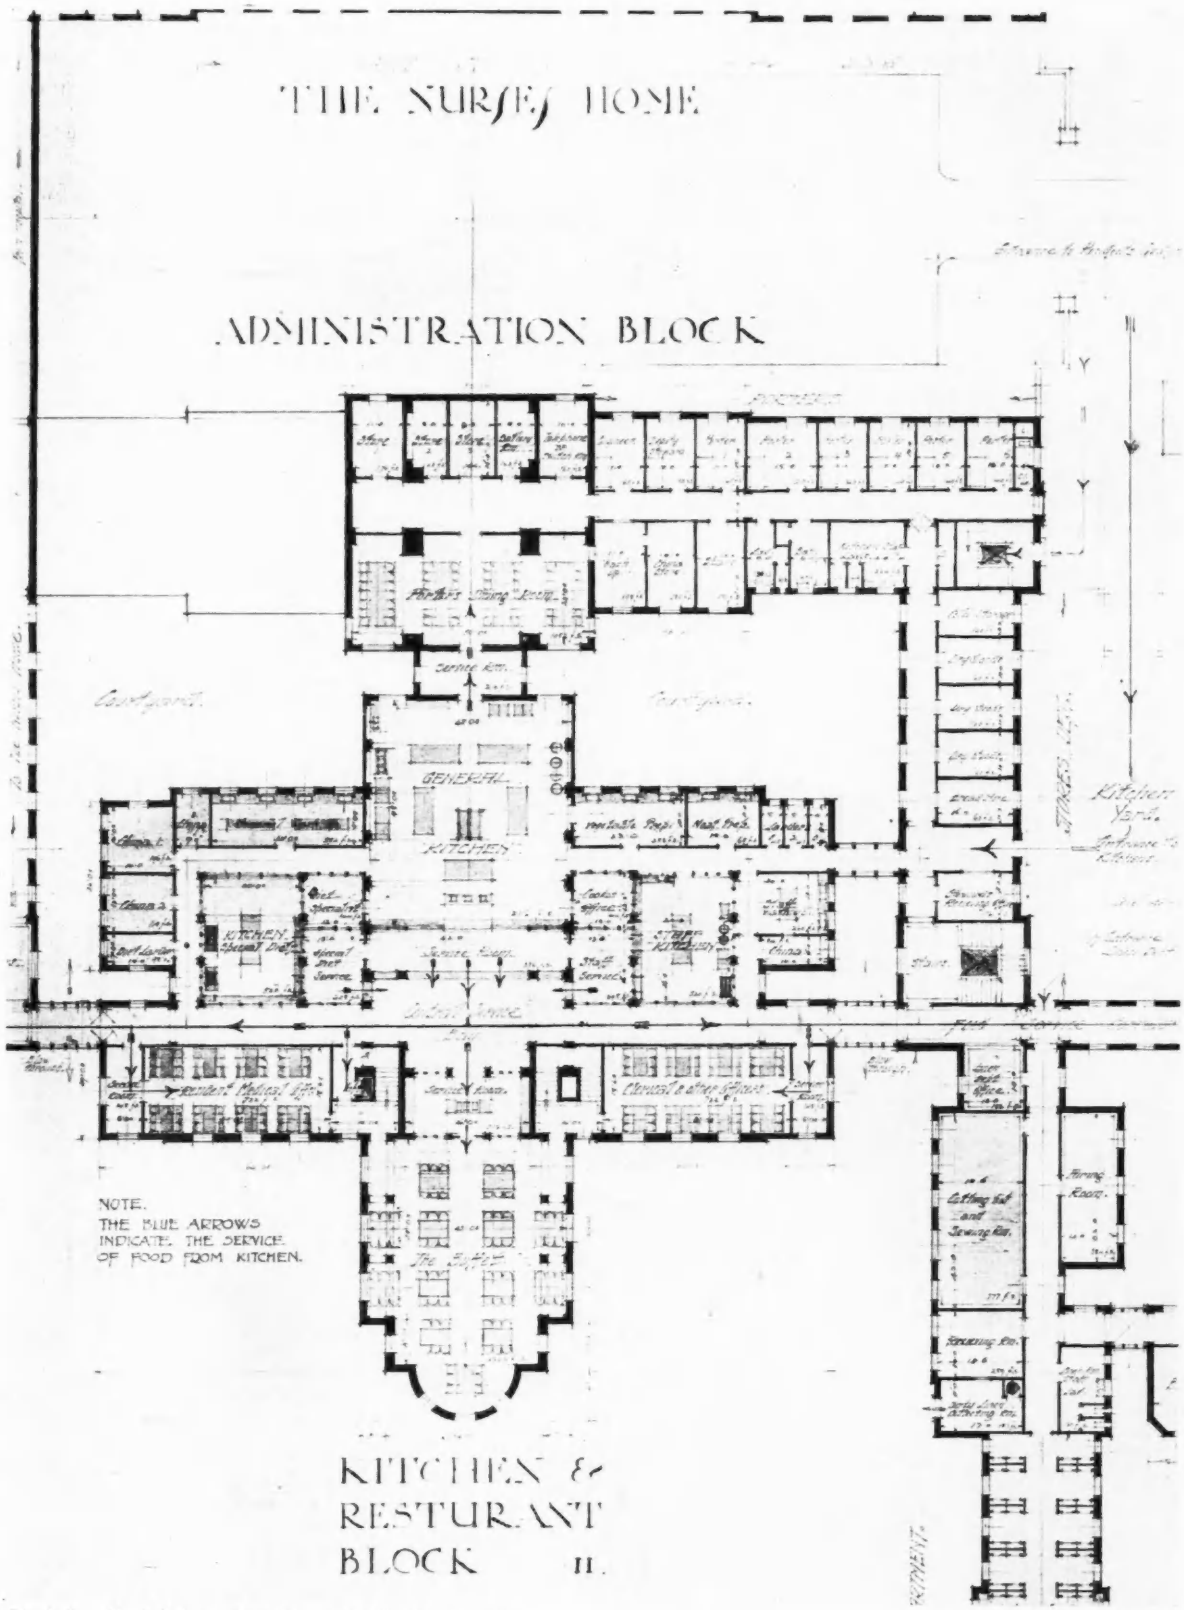
SECOND CIRCULATION

The next circulation will trace the process of admitting patients. The placing of the outpatients' and casualty departments (figures nine and eleven) is a matter of much importance, for these departments are the centre of the hospital's blood system. As a hospital deals with bad blood, as it were, and turns away good, these departments serve as a sort of inverse filter that lets through the worst and turns away the best.



Turning to the enlarged plan of these departments, whose general position is shown on figure eleven, one may see how the filter works. The casualty department is shown above, the outpatients' below, while between them is the dispensary and operating theatre, and to the left the wards of a small hospital. This large unit does indeed comprise a complete little hospital.

The flow enters from north and south, and congregates in the central waiting halls, from whence, male and female, it is drawn right and left through the regulated warren of consulting and dressing rooms. From here the bad blood turns inward to the central corridors leading to the hospital; the



Birmingham Hospitals Centre Competition : The Winning Design.] [*By Lanchester and Lodge.*

Figure ten. The lines A.A. and B.B., on which these sections are taken, can be identified by reference to figure nine. The lowest of the thickened lines in section B.B. show the ramped corridors of communication, containing pipe ducts for the water circulation. The central tower houses the supply tanks.

Birmingham Hospitals Centre Competition : The Winning Design.] *[By Lanchester and Lodge.*

Figure eleven. A large-scale reproduction of the ground-floor plan of the outpatients' and casualty departments, illustrating the second circulation, which is concerned with the admission and disposal of patients. This large unit is practically a complete little hospital. The flows are marked by arrows.

Birmingham Hospitals Centre Competition : The Winning Design.] *[By Lanchester and Lodge.*

Figure twelve. An enlarged plan of the central kitchen, in which the progress of the foodstuffs is the subject of the third circulation, its directions indicated by arrows. The chief means of access is from the eastern car park not shown on this drawing, but situated near the top, to the right. The kitchen is in the basement, and above the buffet is the chapel.

good turns in the opposite directions, and finds its immediate exit; the medium-good may be given short treatment in the hospital immediately attached.

All that concerns the main hospital passes along the ramped corridors which are to be seen on long section (figure ten), and this main flow is disseminated vertically and horizontally, having passed through the filter.

THIRD CIRCULATION

One cannot maintain a very strict analogy, but one may take the passage of food from a central kitchen to constitute an important circulation and place it third. The kitchen block is shown in detail on figure twelve, and its central position, between the administration block and the chapel, is shown on the block plan (figure two) and on figure nine. It is situated in the basement and has an immediate duty to perform in serving no less than four staff dining-rooms.

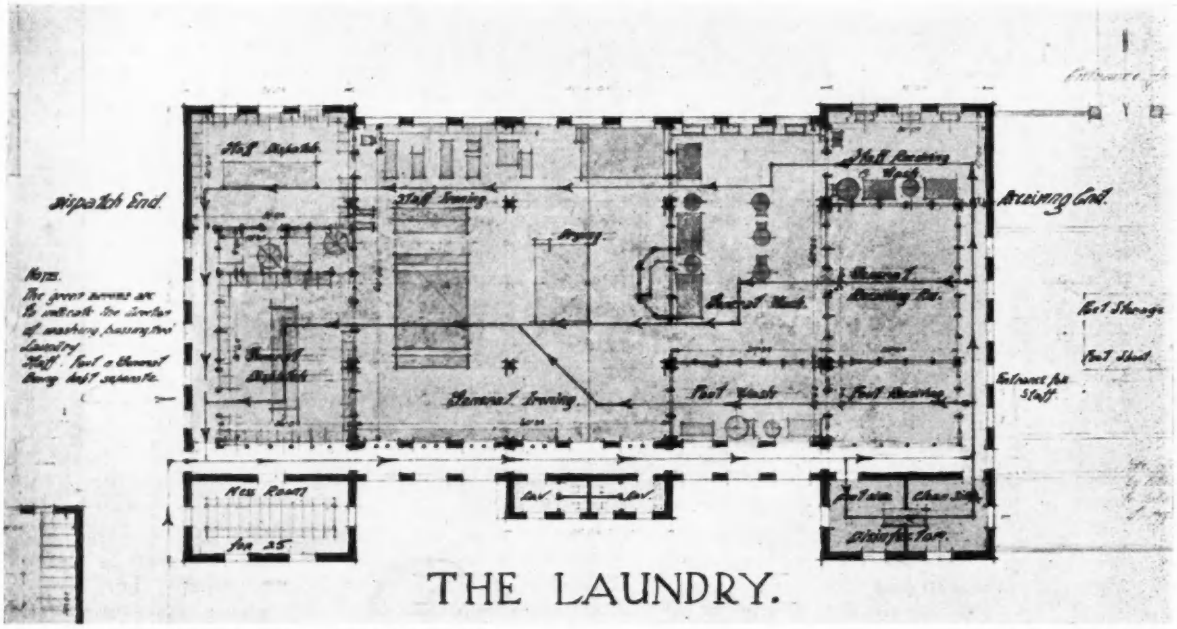
Food enters from the eastern car park and passes under the supervision of a receiving office direct to the main kitchen, surrounded by its subsidiary departments, and by the kitchen for special diet. The basement corridor is entirely for service. It will be seen enlarged into a central service bay opposite the kitchen, and from here the circulation, having attended to the several dining-rooms, spreads laterally to the lifts serving the hospital blocks; the circulation then becomes vertical, until it is disseminated along the wards. This service is, of course, by means of trolleys.

FOURTH CIRCULATION

The washing of linen is an enormously important item in a hospital. A week in bed is enough to make one realize this fact. This laundry circulation is in reverse, originating in beds and operating theatres, and flowing at first vertically downwards by means of shutes. The laundry plan (figure thirteen) shows the dirty linen entering, and it is interesting to trace the distinct operations of staff, general and foul wash. The plan explains itself so well that further discussion is unnecessary.

FIFTH CIRCULATION

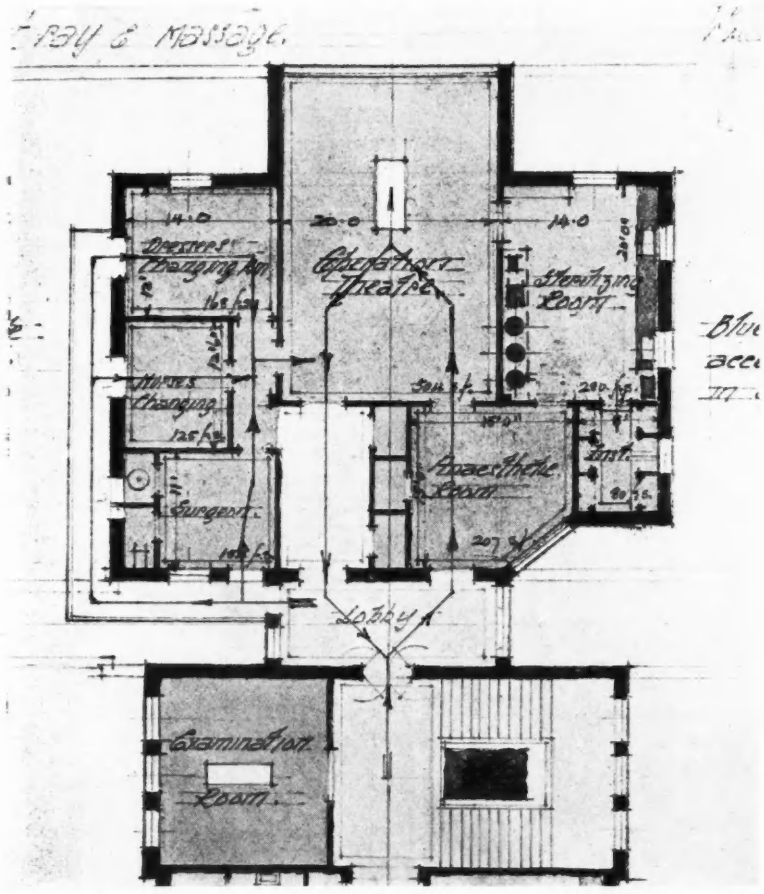
The discipline of the operation theatre calls for planning that results from a close study of circulation. It will be seen on figure fourteen how carefully the staff side is separated from the patient side, and how both meet in the theatre, each having gone through the preparations necessary to an operation. The patient's return, even, is by another exit, since his entry was by way of the anæsthetic room.



OTHER CIRCULATIONS

These circulations have narrowed their range from the very general to the very particular. Tracing them, one sees something of the ceaseless flow of human beings through the buildings. There are other circulations, of course.

There is, for instance, the steady movement of nurses, doctors and staff off and on duty. There is the other, and lesser, influx of visitors. And there are the silent circulations of water, gas, electricity and sewerage. Low down on the site the boilers are feeding the system of pipes that heat the building and provide hot water. The ducts that carry the pipes may be seen (figure ten, section BB : thick lines) falling back to the boiler, with the tanks that store the head of water high up in the central tower.



Turning again to the block plan (figure two), one sees more clearly how much the plan gains, not only by its system of circumferential circulation, but by its symmetrical disposition, which seems to regulate the complicated flow along understandable channels. Above all, it must be a matter for general congratulation that these channels that seem so much to follow the lines of least resistance should have been disciplined into the fine symmetry which turns a mixed assemblage of units into a plan and buildings that are together a very fine example of English monumental architecture.

(Concluded)

Birmingham Hospitals Centre Competition : The Winning Design.] *[By Lanchester and Lodge.*

Figure thirteen. The fourth circulation traces the processes of cleansing linen in the laundry. The paths for three categories of washing—staff, general and foul—branching away from and, later, rejoining the main flow, are clearly indicated.

Birmingham Hospitals Centre Competition: The Winning Design. [*By Lanchester and Lodge.*

Figure fourteen. The operation theatre and its accessory rooms, through which the fifth circulation—that of patients and of staff, meeting in the theatre itself—is set out.

TOWN PLANNING AND GARDEN CITIES

THE third of the series of six non-technical lectures on Present-day Architecture was given at the Architectural Association on Saturday. Sir Theodore Chambers presided over a large gathering.

Mr. Louis de Soissons, F.R.I.B.A., S.A.D.G., began his lecture on "The Creation of a Garden City" by saying that the chief reason for the town planner's existence and his chief problem is due to man's incurable gregariousness. The earliest records of Mediterranean civilization showed humanity grouped in comparatively densely populated states, with the country between them so unknown that stories as to its being inhabited by fabulous monsters found ready acceptance. He was afraid a modern parallel to those monsters existed; and they were the long, inanimate dragons, of brick, roughcast and asbestos, that could be seen along our country roads.

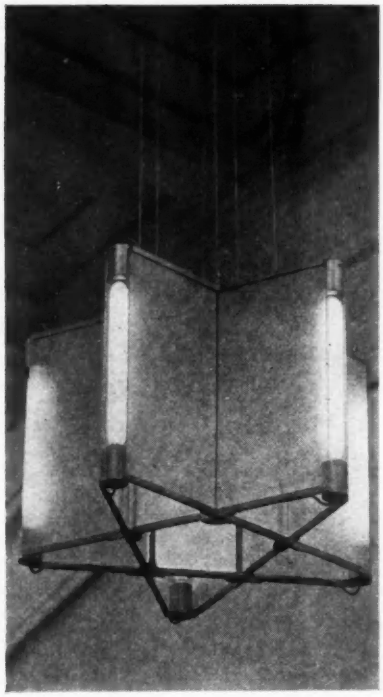
The growth of seamanship and sporadic eras of peace made travel easier, and tended to scatter populations, but the growth of raiding piracy (sometimes dignified by the name of war) drove the people together again into compact easily-defended cities, and thus accordance action—this expansion from the cities into the country, and contraction from the country to the cities—had, roughly speaking, continued throughout history. But with the coming of the industrial era, the main centripetal force towards the cities was due to the massing of large bodies of labour in factories employing hundreds of thousands of workmen, and the need for housing them as near their work as possible. There was no broad-visioned planning and foresight—merely the play of supply and demand—and consequently there resulted the ghastly industrial towns in the Midlands and North, and in London's East End.

The modern town planner, the lecturer said, looked upon existing cities as incurable; the only solution was to start on virgin sites and build cities of manageable size, which should be conscientiously planned as self-contained units with due regard to the hundred-and-one domestic, economic, transport, and other questions involved—the neglected and haphazard tackling of which had created the present impasse in older cities. As an example of these planned civic units he drew attention to Letchworth and Welwyn Garden Cities, which, he said, had been not merely conceived, but brought to birth. Both were founded by Sir Ebenezer Howard. It was interesting to note that Letchworth, the first garden city, was built in 1903, on a site of 33,000 acres of land. Welwyn was of much later date; it was begun in 1920 on 24,000 acres of land.

Mr. de Soissons gave a descriptive account of Welwyn Garden City, for which he is principal architect, and illustrated it by lantern slides. Many of these showed the fine old trees in the district. He emphasized the importance of preserving them and stated that only two had been cut down during the past ten years. Many young trees had also been planted in certain roads. Grass verges had been laid out, and could, if necessary, be narrowed for road widenings. It was often the case that people preferred to live on a busy main road, where they could look out upon the traffic. But gradually they were beginning to appreciate the quieter places, such as those afforded by the cul-de-sac type of development, by which houses were built in "closes." This was certainly ideal from a "safety first" point of view, because it provided ground where children might play together, without danger from fast-moving traffic.

Showing the Welwyn Theatre, he explained how the Georgian treatment of the exterior conforms with a predetermined scheme which embraces the whole of the shopping and commercial areas of Welwyn. Internally, however, no specific style was required, and it was designed in the most modern manner. The acoustical features had been employed as new motives of decoration.

He said, as a result of years of concentrated thought, they had built up a Garden City which they believed to be a solution of the evils of the towns as they had grown up and developed at the present time.



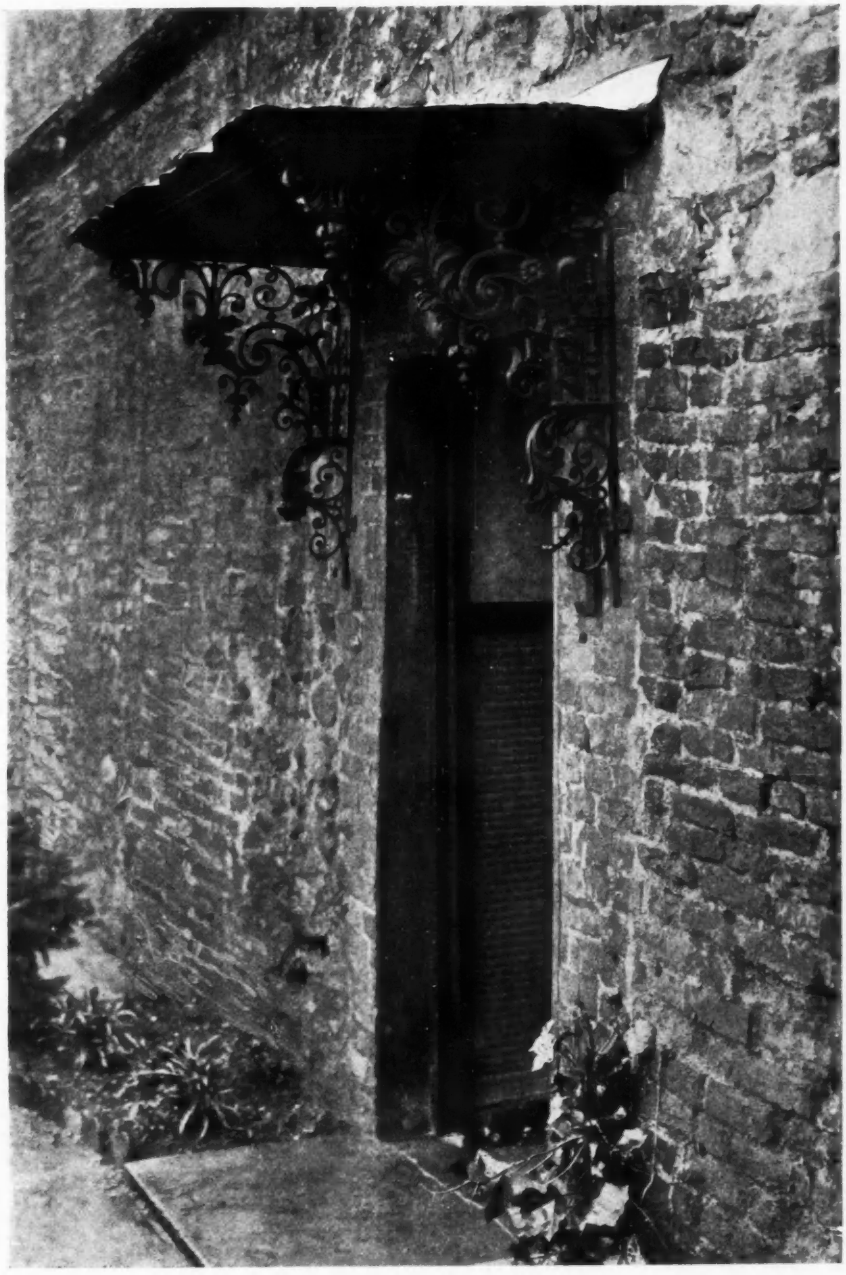
LIBRARY AT THE POLYTECHNIC, W.1

DESIGNED BY FREDERIC E. TOWNDROW

THIS is for the most part an internal construction on the site of the old architectural studios, which were, in transverse section, like a semi-octagon, with the top side for the ventilation ducts, the two sloping sides glazed with large sheets of patent glazing, and the vertical sides of brick walling. The new work is, in reality, a large semi-circular lay-light beneath a concrete roof. The coffers are of fibrous plaster, though all the projecting members are structural. Unfortunately, however, the radial centre of the existing steel supporting arches was quite close to the ground; and, as vertical bookcases had to be housed at the sides, the junction of the vertical with an arched form—well above its springing—provided a difficulty in the design.

The library is planned to accommodate both lending and reference departments. It is on the open-access system, and the mechanism and arrangement are of the standard public library design. All the joinery is of Austrian wainscot oak, oiled and waxed, giving a pleasing golden effect.

The electric light fittings were specially designed to give a maximum efficiency compatible with a minimum of glare. All parts of the lamp serve some purpose. It consists simply of a group of five vertical tube-lights, arranged in the form of a pentagonal star. The glass is introduced to break up the direct view of the bulbs. The glass plates are arranged to slide out for cleaning, yet as all the faces are vertical they are not likely to catch dust. The form of the fitting suggests five open books facing each other. This is appropriate to a library, though not the original idea underlying the design.



One of the lamps, specially designed by the architect. The peculiarly appropriate form, suggestive of five open books, was arrived at fortuitously in the development of the pentagon star idea.

The flooring is of cork tiling, ½ in. thick, to the architect's design, which makes a noiseless floor of a good colour. In fact, much of the effect in this library is obtained by colour. The slight golden tone of the oak is enhanced by the warmer colours of the floor and a sparing use of bright yellow in the edges to the coffers. Also a warm cream is used to pick out the main structural members of the ceiling, and to carry this farther the ceiling air-vent panels and the lighting fittings are lacquered in gold.

An interior view of the library, laid out to hold 25,000 books, on the first floor of the Regent Street building. The fittings are in Austrian oak, oiled and waxed to a golden tone ; the edges of the ceiling coffers, formed of fibrous plaster, are edged with bright yellow ; the ceiling grilles and lamps are gold lacquered. To this range of colour the warm cream used for the main structural members supplies a harmonious groundwork.

ENGLISH PRECEDENT No. 102

DOORHEAD,
ST. ANNE'S HOUSE,
KING'S LYNN,
NORFOLK

King's Lynn is full of the remains of a flourishing period of Georgian architectural activity; some of them well preserved, and some, unfortunately, as incongruously situated as this most delicate piece of wrought ironwork.

Anyone who has ever designed in wrought iron will recognize how valuable a possession such a work can be. This would seem to be in danger of being carried away or sold unless some responsible body takes care of it at once. —[E. MAXWELL FRY.]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an arbitrator, brought by Colonel Jago, J.P., jointly and severally against the builder and architect, for damages for the collapse of a village hall. Mr. Chawlegger, K.C., and a Junior represent the plaintiff; Mr. Twistle the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. Mr. Pitfall is now about to bring his closing address, with which the third day of the hearing opened, to a conclusion.
Though the case related is true to life in every particular, the characters named are fictitious.

vi: Mr. Twistle's Closing Address

THE Arbitrator having, in reply to a remark of Mr. Pitfall's, told Counsel that he must **use his own judgment** in pursuing arguments destructive of the charge of negligence against his client, Mr. Pitfall went on as follows :

Then, sir, I will add nothing to what I have said on the subject of negligence, for my judgment directs me not to offend your understanding by further labouring the matter. Neither, sir, will I **insult** you by arguing that the continued violent—or vigorous—dancing on the buckled floor—which it is agreed caused the collapse—was **not** proximate to and directly flowing from the omission to remove the wedges. I will rather leave it to my learned friend to offend you more deeply, by urging that it **was** and **did.**

Mr. Chawlegger : Thank you. I am much obliged.

Mr. Pitfall : My friend is very welcome. No, sir, I will confine myself merely to reminding you of the evidence you have heard from both sides of this table, and submit that that evidence proves that the collapse of the building was **not** proximate to and did **not** flow directly either from the omission to remove the wedges or from the buckling of the floor, but was directly caused by the negligent, callous, or wilfully mischievous act of the plaintiff in persisting in violent ill-usage of the building until it was gradually reduced to a condition of instability and fell down; and that, **therefore,** no charge of negligence can lie against the defendants. **So far as the defendants,** or either of them, are concerned, sir, the collapse was due to *vis major*, and I submit, Mr. Arbitrator, that on the grounds of *vis major* **alone**—and exclusive of the whole of the facts, destructive of any charge of negligence which I have laid before you—the defendants are jointly and severally exculpated. *Vis major*—which, together with the Act of God, or of the King's enemies, is by the immemorial laws of these realms, outside all contracts—is defined as " an inevitable accident in respect of which persons ordinarily liable would have no remedy over." The accident in respect of which the defendants had no remedy over was the amazingly remote coincidence of the period of vibration of the walls happening to synchronize with the rhythm which a horde of drunken and excited villagers chanced to adopt in dancing a particular dance. Mr. Arbitrator, I present to your attention a certain fact conclusive of my contention that this accident was not merely **remote,** but unforeseeable by the most active—I might even say **" diseased "**—imagination; and not merely **unforeseeable** but, even **now,** when all the facts, even to the analysis of a scientific expert, are before us, still remains barely comprehensible and almost unbelievable. That fact, sir, is that the building would not have collapsed **if one only** of the contributory coincidents had been lacking; namely, the unusual use of maple flooring instead of any other; the special close pressing together of the boards; the leaving in of the wedges; the dancing of the gallop instead of any other dance, and violently and at a certain rhythm instead of any other rhythm; the particular thickness and height of the walls and depth of the footings—instead of any other thickness, height or depth—and the consequent coincident period of vibration of the wall; and, lastly, the inconceivable circumstance that, as a climax to this amazing string of coincidences, the building should be given up to the ungoverned liberty of persons who, either from the density of agricultural wits or from drunken frenzy, or both, proceeded, by protracted stages, gradually to dance the place down on their own heads—which, in fact, only by divine providence did they escape doing. Mr. Arbitrator, if there ever was an accident to a building over which architect and builder had no remedy and which accident **for them,** therefore, constitutes *vis major*, the collapse of Grastopen Village Hall was such an accident. An accident more completely beyond the defendants' remedy cannot be imagined. No village hall ever was, or is likely to be, treated with the mischievous ill-usage with which the plaintiff treated this one. I say " the plaintiff," Mr. Arbitrator, because the responsibility is directly his. Not only were the persons he permitted to knock the place down his private guests, whom he invited to the hall to hold their annual jollification and celebrate their squire, but he instituted and maintained the riotous disorder of the proceedings by a free gift of whiskey. I do not know what my friend's idea of an ordinary dram of spirits may be—and two dozen bottles divided equally among three hundred and twenty persons does not, I admit, suggest general intoxication—but we know that beer, and porter, and whiskey and all sorts was in it, quite apart from these mischievous two dozen bottles; and the sort of equal division which is represented by struggles to the death—of the whiskey—for whole bottles of it in the middle of the dance-floor, is, I submit, a clear indication of what took place, and establishes, sir, that when I described the proceedings as a " beastly drunken orgy " I was not overstating facts adduced in evidence. How else, sir, are we to understand the continued dancing on the buckled floor by these guests of Colonel Jago's, who remained oblivious of the walls wagging in and out in time with the music, and of the flags bobbing and curtseying on the roof-timbers, and of the portrait of their host decked out in full regimentals and eyeglass——

Mr. Chawlegger : That was not given in evidence.

Mr. Pitfall :——portrait of their host, possibly in full regimentals and eyeglass or possibly naked, flapping and jaggering against the wall? The plaintiff's witness, the magnificent potato merchant—and I freely admit, sir, that no potato merchant I have ever known had such an astounding gift of language—told us all about it; how the dancers, mad with whiskey and joy, in the springiness of the floor, were lepping and cursing and yowling and screeching and capering—in drunken oblivion of the fact that they were knocking the place down—till they could not hear the music for the

din, nor know which moment was going to be the next with all the spinning and whirling and kicking there was to it. Sir, was there **ever** such a village dance since this world began? Or, if there ever should be, will there **ever** be such a description of it as we heard from Mr. Padrig O'Hara? Padrig is not drunk, but he "has drink taken"; he inflates himself to the lightness of a balloon by successive bottles of ginger beer; he lets a great yell, gives a great stamp of his heels and rises like a lark to the ceiling, adroitly wafted on his heavenward way by a friendly kick behind! What Mr. O'Hara did, sir, it is obvious the others were all doing, although they might not be able to give so praiseworthy an account of their several performances; and, sir, it is **this**—this unheard-of, monstrous, preposterous, unbelievable enormity by Colonel Jago's drunken and irresponsible guests—which my learned friend is calmly asking you to say was a direct, proximate effect flowing from the omission to knock out a few wedges.

Sir, I have done. With confidence I place in your hands the meting out to my client of that justice which the humblest of His Majesty's subjects can claim against the most proud, wealthy and powerful of them. But there is **one** thing, sir, which I ask you not to lose sight of among the many facts and the many submissions which it is your duty to sort out and weigh. That thing, sir, is the **painful**—and I may perhaps add **pathetic**—position in which the defendants are placed. **Both** are humble, hardworking bread-winners; of their other characteristics which will commend them to you I need not speak, for you have seen them and have heard them; **but,** sir, speaking for my client, I ask leave to say that any award that finds him negligent, means to him just this one little thing: absolute and complete ruin. I am not, sir, referring to financial ruin: a poor man who has made his own way by integrity and hard work can, when broken, start again at the foot of the ladder and again laboriously climb to a position of security and self-respect—I am referring, sir, to the ruin of his **professional reputation.** My client's practice is confined to a small district in the provinces. He is not of such a professional standing as to hope for employment outside it. He depends for his livelihood upon the confidence, esteem and goodwill of his neighbours, and he is beset by rivals, many of whom are unscrupulous rivals. Every particular of his professional enterprises and private doings is of public interest in a society which has not enough intelligence to find interest outside their own and their neighbours' affairs; and a pronouncement from **your** lips, sir, of professional dereliction from duty—of guilt, will cast my client into ignominy and contempt—in a place where ignominy and contempt spell destruction—to the triumph and aggrandisement of the plaintiff. For, sir, **what** is at the back of this hounding down of humble, hardworking, independent-spirited men by this wealthy and proud ex-tallow-boiler, spurious Colonel and self-acclaimed Squire, the plaintiff, who has, with such brazen arrogance, strained the sense of all law and justice in bringing this action? Sir, you have **seen** Colonel Jago; you have **heard him** under cross-examination; on **his** behalf and at **his** instigation you have heard my friend attempt to cast reflection upon the character and motives of the aged rector of Grastopen parish church, and you have heard, sir, not I fancy without emotion, the reverend gentleman's story of the coarse, underbred, bullying interferences he has had to endure——

The Arbitrator: Colonel Jago, remember yourself.

Colonel Jago: Damn! . . . Dirty swine!——

The Arbitrator: Leave the room.

Colonel Jago: Mr. Arbitrator, my feelings——

The Arbitrator: Leave the room, sir.

(There was an ominous silence as the plaintiff, with trembling hands, muttering lips, and blanched and twitching face, collected his papers and blundered out of the room, leaving the door open.)

The Arbitrator: Now, Mr. Pitfall.

Mr. Pitfall: I was about to submit, sir, when I was interrupted, that the plaintiff is actuated in bringing this action by **vanity.** For a man in his position of bolstered aggrandisement, to build and then to have the building immediately collapse on his hands by reason of his own negligence and the mischievous stupidity of his guests, and for it to be known that he had got to pay for his stupidity—would be intolerably humiliating. The great Squire of Grastopen, sir, is supreme in the little realm he has bought and which he wears, like the hat he cocks on the side of his head, for all to observe and admire. The money is nothing to him; **he** does not—like the poor man he pursues—have to produce, in order to live, the careful, intricate drawings and specification you have seen, and chase about after bricklayers and carpenters for six months, and write scores of letters, for a wretched fee of £170, of which expenses and taxes eat up a good half. It is his tin-pot **dignity** Colonel Jago is concerned for. He can **well** afford to indulge his vanity, and it is this merciless indulgence of his vanity which has brought us together in this room, for—**mark this,** sir—having brought his action with the disastrous consequences for him which I confidently hope, he still will remain the **proud squire. Not** any humble builder and architect will have put him in the wrong; it will be the mischievous and iniquitous devices of the law, and the obtuseness of an arbitrator sitting in London, that will have been too much for **him.** No award you will make, sir, can more than touch the dignity or ruffle the bank-balance of Colonel Jago. He secured himself in the **one thing he esteems**—his swaggering self-importance—when he issued his writ against the defendants.

Sir—Counsel concluded—I have now only to thank you for the patient hearing you have given me.

The learned Pitfall, who had been speaking for an hour all but four minutes, here briskly refreshed himself with his handkerchief, glanced at his watch, and whispered a word aside to Wrackem: he was already thinking of his next case. He looked round suddenly, however, at a touch on his shoulder, to find Toomer stretching towards him across Wrackem's back. Pitfall stared for a moment, astonished at the countenance presented to him, and then realized that Toomer was offering to shake hands. Pitfall did so with particular cordiality, as, for the moment, he had fancied Toomer was ill. Toomer's grip was moist but fervid. "Thank you, sir," he whispered, "**thank** you"; and the poor man's worried eyes suddenly cocked and filled.

The case, however, was not finished by any means. It was now Mr. Twistle that the Arbitrator called upon to address him on behalf of the defendant Swillerton.

Mr. Twistle was a short, bald man with a bulbous head, pallid face and the sagging cheek-pouches of a glass-blower flanking a rose-bud mouth. His language was colourless, his voice low, his utterance sibilant and suety; but his heavy and authoritative manner carried an air of serious conviction based on vast knowledge, and was impressive. He began by telling the arbitrator that he entirely associated himself, and was in entire agreement with, "my friend who is with me" (meaning Pitfall) in his setting forth of the common grounds of agreement of the parties and of the circumstances antecedent to and attending the collapse; and he also entirely associated himself with the facts and arguments, exculpating the defendants, submitted by his learned friend. He went on to recapitulate them as follows: That the omission to remove the wedges was contributory to, but not the cause of, the buckling of the floor; that the buckling of the floor was not the cause of the collapse of the building; that his client, the defendant Swillerton,

was given no opportunity of making good the buckled floor, and that the plaintiff was, accordingly, estopped from any other claim than the cost of making good that defect; that the behaviour of the floor in buckling was entirely without precedent, so that no man, however reasonable and prudent, could foresee or guard against such buckling; that the omission to remove the wedges was not due to any act of gross negligence nor to habitual acts of trivial negligence on the part of his client, and that the collapse was due to the negligence or wilful act of the plaintiff which, so far as the defendants were concerned, constituted *vis major*.

But, Mr. Arbitrator—said Twistle—completely removed as both the defendants are from any complicity with legal negligence, I have to submit that the circumstances of this case banish my client even more remotely beyond the limits of any such implication than they do his co-defendant. I have to press this point because my learned friend has, if he will pardon me, strained the sense of the matter in the opposite direction and made it appear that if there should be the least doubt of the complete exculpation of the defendants, then that doubt is directed upon my client. I do not suggest to you, sir—I should be ashamed to suggest to you—that any ground for imputing negligence lies at the door of the defendant architect, Mr. Toomer, but I do suggest, sir, that such an imputation against my client would be even more extravagant. What, sir, were my client's obligations; what has been his performance? My client contracted to build soundly and skilfully with good materials, according to the accepted standards of sound and skilful building; and further to build according to the true intent and meaning of such drawings and specifications and instructions as the architect would supply and give to him, and to follow those instructions, and to carry out the whole work in a workmanlike manner, whether all details of it were specifically drawn or described in the instructions supplied to him, or not. Those, sir, were my client's obligations, and you have heard it given in evidence by the plaintiff's own witnesses that he not only performed the whole of those obligations, but that his performance of them was as good as anything the mature experience of the plaintiff's own technical witness had ever before seen. Mr. Arbitrator, what more could my client do in justification of his reputation of fifty years' standing, and in the performance of his duty under this contract? The plaintiff says he should have removed the wedges; but that duty only became apparent after the floor had buckled, and, as my learned friend this morning reminded you, the proving of a defect cannot set up an anterior obligation; the obligation must exist before the act or omission giving rise to the defect. No such obligation existed. In following the established custom of the building trade in making use of blocks and wedges and leaving them in place, my client was acting as a prudent and reasonable man would act, and, therefore, under the famous judgment of the late Baron Alderson, quoted by my friend, no charge of negligence can lie against my client.

The peculiar properties of American maple flooring which led to this entirely unprecedented buckling of the floor were known, and could be known, to nobody concerned except, Mr. Arbitrator, the defendant architect, who by a certain personal experience had become in a limited degree aware of them. The architect was the person whose authority was in every detail binding upon my client who was otherwise under obligations to work according to established custom; and any negligence which might conceivably be involved in the omission to remove the wedges cannot lie at the door of my client. If the architect's experience was not sufficient in kind or degree to make him aware of the risk of the floor buckling, then, I submit, neither of the defendants can be touched by a charge of negligence; but if it was—and so far as it was—sufficient, then negligence, if any, consisted in the architect omitting to warn the builder or to direct the removal of the wedges, and negligence can lie at the architect's door only.

My learned friend who is with me tried to urge upon you, Mr. Arbitrator, that those blocks and wedges, of which we have heard so much, are of the nature of tools. I do not think, sir, that you can have been much impressed by what my friend said on that subject. My client, who alone of any of the witnesses who have appeared before you is entitled to express a decisive opinion upon that point, told you in the plainest terms that such blocks and wedges are not tools. My friend tried to get from him an admission that if the wedges had been of iron they would have been tools; but my client in his replies made clear that any such idea was fantastic. In this practical opinion he is supported by learned authority, which describes a tool to be a mechanical instrument. The applicable definition of the word "tool" in *Webster's International Dictionary* is "an instrument, such as a hammer, saw, plane, file and the like; any instrument used by a craftsman; as the tools of a joiner, smith, etc.; a chisel, cutter or instrument that dresses work." It is clear, therefore, that these unwanted bits of roughly shaped wood were neither tools, nor in any degree of the nature of tools. They were part of the usual constructive elements of a boarded floor, and my client swore, and the defendant Toomer admitted in cross-examination, that such wedges might be, and frequently are, made use of as fixings for skirtings. Even if my client had admitted under cross-examination—as he did not—that these wedges were in the nature of "false work"; and supposing also—what my learned friend did not make clear—namely, that one and the same object can at once be "false work" and in the nature of a tool, what would the establishment of these wedges as "false work" amount to? It would amount, sir, to establishing that the wedges were an element of construction under the specific direction and authority of the person responsible for direction—to wit, the architect; for, as I need not, Mr. Arbitrator, remind you, the design of "false work" is an important duty of those responsible for engineering structures, and it is in connection with engineering structures that the term "false work" is alone used. I submit, Mr. Arbitrator, that my learned friend has completely failed to show that my client, in making use of the wedges and leaving them in situation, was doing otherwise than a reasonable and prudent builder, following established practice according to the requirements of the contract, would do; and I further submit, sir, that the architect defendant knew perfectly well that my client would, in following established custom, make use of such wedges and leave them in place; and that in giving him no directions to the contrary he, in effect, did in fact sanction the fixing of the wedges, and, by drawing a final certificate, formally approved of their use.

What, Mr. Arbitrator, is the position of a builder who contracts to build according as the building owner's accredited agent—the architect—shall direct, when—after that builder has exactly performed his obligations to build in all details as the architect has directed—failure results? Is the builder to be regarded as responsible for that failure? Can negligence be attributed to him for diligently performing that which he was under contract to perform? It has been said, sir, that it is not the business of a Judge to give justice, but to administer the law; but here the law is on the side of justice. It was decided in *Rogers* v. *James*—and the same principle was laid down in the judgment given in *Leicester Guardians* v. *Trollope*—that when an architect, under and within the limits of the authority given him by a building contract, decides any question and directs the builder in any matter, then—whatever cause for action the building-owner may have against the architect in respect of that decision—such decision is final as regards the builder, and

the building-owner has no cause of action against him.

The same principle was enunciated also by the late learned Judge, Mr. Justice Erle, in the case *Turner* v. *Garland and Christopher*, which my learned friend referred to. My friend points out that his client had no opportunity of seeing that the defect of the buckled floor was made good, because he was never informed of that defect by the building-owner. **That,** sir, is as it may be, and I do not suggest for **one moment** that the failure of the defendant architect to notify my client of the defect was due to any lack of diligence on his part; but it is my duty to remind you that—**as between the defendant architect and my client**—it was to the **architect,** and to the architect **alone,** that my client had to look for notification that the floor had buckled, and for orders or directions for making good that defect. Such order or direction my client never received. Had he done so, he would have restored the floor and I, sir, should not now be addressing you in this room. My client explained to you, in evidence, the steps he would have taken to restore the floor had such opportunity been given him, and you were able to satisfy yourself that my client's estimate of three pounds ten shillings as the cost of making good was a close and reasonable estimate. The defect, therefore, was one of those minor defects of which a certain number must inevitably reveal themselves in the most carefully and soundly built building, and the making good of which are included for in the price which a builder tenders and which forms the money-consideration of the contract. That liability of the value of seventy shillings my client would not have disputed, but his liability ended **when**—by the wilful and mischievous act of the plaintiff—all possibility of liquidating that liability ended.

Mr. Twistle next submitted that as the building had in fact been completed—and certified by his architect as having been completed—before the date of the collapse, the clause in the contract fixing penalties for delay in completion had lapsed; and he urged that the plaintiff was, therefore, not entitled to add the weeks necessary for reconstruction to the contracted weeks, nor claim damages for delay in completion of the contract in respect of those added weeks. Counsel then went on :

In conclusion, Mr. Arbitrator, I would ask you to extend to my client the same sympathetic consideration which my friend has so justly claimed for **his** client. You have **seen** my client, Mr. John Robert Swillerton, you have **heard** him giving evidence from that chair, **and, sir,** you have formed a certain opinion of the character of my client and of his capacities and attainments as a builder. **Sir,** I feel that I shall not be trespassing beyond what is due from me when I say that the case of this honest, industrious, capable and conscientious man—who is **also,** sir, a poor man—struck down through no fault of his own by a rich and powerful one, is a **hard case.** He is a man of independence and character who has **made** his own way, and who has **paid** his own way; who has never before been involved in legal proceedings, who holds the respect of all who know him or do business with him, and the affection of those he employs, some of whom worked for his father forty years ago and by whom he is still known as "Young Jack." My client, sir, seeks no favours from any man, and is willing to abide by whatever your award, in law and in justice, may bring; but we have in this England, Mr. Arbitrator—and I thank God I can say it—a justice which is tempered with mercy and which gives the poor and the oppressed the full measure of consideration which the advantages of wealth and high station can command for the rich and influential.

While the arbitrator made a final note, Pitfall, who had been sitting, with his arms folded, gazing at the table, slowly turned his head and met Twistle's eye with blank face and a succession of almost imperceptible nods. Twistle acknowledged this tribute of his senior by complacently stroking the back of his head—of his own, not Pitfall's.

Directly the arbitrator had finished his note-making, Mr. Chawlegger handed him a sealed envelope. The Arbitrator opened it and, after reading, passed the brief letter it contained to Mr. Pitfall, who glanced through it and returned it with a consenting nod. The Arbitrator thereupon gave a whispered direction to his clerk, who left the room and a moment later ushered in the chastened Jago, whom he tactfully arrested at the foot of the table. The delinquent Colonel, squaring his shoulders and facing the arbitrator, as he might the President at a Court Martial, then miserably said :

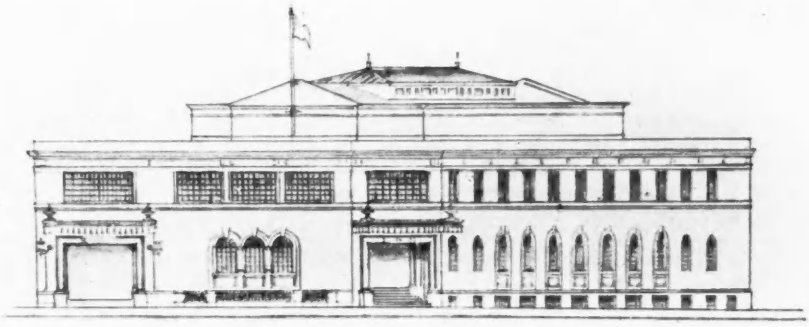
I desire to apologize to you, Mr. Arbitrator, and to Mr. Pitfall, for having lost my self-control; and to withdraw the—er—hasty expressions which I—er—that—er—escaped me, and to beg that Mr. Pitfall will excuse my lapse and be so generous as to forget that the words—er—expressions, ever—er—er—escaped me.

Pitfall stood up, bowed to the arbitrator and to the plaintiff, and sat down.

The Arbitrator : That is a very proper statement, Colonel Jago. You may resume your seat. Mr. Chawlegger, I will hear you, if you please.

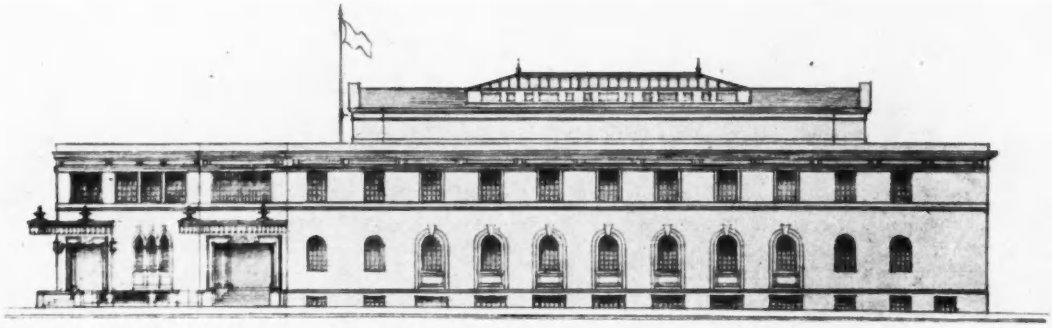
(NEXT WEEK—VII : MR. CHAWLEGGER'S CLOSING ADDRESS)

Institute of Arbitrators at Dinner



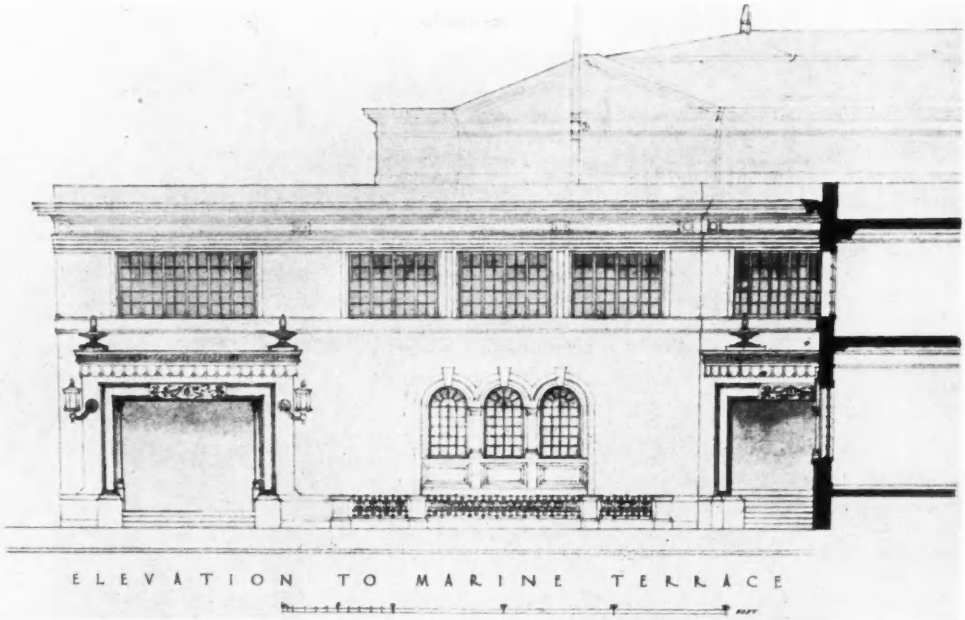
"IT is inevitable as business expands and increases that disputes of various kinds, disputes which are not in themselves, necessarily, matters for law should arise," said Mr. H. B. Chaplin Baldwin, M.A., in proposing the toast of the Lord Mayor and the Sheriffs and Corporation of the City of London, at the annual dinner of the Institute of Arbitrators. Further, he said, it is quite possible for the parties to agree to submit the case for arbitration and to require the services of some entirely independent person to arrive at a decision which above all must be equitable, for which a trained arbitrator is necessary. There were many cases where arbitration was better than litigation.

The Lord Mayor remarked, during the course of his reply, that he did not know how far the lawyers looked with favour upon the Institute of Arbitrators; probably they were broadminded enough to look upon it favourably. Certainly, he added, all commercial men did.



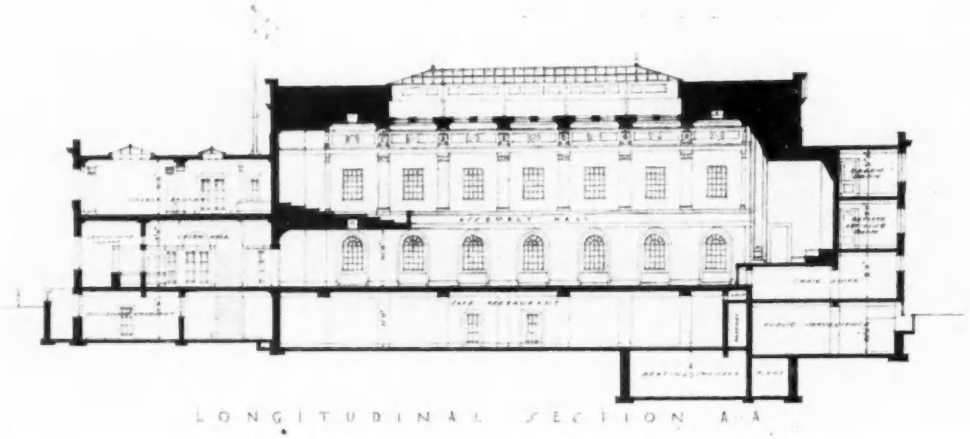
Sir James Martin, in proposing the toast of the Institute, said that as to the qualifications of an arbitrator it would appear that these were difficult to state. He had looked up "Russell" to see what he gave. He certainly gave disqualifications, and they were as follows : Madness, idiotcy, deafness, dumbness and blindness ! He thought that they must go a little deeper than that, and said he would take the qualifications of an arbitrator. An arbitrator must have a judicial mind and a habit of coming to definite conclusions, which must be free of fear or favour, affection or ill-will towards the parties before him. He must have a special knowledge of a business or professional nature, enabling him to understand the difficulty between the parties. He should also have a knowledge of the law of arbitration, and be able to conduct the business in reference.

That arbitration was probably the oldest form of settling disputes and differences was pointed out by Mr. Edgar S. Underwood, President, who said that it was mentioned about 300 B.C. by Plato, and even in those days the person was called arbiter Also, we had Solomon deciding the case of the two women claiming the child. This was really arbitration and a fifty-fifty award. Today we had institutions like the "Hague." If disputes arose in the trades a quick settlement could be obtained while the work continued.

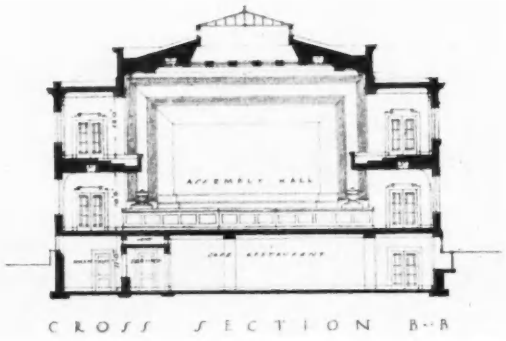


PAVILION COMPETITION: ABERYSTWYTH, N. WALES

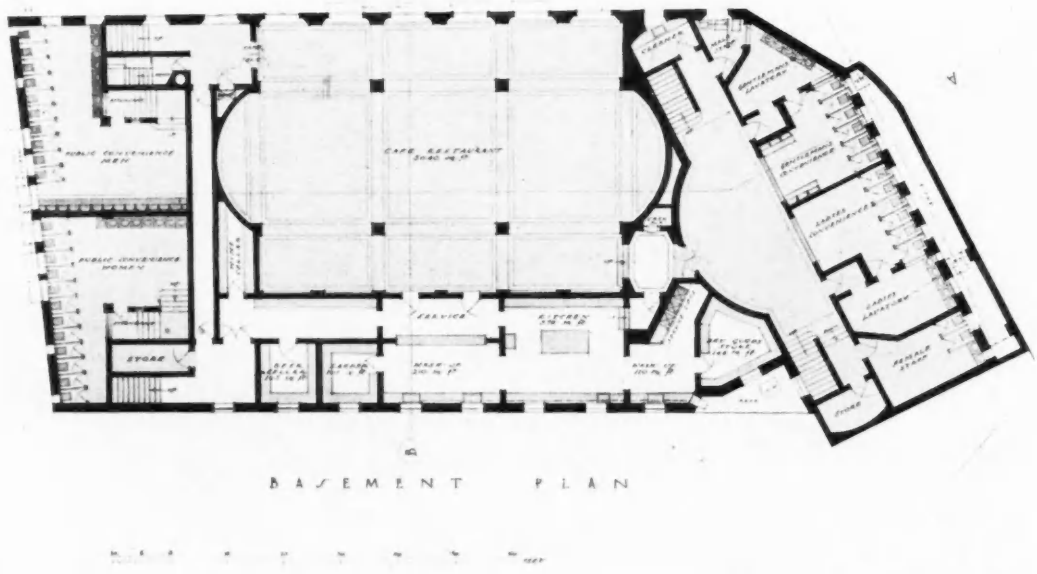
ELEVATION TO MARINE TERRACE



ELEVATION TO TERRACE ROAD

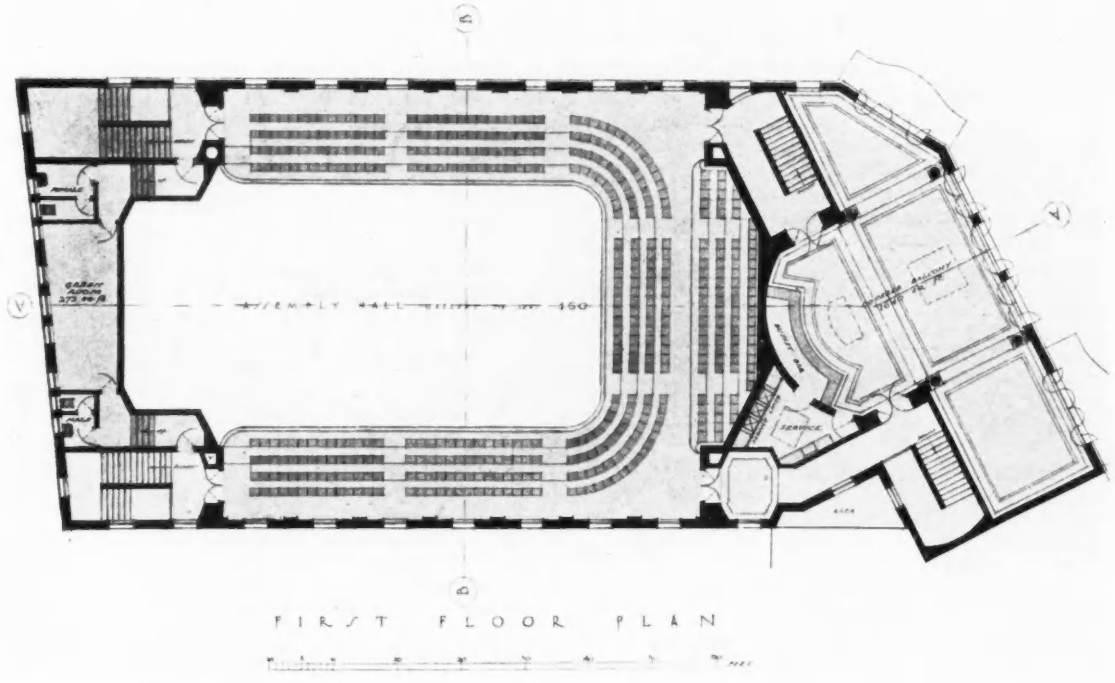


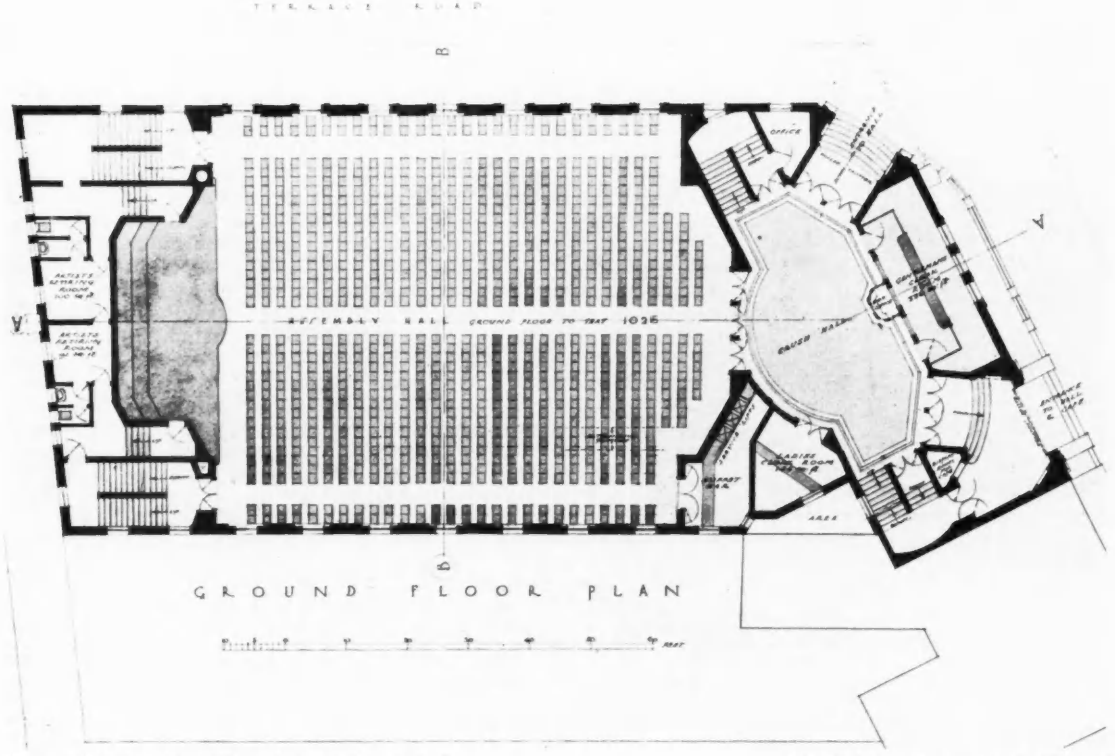
ELEVATION TO MARINE TERRACE



Awards in the Aberystwyth Corporation's competition for a municipal pavilion are: First (£100): Stewart McLaughlan and S. B. Howard, of Liverpool; second (£70): Charles F. Ellis, Aberdovey, and T. Wynne Thomas, Moseley; third: J. Crowe and Stockford Careless, London. Above are reproduced the winning competitors' drawings of two main elevations, and a detail of one of them; for other aspects of this design see the following two pages.

D





Aberystwyth Pavilion Competition: The Winning Design.] [*By S. McLaughlan and S. B. Howard.*

Of the two sectional drawings given above, the cross-section is here placed for the sake of comparison side by side with the external end-elevation of a similar aspect of the building; below is the basement plan, ground and first-floor plans being reproduced on the facing page. The site for this proposed pavilion is that previously occupied by the Waterloo Hotel, Marine Terrace, which was completely destroyed by fire some years ago.

Aberystwyth Pavilion Competition: The Winning Design.] *[By S. McLaughlan and S. B. Howard.]*

Drawings of the ground-floor and first-floor plans. The ground-floor plan shows the roads and portions of existing buildings bounding the site. Marine Terrace is on the right. While the scheme was required to cost not more than a maximum of £30,000, the estimate calculated from the designs here illustrated is £25,000. It is expected that they will be adopted for erection. There were over one hundred entrants for the competition.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

MAJOR NATHAN asked the Minister of Transport whether, in connection with the Government's unemployment schemes, work had yet been started on Waterloo Bridge; and when he expected work to start on Charing Cross Bridge.

Mr. Morrison said that the answer to the first part of the question was that work had not yet begun and, as regarded the second part, he must await progress of the necessary Bill, which was now before the House.

Sir Kingsley Wood asked the Minister of Health if he could state the total amount paid by Exchequer subsidy towards the cost of slum clearance since May last.

Mr. Greenwood said that the amount of Exchequer subsidy paid by his department in connection with slum clearance schemes since June 1 last to the present date was £54,345.

Viscountess Astor asked the Minister of Health if he would state the number of houses completed under all Housing Acts during the last quarters of 1928 and 1929, respectively.

Mr. Greenwood said the following statement gave the desired particulars :

Quarter ended	Number of State-assisted Houses completed during the quarter in England and Wales under the		
	Housing, Town Planning, etc., Act, 1919.	Housing etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.
Dec. 31, 1928 ..	—	14,197	12,661
Dec. 31, 1929 ..	14	—	14,507

In reply to Mr. McKinley, Mr. Greenwood said the following table showed the average cost per superficial foot of non-parlour and parlour houses included in contracts let by or in direct labour schemes of local authorities in England and Wales during each of various years in question:

Year.	Non-Parlour Houses.	Parlour Houses.
	s. d.	s. d.
1923	9 3	8 9¼
1924	10 4¼	10 4
1925	10 11¼	10 9
1926	10 11½	10 10½
1927	10 8	10 6
1928	9 5¾	9 5½

Mr. Greenwood gave the following statement, in reply to Mr. Raynes, showing the average cost of non-parlour and parlour houses included in contracts let by and in approved direct labour schemes of Local Authorities in England and Wales during each of the three years ended December 31, 1929 :

Year ended Dec. 31.	Non-Parlour Houses.		Parlour Houses.	
	By Contract.	By Direct Labour.	By Contract.	By Direct Labour.
	£	£	£	£
1927	412	443	482	482
1928	359	388	427	456
1929	344	356	405	435

Lord Fermoy asked the Minister of Health if he would state the number of applications he had received, both in respect of urban and rural housing, since the increase of the housing subsidy; and how this total compared with the applications received for each of the six preceding periods.

Mr. Greenwood said the level of the housing subsidy had not been increased since August, 1924. He was not clear, therefore, for what periods the figures mentioned in the latter part of the question were desired. The number of houses authorized in England and Wales, under the Acts of 1923 and 1924 during the half-year ended December 31 last and the six preceding half-years were shown in the following table :

Half-year ended	Number of Houses authorized during the half-year under the		Number of Houses (included in preceding columns) authorized for rural districts.	
	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.
December 31, 1926	40,825	34,707	11,215	4,523
June 30, 1927	38,599	34,111	11,780	4,568
December 31, 1927	24,413	26,273	6,394	2,299
June 30, 1928	21,806	18,931	4,764	1,805
December 31, 1928	25,368	26,068	5,868	3,000
June 30, 1929	26,514	29,774	4,805	4,019
December 31, 1929	2,699*	28,097	451*	3,248

* Authorized during the three months ended September 30, 1929.

Viscountess Astor asked the Minister of Health if he would state what was the estimate showing the number of houses built by 100 men in a year, published by the Building Research Board in April, 1922; and what was their estimate for the output of the building trade operatives in 1929.

Mr. Greenwood said the results contained in the Report referred to were based on an estimate that 1.45 men were required to build one house per annum, or 100 men per 69 houses. This estimate was derived from a special investigation of certain schemes. No comparable data relating to recent schemes were available.

Viscountess Astor asked the Minister of Labour if she would state the number of registered bricklayers, masons, plasterers, plumbers, and slaters employed and unemployed for the last quarters of the years 1928 and 1929 respectively.

Miss Bondfield said that statistics of the numbers actually in employment in the periods specified were not available, but the following table gave the estimated numbers of insured persons in the occupations in question, classified as belonging to the building industry in Great Britain at July of 1928 and 1929 and the numbers of such persons recorded as unemployed in the last quarter of each of those years :

BUILDING INDUSTRY—GREAT BRITAIN.

Occupation.	1928.				1929.			
	Estimated Nos. insured in July.	Numbers recorded as unemployed.			Estimated Nos. insured in July.	Numbers recorded as unemployed.		
		Oct. 22.	Nov. 26.	Dec. 17.		Oct. 21.	Nov. 25.	Dec. 16.
Bricklayers ..	72,810	5,809	6,380	6,656	74,630	7,250	9,155	9,089
Masons ..	21,640	1,944	2,138	2,304	21,960	1,468	2,351	2,466
Plasterers ..	22,880	2,355	2,672	2,941	23,840	2,592	4,139	4,700
Plumbers ..	32,070	2,563	3,020	2,620	32,910	2,504	2,705	2,878
Slaters	5,860	588	515	470	6,220	718	799	665

Sir Philip Richardson asked the Minister of Transport whether his attention had been drawn to the excessive vibration caused by heavy motor vehicles and the serious damage occasioned to properties adjoining roads; and, if so, what steps he proposed to take to minimize this damage and consequent loss to householders.

Mr. Morrison said that complaints had been made to him from time to time on this subject. There was reason to hope that the vibration caused by heavy traffic would diminish owing to the improvements which were continuously being made both in road surfaces and in the design and construction of heavy vehicles. Encouragement was given to the equipment of the heavier types of vehicles with pneumatic tyres by a substantial rebate in taxation.

Major Graham Pole asked the First Commissioner of Works whether it was his intention to accept an offer to defray the cost of erecting a permanent carillon of bells in Hyde Park.

Mr. Lansbury said he had this matter under consideration at present, but the question of an appropriate site in Hyde Park was one that was not free from difficulties. He was therefore carefully considering the question before making a decision.

Mr. Lovat-Fraser asked the First Commissioner of Works if he was aware that the fabric of a house in Chedworth, in the Cotswolds, was about to be removed to the United States of America; and if he would consider the desirability of introducing legislation to stop this process.

Mr. Lansbury said he was advised that this was not a suitable case for intervention under the Ancient Monuments Act, which does, in fact, give the Commissioners of Works power to protect buildings not in actual occupation as dwelling-houses. He did not consider that further legislation on this point was needed at present.

Mr. Lansbury informed Sir W. Davison that the total number of buildings which were in course of erection by the Office of Works during the year 1929 was 245. The total estimated cost of these buildings was approximately £6,700,000.

SOCIETIES AND INSTITUTIONS

WEST YORKSHIRE SOCIETY OF ARCHITECTS

A students' evening was held on Thursday last at the Leeds headquarters of the above society, with the following subject for debate: "That the Architectural Beauties of England be Preserved."

Mr. E. J. Sterry, opening in the affirmative, said that it was as much a question of preserving beauty in the new work which was going on, as in conserving the charm of the older buildings. Much of the prevailing vandalism was due to the present easy means of transport, new landowners, and a lack of settled schemes of rural planning. The only way to combat disfigurement was by education and co-operation.

In taking the negative side, Mr. G. B. Stickney remarked that the architect and student thought that because they liked certain buildings, they should be preserved, which seemed selfish reasoning. They found that the average person did not agree with their idea of beauty, and was not ravished at the sight of Doric columns. Did we wish to preserve dead architecture in the way that the Egyptians mummified their relatives? Architects should strive to create the new rather than trouble to preserve the old.

Mr. G. H. Foggitt, president, said that ideas of beauty changed, but he thought that a sense of the beautiful was more inherent in those who had been brought up in like surroundings. These had an enormous start over others less fortunate.

Mr. Norman Culley remarked that they were trying to turn Epstein's "Night" into "Morning" by means of flood-lighting. A sense of the beautiful lay dormant in every one, and it was part of an architect's duty to evoke and sustain that faculty.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE ASSOCIATION OF ARCHITECTS

A dinner arranged by the Northamptonshire Committee of the above society was held at Northampton. About fifty members and friends were present. The President, Mr. R. J. Williams, F.R.I.B.A., occupied the chair.

Mr. C. Malone, M.P., in proposing "The Royal Institute of British Architects," referred to the antiquity of the profession of the architect, and then went on to say that they were badly in need of good architects at Westminster. The Parliament buildings were crumbling away; some attributed it to the atmosphere outside, but others suggested it was the hot air inside. Whatever the cause might be, something like two or three million pounds would have to be spent upon the restoration of the buildings. He would like to see them rebuilt on more modern and business-like lines.

Mr. Ian MacAlister, M.A., in reply, said that for some time the idea had been growing that their profession should have statutory regulation and organization. He hoped that if they had anything like luck in the ballot at the House of Commons, their Bill would soon become law. The speaker went on to say that they had been suddenly threatened with a quarrel in London with the Institute of Builders, who were opposing the Architects' Registration Bill on certain theoretical grounds, and also because they complained of the failure to settle the "Form of Contract" problem. He felt convinced that the question would not be settled by a public quarrel, which would be a waste of time and energy, but by businesslike men negotiating round a table.

PRIZE-GIVING AT CARDIFF

The South Wales Institute of Architects, Central (Cardiff) Branch, and the Welsh School of Architecture, Technical College, Cardiff, held their prize distribution on February 6 at the college. The chair was taken by Mr. T. Alwyn Lloyd, F.R.I.B.A., President of the South Wales Institute of Architects. An address on the work of the school was given by Mr. W. S. Purchon, M.A., A.R.I.B.A., Head of the School. The prizes were presented by the Lord Mayor of Cardiff, Alderman William Charles, J.P.

During the session 1928–29 the following successes were gained by students in the School of Architecture, in addition to the prizes, diplomas and certificates presented that evening:

Rome Scholarship in Architecture (value £250 per annum for three years): James B. Wride.

R.I.B.A. Prize Competitions: Archibald Dawnay Scholarship (value £50 per annum for two years): John P. Ward.

Soane Medallion for Design, Finalist: Cyril J. Bartlett.

The Dovey Scholarship (value £75): Cyril J. Bartlett.

The following students, having obtained the Diploma of the School, subsequently passed the Professional Practice Examination of the R.I.B.A. qualifying for Associateship: Cyril J. Bartlett; Arthur E. Jewell.

The following student has passed the Intermediate Examination of the R.I.B.A.: Lister P. Rees.

The following prizes were presented during the evening:

Welsh School of Architecture Prizes

The Lord Mayor's prize for third-year students (£2 2s.), presented by Mr. W. R. Williams: William H. Maton.

President's prize for first-year students (£3 3s.), presented by Mr. T. Alwyn Lloyd, F.R.I.B.A.: Herbt. J. W. Lewis.

Second prize (for first-year work), presented by the Head of the School, Frederic G. Allen.

The Working Drawings prize (£2 2s.), presented by Mr. Ivor Jones, A.R.I.B.A. : Percy G. Budgen.

The prize for fifth-year Theses (£2 2s.), presented by Mr. T. Alwyn Lloyd, F.R.I.B.A. : Equal, Olwen M. E. Price and Cyril J. Bartlett.

The Architectural Sketching prizes (£1 11s. 6d. and 10s. 6d.), presented by Mr. H. Teather, F.R.I.B.A. : 1st, Norman D. Ayres; 2nd, Wm. J. Davies.

The Essay prize (£2 2s.), presented by the Architectural Press, Ltd. : Leonard F. Richards.

The Architectural Construction prize (£2 2s.), presented by Mr. H. Budgen, F.R.I.B.A. : Clifford Rosser.

The Batsford prize for Architectural History and Theory of Design (£2 2s.), presented by Messrs. B. T. Batsford, Ltd. : Hubert J. Hughes.

The Sketch Design prize (£2 2s.), presented by Mr. E. C. M. Willmott, A.R.I.B.A. : Equal, Cyril J. Bartlett and Olwen M. E. Price.

Certificate in Architecture (carrying with it exemption from the R.I.B.A. Intermediate Examination) : John T. Banks, Ronald Barraud, Hubert J. Hughes, William H. Maton, Ivor F. B. Richards, Clifford Rosser, John P. Ward.

Diploma in Architecture (carrying) with it exemption from the R.I.B.A. Final Examination, with the exception of the subject of Professional Practice : Cyril J. Bartlett (with distinction), Percy G. Budgen, Arthur E. Jewell.

The South Wales Institute of Architects, Central (Cardiff) Branch Prizes.

Design, second year (£2 2s.) : Norman D. Ayres.

Design, third year (£3 3s.) : Clifford Rosser.

Design, fourth year (£4 4s.) : Carl A. E. Thatcher.

Design, fifth year (£5 5s.) : Cyril J. Bartlett.

Measured Drawings (£5 5s.) : John T. Darch.

R.I.B.A. NEW MEMBERS

At the last general meeting of the R.I.B.A., the following members were elected :

As Hon. Fellow.

Llewellyn, Sir William, K.C.V.O., P.R.A.

As Hon. Associate.

Blount, Colonel Edward Augustine, C.B.E., F.S.I.

As Fellows (10).

Archer, H. D.	Adamson, J. R.
Burnett, P. V.	Bird, H. R.
Eprile, C. J.	Ogden, C. C.
Fitzgerald, G. E.	Scott, W.
Haseldine, C. F. W.	Lake, G. F.

As Associates (7).

Bayne, O. A.	Highet, G. I. C.
Chaplin, S. G.	Hirst, W.
Heath, C. P.	Peskett, H. M.

Whittingham, A. B., M.A.(CANTAB.)

THE THERMAE OF ROME

Sir Banister Fletcher, P.R.I.B.A., lecturing at the Central School of Arts and Crafts, described the construction and equipment of the great Roman Thermae. These gigantic thermal establishments, he said, showed those old Romans as past masters in matters of water supply, central heating and complicated planning. They were designed to minister to the pleasure needs of a population that emperors sought to placate, and these magnificent buildings, set in their park-like enclosure, were the last word in luxurious living.

Buildings designed to meet such varied requirements, the lecturer explained, involved a fresh development in architectural planning, and they could only be carried out by using slaves for labour and concrete for material.

SCOTTISH CASTLES

Although there were no actual Norman castles in Scotland, they undoubtedly formed the model for such as were built in the reigns of Alexander I and David I, and recalled the larger castles of France and England, such as the Chateau Gaillard Loches, Conway and Carnarvon, said Mrs. E. M. B. Hughes in a lecture on "Scottish Castles," delivered before the West Yorkshire Society of Architects.

As an example of a castle of that period, Bothwell, Lanarkshire, was not only one of the finest (said the lecturer), but one of the most extensive in existence. In Stirling Castle there were very distinct traces of a connection with France, and particularly in the influence of Italian workmen from Fontainebleau.

The above sketch has been drawn by a reader, and is his conception of some of the principal characters in the Jago v. Swillerton and Toomer arbitration case.

CORRESPONDENCE

AN APPRECIATION OF KARSHISH

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—I should like to say how very much I enjoy Karshish's contributions to your excellent paper. Besides being amazingly amusing, because all the characters are so very human and come to life in an extraordinary way, they are very instructive, especially to a probationer, like myself, at the very beginning of the profession.

The latest addition in the case, *Jago v. Swillerton and Toomer*, Mr. Randegger, was a perfect joy, and his verbal duel with Mr. Chawlegger a thing to be read and enjoyed over again and again. I could not resist the temptation to sketch roughly some of the characters, as they appear to me, and humbly submit my ideas to you.

ALASTAIR GRARER

A NORMAN SHAW BUILDING

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—I am sure that all will agree with Mr. Nathaniel Lloyd in his appreciation of the work and influence of Norman Shaw, but in the course of the development of his art I believe Shaw must have looked back with regret on such a building as that in Farnham; and I believe if he were alive today he would not wish his memory to be perpetuated by a building of this kind, which has nothing to recommend it but the name of its designer.

I think, therefore, the directors of Lloyds Bank will do no harm to the memory of Norman Shaw if they pull it down. In that case we may hope to see it replaced by a building which modestly takes its place by the side of its Georgian neighbours without putting them to the blush by any display of classic grandeur. In this connection I may refer to that excellent measured drawing of a street in Hatfield illustrated in THE ARCHITECTS' JOURNAL for January 29 last.

This seemed to me the perfect model for street architecture. Each house in it maintains its individuality and yet preserves a friendly and harmonious relationship with its neighbours, and to my mind this quality of relative harmony is much more important than any outstanding intrinsic qualities of the individual building.

M. H. BAILLIE SCOTT

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents, and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full published specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, London, W.C.2. The price is 1s. each.

LATEST PATENT APPLICATIONS

2,042. Lyne, R. J. Determining position and dimensions of buildings. January 21.

2,021. Parsons, J. Slabs for floors, pavements, etc. January 21.

SPECIFICATIONS PUBLISHED

324,087. Bates, H. K. Reinforced concrete floors for buildings and the like.

324,174. Gay, G. Means for securing roofing slates.

324,184. Tabanou, J. Building block.

THE ARCHITECTS' DIARY

WEDNESDAY, FEBRUARY 12

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. "Roman Architecture." By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Ordinary Meeting. "Colour Determination in the Fashion Trades." By B. Holbrook Jackson. The Rt. Hon. Lord Ebury, D.S.O., M.C., will preside. **8 p.m.**

INSTITUTION OF CIVIL ENGINEERS, Great George Street, S.W.1. Informal Meeting. "The Influence of the Progress of Aeronautical Engineering on other Branches of Engineering Work." By L. A. Legross, O.B.E., M.INST.C.E. Sir John Thornycroft, K.B.E., will preside. **6 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. Visit to Messrs. Doulton's, Ltd., Porcelain Insulator Factory, Lambeth. **2.30 p.m.**

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Annual General Meeting at the Holborn Restaurant (Caledonian Room), W.C.1. "Half a Century of Boiler Making." By Sam Fox. **2.30 p.m.**

THURSDAY, FEBRUARY 13

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Print Making and Collecting." By W. M. Keesey, M.C., A.R.I.B.A., A.R.C.A., A.R.E. **7 p.m.**

SHEFFIELD UNIVERSITY. Second of a course of three lectures on "The Acoustics of Buildings." By M. H. Evans. (Lantern Illustrations.) **6 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Welding." By Major James Caldwell, M.INST.C.E. **6.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Ordinary Meeting. "The Jet Wave Reflector: the Experimental and Theoretical Basis of its Design." By Dr. J. Hartmann. (To be illustrated by a Cinematograph Film.) **6 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Early Italian Engravings." By Professor A. M. Hind, O.B.E., F.S.A. **5.30 p.m.**

FRIDAY, FEBRUARY 14

TOWN PLANNING INSTITUTE, General Meeting at the Caxton Hall, Caxton Street, Westminster, S.W.1. "The Systematic Treatment of Road Signs." By H. V. Lanchester, F.R.I.B.A.

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. At the Chamber of Commerce Buildings, New Street, Birmingham. Discussion on "Bracing for Wind and Vibratory Forces" to be opened by W. Smith. **7 p.m.**

SATURDAY, FEBRUARY 15

Sunrise, 6.16 a.m. Sunset, 6.3 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, 12 Russell Square, W.C.1. Visit to the Home Office Industrial Museum, Horseferry Road, Westminster, S.W.1. Meet at entrance. **2.15 p.m.**

MONDAY, FEBRUARY 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting. "The Thames Valley Preservation Scheme." By Professor Patrick Abercrombie, M.A., F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture I.) **8 p.m.**

TUESDAY, FEBRUARY 18

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Second of a course of three lectures on Electrical Transmission by Overhead Lines. (2) "Electrical Characteristics of Lines, Resistance, Inductants, Capacitance, Effects of Atmospheric Conditions on Insulation." By Charles W. Marshall, B.SC., M.I.E.E. 5.30 p.m. Faculty of Arts. Fifth of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) **5.30 p.m.**

ILLUMINATING ENGINEERING SOCIETY, 32 Victoria Street, S.W.1. General Discussion on "Problems in Illuminating Engineering." Light refreshments at 6.30 p.m. **7 p.m.**

LONDON MASTER ASPHALTERS ASSOCIATION, 40 Broadway, S.W.1. Tenth Annual Dinner at the Restaurant Frascati, Oxford Street, W.1. 6.30 for 7 p.m. **6.30 p.m.**

WEDNESDAY, FEBRUARY 19

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. Cantor Lecture, "Alfred Stevens: Architect-Sculptor-Painter." **8 p.m.**

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Honan Night. "Modern Architecture of Sweden." By B. B. Lewis.

THURSDAY, FEBRUARY 20

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate: "That under the present system of Competitions in England, the progress of Architecture is being retarded." Affirmative, J. G. Sidebottom. Negative, T. F. Firth. **7 p.m.**

SHEFFIELD UNIVERSITY. Last of a course of three lectures on "The Acoustics of Buildings." By M. H Evans. (Lantern Illustrations.) **6 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "The Ancient Guilds and their Halls." By Allen B. Walker. (Lantern Illustrations.) **7.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Furniture." By H. Clifford-Smith, F.S.A. **5.30 p.m.**

FRIDAY, FEBRUARY 21

LONDON SOCIETY. At the Royal Society of Arts, John Street, Adelphi, W.C.2. "The Royal Observatory, Greenwich." By Sir Frank Dyson, Astronomer Royal. **5 p.m.**

UNIVERSITY OF LONDON, UNIVERSITY COLLEGE, Gower Street, W.C.1. "The Infirmary of the Mediæval Monastery, with special reference to the Abbey of Westminster." By Professor Percy Flemming, F.R.C.S. (Lantern Illustrations.) **5.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. "Paper Insulated Power Cables." By S. H. Hart. **6.15 p.m.**

SATURDAY, FEBRUARY 22

Sunrise, 6.0 a.m. Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Fourth of a Series of Six Non-Technical Lectures on Present-Day Architecture. "Decoration and Furnishing." By G. G. Wornum, F.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Foyle's New Bookshop, 121 Charing Cross Road, W.C.2. **3 p.m.**

MONDAY, FEBRUARY 24

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Designing for the Film." By Lawrence Irving. 8 p.m. Exhibition of Film Settings (until March 22). **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture II.) **8 p.m.**

TUESDAY, FEBRUARY 25

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the Bishopsgate Institute, Bishopsgate, E.C.2. **3 p.m.**

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Last of a course of three lectures on Electrical Transmission by Overhead Lines. (3) "Typical Transmission Lines in use in Great Britain: Characteristic Features of Low, Medium and High Voltage Construction." By Charles W. Marshall, B.S.C., M.I.E.E. 5.30 p.m. Faculty of Arts. Sixth of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) 5.30 p.m. **5.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. North-Eastern Centre. At the Hotel Metropole, King Street, Leeds. "The Breaking Performance of High-Power Switchgear and of a New Form of Quenched-Arc Switch." By L. C. Grant. **7 p.m.**

THURSDAY, FEBRUARY 27

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Social Life and Art in France during the Eighteenth Century." By Professor A. E. Richardson, F.R.I.B.A., F.S.A. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Ferro-Concrete Cooling Towers." By T. J. Grueritte. **6.30 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Timber Architecture in Old Houses and Churches." By Philip M. Johnson, F.S.A., F.R.I.B.A. (Lantern Illustrations.) **7.30 p.m.**

FRIDAY, FEBRUARY 28

R.I.B.A., 9 Conduit Street, W.1. London Architecture Medal, 1929. Latest date for submission of nominations.

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. Ordinary Meeting. At the Chamber of Commerce Buildings, New Street, Birmingham, "Types of Movable Bridges." By J. D. Vaughan M.SC., A.M.INST.C.E. **6.30 p.m.**

ACCRINGTON COMPETITION. Latest date for submission of designs for the New Police and Fire Stations.

SATURDAY, MARCH 1

Sunrise, 6.47 a.m. Sunset, 5.39 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, Manchester and District Branch. Visit to the Manchester Newspaper Works and Offices (Time will be announced later.)

MONDAY, MARCH 3

R.I.B.A., 9 Conduit Street, W.1. General Meeting, "The Design of Modern Railway Stations in Europe and America." By Frank Pick. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2 Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture III.) **8 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, South Midland Centre. At the University, Edmund Street, Birmingham. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. Also, "The Heat Pump—An Economical Method of Producing Low-Grade Heat from Electricity." By T. G. N. Haldane, M.A. **7 p.m.**

TUESDAY, MARCH 4

KING'S COLLEGE, Strand, W.C.2. Faculty of Arts. Seventh of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) **5.30 p.m.**

WEDNESDAY, MARCH 5

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Paper by L.A.P.A. **8 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, Lancashire and Cheshire Branch. At the College of Technology, Manchester. Ordinary Meeting. "The Ford Factory, Dagenham." By Major E. H. Heathcote, M.A.(CANTAB.), F.R.I.B.A., A.M.INST.C.E., A.M.I.MECH.E. **7 p.m.**

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Swedenborg Hall, 20 Hart Street, Bloomsbury, W.C.1. Discussion on "The Space Required for Central Station Equipment." **7 p.m.**

THURSDAY, MARCH 6

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting: Nomination of Officers. "Classic Forms and English Geology." By Hope Bagenal, D.C.M., A.R.I.B.A. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Plywood: Its Influence on Modern Furniture Design." By Percy A. Wells. (Lantern Illustrations.) **7.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. Annual Dinner at the Florence Restaurant, Rupert Street, W.1. 7.15 for 7.30 p.m. **7.15 p.m.**

SATURDAY, MARCH 8

Sunrise, 6.32 a.m. Sunset, 5.51 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Old and New Architecture." By the Hon. Humphrey Pakington, A.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

MONDAY, MARCH 10

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, Southwark, S.E.1. "Some District Heating Systems." By L. J. Fowler, B.A. Light Refreshments at 6.30 p.m. **7 p.m.**

WEDNESDAY, MARCH 11

KING'S COLLEGE, Strand, W.C.2. Faculty of Arts. Eighth of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. **5.30 p.m.**

THURSDAY, MARCH 13

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate on "Is the Skyscraper Architecture?" Affirmative, D. B. Smith. Negative, G. L. Crowther. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Walnut and Mahogany Furniture from 1710 to 1750." By Herbert Cescinsky. **7.30 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Pyramid Building Problems: Manpower Organization in the Pyramid Age." By D. Davidson, F.R.S.A. **6.30 p.m.**

SATURDAY, MARCH 15

Sunrise, 6.16 a.m. Sunset, 6.3 p.m.

MONDAY, MARCH 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting. Presentation of the Royal Gold Medal. **8.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Discussion on "High Tension Sub-station Control Gear." To be opened by A. F. Harmer. **7 p.m.**

TUESDAY, MARCH 18

KING'S COLLEGE, Strand, W.C.2. Faculty of Arts, Last of a course of nine public lectures on "Italian Paintings." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) **5.30 p.m.**

ILLUMINATING ENGINEERING SOCIETY. Paper on "The Lighting of a Large Liner." Light Refreshments at 6.30 p.m. **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, North Eastern Centre. At the Engineers' Club, 17 Albert Square, Manchester. "Voltage Control of Large Alternators." By H. W. Taylor. **7 p.m.**

WEDNESDAY, MARCH 19

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Design in Town Planning." By Dr. Raymond Unwin, F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Ordinary Meeting. "The Portrait in Later Monumental Sculpture." By K. B. ESDAILE (Mrs.). **8 p.m.**

THURSDAY, MARCH 20

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. Election of Officers. "Mainly About Germany." By Howard Robertson, F.R.I.B.A., S.A.D.G. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.C.2. "London in the Middle Ages." By D. Martin Roberts, M.A. (Lantern Illustrations.) **7.30 p.m.**

FRIDAY, MARCH 21

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Annual Meeting at the Royal Institute Galleries, Piccadilly, W.1.

SATURDAY, MARCH 22

Sunrise, 6 a.m Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Houses at Home and Abroad." By Oswald P. Milne, F.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. Visit to the Post Office (London) Railway, Mount Pleasant, N.W. **4 p.m.**

TRADE NOTES

The accompanying illustration shows the large extension which has just been made from the designs of Mr. T. Burditt to the factory of Messrs. Horlick's Malted Milk Co., Ltd., at Slough. The extension has a steel framework, and is built with Phorpres Cellular Flettons. Following is a résumé of a letter received by Messrs. London Brick Co. and Forders, Ltd., the manufacturers of the bricks, from Messrs. Horlick's Malted Milk Co., Ltd., the owners of the building. It is signed by Mr. O. P. Horlick, director. "We think you will be interested to learn of the considerations which prompted our use of your Phorpres Cellular Flettons in the imposing extension to our works at Slough. Our architect and contractors were of the opinion that your bricks would improve the insulation of sound, heat and moisture without decreasing the strength of the building. Our works, situated as they are within a 'disturbance' distance of the railway line, require, in the interests of our workers, that we should ensure an adequate insulation from noise; your bricks, our architect feels, are ideal in this respect, and they certainly give that dryness and evenness of temperature so essential to the production of our malted milk. Furthermore, we find their lightness makes them quicker and easier to handle. We are glad to intimate that in our opinion the decision was a wise one."

The enormous weight of big modern buildings has provoked a great deal of discussion. It is agreed that the traffic conditions of today—and of the future—demand buildings of exceptional strength, which possess a wide margin of safety. But in obtaining this necessary strength by sheer bulk, much of the strength—too much, it is felt—is absorbed in carrying the huge dead weight of the building, thus reducing the reserve strength to a minimum.

Since brickwork supplies the greatest proportion of dead weight in a building, it was logical to approach the problem from this direction. It was essential, however, that, in lessening weight, there should be no loss of strength. This formidable problem was tackled by the London Brick Co. and Forders, Ltd., and the new brick, a development of their Phorpres Flettons, produced. Phorpres Cellular Flettons are 23 per cent. lighter in weight (1,000 $2\frac{5}{8}$ normal Flettons = 2 tons 9 cwt.; 1,000 $2\frac{5}{8}$ Cellular Flettons = 1 ton $16\frac{1}{2}$ cwt.), yet they possess the structural strength of an ordinary Fletton brick. Crushing load of Cellular Flettons = 22·2 tons per ft. run. Modulus of elasticity (to 40 tons) = 0·59 × 10 lb. sq. in.

This means, speaking approximately, that a five-stories building built of Phorpres Cellular Flettons weighs no more than four stories built with ordinary bricks. In the case of buildings of the same size using steel-brick-stone construction, if the normal amount of steelwork is employed, less of its strength is absorbed in supporting these lighter weight bricks, and a much greater reserve of strength is left to withstand the vibration set up by modern traffic.

A further advantage of Cellular Flettons is the sealed multi-cellular construction which they give in practice. This means better insulation of heat, sound, and moisture—an important advantage both to the city building and the suburban villa. Heat transmission is reduced from ·000095 gram calories per sec. per sq. cm. per 1°C. to ·00008 = 16 per cent.; sound transmission to ½ as against solid bricks. Porosity and absorption effects have all been reduced owing to the decreased maxima.

Phorpres Cellular Flettons are R.I.B.A. standard in size and are handled as ordinary bricks. They are not to be confused with cavity bricks or tiles. Their cost is only a fraction more than ordinary Flettons—and this cost, it is claimed, is more than covered by the advantages and economies permitted. The bricks have been tested by the Building Research Station of the Department of Scientific and Industrial Research and the National Physical Laboratory. H. B.

Extension to factory for Messrs. Horlick's Malted Milk Co., Ltd., Slough. Designed by T. Burditt. It is built of Phorpres Cellular Flettons and steel.

On Friday last the Nettleson Players, comprising members of various branches of the staff of Messrs. Nettlefold and Sons, Limited, presented *Tilly of Bloomsbury*, a comedy in three acts, at the Kings Hall, Caroline Street, W.C. The whole cast of sixteen players performed exceptionally well, and although it is unfair to single out anyone for special praise, it should be mentioned that Miss Madge Breed, who played Tilly, was a brilliant success. This was the second play given by the same players in the Kings Hall during recent months.

THE BUILDINGS ILLUSTRATED

Mr. Walter Gilbert carried out the whole of the electrical fittings in the principal rooms of Royal London House, illustrated in our last issue, including the directors' and committee-rooms, boardroom, entrance vestibule, halls (main, lower and rear) and corridors on all floors. Among the sub-contractors for the building, other than those mentioned last week, were the following: Engineering Works (Electrical and General), Ltd., other electric fittings; Frederick Tibbenham, Ltd., furniture in directors' room; J. P. White and Son, Ltd., panelling; Roneo, Ltd., office furniture.

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

Artillery House, Westminster, S.W. (pages 268, 271-274). General contractors, John Knox and Dyke, Ltd. Sub-contractors: Natural Rock Asphalte, Ltd., asphalt; London Brick Co. and Forders, Ltd., and Wiggins, Sankey & Co., Ltd., bricks; Stuart's Granolithic Co., Ltd., artificial stone; Leeds Fireclay Co., Ltd., faience and sanitary fittings; Redpath, Brown & Co., Ltd., structural steel; Pilkington Bros., Ltd., glass; Mellowes & Co., Ltd., patent glazing; Sulzer Bros., Ltd., central heating; G. E. Taylor & Co., Ltd., electric wiring, electric light fixtures and electric heating; Smeaton and Sons, Ltd., plumbing; Brookes, Ltd., stairtreads; Nettlefold and Sons, Ltd., door furniture; Crittall Manufacturing Co., Ltd., casements and window furniture; Express Lift Co., Ltd., lifts.

Library at the Polytechnic, W.1 (page 284). General contractors: Messrs. Bovis, Ltd. Sub-contractors: B. W. Blindell, oak joinery; F. De Jong & Co., fibrous plaster; Robinson Bros., Ltd., cork flooring; Mortimer and Gall, electric wiring; S. Mulliner, Ltd., heating; Howard Bros., electric light fittings.

Garage, Lewisham Hospital (page 299). General contractor: Albert Monk. Sub-contractors: The Trussed Concrete Steel Co., Ltd., reinforced concrete engineers, reinforced concrete; Tyler, Freeman and Minett, central heating; G. Taylor & Co., electric wiring; Haskins, revolving doors.

THE WEEK'S BUILDING NEWS

LONDON AND DISTRICTS

The BARKING U.D.C. has given directions for the architect and medical officer of health to prepare a layout of the isolation hospital on a new site, and at the same time to report as to the erection of a maternity hospital and clinic, etc., on the existing hospital site.

Plans passed by the CAMBERWELL B.C.: Shops, Linden Grove, for Mr. H. W. Cash; garages, Kerfield Place, for Mr. G. Trotman; house, College Road, for Mr. F. A. Llewellyn; shops, Park Road and Croxted Road, for Mr. A. W. T. Richards.

The L.C.C. is to proceed with the erection of tenements at Comber estate, Camberwell, cost £162,000; Holland estate, Stepney, cost £44,000; Highes Field estate, Deptford, cost £243,000; Wapping estate, Stepney, cost £187,000; and Whitmore estate, Hoxton, cost £234,000.

The FINCHLEY Education Committee is to prepare plans for the proposed new school on the Summers Lane site.

Plans passed by the FINCHLEY U.D.C.: Eight houses, junction of Naylor Road and Hayward Road, for Messrs. A. J. Harris and Sons; additions, Kensit Memorial College, Hendon Lane, for Mr. J. A. Kensit; workshop and office, Arcadia Avenue, Limes estate, for Messrs. Compton Bros.; two shops, Great North Road, Whetstone, for Messrs. C. F. Day, Ltd.; two houses, Hill Top, for Mr. G. Ramsbotham; twelve houses, Ossulton Way, for Mr. H. Lawrance; two houses, Addington Drive, for Mr. V. C. Smith; four houses, South Crescent, for Messrs. Rainbird and Scarfe; additions to hospital, Bow Lane, for Finchley Memorial Hospital; new road and sewers, Hampstead Garden Suburb, for Co-Partnership Tenants, Ltd.; additions, Belgrave tavern, High Street, for Messrs. Hoare & Co.; four houses, Templars Crescent, for Mr. A. Ibbetson.

The ILFORD Corporation has approved plans of the proposed town hall extensions at a cost of £61,581.

The ILFORD Corporation is to acquire twelve acres of land in Fencepiece Road, and is to invite tenders for the erection of 146 houses in accordance with the plans prepared by the borough engineer, at an estimated cost of £65,000.

Plans passed by the ILFORD Corporation: Thirty-two houses, Staines Road, for Messrs. E. Glenny and Son; ten houses, Windermere Gardens, for Mr. T. Anders; three houses, Parkway, for Messrs. J. W. Moore and Sons, Ltd.; four houses, Campbell Avenue, for Vernon Gordon & Co.; seven houses, Campbell Avenue, for Mr. W. Wakeling; additions to store, 118–122 High Road, for Messrs. F. W. Woolworth & Co.; two houses, Victoria Road, for Mr. J. Hook; fifteen houses, Horns Road, for Mr. J. W. Lohden; additions, St. Paul's church, Barley lane, for Messrs. Goddard and Sons; twenty-four houses, South Park Road, for Mr. C. Fryatt; additions for B.I.M., Ltd., Roden Street, for Messrs. Hammond and Miles; warehouse for Cakebread, Robey, Ltd., High Road, for Mr. G. E. Holditch; shops and flats, Ley Street, for Mr. W. J. Lewis; rebuilding "Beehive" public-house, Beehive Lane, for Mr. F. M. Kirby; twelve houses, South Park Crescent, for Mr. J. Aldridge; 104 houses, Loxford Lane estate, for Mr. T. B. Goodwin; four houses, Perrymans Farm Road, and eight houses, Hamilton Avenue, for Mr. A. G. Scholes.

The Middlesex Education Committee is to purchase a site at Church Lane, KINGSBURY, for the erection of an elementary school.

The trustees of the Borough Market, SOUTHWARK, are to reconstruct the market at a cost of £150,000.

The L.C.C. Improvements Committee has prepared an amended scheme for the improvement of the traffic conditions at the Elephant and Castle, SOUTHWARK, at a cost of £1,913,000.

The SOUTHWARK B.C. has under consideration a reconstruction scheme for an area in the vicinity of Lock Square.

The WIMBLEDON Corporation has approved the scheme for the extension of the library building.

Plans passed by the WIMBLEDON Corporation: Alterations to covered stand, All-England Lawn Tennis Ground, Church Road, for the Trussed Concrete Steel Co., Ltd.; alterations, Raynes Park cinema, Pepys Road, for Mr. R. Atkinson; three houses, Home Park Road, for Mr. G. Hazell; underground electricity sub-station, The Downs, for Mr. A. E. McKenzie; two houses, Wool Road, for Mr. A. J. Styles; bungalow, Holland Gardens, Cambridge Road, for Mr. T. Webster; two houses, Somerset Road, for Messrs. G. E. Wallis and Sons, Ltd.; four shops, Coombe Lane, for Mr. E. G. W. Souster.

SOUTHERN COUNTIES

Plans passed by the EASTBOURNE Corporation: Alterations, Feedwell restaurant, Seaside Road, for Mr. W. R. Hamblyn (architect); alterations, 175, 186 Seaside, and house, Baldwin Road, for Mr. A. Ford (architect), on behalf of Messrs. Baker, Sons and Hyde; house, Prideaux Road, for Mr. J. Bowley (architect); two houses, Dilligburgh Road, for Mr. A. J. Fellows (architect); alterations, 102 South Street, for Messrs. P. D. Stonham and Son (architects); pavilion, Gildredge Park, for the Upperton Lawn Tennis Club; conveniences, Seaside Baths, for the borough engineer; four houses, Chamberlain Road, for Messrs. W. Llewellyn and Sons; two houses, Neville Avenue, Hampden Park, for Mr. F. C. Benz (architect); fourteen houses, Kingston Road, kiosk, Beachy Head Hotel, riding school, Trinity Place, for Messrs. P. D. Stonham and Son (architects); two houses, Chamberlain and Milton Roads, for Messrs. Weller and Seymour; additions, Royal Marine Laundry, Winchelsea Road, for Mr. C. M. Wood (architect); alterations, 89 Terminus Road, for Mr. A. Ford (architect), on behalf of the Eastbourne Gas Co.; alterations, Baskerville Press, York Road, and alterations, 85 and 87 South Street, for Messrs. P. D. Stonham and Son (architects); alterations and additions, 156 Terminus Road, for Messrs. Cripps and Co.; sub-station, Avenue House, for the Eastbourne Corporation; ten houses, St. Anthony's Avenue, for Messrs. Scales and Baker (architects).

SOUTH-WESTERN COUNTIES

H.M. Office of Works is negotiating with the CHELTENHAM Corporation for a site for the erection of a labour exchange.

Plans passed by the CHELTENHAM Corporation: New road, off Naunton Lane, for Naunton Estates, Ltd.; additions, Bayshill Lawn, Parabola Road and Sidney Lodge, Overton Road, for the Ladies' College Council; house, Prestbury Road, for Mr. J. Allen; house, Tewkesbury Road, for Mr. T. H. Fleetham; office, Painswick Road, near Shurdington, for Messrs. Miles and Son; totalisators, indicator and garage, for the Cheltenham Racecourse Co.; two houses, Pilford Avenue, for Messrs. Bendall and Sons; two houses, Old Bath Road, for Mr. P. Witts; rebuilding, 95 Winchcomb Street, for Messrs. Marks and Spencer.

MIDLAND COUNTIES

The BIRMINGHAM Corporation is acquiring property in connection with a comprehensive scheme for the extension of the wholesale fruit and vegetable market, at a total estimated cost of £259,000.

The BIRMINGHAM Corporation has prepared plans for the erection of new baths at Kent Street, at a cost of £75,000.

Schemes have been prepared by the BIRMINGHAM Corporation for relief works, including roads, sewers, bridges, sewerage and river improvements, at a total cost of £2,092,000.

The Ministry of Health has sanctioned a loan of £325,000 for the BIRMINGHAM Corporation, for the reconstruction of gasworks.

Plans passed by the DUDLEY Corporation: House, Church Road, Netherton, for Mr. A. L. Golding; extensions to Park Council Schools, Nelson Road, for the Education Committee; alterations and extensions, Kesson's Charity School, Eve Hill, for the trustees; four houses, Church Road, Netherton, for Mr. H. Smart; boiler house, Birmingham Road, for the Station Garage Co., Ltd.

The Notts Education Committee is to erect a school for 500 at HARWORTH.

The Notts Education Committee is to erect new premises for the County School of Art, MANSFIELD, at a cost of £8,500.

The NOTTS Education Committee is to purchase Sutton Fields House and estate of thirty-five acres of land, for the provision of accommodation for mentally defective girls.

The RETFORD Corporation has prepared a scheme for extensions to the pumping plant and the sewage works.

NORTHERN COUNTIES

The BIRKENHEAD Education Committee is to enlarge the Temple Road, Hemingford Street and Brassey Street central schools.

The BIRKENHEAD Corporation Parks Committee has received sanction to borrow £13,874, for improvement works in the parks, cemetery and recreation grounds.

The Catholic authorities are to erect a public elementary R.C. school in Challis Street, BIRKENHEAD, for the accommodation of 350 junior and infant scholars.

Plans passed by the BOLTON Corporation: Extensions, Hill Mill, Temple Road, for Mr. Henry Crossley; sub-station, Delph Hill, Chorley Old Road, for the Electricity Committee; addition to filter house, Ferns Park, for the Waterworks Committee; extension to clubhouse, off Junction Road, for Deane Golf Club, Ltd.; extensions to offices and workshop, Blackburn Road, for Mr. Robert Mayoh; garage and recreation room, off Morris Green Lane, for Mr. James Scott; extension to dyehouse, Sunnyside Mills, for Messrs. Tootill, Broadhurst, Lee & Co., Ltd.; two houses, Old Kiln Lane, for Mr. A. S. Wood; five houses, Hedley Street, and six houses, Walker Avenue and Rishton Lane, for Mr. Wilfred Andrew; extension to pavilion, off Green Lane, for Bolton Cricket Club; alterations, Albion Inn, Moor Lane, for Leach's Brewery, Ltd.; extension to workshop, Arden Street, for Mr. James Kirkman; six houses, Walker Avenue, for Mr. Thomas Blakley; six houses, Kingwood Avenue, for Mr. A. S. Woods; extension to premises, Derby Street, for Bolton Savings Bank.

The Manchester Corporation is to erect a public washhouse at Herbert Street, CHEETHAM, at a cost of £12,640.

The CHESHIRE C.C. is promoting a Bill for the constitution of a Joint Sewerage Board, for undertaking sewerage works, at a cost of £868,850.

The CHESHIRE Joint Board for the Mentally Defective is to adapt Cranage Hall as a temporary institution for the reception of fifty-six defectives, at an estimated cost of £9,000.

Garage at Lewisham Hospital, S.E. Designed by Mathews, Son and Ridley. The building is of reinforced concrete. Central heating is installed.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour ;* NAVVY, 1s. 3½d. *per hour ;* TIMBERMAN, 1s. 5d. *per hour ;* SCAFFOLDER, 1s. 4½d. *per hour ;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day :

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
If left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1s. 3½d. *per hour ;* TIMBERMAN, 1s. 5d. *per hour ;* BRICKLAYER, 1s. 8½d. *per hour ;* PLUMBER, 1s. 8½d. *per hour ;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. *6 in., per ft.*	0	1	3
DO. *9 in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. *6 in., per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft. 0 4 3
DO. 6 in., per ft. 0 5 0
DO. 9 in., per ft. 0 7 9

CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0	8	3
DO. 6 in., per ft.	0	10	3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 8½d. *per hour ;* LABOURER, 1s. 3½d. *per hour ;* SCAFFOLDER, 1s. 4½d. *per hour.*

London stocks, per M.	£4	5	6
Flettons, per M.	2	12	6
White facing bricks, per M.	5	0	0
Multi-coloured facings, per M.	7	7	9
Best red facings, per M.	7	7	9
Rubbers, 9¼ in., per M.	12	0	6
Staffordshire blue, per M.	9	5	0

Glazed salt, white, and ivory stretchers, per M.	21	10	0
DO. *headers, per M.*	20	10	0
Colours, extra, per M.	5	10	0
Seconds, less, per M.	1	0	0
Cement and sand, see "Excavator" above.			
Lime, grey stone, per ton	£2	11	6
Mixed lime mortar, per yd.	1	6	0
Dampcourse, in rolls of 4½ in., per roll	0	2	6
DO. *9 in. per roll*	0	4	9
DO. *14 in. per roll*	0	7	6
DO. *18 in. per roll*	0	9	6
BRICKWORK in stone lime mortar, Flettons or equal, per rod	30	0	0
DO. in cement do., per rod	32	10	0

DO. in stocks, add 25 per cent. per rod.
DO. in blues, add 100 per cent. per rod.
DO. circular on plan, add 12½ per cent. per rod.
DO. in backing to masonry, add 12½ per cent. per rod.
DO. in raising on old walls, etc., add 12½ per cent. per rod.
DO. in underpinning, add 20 per cent. per rod.

HALF-BRICK walls in stocks in cement mortar (1–3), per ft. sup.	£0	1	0
BEDDING plates in cement mortar, per ft. run	0	0	3
BEDDING window or door frames, per ft. run	0	0	3
LEAVING chases 2½ in. deep for edges of concrete floors not exceeding 6 in. thick, per ft. run	0	0	2
CUTTING do. in old walls in cement, per ft. run	0	0	4
CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0	0	7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0	3	6
DO. 14 ft. by 9 in. do., per ft. run	0	6	0
FLAUNCHING chimney pots, each	0	2	0
CUTTING and pinning ends of timbers, etc., in cement	0	1	0
FACINGS fair, per ft. sup. extra	0	0	3
DO. picked stocks, per ft. sup. extra	0	0	7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0	4	9
DO. in salt white or ivory glazed, per ft. sup. extra	0	5	6
TUCK pointing, per ft. sup. extra	0	0	10
WEATHER pointing, do. do.	0	0	3
TILE creasing with cement fillet each side, per ft. run	0	0	6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0	5	0
DO. 1½ in., per yd. sup.	0	6	0
DO. 2 in., per yd. sup.	0	7	0
If coloured with red oxide, per yd. sup.	0	1	0
If finished with carborundum, per yd. sup.	0	0	6
If in small quantities in finishing to steps, etc., per ft. sup.	0	1	4
Jointing new grano. paving to old, per ft. run	0	0	4
Extra for dishing grano. or cement paving around gullies, each	0	1	6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup.	0	0	7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0	8	0
DO. vertical, per yd. sup.	0	11	0
SLATE DAMP COURSE, per ft. sup.	0	0	10
ASPHALT ROOFING (MASTIC) in two thicknesses, ¾ in., per yd.	0	8	6
DO. SKIRTING, 6 in.	0	0	11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0	5	3
DO. DO. 3 in.	0	6	6
BREEZE fixing bricks, extra for each	0	0	3

MASON

MASON, 1s. 8½d. *per hour ;* DO. *fixer,* 1s. 9½d. *per hour ;* LABOURER, 1s. 3½d. per hour; SCAFFOLDER, 1s. 4½d. *per hour.*

Portland Stone :			
Whitbed, per ft. cube	£0	4	6
Basebed, per ft. cube	0	4	9
Bath stone, per ft. cube	0	3	0
Usual trade extras for large blocks.			
York paving, av. 2½ in., per yd. super.	0	11	0
York templates sawn, per ft. cube	0	7	6
Slate shelves, rubbed, 1 in., per ft. sup.	0	2	6
Cement and sand, see "Excavator." etc., above.			
HOISTING and setting stone, per ft. cube	£0	2	2

DO. for every 10 ft. above 30 ft. add 15 per cent.

PLAIN face Portland basis, per ft. sup.	£0	2	8
DO. circular, per ft. sup.	0	4	0
SUNK FACE, per ft. sup.	0	3	9
DO. circular, per ft. sup.	0	4	10
JOINTS, arch, per ft. sup.	0	2	6
DO. sunk, per ft. sup.	0	2	7
DO. DO. circular, per ft. sup.	0	4	6
CIRCULAR-CIRCULAR work, per ft. sup.	1	2	0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0	1	1
DO. circular, do., per ft. run	0	1	4
HALF SAWING, per ft. sup.	0	1	0

Add to the foregoing prices, if in York stone, 35 per cent.
DO. Mansfield, 12½ per cent.
Deduct for Bath, 33⅓ per cent.
DO. for Chilmark, 5 per cent.

SETTING 1 in. slate shelving in cement, per ft. sup.	£0	0	6
RUBBED round nosing to do., per ft. lin.	£0	0	6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1	7	6
YORK SILLS, W. & T., ft. cub. fixed	1	10	0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0	1	3
DO. 2½ in. thick, per ft. sup.	0	1	6

SLATER AND TILER

SLATER, 1s. 8½d. *per hour ;* TILER, 1s. 8½d. *per hour ;* SCAFFOLDER, 1s. 4½d. *per hour ;* LABOURER, 1s. 3½d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200 :			
Portmadoc Ladies	£14	0	0
Countess	23	0	0
Duchess	32	10	0

Old Delabole	*Med. Grey*	*Med. Green*
24 in. × 12 in.	£42 11 3	£45 1 0
20 in. × 10 in.	31 4 3	33 0 6
16 in. × 10 in.	20 18 0	22 4 9
14 in. × 8 in.	12 1 0	12 16 3

Green Randoms, per ton	£8	3	9
Grey-green do., per ton	7	3	9
Green peggies, 12 in. to 8 in. long, per ton	5	13	9
In 4-ton truck loads, delivered Nine Elms station.			
Clips, lead, per lb.	£0	0	6
Clips, copper, per lb.	0	2	0
Nails, compo, per cwt.	1	6	0
Nails, copper, per lb.	0	2	2
Cement and sand, see "Excavator," etc., above.			
Hand-made tiles, per M.	£5	18	0
Machine-made tiles, per M.	5	8	0
Westmorland slates, large, per ton	9	0	0
DO. *Peggies, per ton*	7	5	0

SLATING, 3 in. lap, compo nails, Portmadoc or equal :

Ladies, per square	£4	0	0
Countess, per square	4	5	0
Duchess, per square	4	10	0
WESTMORLAND, in diminishing courses, per square	6	5	0
CORNISH DO., per square	6	3	0
Add, if vertical, per square approx.	0	13	0
Add, if with copper nails, per square approx.	0	2	6
Double course at eaves, per ft. approx.	0	1	0

SLATING with Old Delabole slates to a 3 in. lap with copper nails, at per square.

	Med. Grey	Med. Green
24 in. × 12 in.	£5 0 0	£5 2 0
20 in. × 10 in.	5 5 0	5 10 0
16 in. × 10 in.	4 15 0	5 1 0
14 in. × 8 in.	4 10 0	4 15 0
Green randoms		6 7 0
Grey-green do.		5 9 0
Green peggies, 12 in. to 8 in. long		4 13 6

TILING, 4 in. gauge, every 4th course nailed, in hand-made tiles, average per square	£3	17	6
DO., machine-made do., per square	3	7	6

Vertical Tiling, including pointing, add 18s. 0d. per square.

FIXING lead soakers, per dozen	£0	0	10
STRIPPING old slates and stacking for re-use, and clearing away surplus and rubbish, per square	0	10	0
LABOUR only in laying slates, but including nails, per square	1	0	0

See "Sundries" for Asbestos Tiling.

CARPENTER AND JOINER

CARPENTER, 1s. 8½d. *per hour ;* JOINER, 1s. 8½d. *per hour ;* LABOURER, 1s. 3½d. *per hour.*

Timber, average prices at Docks, London Standard, Scandinavian, etc. (equal to 2nds) :			
7 × 3, per std.	£22	0	0
11 × 4, per std.	30	0	0
Memel or Equal. Slightly less than foregoing.			
Flooring, P.E., 1 in., per sq.	£1	4	6
DO. *T. and G., 1 in., per sq.*	1	4	6

DO., 3-ply, per yd.	0	1	9
CENTERING for concrete, etc., including horsing and striking, per sq.	2	0	0
TURNING pieces to flat or segmental soffits, 4½ in. wide, per ft. run	0	0	4½
DO. 9 in. wide and over per ft. sup.	0	1	2

[*continued overleaf*

CARPENTER AND JOINER: *continued*

SHUTTERING to face of concrete, per square	£1	10	0
DO. in narrow widths to beams, etc., per ft. sup.	0	0	6
USE and waste of timbers, allow 25 per cent. of above prices.			
SLATE BATTENING, per sq.	£0	12	6
DEAL boarding to flats, 1 in. thick and firrings to falls, per square	2	10	0
STOUT feather-edged tilting fillet to eaves, per ft. run	0	0	6
FEATHER-edged springer to trimmer arches, per ft. run	0	0	4
STOUT herringbone strutting (joists measured in), per ft. run	0	0	6
SOUND boarding, ⅞ in. thick and fillets nailed to sides of joists (joists measured over), per square	2	0	0
RUBEROID or similar quality roofing, one ply, per yd. sup.	0	2	3
DO., two-ply, per yd. sup.	0	2	6
DO., three-ply, per yd. sup.	0	3	0
TONGUED and grooved flooring, 1½ in. thick, laid complete with splayed headings, per square	2	5	0
DEAL skirting torus, moulded 1½ in. thick, including grounds and backings, per ft. sup.	0	1	0
TONGUED and mitred angles to do.	0	0	6
WOOD block flooring standard blocks laid herringbone in mastic:			
Deal 1 in. thick, per yd. sup.	0	10	0
DO. 1½ in. thick, per yd. sup.	0	12	0
Maple 1½ in. thick, per yd. sup.	0	15	0
DEAL moulded sashes, 1⅛ in. with moulded bars in small squares, per ft. sup.	0	2	6
DO. 2 in. do., per ft. sup.	0	2	9
DEAL cased frames, oak sills and 2 in. moulded sashes, brass-faced pulleys and iron weights, per ft. sup.	0	4	6
MOULDED horns, extra each	0	0	3
DOORS, 4-panel square both sides, 1⅛ in. thick, per ft. sup.	0	2	6
DO. moulded both sides, per ft. sup.	0	2	9
DO. 2 in. thick, square both sides, per ft. sup.	0	2	9
DO. moulded both sides, per ft. sup.	0	3	0
DO. in 3 panels, moulded both sides, upper panel with diminished stiles with moulded bars for glass, per ft. sup.	0	3	6
If in oak, mahogany or teak, multiply 3 times.			
DEAL frames, 4 in. × 3 in., rebated and beaded, per ft. cube	£0	15	0
Add for extra labours, per ft. run	0	0	1
STAIRCASE work:			
DEAL treads 1⅛ in. and risers 1 in., tongued and grooved including fir carriages, per ft. sup.	0	2	6
DEAL wall strings, 1⅛ in. thick, moulded, per ft. run	0	2	0
If ramped, per ft. run	0	4	6
SHORT ramps, extra each	0	7	6
ENDS of treads and risers housed to strings, each	0	1	0
2 in. deal mopstick handrail fixed to brackets, per ft. run	0	1	6
4½ in. × 3 in. oak fully moulded handrail, per ft. run	0	5	6
1⅛ in. square deal bar balusters, framed in, per ft. run	0	0	6
FITTINGS:			
SHELVES and bearers, 1 in., cross-tongued, per ft. sup.	0	1	6
1⅛ in. beaded cupboard fronts, moulded and square, per ft. sup.	0	2	9
TEAK grooved draining boards, 1⅛ in. thick and bedding per ft. sup.	0	4	6
IRONMONGERY:			
Fixing only (including providing screws):			
To DEAL—			
Hinges to sashes, per pair	0	1	2
Do. to doors, per pair	0	1	7
Barrel bolts, 9 in., iron, each	0	1	0
Sash fasteners, each	0	1	0
Rim locks, each	0	1	9
Mortice locks, each	0	4	0

SMITH

SMITH, *weekly rate equals* 1*s.* 8½*d. per hour*; MATE, *do.* 1*s.* 3½*d. per hour*; ERECTOR, 1*s.* 8½*d. per hour*; FITTER, 1*s.* 8½*d. per hour*; LABOURER, 1*s.* 3½*d. per hour.*

Mild Steel in British standard sections, per ton	£12	10	0
Sheet Steel:			
Flat sheets, black, per ton	17	0	0
DO., *galvd., per ton*	18	0	0
Corrugated sheets, galvd., per ton	17	10	0
Driving screws, galvd., per grs.	0	1	10
Washers, galvd., per grs.	0	1	1
Bolts and nuts per cwt. and up	1	18	0
MILD STEEL in trusses, etc., erected, per ton	25	0	0
DO., in small sections as reinforcement, per ton	16	0	0
DO., in compounds, per ton	17	0	0
DO., in bar or rod reinforcement, per ton	22	10	0
WROT-IRON in chimney bars, etc., including building in, per cwt.	2	0	0
DO., in light railings and balusters, per cwt.	2	5	0
FIXING only corrugated sheeting, including washers and driving screws, per yd.	0	2	0

PLUMBER

PLUMBER, 1*s.* 9*d. per hour*; MATE OR LABOURER, 1*s.* 4*d. per hour.*

Lead, milled sheet, per cwt.	£1	13	0
DO. *drawn pipes, per cwt.*	1	13	6
DO. *soil pipe, per cwt.*	1	16	6
DO. *scrap, per cwt.*	1	1	6
Copper, sheet, per lb.	0	1	0
Solder, plumber's, per lb.	0	1	0
DO. *fine, per lb.*	0	1	6
Cast-iron pipes, etc.:			
L.C.C. soil, 3 in., per yd.	0	3	0
DO. *4 in., per yd.*	0	3	8
R.W.P., 2½ in., per yd.	0	1	5
DO. *3 in., per yd.*	0	1	8
DO. *4 in., per yd.*	0	2	5
Gutter, 4 in. H.R., per yd.	0	0	11
DO. *4 in. O.G., per yd.*	0	1	2½
MILLED LEAD and labour in gutters, flashings, etc., per cwt.	3	2	6
LEAD PIPE, fixed, including running joints, bends, and tacks, ½ in., per ft.	0	2	2
DO. ¾ in., per ft.	0	2	5
DO. 1 in., per ft.	0	3	4
DO. 1½ in., per ft.	0	4	5
LEAD WASTE or soil, fixed as above, complete, 2½ in., per ft.	0	6	6
DO. 3 in., per ft.	0	7	9
DO. 4 in., per ft.	0	10	6
WIPED soldered joint, ½ in., each	0	2	6
DO. ¾ in., each	0	3	2
DO. 1 in., each	0	3	8
BRASS screw-down stop cock and two soldered joints, ½ in., each	0	11	0
DO. ¾ in., each	0	13	6
CAST-IRON rainwater pipe, jointed in red lead, 2½ in., per ft. run	0	1	4
DO. 3 in., per ft. run	0	1	8
DO. 4 in., per ft. run	0	2	0
CAST-IRON H.R. GUTTER, fixed, with all clips, etc., 4 in., per ft.	0	1	6
DO. O.G., 4 in., per ft.	0	1	9
CAST-IRON SOIL PIPE, fixed with caulked joints and all ears, etc., 4 in., per ft.	0	3	0
DO. 3 in., per ft.	0	2	0
Fixing only:			
W.C. PANS and all joints, P. or S., and including joints to water waste preventers, each	2	5	0
BATHS, with all joints	1	3	6
LAVATORY BASINS only, with all joints, on brackets, each	1	10	0

PLASTERER

PLASTERER, 1*s.* 11½*d. per hour*; LABOURER, 1*s.* 3½*d. per hour.*

Chalk lime, per ton	£2	17	0
Hair, per cwt.	2	5	0
Sand and cement see "Excavator," etc., above.			
Lime putty, per cwt.	£0	2	9
Hair mortar, per yd.	1	7	0
Fine stuff, per yd.	1	14	0
Sawn laths, per bdl.	0	2	5
Keene's cement, per ton	5	15	0
Sirapite, per ton	3	10	0
DO. *fine, per ton*	3	18	0
Plaster, per ton	3	0	0
DO. *white, per ton*	3	12	6
DO. *fine, per ton*	5	12	0
Lath nails, per lb.	0	0	4
Ferrocrete, per ton	2	15	6
LATHING with sawn laths, per yd.	0	1	7
METAL LATHING, per yd.	0	2	6
FLATING in Cement and Sand, 1 to 3, for tiling or woodblock, ⅜ in., per yd.	0	2	4
DO. vertical, per yd.	0	2	7
RENDER, on brickwork, 1 to 3, per yd.	0	2	0
RENDER in Portland and set in fine stuff, per yd.	0	3	3
RENDER, float, and set, trowelled, per yd.	0	2	7
RENDER and set in Sirapite, per yd.	0	2	5
DO. in Thistle plaster, per yd.	0	2	5
EXTRA, if on but not including lathing, any of foregoing, per yd.	0	0	5
EXTRA, if on ceilings, per yd.	0	0	5
ANGLES, rounded Keene's on Portland, per ft. lin.	0	0	6
PLAIN CORNICES, in plaster, per inch girth, including dubbing out, etc., per ft. lin.	0	0	2
WHITE glazed tiling set in Portland and jointed in Parian, per yd., from	1	11	6
FIBROUS PLASTER SLABS, per yd.	0	1	10

GLAZIER

GLAZIER, 1*s.* 7½*d. per hour.*

Glass: 4ths in crates:			
Clear, 21 oz.	£0	0	4⅛
DO. *26 oz.*	0	0	5
Cathedral white, per ft.	0	0	7½
Polished plate, British ¼ in., up to 2 ft. sup., per ft.	0	1	2
DO. *4 ft. sup.* „	0	2	3
DO. *6 ft. sup.* „	0	2	6
DO. *20 ft. sup.* „	0	3	1
DO. *45 ft. sup.* „	0	3	3
DO. *65 ft. sup.* „	0	3	5
DO. *100 ft. sup.* „	0	3	10
Rough plate, ¼ in., per ft.	0	0	6½
DO. *⅜ in., per ft.*	0	0	6½
Linseed oil putty, per cwt.	0	15	0
GLAZING in putty, clear sheet, 21 oz.	0	0	11
DO., 26 oz.	0	1	0
GLAZING in beads, 21 oz., per ft.	£0	1	1
DO. 26 ozs., per ft.	0	1	4

Small sizes slightly less (under 3 ft. sup.).
Patent glazing in rough plate, normal span, 1*s.* 6*d.* to 2*s.* per ft.
LEAD LIGHTS, plain, med. sqs. 21 oz., usual domestic sizes, fixed, per ft. sup. and up | £0 | 3 | 0

Glazing only, polished plate, 6½*d.* to 8*d.* per ft. according to size.

PAINTER AND PAPERHANGER

PAINTER, 1*s.* 7½*d. per hour*; LABOURER, 1*s.* 3½*d. per hour*; FRENCH POLISHER, 1*s.* 8½*d. per hour*; PAPERHANGER, 1*s.* 7½*d. per hour.*

Genuine white lead, per cwt.	£2	19	0
Linseed oil, raw, per gall.	0	4	0
DO., *boiled, per gall.*	0	5	0
Turpentine, per gall.	0	4	0
Patent driers, per cwt.	1	10	0
Knotting, per gall.	0	15	0
Distemper, washable, in ordinary colours, per cwt., and up	1	19	0
Double size, per firkin	0	3	3
Pumice stone, per lb.	0	0	4½
Single gold leaf (transferable), per book	0	2	0
Varnish, copal, per gall. and up	0	15	0
DO., *flat, per gall.*	0	15	0
DO., *paper, per gall.*	1	0	0
French polish, per gall.	0	16	0
Ready mixed paints, per cwt. and up	3	10	0
LIME WHITING, per yd. sup.	0	0	3
WASH, stop, and whiten, per yd. sup.	0	0	6
DO., and 2 coats distemper with proprietary distemper, per yd. sup.	0	0	9
KNOT, stop, and prime, per yd. sup.	0	0	7
PLAIN PAINTING, including mouldings, and on plaster or joinery, 1st coat, per yd. sup.	0	0	9
DO., subsequent coats, per yd. sup.	0	0	8
DO., enamel coat, per yd. sup.	0	1	0
BRUSH-GRAIN, and 2 coats varnish, per yd. sup.	0	3	8
FIGURED DO., DO., per yd. sup.	0	5	6
FRENCH POLISHING, per ft. sup.	0	1	0
WAX POLISHING, per ft. sup.	0	0	6
STRIPPING old paper and preparing per piece	0	1	7
HANGING PAPER, ordinary, per piece	0	1	10
DO., fine, per piece, and upwards	0	2	4
VARNISHING PAPER, 1 coat, per piece	0	9	0
CANVAS, strained and fixed, per yd. sup.	0	3	0
VARNISHING, hard oak, 1st coat, yd. sup.	0	1	2
DO., each subsequent coat, per yd. sup.	0	0	11

SUNDRIES

Fibre or wood pulp boardings, according to quality and quantity. The measured work price is on the same basis . . . per ft. sup.	£0	0	2½
FIBRE BOARDINGS, including cutting and waste, fixed on, but not including studs or grounds, per ft. sup. . . . from 3d. to	0	0	6
Plaster-board, per yd. sup . from	0	1	7
PLASTER-BOARD, fixed as last, per yd. sup. . . . from	0	2	8

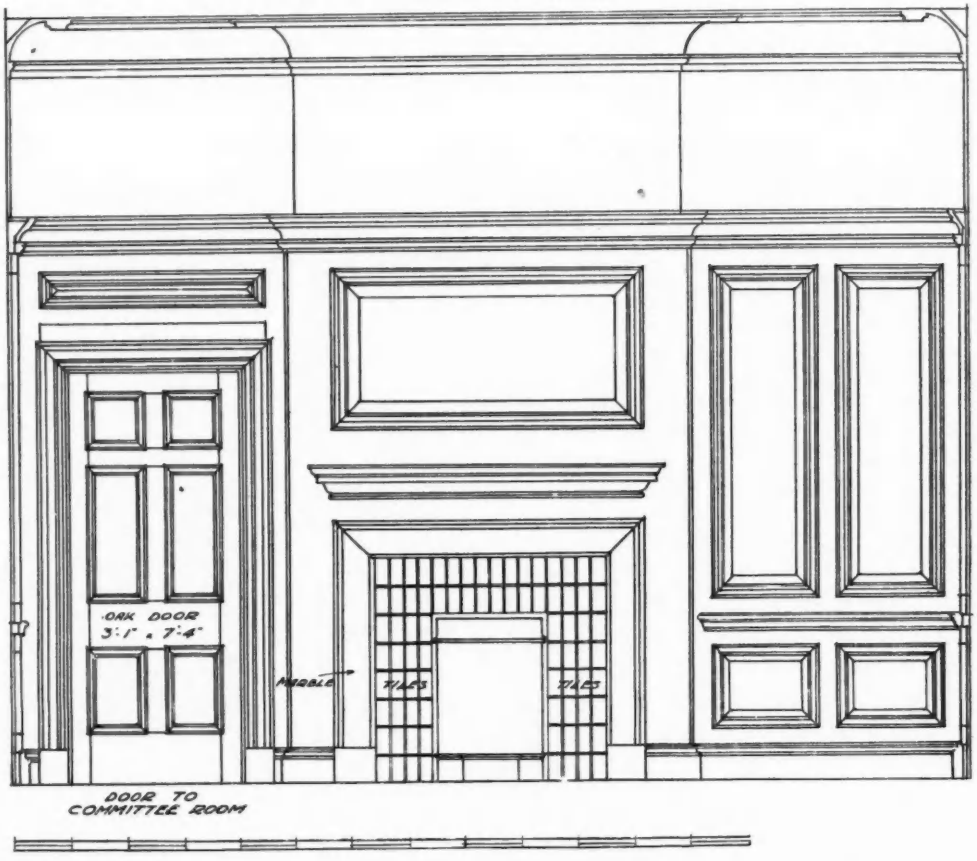
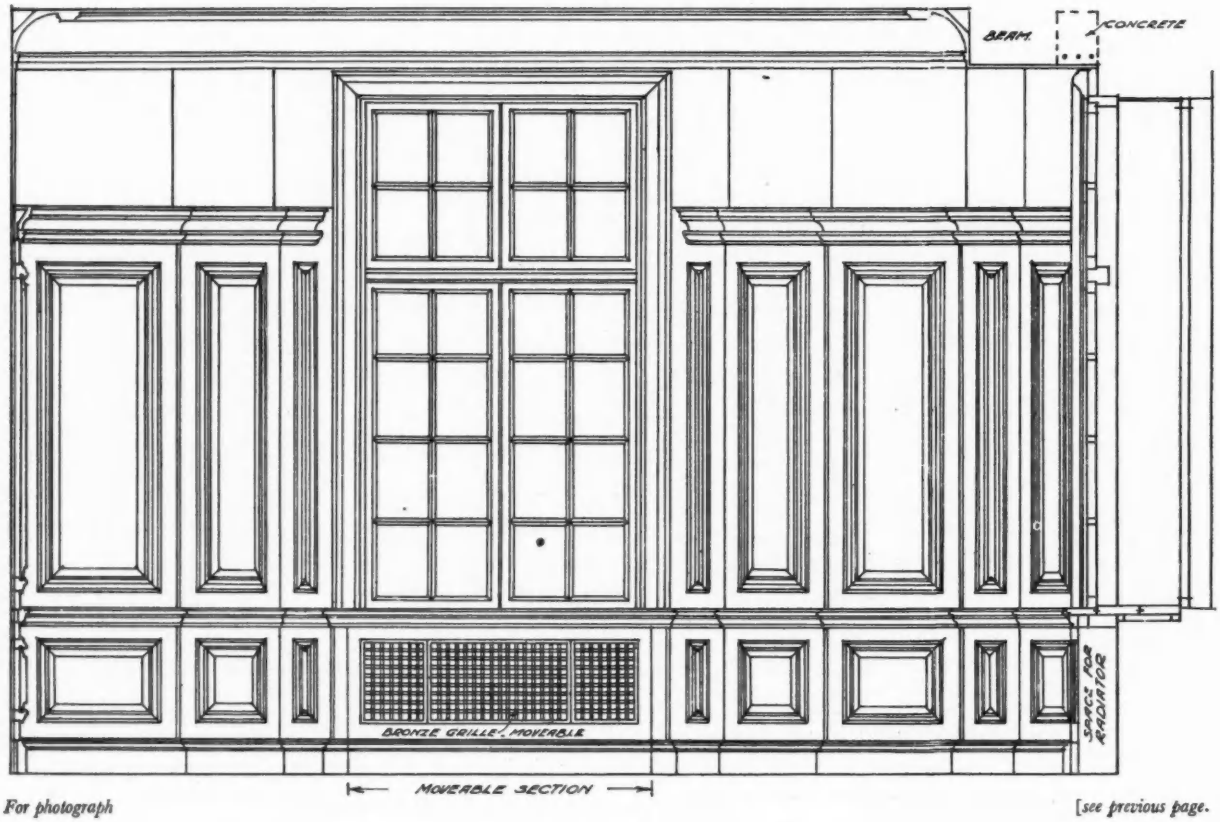
GENERAL SECRETARY'S OFFICE:
NATIONAL DEPOSIT FRIENDLY SOCIETY'S HEADQUARTERS,
QUEEN SQUARE, BLOOMSBURY, W.C.
By
W. H. ANSELL

THIS room is on the first floor, at the corner of the building where Queen Square is intersected by Ormond Street, and one of the windows, of which an indication is seen on the extreme right, overlooks the Square. Adjacent, along this same front, is the large committee room, and to it the door, seen on the left of this photograph, gives access.



In common with the committee room and other private rooms, this office has oak panelling, a section of which, with radiator grille, below the window, is moveable, as will be clear from the lower of the two workings drawings reproduced on the following page. The fireplace surround and hearth are in tiles. The floor is of wood blocks.



A photograph and working drawings of the entrance hall of this building appeared in the issue of THE ARCHITECTS' JOURNAL *for January 22, 1930.*

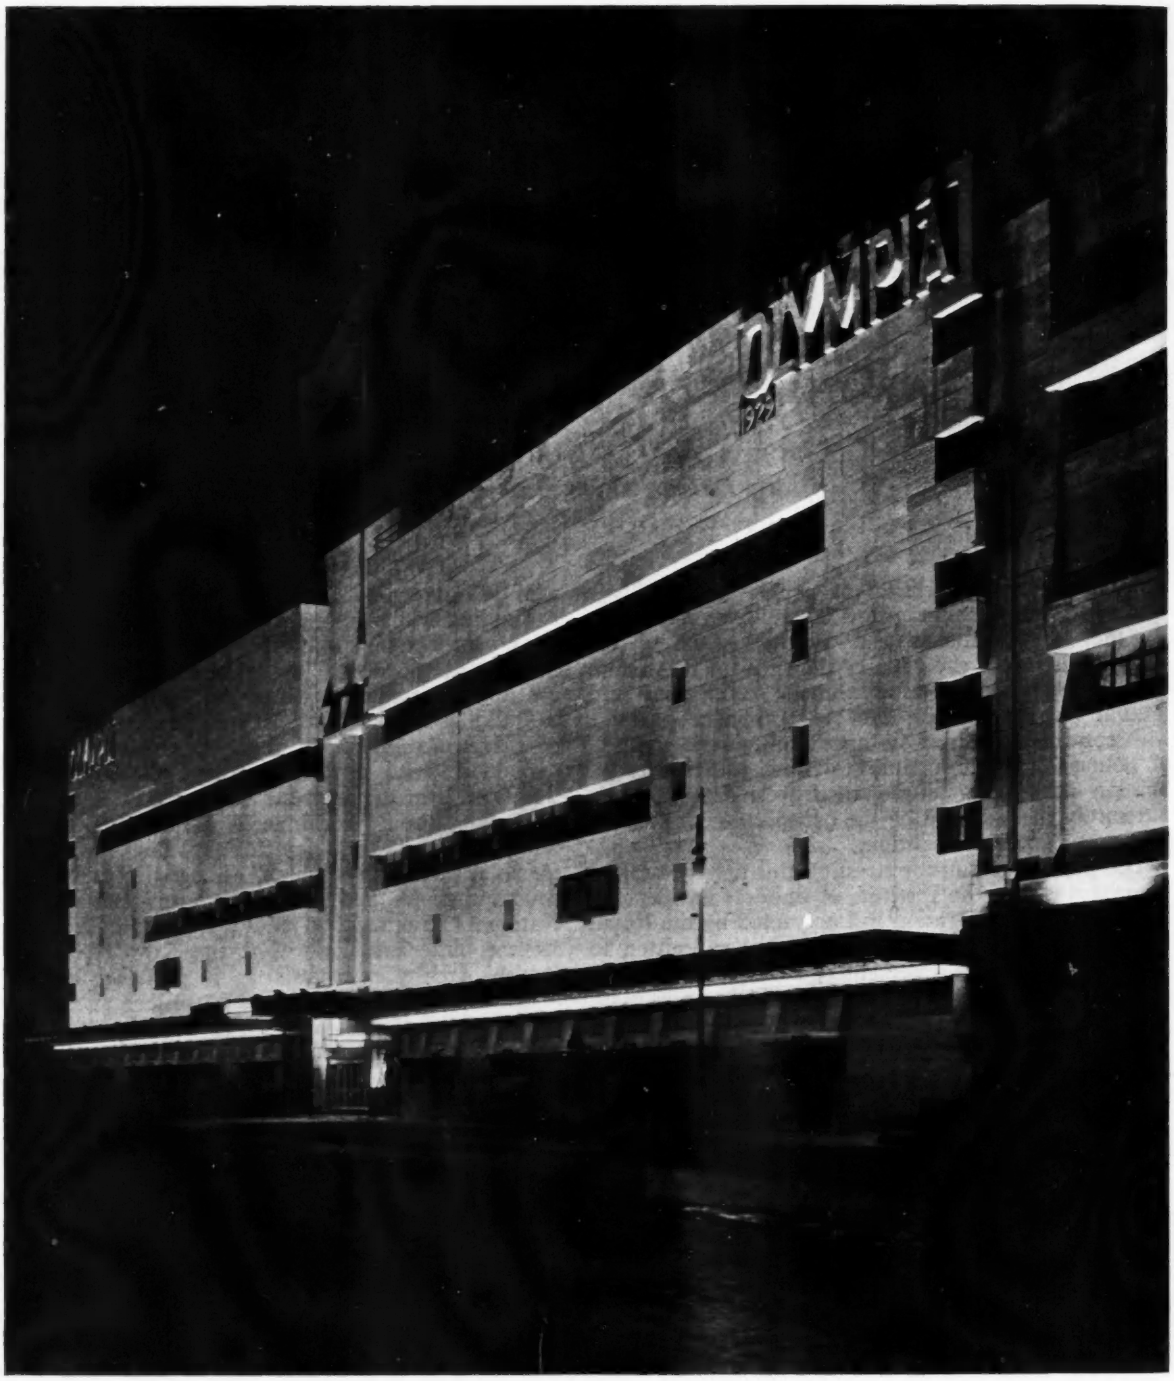
LET ARCHITECTS AND BUILDERS AGREE

"By harmony our souls are sway'd;
By harmony the world was made."

GRANVILLE.—*The British Enchantress*
(Chorus) Act I., Sc. I.

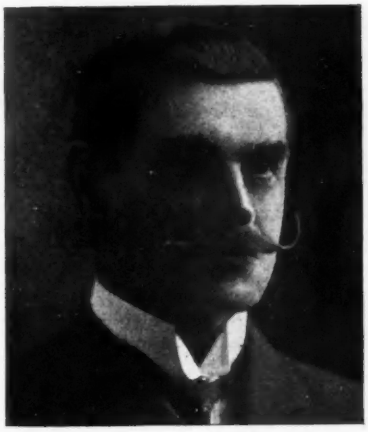
IF there are two classes of people in the whole world who cannot afford to quarrel, manifestly they are architects and builders. One of the basic industries of the country depends for its welfare very largely upon the establishment of harmony and mutual respect between the two principal partners who control and direct its operations. It is natural, of course, that, from time to time, differences of opinion may arise between architects and builders, but surely these should be the occasion for diplomacy and mutual accommodation.



The present reason for stressing this appeal to consideration is that the Institute of Builders has decided to oppose the Registration Bill promoted by the Royal Institute of British Architects, and has submitted to the Privy Council a statement of its objections to this measure. Now the Institute of Builders is a small but powerful body which has an academic status. The National Federation of Building Trades Employers is a very much larger and still more powerful body, which, however, has not directly associated itself with this appeal to the Privy Council. The two societies, however, have common objects, and there can be no question of the Royal Institute of British Architects seeking to play off one against the other.

In a discussion of this nature the utmost candour is desirable, but there is no need that frankness and friendliness should not go together. It is within recent memory that, after negotiations lasting three years, a form of building contract was agreed upon between the representatives of the National Federation of Building Trades Employers and of the Royal Institute of British Architects. This met with, and still meets with, the full approval of the former body, but it was rejected at a general meeting of the Royal Institute of British Architects, whose members repudiated the agreement which their own representatives had negotiated; with the result that a previous form of contract, which in some respects is cordially disliked by the builders, still remains in force.

As is well known, the main object of dispute concerns the right of the architect to compel the contractor to pull down and re-erect at his own expense any part of a building which in the opinion of the architect does not conform to his specifications. Fortunately, matters have by no means reached an impasse, and discussions are now proceeding between the National Federation of Building Trades Employers and the Royal Institute of British Architects in the hope of coming to an agreement with regard to the Form of Contract. Surely it is in the interests of both parties that these discussions should continue in a spirit of amity and reach a satisfactory conclusion. But how is this possible if a body which, though of independent constitution, is yet intimately associated with the National Federation of Building Trades Employers, seeks to interfere with what the Royal Institute of British Architects regards as a perfectly legitimate attempt to set its own house in order? This action on the part of the Institute of Builders, if persisted in, will cause deep and bitter resentment in the architectural profession.



What is the burden of complaint made by the Institute of Builders in their submission to the Privy Council? The greater part of it consists of statements of opinion upon matters with which the Institute of Builders is not directly concerned, while the only grievance or apprehension of a grievance which seems to touch upon the specific interests of the profession of building concerns the control of education. Yet the desire of the Institute of Builders to give their apprentices an academic training is one which has the full sympathy of architects.

Let the representatives of the Institute of Builders, therefore, state clearly the grounds for their belief that Architectural Registration might hinder the fulfilment of the educational ambitions of builders, and we will venture to prophesy that their fears will prove groundless and that the Royal Institute of British Architects will express its complete willingness to collaborate with the Institute of Builders in an educational object which is for the joint advantage of both professions. Before a foolish and totally unnecessary conflict is begun, let counsels of peace prevail.

THE NEW HOME OF THE BRITISH INDUSTRIES FAIR

A night study of Empire Hall, Mr. Joseph Emberton's new extension to Olympia. As will be seen, the elevation has been specially designed so that the horizontal shapes formed by the fenestration, to be used for exhibition posters, can be flood-lit without shadows. The hall was fully illustrated and described in our issue for January 29 last. It is the first multi-storied exhibition building to be erected in this country, and houses a portion of the London section of the British Industries Fair, which opened at Olympia on Monday last.

James Miller, of Glasgow, who, with James B. Dunn, of Edinburgh, both being well-known architects, FF.R.I.B.A., has been elected to Academician rank in the Royal Scottish Academy.

NEWS & TOPICS

E. Prentice Mawson, F.R.I.B.A., who read the presidential address of his father, Thos. H. Mawson, at the inaugural meeting in London of the newly constituted Institute of Landscape Architects last week.

THE R.I.B.A.'S VALENTINE

THE Feast of St. Valentine was nobly marked by the issue under that date, on the part of the R.I.B.A., of a definite pronouncement that the Council had decided in favour of the design of the new Institute building being the subject of a competition open to all its members and those of its allied societies. Any other decision would have been inconceivable, but its promulgation is reassuring. There is to be a jury of five assessors—themselves architects of the R.I.B.A.—to be selected by the President and approved by the Council, and, in order to assist in its selection, members are invited to submit to the secretary the names of members considered suitable and qualified to serve.

THE BAD BRIDGE BILL IN PARLIAMENT

The debate on the second reading of the London County Council Bill dealing with Charing Cross Bridge has been, at the time of writing, fixed for today, February 19. Unless there is an eleventh-hour postponement, an important discussion, lasting possibly for two afternoons, is expected. As the Government are supporting the Bill there is little likelihood of its rejection in the Commons, but, in the Lords, there may be a different story to tell. Apropos, the Thames Bridges Conference issued last week a detailed criticism of the deposited plans for Charing Cross Bridge in the form of a statement circulated to all M.P.'s. It is a vigorous statement, as the opening words will show. "This is probably the most important and certainly the most costly scheme for a London improvement that has ever been submitted to Parliament. The deposited plans show that it has been treated as a local problem only. . . . In its present form the scheme would effectually stop developments that are of outstanding importance to London."

*

It then goes on to deal with the deficiencies of the plan under the various heads of cost, town planning, traffic, architecture, etc. It first points out that the scheme is costly, with little hope of recoupment, not only by reason of the long, sterilizing lengths of dark tunnels on the south side, but because the potentially valuable frontage of the new southern embankment is taken up by the railway station and the awkward bridge approach from York Road. There are, by the way, 990 feet of thoroughly dark tunnels in the scheme. From the town-planning aspect it points out what has been many times pointed out in these columns—namely, that the aggravated system of embankments and tunnels with which this scheme is weighted must serve still further to retard the development of South London and the southern bank of the river. Nor on the south bank only will the deadening effect of these embankments be felt, for the Adelphi terrace is shown deprived of through access, and Villiers Street is destroyed.

*

The whole railway from London Bridge to Waterloo should be put underground, and the bridge brought to earth at York Road, so that, without tunnels, York Road and the new bridge approach may become very valuable and important thoroughfares. This, the statement suggests, is probably the best way of dealing with the problem of the railway, and one that would at a blow remove some of the worst features of the scheme. But apart from the many detailed criticisms of the plan, the latest of which is that by Mr. W. D. Caroë in *The Times* of February 17, it is pointed out that from its inception the larger aspects of town planning, which include traffic and development, have not been considered, and indeed it is evident from the results how closely the needs of a body of railway shareholders have been studied, to the entire exclusion of every call for directness, simplicity, dignity and fine planning.

ADVOCATUS DIABOLI

I should have expected an enlightened paper like *The Daily Telegraph* to be on the side of the angels in this matter. Is it not giving a lead in Fleet Street by erecting a fair new building? And has it not just, on the eve of its seventy-fifth birthday, replanned its own pages to meet modern conditions? Nevertheless, one who writes in its columns under the pseudonym of "An Observer" is guilty of remarking, in that tone of indulgent irony, the property of a few delightful scholars and of a host of lesser observers, that after all there is little use in criticizing the Charing Cross scheme when one patchwork will be replaced by another like it. For we shall always be rebuilding piecemeal, says he, and we shall never know what the future will require—so let us go on building piecemeal. This is the type of mind that finds delight in crookedness, and worships all cock-eyed things—so long as they be old. He is the great obstructor of clear thinking, in which he sees no beauty. Over the heads of such are Regent Streets, and Kingsways, and Rue de Rivolis, and Unter den Lindens, and all the nobilities of urban civilization constructed. Nor can he differentiate as bad from good the muddle-headedness that produced Victoria Street from the wide vision that saw a plan of London that would have lasted from the Fire of London to this day.

THE ABBEY SACRISTY : "CHECK!" BY THE DEAN

The Dean and Chapter of Westminster Abbey have now decided to request Mr. Walter Tapper, A.R.A., to consider the possibility of the Poets' Corner site and prepare a report with an estimate of the cost of erecting a sacristy there. Unfortunately, however, the proposal to connect such a building with the Chapter House crypt has been definitely rejected on the ground that such a scheme would necessitate "interference with the foundations of the Abbey." Such a point of view appears to me incomprehensible, unless it represents merely an excuse to justify the Abbey authorities in rejecting a scheme which they do not like. If they are going to ban every proposal for an underground sacristy, it is in the hope that they will ultimately succeed in persuading the public that the original scheme of erecting a sacristy between St. Margaret's Church and the Abbey is the only practicable one. The objections to this latter course have been set forth in these pages on several occasions, nor has any adequate reply been vouchsafed to the argument that a sacristy in such a position would be an artistic blunder of the first magnitude, because an addition to the Abbey at this particular place, however designed, must necessarily appear as an addendum having no organic relationship to the rest of the building, and it would still further obstruct our view of the original north elevation. The objections to the underground sacristy, however, appear to have no kind of validity, for obviously the appearance of the Abbey is neither marred nor even modified in any way thereby, while once the principle of its construction is accepted there is no limit to the amount of accommodation which may be provided.

★

Writing in *The Morning Post*, Mr. Reginald Grundy, who is presumably interpreting the views of the Abbey authorities, points out that the sacristy which could be erected on the Poets' Corner site could not afford room for State biers and other important pieces, and it would also be too small to allow of any public display of the interesting vestments and plate belonging to the Abbey. The Advisory Committee appointed by the Dean and Chapter never thought that it would, and consequently they recommended that the crypt of the Abbey should be connected with the building on the Poets' Corner site by means of a staircase and underground passage. To describe this quite simple piece of engineering as "a destruction of the ancient fabric" is surely a misuse of words. The phrase "interference with the foundations of the Abbey" is also a misleading one in this connection, for it implies, and is intended to imply, that the act of cutting a passage into the crypt would necessarily injure the foundations of the Chapter House and render them less secure than they are at present. But this supposition is not justified in logic, and if the Abbey authorities really wished to have trustworthy information upon such a point they would call in experts in engineering. Let the Dean and Chapter themselves choose engineers of acknowledged reputation and publish their report upon the question at issue.

THE INSTITUTE OF LANDSCAPE ARCHITECTS

It is remarkable that during the long period in which the design of public parks has been passing from the hands of architects and competent designers into the inexpert ministrations of borough engineers and surveyors, there has been no concerted effort either to keep the work in safe hands or to educate those into whose hands it has fallen. The level of design of all kinds of public parks is now so lamentably without grace, taste or vision, that the newly-formed Institute of Landscape Architects, before whom Mr. Mawson's presidential address was read last week (see p. 330), will be hard pressed to make up for the time lost and opportunity wasted. There is no branch of architecture—for the design of parks is well within the strict province of architecture—so lamentably in need of an infusion of fresh artistic stimulus. At the moment it is without ideas or direction, or any backing of culture or scholarship, and our public parks and playgrounds are barren. The new Institute should have all the backing of the R.I.B.A.

WHAT MAKES "A GOOD SURVEYOR"?

I felt at the time of Mr. Baillie Scott's paper on "Building By-Laws and Rural Beauty" that he and many who spoke were unduly hard upon the surveyor in so far as he was an administrator of sanitary laws, and not half hard enough upon him in his capacity as architect and perpetrator of negative horrors. Mr. C. B. Borthwick, the Surveyor to the Welwyn R.D.C., writes to the R.I.B.A. Journal complaining very justly that the by-laws are one thing, and the administrator of them another. It is indeed hard that the qualities that make a good surveyor in the eyes of those who employ him should make him a butt for professional humour. It is hard; but yet I feel that really good surveyors can be the friend of architect and councillor, and that the source of friction lies in the point of view evinced by the representatives of local government, whose ideals run so constantly away from what is good and well done to what is meretricious and in bad taste—and these are the employers of the surveyor, and the enemies of the good architect.

POOLE HARBOUR BRIDGE

There is a scheme afoot, a financial money-making scheme, to throw a bridge across the mouth of Poole Harbour, in order to open up the Isle of Purbeck to the type of seaside development which always sounds well on paper and looks ill in fact. There is keen opposition (and no wonder!) to the erection of a high steel bridge, and petitions are to be lodged in Parliament by the residents, local authorities and others who think that the quiet beauties of the Isle and the "Little Sea" are worth more to the world than any further extension of the blousy complex of Bournemouth. I feel that the opposition is right. Once upon a time, and perhaps once again in the future, we may develop the taste that will give us the right to replace a beautiful coastline with an ordered architectural beauty; but at this moment the financial mind is badly advised, and should be kept off beautiful places, as an unruly child is kept out of reach of delicate and costly china.

R.U.R.

I was impressed by the performance of Karel Capek's fantastic play, "R.U.R.," given by members of the Architectural Society of University College, Gower Street, last week. Its highly sensational character calls for acting of a restrained nature to give it a sense of realism, and this was admirably accomplished. In fact, I began visualizing what would happen to architecture if, as in the play, the Robots—the machine men—conquer the world and produce houses by the thousand.

ASTRAGAL

THE BATTLE FOR ARCHITECTURAL REGISTRATION

BY A. TRYSTAN EDWARDS

SUCCESSIVE councils of the Royal Institute of British Architects have suffered disappointments in their efforts to persuade Parliament to pass a Bill for the registration of those who are genuinely engaged in architectural practice and possess certain minimum qualifications for it. I do not know what are the precise views of the heads of my profession concerning the reasons which have induced Parliament to refuse their request, but I suspect them of believing that they need only try again in the same old way and if they persist long enough they will gain their object. They regard their failure as due to the ignorance or apathy of individual members of Parliament who, they like to believe, need only become a little better informed concerning the functions and status of the architectural profession to grant its claims at once. Just a little more propaganda, a combined push, and the thing will be done! Does it ever occur to the leaders of the profession that there may perhaps be some elements of weakness in their case and that even the stupid members of Parliament are, subconsciously perhaps, aware of this?

There are two sides to Registration. One of them appertains to architecture as a profession and the other to architecture as an art. The object of the Registration Bill is to raise the prestige of the architectural profession by excluding from it two classes of people, namely, those who refuse to conform to an honourable code of professional conduct, and those who would offend in a quite different manner by displaying incompetence in design. It is necessary very clearly to separate these two aspects of Registration for, failing this, the strategy and tactics of those who direct the campaign on its behalf are sure to be at fault. It may be convenient if I continue the military analogy still further and say that the fighting front of the Registrationists has two distinct sections. These may be described as the *professional* front and the *æsthetic* front. The professional front is very strong, but the æsthetic front is vulnerable. Why not admit this and try to remedy a defect that may be one of the causes of failure of the Registrationists to achieve their aim? I propose to make an unauthorized inspection of both these fronts. But before embarking upon the more unpleasant and difficult part of my tour I propose to make a few observations upon "the *professional* front," where I find that the defences are very strong and the communications excellent.

There are certain things which nobody who describes himself as an architect should be allowed to do, and people who do these things should be definitely excluded from the architectural profession, even if they possess considerable artistic talent. This may seem a hard saying, for it may plausibly be argued that the main object of architecture is to create buildings which not only fittingly serve their purpose but are also beautiful, and if a practitioner succeeds in fulfilling both these objects he has served the cause of architecture well. He is a better architect, it may be contended, than one who slavishly follows the professional code and yet designs badly. Yet the reply to this is obvious. By insisting upon a compliance with the professional code we are not expressing any hostility to artistic talent nor depriving it of its opportunities. The indifferent designer cannot at will develop into an artistic genius, but the clever designer certainly can, if he wishes to do so, conform to the professional code and, in the interests of the profession as a whole, it is desirable that he should be compelled to do so, or else be deprived of his professional status.

It is desirable, too, that a person employing an architect should have assurances that his agent is free from the slightest suspicion of making any profit from the sale of building materials or accepting commissions from any of the parties concerned with the work, with the exception of the client himself, whose interests he is paid to subserve.

The complete separation of the functions of architect and builder is essential if the professional status of the former is to be maintained. And even if it were to be found that certain men with a special gift for the organization of building were at the same time architects of the works the erection of which they were supervising, it would be still inadvisable to encourage such a practice unless special safeguards were introduced. For there can be no question that the normal relationship between architect and builder which with such great difficulty has now been established is in the best interests of both. The builder serves his office with the greatest efficiency if he devotes himself to the task of organizing the work of erecting a building designed by an architect, and the architect has surely a difficult enough job if his energies are confined to tackling the intricate problems of design, planning, and construction of buildings without worrying his head about the purchase of materials and their assemblage upon the site, the hiring of labour and such matters.

The advocates of Registration have also an unanswerable case when they would insist that an architect claiming professional status should be debarred from adopting certain underhand or unworthy methods of obtaining work. The question of how far an architect should advertise himself is, I understand, still being considered by the Practice Committee of the R.I.B.A., but here, also, it is obvious that while some methods of advertisement might be legitimate, others might be injurious to the repute of the profession as a whole; and the R.I.B.A. will be justified in defining very precisely its point of view on this matter and in taking punitive measures against those who disregard it. For while architects should be known as designers of good buildings, it is also essential that they should be regarded as a body of honourable men.

If Parliament were asked to give its assent to a measure which was designed to establish nothing more than that the name of "architect" should be reserved for those who are ready to uphold a certain standard of professional conduct and, in addition, have achieved a certain competence in dealing with the practical side of architecture, it is extremely unlikely that so reasonable a request could be refused. Let the Royal Institute of British Architects, while reserving to itself the opinion that it is an association of artists, maintain a discreet silence concerning this while making its claim for Registration, and come before Parliament as a body of honourable and competent practitioners who desire nothing more than to establish their professional status. If, however, architects insist upon talking about Art with a big "A" they must expect nothing but disdain from Parliament unless they show themselves to possess a definite æsthetic philosophy. I propose to discuss this aspect of the problem of Registration in another article, which will be devoted to what I have here described as "the *æsthetic* front."

" Le bar " is finished with imitation birch-bark paper on the walls, and has columns of waxed oak. Tables and chairs, in the same wood, complete a conventional scheme.

New Annexe for the

(L. H. Boileau,

BY P. MORTON

NEW styles proverbially assume their extremer mannerisms in their opening and closing phases. Posterity will probably identify the first decade of Modernism with the imposition of a decorative prohibition, and decide that under a universal Fascist regime at the beginning of the twentieth century architecture went "flat," much as the United States went "dry." The structural theorists who have held the field since the war proclaim the dogma that a façade adorned is a façade accursed, an unclean—or, at all events, an unhygienic —thing.

Now, raw concrete and gypsum can frown in their orthodox, but cheerless, state of grace as repressively as the drabbest brick or sootiest stone that ever sanctified a Primitive Methodist tabernacle. The " root-and-branch " austerity of this neo-Puritan style is so absolute and immutable in its geometric predestination to monotony that the only chance of any wider development must lie in a partial relaxation of that very salutary plainness which constitutes its principal doctrine. Reaction was inevitable. The ungrateful soul of man, though satiated with the architraved Renaissance wedding-cakes and porticoed champagne-fountains of the last century, still obstinately craves for the smaller cakes and ale of architecture, and will not be denied. The

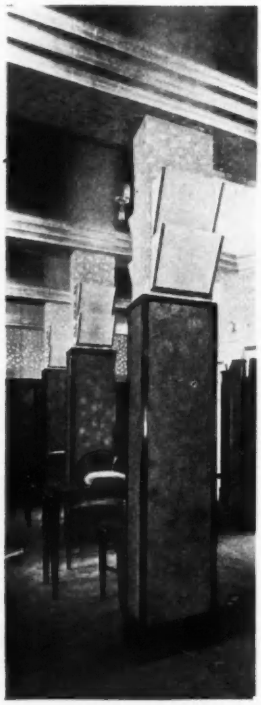
SHAND

process of modifying the new architectural creed from a superhuman to a merely human scale of renunciation promised to be gradual, and the result is all the more hopeful on that account. It is something of a shock, therefore, to find a notable building, finished within the last twelvemonth, which betrays unmistakable signs of being decadent in its brave parade of Modernism.



Fashion is a goddess more powerful and dreaded and more implicitly obeyed in France than in England. It seems probable that the architect of the new extension of the Bon Marché has worked in, rather than been converted to, Modernist idioms; and that he could have produced what Americans call a " Louis style " building just as easily and perhaps more satisfactorily. Moreover, proprietors of large emporiums, especially in Latin countries, notoriously demand plenty of pomp and glitter. Monsieur L. H. Boileau has given the directors of the Bon Marché all they could reasonably require. It would be interesting to know to what extent they gave him a free hand.

The new annexe of the Bon Marché (which houses its various furnishing departments) is certainly a very modern building, but it is also a very florid and even a garish one. If undeniably over-ornate, however, this besetting

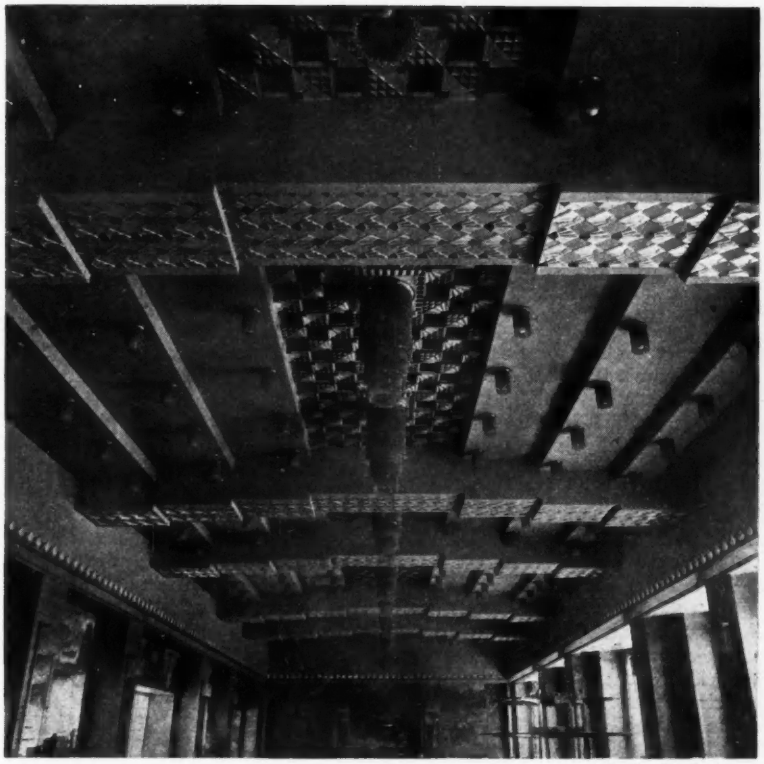
The elaborately designed cupola over "le hall," which extends through four floors, and is therefore visible from the ground floor. The number of lamps provided, quite apart from the central cluster, is noteworthy, and eloquent of the desire for sparkling effect.

fault is at least expressed in a manner that is in many respects original. Much of the interior detail, though largely submerged in the too luxuriant opulence of the whole, is both excellent and carefully thought out.

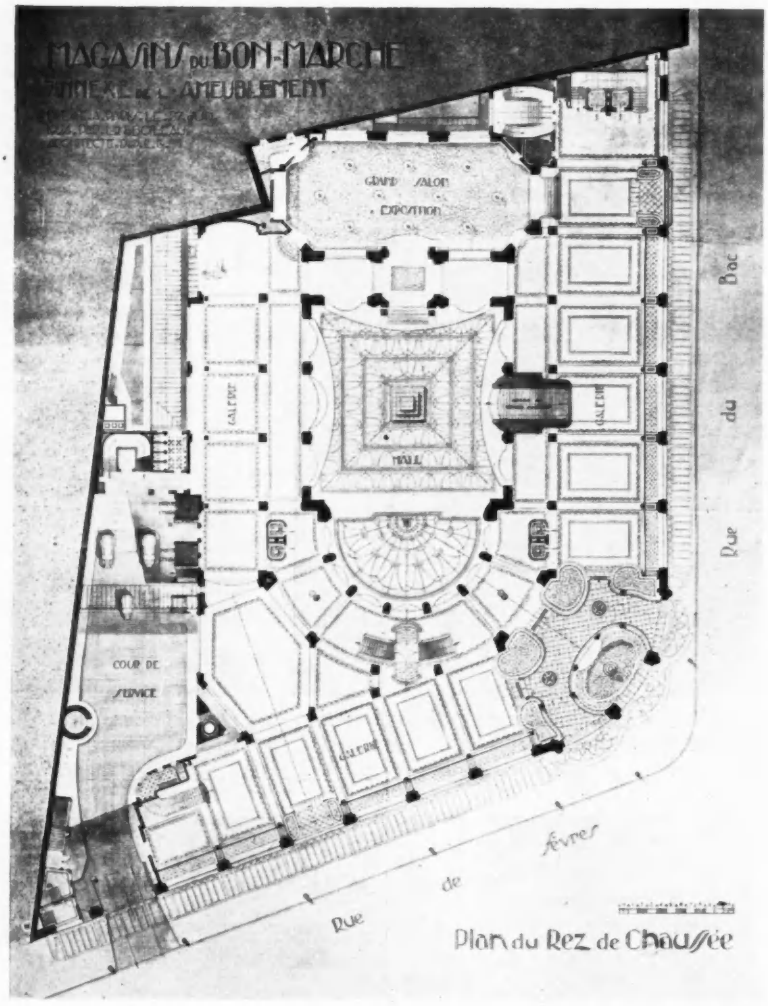
The site is a corner, but not an island, one, separated from the lamentable parent building on the rue de Sèvres—perhaps the shoddiest-looking departmental store in Europe—by the rue du Bac. Externally, it seems at first sight a typical and distinctly ordinary example of the big shop. Like the original structure alongside, to which its proportions are assimilated, it is too low for the length of its frontages. The average shopper will probably remain unaware of the unobtrusive modern details which have been discreetly grafted on to its nondescript façades. The entrance is entirely commonplace, while the almost conventional bronze marquises cannot for a moment sustain comparison with the beautiful and effective design recently adopted for those of the Galeries Lafayette. The casement infillings are of bronze, burnished a rather ugly and dingy tint; and the piers between them apparently of polished Hauteville stone. The two attic stories are particularly unsatisfactory.

The interior—as is the usual but rather wasteful practice of large shops on the Continent, exemplified by Wertheim in Berlin and the various



A comprehensive view of the various shopping floors, looking towards the rue de Sèvres from the vantage-point of a first-floor balcony. The arrangement of the stairs from floor to floor in symmetrical pairs may be traced. The pillars are cased in old-rose composite marble.

The circular idea in lighting fittings in the main entrance.



Warenhäuser Tietz in the more important German towns—consists of an immense rectangular well, unobstructed from ground to roof levels, surrounded by three tiers of balconied galleries. Four massive piers support the square of girders carrying the coved skylight roof; with two subsidiary columns on each of three sides, and six on the fourth, which is curved into an apse. These are all cased in an old-rose coloured composite marble.

The main staircase, with its double flight of steps, which shows a marked Egyptian influence, is rather overpowering in its scale and emphasis. The balustrades of the staircases and balconies, like the two successive dadoes above the heads of the columns, are of burnished bronze. The top balconies are protruded in graceful segments. The great convex skylight is arranged in a subdued and very skilfully composed colour-scheme based on a design of stylized lotus leaves. Perhaps the best detail of all is the balustrading: a curious, essentially modern, pattern of whorls, rather suggestive of the way in which the tenuous leaves of hyacinths curl back to the ground when their blooms begin to wither. This is really fine work, though overrich, which would probably have been all the better if it had been executed in plain wrought iron, instead of rather shiny bronze, with a little judicious pruning.

[*By L. H. Boileau.*

The ceiling in the "salon de thé," showing an inverted stepped motive combined with an intricate pattern of coffering, and a scheme of lighting in which the lavish provision of ornate lighting fittings plays its part in setting the room a-glitter.

Au Bon Marché, Paris.] [*By L. H. Boileau.*

The architect's drawing of the ground-floor plan, showing the wide range of display "galeries" surrounding the central "hall," and, on the left, the service quarters and court for delivery vans. The scale is in metres.

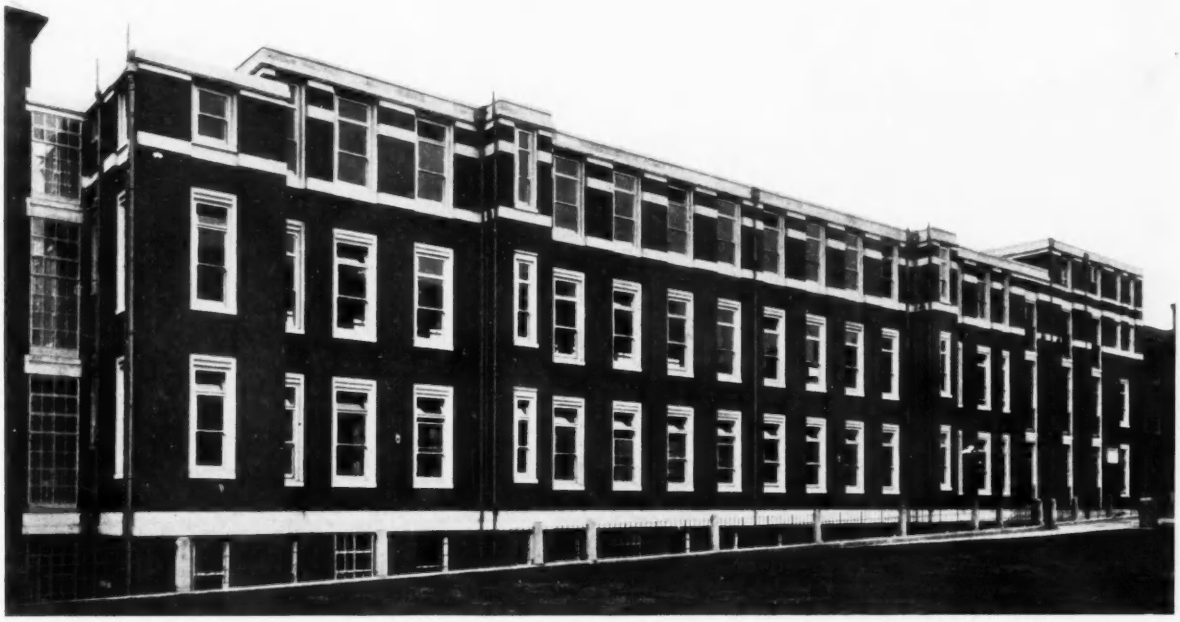
The general effect of this lofty and capacious vault is rather too evocative of that coruscating hothouse art which the vulgar mind is apt to consider synonymous with the more fabulous splendours of "luxury." There is the same sense of light and space without air as in a vast conservatory of rare, exotic plants. The cumulative impression caused by such a clash of interweaving, but often internecine, rhythms of over-elaborate pattern, combined with this profusion of richly sombre colour, dully glinting metal and semi-iridescent glass, is almost overpowering. Indeed, the view from the middle balconies irresistibly suggests the vaguely Oriental setting of some pantomime transformation scene. It is only fair to add that the *ensemble* looks far better in these photographs than in its polychrome and glassily metallurgic reality.

M. Boileau has also designed a new restaurant and bar for the old building. The former is decorated in dull gold and brown, and in spite of having large blue windows (or so, at least, they appear in winter twilight) is decidedly gloomy. The ceiling has a restless, overcharged design with which the lighting is not very skilfully amalgamated. Though made by Ruhlmann, the furniture is without the usual distinction of this artist's work.

LAW REPORT

DANGEROUS STRUCTURE NOTICE—IMPORTANT DECISION

Jackson v. *Solomin.* *King's Bench Division. Before Mr. Justice Wright*



THIS action was brought by Mr. L. Jackson, of Glenavon, Gloucester Gate, London, W., against Mr. M. Solomin, of Soho Street, London, W., to recover possession of 11 Soho Street, on the ground that defendant had forfeited the lease in consequence of breaches of covenant to execute certain repairs set out in a dilapidation notice served in March, 1929.

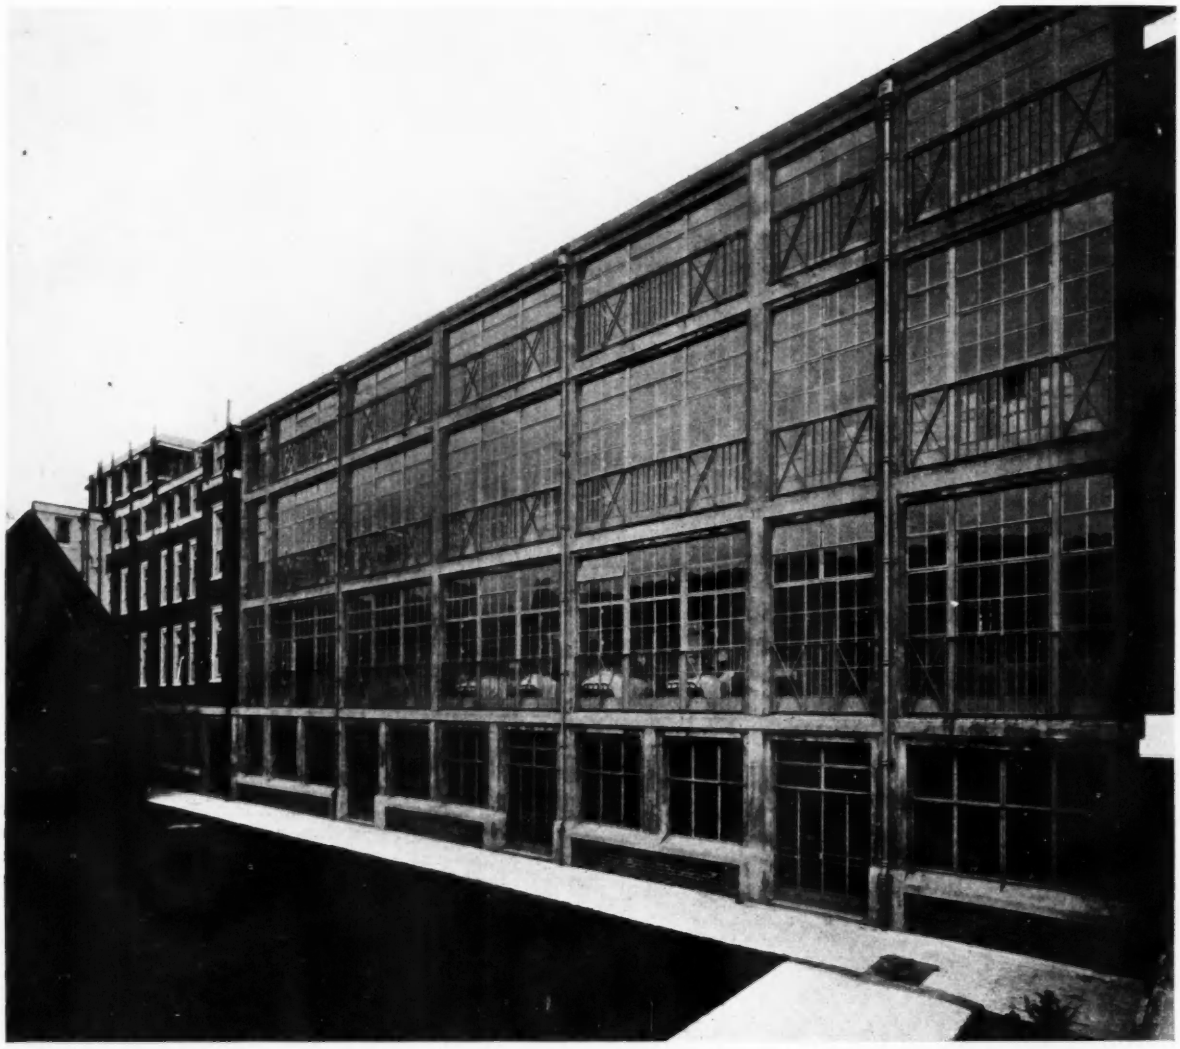
Mr. R. O'Sullivan, for plaintiff, explained that the premises were some 200 years old. The lease in question was for 11½ years, ending March, 1933, at a rental of £130 per annum, and under it the lessee agreed to paint and repair the interior and to execute such exterior repairs as were required every seven years. A dangerous structure notice under the London Building Acts was served on the owner or occupier by the London County Council in October, 1927, calling upon them to do certain vital repairs to walls, floors and chimneys. The plaintiff thereupon sent that notice to the defendant, together with a notice and schedule of dilapidations. The defendant then set up that he was not liable in view of the age of the building, but said that as soon as plaintiff complied with the demands of the dangerous structure notice, he would comply with the schedule of dilapidations. In the end the L.C.C. demolished the top two floors and Counsel contended that the defendant was liable under his lease to make good those floors. It was because of the defendant's default to do what was necessary that the L.C.C. demolished the two floors.

Mr. Woodgate, for defendant, submitted that the defendant had done all the repairs that could legally be demanded of him, and that the plaintiff could not expect him to take down and rebuild portions of the buildings which had fallen into disrepair because of the old age of the premises. The upper portion of the premises became unsafe owing to original faulty construction of the building, and the top portion could not be rebuilt unless the lower portion was demolished and reconstructed.

His lordship, in giving judgment, said he found as a fact that substantially the whole of the building had had to be pulled down. If he had found that only a building up on an existing construction had been necessary, he would have come to a different conclusion.

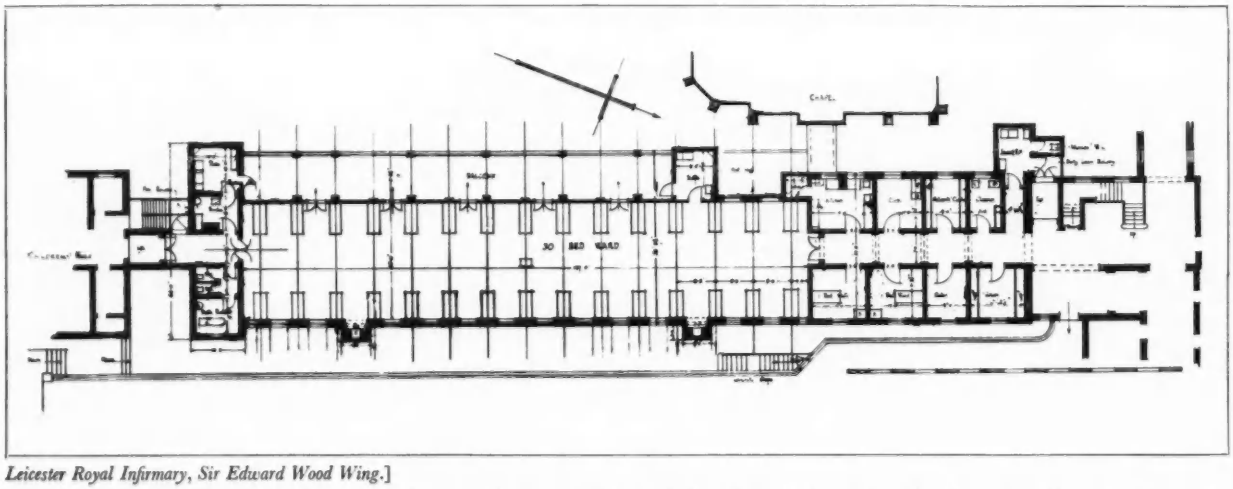
But here he was faced with the certainty that the whole of the party wall would have to be rebuilt right down to the basement. Probably there would have to be an entirely new method of construction in order to bring the building up to the limit of what was fairly called repair, and renewal of a subsidiary part. In his opinion the claim to forfeiture failed, and he entered judgment for the defendant with costs.

The east elevation of the new Sir Edward Wood wing, which was opened by the Duchess of Rutland last November. Externally the building is faced with tapped red wire-cut bricks of uniform colour. The dressings are of reconstructed Portland stone.



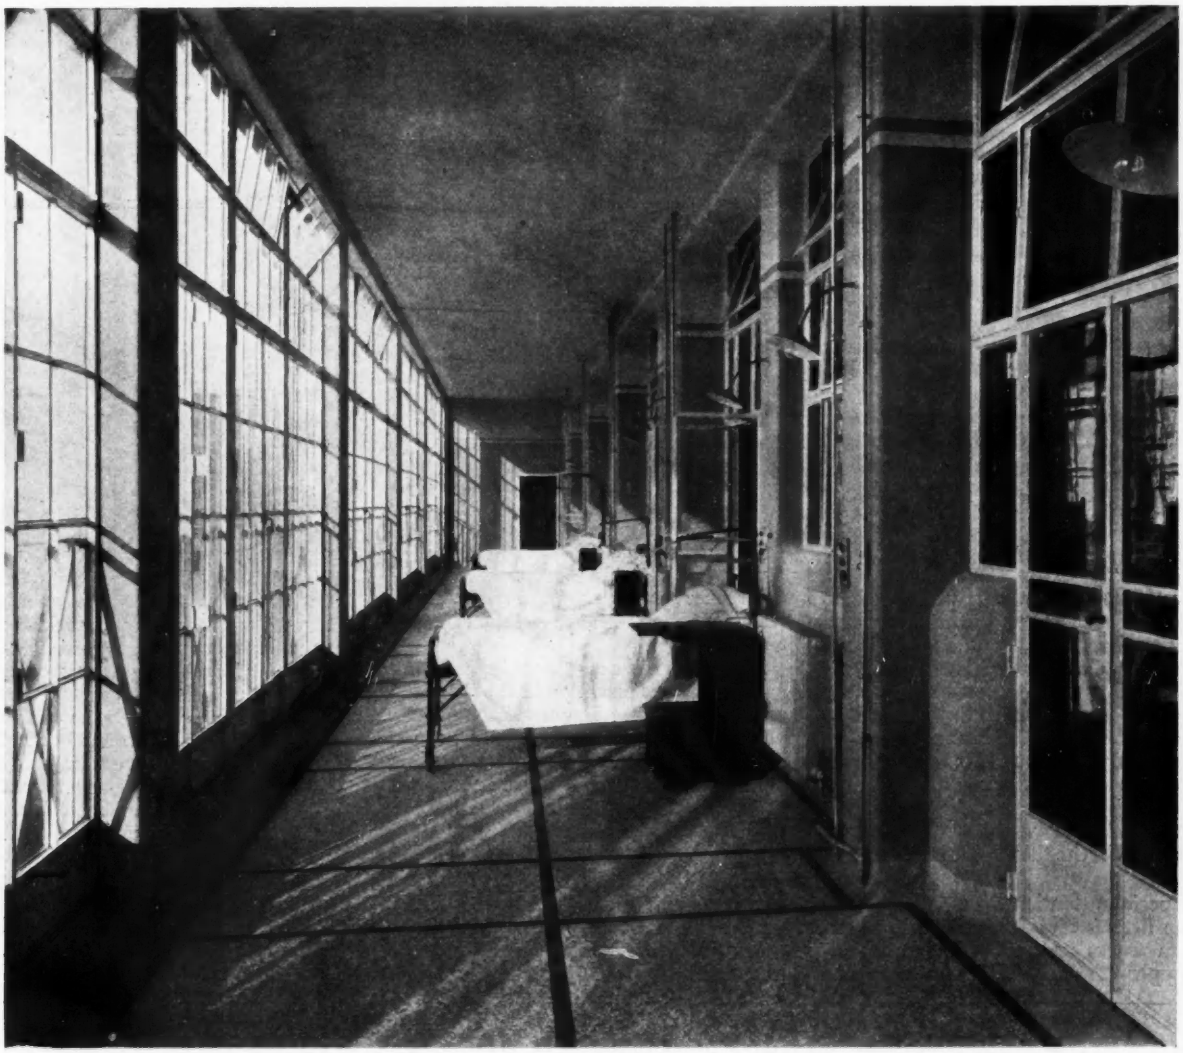
LEICESTER ROYAL INFIRMARY: NEW WING

DESIGNED BY PICK, EVERARD, KEAY AND GIMSON

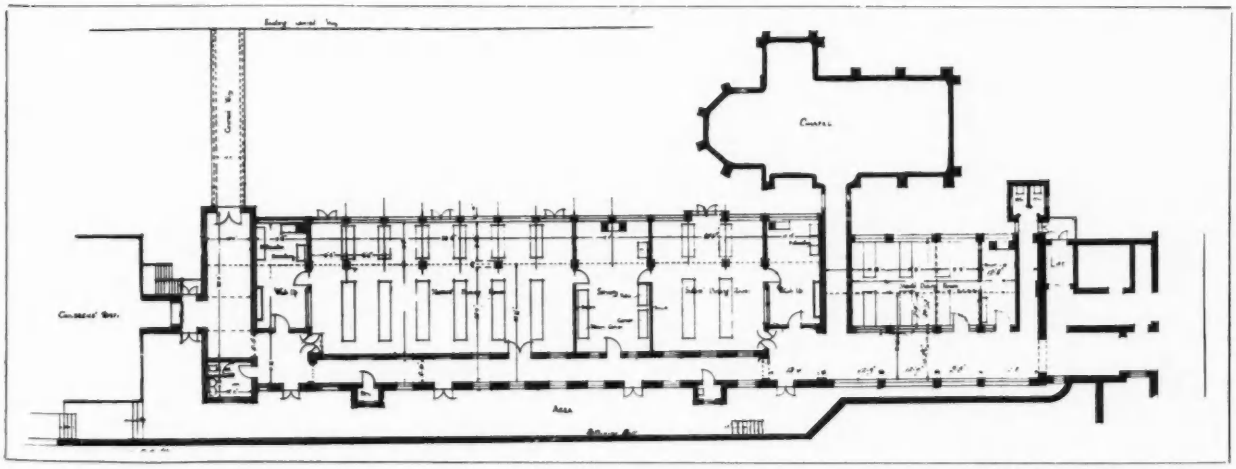


THE new Sir Edward Wood wing was opened last November, exactly sixty-seven years after the completion of the old building, which was demolished in 1928 to make way for the new wing. Before building operations could begin, accommodation had to be found for the domestic servants, housed in the old building. A house near-by the infirmary was purchased as a home for eighteen servants and a superintendent,

The ward on the first floor. There are three wards in the new wing, the other two being situated on the ground floor (see next page) and the second floor respectively. Each accommodates thirty beds and two one-bed wards.



On the south-west elevation are the sun balconies and the nurses' dining quarters. Each sun balcony is 96 ft. long and is of steel-framed construction, with the stancheons encased in concrete. The divisional wall between the balcony and the ward is glazed as much as possible to give a cheerful and airy appearance.



Leicester Royal Infirmary, Sir Edward Wood Wing.]

Ground-floor plan. All the fires in the new wing are electric, including those in the centre of each ward. Every bed is provided with a wireless plug and headphones. Rubber buffers in the rebates of the door frames reduce noise from banging.

The sun balconies are enclosed with steel glazed screens, having folding doors in the lower portion and swinging casements above, hung on friction pivots. Sufficient obscured glazing is provided in the windows of the divisional walls to give privacy for the patients. Each balcony is warmed and planned for easy access to the sanitary annexes.

[*By Pick, Everard, Keay and Gimson.*

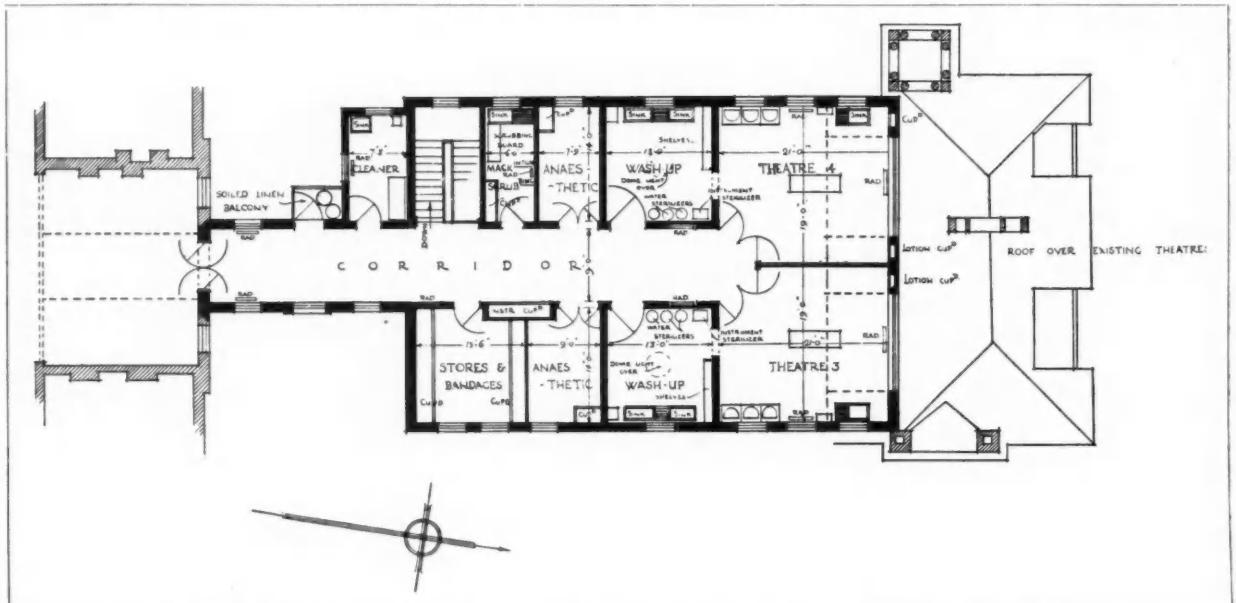
On the lower ground floor are the sisters', nurses' and maids' dining-rooms, servery, and wash-up rooms, and a corridor to link up the children's hospital with the main building. The entrance to the chapel was preserved in erecting the building.

Two views in the new suite of operating theatres. Left, the corridors looking north towards theatres numbers four and three ; right, theatre number three.

a temporary ward for thirty patients was erected on the infirmary site to ease the pressure on the bed accommodation, and temporary dining quarters were provided for the sisters and nurses.

The new wing comprises a lower ground floor, containing the sisters', nurses' and maids' dining-rooms, servery and wash-up rooms, and a corridor to link up the children's hospital with the main building, and ground, first, and second floors, each containing one ward. On the third floor is the matron's flat.

Special attention has been given to the fittings and furnishing. The bed-pan racks are of chromium-plated copper-tube boxes. Steam-heated hot-water bottle tanks are provided, and a crockery sterilizer and a steam plate-warming cupboard are installed in each ward kitchen.



Steam-heated carving-tables and hot cupboards are provided in the serveries, with teak sliding serving hatches over. There are also a coffee-making set, a small refrigerator, electric dish-washing machines, and a burnishing machine. Electric plugs for floor-washing machines are also provided.

The floors are of terrazzo and the plastering throughout is in cement. Cream glazed tiles line the sanitary annexes and other rooms. The floors are of hollow concrete beams, with metal lathing and flush ceilings.

THE NEW OPERATING SUITE

The additional suite of operating theatres is connected by a corridor and a new staircase to the Queen Victoria Memorial wing. The story containing the new suite has been erected without interference with the operating work of the hospital on the floor below.

The walls of the theatres and wash-up rooms are lined from floor to ceiling with vitrolite. Stainless steel angles are provided in the opening between the theatres and wash-up rooms to protect the wall lining. Framed copper gauze windows are inserted in the summer to prevent the entrance of flies. The doors are made of teak and have flush surfaces.

Leicester Royal Infirmary, Operating Suite.] [*By Pick, Everard, Keay and Gimson*

Plan of the new suite of operating theatres. Planning was governed largely by the position of the existing walls and the extent of the existing buildings.

HOUSES,
NORTHGATE,
WARWICK

Once an old coaching house, known as "The Lamb and Flag," through the central doorway of which the London and Birmingham mails rolled in, this early Georgian building is now converted into two houses.

Built of 2½ in. bricks with local stone dressings, it has a bold stone cornice with a projecting central bay, the gable having a painted sun-dial within an oval stone surround. The tiled roof is somewhat over-dormered, but these windows are attractive by reason of their alternate curved and pointed pediments.

—[C. M. C. ARMSTRONG]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an arbitrator, brought by Colonel Jago, J.P., jointly and severally against the builder and architect, for damages for the collapse of a village hall. Mr. Chawlegger, K.C., and a Junior represent the plaintiff; Mr. Twistle, the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. It is the morning of the third day. Mr. Pitfall has delivered his closing address to the arbitrator, on behalf of the defendants jointly, and of Toomer as against Swillerton; and Mr. Twistle has done the same in the interests of Swillerton, as against Jago and Toomer.

Though the case related is true to life in every particular, the characters named are fictitious.

vii: Mr. Chawlegger's Last Word

DURING the addresses of defending Counsel, Chawlegger had been closely engaged in covering two sheets of foolscap with highly elaborated pencil drawings. The learned Counsel's thoughts that day ran, it seemed, on currant buns and tadpoles—or possibly they were microbes; it is sufficient to say, however, that these drawings were not of a kind suitable for framing. He now leant back easily, half facing the arbitrator, with one elbow over the back of his chair, and held a lapel of his coat with each hand, except when he extended the palm of the right as a conclusive exhibition for the arbitrator's inspection. His utterance was gentle and caressing; his manner one of such charming, indolent assurance as made it necessary for him merely to glance down over his shoulder at the papers his assiduous junior, Gadd, pushed to him along the table. He had the air of a man filled with kindly regret at being obliged to expose the errors of his learned friends; and sometimes, pursing his lips, he shook his head sorrowfully; it was very sad, of course, but he was compelled to point out that the contentions of the other side would not do at all.

During Chawlegger's speech Twistle was industriously drafting an opinion on another case, and Pitfall—with him Mr. Wrackem—with legs stretched out, arms folded and eyes closed, incontinently went to sleep; that at least was the picture they presented, but the alertness with which Wrackem opened eye on a fly that hovered for a moment over his forehead, and the repeated sucking in of his cheeks by Pitfall, indicated that the unconsciousness of Chawlegger's learned friends was not so profound as appeared. The etiquette of the Bar—where men of the finest sensibilities and keenest discernments are pitted against one another, furnished with every weapon with which wit, sentiment, ridicule, law and logic can arm them, and where the fiercest controversy awakens no animosity—enjoins a nice observance of fair play; and the demeanour of defending Counsel was no doubt assumed to leave an unembarrassed field for an opponent who was, physically, scarcely a yard in front of their noses.

Mr. Arbitrator (Mr. Chawlegger began), I have listened—as **you, sir,** have listened—with great attention to the addresses of my learned friends. I do not know, sir, how far the ingenious display of facts presented to you, and the no less ingenious arguments advanced by my friends, may have impressed you; but they **have,** sir, I make bold to say, succeeded in **this**—they have disposed you to regard the issue you are trying as a **difficult** and **intricate** issue, rather than the very **simple** and **clear** issue it actually is. Sir, I repeat, the issue before you is **simple,** and the issue is **clear;** for what, sir, **is** that issue? It may be fully stated in ten plain words—**"Who was responsible for the collapse of Grastopen Village Hall?"** That question has no more than **four possible answers.** They are: **One,** that the **defendants,** or one of them, are responsible. **Two,** that the **plaintiff** is responsible. **Three,** that **no one** is responsible, and **Four,** that **all parties** to the action are **equally** responsible. This last possible answer I will not discuss; for it is obvious that if **all** parties are **equally** responsible then no **one** of them is, so that answer **four** becomes identified with answer **three** and may be disregarded. I will first address you, sir, on the subject of the **third** answer—namely, that **no one** is responsible.

This was put to you, sir, in a strange way by my friend, when he urged *vis major* as exonerating the defendants for, **if** *vis major* is shown, the whole of my friends' laborious attempts to persuade you that the collapse was due to the **act of the plaintiff** falls to the ground.

Mr. Pitfall: No.

Mr. Chawlegger: My friend says "No"—but if *vis major* exonerates the defendants it equally exonerates the plaintiff.

Mr. Pitfall: Exactly—**If!** I have submitted that *vis major* exonerates the defendants, but that **if** there was negligence, the plaintiff is responsible for it.

Mr. Chawlegger: My point, sir, is that a submission that the collapse of the hall was **not** due to the act of the plaintiff disallows an alternative submission that it **was** due to his act.

Mr. Pitfall: **If** it was not due to what is akin to an Act of God, **then** it was due to the negligent act of the plaintiff. **That** is my submission. My friend is not doing himself justice.

Mr. Chawlegger: So we have it at last! Either the Almighty or my client is responsible, and my friend is unable to say which, but leaves the grateful task of deciding to you, sir. A building-owner entrusts the design and construction of a village hall to a qualified practising architect and surveyor, and a builder of fifty years' standing; the building falls down and my friend says responsibility for the failure lies either outside the world altogether, or with someone who had nothing to do with the construction of the building.

There were moments while my friend was addressing you, sir, when I began to think I was in bedlam. May I remind you of the **justification** for his submission of *vis major*? It was, that the collapse was due to the **coincidence** of the period of the wall synchronizing with the rhythm of the dance. This will not do at all! My friend told you, and **rightly** told you, and has just **repeated,** that *vis major* is an act akin to the Act of God; but in no sense can a **coincidence** be identified with an **act;** the word "act" here expressly establishes

vis major to be an extraneous, adventitious event—an accident; and its employment forbids any sense of a coincidence. The rule is that when the law creates a duty which a person is disabled from performing—without any default of his own—by the Act of God, the law will excuse him; but when he, by his own contract, creates a duty, then he is bound to make it good notwithstanding any accident. A coincidence is **not** an act **nor** an accident, and the defendants themselves created the duty to hand over a properly completed hall when they contracted to design and build it. The error in my friend's submission is particularly flagrant, in view of the particular matters which involve this coincidence. The rhythm in question, sir, was no more than the **usual** and **appropriate** rhythm of a **common** and **popular** dance measure—for so the "gallop" is: the period of the wall was a **static condition** of the wall established in the wall by the defendants. My friend laid special stress on the point brought out by his expert witness, that it was **almost** impossible to calculate the period of the wall, and **quite** impossible to estimate the resistance to overturning exerted by the roof principals; and he blandly asks you, sir, to decide that **because** those matters were not exactly determinable, **therefore** the defendants are not accountable for the period of the wall, and the resistance of the roof, resulting in the collapse of the building. Sir, I do not wish to be unduly crushing in my exposure of my friend's fallacy; I will, therefore, merely remind you of what—as an eminent practitioner of architecture—you are well aware, namely, that in **any** construction there are always **numerous** elements of weakness that cannot be exactly calculated; and that it is a **basic rule** in the science of construction to employ a margin, or "factor of safety," to cover these unknown weaknesses or uncalculable stresses. The usual factor of safety employed by engineers and architects for each part or member of a structure, and which is used in arriving at the working rules and formulæ in daily use, is commonly **four** times, but never less than **three,** and sometimes **five** times the ascertainable crippling load, or breaking strain, but it **may,** in special cases and at the discretion of the designer, be even **higher.** In short, it is the **essential duty** of the designer to make sure that the factor of safety employed by him in every part of a building is **ample** for strength and stability. Can it be said that the factor of safety employed by the defendants in Grastopen Village Hall was **ample** or even **adequate?** I fancy not, sir: yet if it was **not** adequate, they failed in an essential duty reposing in them, and are therefore guilty of legal negligence.

As my friend established that the inherent weaknesses in the structure leading to its failure could not be estimated, it follows that a factor of safety **greater** than that employed in ordinary cases was called for; but can it be said that the factor of safety employed by the **defendants** was even the usual **five** or **four,** or even the minimum **three** times, the calculable strength? Sir, the evidence gives no support to that view. The defendants' own expert witness made it abundantly clear that the factor of safety was not even **twice** nor so much as **half** as much again as the calculable minimum, and, sir, I submit that in doing so, he definitely fixed culpable negligence upon the shoulders of the defendants.

It must have surprised you, sir, to listen to my friend's long list of circumstances **contributory** to the collapse, the absence of any one of which would have **prevented** the collapse: but if the stability of the building could have been secured by any one of six or eight precautions, **why,** in the name of wonder, did the defendants **not** take one or more of those precautions? Or **how,** having **failed** to take any one of them, can they claim to be **relieved** from a charge of negligence? It is clear, sir, that this third answer to the question, "Who was responsible?"—namely, that **no one** was responsible—which has been urged with such ingenuity by my friend—entirely and completely breaks down.

I now pass to the second possible answer, namely, that the **plaintiff** is responsible.

I shall not, sir, detain you by emphasizing the fatuousness of my friend's plea that my client, by a martial command, **ordered** American maple flooring. I will merely remind you of my client's **perfectly clear and obviously truthful** statement that he knows **nothing** about building operations; that he looked to his **architect** to advise him on **all** technical points; and that if his architect **had** told him that American maple was a tough and refractory wood—which is all the defendant claims to have told him—my client would not have known what was meant. Sir, may I also remind you that the defendant architect **admitted** in cross-examination that, at the interview with my client on December the seventh, he **definitely undertook** to lay down a satisfactory dancing floor of American maple. I need say nothing more, I fancy, sir, on that matter.

My friend has not gone so far as to tell you that the leaving in place of the blocks and wedges was **also** a martial order of my client, and I have only to submit, sir, that in undertaking to lay a satisfactory dancing floor of American maple the defendant architect clearly accepted responsibility for **all** precautions necessary to **secure** that result. It is unnecessary for me to say anything more on that matter, except to remind you that when I asked the defendant architect **why** he had not ordered the removal of the blocks and wedges, his answer was that he **overlooked** the matter as there were so **many things to think of.** In face of that admission, sir, my friend still asks you to decide that his client's omission to order the removal does **not** amount to negligence.

I now come to the gravamen of my friend's contention that the plaintiff is responsible, namely, his submission that the collapse was due to the wilful or negligent act of my client in promoting in the hall a **beastly, drunken orgy.** I am not going to contend that some who were present that night did not take alcoholic drink in excess of what the rector of the parish might think seemly; but the contention that two dozen bottles of whiskey distributed among three hundred and twenty persons could **alone** produce intoxication, or that if my client, conceivably, **intended** to promote intoxication he would have **limited** his gift to two dozen bottles, is so extravagant that I will make no further comment upon it, confident as I am, sir, that you will understand very well what the degree of alcoholic enlivenment that evening actually amounted to; **but,** sir, I do ask your attention to the submission of my friend that it was this alcoholic enlivenment of the dancers that caused the buckling of the floor.

First, sir, I will remind you that the defendants' own expert witness, when pressed by my friend to say that the collapse was the result of **violent** dancing, refused to do so, and substituted the word **energetic.** Now, sir, what is the nature of a "gallop"? It is a dance that can be danced in **no other way than energetically;** and this is so well understood that it is danced but **once** in an evening, and then **always** as a **concluding** dance, or **finale,** or **last fling** or **wind up,** of the entertainment. An ordinary gallop danced in the usual way at the close of the evening, as is usual, was sufficient, according to the defendants' own witness—a gentleman of firm discretion and exact phrases, as you, sir, observed—to account for the collapse. But if you had **not** heard this witness to the **fact,** in what way **could** the advanced degree of intoxication urged by my friend have **increased** the destructive effect of the dance? Obviously, sir, it would have had rather the effect of **diminishing** that destructive effect. Is a drunken person more **active,** more **nimble,** more **energetic,** more nicely precise in observing **rhythm,** than one who is sober? Assuredly he is **not;** he is **clumsy, slow-footed** and **blundering,** and would be incapable of imparting to the dance that energetic

rhythm which is characteristic of the gallop and which was necessary for the overthrow of the walls. If, sir, you are with me in this, I submit that I have established two points, **first,** that as energetic rhythm **did,** in fact, operate, **therefore** the dancers were **not** intoxicated; and **second,** that as they were **not** intoxicated, my client is entirely absolved from promoting a drunken orgy and—by my friend's own admission—is **not** accountable for the buckling of the floor—for the buckling is shown to have been the result of using the floor, as anyone who lays down a dancing floor knows it will be used.

But, my friend says, it was, particularly, the wilful or negligent act of my client's guests in dancing on the floor **after it had buckled** that brought about the collapse. It is not disputed, sir, that if the buckled floor had **not** been danced on, the hall would now be standing; but in **what way** can a charge of wilful or permissive negligence be shown to lie against my client? By reason, says my friend, of the native callousness or mischievousness of my client's guests. He says that my client negligently allowed irresponsible, drunken, agricultural rantypolls to knock the place down. Sir, I submit that that plea is completely answered by the reply my friend got in cross-examination from my witness, Mr. O'Hara : " Sure, how would we know the floor was not the way a spring dancing floor **would** be? " How, sir, **would** they know? **How** could they be **expected** to know? When the defendants undertook to design a hall for an agricultural village, suitable for dancing in, **who,** did they suppose, would dance there? Was it members of the Institute of Civil Engineers, lecturers on Statics and Dynamics and eminent King's Counsel; or was it to be Hodge, and Jack Pudding, and Tony Lumpkin? Sir, I submit that the evidence is clear that the dance which wrecked Grastopen Village Hall was a **usual** dance, danced in the **usual** way by dancers whom the hall was **specifically intended and designed to accommodate,** and that when my friend contends that the plaintiff is responsible for the collapse he has not a shred of evidence to support him.

I now, sir, come to that last of the four possible answers to the question, "Who was responsible?"—and which is first on my list—namely, that the **defendants,** jointly and severally, were responsible; but I shall not, sir, detain you long, for in showing that no **other** answer than this is possible I have already said all I can say without grave risk of wearying you by repeating myself. There are, however, one or two points of which I ask permission, sir, to remind you.

Both my friends spoke at some length of the relative responsibilities of the two defendants; but beyond wishing to associate myself with all that each of my friends said in **blaming**—and **rightly** blaming—the others' client, I have nothing to add, for my case is **this** : that the defendant **Toomer** was negligent in failing to give adequate **instructions** and in **seeing** that the hall was soundly and well built; and the defendant **Swillerton** was negligent in failing to build **soundly** and **well.** My friends' pains to show you, sir, that adequate instructions **were** given and that the work **was** soundly and well built have, I fancy, sir, been wasted; for both pleas are negatived by this **decisive fact**—that the **hall did incontinently fall down.**

It is true, sir, that a building-owner is estopped by the act of his duly qualified agent,—his architect—in directing the contractor, from the recovery of damages from the contractor for failure **consequent** on that direction; but he is **not** estopped from recovering damages against the architect for that consequent failure. This is laid down by Mr. Justice Erle in the case *Turner* v. *Garland and Christopher*, quoted by my friend. My friend's submission that the use, and leaving in place, of the wedges, was not a matter for which an architect is responsible, is discredited by the famous case of *Leicester Guardians* v. *Trollope*, to which my friend did **not** refer. This was a case, sir—may I remind you—in which the builder of a hospital had **left in place** the wooden pegs knocked into the ground and ranged at a uniform level to fix the thickness of the concrete foundation for receiving wood-block floors. **Years** after the building was completed, sir—when the period of the builder's liability for defects had long expired—dry rot, set up in these pegs, was found to have involved the whole of the floors and adjoining woodwork; and though a clerk of the works had been employed by the plaintiffs to supervise the work on the building-owner's behalf, the judge held that the architect was negligent in leaving such a matter to the clerk of works, and the plaintiffs got a verdict with heavy damages against the defendant architect. In the **present** case the architect recommended the use of a special material that went wrong, and for this he was guilty of **negligence,** because a professional man is **not** entitled to **speculate** at the risk of a building-owner; he also allowed certain wedges to be improperly left *in situ*, and in this **also** he was negligent. Sir, the responsibilities of an architect are definite and exacting—as all architects who suppose otherwise sooner or later have to learn, to their cost—and cannot, sir, I fancy, be answered by the plea, " I overlooked the matter; there were so many things to think of."

One thing more, sir, and I have done. My friend, Counsel for the defendant Swillerton, submitted to you that the architect had issued his certificate of completion; that the building was, in fact, completed, and that **therefore** the penalty clause of the contract had lapsed and become void at the time the building collapsed; but, sir, this is surely begging the question ! A building which falls down the first time it is used for a purpose it was designed to fulfil, has **not** been completed. Moreover, the contract had **not** lapsed, for the builder was still bound under contract to complete the building by making good defects; and **money** was to become due to him **in respect of** such completion. **If,** sir, it should seem to you that the act of the architect in certifying completion estops my client from benefiting by the application of the penalty clause, **then** I submit that the architect was negligent in certifying completion and that my client can claim from the defendant architect the amount which would have become due to my client under the penalty clause if the architect had **not** negligently certified completion.

As to the other items making up the sum claimed as damages in the particulars of claim, I content myself with calling your attention, sir, to the very modest sum in which my client assesses loss of enjoyment. That **loss,** sir, and the **annoyance, frustration, disappointment** and **humiliation** to a man situated as my client, is not to be adequately represented in **money,** and he has **not attempted** to so represent it. The other items are the agreed cost of reconstruction, and the actual sums—supported by receipts—paid to parties injured by the collapse.

And now, sir, one last word. I have **refrained** throughout this hearing from vexing your ears—as my friend must have vexed them—by abusive disparagement of the other side. I have **not,** sir—however much my friend may have provoked me to do so—sought **in the least** to discredit that good standing and those moral attainments of the defendants upon which subjects my friend found it necessary to his case to be so **vociferous.** I **agree** that the defendants may—for all I know—be citizens of good repute and men of high integrity; **but,** sir, citizens of good repute who are also men of high integrity are **not,** I fancy, for those reasons, exempt from the obligations which bind **less** exemplary subjects of His Majesty; and are **not,** I believe, entitled to remission of the law and to a tempered justice ! It is **true** that, in this land, a man is not to be denied justice because he is **poor;** but neither is a man to be denied justice because he is **rich.** The defendants, by their culpable negligence,

have done **serious injury** to my client, who asks no more, in compensation for that injury, than law and justice ordain to be his due; and he asks it **not only** for **himself,** but because he holds it to be his duty—as a person publicly conspicuous—to protect those humbler members of the community who are not able to protect **themselves** against the catastrophes in which the negligence or incompetence of architects and builders may involve them.

My friend, sir, found it necessary to bolster up his case by dragging in one of those wretched squabbles which are common in village life throughout the country.

The Court House, Stokesley, Yorkshire, of which measured drawings are reproduced on the facing page. The side door gives on to what was the magistrate's private house.

Mr. Pitfall: It was **you** yourself who dragged it in.

Mr. Chawlegger: I **bolted** the quarry, but it was my friend who **pursued** and **harried** it. I say no word against the reverend gentleman, the rector of Grastopen; but **who among us,** sir, sitting in the remote confines of this room, dare gauge the rights or wrongs of a petty wrangle involving those **prejudices, vanities, emulations** and **rivalries** which are the failings of all men, be they prelates or laymen?

Of my friend's insulting denunciations of my client I will say merely this—that he himself expressed just those vulgar prejudices and that ignorant public hostility which my client has to contend against in his daily goings out and comings in. His **crime**—in a neighbourhood where the "County" rules—is that he **made** his money instead of **inheriting** it, and **won** the position he occupies instead of being **born** to it. His **wealth** is the object of just that snobbish scorn which my friend exhibited to you; his **every attempt** to fill the place he has made for himself, by **open-handedness** and by activity in **public service** and **philanthropic enterprise,** is obstructed and discredited by just such unfair ascriptions of **mean, self-seeking** motives as you have heard from my friend's lips. It is characteristic of my friend that he even sneered at the fact that my client had served his King and Country in the Army Service Corps.

Mr. Pitfall: I did no more than **mention** the branch in which he served.

Mr. Chawlegger: But **unnecessarily,** and in a **contemptuous** association: everyone knows the gibe, A.S.C.—Army Safety Corps. Sir, Colonel Jago was drafted into the A.S.C. because—as an experienced business organizer—he was considered of greater use in that occupation than in another; and if he was not therein serving his country to the best of his powers, I should very much like to know **who,** in those days, **was.**

Mr. Arbitrator, my client asks no more than this—that he shall have such an award as he is in law and in justice **entitled** to have; and he leaves the matter in your hands, sir, with perfect confidence that each of the parties to this action will receive his deserts without regard to **wealth** or **station.**

After Mr. Chawlegger ended, the arbitrator continued writing for two or three minutes, while there was a gentle stir and gathering up of litter about the table. Pitfall's clerk stole from the room with a bag of papers; Jago whispered Chawlegger, who only gave him half an ear as he sorted out documents; Twistle briskly licked a foolscap envelope and addressed it; Chawlegger accepted a lozenge offered him by Gadd, and Pitfall closely consulted a pocket diary.

The laying down of his pen and the blotting of the sheet by the arbitrator drew attention. With a certain ceremony he then said: "Well, gentlemen, I will now proceed to my award." He made this announcement as a warning that if anyone had anything to say his last chance was now. As nobody made any move to speak, the arbitrator next said: "I will consider my award and notify its publication to all parties in due course."

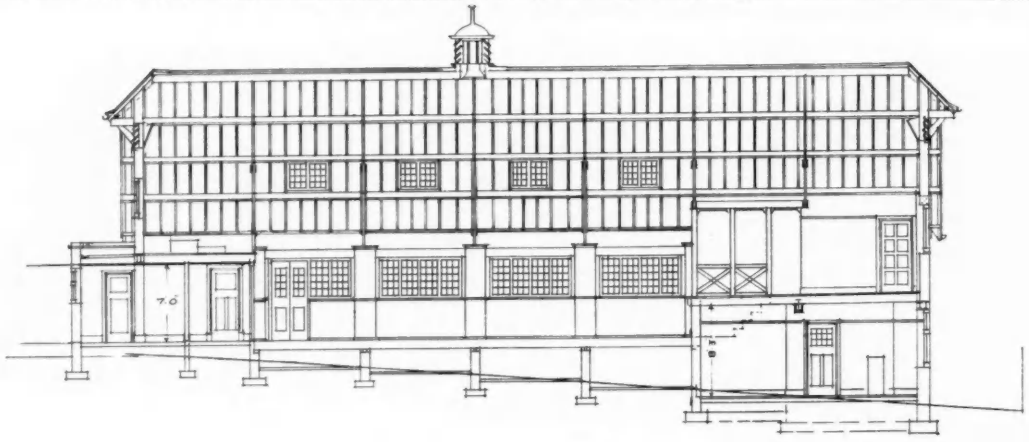
The arbitrator then rose, and all present stood. Hand-shaking between Counsel and the arbitrator was the concluding formality. The arbitrator then left his chair and, on his way out, shook hands with Vivian Fanshawe, John Robert, and David Winkletop—each of whom attempted, in reciprocating the courtesy, to throw a barleycorn into his own side of the scales: Jago, by a stiff bow as though the hand he held had been the hand of his Sovereign; Swillerton, with an abrupt, manly cordiality; and Toomer like a spaniel yearning for biscuit but dreading kicks. After the arbitrator had left the room Counsel shook hands each with his own client, and in rather a careless way considering it was the last they would ever see of them; and Pitfall and Chawlegger then went off to the Temple in the same taxi, like blood-brothers.

"Well, what did you think of it all?" Bosson asked, as a theatrical manager might of his show, while he and Toomer walked out of the building.

"Well, I—I—I—I don't quite know," Toomer rumbled. After regaling on Twistle, sandwiched between Pitfall and Chawlegger, Toomer had a worse indigestion of the whole matter than ever before.

"I will let you know directly the award is published," said Bosson, irritably. "Good-day."

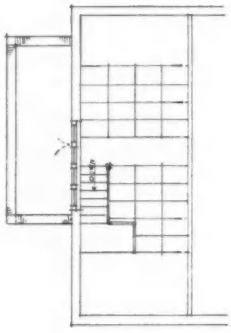
"When will it be published?"



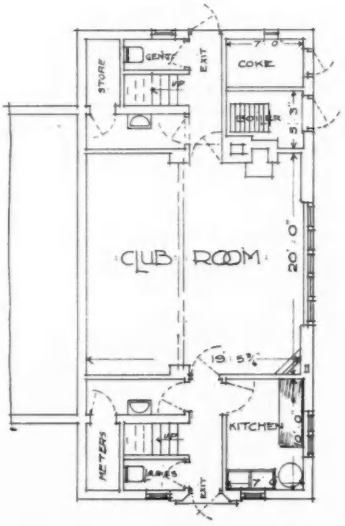
"Can't say."

"But what papers will it be published in?"

Bosson, who was signalling a taxi, waited for it, got in and drove off without replying.

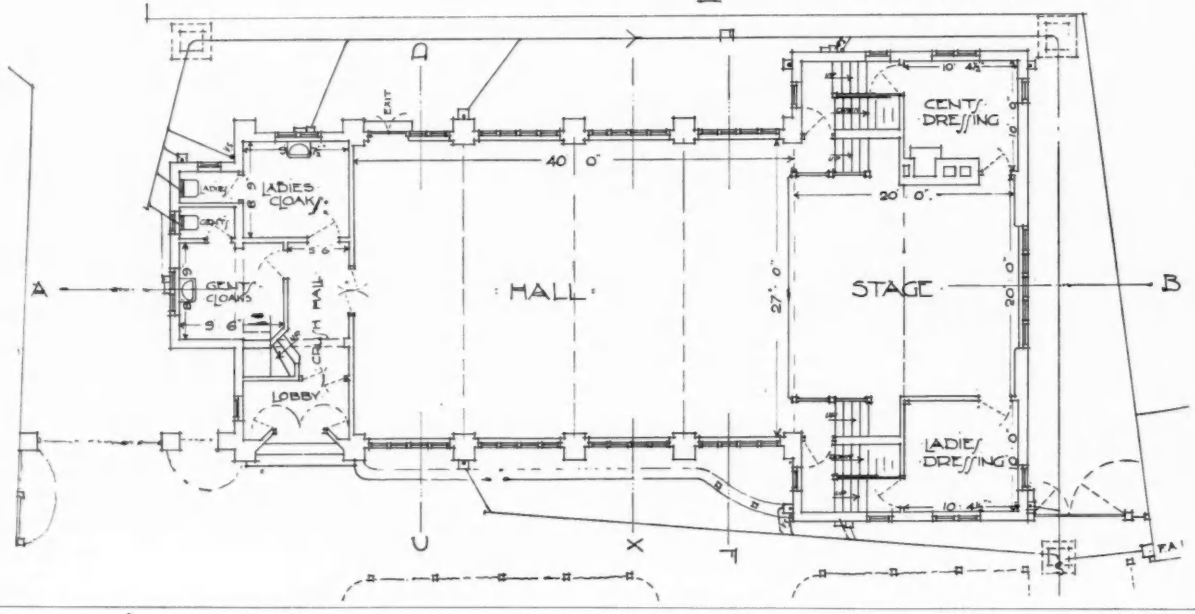


(NEXT WEEK—VIII: THE AWARD; AND AUTHOR'S COMMENTARY)



The Court House at Stokesley is built of brick, with stone quoins and plaster plinth, both painted, and has a slate roof, with hips and ridge of stone. The subtly bowed front to the Court room is treated rather after the manner of a shop front of the eighteenth century, and both in proportions and detail the design achieves a shapely dignity. A photograph showing the main street front and the bowed side appears on the facing page.

SECTION AB



ALVECHURCH
VILLAGE
HALL,
Worcestershire

PLAN OF GALLERY

PLAN BELOW STAGE

[By Bloomer and Gough.

The architects' drawings of the ground-floor plan, with those at below stage and at gallery levels, and a longitudinal section. The hall was built on a site given to provide social amenities in the village, and has a floor, 40 ft. by 27 ft., in maple, for dancing. Two hundred people can be seated, with an additional forty in the gallery.

The exterior, showing the main front to Bears Hill. Designed in the style of a tithe barn, the base is built of Bromsgrove stone from a demolished railway bridge, the walling in King's Norton bricks, and the roof in smoked tiles.

ALVECHURCH VILLAGE HALL, WORCESTERSHIRE

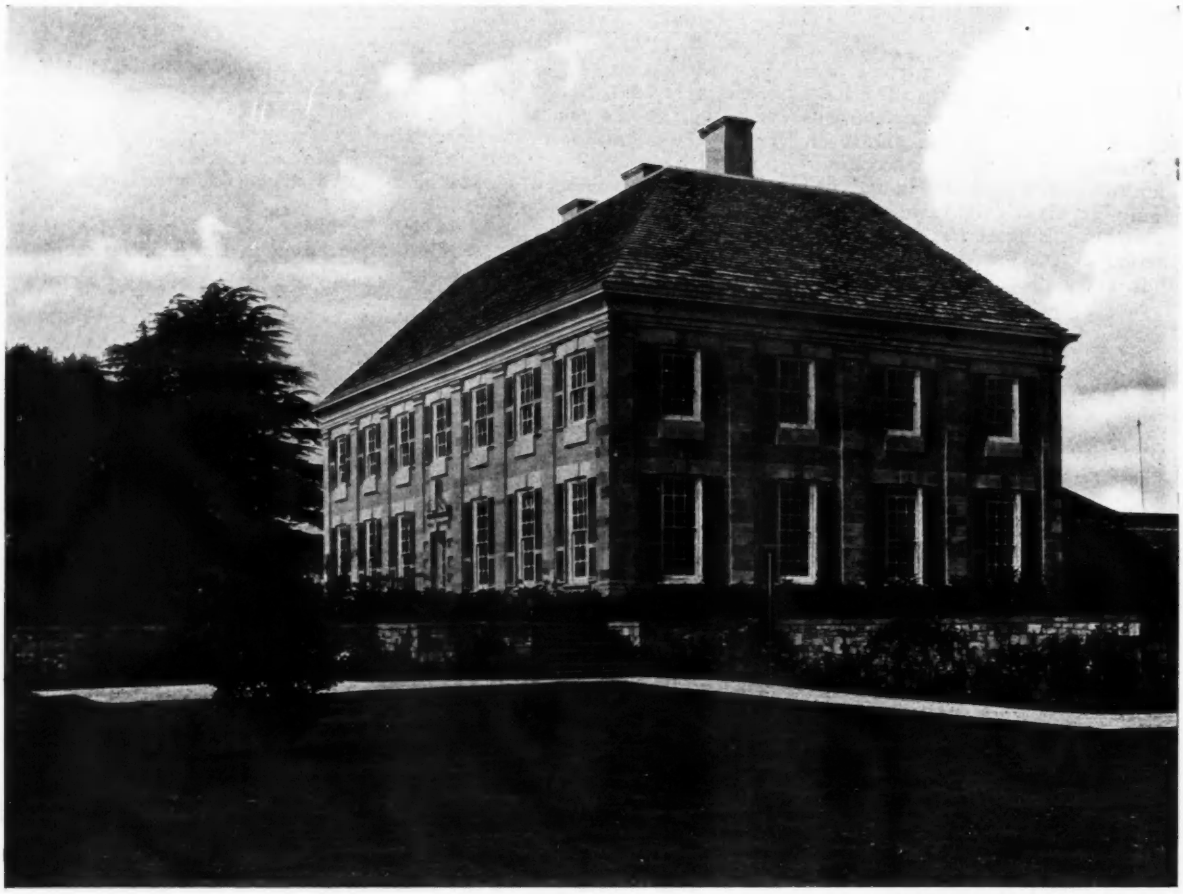
DESIGNED BY BLOOMER AND GOUGH

THIS hall is the outcome of a competition limited to five local architects, £2,000 being the contract price in view. It was, however, not found possible to give the accommodation required within this limit. The winning architect's estimate was for £2,200, but this figure was considerably exceeded by the lowest tender. After certain economies, it was reduced to £2,412. Eventually King's Norton bricks were used, those that had been near the fire—i.e. blacks and greens—being chosen, mixed with reds, to give a mottled effect. The quoins to piers and window reveals are of Bidford sandstocks, while the base was built of stone from a demolished railway bridge, given, in fact, by the L.M.S. Railway. The roof is covered with smoky tiles, and metal casements, glazed with leaded lights, were employed throughout. The object being to provide a social centre, the hall has been made adaptable for many purposes. The stage is furnished with a system of head, foot and flood lights, and dressing-rooms for the two sexes are included in the facilities for dramatic performances.

The interior of the hall, looking towards the stage, which is fully equipped with foot, head and flood lights, for theatrical purposes. Behind are dressing-rooms; below is a club room, with kitchen adjoining.

MELLS PARK, SOMERSET

THERE are many delightful photographs in the February issue of *The Architectural Review* of Mells Park, Somerset, the residence of the Right Honourable Reginald McKenna. Mells Park, which was burnt down in 1917, faced south on to a gentle upward slope, and westward down a steep incline to a picturesque little lake of its own. It was a good-sized house, and surrounded a courtyard on three sides.



In 1924, Sir Edwin Lutyens began to rebuild it for Mr. Reginald McKenna. The whole colonnade of the courtyard was retained, but only two wings of the original house have been rebuilt. The main body of the building being to the south, and the servants' wing to the west, means that the courtyard is no longer central. The fall of the ground puts the first floor of the west wing on a level with the ground floor of the south, while the servants' ground floor gradually becomes a basement the farther south it goes.

Mr. Christopher Hobhouse, in an article on the building in the same issue, says :

At first sight the design of the front with its unbroken rows of windows, seven along and four across, seems to indicate a monotonous plan, divided into twenty-eight perfect squares. But it does not take long to discover that while the pilasters of the south front are only 8 ft. apart, those on the east and west are 9 ft. 2½ in. apart, so that the units of the plan are not squares but oblongs, thus giving a pleasing variety to the proportions of the rooms. These twenty-eight units are economically used. The library and drawing-room take up six apiece, the dining-room, morning-room and stairs four apiece; while four are left over for the pantry and hall.

The exterior of the house is open to little criticism. Apart from the dormer windows on the west, my only complaint is that the lintels of the windows contrast with the rest of the stone, both in size and texture. The north front compensates for a certain lack of beauty by a display of dazzling ingenuity.

Taken as a whole, the house presents a perfect blend of dignity and simplicity. Without its graceful pilasters, it would be deprived not only of its dignity, but also of apparent adequate support to the stone roof. The discrepancy I have already mentioned, in the distance apart of these pilasters, is carried out without any of those signs of apology or shame which so often spoil over-scrupulous work. The coved cornice gives just the feeling of homeliness which this Order lacks in its more orthodox form. As for the roof and chimneys, one can only envy their lavish, unerring proportions. Sir Edwin Lutyens is seen at his best in this sort of straightforward country house, in which classical ornament has not been stuck on like a coat of paint, but incorporated from the beginning as a governing factor of the design

[*From* The Architectural Review.

Mells Park, Somerset, from the south-east. Sir Edwin Lutyens, architect. The walls are built of Bath stone. For the facings and quoins old stone from the original building was re-used as far as possible, and the new stone supplied for the entrance doorway was obtained from the same quarry. The window shutters are stippled in myrtle green on a lighter ground. The coved cornice is of plaster with a wood moulded gutter above and a stone string below. The roof is covered with grey tiles.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

IN the House of Commons on February 12, Mr. P. Oliver moved a resolution viewing with regret the excessive burdens placed on the occupiers of new houses by the incidence of the present rating system, and by street-paving charges, and the detrimental effect of such burdens on future housing developments, and urging on the Government the consideration of proposals for the reduction of such burdens in connection with any future legislation dealing with the question of housing.

Referring particularly to road charges, Mr. Oliver gave an instance of one estate where nearly three years' rent was absorbed by such charges. These burdens were crushing development, and road making should become a communal charge. "Ribbon" development was taking place because there were no road authorities for arterial roads. They were taxing people who undertook "block" development, which was desirable, and not taxing people who undertook "ribbon" development, which was undesirable.

Mr. Greenwood, the Minister of Health, replying to these and other points raised in the debate, said that the problem of street-paving charges was one which ought to be the subject of some inquiry. It was probably true that local authorities were demanding roads which were in excess of requirements.

Already discussions had taken place between officers of his Department and representatives of the Institute of Municipal and County Engineers on the question of cost and the incidence of cost. He hoped that inquiry would be pursued. He had never defended the present rating system, which was hopelessly antiquated and out of touch with modern requirements. But the problem of rating was not one which they could deal with as a side line when they were dealing with the housing problem. He agreed with much that had been said as to the hardship of the incidence of taxation and street paving charges, but he asked the House not to pass the resolution because of its irrelevancy to the housing problem. Members, he hoped, would bear with patience what little delay there might be in the bringing in of the promised Bill.

Eventually, however, the resolution was agreed to.

Mr. Lansbury stated that the question of the erection of a new building to house departmental staffs on the Whitehall Gardens, Montagu House site, was still under consideration, but no decision had yet been taken on this proposal or on the proposal to vary the building line on the Thames Embankment. Until a decision had been reached on this question it was obviously impossible for him to state what departments could be housed in the building.

Sir John Power asked the Minister of Health if he could state the number of houses completed during each of the months, October, November, and December, 1929, and, for comparison, the corresponding figures for the same months of 1928.

Mr. Greenwood said that returns as to houses erected without State assistance were obtained half-yearly only, but the following statement showed the number of State-assisted houses completed during each of the months in question in England and Wales :

Month.	No. of State-assisted houses completed during the month under the		
	Housing, Town Planning, etc., Act, 1919.	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.
1928 :			
October	—	6,174	4,585
November	—	4,152	4,195
December	—	3,871	3,881
1929 :			
October	4	—	6,278
November	10	—	4,555
December	—	—	3,674

Mr. Greenwood informed Viscount Lymington that up to December 31 last, the latest date for which figures were available, assistance had been promised under the Housing (Rural Workers) Act in respect of 2,510 dwellings in England and Wales. Work had been finished on 1,669 of these, and was in progress on a further 650. Applications in respect of an additional 396 dwellings were then before the local authorities.

Mr. Greenwood informed Miss Lloyd George that the number of houses completed under the Housing, etc., Act, 1923, up to September 30, 1929, was 413,911 in England and 22,722 in Wales. The number completed under the Housing (Financial Provisions) Act, 1924, up to January 31, 1930, was 269,337 in England and 11,741 in Wales.

Sir Kingsley Wood asked the Minister of Health if he would state the average cost per superficial foot of non-parlour and parlour houses included in contracts let by or in direct labour schemes of local authorities in England and Wales during 1929.

Mr. Greenwood said that the figures were : for non-parlour houses, 8s. 11¾d., and for parlour houses 9s. 0¼d.

CORRESPONDENCE

A NORMAN SHAW BUILDING

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—I rub my eyes and wonder if I am reading the signature correctly—"Baillie Scott." We all know Baillie Scott, the author of very numerous buildings, admirably toning with their surroundings, of a picturesqueness we have ourselves a little envied. Would there have been a Baillie Scott if there had not been a Norman Shaw, and if he had not had an earlier manner?

There is one passage in this letter (see last week's issue) of very grave inaccuracy—"a building of this kind which has nothing to recommend it but the name of its designer." This is simply rhetoric. Mr. Scott cannot know the building, or the 125 drawings in the Institute Library, mostly in Shaw's own hand, from which it was developed.

I challenge Mr. Scott to show any one point in any of these or in the completed building, which, considering the craftsmanship available in 1868, could have been done better.

This is not a question of ruining the aspect of a street; Castle Street, Farnham, can very well take care of itself. Without any improvement of its features, and with several worse buildings than Shaw's Bank, it would still be one of the most satisfactory streets in England.

Admitted, that Shaw's influence was good, the point is not which of his buildings he would have chosen as a memorial, but how to record development.

Shaw began in an offshoot of the Gothic revival, and was the principal influence in English domestic architecture for forty or more years; his work during that time shows a steady change from Gothic to Classic detail, and from irregular to formal planning. Therefore, in order to illustrate his life's work, several instances must be preserved. Of these I would choose : the Bank, Farnham; Pierrepoint, Fleete, in Devonshire; and No. 2 Queen's Gate, Kensington. If anyone knows a better series let them point it out.

It will be noticed that I have chosen none of Shaw's public works. Shaw lived at a period when our public works were as bad as they could be, and although his influence was beneficial, particularly in plan, it will, I believe, be for his influence on domestic work that Shaw will be remembered.

HAROLD FALKNER

SMOKE ABATEMENT

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—The Report on Smoke Abatement prepared by a Committee of the R.I.B.A. is remarkable for the fact that

the Committee makes detailed reference to the effect of smoke upon one kind of building material only, viz., stone.

It is true that the report states that "sulphuric acid particularly corrodes or disintegrates practically all kinds of building materials," but it would certainly have been of more interest to architects and others if the Committee had pointed out that well-burnt clay products will successfully withstand the smoke-laden atmospheres of our great cities, as evidenced by the successful use of bricks, terra-cotta and faience on thousands of buildings which, after standing for many more years than the decayed stone buildings which the Committee deplores, show no signs of corrosion or disintegration.

H. HALLIDAY,
General Secretary, The National Federation of Clay Industries.

SOCIETIES AND INSTITUTIONS

TOWN PLANNING AND SOOT

SIR JOHN ROBERTSON, lecturing on "Town Planning" at Birmingham University, said that a town-plan enabled an authority to prevent overcrowding of dwellings on a site, to avoid the mixing of smoky factories with dwellings, and to establish a pleasant environment for the dwellings. They must not overlook the need that existed of an atmosphere free from soot. There was abundant evidence of the ill-health arising from soot-laden air. A minor disadvantage was the dirtiness it caused and the large amount of extra washing it entailed.

When the number of houses to the acre was strictly limited it was possible to give every dwelling a good circulation of air round it and an unrestricted amount of sunshine.

INSTITUTE OF LANDSCAPE ARCHITECTS

At the first public meeting of the Institute of Landscape Architects, held in the Royal Horticultural Hall on February 11, an address prepared by Mr. Thomas H. Mawson was read by his son, Mr. E. Prentice Mawson. The former is the first president of the Institute.

In the presidential address reference was made to the fact that too often in the past the profession of landscape architect had been the happy hunting-ground of amateurs and out-of-work members of all sorts of professions, trades, and cults, with results which might be seen everywhere throughout the length and breadth of the land. It had been glibly assumed that anyone possessed of a little native taste was capable of doing all that was necessary in laying out a park or garden of whatever extent and importance, and that, if any specialized training was necessary, it was confined to horticulture.

The Institute was set the very formidable task of practically re-creating a profession which, in this country, had become almost non-existent. There was a great work before them in the inculcation in their public, and especially their municipal bodies, of the obvious fact that good work in landscape architecture could not be done by just anybody, by, for instance, a borough engineer, whose whole training was in exact sciences and principally mathematics; or, on the other hand, by a working gardener whose knowledge was confined to the rearing and nurture of individual plants.

In this country it was the private landowner of the leisured art-loving classes who, so far, had been the patron of their profession, so that while they must go abroad for the finest examples of public work, practically all other nations, and not least the American nation, were generous in their praise of the English garden. While students in hundreds came over from America specially to study English gardens, they, in England, did not make the use they should of the opportunities provided at their very doors. The remedying of this state of things would provide one starting point for the activities of their new organization.

THE STANDARDIZATION OF ROAD SIGNS

On Friday last Mr. H. V. Lanchester, F.R.I.B.A., read a paper before the Town Planning Institute on "The Standardization of Road Signs," at Caxton Hall, Westminster, S.W.

Mr. Lanchester said that there were a few special signs to be found here and there to mark important routes, but there was not at present any systematic method generally applied to road crossings and junctions. The roads were also liberally sprinkled with warning signs, most of which would be superfluous if the method he proposed was adopted.

What was needed for the motorist, he said, was that the motorist should get the information as to his route, say, five seconds in advance, so that he knows what road he is going to take and has his mind free to take the turn or crossing, paying attention to this and the exigencies of other traffic. As the car would probably be covering 10 to 15 yards per second, the notifications should be placed 60 to 80 yards from the point in question, more or less in the position now occupied by the warning signs, which they would replace as being efficient substitutes for these.

ETCHING AND PRINT ENGRAVING

A meeting of the West Yorkshire Society of Architects was held at Leeds on February 13, under the presidency of Mr. G. H. Foggitt. An address was given by Mr. Walter M. Keesey on "Print Making and Collecting."

Mr. Kelsey made some brief remarks on the history of engraving as a means of pictorial representation, and explained the reasons for the adoption of particular methods, and also the various processes employed. Etching, he said, was an attractive art, appealing especially to architects, and very suitable for the rendering of surfaces and textures of building materials. The greatest etchers were fond of introducing buildings into their compositions, as, for example, Piranesi, and later, Alex Haigh and William Walcot.

ROMAN THEATRES AND AMPHITHEATRES

Sir Banister Fletcher, P.R.I.B.A., lecturing at the Central School of Arts and Crafts, described the theatres, amphitheatres and circuses as providing necessary amusement for the social life of Roman citizens.

SUBMERGED COMBUSTION

A paper on "Submerged Combustion" was read by Mr. C. Featherstone Hammond, the pioneer of this system, before a meeting of the Institute of Fuel on Wednesday last. Dr. F. A. Freeth, F.R.S., O.B.E., occupied the chair.

[*An illustrated article describing this system was published in our issue for July 31, 1929.*]

WELSH SCHOOL OF ARCHITECTURE

On Wednesday, February 12, a party of over 30 members of the School of Architecture Club, which is associated with the South Wales Institute of Architects (Central Branch) and the Welsh School of Architecture at the Cardiff Technical College, visited Gloucester and Cheltenham. At Gloucester they were able to inspect the cathedral, and they also visited the Sunningend works of Messrs. H. H. Martyn & Co., Ltd., at Cheltenham.

INTERNATIONAL CONGRESS OF ARCHITECTS, 1930

The twelfth International Congress of Architects will take place in Budapest between September 7–14, 1930. In connection with the congress an international exhibition of architectural plans and designs representative of modern architecture throughout the world will be arranged.

The executive committee entrusted with the preparations for the congress has, in order to enhance the importance of the congress and exhibition, awarded

prizes, consisting of one gold medal, two silver medals and three bronze medals, for the exhibition.

The committee has also decided to erect a statue to perpetuate the memory of Edmond Lechner, the Hungarian architect. This statue will be unveiled in Budapest next September.

READERS' QUERIES

COST OF BUILDING A FRENCH VILLA

R. writes: "*I should be grateful if you could obtain for me the following information:*

"*1: What is the average cost of building a good-class villa on the French Riviera, comprising, say, stuccoed walls, deal floors and joinery generally?*

"*2: What would be the best way for an English architect to set about such a contract—local firms or English firms? If the former, what is the customary practice in obtaining prices? Would one employ a French clerk of works?*"

[*The Editor invites readers with experience of building in France to reply to the above inquiry.*]

DAMP WALLS

H. G. writes: "*What are the ways of making and keeping an exterior brick wall dry? The wall is on the ground floor of an old house, and has no damp-proof course. The site is level and low-lying.*"

It is doubtful if there is any concrete under the floors. The proper method of dealing with it is, of course, to cut in a damp course and to put the concrete bed under the floors if necessary. I should think it probable that the floor timbers are rotten, and they should certainly be examined. DELTA

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, London, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

3082. Lundholm, J. E. Production of building-blocks. January 29.

SPECIFICATIONS PUBLISHED

324364. Asmussen, J. P. Machine for casting building-blocks and the like.

324452. Brown, H. E. Wood-block floorings.

PATENTS IN 1929

Although the year 1928 showed the highest figures in patents applied for at H.M. Patent Office in any one year, viz., 38,593, Messrs. Rayner & Co., of London, patent agents, inform us that the total for 1929 is 39,927. This total is especially satisfactory remembering the severe financial depression in the latter part of last year.

The extraordinary activity, however, shown by the Patent Office figures for 1929 clearly points to the onward trend of progress and enterprise in the world of inventions, the corresponding total for 1913, the last pre-war year, being only 30,102.

There does not appear to have been any startling or outstanding new invention last year, but more improvements and developments have been brought forward to improve the character and cheapen the production of manufactures.

LEICESTER ROYAL INFIRMARY

Following is a list of the general contractors and some of the sub-contractors for the Sir Edward Wood wing and the new operating theatre suite at the Leicester Royal Infirmary (pages 315–318):

Sir Edward Wood wing. General contractors, J. Chapman and Sons, Ltd. Sub-contractors: J. Ellis and Sons, terrazzo paving, concrete beam floors, reconstructed stonework and Hy-Rib metal lathings; Ellistown Colliery Co., tapped red wire-cut bricks; G. Potter and Sons, structural steelwork; Wm. Freer, Ltd., plumbing and glazing; Young, Austen and Young, Ltd., heating and hot-water supply; Gent, Hurley and Orringe, electrical installation; British Reinforced Concrete Eng. Co., reinforcement; Henry Hope and Sons, steel windows; Craven, Dunnill & Co., tiling; Doulton & Co., Shanks & Co., Twyfords, Ltd., and Ruffords, sanitary fittings; Doulton & Co., ward electric fires and faience surround; R. Wharton and Sons, chairs; James Slater & Co., servery and kitchen plant.

Operating theatres. General contractors, Bowles and Son. Clerk of works, J. C. Deacon. Stonemason, W. Brown. Sub-contractors: J. Ellis and Sons, floor and roof beams and terrazzo; the Vitrolite Co., Vitrolite lining to walls; Crittall Manufacturing Co., steel windows; Crewe and Sons, plastering; Wm. Freer, Ltd., plumbing; Doulton & Co. and Twyfords, Ltd., sanitary fittings; Leicester Asphalte Co., asphalte roofing; G. Potter and Sons, steelwork.

COMPETITION CALENDAR

February 28.—The Accrington Corporation invite architects of British nationality to submit designs in competition for new Police and Fire Stations which it is proposed to erect on a site in Manchester Road, Accrington. Assessor: Herbert J. Rowse, F.R.I.B.A. Premiums: £250, £150 and £100. Conditions of the competition, together with a plan of the site and all particulars may be obtained from William Henry Warhurst, LL.B., Town Clerk, Town Hall, Accrington. Designs to be submitted before February 28.

March 10. The Council of the Metropolitan Borough of Greenwich invite architects to submit designs for a drinking fountain, which it is proposed to erect at Blackheath on a site facing the War Memorial at the junction of Maze Hill and Charlton Way. Premiums: £50, £20 and £10. Particulars of the competition and a copy of the site plan may be obtained from Frederick J. Simpson, Town Clerk, Town Hall, Greenwich Road, S.E. 10. Latest date for applications: March 10.

April 28.—Messrs. Josiah Wedgwood and Sons, Ltd., invite designs in competition for a Wedgwood Vase, to be made in commemoration of the Bicentenary of the Birth of Josiah Wedgwood, which will be celebrated in 1930. The vase is intended as a centre-piece, and may be either a simple vessel decorated in relief and colour, or an architectural composition embodying ornamental adjuncts in the round. It should not exceed eighteen inches in height, though to this dimension not more than six inches may be added for a pedestal or plinth. Assessors: Philip Connard, R.A., W. Reid Dick, A.R.A., H. S. Goodhart-Rendel, F.R.I.B.A., and Frank H. Wedgwood. Premiums: £100, £50 and £25. Full particulars may be obtained on application to the Secretary, Messrs. Josiah Wedgwood and Sons, Ltd., Etruria, Stoke-on-Trent. Latest date for submission of designs: April 28.

June 14.—The Chelmsford Corporation invites architects to submit designs in competition for a new public library in accordance with conditions drawn up by H. V. Lanchester, F.R.I.B.A., who will act as assessor. Applications for conditions and a plan of the site should be made to G. E. Barford, Town Clerk, Chelmsford. Deposit, £1 1s. Latest date for submission of designs: June 14.

Mr. J. Ralph Edwards, A.R.I.B.A., of 7 Unity Street, College Green, Bristol, has won the Sir Charles Wakefield prize of 10 guineas and silver cup in the competition organized by Somerset Rural Community Council for garage designs.

THE "HEAVY" INDUSTRIES FAIR

The number of foreign visitors to the Heavy Section of the British Industries Fair, which opened in Birmingham on Monday last, will, it is stated, be largely in excess of those in any previous year.

The added inducement to visit this historic centre of England at a season when the countryside is at its best, proved the means of bringing to the Birmingham Section many newcomers from abroad who, notwithstanding the subsequent reversion to early Spring, have since improved their acquaintance, year by year, with this national display of heavy goods.

This year at least three thousand entirely new British products of interest, collectively, to every trade in the country, are to be seen in the Birmingham Section.

Following are some brief particulars of the principal exhibits:—

ADAMSEZ LTD., SCOTSWOOD-ON-TYNE AND LONDON

Fireclay sanitary goods: Basins, baths, country house sewage, coloured ware, fountains, flushing apparatus, hospital fittings, lavatories, sinks, urinals, water-closet sets, wash tubs and washing troughs.

ALLEN-LIVERSIDGE, LTD., LONDON

Oxy-acetylene welding, metal cutting and lead-burning equipment, electric arc and electric resistance (butt, seam and spot) welding equipment, air-acetylene tools consuming dissolved acetylene and atmospheric air for brazing, soldering, paint-burning, etc., acetylene generators, carbide, and all accessories.

BALDWIN, SON & CO., LTD., STOURPORT

This exhibit includes hinges and cast iron.

JOHN BOOTH & SONS, BOLTON

Steel and glass partitions for dividing warehouse,

factories and offices into compartments, fireproof doors and rolling shutters, electrically welded storage tanks, jacketed vessels, etc., steel forgings, solid steel columns, fire-escapes, structural steelwork, "Warren Girder" roofs, steel theatre balcony floors.

BRITISH THOMSON-HOUSTON CO., LTD., RUGBY

Electrical plant for every industrial requirement, including a large range of electric motors, control gear, switchgear, etc., and Mazda lamps.

THE BRITISH ELECTRICAL DEVELOPMENT ASSOCIATION, INC., LONDON

South Midland area. An inquiry bureau regarding the electrical industry generally.

THE BRITISH COMMERCIAL GAS ASSOCIATION, LONDON

This exhibit demonstrates some of the great branches of public utility made possible by the scientific treatment of coal in gas works. Also samples of by-products obtained from the scientific carbonization of coal are shown.

CELLACTITE AND BRITISH URALITE, LTD., LONDON

Urastone, the incorrodible flue pipe, is shown in all its useful forms, the new airing cupboard heater being a special feature. Cellactite—corrugated sheeting "which cannot corrode and does not break"—is also shown. Other exhibits include Asbestone fire surrounds, cooker bases, etc., and Uralite.

ELSAN MANUFACTURING CO., LONDON

This exhibit shows the "Elsan" chemical closets and Elsanol chemical sanitation for homes, buildings, and districts without public sewers or water-flush.

THE EDISON-SWAN ELECTRIC CO., LTD., LONDON

Royal "Ediswan" lamps, lighting equipment, domestic appliances and heating apparatus, cables, accumulators and batteries, refrigerators, radio valves and apparatus, and battery chargers, etc.

THE EXPANDED METAL COMPANY, LTD., LONDON

"Servarising" treatment of metal articles to protect them from oxidation (scaling) at high temperatures. The process is claimed to be suitable for heat treatment appliances, oil engine parts, and furnace fittings.

THOS. FIRTH AND SONS, LTD., SHEFFIELD

A wide range of products made from Firth stainless and "Staybrite" steels. Applications shown include polished sheets, tubes, wire, foil, sections, castings, forgings, fittings, utensils, etc. The range of finished articles made by users of Firth stainless steels cover the whole gamut of engineering, industrial and domestic applications.

SIDNEY FLAVEL & CO., LTD., LEAMINGTON SPA

The Flavel gas cooker in many sizes and finishes, with special features for ease of cleaning; fitted with thermostatic oven control, and designed throughout, it is claimed, for efficient and lasting service. Also the "Metro" coke fire, many designs of gas mantel registers and fires.

THE GENERAL ELECTRIC COMPANY, LTD., LONDON

A varied selection of products manufactured in one or another of the twenty-odd factories owned in this country. The operations of the G.E.C. cover, it is claimed, the entire field of electrical engineering from the equipment of the largest generating stations and power transmission systems to the smallest electrical accessories.

G. A. HARVEY & CO. (LONDON), LTD.

Perforated metals, pipe guards and grilles, woven wire, all meshes and gauges; sheet metal and plate work, steel piping and gutters, ventilators, chimneys, electric heater guards, ventilating panels, steel plate work, Harvey steel furniture, and ornamental radiator covers.

HENRY HOPE AND SONS, LTD., SMETHWICK, BIRMINGHAM

Windows in steel or bronze, standard steel windows and sashes, "Lok'd" bar factory sash for factories, warehouses, etc., patent roof glazing for railway stations, power houses, etc., hardware, locks, door and window furniture, nameplates, etc., and lead work.

HOSKINS AND SEWELL, LTD., BIRMINGHAM

Metal windows of every description, including casement windows and doors in steel and bronze, standard windows, factory sashes and tropical windows. Also examples of leaded glazing and antique fittings.

ARCHIBALD KENRICK AND SONS, LTD., WEST BROMWICH

Aluminium hollow-ware, baths (enamelled cast iron), brassfoundry (general), household ironmongery, kitchen utensils, laundry irons, ranges, and stoves (cast iron), wickless oil stoves, and hot brass die-pressings.

IMPERIAL CHEMICAL INDUSTRIES

The stand of the Imperial Chemical Industries is occupied by Messrs. Naylor Bros. (London), Ltd., Nobel Chemical Finishes, Ltd., both of Slough, Bucks, and Frederick Crane Chemical Co., Ltd., Birmingham. Every variety of finish for household, commercial and factory use is exhibited, including the following: Brushing "Belco" for handy home uses, "Fastain," the combined varnish and stain for all woodwork, ready mixed paint, "Nayrodec" water paint for walls, super-elastic gloss paint for high-class decorative work, varnishes, distempers, "Melanoid" bituminous paint, for protecting metals from rust, "Tectal" wood preservative, "Necol" plastic wood, and "Petrumite" imitation stone paint; "Cranco" cold brush lacquers, "Zapon" cellulose lacquers for all metals, "Enamelloid" cellulose blacks, matt, semi-bright and glossy, "Brassoline" pure shellac lacquers, "Cranco" wood finishes for furniture and all woodwork, "Cranco" spray enamels for application to all surfaces, celluloid varnishes, and frosting lacquers for electric lamp bulbs.

THE KLEINE PATENT FIRE-RESISTING FLOORING SYNDICATE, LTD., LONDON

Kleine patent fire-resisting floors. Over 2½ million square yards, it is claimed, have been built in the United Kingdom. "Duromit" surface floor is also shown.

THE LEEDS FIRECLAY CO., LTD., WORTLEY, LEEDS

Leeds fireclay faience, glazed bricks, sanitary and drainage fittings, fireplaces, "Lefco" garden ornaments, firebricks, and gas retorts.

MACINLOP, LTD., MANCHESTER

All modern applications of rubber to industry, including engineering, mining, shipbuilding, chemical, railway, building trades. Macinlop "High Speed," "Service" and "Forte" transmission belting, conveyor and elevator belting, Macinlop hose, rubber covered tanks, pipes, containers, chutes, screens for anti-corrosion by abrasive or chemical action, rubber floors, mechanical rubber goods, heavy service footwear, waterproof clothing, protective rubber gloves, etc., ebonite goods for chemical and electrical industries, and sponge rubber upholstery.

METRO-VICK SUPPLIES, LONDON

Modern domestic electric appliances, including washing machines, cookers, fires, automatic kettles, etc., electric light fittings, including panel fittings, complete range of wiring accessories in metal and Bakelite Met-Vick ray reflectors, flood lights and flood rays for shop and street lighting, electric fans, etc.

PARKER, WINDER AND ACHURCH, LTD., BIRMINGHAM

British made industrial oil burners, domestic oil burners, and oil furnaces.

PILKINGTON BROTHERS, LTD., ST. HELENS

British polished plate glass, sheet glass, wired glass, Georgian wire glass, figured roll glass, rolled and rough cast double rolled glass, and miscellaneous glass articles.

RADIATION, LTD., ASTON, BIRMINGHAM

"Regulo-controlled" gas cookers, "injector-ventilating" gas grates, "Regulo-controlled" gas radiators, gas-heated hot-water circulators, washing coppers, general apparatus.

RAINSFORD AND LYNES, LTD., BIRMINGHAM

An exhibit of fittings for the gas trade, including a display of main cocks, unions, swivels, tees, elbows, ball joints, etc., also special fittings for cooking stoves, gas fires, gas boilers, geysers, and a selection of lighting fittings, both plain and ornamental.

A. REYROLLE & CO., LTD., HEBBURN-ON-TYNE

Metalclad, oil-immersed circuit breakers for industrial and mining apparatus, air break switches in metal boxes, combined with various accessories, ventilated self-aligning fuses, domestic cooker control boards, electric traffic control signalling devices, electric domestic hot-water storage cylinders, industrial, immersion type, electric water heaters, electric irons and stands, plugs and sockets for mining, battery charging, industrial and domestic uses.

THE RUBEROID CO., LTD., LONDON

"Ruberoid," "Starex," and "Pluvex" roofings for every type of roof and building, claimed to be in use under all climatic conditions for over thirty years; "Ruberoid" strip slates in red or green for garages and all sports and pleasure buildings; "Ruberoid" and "Pluvex" pure bitumen dampcourses, supplied in all wall widths.

RUSTON AND HORNSBY, LTD., LINCOLN

Ruston horizontal and vertical oil engines provide, it is claimed, the cheapest power for factory drive and for generating electricity. Ruston No. 4 half-cubic yard full circle universal excavator, supplied with special equipment for converting to work as shovel, dragline, back-acting trencher, skimmer scoop, or grabbing crane, and petrol-paraffin engine drive.

SHAWS GLAZED BRICK CO., LTD., DARWEN, LANCS.

Showing the newest developments of Faience productions, including new "Della Robbia" ware, and innovations for architectural decoration, fireclay sanitary ware, glazed bricks and tiles, electrical porcelains, fireplace surrounds, acid-resisting ware.

THE SILICATE PAINT CO., LTD., LONDON

This stand is decorated with Duresco water paint, Silpaco flat wall paint and Silcolac hard gloss paint. Charlton zinc white paint and Silkas varnishes for every purpose are shown, together with other interesting specialities.

SUBMERGED COMBUSTION, LIMITED, LONDON

Typical commercial submerged combustion plant and apparatus as applied to central heating, metal melting, chemical concentration, the dyeing and cleaning industry, etc.; also proportioning valves and other associated equipment.

THE UNITED STEEL COMPANIES, LIMITED, SHEFFIELD

Plain and alloy steels, bars, billets for forgings, drop stampings, etc., case-hardening and free-cutting steels, drop stampings, motor and aero valve stampings, springs for road vehicles, cold rolled steel strip, etc.

HENRY WIGGIN & CO., LTD., BIRMINGHAM

This exhibit shows the applications of "Silveroid," a nickel-copper alloy containing 45 per cent. nickel with a brilliant silvery colour and possessing, it is claimed, remarkable resistance to tarnish. Electrical resistance wires and their applications for heaters are also exhibited, and a range of pure nickel anodes.

YORKSHIRE AMALGAMATED PRODUCTS, LTD., DONCASTER

This exhibit shows "Stairfoot" double pressed red engineering and facing bricks, "Askern" rustic facing bricks in multi and controlled colours, representing the charm of old English brickwork.

YOUNG, OSMOND AND YOUNG, LTD., LONDON AND HERTS.

Unity tubular electric heaters for heating schools, churches, cinemas, etc., Unity electric towel airers, tubular electric four-bar radiators, electric anti-condensation window heaters, linen cupboard heaters, car heaters, tubular heaters for traction work, thermostats to maintain constant air temperature.

THE ARCHITECTS' DIARY

WEDNESDAY, FEBRUARY 19

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. Cantor Lecture, "Alfred Stevens: Architect-Sculptor-Painter." By D. S. MacColl. **8 p.m.**

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Honan Night. "Modern Architecture of Sweden." By B. B. Lewis.

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. "Roman Architecture." By Sir Banister Fletcher, P.R.I.B.A. **6 p.m.**

JOINT GAS CONFERENCE, Birmingham. "Tests of Comparative Costs of Fuels for Domestic Purposes." By A. H. Barker, M.INST.C.E.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE SOCIETY OF ARCHITECTS. At Northampton. Annual Meeting of the Northampton-hire Committee.

BRITISH INDUSTRIES FAIR, London and Birmingham. Exhibition will be open until February 28. (10 a.m. till 10 p.m.).

THURSDAY, FEBRUARY 20

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate: "That under the present system of Competitions in England, the progress of Architecture is being retarded." Affirmative, J. G. Sidebottom. Negative, T. F. Firth. **7 p.m.**

SHEFFIELD UNIVERSITY. Last of a course of three lectures on "The Acoustics of Buildings." By M. H. Evans. (Lantern Illustrations.) **6 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "The Ancient Guilds and their Halls." By Allen B. Walker. (Lantern Illustrations.) **7.30 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Lecture Theatre. "Italian Furniture." By H. Clifford-Smith, F.S.A. **5.30 p.m.**

CAMERA CLUB, 17 John Street, Adelphi, W.C.2. Exhibition of German Publicity Photographs. To be opened by Sir William Crawford, K.B.E. (11 a.m. till 1 p.m., 2.30 p.m. till 6 p.m.) Until March 20. **3 p.m.**

FRIDAY, FEBRUARY 21

LONDON SOCIETY. At the Royal Society of Arts, John Street, Adelphi, W.C.2. "The Royal Observatory, Greenwich." By Sir Frank Dyson, Astronomer Royal. **5 p.m.**

UNIVERSITY OF LONDON, UNIVERSITY COLLEGE, Gower Street, W.C.1. "The Infirmary of the Mediæval Monastery, with special reference to the Abbey of Westminster." By Professor Percy Flemming, F.R.C.S. (Lantern Illustrations.) **5.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. "Paper Insulated Power Cables." By S. H. Hart. **6.15 p.m.**

SATURDAY, FEBRUARY 22

Sunrise, 6.0 a.m. Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Fourth of a Series of Six Non-Technical Lectures on Present-Day Architecture. "Decoration and Furnishing." By G. G. Wornum, F.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Foyle's New Bookshop, 121 Charing Cross Road, W.C.2. **3 p.m.**

INSTITUTION OF CIVIL ENGINEERS, Great George Street, Westminster, S.W.1. Students' visit to the Deptford West Power Station.

MONDAY, FEBRUARY 24

R.I.B.A., 9 Conduit Street, W.1. Meeting of the Finance and House Committee. **4.30 p.m.**

ARCHITECTURAL ASSOCIATION, 34 Bedford Square. W.C.1. "Designing for the Film." By Lawrence Irving. 8 p.m. Exhibition of Film Settings (until March 22). **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture II.) **8 p.m.**

TUESDAY, FEBRUARY 25

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the Bishopsgate Institute, Bishopsgate, E.C.2. **3 p.m.**

KING'S COLLEGE, Strand, W.C.2. Department of Electrical Engineering. Last of a course of three lectures on Electrical Transmission by Overhead Lines. (3) "Typical Transmission Lines in use in Great Britain; Characteristic Features of Low, Medium and High Voltage Construction." By Charles W. Marshall, B.SC., M.I.E.E. 5.30 p.m. Faculty of Arts. Sixth of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) 5.30 p.m. **5.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS. North-Eastern Centre. At the Hotel Metropole, King Street, Leeds. "The Breaking Performance of High-Power Switchgear and of a New Form of Quenched-Arc Switch." By L. C. Grant. **7 p.m.**

INSTITUTION OF CIVIL ENGINEERS, Great George Street, Westminster, S.W.1. Ordinary Meeting. "The Development of Lyttelton Harbour, New Zealand." By Cyrus J. R. Williams, M.INST.C.E. "Tyne Commission Quay, North Shields." By Ralph F. Hindmarsh, M.INST.C.E. "Cochin Harbour Works." By Robert C. Bristow, M.INST.C.E. Lectures to be followed by a discussion. **6 p.m.**

WEDNESDAY, FEBRUARY 26

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. "Italian Art and the Italian Exhibition." By William G. Constable, M.A., F.S.A. Lady Austen Chamberlain, G.B.E., will preside. (Lantern Illustrations.) **8 p.m.**

THURSDAY, FEBRUARY 27

R.I.B.A., 9 Conduit Street, W.1. Meeting of the Literature Standing Committee. **4.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Street, W.1. "Broadcasting by Electric Waves." By Captain P. P. Eckersley. **6 p.m.**

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. "Social Life and Art in France during the Eighteenth Century." By Professor A. E. Richardson, F.R.I.B.A., F.S.A. **7 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Ferro-Concrete Cooling Towers." By T. J. Grueritte. **6.30 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Timber Architecture in Old Houses and Churches." By Philip M. Johnson, F.S.A., F.R.I.B.A. (Lantern Illustrations.) **7.30 p.m.**

INSTITUTION OF WELDING ENGINEERS, 30 Red Lion Square, W.C.1. At the Caxton Hall, Westminster, S.W.1. "The Training of Operators in the Welding and Cutting Industries." By J. Ryder. **7.45 p.m.**

FRIDAY, FEBRUARY 28

R.I.B.A., 9 Conduit Street, W.1. London Architecture Medal, 1929. Latest date for submission of nominations.

INSTITUTION OF STRUCTURAL ENGINEERS, Midland Counties Branch. Ordinary Meeting. At the Chamber of Commerce Buildings, New Street, Birmingham, "Types of Movable Bridges." By J. D. Vaughan, M.SC., A.M.INST.C.E. **6.30 p.m.**

ACCRINGTON COMPETITION. Latest date for submission of designs for the New Police and Fire Stations.

SATURDAY, MARCH 1

Sunrise, 6.47 a.m. Sunset, 5.39 p.m.

INSTITUTION OF HEATING AND VENTILATING ENGINEERS, Manchester and District Branch. Visit to the Manchester Newspaper Works and Offices. (Time will be announced later.)

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Visit to the Acton Technical Institute. Meet in Acton High Street, main entrance, at 2.30 p.m. **2.30 p.m.**

MONDAY, MARCH 3

R.I.B.A., 9 Conduit Street, W.1. General Meeting, "The Design of Modern Railway Stations in Europe and America." By Frank Pick. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2 Cantor Lecture. "Recent Improvements in Methods of Brickmaking." By Alfred B. Searle. (Lecture III.) **8 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, South Midland Centre. At the University, Edmund Street, Birmingham. "The Heating of Buildings Electrically by means of Thermal Storage." By Lt.-Col. S. E. Monkhouse, R.E. (T.R.), and L. C. Grant. Also, "The Heat Pump—An Economical Method of Producing Low-Grade Heat from Electricity." By T. G. N. Haldane, M.A. **7 p.m.**

BIRKBECK COLLEGE, Bream's Buildings, Fetter Lane, E.C.4. "The Isometric Diagram of the Construction of the Dome of St. Paul's Cathedral." By Professor Beresford Pite, M.A., A.R.C.A., F.R.I.B.A. Sir Frederick Kenyon, G.B.E., K.C.B., D.LIT., will preside. **5.30 p.m.**

TUESDAY, MARCH 4

KING'S COLLEGE, Strand, W.C.2. Faculty of Arts. Seventh of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) **5.30 p.m.**

WEDNESDAY, MARCH 5

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. Paper by L.A.P.A. **8 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, Lancashire and Cheshire Branch. At the College of Technology, Manchester. Ordinary Meeting. "The Ford Factory, Dagenham." By Major E. H. Heathcote, M.A.(CANTAB.), F.R.I.B.A., A.M.INST.C.E., A.M.I.MECH.E. **7 p.m.**

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Swedenborg Hall, 20 Hart Street, Bloomsbury, W.C.1. Discussion on "The Space Required for Central Station Equipment." **7 p.m.**

THURSDAY, MARCH 6

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting: Nomination of Officers. "Classic Forms and English Geology." By Hope Bagenal, D.C.M., A.R.I.B.A. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Plywood: Its Influence on Modern Furniture Design." By Percy A. Wells. (Lantern Illustrations.) **7.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. Annual Dinner at the Florence Restaurant, Rupert Street, W.1. 7.15 for 7.30 p.m. **7.15 p.m.**

SATURDAY, MARCH 8

Sunrise, 6.32 a.m. Sunset, 5.51 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Old and New Architecture." By the Hon. Humphrey Pakington, A.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

MONDAY, MARCH 10

INSTITUTION OF HEATING AND VENTILATING ENGINEERS. At the Borough Polytechnic, Borough Road, Southwark, S.E.1. "Some District Heating Systems." By L. J. Fowler, B.A. Light Refreshments. **6.30 p.m.**

WEDNESDAY, MARCH 11

KING'S COLLEGE, Strand, W.C.2. Faculty of Arts. Eighth of a course of nine public lectures on "Italian Painting." By Percy Dearmer, M.A., HON. A.R.I.B.A. **5.30 p.m.**

THURSDAY, MARCH 13

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. Students' Evening. Debate on "Is the Skyscraper Architecture?" Affirmative, D. B. Smith. Negative, G. L. Crowther. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.2. "Walnut and Mahogany Furniture from 1710 to 1750." By Herbert Cescinsky. **7.30 p.m.**

INSTITUTION OF STRUCTURAL ENGINEERS, 10 Upper Belgrave Street, S.W.1. "Pyramid Building Problems: Manpower Organization in the Pyramid Age." By D. Davidson, F.R.S.A. **6.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Ordinary Meeting. "The Imperial Chemical Industries, Ltd.'s Steam and Electric Power Plant at Bellingham." By H. A. Humphreys, D. M. Buist and J. W. Bansall. (To be illustrated by a cinematograph film.) **6 p.m.**

SATURDAY, MARCH 15

Sunrise, 6.16 a.m. Sunset, 6.3 p.m.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Visit to Messrs. Gamage's New Premises, near Marble Arch. Meet at entrance in North Row. **2.30 p.m.**

MONDAY, MARCH 17

R.I.B.A., 9 Conduit Street, W.1. General Meeting Presentation of the Royal Gold Medal. **8.30 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. Discussion on "High Tension Sub-station Control Gear." To be opened by A. F. Harmer. **7 p.m.**

TUESDAY, MARCH 18

KING'S COLLEGE, Strand, W.C.2. Faculty of Arts, Last of a course of nine public lectures on "Italian Paintings." By Percy Dearmer, M.A., HON. A.R.I.B.A. (Lantern Illustrations.) **5.30 p.m.**

ILLUMINATING ENGINEERING SOCIETY. Paper on "The Lighting of a Large Liner." Light Refreshments at 6.30 p.m. **7 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, North-Eastern Centre. At the Engineers' Club, 17 Albert Square, Manchester. "Voltage Control of Large Alternators." By H. W. Taylor. **7 p.m.**

WEDNESDAY, MARCH 19

LIVERPOOL ARCHITECTURAL SOCIETY, Bluecoat Chambers, School Lane, Liverpool. "Design in Town Planning." By Dr. Raymond Unwin, F.R.I.B.A. **8 p.m.**

ROYAL SOCIETY OF ARTS, John Street, W.C.2. Ordinary Meeting. "The Portrait in Later Monumental Sculpture." By K. B. ESDAILE (Mrs.). **8 p.m.**

THURSDAY, MARCH 20

WEST YORKSHIRE SOCIETY OF ARCHITECTS, 62 Woodhouse Lane, Leeds. General Meeting. Election of Officers. "Mainly About Germany." By Howard Robertson, F.R.I.B.A., S.A.D.G. **7 p.m.**

GEFFRYE MUSEUM, Kingsland Road, Shoreditch, E.C.2. "London in the Middle Ages." By D. Martin Roberts, M.A. (Lantern Illustrations.) **7.30 p.m.**

FRIDAY, MARCH 21

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Annual Meeting at the Royal Institute Galleries, Piccadilly, W.1.

SATURDAY, MARCH 22

Sunrise, 6 a.m. Sunset, 6.15 p.m.

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Houses at Home and Abroad." By Oswald P. Milne, F.R.I.B.A. (Lantern Illustrations.) **3 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, Savoy Place, Victoria Embankment, W.C.2. London Students' Section. Visit to the Post Office (London) Railway, Mount Pleasant N.W. **4 p.m.**

MONDAY, MARCH 24

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. "Style in Sculpture." By Eric Gill. **8 p.m.**

INSTITUTION OF ELECTRICAL ENGINEERS, North Eastern Centre. At the Armstrong College, Newcastle-on-Tyne. "The Imperial Chemical Industries, Ltd.'s Steam and Electric Power Plant at Bellingham." By H. A. Humphreys, D. M. Buist and J. W. Bansall. (To be illustrated by a cinematograph film.) **7 p.m.**

TUESDAY, MARCH 25

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Dominions and Colonies Meeting. "The Work of the British Association in Relation to the Empire." By O. J. R. Howarth, O.B.E., M.A. **4.30 p.m.**

WEDNESDAY, MARCH 26

ROYAL SOCIETY OF ARTS, John Street, Adelphi, W.C.2. Ordinary Meeting. "Architecture of To-day and To-morrow." By Howard Robertson, M.C., F.R.I.B.A., S.A.D.G. **8 p.m.**

GOLDSMITHS' HALL, Foster Lane, E.C.2. "Nature and Modern Design." By Professor R. V. Gleadowe. (Lantern Illustrations.) **7 p.m.**

THE WEEK'S BUILDING NEWS

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given.
The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour:* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

DO. in raising on old walls, etc., add 12½ per cent. per rod.
DO. in underpinning, add 20 per cent. per rod.

HALF-BRICK walls in stocks in cement mortar (1-3), per ft. sup.	£0 1 0
BEDDING plates in cement mortar, per ft. run	0 0 3
BEDDING window or door frames, per ft. run	0 0 3
LEAVING chases 2½ in. deep for edges of concrete floors not exceeding 6 in. thick, per ft. run	0 0 2
CUTTING do. in old walls in cement, per ft. run	0 0 4
CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0 0 7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0 3 6
DO. 14 ft. by 9 in. do., per ft. run	0 6 0
FLAUNCHING chimney pots, each	0 2 0
CUTTING and pinning ends of timbers, etc., in cement	0 1 0
FACINGS fair, per ft. sup. extra	0 0 3
DO. picked stocks, per ft. sup. extra.	0 0 7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0 4 9
DO. in salt white or ivory glazed, per ft. sup. extra	0 5 6
TUCK pointing, per ft. sup. extra	0 0 10
WEATHER pointing, do. do.	0 0 3
TILE creasing with cement fillet each side, per ft. run	0 0 6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0 5 0
DO. 1½ in., per yd. sup.	0 6 0
DO. 2 in., per yd. sup.	0 7 0
If coloured with red oxide, per yd. sup.	0 1 0
If finished with carborundum, per yd. sup.	0 0 6
If in small quantities in finishing to steps, etc., per ft. sup.	0 1 4
Jointing new grano. paving to old, per ft. run	0 0 4
Extra for dishing grano. or cement paving around gullies, each	0 1 6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup	0 0 7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0 8 0
DO. vertical, per yd. sup.	0 11 0
SLATE DAMP COURSE, per ft. sup.	0 0 10
ASPHALT ROOFING (MASTIC) in two thicknesses, ¾ in., per yd.	0 8 6
DO. SKIRTING, 6 in.	0 0 11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0 5 3
DO. DO. 3 in.	0 6 6
BREEZE fixing bricks, extra for each	0 0 3

MASON

MASON, 1s. 8½d. *per hour;* DO. *fixer,* 1s. 9½d. *per hour;* LABOURER, 1s. 3½d. per hour; SCAFFOLDER, 1s. 4½d. *per hour.*

Portland Stone:	
Whitbed, per ft. cube	£0 4 6
Basebed, per ft. cube	0 4 9
Bath stone, per ft. cube	0 3 0
Usual trade extras for large blocks.	
York paving, av. 2½ in., per yd. super.	0 11 0
York templates sawn, per ft. cube	0 7 6
Slate shelves, rubbed, 1 in., per ft. sup.	0 2 6

Cement and sand, see "Excavator," etc., above.

HOISTING and setting stone, per ft. cube	£0 2 2

DO. for every 10 ft. above 30 ft. add 15 per cent.

PLAIN face Portland basis, per ft. sup.	£0 2 8
DO. circular, per ft. sup.	0 4 0
SUNK FACE, per ft. sup.	0 3 9
DO. circular, per ft. sup.	0 4 10
JOINTS, arch, per ft. sup.	0 2 6
DO. sunk, per ft. sup.	0 2 7
DO. DO. circular, per ft. sup.	0 4 6
CIRCULAR-CIRCULAR work, per ft. sup.	1 2 0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0 1 1
DO. circular, do., per ft. run	0 1 4
HALF SAWING, per ft. sup.	0 1 0

Add to the foregoing prices, if in York stone, 35 per cent.
DO. Mansfield, 12½ per cent.
Deduct for Bath, 33⅓ per cent.
DO. for Chilmark, 5 per cent.

SETTING 1 in. slate shelving in cement, per ft. sup	£0 0 6
RUBBED round nosing to do., per ft. lin.	£0 0 6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1 7 6
YORK SILLS, W. & T., ft. cub. fixed	1 10 0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0 1 3
DO. 2½ in. thick, per ft. sup.	0 1 6

SLATER AND TILER

SLATER, 1s. 8½d. *per hour;* TILER, 1s. 8½d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* LABOURER, 1s. 3½d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:	*Med. Grey*	*Med. Green*
Portmadoc Ladies		£14 0 0
Countess		23 0 0
Duchess		32 10 0
Old Delabole	*Med. Grey*	*Med. Green*
24 in. × 12 in.	£42 11 3	£45 1 0
20 in. × 10 in.	31 4 3	33 0 6
16 in. × 10 in.	20 18 0	22 4 9

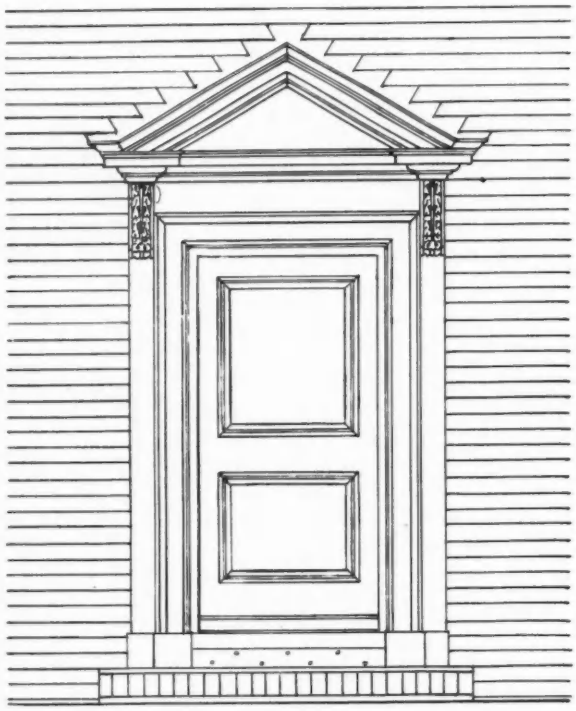
FRONT ENTRANCE: THORESBY, CAVERSHAM HEIGHTS, READING.

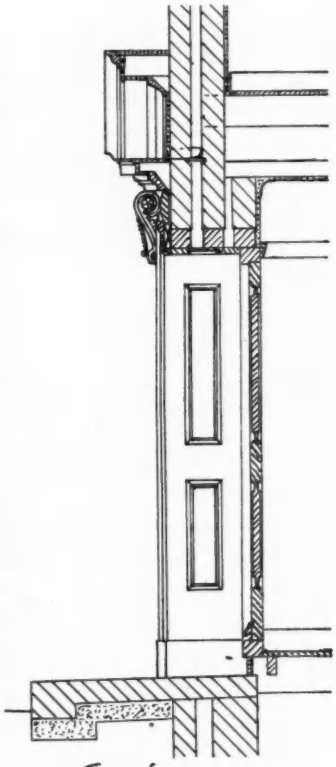
BY

WILLCOCKS AND GREENAWAY



THIS doorway is the entrance to a house, simply designed in Georgian style, and compactly planned, the walls of which are built of 11-in. brickwork, with selected deep red multi-coloured facings, pointed with a wide, buff, rough mortar joint, and support a roof of stained sand-faced tiles.

The architrave and pediment of the doorway are in wood, painted white, the brackets being enriched with carving by Miss C. Wilson, of Reading University. Ordinary bricks-on-edge, set in cement, form the external step. The door sill is raised 2 in. above the floor line to allow the door to swing clear of the doormat.



Working and large-scale detail drawings are reproduced on the following page.

CHARING CROSS BRIDGE— And After

AFTER a defeat a good general will take stock of the situation with a view to informing himself of the causes of his failure. It is well for him if he will drink the cup of his humiliation to the dregs. Let him beware of complacency and, if he indulge in recriminations, let these not be directed against his enemies who, perhaps, it may seem to an impartial observer, have only succeeded because the general himself has displayed conspicuous defects of judgment.

The London County Council and the Southern Railway have won their case in Parliament, with a result that, as far as London is concerned, can only be described as an architectural disaster of the first magnitude—unless a miracle intervenes and the Bill happens to be amended out of all recognition in Committee. Who was the general upon our side who so unsuccessfully led the campaign on behalf of the architectural profession and the other learned bodies who were opposing the measure which was accepted by Parliament on February 20th? Alas! there was no general: there was no organized plan of campaign, but merely a few skirmishes, conducted by stout-hearted individuals. Even among these the team-work was poor, and there was not evolved any policy of combined attack.

Obviously the only way to defeat the official scheme for Charing Cross Bridge was to suggest an alternative agreed upon between the representatives of the Royal Institute of British Architects, the Town Planning Institute and other authorities especially entitled to form an opinion on the subjects at issue. This alternative scheme should have been represented in the form of a model deposited in the House of Commons before the debate was due to take place. Granted that the time was short and that the London County Council succeeded in shrouding their designs in secrecy as long as they possibly could, there would still have been time for concerted action.

Sir Reginald Blomfield alone among the protagonists on our side appears to have understood the strategic situation. He produced an admirable layout plan for Charing Cross Bridge and its environs, which we commended in these pages, and we urged, then, that it should be the subject of immediate discussion among those who were conducting the opposition to the official scheme on behalf of the architectural profession. Nothing, however, was done.

But perhaps it would be wrong to say this, because something *was* done; yet that something was incredibly maladroit. It appears that the votes of members of Parliament were in many cases decided in favour of the London County Council Bill as soon as the Minister of Transport had read a certain letter addressed by Mr. Arthur Keen, chairman of the Thames Bridges Conference, to Sir Edwin Lutyens. The Minister who closed the debate naturally introduced this particular *bonne bouche* at the end of his discourse, so that its flavour should remain vividly in the recollection of Members when they walked into the division lobbies. This was a particularly clumsily worded letter, in which the writer sought to obtain from Sir Edwin Lutyens an assurance that the Charing Cross Bridge scheme, to which Sir Edwin Lutyens had set his seal of approval, was not, in point of fact, approved by him. If Sir Edwin Lutyens would only consent to do this, wrote Mr. Arthur Keen, "it would be a good thing for you as well as for us who are opposing the Bill."

Sir Edwin Lutyens is convinced that the layout of the roads at either end of the proposed new Charing Cross Bridge, which was agreed upon by the engineers of the London County Council and the Southern Railway, is not only good from the traffic point of view but also represents a triumph of civic design. He is fully entitled to that opinion. Meanwhile, however, members of the Royal Institute of British Architects and others who are interested in the prosecution of causes such as architects must necessarily have at heart, will seek an assurance from those competent to give it that Mr. Arthur Keen will write no more letters on behalf of the Thames Bridges Conference.

THE LION BREWERY, LAMBETH: A STUDY BY E. MAXWELL FRY

In this drawing of a building, awaiting demolition to make way for the Southern Railway's projected new station, the view-point is through the entrance archway into the courtyard, with its offices flanking, and its pavement leading up to, the massive temple of malt—the brew-house.

Personalities in the Charing Cross Bridge Bill Debate: Mr. Herbert Morrison, Minister of Transport, who supported the scheme; Sir Edwin Lutyens, Architectural Adviser to the Government; and Sir William Davison (from the portrait by Sir William Llewellyn, P.R.A.), who opposed the Bill. A special report of the debate appears on pages 345-6 of this issue.

NEWS & TOPICS

CHARING CROSS BRIDGE

HOWEVER disappointing the debate on Charing Cross Bridge—by arrangement I leave this subject to other pens—it has not lacked its "sensation," as the papers have it. On Monday *The Daily Telegraph* announced the resignation of Sir Edwin Lutyens from the R.I.B.A., after twenty-four years' membership, as its "dramatic sequel." I should not be surprised to learn that it was absolutely unconnected therewith.

THE LION BREWERY, LAMBETH

Whatever happens to the Charing Cross Bridge Bill, "improvements" on the southern bank will obliterate little of real architectural value, although among the romantic hotchpotch there are to be found relics as interesting as the old Lion Brewery. Classic stucco jibbed at nothing when it made a brewery look like the entrance to an embassy on the one hand and a Government building on the other. It is rather laughable, but on the other hand it is an example of a vernacular handled with great skill; and were it not a brewery, and forgetting for the moment what we know of functional expression, it is a work of considerable imagination.

RURAL AMENITIES BILL IN COMMITTEE

The House of Commons rose to the occasion of the second reading of Sir Hilton Young's Rural Amenities Bill, all parties combining to give to it the attention it deserves. Sir Hilton Young first paid tribute to the great societies whose unremitting labours in the cause of public welfare had made possible the framing of the Bill, before he went on to outline its various clauses.

*

There is not space enough to do justice to an account of wide powers which the Bill seeks to confer upon country and county authorities. A mere list is informative. Clause 2 proposes to extend town planning to country planning; Clause 5 to grant county councils the power at present enjoyed by the Ministry of Transport to acquire strips along the sides of new roads in order to prevent "ribbon" development. Clause 9 is a "ginger" clause that allows county councils to step in where district authorities take no action. Another clause prevents the export of ancient buildings, and yet another seeks to prevent the unnecessary cutting down of trees, hedges and woods. A very interesting clause is that which attempts to adjust the balance between compensation and betterment in the case of land which is earmarked for open spaces. It is proposed to work out a scheme whereby compensation will be paid to the owner of scheduled land by means of a betterment rate, to be levied upon the adjacent land the value of which has been automatically increased. This aims a blow at selfish land speculation, and if passed would make many fine things possible.

*

One realizes, of course, that a great deal of committee work must purge the present draft and make it workable, but it is significant that the spirit of the Bill was not criticized, and that it was read a second time without a division. What criticism it received was directed to clarify its wording with the object of making it more generally applicable, and was subsequently withdrawn. Its further course will be watched with unabated interest.

THE PRIZE-WINNERS AT SWANSEA

The partnership of Ivor Jones and Percy Thomas which has just resulted in their triumph at Swansea is remarkable in many ways. Both are men of similar age and temperament, who yet supplement each other's gifts. Ivor Jones served his articles in the office of his father, a well-known Cardiff architect, but very early in life started practice "on his own," and in 1912 was joined by Percy Thomas, who previously had spent several years in architects' offices in Manchester. It is interesting to note that during his pupilage he won the first prize for architecture at the National Eisteddfod. He is a brilliant draughtsman and his sketches have been exhibited at the Royal Academy. Incidentally, he is a convinced Classicist, and is quite satisfied with the English Renaissance tradition, which he thinks is quite capable of being adapted to our modern needs.

*

The Swansea award will be extremely popular throughout South Wales, where both architects have established a reputation for good building. Their first success was in their competitive design for the Cardiff Technical College. Shortly after, they were placed second in the competition for the Cardiff Fire Station. Their competitive designs were accepted for the new Police and Fire Station both at

Bristol and at Newcastle-upon-Tyne. Anyone looking at the Swansea designs will recognize at once that they are by practised hands. Nobody has yet analysed "the competition touch," which can only be gained by long experience. An extreme neatness and simplicity of planning, a certain vigour of downrightness in the draughtsmanship are, perhaps, the chief ingredients.

NO DUTCH MANSION IN TRAFALGAR SQUARE

"Alas! for the misrepresentation of reporters!" writes Sir Herbert Baker, in regard to my recent note on the subject of the design of his new building in Trafalgar Square. "A representative from South Africa came to me, asking for information about the new South Africa House. I told him that it was too early to tell him anything about it as no design had been made, but that the conditions of the site imposed a design in harmony with its classical neighbours, the National Gallery and St. Martin's Church. When he said that this would not be very 'South African,' I pointed out to him, first, that this was not South Africa, and, secondly, that there were good old examples of classical buildings in Cape Town, notably the present Government House and an old Dutch Governor's House in the suburbs. I should be glad if you will kindly publish this to correct the wrong impression given." In complying, I should like to add an expression of my contrition.

FATE OF LANSDOWNE HOUSE

At one time it seemed very unlikely that Lansdowne House would survive the intensive development of the district, but there is now every hope of saving, if not the entire design, then at least the fabric of the house—the façade and the form of some of the best entertaining rooms. The house has been bought by a newly-formed club, who are to turn it into a sort of super R.A.C. club, with swimming baths, gymnasium, and, in addition, a private theatre, with seating for 800, and a very large stage.

★

The theatre will be built over the courtyard at the back and side. Curzon Street will be pushed through into Berkeley Square to give access to the theatre and the club, so that the house will survive more as a relic of departed grandeur than as a perfect example. It was never to be expected that the courtyard would be saved, when one compared its quiet lawns with the towering masses that throw their shadow across it. Nevertheless, I am glad the house will not be destroyed, for we positively cannot afford to lose yet another piece of good work. We shall be beggared!

DEVELOPMENTS AT DAGENHAM

The erection of the Ford Motor Company works at Dagenham raises some problems, which town planners will follow with interest. The population of Dagenham was increased rapidly when the L.C.C. conducted a quite artificial exodus of urban workers to their Becontree Estate. A still more rapid increase will be the result of the establishment of the Ford works, the 15,000 workmen of which must find homes in the district. What, therefore, was an attempt to provide housing on cheap land outside the urban radius may very well turn out to be the nucleus of a new town formation, artificially created. The interest will lie in the measure of success with which population may be attracted by the dual bait of work and adequate housing, though all this may be seen, of course, both at Welwyn and Letchworth.

A VICTORIAN "MILESTONE"

The 1885 scene from "Milestones" shows what is now a definitely crystallizing period. It was all horrid and nauseous a few years ago, but one has discovered of late that crewel work is occasionally beautiful, and quite often passable. It has distinct merits. Then there are those who admire mother-of-pearl inlay work; and no doubt there will be found defenders for each and every element of this fat, complacent, shiny, colour-blind, overpompous period. I see its relics in many an antique shop in Chelsea, but there is little good I see, little but a vain expanse of better mahogany than money can buy today.

THE CHARING CROSS BRIDGE BILL DEBATE

Specially Summarized by our Parliamentary Correspondent

AFTER a three-and-a-half hours' debate, the London County Council (Charing Cross Bridge) Bill was read a second time in the House of Commons last week by 230 votes to 62.

Sir W. Davison, in opposing the Bill, said that it dealt with perhaps the greatest improvement which had ever taken place in the history of London, and involved an expenditure of about £15,000,000. If a mistake were made now, it would be irrevocable and irreparable. If the scheme contained in this Bill were persisted in, many hundreds of yards of viaduct would cut off South London from future development. Practically the whole of professional opinion was against the London County Council's proposals. All the societies dealing with the improvement and the æsthetic future of London were opposed to the measure. Whether they were right or wrong, certainly inadequate consideration had been given to the present proposals. Owing to the fact that the debate had not been postponed, no model of the scheme was available.

Sir W. Greaves-Lord, who spoke in favour of the measure, said that the Royal Commission came to the conclusion that it would be wise to save Waterloo Bridge, but they also pointed out that if that were to be done it was absolutely necessary that a new bridge should be constructed in the neighbourhood of the present Hungerford Bridge, which took a line across the river which must be taken by any bridge that was built across the river in that neighbourhood. A bridge could not be moved very far to the east or west of Hungerford Bridge, because on either side of that bridge there were two Tubes over which it was impossible to construct a bridge.

If the bridge were placed nearer to Westminster Bridge on the one side or to Waterloo Bridge on the other, the navigable features of the Thames would be destroyed. There was a curve at that part of the river, and the channel was to be found on the outside of the curve, and it was essential that craft beyond a certain size must go to the Middlesex side of the river. That important factor had been discounted by many who raised æsthetic objections to the proposed new bridge.

The new bridge would relieve the Embankment and would not discharge more traffic on to it. The Royal Commission formulated their suggestions on the basis that the railway would not be taken to the south side of the river, therefore they did not fully consider the situation which would arise if the railway were removed. In the scheme now submitted there would be access to the Tubes that would be superior to the access that would be given by any other position that could be chosen.

One of the objections raised to the scheme was that it involved the erection of a railway station on the banks of the Thames, to the destruction of the river's beauty. Surely it was not impossible to construct a railway station with features that could be pleasing to the eye. He could not but believe that any one of the architects who raised this objection could design a building in harmony with its surroundings and in keeping with the County Hall and the Houses of Parliament.

It could not be said that the scheme had not been properly considered. A Royal Commission had sat upon it, and, since then, over thirty different designs for the bridge had been produced, every one of which had been thoroughly examined by the County Council and the Ministry of Transport. There was not one of those thirty schemes that had not got in it something that was absolutely objectionable and fatal to the considerations which had to be taken into account.

Was the House seriously to be asked to hold up a scheme to which there was no alternative, when a solution of the problem of London traffic was pressing and there was a great need for new sources of employment?

Sir Martin Conway, who moved the rejection, caused amusement by remarking that he did not know who was in favour of the scheme, while every body of intelligent men was against it.

This was a much larger problem than a bridge; it was a problem of town-planning. There was on the south side of the Thames a square mile of land right in the very heart of London. It was occupied at present by slums and ramshackle buildings of all kinds, but that square mile could be made to be the very centre of London. There was no reason why in that square mile they should not have streets as fine as Regent Street, or Piccadilly, or the Strand. That was what they wanted to arrange for; but to make that square mile what it should amount to they must have a proper system of town planning. He had not heard that the Ministry of Health, which was the town-planning authority, had been consulted at all.

The plan seemed to lack every merit. It lacked lucidity, simplicity, breadth of imagination, and suitability for human life and town development. It was botched on the very face of it.

They wanted five things. They wanted first to open out and make a splendid square mile on the south side of London. Next, to provide two great through routes—one from north to south, the other from east to west; the third was to relieve traffic in the Strand; the fourth to relieve the site famine which existed on the north side of the Thames; and the last was to pay the whole of the expense of whatever they did by the great increase in site values which could be obtained by treating the south side in a bold, broad, and fine manner.

He had reason to think that the whole expense of this proposed change could be defrayed by the increased rating values of that square mile if they treated the whole thing broadly and with imagination. They were asked to spend £15,000,000 on this rubbishy scheme, and there was not the ghost of a chance of getting much of it back. It was the bankruptcy of imagination. They must also, in such a scheme, consider the question of beauty.

Colonel Ashley, the former Minister of Transport, supported the Bill. After recounting the negotiations which he had had with representatives of the Southern Railway, he said he could not see why a station, overlooking the river, planned by an eminent architect, should not be a great addition to the view of London from the northern side of the Thames. From the traffic point of view, this would be a really important London improvement. The scheme would open up the dreary area around Waterloo Station, and in twenty or thirty years' time, if the plans of the London County Council were carried out, instead of being covered by mean houses, it would be covered by fine buildings. The Government were giving £9,000,000 and London ratepayers were finding £3,250,000 in aid of the scheme, not for æsthetic considerations, but for transport considerations, first, second, and third.

At the same time the Ministry of Transport was not unmindful of æsthetic considerations. Sir Edwin Lutyens, who was asked by him as Minister of Transport to advise on the scheme, had taken every precaution that it should be architecturally worthy of London. The House, he hoped, would

give the Bill a second reading, and he understood that in Committee the London County Council would readily adopt suggestions for its improvement.

Mr. Scurr, a Labour Member, said that after the fullest consideration of the financial, architectural and engineering considerations, the plan was the best that could be devised.

Sir Kenyon Vaughan-Morgan, on behalf of the London County Council, said it was a case of "now or never"; and it would be unwise to neglect the present opportunity.

Mr. Harris complained that there had been a great deal of criticism, but no unity. The critics had been very prolific in their letters to *The Times*, but when they were asked for an alternative there was no agreement, and they took refuge in silence. He had been attracted by the Lee scheme, but he was conscious that, just as there were artistic objections to the present scheme, there were even greater artistic objections to the scheme of the Royal Commission. The scheme should go to a Private Bill Committee, where it would get an impartial investigation. In spite of some heartburnings, he would vote for the second reading, but he hoped the House would pass an instruction that the London County Council should employ the best possible architects. The instruction which he was moving was to secure that the architectural features of the scheme should be submitted to open competition.

Mr. Morrison, the Minister of Transport, who supported the scheme, said that a number of the alternative schemes had been produced without a knowledge of the engineering facts which had to be faced. It was extraordinary that people should expect to be listened to as traffic experts when they suggested bringing the traffic from the proposed new bridge right on to the Thames Embankment.

The House really must face the central facts of the situation. One was the convenience of the Southern Railway. Its suburban electric lines were of very great importance to the housing of London. Parliament could, of course, make the Southern Railway do anything it liked, for Parliament was supreme. But Parliament knew that when an undertaking was made to do something that it did not like, the compensation to be paid was increased.

Another thing to be remembered was that the County Council was the town-planning authority of London, and they could be relied upon not to forget the town-planning considerations of the scheme. Neither the County Council nor the Government had an unlimited purse. Already there was £12,500,000 involved in the scheme, and that was not a small expenditure. The County Council had also some other schemes in hand for the improvement of London. The present scheme provided for embanking the river with a fine promenade and gardens along the river front. The whole line of the river from the County Hall to Waterloo Bridge would be available for fine buildings, the designs of which, including that of the station, would have to be submitted for approval. The County Council intended to develop the area behind the County Hall.

There had been wide misapprehension as to the use of the space between the new station and the County Council building. It was the intention of the County Council to secure by building restrictions that these sites should be occupied by fine buildings fronting the new roads. This would afford a magnificent architectural opportunity.

The so-called tunnels would really be covered roads, and need not be in themselves unattractive. An enormous amount of trouble had been taken with the scheme, and he held that it was a good scheme. Its critics could not agree on an alternative. The scheme before the House held the field and ought to be supported by the House.

It had been asserted that sufficient trouble had not been taken to make sure of the architectural merits of the proposals. The architect was always important, but he must be limited by the engineering and traffic essentials of a scheme. He could not have a free hand. Sir E. Lutyens was consulted before the engineering and traffic considerations were settled. When the protracted investigations had been completed and the essential technical requirements of the problem were known, the advice of Sir E. Lutyens was sought as to the possible layout for the scheme within the known requirements. Sir E. Lutyens devoted a great deal of time to the examination of the scheme, and he prepared a plan showing the layout he advised, and signed the plan jointly with the engineers. Sir E. Lutyens, on August 1, 1929, wrote to Sir H. Maybury, saying he had no doubt that the bridge and approaches as finally agreed upon were capable of distinguished expression in their architectural treatment. Sir E. Lutyens adhered entirely to the view he then expressed, and when the Bill was in Committee would give evidence for the promoters of the Bill.

Apart from these engineering and traffic limitations, Sir E. Lutyens had a free hand. The House ought to know the kind of pressure that was being exerted in support of this agitation. Sir E. Lutyens was out of the country on important work in India when this deputation was received. On his way home, when he could not have first-hand knowledge of the controversy which existed, he received at Aden a letter dated January 14, of which he took no notice except to place it in his (Mr. Morrison's) hands with the request that he should make what use of it he thought proper. It was written on the official notepaper of the R.I.B.A., but he did not know whether it had the authority or represented the views of that body. Indeed, he had been informed that this subject had never been on the agenda of the Council of the R.I.B.A. The letter was signed by Arthur Keen, chairman of the Thames Bridges Conference. Sir E. Lutyens was retained as an expert architectural adviser, and his relations with the Government and the County Council must be relations in which there was complete confidence between the three parties. The letter was as follows:

Dear Sir Edwin,

Charing Cross Bridge

The official scheme for the bridge is receiving a great deal of very damaging criticism, and *The Times* in particular has attacked it very resolutely more than once. From every standpoint it is criticized—the interests of railway passengers, cost, time to be occupied in getting the work done, the development of South London, architectural character, and so forth. The Minister of Transport and Sir Percy Simmons are using your name to justify the whole thing, whereas it has already been found out that the three principal things—the position of the station, position of the bridge, and level of the northern approach from the Strand and not from the Embankment—were given to you as unalterable items in the scheme. We believe also it was said that the southern approach should start by the New Cut. In my judgment your reputation is suffering by your name being identified with the scheme which is very severely criticized in print, and I suggest that you should do something about it. Could you not write to me or to the President, R.I.B.A., to say that you had no free hand, but that the items mentioned were already settled? I feel sure that the Bill will be rejected in Parliament, and if we could publish a few lines from you, stating that in all essentials the layout was settled without reference to you, it would be a good thing for you as well as for us who are opposing the Bill.

That was a most improper letter, and the House of Commons ought to know the kind of tactics that were being employed and the kind of pressure that was forthcoming on this matter. If this scheme were rejected, the County Council would be free from its understanding with the last Government to retain Waterloo Bridge and build Charing Cross Bridge.

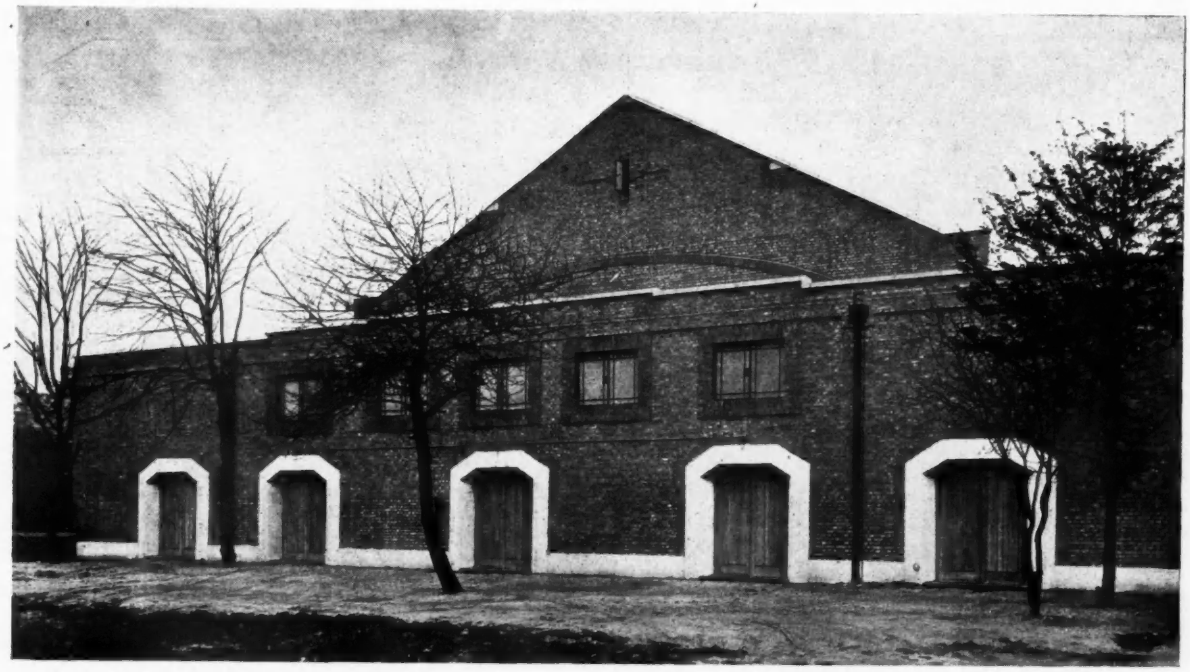
The second reading was carried by a majority of 168; and the House then agreed to the following instruction, moved by Mr. Harris:

That it be an instruction to the Committee to insert clauses, or obtain an undertaking from the promoters, to secure by competition or otherwise designs for the bridge and architectural treatment of the viaduct.

LOCARNO DANCE HALL, STREATHAM HILL, S.W.

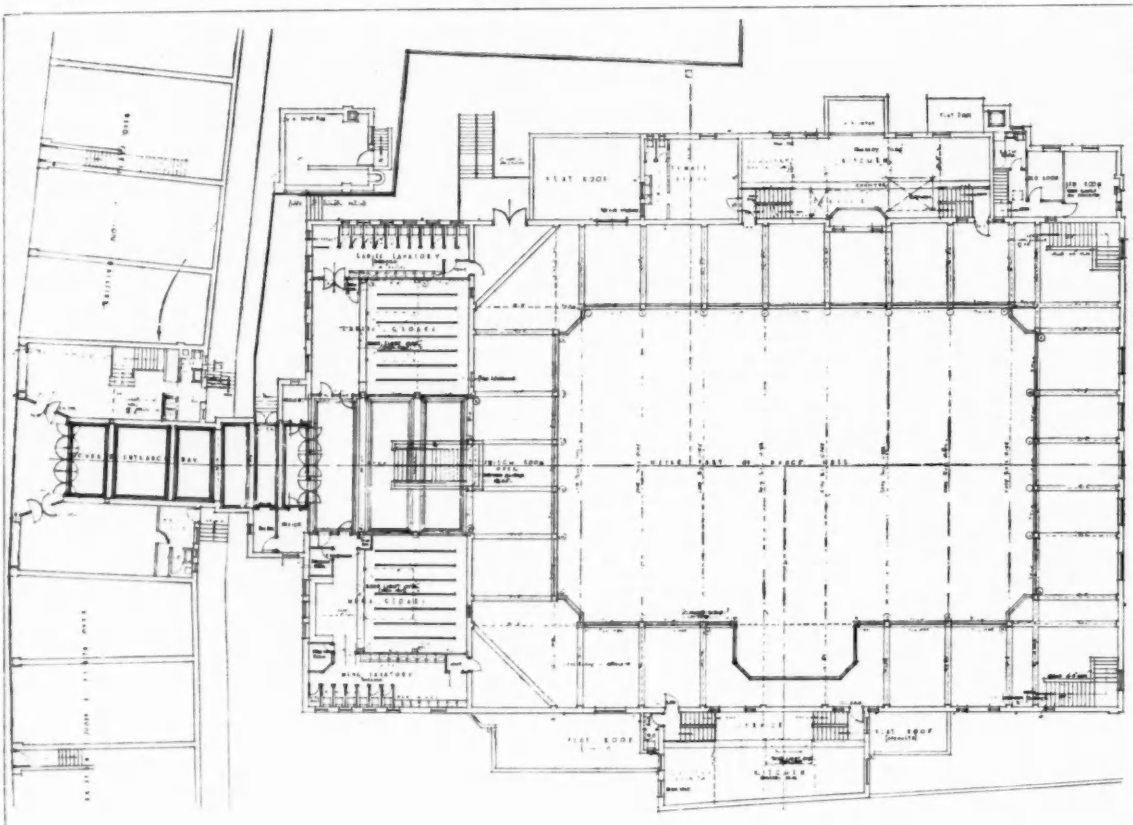
DESIGNED BY TREHEARNE AND NORMAN, PRESTON & CO.

IN the good old days, when the citizens of London wanted to enjoy themselves, they set up a maypole in Leadenhall Street and danced round it. The maypole has gone—burnt, it is said, as a wicked relic of idolatry—and dancing down the middle of Leadenhall Street is a diversion that has been discouraged by the City Fathers for many years.



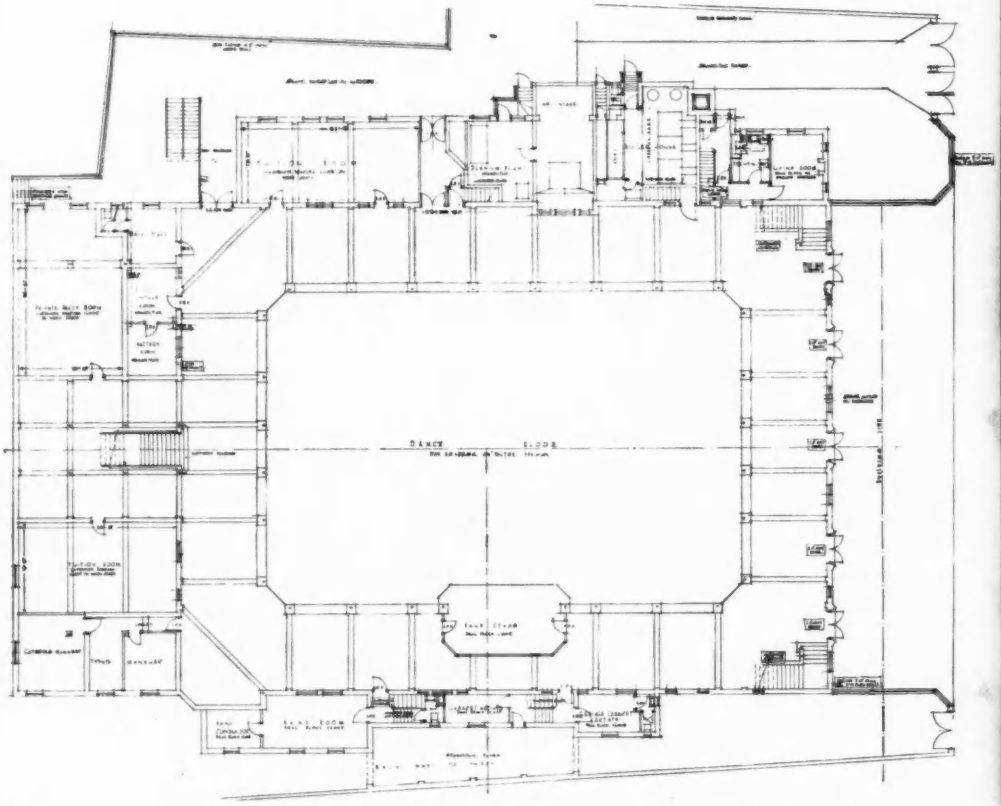
Nevertheless, an instinctive desire to dance on occasion still persists among most normal human beings, and the modern dance hall has been evolved to meet it. Locarno, at Streatham Hill, is not based on any historic precedent. Like Topsy, it "just growed."

Instead of spending weeks in libraries, searching files of old periodicals for precedents on which to base their design, the architects adopted another procedure. A sketch scheme was prepared and each individual member of the staff offered his criticisms and views. The various ideas and opinions were incorporated in amended drawings, which were then subjected to the intensive criticism of stage managers, band conductors, experts on ventilation, professional dancers, authorities on carpets, cloakroom attendants, cabaret artists, hairdressers, experts on acoustics, furnishing specialists, soda-fountain magicians, automatic coin meter wizards, catering managers, authorities on fire hydrants, cigarette ash-tray experts, broadcasting experts, optimists, pessimists, and odd members of the general public who might reasonably be expected to pay for admittance when the hall opened. The tattered remnants of the drawings were afterwards deposited with the London County Council, and the result is Locarno.

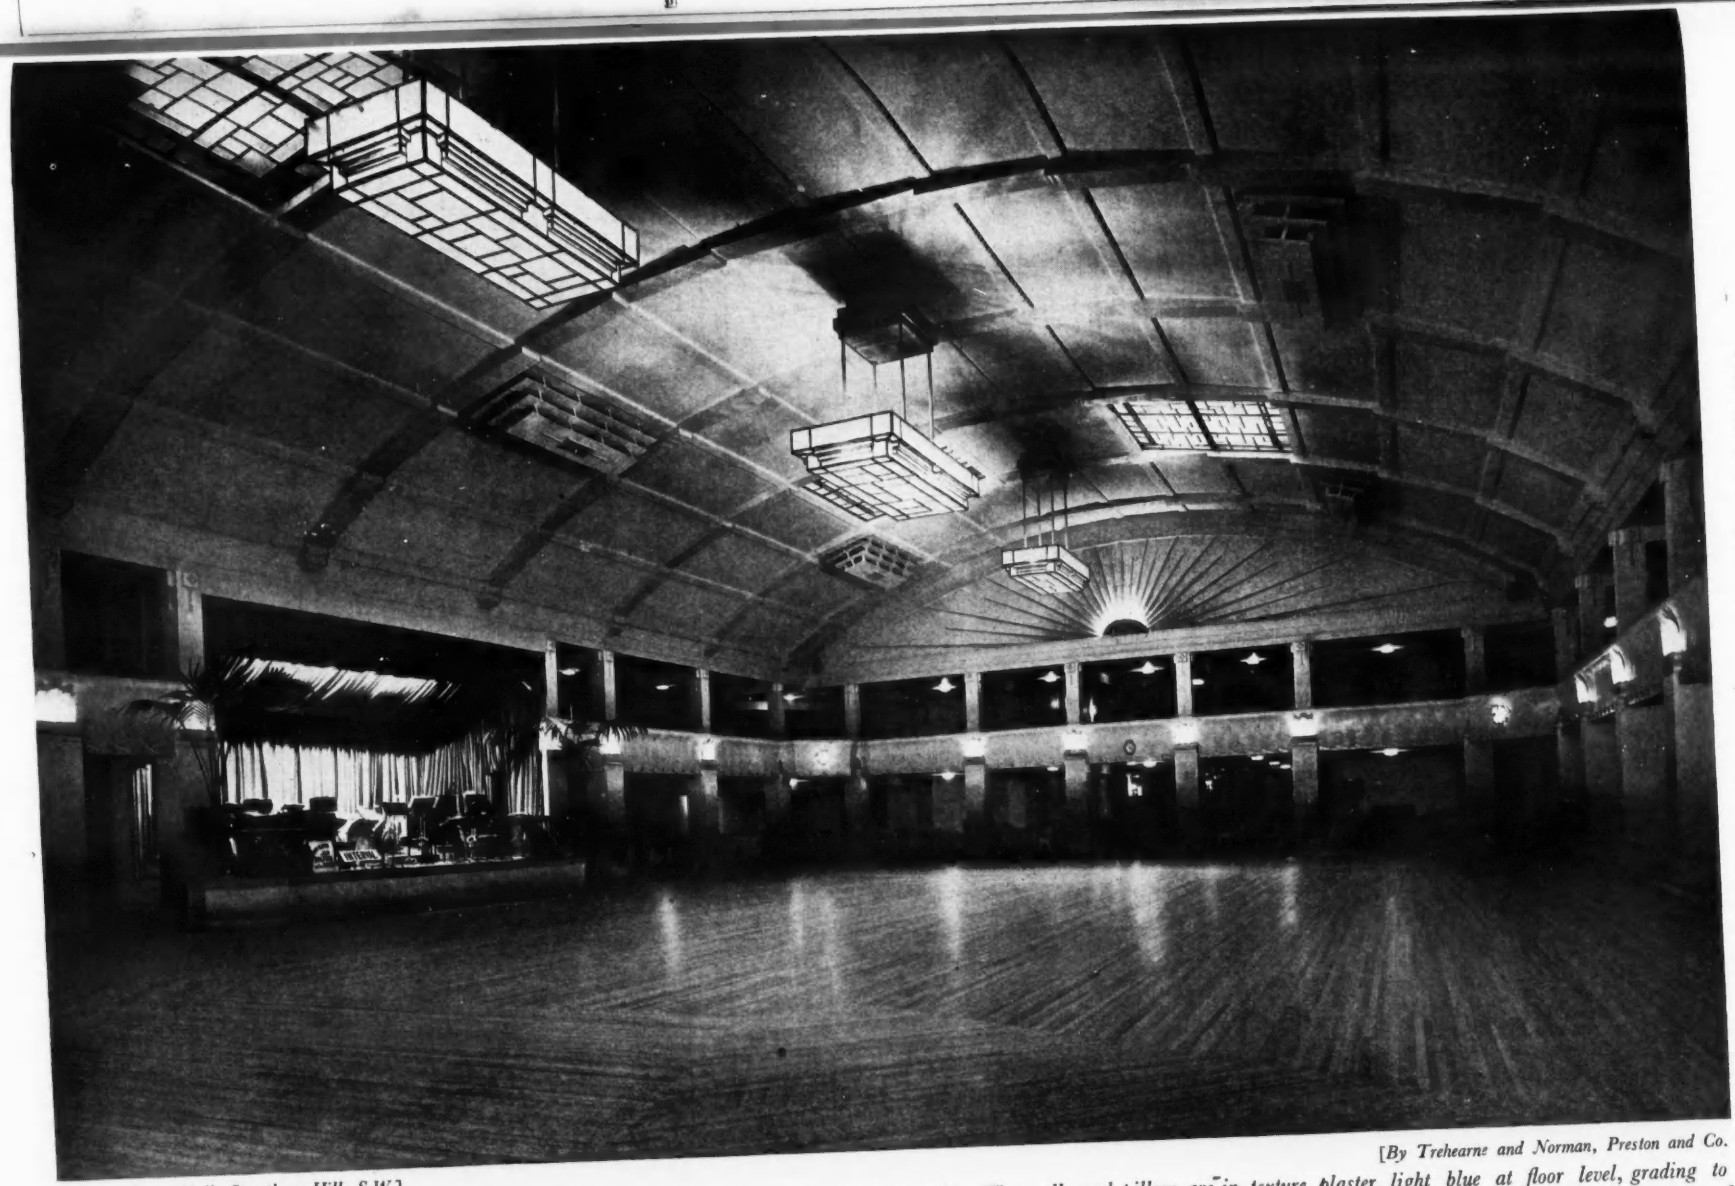


In designing a dance hall an architect must exhibit tolerance, exercise diplomacy, and display great good humour. He must be prepared to accept criticism on æsthetic matters from catering specialists, and hear adverse comment on decoration from those skilled in the

No photograph of the entrance elevation, as it was designed, being available, this view is that seen on entering the main doors. The walls are faced in texture plaster, in blue and silver, and the floor is of rubber, blue, buff and grained.



The back elevation. The walls are of multi-coloured bricks, with red brick and artificial stone dressings. Metal casement windows are fitted. The architraves of the doors, which are provided for exit purposes only, have a family resemblance to the arch in the interior, in the upper view on this page, and strike a distinctive note in the design.



Plan of the gallery floor, which is on the same level as the entrance hall. Among the notable features of this plan are the two kitchens, one on either side of the gallery, and each independent in its service arrangements of the other.

Locarno Dance Hall, Streatham Hill, S.W.

By Trehearne and Norman, Preston & Co.

On the ground floor is the dance hall, which is approached by staircases leading down from the gallery and crush hall, entered from the Streatham Hill front. Other accommodation on this floor includes tuition rooms, private party, band, and cabaret artistes' rooms. The spring dance floor, of oak in narrow strips, can be locked if required during cabaret and other performances. Exits are at the rear of the hall.

[By Trehearne and Norman, Preston and Co.

Locarno Dance Hall, Streatham Hill, S.W.]

The dance hall looking towards the staircase (beneath the sunburst) leading up to the crush hall. The walls and pillars are in texture plaster, light blue at floor level, grading to orange towards the ceiling. The latter and the curtains on the band stage are of neutral tint to take the various lighting effects in red, blue and amber, and combinations of these colours, obtained from the hanging lanterns, the lay-lights and the lamps on the heads of the pillars. The lighting of the sunbursts, of which there is one at each end of the hall, is arranged for sunrise aud sunset effects.

Locarno Dance Hall, Streatham Hill, S.W.] [*By Trehearne and Norman, Preston and Co.*

Looking up the main staircase from the dance hall to the crush hall. The snails are in fibrous plaster and their eyes are red lamps.

contrivance of ingenious receptacles for cigarette ends, but he will also discover that everybody expects a first-class dance floor, a good orchestra, adequate cloak room and lavatory accommodation for both sexes, and effective methods of control of temperature and ventilation.

The introduction of a certain mirthful element is permissible in the treatment of a decorative scheme designed for effect under artificial light. In the contract specification for the erection of Locarno, no provisional sum was allowed for jokes; but instead of conventional newel caps at the foot of the main staircase it was found possible to incorporate in the decorative scheme newel caps of an unusually hilarious type.

No photographic record of the architect's design for the front elevation of Locarno, before it was enriched by the attachment of illuminating devices, is now available, and a view of the rear elevation is therefore given.

CORRESPONDENCE

THE EXPERT WITNESS

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—The article in your issue of the 12th inst. has aroused my interest, and although it is rather late to comment on it, I have not had an opportunity to do so earlier.

The author is undoubtedly correct in his condemnation of those "experts" who are willing to give evidence on either side, as he is also right in describing the proper attitude for an expert witness.

Unfortunately, the position of the expert witness in this country is essentially anomalous for he must be called by one of the parties. This is not his position in some Continental courts and the anomaly does not there exist.

It could be removed in this country, as in some others, by one of three courses:

1. By the judge referring all the technical matters to an arbitrator, skilled in the technology of the subject.
2. By the judge having one or more technical assessors sitting with him and appointed by him.
3. By both parties agreeing to arbitration (instead of going to Court) and choosing an arbitrator with the requisite knowledge.

The last course is usually the best in most instances, as even when the legal position is not clear the arbitrator can always make his award subject to a special case in which he states the legal questions on which he does not wish to give an opinion; a judge in chambers then issues a judgment thereon which, in effect, forms part of the award.

I have never found the parties to an arbitration dissatisfied with my award on technical grounds. This I attribute solely to the fact that in matters of which I have technical knowledge I am able, either to dispense with expert witnesses (by arrangement between the parties) or to know just what credence to give to the statements of the expert witnesses engaged.

As arbitration with a technically expert arbitrator is much cheaper and quicker than a hearing before a judge, it would be advantageous to all concerned if there were more arbitrations and fewer hearings in the courts of technical cases. The anomalies of expert witnesses appearing for one side in an action would then largely disappear.

A. B. SEARLE

Locarno Dance Hall, Streatham Hill, S.W.] [*By Trehearne and Norman, Preston and Co.*

The crush hall, looking towards the dance hall. The walls are in texture plaster, in buff and light buff, and the staircase surround, of the same material, is in light blue. The grilles to the staircase are of metal and the handrails of oak. Red concealed lights illuminate the wall above the pillars, seen at the back of the staircase well. The general lighting scheme is amber.

ARCHITECTS AND BRITISH MATERIALS

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—In view of the disproportion of our import to our export trade, and the imperative need of Great Britain to become more self-supporting, could not architects assist by taking care to specify wherever possible only British or Empire materials?

I suggest that a recommendation to this effect from the Council of the R.I.B.A. to its members, together with some means by which the members could signify their intention of adherence to this principle, would materially help the building industry and the reduction of unemployment.

FRANK SCARLETT

THE BATTLE FOR ARCHITECTURAL REGISTRATION

The Æsthetic Front

BY A. TRYSTAN EDWARDS

WHILE it appears that the professional front of the Registrationists, which I explored last week, is invulnerable, their æsthetic front is weak, and has, in fact, been broken through with the greatest ease on each occasion when their Bill has been presented to Parliament.

Two courses therefore lie open to them. Either they can strengthen their æsthetic front so that they can make a victorious advance in that quarter, or else they can definitely close that front and offer battle on the professional front only. The first course is quite possible, but might take many years to accomplish. The second course is immediately practicable, and if adopted would lead to the passing of a Registration Act which would give to the architectural profession all that they really want and all that at the present moment they have a right to ask. When, however, the Registrationists contend that the passing of their measure would raise the average level of architectural design, they speak in terms of dogma and not of reason.

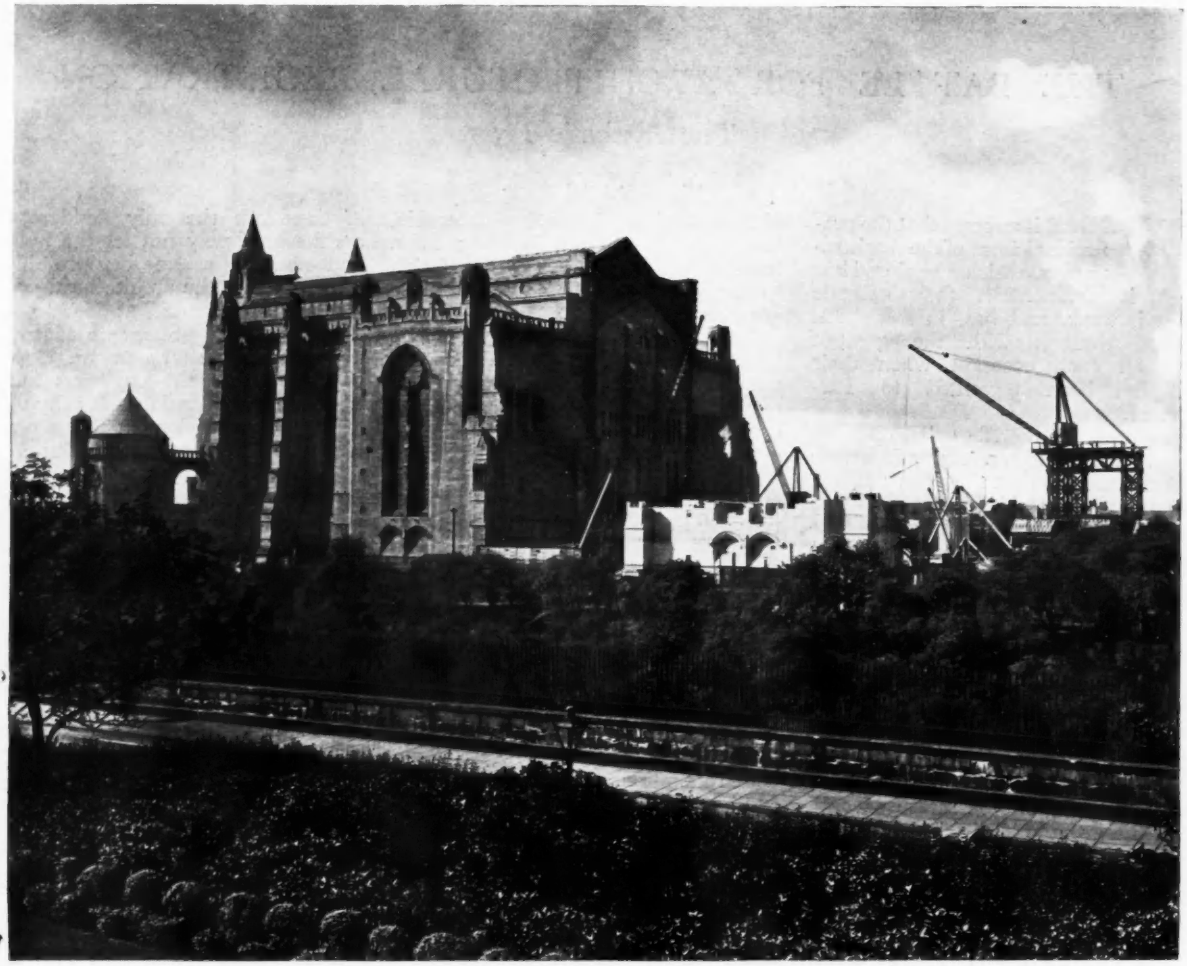
It is true that the R.I.B.A. has never set up its own examinations as the one test to which a practising architect should submit. The Board of Architectural Education, which would be set up by this Bill, guarantees that there will be no narrow professionalism in the body which will watch over the future of the architect. A number of schools of architecture are exempt from the R.I.B.A. examinations, and can establish their own tests; so there is room for many different types of training, and many different opinions concerning architectural design are encouraged to find expression. The R.I.B.A. is generous, tolerant and open-minded.

To this, Members of Parliament might reply: "We do not respect your tolerance and open-mindedness if these qualities result from a failure to establish an acceptable theory of your own art. We granted the doctors Registration, not because they were tolerant and open-minded, but because they were able to persuade the public that they were in substantial agreement and possessed definite knowledge, without which nobody could with safety be allowed to practise as a surgeon or physician." Unfortunately in our own profession we find a very different state of things. Distinguished architect A is convinced that the designs of distinguished architect B are execrable, and most of us are battling in a tempestuous sea of doubt and confusion as to what does or does not constitute good design.

If the case for Registration, however, is in any degree whatsoever dependent upon the ability of the architect to establish his claim to possess definite qualifications as an artist, we must give the public some assurance that we do, in fact, possess knowledge concerning what is or is not good architecture. This is a matter of æsthetic philosophy, but its practical implications are obvious. It must be confessed, however, that a large number of architects are accustomed to pride themselves upon their rejection of all æsthetic canons which are based upon logic. It is not that they wish to defeat the legitimate political objects of their own profession; yet they are, nevertheless, unconsciously disloyal to them. The reiteration of the doctrine that good architecture is dependent upon some indefinable thing called taste, or, worse still, the personality of the designer, is most definitely injuring the prestige of the architectural profession as a whole.

It may be admitted that the formulation of principles of architectural design involves a considerable intellectual effort, but it does not follow therefrom that the effort is not worth while, nor that the object of it is unattainable. This attempt to find an impersonal standard of æsthetic judgment is surely an honourable one, for even if an error is stated so unequivocally that it must needs be exposed, the truth is advanced thereby. The average Member of Parliament will not give his intellectual respect to architects who say in the same breath that they wish to be given an official status as the exponents of architecture, and then, with a puzzled look on their faces, exclaim "What is architecture?"

While utter vagueness of opinion and a refusal to acknowledge an æsthetic standard in their work brings architects into disrepute among ordinary workaday folk who have learnt to admire definite accomplishments, there is a form of dogmatism with regard to design which is more harmful to the profession of architecture even than sentimentality or muddle-headedness; and that is the confident statement that good architecture results from good construction and from what is called the expression of fitness for purpose. If these are the only desiderata in architecture, why not let the builders and engineers assume our professional duties and let the architectural profession commit hara-kiri at once?



Let us for the present be content to say that architecture has an æsthetic element which the engineers fail to take into consideration. It is by virtue of this æsthetic element that architecture becomes an art. Some of us profess to know what this element is, and in so far as we have failed to convince our architectural brothers that the æsthetic element is capable of rational exposition, we share in the responsibility of the failure of the Registrationists to carry their Bill. Certainly the officials of the Royal Institute of British Architects, who have laboured so wholeheartedly to achieve Registration, are not in the least to blame if there does not exist in the ranks of architects themselves a sufficient degree of philosophic talent to persuade the public that the art of architecture has any existence at all. It might certainly be of advantage, however, if they were to recognize this philosophic weakness with which as a body we are inflicted, and plan their political strategy accordingly.

To make this point still clearer, let us suppose that a hundred or more novelists of acknowledged reputation were to urge that the public taste was being corrupted by a flood of stupid and vulgar novels, and that, therefore, all aspirants to the status of novelist should be compelled to undergo some kind of training in schools established or approved by the hundred superior literary men. The claim would appear preposterous unless these latter could establish a *science* of novel-writing and explain that they themselves conformed to its principles. For the same reason, until architectural design becomes a science, its exponents can have no official status in their capacity as artists.

For the purposes of Architectural Registration, then, let this be our maximum and minimum claim—that an architect is a person who is well trained in all *practical* matters connected with the design of buildings, and is pledged to conform to an honourable code of professional conduct. I believe that we can get Registration on these terms. But if we continue to make the larger claim we shall *not* get Registration; and we shall not deserve it.

(Concluded)

C

A general view of the Cathedral, taken a few weeks ago, and showing the walling of the new transepts rising alongside the completed portion.

LIVERPOOL CATHEDRAL:

What the Future

(*Sir Giles Gilbert*

BY PROFESSOR

I DO not think it is realized by the outside world how fast the great second section of the Liverpool Cathedral is rising from the ground. The present photographs show its state a month ago. Today it is some ten to twenty feet higher in parts. Standing on one of the great corner piers of the tower fifty feet above the ground—the pier itself is a platform as big as a large room—one sees rising on every side the vast piers and walls, the latter twelve feet thick, of the central space and of the second pair of transepts. Some of these piers are much higher still. One has just reached the springing of the nave arches, but none of the main arches is yet turned.

The whole thing looks uncommonly like the Baths of Caracalla in its immense scale and massiveness and in the absence of connecting arches. When this present section is built, there will only be left to build the nave, equal to the chancel in length but short, as naves go, in comparison with the size of the general structure, and the upper part of the tower. At the present rate it really seems as if some of us, and certainly the architect, might hope to see the finished building.

As one looks down on the work the peculiarities of the plan become very clear. One realizes the narrowness of the waist in the centre of the building where the two great internal porches impinge upon it between the pair of transepts. Narrowness, however, is a comparative term. This waist inside the walls is seventy feet wide—the internal width of the central tower. The great central area now being completed consists of this square, free of all piers, and of two similar spaces, nearly square, between each pair of transepts; making together an open central space 210 feet long. No solid building in the world has such an open vaulted hall, I imagine. We rightly pride ourselves here in Liverpool on St. George's Hall, with its great central apartment, barrel-vaulted in hollow bricks. Its dimensions, however, are considerably less than these, and its vault in comparison is a plaster ceiling.

It is this great heart of the Liverpool Cathedral—the chief novelty of its plan among similar structures—which is now being completed. When it is finished three thousand people will be able to kneel together in sight of the altar. Discussions are now going on as to the placing of the pulpit and whether indeed there should be one at all, whether, that is to say, an attempt

A view of the new works, taken, from aloft, expressly to illustrate one of the great porches biting into the centre of the structure.

THE SECOND SECTION

C. H. REILLY

should be made to preach to such a vast multitude, even with loud speakers. Canon Dwelly, the producer genius who designs and stage manages the services of the Cathedral, and who is now called in for all national ceremonials, is, I believe, thinking of four ambos, one at the base of each of the four great piers of the tower, and of a type of service with chant and response echoed back across the heads of the congregation from ambo to ambo. I mention this not as a settled fact, but to show how Sir Giles's great building is already awakening the imagination of all who use it. Its great spaces, its vistas and vast massive shapes will inevitably call forth fresh streams of creative imagination. This is the birthright of all great architectural ideas such as those which inform the main lines of Scott's cathedral.

Returning, like Simon Stylites, to our pier, and noticing again the great bites into the structure which the spaces between each pair of transepts and the central tower make on either side of the building, one realizes more than ever the significance of the great porches into which the architect is converting these spaces. They will soon have great arches, as big as any in the building, spanning them, and under these arches will mount great flights of steps seventy feet wide. Those on the river side, facing St. James's Road, are already in place, and lead up from a two hundred foot span of steps embracing both this gigantic porch and the two transepts. On these steps which make a great base to the building, and on the inner ones, with their fine dramatic value as they penetrate the porch, one can imagine a great congregation assembling, half in the open air and half under cover of the porch, and waiting patiently to receive the blessing of the bishop as he emerges at their head.

This south entrance (pseudo-south) must obviously be the main entrance to the cathedral; especially if the nave is set apart for special uses, as the new stone screen cutting it off from the central space suggests. One says "obviously" unless something still more dramatic happens, which I think must be in the architect's mind.

On the north side (pseudo-north) he has an exactly similar porch, seventy feet wide, and as dramatically approached by flights of steps. But where do these steps lead? At present, directly to the almost precipitous side of the quarry on the edge of which the

Up to the south porch, between the southern pair of transepts, lead spans of wide steps. The building is proceeding apace: the porch will soon be spanned by an arch as big as any in the building.

cathedral is built. Far down below is the valley of death, the old cemetery very mysteriously but very unhygienically placed in the bottom of the old quarry. Fifty yards away on the other side of the abyss rises a great Piranesi-like wall of rusticated stonework, with long sloping walks on its face leading to the arched entrances of burial vaults. Above is Hope Street—well named.

Liverpool Cathedral.] [*By Sir Giles Gilbert Scott, R.A.*

A view of work in progress, taken inside one of the new pair of transepts. The size of the arch may be appreciated by comparison with the figures of masons in the foreground.

The architect's idea is surely to throw a single span bridge—not too wide, for that might spoil the scale of his building—from this north porch across the void and then, one hopes, to pull down a horrid terrace of tall, yellow-brick houses and build at the other end of the bridge, facing the cathedral, the bishop's palace, the residences of the canons, the deanery, the clergy school and choir school, and all the other buildings attendant on a cathedral.

If this were done, not only would these deep entrances right into the heart of the structure on both sides be justified, but a more romantic approach would be given to the Liverpool Cathedral than has been dreamt of for any such building. Of course, nowhere else in the world but in Liverpool could such a dream come true! A city, however, which is building a cathedral like the present one, and is contemplating another even larger, is a city where anything glorious of this kind might happen. One does not want to boast of one's adopted town too much. It certainly does sufficiently inglorious things sufficiently often. Yet there is St. George's Hall, there is Sir Giles Scott's Cathedral and that of Sir Edwin Lutyens, fast taking shape. This bridge therefore, which, looking at the site and the architect's useless porch, must be in people's minds though they talk very little about it, is not too much to hope for—in Liverpool.

ENGLISH PRECEDENT No. 104

WHITE HART INN, NEWARK, NOTTINGHAMSHIRE

The building here illustrated is of special interest, inasmuch as it shows that the English genius for street architecture which flowered so splendidly in the eighteenth and early nineteenth centuries was beginning to find expression in the pre-Renaissance period.

In the delightful design of this inn we find that the gabled style has already been superseded, and the façade is given a horizontal emphasis. Particular skill is shown in the treatment of the row of windows beneath the eaves, which is a surprisingly early precursor of the wide continuous openings which "modernist" designers introduce in their façades.

The modern shopfront, although an unfortunate intrusion, is yet fairly reticent in its style, and does not destroy the main lines of the composition.

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

This is an action before an arbitrator, brought by Colonel Jago, J.P., jointly and severally against builder and architect, for damages for the collapse of a village hall. Mr. Chawlegger, K.C., and a Junior represent the plaintiff; Mr. Twistle the defendant Swillerton, and Mr. Pitfall, K.C.—with him Mr. Wrackem—the defendant Toomer. Counsel concluded their closing addresses on behalf of their respective clients shortly before one o'clock on the third day of the hearing, and the arbitrator then said that he would consider his award and notify the parties to the action when it was ready for publication. Though the case related is true to life in every particular, the characters named are fictitious.

viii: The Award and Author's Commentary

WHEN Toomer, in saying goodbye to his solicitor, Bosson, at the end of the hearing, asked when, and in what papers, the award would be published, he received no answer; Bosson, as usual, being irritated by his client's inveterate simplicity. An arbitrator's award is "published" by being issued to the party to the action who pays for it. The arbitrator notifies the solicitor on each side, or, if none, the parties themselves, by registered letter that the award is ready to be delivered to any one of them on payment of "the costs of the award"—i.e. fees and expenses of the hearing. The solicitors of the parties may agree among themselves which shall take up the award, and usually the side most likely to have got the verdict does so. The party so taking up the award can recover from the others the proportion of the costs of the hearing and award, as determined by the award. The costs of the parties to the action, as well as costs of the award, are part of the award, the arbitrator having full discretion in this matter of costs and a lien upon his award until his charges are paid.

Unlike a judge's verdict, an arbitrator's award need not state the grounds for his decision, and therefore, wisely, never does so; nor need it state the terms of reference, and if it does so, and states them wrongly, the error will have no effect on the award, as it is held that fact outweighs a mere mis-recital. The award, after publication, is inviolable: not a letter may be altered except to correct purely clerical errors, and however erroneous it may be it will stand as final; there is no appeal from it except by proving fraud, interest in the subject-matter, and such like. The courts are very reluctant to interfere, and will in no case re-try an action. All the court can be moved to do is to cancel the award or refer it back upon the ground that it diverges from the submission, or exhibits a serious irregularity on the part of the arbitrator; but as the arbitrator is not bound by the strict rules of a Court of Law and, except as regards evidence, has a free discretion in the conduct of the hearing, little short of positive misconduct on the part of the arbitrator will afford sufficient grounds for upsetting his award. In fact, an Arbitrator's Court may be, with the exception of the House of Lords, a final and authoritative tribunal.

It is commonly said that a High Court verdict usually satisfies *one* of the parties to the action, but that an arbitrator's award usually pleases *none*; and this is true in the sense that an arbitrator generally has before him matters of accounts or of technical intricacies, so that his duties are rather those of apportionment than of legal niceties; and as he is not usually a lawyer—or if a lawyer is also a technical expert in a professional calling—he is more disposed to balance justice than to enforce the letter of the law. It is therefore not an altogether unjust criticism of arbitrators that they, at the opening of a case, assume an equal division between the parties of the matter in dispute, and then, while the case proceeds, take away from one side and add to the other as the evidence bears in favour of plaintiff or defendant.

An arbitrator is bound, unless he enlarges the time as by statute required, to publish his award within three months of entering upon the reference. It was five weeks after Bosson left Toomer standing upon the curb outside the front entrance of the Institute of Municipal Engineers, that Toomer heard from Bosson that the award was ready, and that he had arranged with the other side to take it up. He had the grace to enclose a copy of the arbitrator's notification, which was as follows:

In the matter of an arbitration.
Jago v. *Swillerton and Toomer.*

Gentlemen,

I hereby give you notice that I have made and published my award in writing respecting the matters in difference between Colonel V. F. Jago and Messrs. J. R. Swillerton and D. W. Toomer, referred to me; and that it lies in my office ready to be taken up upon payment of the charges, of which particulars are enclosed: they amount to £165.

Yours truly,
F. HOPETOUN GIZZARD,
Arbitrator.

On receipt of that letter Toomer, who had been on tenter-hooks, telegraphed to Bosson—"Reply paid. Please wire result directly known"; and received next day a handsome shillings-worth—"We have won congratulations Nobbos."

It is more usual for arbitrators to "consider" their award than for judges not to do so; and it is also usual for them to be in no hurry to publish unless circumstances make time of importance. However clear an arbitrator may be as to the award he will make, he is glad to meditate on it and test it from every point of view and, perhaps, discuss particular aspects of it with other technicians and lawyers: he will like to feel that his award is definitely a part of himself and an unchangeable fact for him, before he publishes it. In deciding this case of *Jago* v. *Swillerton and Toomer*, Mr. Hopetoun Gizzard undoubtedly had a devil of a time of it. This may well be imagined; but it is also shown by certain tortured sheets of foolscap, blotted, cross-noted, scored, ticked, corrected, amended and discarded in favour of other successive sheets, which shared the same fate in reduction to unintelligible scrawlings; till at last there emerges from the riot of indecision the statement tabulated on page 358, which, at first sight, might appear to be the record of a chess tournament, but which, in fact, is the arbitrator's final apportionment of losses and gains to the several parties on the various issues raised in the case. It may be imagined that Mr. Gizzard was at one time a cricketer addicted to score sheets and tables of averages. On the left of the sheet here reproduced the different issues are tabulated, and three pairs of columns show who, in the arbitrator's opinion, won on each issue: A. stands for *Jago* as against *Swillerton*, B. for *Jago* v. *Toomer*, and C. for *Swillerton* v. *Toomer*.

At the bottom of the sheet is

scrawled—"(*a*) Negligence not made out. (*b*) If plaintiff had intended that defendant builder should be responsible for maintenance and keeping in repair he would have directed contract to be so drawn." By (*b*) the arbitrator indicates that he attaches importance to a point not particularly stressed by Counsel for the defence, namely, that as Swillerton's contract required him only to make good defects due to improper materials and workmanship appearing within six months of date of completion, he is not liable for anything more; and that if plaintiff had intended to hold Swillerton so liable the contract would have stipulated that he was to "maintain and keep in repair." By omitting to take this step plaintiff may be regarded as deliberately accepting all risks outside the making good of defects.

As Jago, in the arbitrator's opinion, failed to bring home negligence to the defendants, he had necessarily failed in his action; and many of the points logged in the table of scores—if it may so be called—have no importance except as they bear on the question of who shall be liable in costs. It is for the arbitrator to say whether each party shall pay his own costs; or one or more of the parties, the whole, or part, of the costs of the other or others. It is to be noted that the only points settled in Jago's favour are: (1) That *vis major* is not established; (2) That he did not order Toomer to lay American maple floor; (6) That the architect undertook to lay a satisfactory floor of American maple; (15) That he is not responsible for the collapse; (17) That the penalty clause of the contract was alive at the time of the collapse; and (19) That the architect is responsible to him for certifying completion. The only point decided against Toomer in favour of Swillerton is that *if* negligence had been shown Toomer was responsible for certifying the building as completed, so that Swillerton would have been exonerated from paying penalties for delay, and Toomer could have been sued. It is to be noticed that while the arbitrator finds that neither Swillerton nor Toomer were negligent in their duty to Jago in making use of blocks and wedges, and in leaving them in place, he finds for Toomer on the same issue as between him and Swillerton; that is to say, *if* negligence of defendants had been shown, it was Swillerton, and not Toomer, who, in the arbitrator's opinion, would have been liable to Jago in damages—less damages for delay which, by his negligence in certifying completion, Toomer had made himself liable for. This point, it will be seen, has effect in the award (page 359), which is neatly engrossed on thick foolscap paper.

It is to be gathered from the above that the arbitrator felt that, though neither of the defendants were guilty of negligence, the use of the wedges was entirely a matter for the builder's discretion and had nothing to do with the architect; and therefore, since the whole trouble arose from the builder's error in judgment, it was not fair that the architect should be mulcted in the costs in which that error in judgment involved him.

The meaning of the award is that Toomer will pay none of the costs in which the action has involved him except his own time and expenses, including out-of-pocket expenses, travelling, hotel, etc.; and except a small proportion of his solicitors' charges and disbursements. The taxing master, for instance, might not allow as costs that 9d. for taxi from Carey Street to the Temple charged up by Bosson, on the ground that he could have walked. Swillerton will pay only the same and, in addition, his own and Toomer's costs—as assessed by an official taxing master, to represent the proportion of costs due to matters in dispute between Swillerton and Toomer—plus the five pounds which the arbitrator in his award has decided to represent the costs of the award in respect of those matters. Everything else—costs of award, fees (retainers and refreshers) of Counsel for all parties and all solicitor's charges of all parties, and expenses and disbursements to witnesses, together with money paid to compensate persons damaged by the collapse and cost of reconstruction—will be paid, except as the taxing master may disallow, by Colonel Vivian Fanshawe Jago, J.P., of Grastopen Manor, in the County of Midshire, Justice of the Peace, who may be said to have fairly "got it in the neck"; and I—who have followed the ramifications of the action with detachment, favouring no one and doing my best for each side in turn by endowing Counsel, for and against, successively with every logical dexterity and quibble I could muster—welcome the award with delight.

I wanted Toomer to win and I believe that the same sentiment found place with most readers—but why? Why should anyone—least of all architects, and I last of any—wish Toomer to win? Like Mrs. F.'s aunt, I hate a fool; and Toomer is one. He is also underbred, ill-educated, a dull, ignorant, flabby fellow deficient in grit; an interloper who is almost an impostor and who has the further disgusting attribute of being an aggressively "worthy" man. From first to last he did nothing to help himself, and, however strong his case might have been, he deserved to lose it by his invertebrate, nerveless idiotcy in the witness chair: yet, in spite of all this, I should have felt real distress if the old ass had lost his case; and I have no doubt whatever that any readers who have been interested in the narrative would have shared my disappointment. Toomer, however, is an entirely honest man: there is not a scrap of malice in him and, apparently, no vanity; his stupidity is closely related to a simple nature which is a lovable trait, and, on the top of all, he is made to suffer unfairly. For Bosson I will say this: that I would at any hour of any day or night gladly hire a taxi and go from one end of London to the other to avail myself of the privilege—if it were accorded—of taking a running kick at him from behind.

When Jago first answered to his name and sat in the witness chair, I thought he was the traditional country gentleman, and I sympathized with his quickness to resent Counsel's methods in cross-examination: but Pitfall soon gave me very different ideas about him which, everything considered, were not very far from the truth; and the episodes of the rectory rubbish heap and the church pew stamp Jago, in my opinion, as a swaggering cad and

probably, also, a member of the great "aow waow waow" brigade as well, and I was delighted when he overstepped the mark and was forced to truckle, and to eat humble pie, in order to hear his own Counsel's address in his behalf.

Swillerton seems to be an honest man and a dependable builder, but he, also, is a kind of interloper, for he is almost illiterate and it is clear that his field of activities lies in the purlieus of the provincial suburb and is regulated by its shoddy customs. The man seems to be outside the fine craft-tradition of the best old provincial firms, and to have no knowledge of right good building methods. He dropped exactly into his place when he described himself as "builder and carting contractor." He is not the sort of man that an educated architect would be likely to employ—which is perhaps exactly why he suited Toomer.

I need hardly say that Pitfall is the man for *my* money. I thoroughly like old Chaw—through and through I like old Chaw—but in Pitfall I rejoice: his agility, his witty resource, his impish power of ridicule, have been a pure delight. My own idea is that it was Pitfall, alone, who won the day for the defendants; and when Polechat told Bosson in consultation that "we may get hit to the extent of a ten pound note," I thought, and still think, he was unduly sanguine. Chawlegger's address struck me as dangerous: it disturbed me with grave doubts whether, after all, Toomer would get the award; in fact, Chawlegger is a bigger man than Pitfall—sorry as I am to think it. How he would be able to answer Pitfall I had no idea: but he did it in his stride, and completely, by the device, it will be noticed, of *not* answering Pitfall. What he did was to lay down his own foundation and build a different edifice with new points of view cemented with broad principles rather than with niceties of law; and this edifice came near to overshadowing that erected by his learned friend and might have won the acceptance of any arbitrator less independent and firm-minded than Gizzard.

We may feel sure that the decisive, unequivocal character of the award owes to the fact that Gizzard was a trained lawyer in addition to being an architect and surveyor. There is a tendency to sloppiness in the awards of arbitrators who are not lawyers: in the present case such an arbitrator might, indeed, have found negligence not proved, but, realizing the question to be a nice one, he might have directed defendants to pay their own costs with their share of costs of the award, and even awarded *part* damages against them on the muddled principle that, though they were not really negligent, they ought not to have been so negligent as they were. Any lawyer would realize that if there was *not* negligence, the plaintiff's claim must fail; if there *was*, it must succeed.

One strange aspect of actions at law is well brought out in this Jago business, namely, the diversity of sound, but contradictory, views that can be urged in support, or in destruction, of matters of which the facts are admitted and their interpretation fixed by the previous decisions of judges in parallel cases. For instance, in *Jago*, one Counsel claims as a precedent that the failure of a novel material does not necessarily involve the architect in negligence; and his learned friend another — namely, that the architect has no right to experiment with novel materials at the risk of the building-owner. The essential question of course is — Which category applies?

Jago seems to have been ill-served by his solicitors, who ought never to have

---

BE it known unto all peoples to whom these presents shall come, I Ferdinand Hopetoun Gizzard, Fellow of the Royal Institute of British Architects, Barrister-at-Law, Member of the Inner Temple, of 5 Midden Court Inner Temple in the City of London SEND GREETINGS:

WHEREAS by an agreement dated the 27th day of February 1927 made between (Colonel) Vivian Fanshawe Jago, Gentleman, of Grastopen Manor, and John Robert Swillerton, builder, of Nollingborough, and David Winkletop Toomer, Architect and Surveyor, of Nollingborough, it was agreed to refer to Arbitration all matters in dispute arising out of the building of Grastopen Village Hall; and WHEREAS differences and disputes have arisen concerning the responsibilities of the parties jointly and severally for the collapse of the said Grastopen Village Hall; and WHEREAS the said parties being unable to agree to the nomination of an Arbitrator referred that nomination to the President of the Royal Institute of British Architects under the powers conferred in that extremity by the above cited agreement; and WHEREAS the President of the Royal Institute did nominate and appoint me as Arbitrator to decide the said disputes and I accepted the nomination and appointment—

NOW KNOW YE that I, the said Ferdinand Hopetoun Gizzard aforesaid as Arbitrator have taken upon myself the burden of this reference and having heard the witnesses of all the said parties and having weighed and considered the several allegations of the said parties and also the plans diagrams vouchers and documents that have been given in evidence before me, do hereby MAKE and PUBLISH this MY AWARD in writing of and concerning the matters above referred to me, in manner following, that is to say: I AWARD AND ADJUDGE that neither of the Defendants jointly nor either of them severally is liable in damages to the Plaintiff and that the Plaintiff fails in his action to recover damages from the Defendants.

I do FURTHER AWARD AND DIRECT that the Plaintiff do pay to the Defendants severally the whole of the costs incurred by the Defendants of and incidental to the reference and award in the whole of the matters in dispute between the Plaintiff and the Defendants excepting as below as between party and party. AND I FURTHER AWARD AND DIRECT that the Defendant Swillerton shall pay to the Defendant Toomer the whole of the costs incurred by the Defendant Toomer of and incidental to the reference and award in the whole of the matters in dispute between the Defendant Swillerton and the Defendant Toomer as between party and party, and I FURTHER AWARD AND DIRECT that the sum to be paid by the Defendant Swillerton as costs of the award shall be Five Pounds sterling and I FURTHER DIRECT that he the Defendant Swillerton shall not recover from the Plaintiff the whole or any part of the costs which I have by this my award directed to be paid by the Defendant Swillerton to the Defendant Toomer, nor of his own costs incidental to the matters in dispute between him and the Defendant Toomer.

IN WITNESS my hand this 19th day of January 1928.

FERDINAND HOPETOUN GIZZARD.

Signed in the presence of:
Herbert Kitchener Cox,
Practical Window Cleaner,
97 Asquith Villas,
Glue Lane, Hackney.

called Mr. Padrig O'Hara or the egregious archipigkeeperteet as witnesses. Pitfall made great profit out of the former, and so handled the latter that he got from him as much support as any of his own witnesses gave him. Chawlegger, of course, had never seen these witnesses before they confronted him in the witness chair, or he would probably have secured the testimony they gave from some other source. Toomer was the only bad witness Pitfall had; but Toomer's exhibition of honesty, carried to the point of idiotcy, probably did him little harm with such an experienced, level-headed arbitrator as Gizzard. Randegger was certainly a splendid witness: it would be difficult to imagine an expert witness better equipped in principles, and power, and firmness of character than Randegger; and though, as the arbitrator objected, his method of protest against Counsel's devices of cross-examination was "deplorable," it seems to me that he was perfectly justified in insisting on the dignity of his calling and in fighting Counsel with his own weapons. Randegger is obviously a man of known attainments entitled to respect, and the arbitrator was naturally reluctant to enforce his authority as he did with the carpenter; but I fancy Randegger would have found himself turned into a cell to cool off for an hour or two if he had attempted to carry things to such lengths with a judge of the High Court. However, Randegger probably understood that, perfectly.

Thus ends the narrative of the famous cause of *Jago* v. *Swillerton and Toomer*; BUT—— as the film captions say ——

(NEXT WEEK—IX: THE AUTHOR JUSTIFIES HIMSELF—CONCLUSION)

SWANSEA CIVIC CENTRE COMPETITION

The Winning Design: By Ivor Jones and Percy Thomas

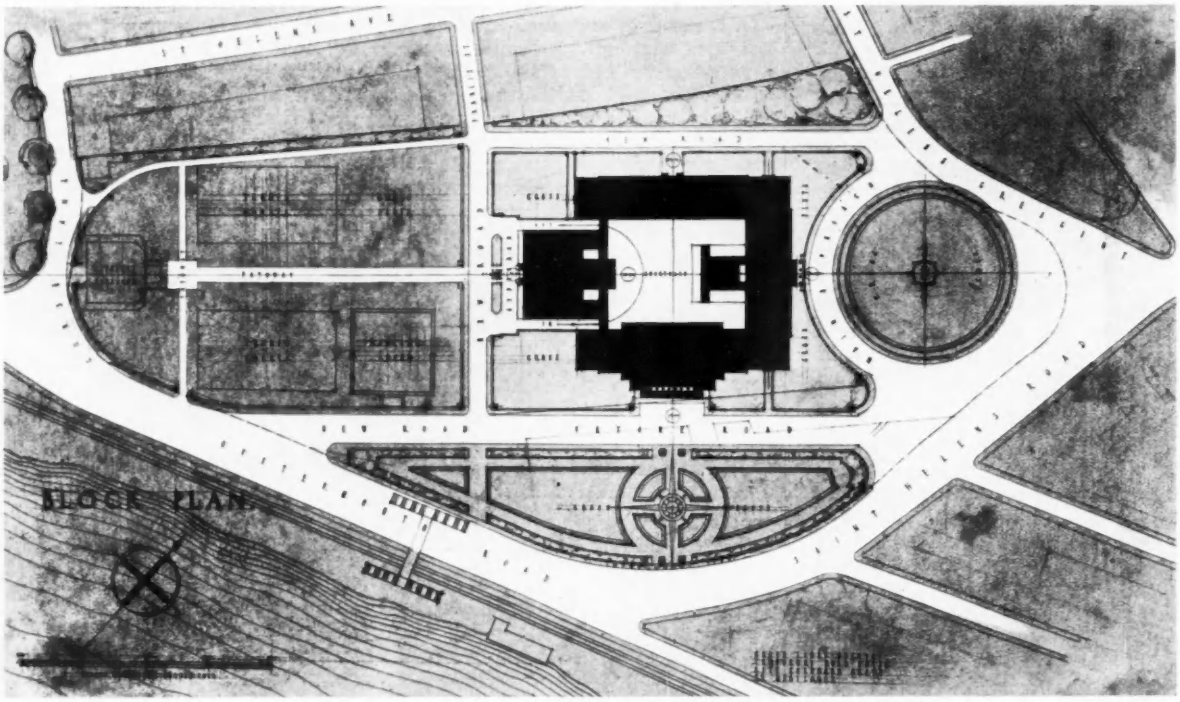
MR. HENRY V. ASHLEY, the assessor of the competition, promoted by the Swansea City Council, for designs for the new civic centre, made his awards as follows:

First place, Ivor Jones and Percy Thomas, Cardiff. (£750.)

Second place, D. H. McMorran and Arthur Bailey, Harrow-on-the-Hill. (£500.)

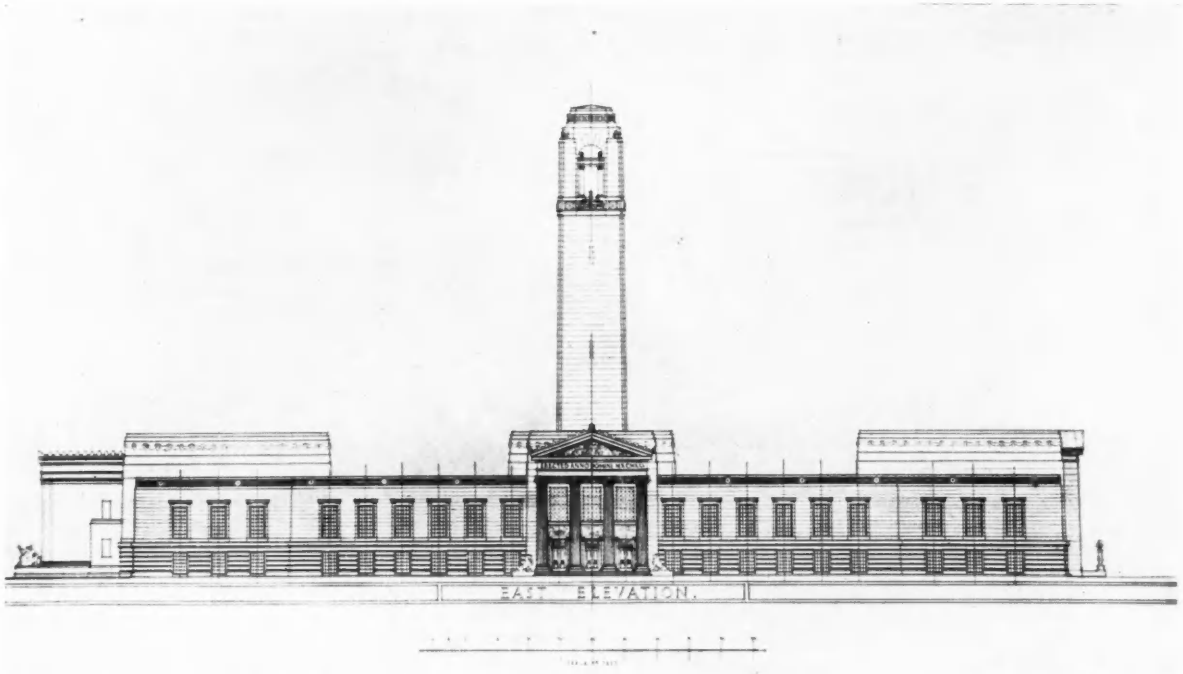
Third place, V. O. Rees, London. (£300.)

Fourth place. C. Wyville Home and Shirley Knight, London. (£200.)



The designs of Crouch, Butler and Savage, of Birmingham, and Eric Hayman, of London, were commended.

There were seventy-one competitors.



Following are some critical notes on the winning design:—

Messrs. Ivor Jones and Percy Thomas have submitted plans which are of such conspicuous merit that they could scarcely be improved upon. As is usual in architectural competitions, we find that the winning design has a substantial measure of symmetry. There seems no reason to quarrel with this convention, provided that the true expressiveness of the architectural "programme" is not sacrificed thereby. To balance an assembly hall with a block of municipal offices, for instance, as if these two elements were exactly comparable, would not only have been an error in architectural expression, but would probably have resulted in a certain artificiality of planning, in a striving to place a number of rooms within a rectangle of pre-determined shape, and perhaps not the best shape. In the Swansea Civic Group, however, Messrs. Jones and Thomas have succeeded in giving to the four main parts of the building, namely, the council chamber with mayoral suite, the municipal offices, the assembly hall, and the law courts, just the right mutual inter-relationship, for the individuality of none of them is sacrificed, while together they comprise an orderly composition.

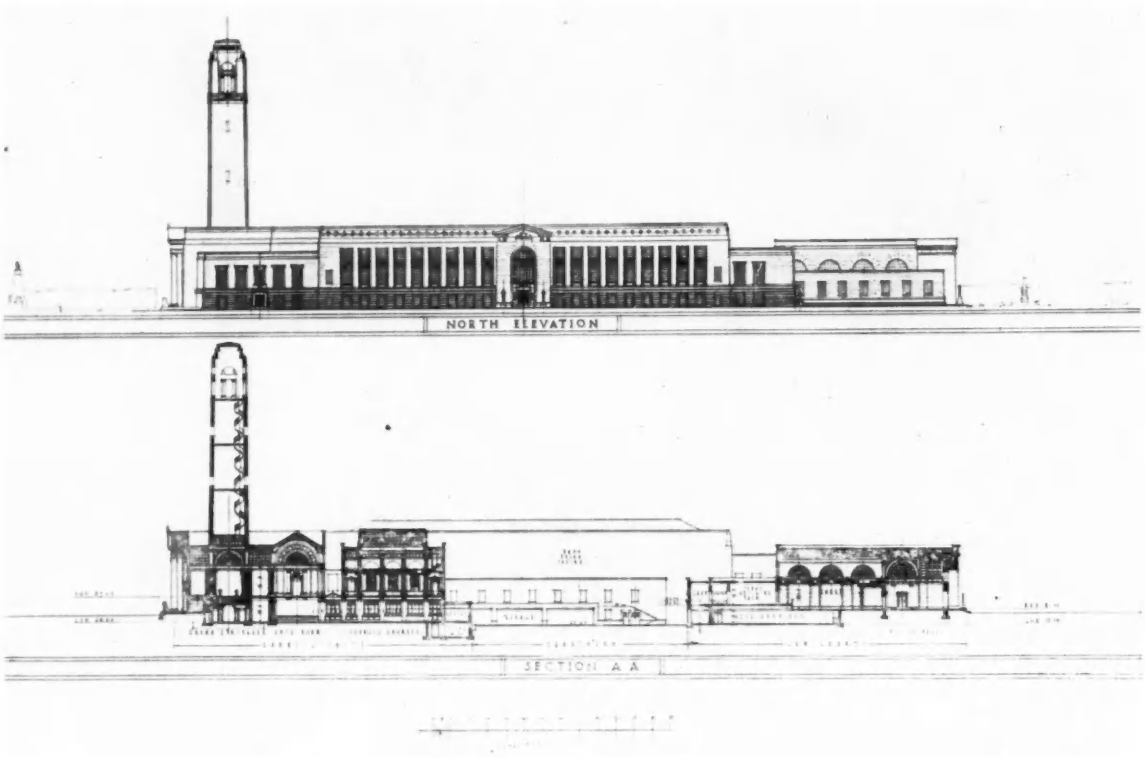
In next week's issue of this JOURNAL we shall illustrate a number of the plans

Block plan of winning design. The scheme comprises, on the north (actually north-west by the compass) and east sides, municipal buildings; on the south front, an assembly hall; and on the west, law courts.

Swansea Civic Centre Competition : The Winning Design.] [*By Ivor Jones and Percy Thomas.*

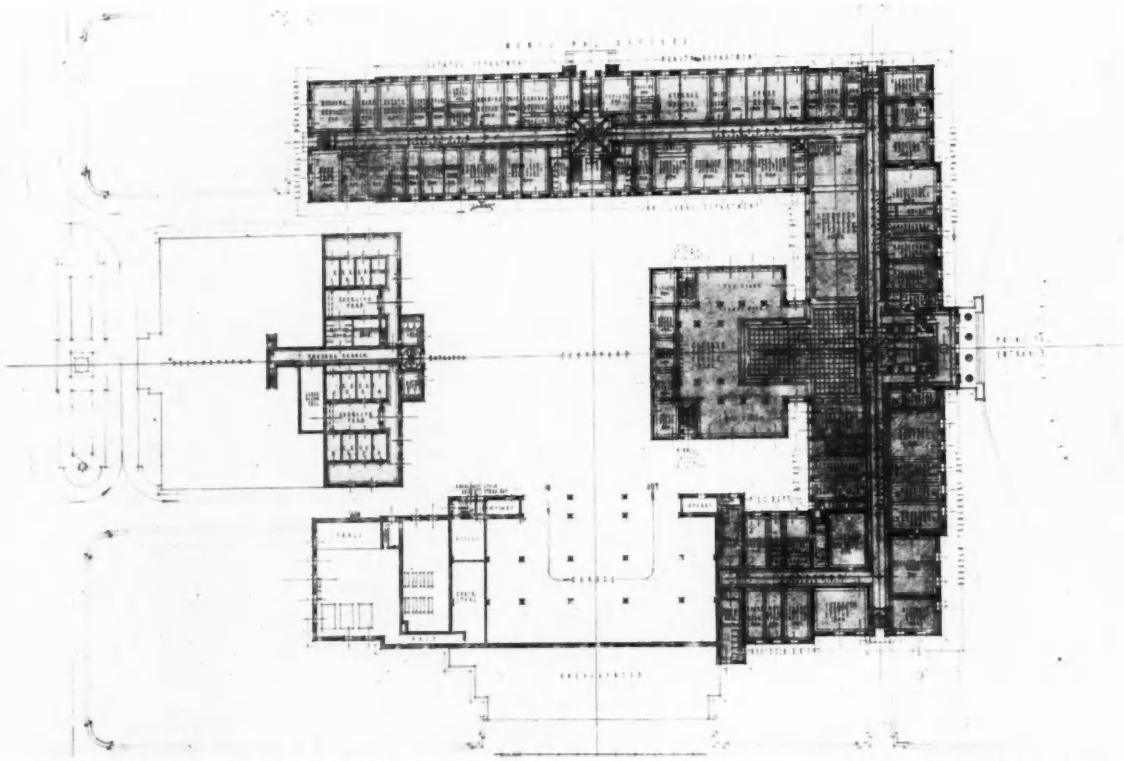
The principal (east) elevation. Immediately beyond the main entrance are the council suite and chamber. To the left, on the lower ground floor, is the borough treasurer's department and, to the right, the health department. The tower rises over 100 ft. above the roof of the buildings.

submitted by other competitors, and it will then be realized how few of them have visualized the problem so clearly as the winners.



The civic group here illustrated has entrances at the centres of the east, south, west and north sides, and the position of these entrances was the occasion for four separate symmetries in the elevations, all of which are highly expressive of the different functions of the building. Let us take the east elevation first, as this is the most important. The entrance here gives access not only to the council chamber and mayoral suite, which are approached by a grand staircase, but to the municipal offices, the rates department of which is situated underneath the council chamber. Immediately above the vestibule is a tower. A feature of this kind was clearly indicated in the conditions, and in this matter the assessor was perhaps influenced by the example of Southampton, where, it will be remembered, the winning design showed elevations for a civic group in which the most conspicuous feature was the roof of the assembly hall.

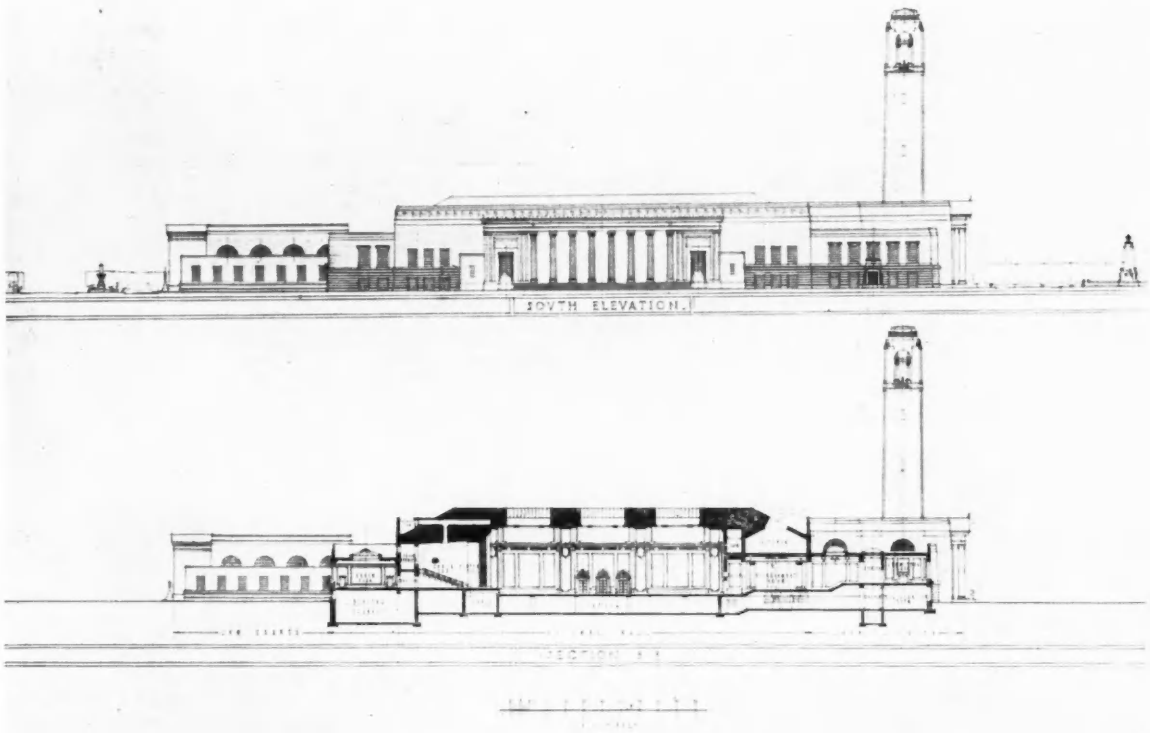
On the occasion on which he visited the Public Gallery where the numerous schemes for the Southampton Town Hall were exhibited, the writer naturally asked the policeman on duty what he thought of the winning design. He expressed his profound dissatisfaction with it in one respect, for he said that a town hall ought certainly to have a tower. Of course, the policeman was right, and it is noteworthy that his profound æsthetic judgment soon afterwards found support in official quarters, and the Corporation of Southampton requested Mr. Berry Webber to amend his design and introduce a tower.



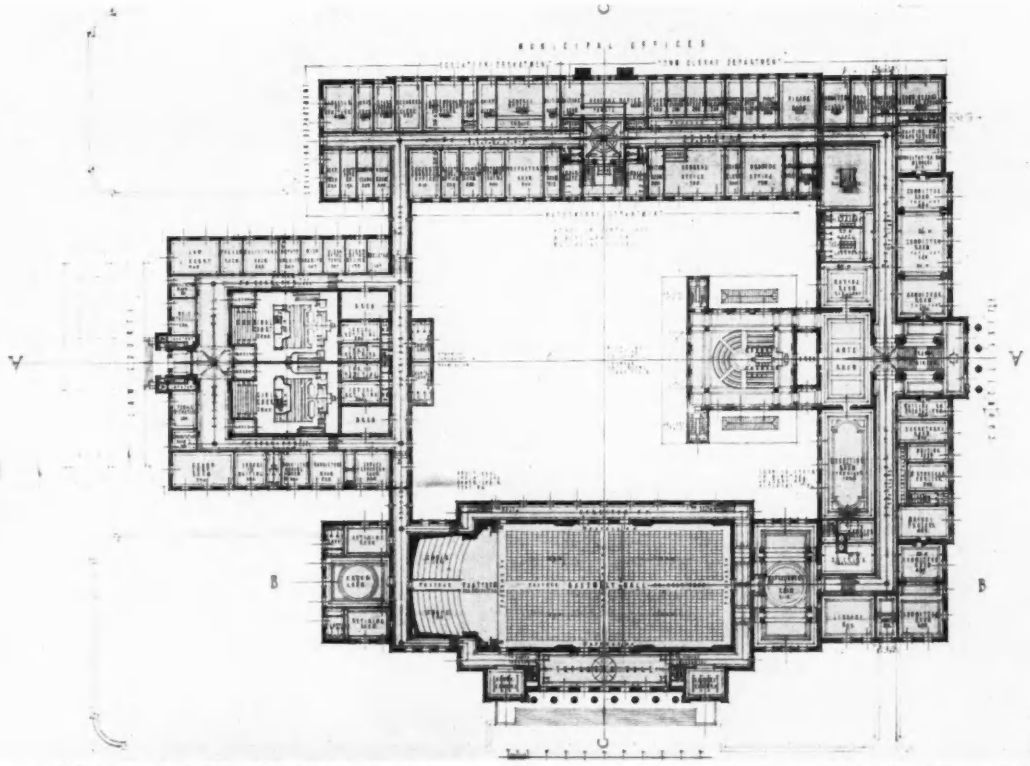
A point here arises which is worthy of consideration by those who are entrusted with the task of formulating the "programmes" for architectural competitions. Whereas in the present instance the assessor definitely asks for a tower, some indication should be given concerning the amount of money which the promoters of the scheme are prepared to spend upon such an ornamental feature. If the competitors receive no guidance in this matter and are, moreover, under the obligation to provide a very large number of rooms of specified floor areas for a limited sum of money, the tendency will be to pursue the ideal of economy with such persistence that the tower will suffer in consequence. It is perhaps better to have no tower at all than to have one that looks like a factory chimney. Yet if the competitor takes the risk and designs a tower such as he himself thinks would be worthy of the architectural occasion, he may find that his design is turned down on the score of extravagance.

Without contending that the tower here illustrated is comparable to a factory chimney, one may nevertheless suggest that it does express a certain parsimony which accords ill with the conception of a great civic group of buildings. It may be hoped, therefore, that when the scheme of Messrs. Ivor Jones and Percy Thomas is put into execution, the Corporation of Swansea will be sufficiently generous to provide a little more money, such as would enable the architects to broaden the tower or otherwise make it look more important and ceremonial. As at present designed, the tower seems somewhat oddly placed behind a pediment, for one naturally asks how it comes about that the portico or doorway is required to give access to the base of a tower which is narrower than itself.

In the case of the other elevations, no such difficult problem of composition arises. The grand colonnade in front of the assembly hall is highly effective, and the north front of the municipal offices is also imposing and dignified. The law courts section, although its façades are lower than the rest of the building, takes its place harmoniously in the group. The virtues of the plan are self-evident, and one cannot help being struck by the admirable communications between the several parts and the degree of economy which has been achieved. In the lay-out also, it will be observed that in a site which offered many difficulties, the traffic requirements are well considered, and the environs of the civic group have been vested with the requisite formality. From the practical point of view, this scheme has the great merit that the three sections—the municipal group with council chamber and mayoral suite, the assembly hall, and the law courts—can be built as separate contracts. It is understood that the Swansea Corporation intend to proceed with the municipal blocks, that is to say, the north and east sides of the quadrangle, at the earliest opportunity.



North elevation and section. In this wing are the town clerk's, education, estate, health and electricity departments.



Swansea Civic Centre Competition: The Winning Design.] [*By Ivor Jones and Percy Thomas.*

On the lower ground floor, in addition to various municipal departments are the general rates office, the garage, and prison cells.

South elevation and section. The porticoed central entrance leads to the assembly hall, beneath which is a garage for forty cars.

Swansea Civic Centre Competition: The Winning Design. [*By Ivor Jones and Percy Thomas.*

On the upper ground floor are the assembly hall, the council chamber and suite, and the criminal and civil courts.

The south or main entrance front as it is today. As will be seen, the columned entrance, the zinc verandah, the sash windows of the 1830 incarnation, have been swept away.

The south or main entrance front of the hall, which is in close proximity to the church, as it appeared in the year 1919. It had undergone considerable alterations from time to time, not without prejudice to the stability of the old oak framing.

LITTLE BARDFIELD

REDESIGNED

THIS house, of half-timber construction, built in the sixteenth century, near Braintree, Essex, had been altered considerably from time to time until it had almost lost its original character, although retaining its proportions.

The entrance front was altered about 1830 by the insertion of sash windows, the addition of columns each side of the front entrance and a zinc verandah, and although this was carried out with considerable skill, the original oak framing was so weakened in the process as to endanger its stability after a period of years.

When the present owner, Mr. S. E. Letts, embarked upon certain additions and general reconditioning of the structure, he decided to revert to the original plan and elevation in so far as evidence could be found, or was available, and bearing in mind modern conditions and requirements.

Considerable time, care and trouble

The garden front. The process of reconditioning has been carried out in a spirit of faithful observance of tradition: the external modelled plaster work is in the Essex manner.

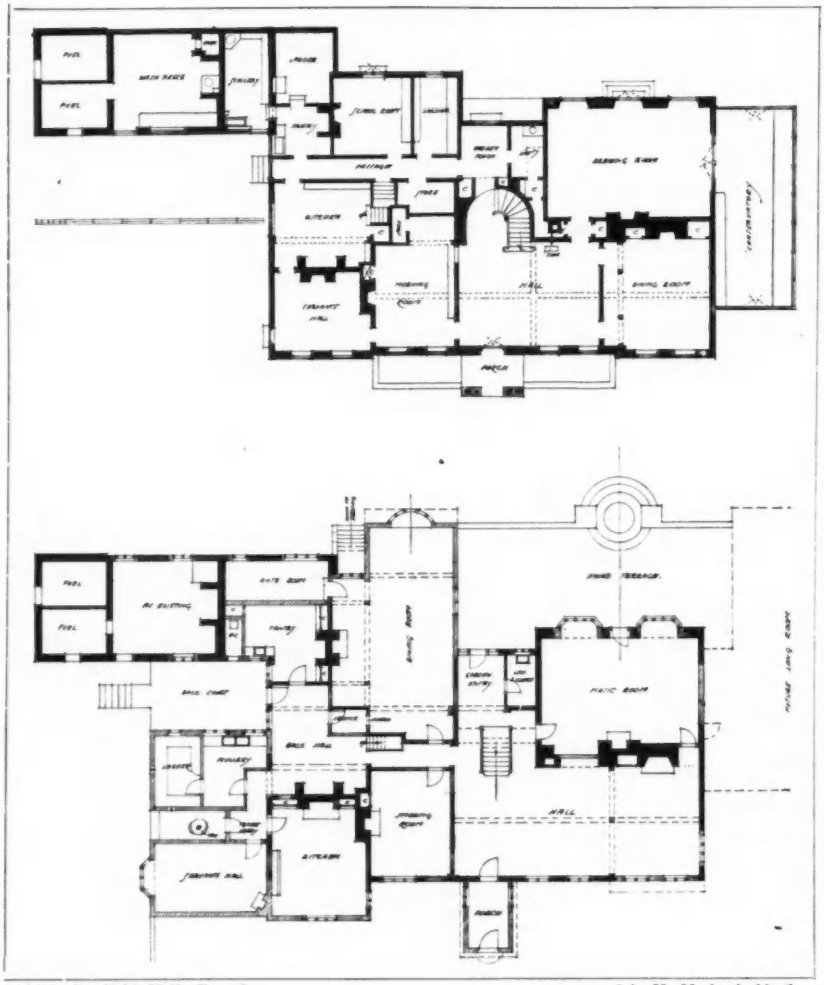
HALL, ESSEX

BY A. V. HEAL

was given to every detail and the entrance front, as restored, is believed to follow the lines of the original house, as also do the internal finishings.

The dining-room wing, facing the garden on the north side, was added where a wing had previously existed.

To give privacy to the entrance front, which faces south, the entrance courtyard was enclosed as a walled garden and considerably adds to the amenities and interest of the house.



The external modelled plasterwork has been carried out in the Essex manner, which might well be followed in these days of concrete surfaces; the ever-changing effect of light and shade on this old English surface treatment is quite delightful.

Numerous bathrooms were embodied in the replanning, and central heating, hot-water domestic supply and electric lighting were put in.

The work covered a period of years and was carried out in sections.

The hall as it now is. The plans reproduced on the next page show that the part where the observer is standing was formerly a dining-room. Another dining-room has been built elsewhere, and the space has favoured the formation of a fine room.

Little Bardfield Hall, Essex.] [*A. V. Heal, Architect.*

LITERATURE

BUILDING CONSTRUCTION

THIS publication is the fourth edition of a book prepared in the first instance by Brysson Cunningham, D.SC. The fact that it has passed through three editions shows that it has been appreciated and has found a definite use in students' libraries.

The present edition has been revised and prepared by Mr. Frank H. Heaven, A.R.I.B.A., whom we congratulate on the good quality of his new sketches and diagrams and on the thoroughness with which he has revised the reading and pruned the old edition of its obsolete matter.

The chapter on tools, plant, and appliances is sound, concise, and well-illustrated, and the general knowledge conveyed will be very helpful to students.

Concreting is given a prominent place, and its preparation, uses, particular applications and the form work necessary for placing are described and efficiently illustrated.

The weakest chapter in the book is that which deals with forces, namely, Chapter XI. The matter presented is good, but the attempt to convey fundamental ideas, in fifteen pages, of graphics, bending moments, moments of resistance and ideas of the strength and selection of beams and columns, is not to be recommended. It is not of real help to a reader, because there is no possibility of carrying the instruction far enough to be useful or even intelligible to the average student.

The authors fall into the usual error of presenting the methods of finding the stiffest and strongest beams which can be obtained out of a round log of timber. The theory is correct, but it is doubtful whether any log was ever converted in practice with the given objects in view. The matter is only of interest to mathematicians.

In spite of the objection to the few sections referred to, there is a mass of excellent information, numerous questions for practice attached to each chapter, and a good index. The book covers the elementary parts relating to construction in all sections of the building trades, and it is quite modern in its conception. F. E. DRURY

First Course in Building Construction. By Brysson Cunningham D.SC., and Frank H. Heaven, A.R.I.B.A. University Tutorial Press, Ltd. Price 5s. 6d. net.

LA SCIENCE DES PLANS DE VILLES

MESSRS. A. REY, PIDOUX AND BARBE have succeeded in putting together all the existing documents on the art of laying out plans, and in making an interesting encyclopædia of all the faults one is apt to fall into while town planning. Their intention, they say, is to study in a scientific and practical way all things concerning the extension of a town, and the best conditions under which a city should grow. The first and final condition, the centre-point where all efforts must tend, is health; and, according to Mr. Rey and to most people, health is nothing else but sunshine, light. The architect must therefore above all things consider the *insolation* of the house he is about to build.

Mr. Rey would like all houses to be situated on a "heliothermic" axis, on what he calls the direction in which one gets the best sum of health out of the product of insolation by heat. This is a fine idea, but is it practically possible to have every house in a town, the ideal town, Ηλιοπολις, oriented along this life-line of sun?

Mr. Rey is an enemy of high buildings, for skyscrapers mean a virtual slide towards the North, as the sun is capable of reaching only a small portion of the building, and life in it therefore is subject to a colder atmosphere.

Insolation happily is not the only "leitmotiv" of the book: one finds every problem studied in connection with town-planning, not merely in a synthetic way, but in the light of past experience. But, alas, science is often ineffective against reality. It is no use saying that a town must have wide avenues, planted with trees, and have long green areas so long as there are men who buy and sell land, who build and destroy houses, and who always try to make the most out of the least, without caring for the best.

One can only regret that some of the photographs are not more up to date.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

[*For special report of the Charing Cross Bridge Scheme, see page 345.*]

THE rejection of the Bournemouth-Swanage Motor Road and Ferry Company (Bridge) Bill was moved in the House of Commons last week by Mr. Glassey, a Liberal member, who said that the measure proposed to substitute for the present chain ferry across the beautiful Poole harbour a huge bridge of steel and concrete, costing £200,000, to the hindering of shipping and the disfigurement of the landscape. It was difficult to find words to describe the hideousness of the work that it was proposed to erect on a spot famed for its beauty. There was talk of covering that glorious heath-land and those magnificent hills with bungalows. That would be a crime. The bridge was not needed for traffic, and would cause permanent local unemployment.

Mr. J. H. Thomas, the Lord Privy Seal, also opposed the Bill.

Sir M. Conway said that if they opened up a piece of land today they necessarily spoilt its beauty, and because this bridge proposed to open up for development a beautiful piece of country in the neighbourhood of the lovely village of Studland he would vote against the Bill.

The Bill was rejected by 155 votes to 120.

At question-time, Mr. Wardlaw-Milne asked the First Commissioner of Works whether he had received any representations regarding the undesirable character of certain of the alterations now being carried out in the Royal parks, and whether he was aware that the alterations now being made go much farther than was originally intended and announced to this House.

Mr. Lansbury said he had received representations both for and against the schemes which were being put in hand for providing increased facilities for recreation in the Royal Parks. The only addition since last November was the provision of a running track on an outlying piece of ground at Regent's Park.

Replying to further questions, Mr. Lansbury said that no tree had been cut down in Hyde Park or Kensington Gardens in connection with these schemes. One tree was cut down on the site of the boating pond in Regent's Park, but this would have had to come down in any case very soon. His department was compelled to remove from time to time from the parks a considerable number of decayed and dangerous trees. The removal of such trees recently seemed to have given rise to some misapprehension as to the object of the work. Several fresh trees were planted for every one which had to be removed.

Asked by Sir William Davison and other members whether he had in mind the erection of any buildings or pavilions either in Hyde Park or Kensington Gardens, or any alterations in their layout; and whether he could assure the House that no such buildings or alterations would be put in hand without particulars being first submitted to the House of Commons, Mr. Lansbury said he was satisfied that the structures which were to be erected would not detract from the beauty of the parks.

Major Colville asked the First Commissioner of Works if the plans for the buildings on the Calton site in Edinburgh were ready for submission; and if it was his intention to have a model of the proposed building prepared.

Mr. Lansbury said that plans were practically ready for submission, and the model, which was in course of preparation, would be ready early in March.

Mr. T. Griffiths asked the Minister of Health if he would furnish a return showing, monthly from January, 1928, to the latest convenient date, for England and Wales, the average prices of non-parlour houses and parlour houses respectively, included in contracts let by or in direct labour schemes of local authorities.

Mr. Greenwood said the statement (reproduced on this page) gave the desired particulars for each month from January, 1928, to January, 1930, inclusive.

Sir John Power asked the Minister of Health what steps he was taking to deal with the situation caused by the decrease in the building of houses which had occurred during recent months.

Mr. Greenwood said he could not accept the statement as to the present situation. The number of houses completed under the 1924 Housing Act in the last quarter of 1929 was 14,507, as compared with 12,661 in the same period of 1928; and the number of houses under the same Act authorized in the last quarter of 1929 was 19,824 as compared with 11,692 in 1928.

Mr. Simon asked the Minister of Health whether he had any reports which would enable him to give the superficial area and the rents of the municipal houses built in Vienna during the last ten years; and whether he proposed to take steps to secure the building of similar houses at similar rents in this country.

Mr. Greenwood said that the answer to the last part of the question was in the negative. The conditions in this country and in Vienna were not comparable. The standards of accommodation provided in the Viennese schemes fell considerably below those thought necessary in this country. About 75 per cent. of the tenements consist of a kitchen and one room, and had an area of from 400 to 450 square feet. The rents were based only on maintenance costs, and took no account of capital charges.

Mr. Greenwood said that although figures of average annual loss on slum-clearance schemes had not in any case been fixed, the final accounts showing the capital cost of several of the completed schemes had been made up and estimates had been made of the probable average annual loss on the basis of present rents and on certain assumptions as to the selling price of the cleared sites. These estimates showed, as regarded ten completed schemes under the Housing Act, 1923, for which accounts had been received, an annual loss of about £2 per person displaced from slum areas.

LAW REPORT

PUBLIC HEALTH ACT, 1925—AN IMPORTANT DECISION

Attorney-General v. *Sunderland Corporation. Court of Appeal. Before the Master of the Rolls, and Lords Justices Lawrence and Russell*

The Court affirmed a judgment of Mr. Justice Eve, sitting in the Chancery Division, on an interesting question arising under the Public Health Act, 1925, in regard to the use of derelict land acquired by the Corporation for certain uses, including street widening and the making of new streets, and then used by the Corporation as a parking place for motor cars.

The action was brought by the Attorney-General at the relation of Mr. Chas. T. Stockdale, and Mr. Thos. Rutherford, of Sunderland, for a declaration that the Corporation were not entitled to provide a parking place for motor cars on the land, known as the Shrubbery, and an injunction to restrain them from using it for such a purpose. The land, about 6,000 square yards in area, was acquired by the Corporation about 1896 for purposes authorised by the Public Health Act, including street improvements, and a pleasure garden, and under the Post Office Act, for a new post office. The Local Government Board approved the purchase of the land, and the Post Office was built and road widened, the remainder of the land being laid out as an ornamental garden. In 1927 the Corporation resolved to use part of the Shrubbery as a parking place for motor cars, in pursuance of their powers under section 68 of the Public Health Act, 1925. There was a protest against the user of the land as a parking place, but the Corporation confirmed its use. The action was then brought. The plaintiff urged that as the land was purchased for specific purposes, it was *ultra vires* to use it for a motor-car park. Mr. Justice Eve held that the land could be used lawfully for the purpose of a widened street, and any part of a widened street could now, under section 68 of the Public Health Act, be used for a parking place.

The plaintiff now appealed.

Mr. C. A. Bennett, K.C., argued the case for the appellant, and Mr. Montgomery, K.C., that for the Corporation.

The Court dismissed the appeal, with costs.

The Master of the Rolls, in giving judgment, said that, looking at what took place in 1896 and before that time, it was impossible to say that the respondents had acquired the land for public walks and pleasure grounds only; they had also acquired it as a matter of street improvement. It was impossible to say that any particular part of the land acquired had been definitely delegated for any particular purpose, or that the purpose of the Corporation had been made plain as to what was to be pleasure ground and what was to be street, or the widening of a street.

The respondents had not only the wide powers to purchase land for street widening which were conferred by section 154 of the Public Health Act, 1875, but also the equally wide powers conferred by section 164. Reading those sections, it was impossible to say that the discretion of the respondents could be circumscribed in the way suggested, or that they were bound to allocate to the public land for walks or pleasure grounds not less in extent than that proportion which they had contemplated in 1896. It was impossible to say that the Corporation, holding those wide statutory powers, were tied down to any particular closely defined scheme. Section 68 of the Public Health Act must be read with the relevant sections of the Act of 1875, and under the powers of those two Acts the Corporation were clearly entitled to make a parking place in existing streets or in streets to be acquired. From those sections it was obvious that the respondents could, subject to the exercise of a proper discretion, determine how much of the land at their disposal was to be used for one purpose and how much for another. The appeal would be dismissed with costs.

Lord Justices Lawrence and Russell agreed.

SOCIETIES AND INSTITUTIONS

SWANSEA COMPETITION WINNERS CONGRATULATED

Architects and builders from Cardiff and many parts of South Wales, together with friends, assembled at the Engineers' Institute, Cardiff, on Thursday last, when a reception was accorded Mr. Percy Thomas, O.B.E., F.R.I.B.A., who, with his partner, Mr. Ivor Jones, has achieved the distinction of winning a £750 prize offered for the best design for the new civic buildings at Swansea.

Mr. Thomas lectured to the members of the South Wales Institute of Architects (Central Branch) and the South Wales Branch of the Institute of Builders upon his recent visit to America.

In the absence of the president of the institute (Mr. T. Alwyn Lloyd), the chair was occupied by Mr. H. Norman Edwards, who, on behalf of those present, congratulated Mr. Thomas upon the distinction which had been gained by him and his partner.

Mr. Thomas gave a description of his trip by aeroplane from New York to Washington, and of the cruise by steamer down the St. Lawrence River to Montreal.

The lecture was illustrated by a series of slides, many of them from photographs taken by the lecturer, showing the various important buildings in New York, Washington, Detroit, Toronto, Montreal, and Quebec, and also the Masonic temples at Washington and Detroit, as well as the fine memorials in the former town.

MR. D. S. MACCOLL ON ALFRED STEVENS

At a meeting of the Royal Society of Arts on Wednesday last, Mr. D. S. MacColl delivered a lecture on "Alfred Stevens: Architect, Sculptor, and Painter." Mr. P. Morley Horder occupied the chair.

Mr. MacColl said that Stevens was the greatest plastic artist our country had seen. The fact that he took Raphael and Peruzzi as his models in itself argued that he had an original mind, though it had been said his work lacked originality. Stevens's art was masculine; he stood aside from the tendency of his time to romanticism and the feminine in art. For a short time he was occupied with portrait painting, and it was significant that he beat all the regular English portrait painters of the nineteenth century.

Describing Stevens's architectural activities, Mr. MacColl said that it was Stevens's misfortune to have come up against the genius of Brunelleschi, whose work on brazen doors was superior. The lecture was illustrated by lantern slides.

TRIUMPHAL ARCHES OF THE ROMANS

Sir Banister Fletcher, P.R.I.B.A., in a lecture at the Central School of Arts and Crafts, described the triumphal arches of the Romans as the outcome of Roman love of pomp and ostentation and a desire to impress conquered peoples with the military power of the Empire. These arches, he said, were erected in various parts of the home country and in conquered provinces to celebrate the opening of a new road or seaport.

NORTHAMPTONSHIRE, BEDFORDSHIRE AND HUNTINGDONSHIRE ASSOCIATION OF ARCHITECTS

At the annual meeting of the above society, held at Northampton, the following officers were elected: President, Major B. C. Deacon, F.R.I.B.A. Vice-presidents, Messrs. F. H. Allen, A.R.I.B.A., and W. B. Stonebridge, F.R.I.B.A. Hon. secretary and treasurer, Mr. C. Croft, L.R.I.B.A., F.S.I. Hon. auditor, Mr. J. A. Piccaver. Council: Lieut.-Col. J. W. Fisher, F.R.I.B.A., and Messrs. J. A. Gotch, F.R.I.B.A., S. F. Harris, F.R.I.B.A., H. Haines, A.R.I.B.A., W. A. Lea, L.R.I.B.A., J. Murray, F. R. I. B. A., H. Norman, F. R. I. B. A., W. H. G. Hubbard, L.R.I.B.A., and R. J. Williams, F.R.I.B.A.

PROFESSIONAL CONDUCT AND PRACTICE

At the suggestion of the Practice Standing Committee, the Council of the R.I.B.A. have had reprinted and bound together in pamphlet form the following papers on Professional Conduct and Practice, by Mr. W. E. Watson, F.R.I.B.A., Barrister-at-Law, that have appeared in recent years in the R.I.B.A. Journal: (1) Easements; (2) Handbook of Architectural Practice; (3) Party Walls; (4) Contract; (5) Specification.

While the papers are not exhaustive treatises on the subjects, they are based on the standard works which are recommended for student courses, and amplified by incidents arising in the Courts of Justice.

A general index and an index of cases has been prepared by Mr. H. C. Hughes, M.A. (Cantab.), A.R.I.B.A. Copies of the pamphlet can be obtained on application to the Secretary R.I.B.A., 9 Conduit Street, W. 1. Price 2s. 6d.

R.I.B.A. SALARIED MEMBERS COMMITTEE

The following members, representing private practising architects, official architects and assistants, have been appointed to the R.I.B.A. Salaried Members Committee :

John Batty, A.R.I.B.A.
W. E. Brooks, A.R.I.B.A.
W. T. Curtis, F.R.I.B.A.
J. Grieve, A.R.I.B.A.
E. Stanley Hall, V.P.R.I.B.A.
W. H. Hamlyn, A.R.I.B.A.
L. A. F. Ireland, L.R.I.B.A.
H. V. Lanchester, V.P.R.I.B.A.
Charles McLachlan, A.R.I.B.A.
F. Winton Newman, F.R.I.B.A.
J. Alan Slater, F.R.I.B.A.
Herbert A. Welch, F.R.I.B.A.
Charles Woodward, A.R.I.B.A.
F. R. Yerbury, HON. A.R.I.B.A., and
Capt. A. Seymour Reeves, L.R.I.B.A.

The duties of the Committee embrace, *inter alia*, the following : (1) To report to the Council from time to time upon all matters affecting the welfare of the salaried members of the R.I.B.A. (2) To form an agreed policy among members of the R.I.B.A. relative to official salaried appointments. (3) To investigate conditions of employment, study the problems that arise, and recommend such action as may benefit all ranks of the profession.

Any comments that will assist the Committee in their work under paragraph (3) should be sent to Mr. William H. Hamlyn, Hon. Secretary, R.I.B.A. Salaried Members Committee, 9 Conduit Street, W.1.

THE A.B.S. OPTIONAL POLICY

A scheme has been devised by the Architects' Benevolent Society with a view to providing an assurance which can be adapted at the option of the policy-holder to meet financial requirements that may not be foreseen at the outset. An optional policy may be used for any of the following purposes : house purchase, family protection, education of children, partnership assurance, income on retirement, payment of death duties. After two years' premiums have been paid it can be used as the security for an immediate advance in the event of sudden illness or other misfortune. Particulars may be obtained from the Secretary, the Architects' Benevolent Society, 9 Conduit Street, W.1.

G.C.T.P.A. WHITSUNTIDE TOUR

The Garden Cities and Town Planning Association have arranged a housing and town planning tour of the northern capitals of Europe during Whitsuntide, June 3 to 14. The cities to be visited are Oslo, Stockholm, Copenhagen and Hamburg, and the tour has been arranged with the local authorities concerned, and representatives of those cities will accompany the parties on each series of visits.

Particulars are obtainable from the Secretary, Garden Cities and Town Planning Association, 3 Grays Inn Place, W.C.1.

COST OF FUEL FOR DOMESTIC PURPOSES

Mr. A. H. Barker, M.INST.C.E., reading a paper on " Tests of Comparative Costs of Fuels for Domestic Purposes " at the Joint Gas Conference at Birmingham, gave an account of a series of experiments and observations extending over five years, on the operation of the elaborate plant in his own private house, which was specially designed by himself for the purposes of the comparative tests.

He explained the great difficulty of making tests in such a way that the results could have any general application. If such tests were made in a scientific manner the processes were so different from those employed by a cook that the results had little practical application, except comparative ones. On the other hand, if they were made in the practical manner, by using the plant as it was used in ordinary service, the results were liable to vary very widely, through accidental and special circumstances, or on account of personal differences between the operators.

In order to secure reliable averages it was necessary to change over frequently from one kind of plant to another, and operate each for a considerable period. In order that that might be possible the house was supplied with three or four completely different sets of domestic appliances, each being in itself complete and adequate for the use of the entire house. The house was equipped with complete central heating, coal, gas and electric fire equipment in every room, with hot-water service which could be supplied either with coke, oil, gas, or electricity, with cooking appliances either by solid fuel, gas, or electricity, and refrigerator plant which could be operated either by gas or electricity.

The same inhabitants and staff had been in charge of the appliances throughout the whole period of the test, which extended over a period of five years. Hence the results had a degree of uniformity which was rarely obtainable.

The general results were as follows :

It was shown that gas boilers could only be employed for such purposes as central heating and the supply of hot water in a circulating system, at a cost, in gas, of about 3·7 times the cost of solid fuel.

That the general use of coal fires to produce the same results as were obtained by a good system of central heating, cost 2·7 times as much as when coke was burnt in the boilers.

That gas fires in a continuously used room cost about 2·2 times as much as the corresponding coal fires, while in an occasionally used room the actual cost was less than coal fires, depending on the degree of use.

The electric fires in the same conditions were found to cost from 1·57 to 1·98 times as much as the gas fires.

The point was emphasized that the economy, or otherwise, of gas and electric fires could only be secured by careful regulation. It was explained, however, that the cost of fuel was by no means the only cost of a fire, and it was shown that the whole cost of a gas fire was not notably greater than that of a coal fire, even in a constantly used room.

Comparisons were made between the use of gas and electric fires, and the conclusion was drawn that, for the purpose of that establishment, the most generally economical and satisfactory results were obtained with a gas fire of a " Cinderella " type.

A series of tables of comparative cost were given, from which it was shown that the general cost of cooking by electricity was about double that of cooking by gas, the cost of the fuel being standardized at 10d. per therm for gas and 1d. per unit of electricity.

Critical comparisons were also made between these two methods, and the lecture concluded with a table showing the respective equivalents of solid fuel, gas and electricity for the various purposes in a household.

Architects' Wills

Mr. David Wishart Galloway, F.R.I.B.A., of Market Street, Brechin, Forfarshire, left £17,544 (personal estate).

Mr. George James Cawthorne, of Petty France, Westminster, S.W., and of Staplehurst Place, Staplehurst, Kent, architect, left £52,989 (net personalty £1,342).

TRADE NOTES

The Leyland and Birmingham Rubber Co., Ltd., have moved their London office to larger premises in Grand Buildings, Trafalgar Square, W.C. This change has been made with the object of transferring the sales centralization from Leyland Works, Lancs, to London, in order to effect greater efficiency in both manufacture and sales service. London will now become the sales organization centre, and Leyland will devote its activities solely to manufacture. Each sales department will be in charge of a specialist who will be in constant touch with the firm's sales activities throughout the country.

The Cork Insulation Company, Ltd., have just published a new brochure describing their Eldorado cork tile flooring, and containing illustrations in colour of the various shades of brown in which the tiles are made. The tiles are claimed to be all pure cork, without the addition of any other substance. It is said that the cork as it comes from the tree is ground, cleaned and compressed into blocks, and then baked; this baking cements the particles into a firm mass by liquifying the natural gum in the cork. The baking also imparts to it the rich brown permanent colouring, ranging from light tan to dark chocolate, according to the duration of the heating process. The tile, it is claimed, is durable, noiseless and comforting to walk upon, non-slippery under any conditions, resilient and dustless, and can be made to harmonize perfectly with the appointments of any room. A copy of the brochure and samples of the tile can be obtained from the Cork Insulation Company, Ltd., 14 West Smithfield, London, E.C.1.

ANNOUNCEMENTS

The Rt. Hon. Viscount Goschen, G.C.I.E., C.B.E., has been appointed a director of Westminster Bank, Limited.

Sir Richard Tetley Glazebrook, K.C.B., D.SC., F.R.S., has been elected an honorary member of the Institution of Electrical Engineers.

Messrs. Lander, Bedells and Crompton, architects and surveyors, 6 John Street, Bedford Row, W.C.1, have taken into partnership Mr. Harold E. Moss, A.R.I.B.A., of 5 Verulam Buildings, Gray's Inn, W.C.1. The style and address of the firm remain as at present.

Mr. A. F. A. Trehearne, F.S.I., F.R.I.B.A., has taken into partnership Messrs. Eric W. Preston, F.S.I., and F. R. Jelley, A.R.I.B.A. The name will be Trehearne and Norman, Preston & Co., chartered architects and surveyors.

The partnership between Mr. W. J. Fitt and Mr. L. Prior-Hale, of Messrs. Fitt and Prior-Hale, of 3 John Street, Bedford Row, W.C., has been dissolved. The practice will be continued by Mr. L. Prior-Hale under the same name and at the same address.

THE BUILDINGS ILLUSTRATED

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue :

Locarno Dance Hall (pages 347–350). General contractors, Pitcher Construction Co., Ltd. Clerk of works, F. Pearse. Sub-contractors : Limmer and Trinidad Asphalte Co., Ltd., asphalt; A. C. W. Hobman & Co., Ltd., artificial stone; Lindsay's (Paddington) Iron Works, Ltd., structural steel; Vigers, Sons & Co., Ltd., wood-block flooring (including dance floor); The Luxfer Co., Ltd., lantern lights and skylights; Diespeker & Co., Ltd., terrazzo paving, reinforced terrazzo, w.c. partitions, and patent suspended flooring; J. Jeffreys & Co., Ltd., central heating and ventilation; Strand Electric and Engineering Co., Ltd., electric wiring and telephones; A. Emanuel and Sons, electric light fixtures; Leeds Fireclay Co., Ltd., sanitary fittings; J. W. Gray and Sons, lightning conductor system; Asbestos Cement Building Products, Ltd., standard corrugated (grey colour) asbestos cement sheet roofing; Haywards, Ltd., canopy at entrance; Lockerbie and Wilkinson, Ltd., and James Gibbons, Ltd., door furniture; James Gibbons, Ltd., casements and lay lights in main hall; Safety Tread Syndicate, Ltd., iron staircases; W. B. Simpson and Sons, wall tiling; Wilmer and Sons, Ltd., ornamental grilles; A. C. W. Horman & Co., Ltd., granolithic paving; Francis Morton, Jun., & Co., spring dance floor; Jackson Boilers, Ltd., kitchen fittings; North British Rubber Co., Ltd., rubber flooring.

Little Bardfield Hall, Braintree (pages 364-366). Main contract, William Downs, Ltd. Smaller contract, Chas. Dare. Sub contractors : Esmond Burton, Red Lion St., modelled plasterwork ; Comyn Ching & Co., Ltd., hot-water direct supply and central heating ; Mr. Savage, electric lighting.

4365. Walker, F. T. Building construction. February 8.

SPECIFICATIONS PUBLISHED

324709. Harris, L. G. Slabs and slab building-constructions.

324812. Chevron, A. Composition and method for the manufacture of building-bricks, flagstones, and similar products.

COMPETITION NEWS

March 10. The Council of the Metropolitan Borough of Greenwich invite architects to submit designs for a drinking fountain, which it is proposed to erect at Blackheath on a site facing the War Memorial at the junction of Maze Hill and Charlton Way. Premiums : £50, £20 and £10. Particulars of the competition and a copy of the site plan may be obtained from Frederick J. Simpson, Town Clerk, Town Hall, Greenwich Road, S.E. 10. Latest date for applications: March 10.

March 31. — The Accrington Corporation invite architects of British nationality to submit designs in competition for new Police and Fire Stations which it is proposed to erect on a site in Manchester Road, Accrington. Assessor : Herbert J. Rowse, F.R.I.B.A. Premiums : £250, £150 and £100. Conditions of the competition, together with a plan of the site and all particulars, may be obtained from William Henry Warhurst, LL.B., Town Clerk, Town Hall, Accrington. Designs to be submitted before March 31.

The Royal National Eisteddfod of Wales, 1930, has just issued a list of competitions in the arts, crafts and science section. Mr. Percy E. Thompson, F.R.I.B.A., has been appointed assessor. Following is a list of the architectural competitions : the first three are confined to persons under thirty years of age.

1 : A public or town hall for a provincial town to seat 2,000 persons—about 1,500 on the ground floor and 500 in a balcony. Also a small hall is to be incorporated in the design, arranged so that it may be used separately or in conjunction with the large hall. The site is facing a public square, and has a frontage of 150 ft. and a depth of 300 ft. Prize, £50.

2 : A central motor-bus station or terminus in a provincial town. The site is on a main road and has a frontage of 200 ft., with unlimited depth. Prize, £25.

3 : A pair of workmen's cottages in an industrial area. There is no limit as to the site, but due regard must be paid to simplicity of planning and economy of construction. Prize, £25.

4 : Set of measured drawings of architecture. This competition is confined to persons under twenty-four years of age. Prizes : first, £15 15s.; second, £5 5s.

The drawings are to be delivered to Mr. W. H. Protheroe, General Secretary, Eisteddfod Office, Llanelly, not earlier than July 1, 1930, or later than July 5, 1930. Besides the architectural section there are also competitions for fine art, sculpture, applied art, and domestic arts and crafts.

Programme giving full particulars, etc., is obtainable from James Davies & Co., Ltd., Murray Street, Llanelly. Price 1s. (post free, 1s. 3d.).

Lane; house, Barcombe Heights, for Mrs. Wilson; house, Marldon Hill, for Miss M. A. Booty; eight houses, Barnfield Road, for Messrs. Pecke Bros.; bungalow, Dunstone Park, for Mrs. I. G. Kenkins; six houses, Headland Park Road, for Mr. H. Proctor.

EASTERN COUNTIES

The Herts Education Committee has approved plans prepared by Mr. C. F. Skipper for the erection of a grammar school at BARNET, at an estimated cost of £50,000.

The BEDFORD Corporation General Purposes Committee is seeking sanction to borrow £9,000 in connection with the Harpur Street improvement.

The BEDFORD Education Committee estimates for a capital expenditure of £50,000 for alterations at schools and enlarging the Pearcey Road school, and has asked Mr. G. P. Allen, the school architect, to proceed with the preparation of sketch plans.

Plans passed by the BEDFORD Corporation: House and garages, Warwick Avenue, for Mr. E. J. Smith; conversion into offices and flat, 94 Midland Road, for Mr. G. P. Allen; two houses, Goldington Road, and two houses, Southville Road, for Mr. E. H. C. Inskip; rebuilding "The Barley Mow" public-house, Bromham Road, for Messrs. Newland and Nash, Ltd.; 132 dwellings, Fenlake Road, Christie Road and Gifford Road, for the Corporation.

The Herts Education Committee has asked the county surveyor to prepare plans for the erection of an elementary school at EAST BARNET village, and also for one in Manland Road, HARPENDEN.

The LOWESTOFT Corporation Education Committee is acquiring land in Church Road, for the proposed erection of a senior girls' school.

Plans passed by the LOWESTOFT Corporation: Alterations and additions, London Road, for Messrs. F. W. Woolworth & Co., Ltd.; additions, Crown Street, for Messrs. Chambers and Son; shop, Beccles Road, Oulton Broad, for Mr. J. R. Sutton; two houses, Laurel Road, for Mr. F. W. King; new inn, Carlton Road, for Messrs. E. and G. Morse; two houses, Victoria Road, for Mr. W. Carver; two shops, London Road, for Miss L. M. Coates; four bungalows, Colville Road, Oulton-Broad, for Mr. A. E. Ingles; alterations, Kirkley Post Office, Carlton Road, for Mr. R. Plant.

The Herts Education Committee has purchased a site in Hatfield Road, ST. ALBANS, for the erection of an elementary school.

The Herts Education Committee has passed the plans prepared by the county surveyor for the erection of a central school at Hatfield Road, ST. ALBANS, at an estimated cost of £25,000.

NORTHERN COUNTIES

Plans passed by the BARNSLEY Corporation: House and shop, Pontefract Road, Monk Bretton, for Mr. W. Davis; hotel, Redhill Avenue, Kendray Estate, for Barnsley Brewery Co., Ltd.; two houses and shops, Pontefract Road, Monk Bretton, for Mr. A. Radford; shop and bakehouse, Pontefract Road, for Miss E. M. Booton.

The CHESTER Corporation has prepared a scheme for the construction of a ring road at a cost of £284,000.

The ELLESMERE PORT and WHITBY U.D.C. is to undertake works of sewerage and sewage disposal at a cost of £40,000.

The GRIMSBY Corporation is to erect a maternity home at Nunsthorpe adjoining the present home, and adapt the present home as staff quarters, at a total estimated cost of £17,540.

WALES

The SWANSEA Corporation has decided to erect sixty-six houses on the Townhill estate by direct labour, and obtain tenders for the erection of sixty-two houses.

The Picton Cinema Co., Ltd., has prepared plans of a cinema to be erected at Picton Place, St. Helens Road, SWANSEA.

The SWANSEA Corporation has authorized the borough engineer to proceed with the road and sewer works on the Cadle estate at Ffforestfach, so that arrangements may be made for the erection of houses.

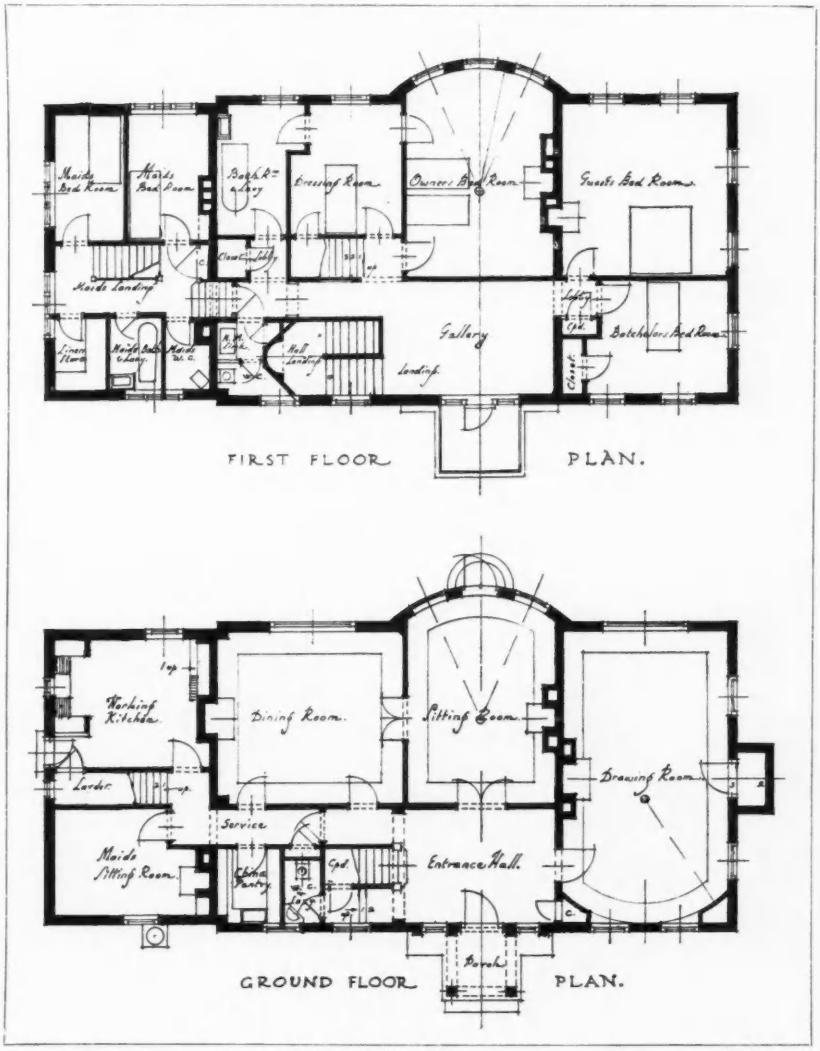
Plans passed by the SWANSEA Corporation: Alterations and additions, Mynyddbach Chapel, for the trustees; alterations, Northampton Place, for the General Electric Co., Ltd.; two houses, Brondeg, Manselton, for Messrs. Weaver Bros.; house, Middle Road, for Mr. G. Emmanuel; five houses, Pennard Street, for Mr. G. Davey; two houses, Neath Road, Peniel Green, for Mr. Thos. Rees; house, Dunvant Road, for Mr. M. Evans; two houses, Brookvale Road, for Messrs. E. E. Allen and D. C. Llewellyn; bungalow, Cockett new road, for Mr. D. Black; five houses, Eastbourne Road, Sketty, for Mr. C. H. Wastell; four houses, Dyfatty Street, for the Swansea Hide and Skin Co.; recreation room, Bethesda Street, for the Great Western Railway Social and Educational Union; two shops and flats, Sketty Road, for Mr. J. Hubert Roberts; office, De La Beche Street, for Britannic Assurance Co., Ltd.; fifty-two houses, Carnglas Estate, for Messrs. T. and G. Spragg; additions, Port Tennat Road, for Mr. S. R. George.

SCOTLAND

Messrs. D. Campbell and Son are to erect a showroom, offices and workshop in Crow Road, Jordanhill, GLASGOW

The GLASGOW Corporation has approved the layout plan for the housing scheme at Torbreck Street, showing a proposal to build 372 houses.

The GLASGOW Corporation Housing Committee has adopted a layout of the ground at North Street, Whiteinch, showing sixty-six tenement houses for rehousing purposes.



The GLASGOW Corporation Housing Committee has adopted a plan submitted by the housing director of a layout of the remaining area of ground at Torbreck Street, showing 198 houses on the intermediate type.

The GLASGOW Corporation has adopted an amended layout plan for the West Drumoyne Housing Scheme, showing sixty two-story houses and 810 three-story tenement houses.

MISCELLANEOUS

The DOUGLAS (I.O.M.) Corporation has asked the town clerk to make inquiries for sites for additional houses, and is considering a scheme for the erection of flats in Bigwell Street.

The ISLE OF ELY C.C. has instructed the county surveyor to proceed with the preparation of plans for the reconstruction of Ponds Bridge, Angle Bridge and Fields End Bridge, Whittlesey.

Castlefield, Queensmere Road, Wimbledon Park, S.W.19. Designed by Harold E. Moss. The entrance hall gives off to the drawing-room, sitting-room and dining-room. The corridor adjoining the main staircase leads to the service quarters.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

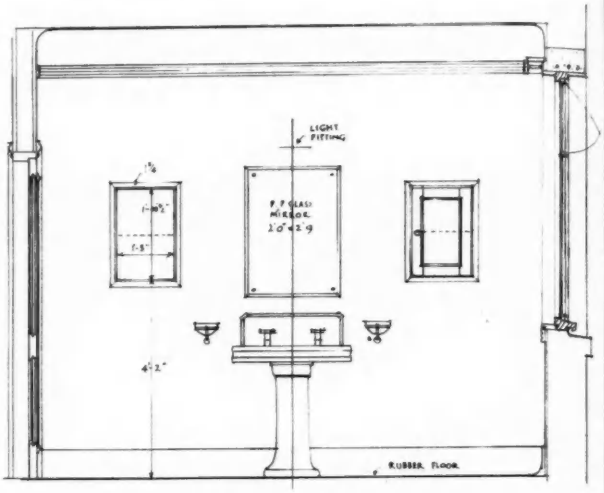
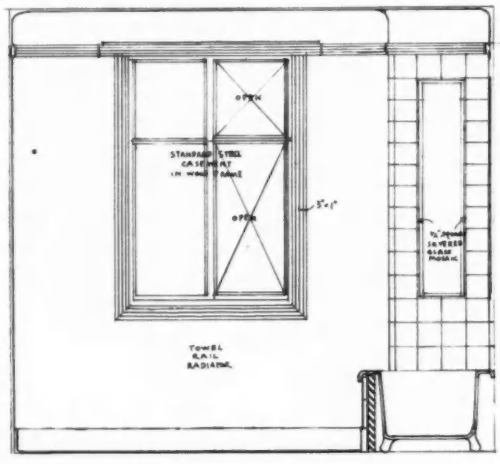
NEW BATHROOM: No. 9 LANSDOWN CRESCENT, BATH
BY
E. MAXWELL FRY
(Adams, Thompson and Fry)



IN a typical Georgian house, recent renovations included the designing of this bathroom and its adjuncts, as indicated in the working drawings reproduced on the following page.

The bath is set back in a tiled recess, with coved wall-corners on either hand, and is itself fronted with fluted tiles. Central, above the bath, is a sunk soap-holder. In the opposite wall are two sunk cupboards, either side of the lavatory basin and mirror, which is surmounted by an electric lamp.



The walls are of hard plaster, painted a pale aqueous green that matches the tiles. Bordering the panels, and dividing the green fluted tiles, are ½-in. strips of silver glass mosaic. The floor is covered with rubber, of the same green, with a white surround; and the curtains to the standard steel casement window are of oiled silk.

STEEL STATIONS ON THE STEEL ROAD

A Moral from the Good Old Days of Railway Architecture

THE illuminating address which Mr. Frank Pick delivered at the Royal Institute of British Architects on Monday serves to remind us that the development of transport has an extremely important bearing on architecture, and the buildings which have been associated with the railways in particular have invariably acquired certain characteristics of their own. Mr. Pick's references to the work which has been done in connection with the London Underground stations was of great interest to architects, but it may be suggested that in some respects the hey-day of railway architecture was at the beginning of the industrial era, when the high standards of architectural taste established in the eighteenth century and maintained to the Early Victorian period were still respected even by members of the rising profession of engineers, then for the first time beginning to separate themselves from the body of architects.

When the Great Western Railway Company laid down its main line it was with infinite care that Brunel, the elder, and his collaborators designed the new bridges, many of which to this day remain models of elegance. Visitors to the picture galleries in the corridors of the Great Western offices at Paddington can inform themselves concerning these developments and may, perhaps, be astonished to discover how deeply concerned the engineers were with the qualities of landscape architecture. Skilled water-colourists were employed to portray the natural scenery through which the new railway traversed, and obviously the directors of the gigantic project to take a steel railroad for a distance of over 300 miles were keenly alive to the æsthetic aspect of their activities, and were prepared to make a great effort to ensure that the new railway should be beautiful as well as useful.

Not only the bridges but also the stations which were built at the very beginning of the railway period were well designed, and it was only when the general architectural rot set in that the ugliness which, unfortunately, we still associate with the average railway station made its appearance. In spite of this, however, there resulted several imposing structures which, although they date from what is now considered to be a bad period of architecture, are not always justly appraised by critics. The great iron spans of Paddington and St. Pancras stations have a truly artistic quality, and, indeed, display a more acute perception of the decorative possibilities of steel than do nine-tenths of the modern structures in which that material is employed. And, after all, there is a certain artistic appropriateness in the use of a steel building as the terminus of a steel road, and while it may be desirable that the entrance front to a station should be faced with stone in order to show its affinity to the buildings near it, the design has certainly an added expressiveness if above this stone portion of the façade we have a glimpse of the iron roof of the station itself.

It is well to remember that a railway station, and even a principal railway station in the metropolis, is a symbol of something which, although important, is yet strictly utilitarian. Railway transport is a means to civilization rather than one of its ends, and for this reason we should guard ourselves against a certain tendency which has manifested itself during recent years, namely, the tendency of railway stations to display an architectural pomposity which ill befits them. The Pennsylvania Railway station at New York, for instance, although it is a fine and monumental building, ought surely not to have assumed a grandeur which surpasses that of any other building in the city. That seems the wrong kind of architectural path for the railway station to tread.

While giving to our modern railway stations whatever excellences in design would be considered to be the special product of our own age, we cannot afford to ignore certain features of past railway development which are especially worthy of our admiration. Let architects and engineers of today emulate the example of their forbears of the mid-nineteenth century in the matter of bridge design, and let them also turn their attention once more to the architectural possibilities of steel, and the railways will contribute to an important revival in the structural arts. Our ability to take advantage of a great opportunity will be tested when the new Charing Cross Bridge and Southern Railway Station are built.

ELECTRA'S GOSSAMER DRAPERIES

A spark at about a million volts, photographed in the new high voltage laboratory of the National Physical Laboratory, at Twickenham. The apparatus is housed in a special building, designed by F. A. Llewellyn, of H.M. Office of Works, and recently completed. Three transformers are employed, the primary current being of 500 ampères at 1,000 volts; the high-tension current is therefore of about half an ampère. *(A review of the last report of the National Physical Laboratory's work, for the year 1928, appears on page 402.)*

NEWS & TOPICS

ARTS ALLIED TO ARCHITECTURE

PROFESSOR LIONEL BUDDEN's plea, last week, for a closer association of schools of architecture, of painting, and of sculpture, is timely, for there is undoubtedly a growing desire on the part of a certain section of painters, and especially of sculptors, to work to definite architectural programmes. And, on their part, despite the modern vogue of plain and severe surfaces, many architects would be only too glad to welcome the co-operation of the major allied arts, as they do the minor crafts, could it be given with understanding and as an integral part of their theme; not applied as so much adventitious adornment. Professor Budden again exposed the fallacious influence of Ruskin and Morris in this connection. For them architecture was merely a pretext for the display of painting and sculpture in their own several rights. A swing of the pendulum was inevitable, and has, in fact, in our day, come somewhere near effecting a complete cleavage between the three allied arts. It is time they were reconciled on a basis of common understanding.

THE PART OF SUNLIGHT IN COMMUNAL LIFE

It is only occasionally that one sees the seamy side of America's cloth of gold. Visitors from England take too long to recover from the first shock to be as competently critical as a really critical American can be. Mr. Lawrence Veiller, as becomes a city planner, is critical enough to wonder whether the skyscraper is not, after all, an unhealthy manifestation of greed, and a source of real harm to those whose days are spent under its long-cast shadow and in the comparative gloom of its lower stories. We who in England enjoy, as the lawyers have it, the right to a fairly reasonable modicum of direct sunlight, can hardly realize how injurious the effects of high building may be in a country like America, where " light " was not a thing recognizable in law until the relatively useless zoning laws of New York were instituted.

*

And not only in New York but in Berlin, Paris, and other capital cities, high building means deep shadows, little sunlight and a steady manufacture of rickets and tuberculosis. We have been saved from the worst of these conditions, but we move steadily backward as high buildings multiply, and the question of direct sunlight and communal life must again be made the subject of our very earnest inquiry. At the moment further improvement is hardly practical politics, which is wrong.

*

So also with noise, bearable enough in the days when traffic was measured in the clip-clop of horses' hoofs and the roll of iron wheels on stone roadways, but another matter since wheels were made to revolve rapidly and the semi-internal combustion engine was invented. People imagine that we grow used to noise; that it becomes a part of one's life, and affects us very little. To a certain extent, of course, this is true, but experiments being carried out in America seem to prove that noise occasions reactions in the brain of corresponding violence, and that there is no reason to believe that the brain becomes hardened to repeated or continuous shock. I myself know, working in my office on one of the great traffic streets, how much easier it is to concentrate when once the infernal roar of motor cars has died down to an occasional rumble. No further experiment is necessary.

ANOTHER " CAUTIONARY GUIDE "

The Design and Industries Association went about their job in the right spirit when they issued *The Cautionary Guide to St. Albans*. The shopkeepers of St. Albans were very annoyed about the Cautionary Guide, which shows how accurate was the aim. The D.I.A. have now shot another bolt, this time at garages and those who own them. *The Village Pump : a guide to better garages* is an excellent piece of pamphleteering, that uses photographs on the same comparative system, showing the bad and the good of it. One of the bad ones is reproduced here, so that one may imagine how finely the old brick wall came into its own again after Shell had decided to remove all their enamel road signs. In the booklet are to be found some very good garages, and others in such varying stages of goodness that there will be no garage-owner, be he ever so humble, that will not find his stimulus towards better things on one page or another.

An illustration from the D.I.A.'s latest pamphlet, " The Village Pump." The Shell firm removed this sign some time ago.

TOWN-PLANNING THE PAPAL CITY

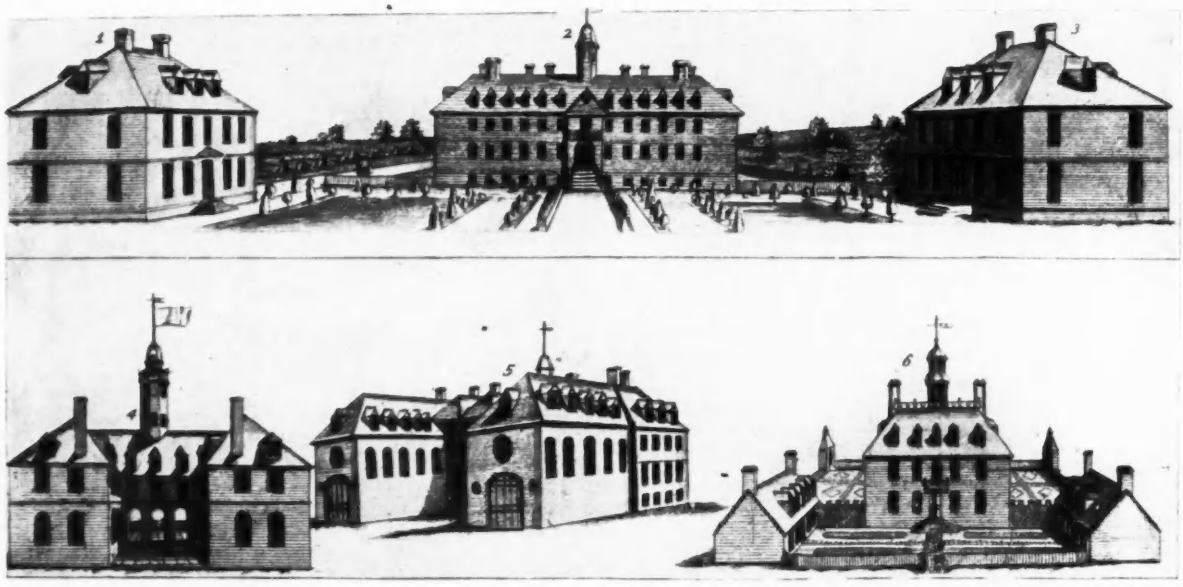
There is something rather amusing in the idea of town-planning in the Vatican city. It covers 109 acres—the area of an average-sized village—and contains, besides St. Peter's itself, a railway station, courts of justice, a wireless station, palaces and other buildings. The station is no great affair as stations go, since it will be used but three or four times a year, but one imagines that the wireless station is of immense importance. The reconstruction is very thorough, and will entirely alter the appearance of the district now included within the Papal city. A thousand workmen are being employed, and for the next few years they will outnumber the regular inhabitants by two to one.

MANCHESTER FORGES AHEAD

Manchester used to have rather a bad name among architects who go in for open competitions. One never felt certain that the building would be built. Mr. Ramsay MacDonald will inaugurate a new era in more senses than one when he lays the foundation stone of the new Town Hall extensions which Mr. E. Vincent Harris won in open competition. It will be remembered that his library

scheme, which is the greater part of the extension, took the form of a great rotunda. It will be unquestionably one of the finest civic buildings in the country, and I cannot help feeling how badly provided is Manchester with sites fit for buildings conceived as this is, in the really grand manner.

CARPENTER, SPARE THAT TREE !



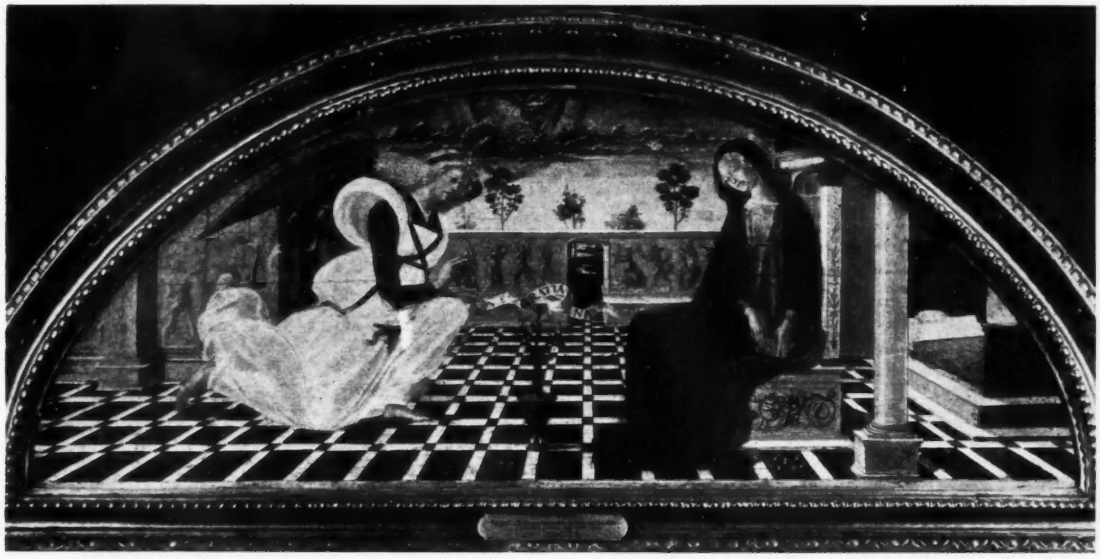
There have been complaints from responsible quarters that tree felling and pruning in the London squares is carried out with a liberal but untrained hand. Branches are lopped in the name of safety in such a manner as to destroy the balance upon which their safety depends; tree wounds are left undressed until the weather has poisoned them, and other treatment of a similar nature plays havoc with the fine growths which so much help to make the squares and open spaces of London the restful havens they are. Mr. Basil Homes suggests that no scheme for felling or lopping trees in London should be undertaken without advice from the one competent authority—namely, the Director of the Royal Botanic Gardens at Kew. At least this authority might issue a statement on the essential principles involved, which those who are responsible for all kinds of open spaces might follow.

LE CORBUSIER'S LOGICAL ANALYSIS

It is peculiar that the ideas of Le Corbusier, so universally acceptable to Continental designers, should have received so little popular appreciation in this country. There are those who agree with his ideas in a general sort of way, have put into modified practice certain of his principles, and have written in his praise in the technical press. But the public at large meets him at fourth hand through bad shop designs, and over his real teaching there hangs what seems to amount to a professional taboo; as though not believing it possible to go the whole way, architects were of the opinion that it were safer to forget about him. This is manifestly a wrong way of regarding his very valuable contribution to modern architecture, and there does surely exist a reading of his logical analysis which will lift architecture in this country from the historical complex which damns it in the eyes of the world, without landing it into the extravagant stylism from which our insularity is in revolt.

A WREN BUILDING IN NEW ENGLAND ?

How much of the original colonial architecture of the Southern and New England States of America can be directly ascribed to well-known architects practising at that time in London is an interesting but debatable point. I believe that James Gibbs designed a church or churches in Virginia, but I have never heard of corroborated evidence pointing to examples of Sir Christopher Wren's work being found in those parts. As it is difficult enough to be certain of what was his out of a mass of contemporary work here, his name is likely to be associated with buildings in America merely because it was familiar to laymen as that of the leading architect of the day.



Original civic buildings in Williamsburg, Virginia: 1, Brafferton, America's first Indian school; 2, William and Mary College (1695); 3, The College President's House; 4, the Colonial Capitol; 5, rear view of 2; 6, Governor's Palace.

*

It is therefore the more interesting to know that the town of Williamsburg in Virginia is conducting research in this country with the object of discovering the authorship of its original civic buildings. Miss Mary F. Goodwin has brought to light the print reproduced here after long searching in the Bodleian, and has asked in a letter to *The Times* of February 27 for any information that may help to place it as being an illustration to any known work. In America these original buildings are regarded, on the evidence of an old book entitled *The True Relation of the Seven States of Virginia*, as being by Sir Christopher Wren. Their faint resemblance to Chelsea Hospital strengthens the belief, though in point of fact the similarity is in a general arrangement too common to give grounds for the assumption, and there is unfortunately insufficient detail in this guide-book print to take one very far. It is a great find, nevertheless, because Williamsburg wants to rebuild its historic buildings, and these are certainly good architecture.

ASTRAGAL

NEROCCIO

THE ARCHITECTURE OF THE ANNUNCIATION

Musings at the Italian Exhibition at Burlington House

BY RAYMOND McGRATH

JUST as the modern painter is content to express his beliefs and aspirations in the nice forms and colours of a still life, in bunches of celery, fish, apples or nautical instruments, so the Italian Renaissance painters found a most adequate satisfaction in Christian or Classical themes or in combinations of both. There is an infinite variety of variation on any one theme. The elements which compose the theme of picture or building are almost unlimited. In this simple arithmetic lies the secret of the perpetual appeal of art, as of all things that make life worth living. Certainly there are some simple forms to which all complexities owe their final appeal. Therein lies the artistic subtlety. Great artists have a way of transforming the simplest things into great and apparently complex things by the simplest of means.

No discerning person, however, is misled by the mere qualities of decoration, though in the worst periods moss and leaves are most often mistaken for the ultimate wood. Today, the abuse of decoration and a preoccupation with trivialities have brought about the inevitable reactions. The result is a crusade for simplicity, even for naivety, the desire for good wood and less moss round about our feet. Stupid people, confronted with simple, satisfying things, often rejoin : " This cult

DOMENICO VENEZIANO

FRANCISCO DI GIORGIO MARTINI

of ugliness! You like ugly things?" And the truth is that they secretly believe that simplicity is an easy thing to achieve, and therefore a despicable thing. That is one of the reasons why so many people always prefer Renaissance or Gothic architecture to any recent attempts at simplicity. They can *see* something in Notre Dame or St. Peter's, columns and statues in fact, thousands of them, very often. Therefore this *is* architecture. My argument is not that simple buildings excel over enriched ones. Enrichment is merely not our modern strong point. We have little time in which to enrich them. That is a good reason why we should strive for the utmost subtlety in unenriched forms.

Today it is our constant surprise to see with what sureness the Italian Renaissance architects and painters were able to decorate their buildings and canvases. Only a very occasional modern can indulge with impunity in the intricacies of detail which were child's play to Botticelli or Ghirlandaio. This is the lighter side of the variations on any chosen theme, but none the less a mark of the great artist, a real test of the trustworthy artistic imagination. If we might call imagination the intuitive mathematics of the mind, then the fifteenth-century Italian painters were superbly artistic mathematicians.

Our six Annunciations here illustrated all belong to the fifteenth century, that enviable era of spiritual geometry in architecture and in painting. It was plane rather than solid geometry upon which both arts were based. A glance at them reveals that all these Annunciations owe their beauty primarily to line, and of course to the colour which is here lacking. This is particularly the case with Veneziano and Botticelli, who concentrate your appreciation with uncompromising strokes of ruler-like precision.

Let us examine these paintings in detail. Personally I give pride of place to Francisco di Giorgio's Annunciation. This is the Sienese school at its best, the work of a painter who is both scientific and romantic, of a dreamer in the new world. It is in tempera on wood, and whatever its original state, it now possesses a surprisingly beautiful atmosphere of mother-of-pearl. Its pastel softness of

ALESSANDRO BOTTICELLI

FRA FILIPPO LIPPI

colouring is given greater delicacy by the brilliance of the reds. The arches of the loggia are red, and so is the Virgin's blouse. Her robe is ultra-marine-purple. Behind her rise the impossibly slender pink marble columns of the arcade. The blonde angel almost floats upon the elaborate pavement. Her wings are blue, her robe purple-blue. There is a delightful intimacy about this Annunciation, which is enhanced by the romantic landscape beyond, by its trees and precipice.

This, and the other Sienese Annunciation of Neroccio are the two most romantic of the six. Neroccio's angel floats over a still more elaborate pavement of black and white marble. She has grey-blue wings, a mass of blonde hair, and a dress of delicate pink, with snake-like ribbons. (The six angels and six Virgins of these pictures are all fair.) The Virgin has a blue, almost black, robe over crimson. The architecture is all a grey-white marble, with exquisite reliefs, and the sky is rain-washed cerulean blue. The most brilliant touches of colour are the red of the bed and of the glory of God the Father in the sky. Neroccio's Annunciation was lent for the exhibition by the Yale University of America.

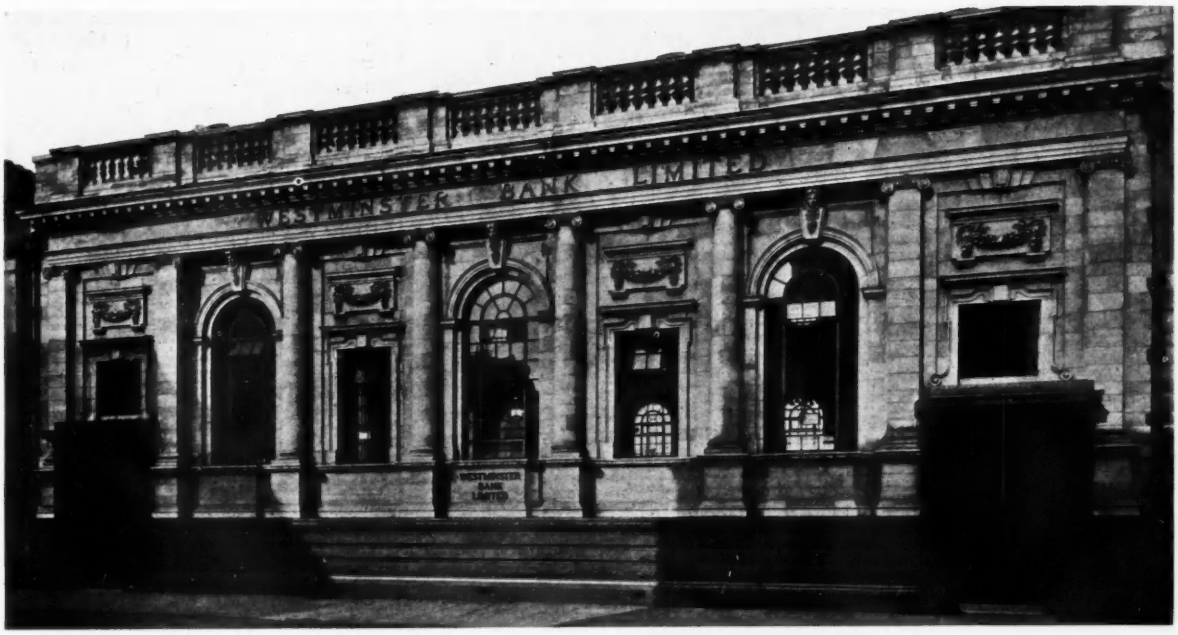
Three of our other Annunciations are Florentine, one Venetian. Botticelli's Annunciation, from the Glasgow gallery, is most unlike his other works exhibited. It is the sort of Annunciation I imagine Brunelleschi would have painted. This is his architecture—the supreme Tuscan sensibility. Botticelli's conception is dramatic and sombre. It has that still, grey atmosphere which prevails before a thunder-storm.

Through the arcade are the dark hills and a sheet of water under pale sky seen flecked with clouds. There is grey shadow on the walls and under the vaulted ceiling. The white-winged angel approaches across a plush-red floor, and from above her head the gilded rays of glory seek out the Virgin. Botticelli's treatment is monumental, arresting.

In complete contrast to this grand setting we have Fra Filippo Lippi's homely interior. Here, in her room, the Virgin takes the lily from the angel's hand, in the unusual presence of

VITTORE CARPACCIO

two donors. The Virgin has a cobalt blue gown. The angel's robe is black. The wings are black, relieved with gold. Otherwise the walls are pale grey and the parapet, behind part of which kneel the donors, is a warm amber. Outside, the landscape is in sombre greens. The rays and haloes and other details are illuminated with gold. Filippo Lippi paints with simple grace, delighting in all enrichments, with a rare success.



Domenico Veneziano's Annunciation is severely classical and intentionally archaic. In colour it is Pompäean. Here the blues and crimsons of angel and Virgin are against cool grey walls in a courtyard where crisp white columns support deep-rose coloured cornice and architrave and a frieze of dark blue. The ceiling of the colonnade is a dark blue. The caps and bases of the columns are red, and the pavement is Venetian pink with grey borders. Through the archway are warm orange walls and a rose trellised garden. There is the sunny glow of summer in the air, within and without. How is it that people who enjoy the colours of the architecture of Italian pictures can still be content to live in monochrome streets? We are afraid of colour except within the traditional bounds of a safe frame.

Carpaccio's Annunciation, lent by the Cà D'Oro, is frankly pagan. Peacocks, arabesques, and fantastic carvings are here the Virgin's environment. Humour is not lacking. The angel might well appear to be abstractedly plucking petals from the lily, and God, in a red robe, above the garden gate, miraculously juggles with six pink-faced cherubims, as the Holy Spirit flys down in a golden beam. The colour of the picture is rich and sombre. It is the only one of the six painted in oil, all the others being in tempera. The exhibition as a whole is in fact an eloquent proof of the superiority of tempera over oil, so much so that the present neglect of this medium is difficult to understand, now that impressionism is on the wane. Oil is, of course, the medium for the impressionist, and Carpaccio himself was a modest forerunner of impressionism in painting.

Architecture plays a very prominent part in Italian Annunciations. The Renaissance painter revelled in and understood the forms which are of such value to his designs. Modern architecture holds no such place in modern painting, and it is equally noticeable that modern painting has little or no place in modern architecture. Perhaps this wealth of Italian suggestion will inspire us!

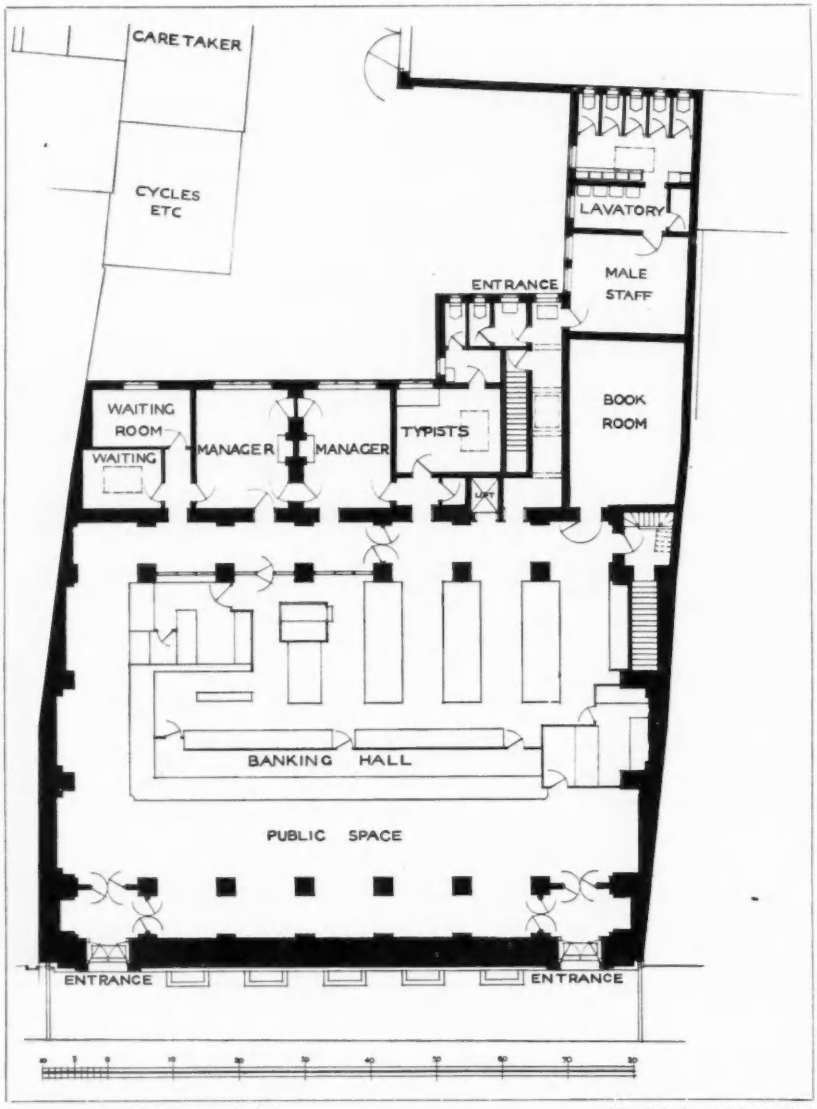
A SINGLE-STORY PROVINCIAL BANK BUILDING

DESIGNED BY BRIERLEY AND RUTHERFORD

The main street frontage, some eighty feet long, is faced with Portland stone, above a plinth of Aberdeen granite.

THE new premises for the Westminster Bank, Ltd., at Doncaster, Yorkshire, here illustrated and described, possess distinctive features in the length of the main frontage; the one-story treatment; and the concentration of practically the whole working space within one lofty hall.

ONLY in the case of a site which is both in a provincial town and in the possession of wealthy owners is the opportunity likely to arise for the design as a single-floor structure of so large a building as this bank. A feature of the exterior is the single range of large windows, raised above pedestals, with a high plinth, unpierced by openings, save the doorways, which occur at each end of the front. This treatment indicates at once that the building is of the single-story type, and that the banking hall extends throughout the full height of the interior above the ground-floor level.



The classical treatment of the façade has been adopted to harmonize with the note struck by the civic Mansion House on the opposite side of the street, which was built by James Paine about the year 1745. Variety has been introduced by the alternation of arched and square-headed windows, a device of which San Michele was a notable exponent.

The bank is to be congratulated on having allowed the architects to take advantage of the opportunity which the absence of upper floors affords for designing an interior of striking proportions.

This interior is occupied by one spacious aisled banking hall, measuring about 90 ft. long by 45 ft. wide within the colonnades. Practically the whole work of the bank is carried on in this large hall, the only adjuncts being the private offices for the manager, the waiting-

The central window of the main front, taken at closer range, to show details of the stonework and inscription.

Westminster Bank, Doncaster, Yorks.] [*By Brierley and Rutherford.*

The architects' drawing of the ground-floor plan. Practically the whole of the banking business is transacted in the one spacious hall.

rooms and typists' rooms—low buildings at the back under the main sill level.

The height of the external and internal orders is the same, and this is an indication of the consistency with which a classical motif has been pursued throughout the building.

The principal front, above the external plinth and doorways, which are of Aberdeen granite, is faced with Portland stone. There are sculptured keystones to the arches and other enrichments; for the carving and modelling James Walker, of London, undertook the responsibility. The windows are of bronze. Floors and roofs are constructed of reinforced concrete.

On the interior walls are dadoes of Nabresina marble and Belgian fossil.

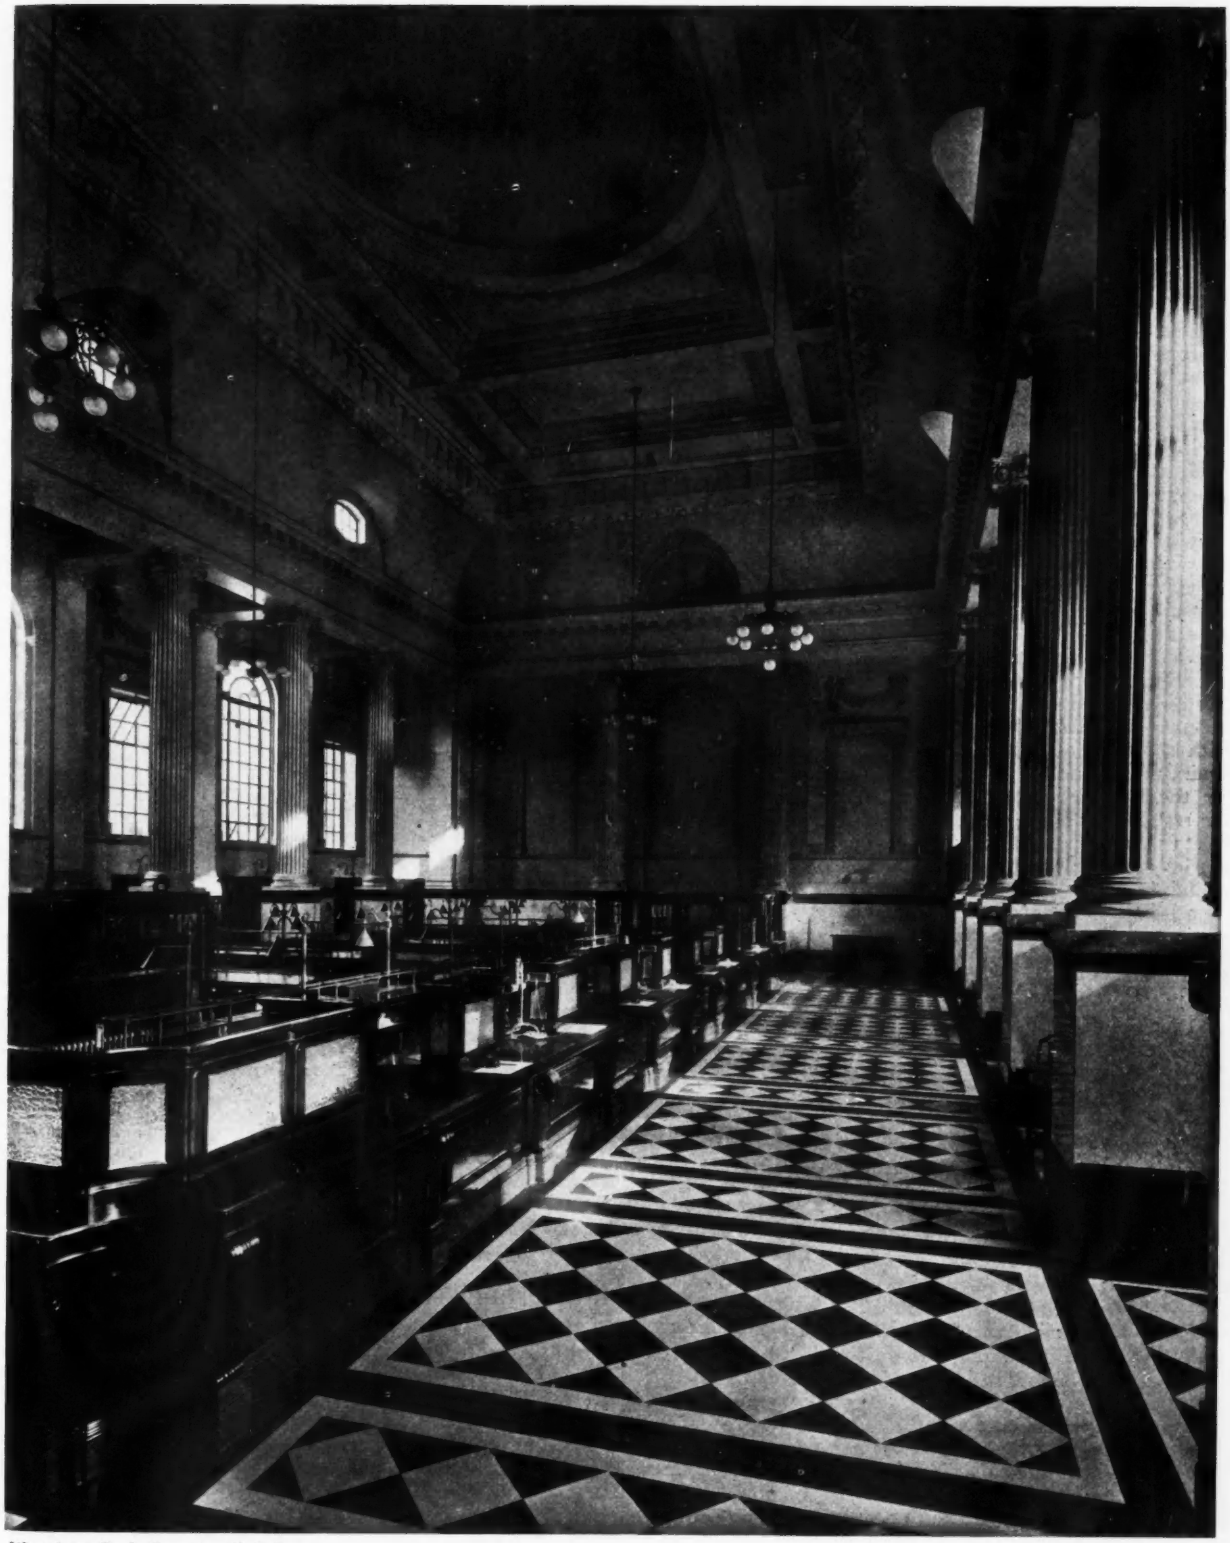
CORRESPONDENCE

The Charing Cross Bridge Scheme

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—It would be a pity if the impression got abroad that the profession is entirely behind the R.I.B.A. in its action in connection with the Charing Cross Bridge Scheme, for when the plan of Sir Edwin Lutyens is published, I am sure it will find many warm supporters, and many things will appear in a different light.

The Institute has done much useful work in the past in connection with bridge-building. Its activities have succeeded in impressing upon the mind of authority the idea that a bridge should not be regarded simply as a piece of construction, to be left to the tender mercies of the engineer, inasmuch as bridge-building has an architectural as well as an engineering aspect. And, what is equally important, it has been instrumental to some extent in ousting steel bridges in favour of stone ones.



Nor did the Institute stop there. It not only brought stone bridges back in favour but it nominated the architects to design them. And, though I am far from thinking that the architects chosen were always the best for the work, there is this much to be said in their favour—it is probable that much better architects were appointed to design these bridges than if the R.I.B.A. had not intervened.

While the useful work of the Institute as an advisory body is not to be questioned, it becomes presumptuous in them to interfere when there is appointed by the Government an architect of outstanding ability like Sir Edwin Lutyens. For, after all, the aim of intervention in the past was entirely to ensure the appointment of architects such as he. The Institute therefore has put itself in a very invidious position by its recent ill-timed interference, and it will have to tread very carefully if the whole controversy is not to become for it a veritable *pons asinorum*.

But what of the actual scheme? Are the criticisms of the Institute committee justified? I think not. So far as traffic considerations are concerned, the main lines of the scheme were determined by the Ministry of Transport and a committee of engineers before Sir Edwin Lutyens was consulted. Nevertheless, it is foolish to suggest, as Mr. Keen did in his letter to Sir Edwin, that the latter had not a free hand. For Sir Edwin completely recast the scheme of the engineers in detail, and in its final form it may certainly claim to be a triumph of civic design.

That the town-planners connected with the Institute should be entirely blind to this is easy to understand; for they always walk about in seven-league boots, and would, presumably, overlook the merits of anything designed on a more human scale. Yet it is just because Sir Edwin's plan is so entirely right in scale that it is so peculiarly successful. Civic design, according to the pundits of the Institute, is a matter of axial lines, circuses or roundabouts, and slick draughtsmanship; and so it is but natural that they should see nothing in a design which ignores their pet canons. But that does not condemn the design. It merely makes us aware of the gulf which separates their thought from that of Sir Edwin Lutyens.

The bridge is to be a high-level one,

Westminster Bank, Doncaster, Yorks.] [*By Brierley and Rutherford.*

A general view of the banking hall, taken from a slightly elevated viewpoint in the public space, so as to show the disposition of counters, partitions, etc. The main street front is to the right of the spectator, and under the windows in the wall opposite to it are doors leading to the managers' rooms and subsidiary offices, which are housed in a low annexe on the rear portion of the site.

which will go over the Embankment, like Waterloo Bridge. That is one of the things to which the Institute committee objects, on the ground that it is desirable that access be had to the bridge from the Embankment. But is this a valid objection? Access from the Embankment would mean a low-level bridge, and that would mean a hill to climb to reach the Strand level. And as the traffic from the Embankment to the bridge would be negligible compared with that to the Strand, to make the bridge a low-level one would be to sacrifice a major purpose for a minor one.

In any case, a low-level bridge is out of the question, as the Southern Railway have made it a condition of their co-operation that the road of the bridge be at the platform level of their station.

Moreover, as a high-level bridge offers far greater architectural possibilities than a low-level one, it is not easy to see why a body which exists to promote the interests of architecture should object to it.

Another objection of the Institute committee is to the position of the new station, which comes up to the river, because, they say, it involves a long plain wall at the side. This is not necessarily the case; it could be flanked with shops or other buildings. And, again, there is no option in the matter, for the Southern Railway insist that the station shall be in this position.

Let us consider the architectural possibilities of the plan. You will not look to infinity, but the vista will be closed by a building about on a line with the National Liberal Club, while the road will bear to the right. On arriving at the Strand there will be a square or, to be more correct, a diamond, which, at the same time, provides a happy solution of the traffic problem, and of the problem presented by Duncannon Street and the other streets which are at right angles with the side of Trafalgar Square and not with the Strand. I should like to dwell on this feature of the plan for a moment.

Most architects and town-planners, I suppose, would have sought a solution of this problem by the provision of a circus, which appears to cover such a multitude of sins. It is so easy to strike a circle with a pair of compasses and it looks so well and workmanlike on the plan. But in execution it is ugly. A circus is the worst imaginable way of effecting a junction of streets, because what you really get in execution is not the circle which looked so nice on the plan, not even a crescent, but small segments of circles, which do not explain themselves. For it is impossible to see more than two at a time, and as these are separated by a wide street the eye does not complete the circle which is the essential condition of its pleasing. Experience proves it impossible to make the buildings which abut on a circus really satisfactory; there is nothing to be done with a site with a small segment taken off the angle. Go and have a look at Oxford Circus and take warning.

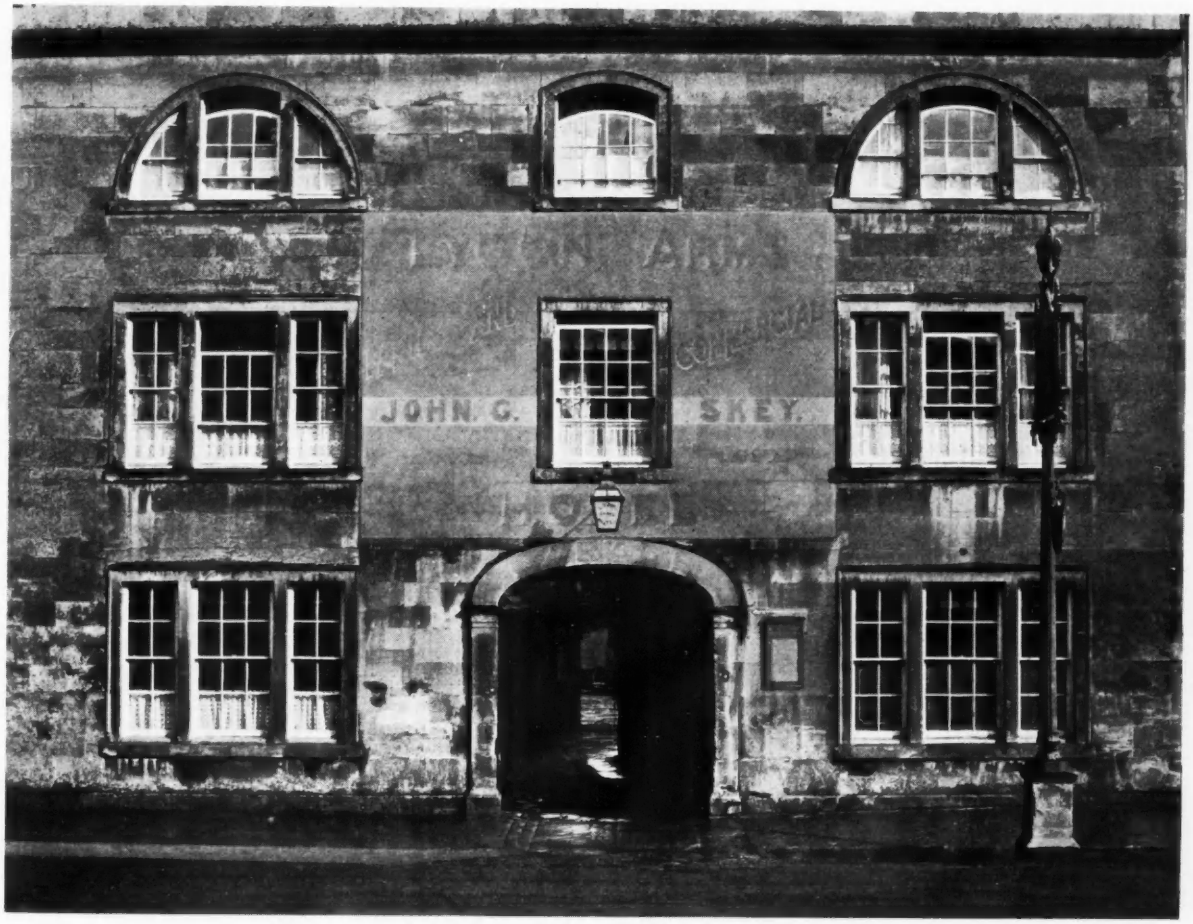
The truth is that the plans which are nowadays served up to us by town-planners do not explain themselves. It would be necessary to live in an aeroplane to appreciate them, for they are obviously designed to be looked at from the air. Most of us still spend our time on the ground, and I, for one, strongly object to town-planners catering entirely for airmen.

This is only another way of saying that in the town-planning of today the scale is invariably too large. The right way to design large civic schemes is to consider how much can be seen at a given time, and not to insist upon axial lines and circles, which have become an obsession with town-planners. And I confess it is largely because Sir Edwin Lutyens will have nothing to do with such nonsense that I am so attracted to his design. There are things which appear on drawings which are not really seen in execution, and things which bulk largely in execution that make little show on drawings. Sir Edwin Lutyens has not overlooked this. As his plan is examined in detail it will be seen that the various parts lend themselves to beautiful architectural treatment. He appears to have actually walked down his streets and considered every little corner and detail instead of flying over them in an aeroplane. I am intrigued especially by a wonderful effect that will appear from the Embankment when looking in the direction of the Strand. There will be the pile of buildings that close the vista from the bridge, resting on a massive base, with, perhaps, a staircase leading down to the Embankment. It has wonderful possibilities, and no doubt Sir Edwin Lutyens will make the most of it, as he will when he turns to the design of the buildings on the river front on the Surrey side, which, appearing above a high-walled embankment, will be highly effective.

PONDERIVO

The Æsthetic Front

To the Editor of THE ARCHITECTS' JOURNAL



SIR,—I do not think there is any bird in the architectural cockpit to whom I am so entirely hostile as my friend Mr. Trystan Edwards; and I dare say he feels the same towards me. We do not, I hope, think any the worse of one another on that account, for I have no doubt whatever that God made Edwards and, I believe, He made me; we are both earnest and both sincere; we are each entirely independent. This, however, is all we seem to have in common; and if there is anyone in this world whose sense of architectural decency is so ruffled as mine is by Edwards's reference of æsthetics to the test of logic and rule, I should be glad to meet that person and share his grievances over a week-end.

Mr. Edwards expresses strong objection to the view " that good architecture results from good construction and from what is called *the expression of fitness for purpose*," and comments: " If these are the only desiderata in architecture, why not let the builders and engineers assume our professional duties and let the architectural profession commit hara-kiri at once? " The italics are mine : and my answer to the question is, that builders are incapable of giving *expression* to fitness of purpose in a building or to anything else. Now this is the particular purpose for which an architect exists.

The precautions taken by those responsible for the drafting of the Registration Bill, to secure that no coercion of architectural taste, nor restraint of architectural fancy, shall result from it, is, in my opinion, no less than necessary if the Bill is to find favour with our legislators. Does Mr. Edwards really suppose that, even if not necessary, architects themselves would support a Bill the purpose of which was to dragoon their fancy. He actually cites other arts in support of his recommendation of a policed art of architecture. Has he forgotten what an art, in fact, is—what the impulse of the artist consists in? He seems to suppose that schools of art are concerned to teach art. I venture to say that there is not one principal or assistant in any school of art in the country who would not repudiate any such idea with indignation : art is precisely what they try *not* to teach; their endeavour is to teach technique—the mechanism of performance—and particularly to encourage individuality of thought and feeling. The one all-pervading common impulse of every artist is never to repeat himself. Yet Mr. Edwards proposes that the welfare of the art of architecture depends upon restraining and coercing that impulse. Taste is a thing which develops, changes, and has reactions just as does the work of the individual artist. The word itself intimates choice and selection; and the very matter of that choice is always changing. In spite of this, Mr. Edwards would determine once and for all a physical rule of form and proportion which is to establish good taste as a fixed, measurable quality. Obviously, directly he accomplished this impossibility, taste would cease to exist; for all opportunity for discretion and choice, upon which taste depends, would be destroyed.

I am reminded of a dictum of Matthew Arnold : " Poetry is the essence and finer spirit of all knowledge." In my thought architecture is the poetry, not the science (or knowledge) of building.

H. B. CRESWELL

ENGLISH PRECEDENT No. 105

THE LYGON ARMS, CHIPPING CAMPDEN, GLOUCESTERSHIRE

This building, not to be compared with its namesake at Broadway, is built entirely of local stone, and is a typical example of the many old inns of the locality and period.

Symmetrical and severe, the mouldings are reduced to a minimum. The square mullions of the large lower three-sashed windows are repeated in semicircular ones on the second floor. The inn sign and standard are also excellent work.

—[C. M. C. ARMSTRONG.]

JAGO *v.* SWILLERTON AND TOOMER

In the matter of the Arbitration Act, 1889

BY KARSHISH

The case is concluded and the arbitrator has published his award. The author here sets forth the grounds upon which he claims that fact justifies every detail of his fiction.

ix: The Author Justifies Himself

THUS ends the story of the famous cause of *Jago* v. *Swillerton and Toomer*; BUT——, as the film captions say——

This "but" must have been in the minds of many readers: would Grastopen Village Hall, under the circumstances and for the reasons described, in fact, have collapsed? Unless the author can establish that it would so have done, his narrative has no point or justification; moreover, he is bound to redeem the pledge he gave at the outset, when he stated: "*The essential constructional facts of this fiction are from experience and are exactly true in all details.*"

It will be noticed that the author met this challenge in a most handsome way by preparing working drawings of the supposititious village hall, and giving its exact dimensions, and details of its construction, and minute particulars of all relevant circumstances; and he now goes a step further and displays a detailed cross-section of the hall (figure five) amended from the version of Mr. D. W. Toomer, F.S.I., and adds to his obligations that of showing that if Toomer had so constructed his roof, Grastopen Village Hall would *not* have collapsed in spite of the buckling of the floor and the exuberances of Mr. Padrig O'Hara and his friends. The author has allowed himself no loophole of escape. He has to demonstrate that he is *right* in saying that the circumstances leading to collapse might arise exactly as described; that the hall, as constructed by Toomer, *would* have collapsed; that if constructed as shown in figure five it would *not* have collapsed. In undertaking this he makes the modest claim that he is the only person in the world who could do it; and that the massed forces of all the universities and of all professors of natural and applied physics, are in a hopeless position should they attempt to show that in the first case the building would *not* have collapsed, or in the second case that it *would*. The reader is merely asked to accept the author's word that everything in the statement that follows occurred exactly as described, and that each particular given is exactly true. When any doubt exists the margin of that doubt is fully covered by the limits given to it.

IN or about the year 1913 a hall was built in a village adjoining a small country town in the Southern Midlands, to the designs of an architect who was a Fellow of the Institute, by builders

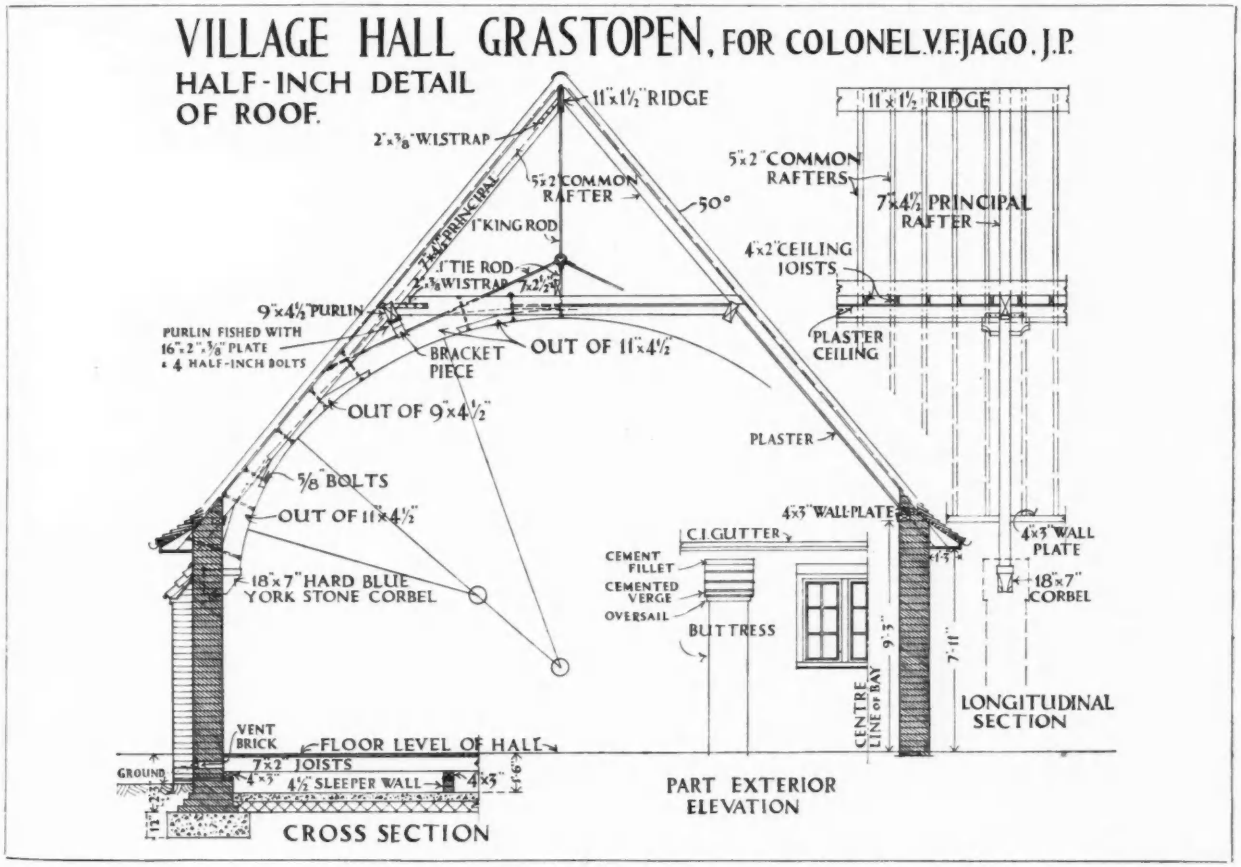


Figure five. How the roof should have been designed so as not to fall down.

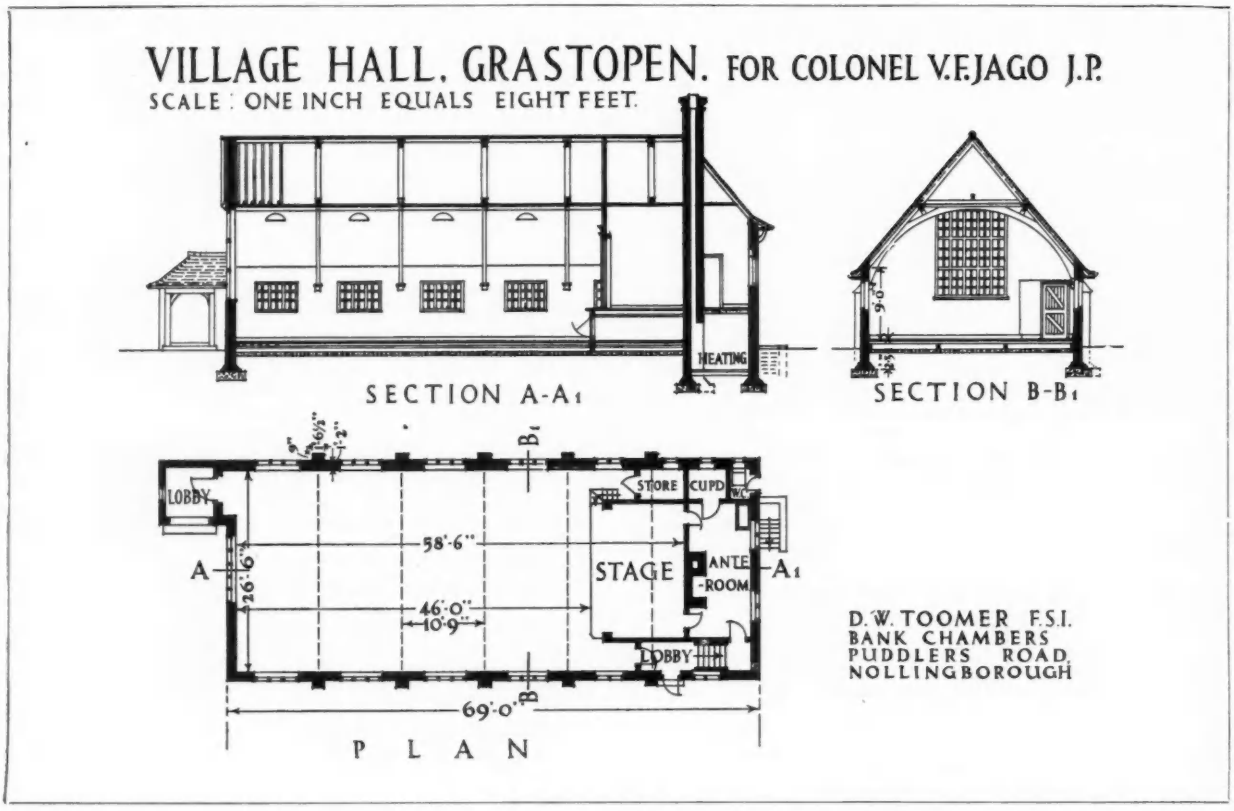

Figure one. Reprint of Mr. Toomer's drawing of his plan and sections.

of high repute, who would find a place in any informed list of the twelve leading London firms. The hall was a gift in memory of a late rector; the building-owner was the rector, and the architect lived only a couple of hundred yards from the site, so that the builders at no time had any serious cause to complain of lack of supervision either by the architect or by the building-owner or by members of a small committee appointed to regulate the discretion of the building-owner, dragoon the architect, and set up the trusteeship in which the after-care of the building would vest. The building stood on an open site flanking the road and at a distance of about 30 ft. from it, and was identical in cross-section with that of Grastopen Hall (figures one and two), except that the roof construction was as shown in figure five. The plan, and therefore the longitudinal section, differed from Grastopen (figure one) only in this, that there was a 9-in. cross wall at the line of the proscenium, and that the retiring-room was in a low, gabled annexe at the side of the stage, instead of behind the stage, so that the hall proper ended at the proscenium, and one of the side walls was further stiffened by the offset of the retiring-room annexe. If Grastopen had been so planned it would still have collapsed—as I have to show; but there seemed some doubt whether, in that case, the collapse would have had the dramatic completeness which gives spice to a tale, and, therefore, Grastopen was given an increased length of unstiffened side walls to make the utter ruin of the whole building a certainty, and its "flat on the ground" collapse not only plausible, but probable. In what follows, then, the reader is asked to assume that the *actual* hall, now spoken of, was identical with Grastopen, except that the roof was constructed as at figure five; for in showing that the actual and stiffer wall would have collapsed under Toomer's roof and would have stood firm under the roof of figure five, I abundantly prove that Grastopen would have collapsed, and still show that if roofed as at figure five it would not have collapsed—that is to say, the two cases differ only in *degree* of ruin; the *fact* of ruin is not involved. The hall now spoken of, then, is to be understood to be identical with Grastopen, but roofed as at figure five.

In designing this hall the idea, or conception, or creative impulse—or whatever that compelling thing is which, for the architect, is a distraction and a joy and at once the bugbear and the salt of life—decreed that the eaves should be kept very low; and, as adequate height of ceiling was a condition, this meant that the collar tie of the principals should be kept unusually high. A reference to the cross-section shows a straddle of the principals which, if not actually excessive, is very nearly so. It need scarcely be said that the rigidity of a roof-truss, braced as this one is, cannot be determined by any niceties of applied mathematics—much less by those at the disposal of the ordinary practitioner: the joints are too many, the stresses too complicated, the material too uncertain and, as in all constructive feats—including even the Forth Bridge—the designer can, in the last resort, only arrive at a decision by concentrating an informed imagination on the problem in such a way that he at last feels identified with the construction and knows as much about what it will, and will not, accomplish as he does of his own legs. So was this roof designed by its architect; but when all was done and drawn, doubts returned and hovered in the air; and as they could readily be dismissed by the expedient of iron ties hidden above the ceiling or behind the braces, ties (as shown in figure five) were introduced. Other particulars in which the roof differed from Toomer's construc-

tion (figure two) are the strapping of collars to rafters, the more thorough bolting of bracings to rafters and collars, the fishing of purlins where they meet at points of bearing—and so forth.

The competitive contract price for the hall was just under £1,000—£1,989 hangs in the air—or, at present prices, about £2,250, and the building, beautifully built, was completed at the end of the summer or in the first days of autumn. At the middle or latter end of autumn the architect one day returned home late from London and, at an hour probably approaching ten o'clock, passed his proud new hall, where, for the first time, a dance was in progress; and he paused, amused to observe, through one of the open windows, an etiquette of the ball-room which was entirely new to him. The usual decorous, suppliant gallantry of the male, common to those occasions in those days, was replaced by a lofty condescension which expressed itself in the gentlemen keeping the left hand in the trouser pocket, grasping the partner with the right arm and gyrating austerely with a remote air, the hat on the side of the head and pipe held firmly in the teeth. The dance having been thus firmly impressed in his memory did not, however, prepare the architect for the congratulations offered him a day or two afterwards by one of those inestimable village worthies who span the abyss of misunderstanding between an aristocratic rector and a democratic village raddled with non-conformity. Said that worthy to that architect: "We all greatly admired the fine spring dancing-floor at the hall the other night."

The architect had no idea what was meant by this, but he had long lost the habit of trying to eradicate the obstinate densities prevalent among his neighbours, and as he went without the praise he deserved he thought he might accept what he did not, and accordingly he acknowledged the compliment with a gracious smile. It was, perhaps, a fortnight later that he dined at the rectory and was told, gently, by the rector, when the two were left alone with the port: "We think we notice cracks in the wall of the new hall."

"*Cracks!* Oh, yes. Cracks. Where are they?"

The architect suspected at once that the principals had spread, and the answer he got was exactly what he expected.

"They are all along between the windows, and across the top of the buttresses."

"Yes? Oh, well, I'll go and have a look at them."

The topic then dropped; because if an owner notices cracks in his brand-new building, and his architect says he will "have a look at them," all is well.

The attention the architect bestowed on those cracks next morning was avid; so also was his attention to the wall, which was startlingly out of the perpendicular; so also to the eaves gutter, which, when sighted along from the gable, was seen to be bulging outward in a strong curve; so particularly to the fact that the face of the brick courses on one side of the horizontal joint through which the crack ran was standing out a full half-inch or more in front of the course on the other side of the crack. The architect's

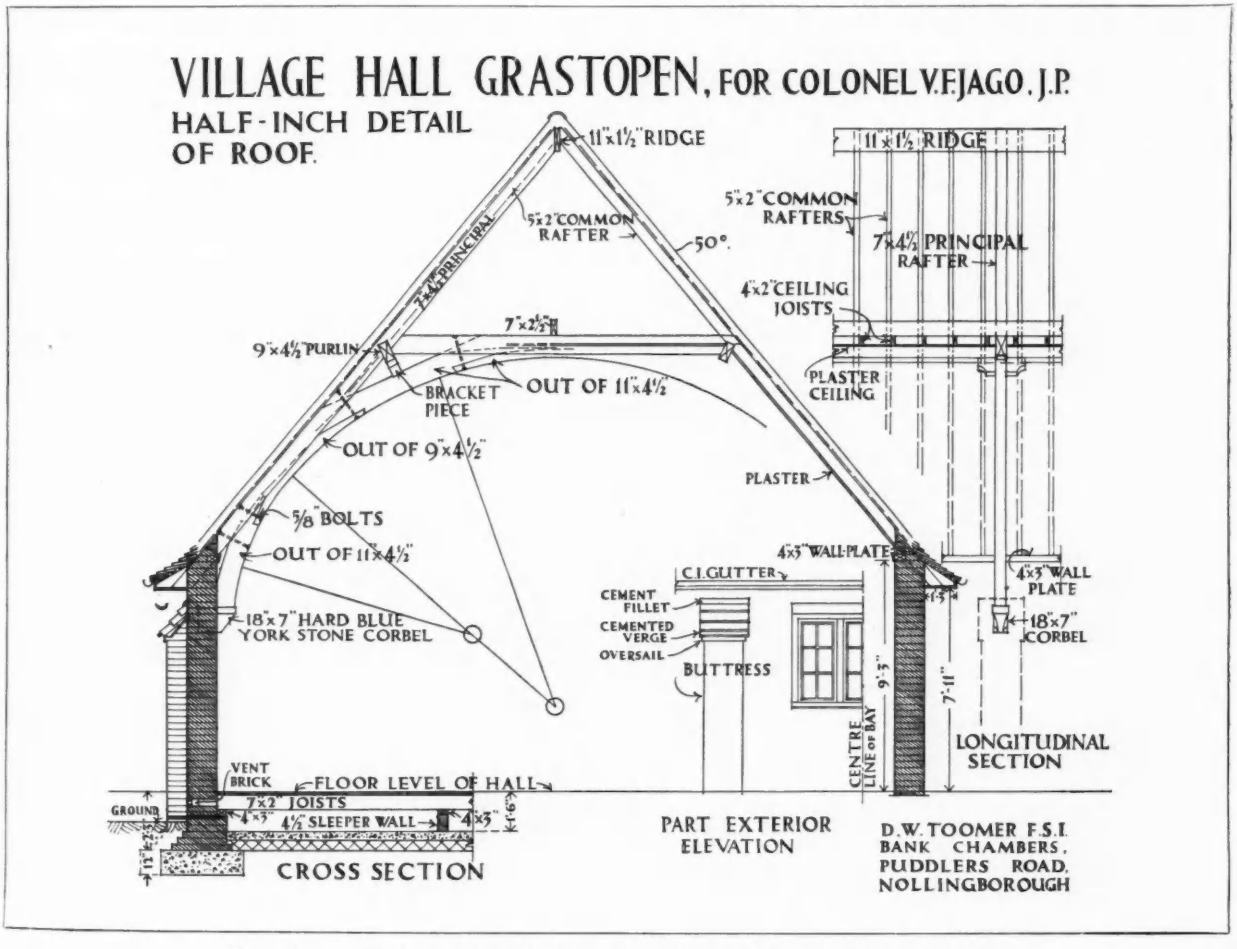

Figure two. Reprint of Mr. Toomer's large-scale drawing of roof in cross-section.

realization that he had fairly been and gone and done it, and that his principals were pushing the wall over, was arrested, but not at all lessened, by his observing that it was not the brick course *above* the crack that was pushed out in front of that below, but the *lower* which was standing out in front of the upper. The thing was not what would be expected; but when a wall cracks it does not particularly stand on the order of its cracking.

The architect did not go inside, as the hall was locked up, but hied him to his office in the neighbouring town and got through on the telephone to the builder's shop-foreman—one J. H. of gorgeous memories (rest his spirit).

"Look here, those principals at the village hall are spreading, and pushing the walls out."

"Lor, sir, they won't move. Nothing will shift *them*."

"All right. Come out and see for yourself."

The appointment was made for ten o'clock next morning, and J. H.—still gruffly rumbling his incredulity—was asked to bring a plumb-bob with him.

The plumb-bob was about four feet long or less, and the greatest overhang of the wall in this four feet was next morning found to be substantially more than one inch. What it exactly was is now forgotten, but the measure included one-eighth of an inch; it was either an inch and one-, or three-, or five-eighths; but it was not seven-eighths, for a two-inch measure was certainly nowhere in the offing. One and five-eighths inches it probably was, but we will assume one and three-eighths inches; so that in the worst case the wall was inclined at least three and a-half inches out of perpendicular.

While the architect was digesting these gritty facts he was interrupted by J. H., who approached him from the direction of the entrance with eyes actually round and staring with astonishment: "Have you been inside, sir?"

When the proud architect advanced to the inner door of his newest creation, he saw the waxed maple floor glistening in heavy undulations. The likeness it bore to a still pool at low tide heaving under the distant ocean's swell, was astonishingly emphasized when J. H. lolted his burly sixteen stone downward on its margin, and a wave—a definite flowing undulation—travelled rapidly to the stage end, returned to his feet, and could be seen again to reach the far wall and lose itself in the glinting reflections of the greasy surface on its second journey back. The explanation was at once clear: the blocks and wedges had been left in place under the skirtings; the floor had swelled owing to the boards taking up moisture from damp autumn airs circulating beneath them; the act of dancing had caused the floor to buckle, and the dancing on the buckled floor had rocked the walls outwards. The unexpected nature of the displacement of the bricks on each side of the cracks was now clear: the principals were not pushing the walls over, they were *holding the walls up*, and the extent of the resistance of the feet of the principals to spreading was the measure of the force necessary actually to slide the 14-in. wall and the 1 ft. 10½-in. pier—which was probably built in cement mortar—upon its bed. The principal had, in fact, sprung out approximately 3 in., but its resistance to spreading would increase as it opened till, at last, that resistance exceeded the considerable force necessary to slide the brickwork on its bed. Startling as this revelation was, it was less a cause of astonishment than was a message the architect received that afternoon.

It was apparent that the first thing was to relieve the pressure on the walls. The architect directed that two of the 4½-in. boards should be cut out down the length of the hall, and 4-in. boards prepared and temporarily laid in the gaps. He would afterwards decide what steps should be taken to force the walls back and restore the building. J. H. carried out these instructions, and afterwards called at the architect's office and reported progress somewhat as follows:—

"I set the men to take up the boards, and went out myself with the 4 in.; but they were too wide! They wouldn't go in where the 4½ in. had come out; they overlapped a quarter of an inch [or some other substantial amount]; and, what's more, sir, the *walls have gone back and the cracks closed up so that you'd never know they had been there, or that anything had ever been wrong with the place.*"

The architect confirmed the accuracy of this report next day: a crawling fly might have noticed a hair crack in the mortar joint where the brick courses had been pushed over; and a particular eye could discern that the window-frames were not absolutely parallel with the angle of the jamb; and the same nice eye could detect a slight bulge in the eaves-gutter when sighted along; but in other respects the building was sound and flawless, as it has stood to this day. It is scarcely necessary to mention that the blocks and wedges were taken out after the floor was released.

The degree of the "springiness," so much appreciated by the village dancers, can scarcely be imagined; but it must have been terrific. Tactful inquiries by the architect discovered that the flags hung out on the roof timbers were jumping and flapping, which proves that the principals were opening and shutting in response to the inward and outward swing of the walls; and if the walls were swinging, the floor was being flattened by the impact of the dancers, and Mr. Ackermann considers that the upward and downward movement of the centre of the floor must in that case have been about 6 in. As Pitfall said, "Was there ever such a dance since this world began!" The horizontal movement of the feet of principal rafters and of the wall at plate level must have amounted to *at least* four inches—for the wall must have rocked inwards as well as outwards—and may well have been five or even more; yet there was no one present with enough intelligence to suspect anything wrong.

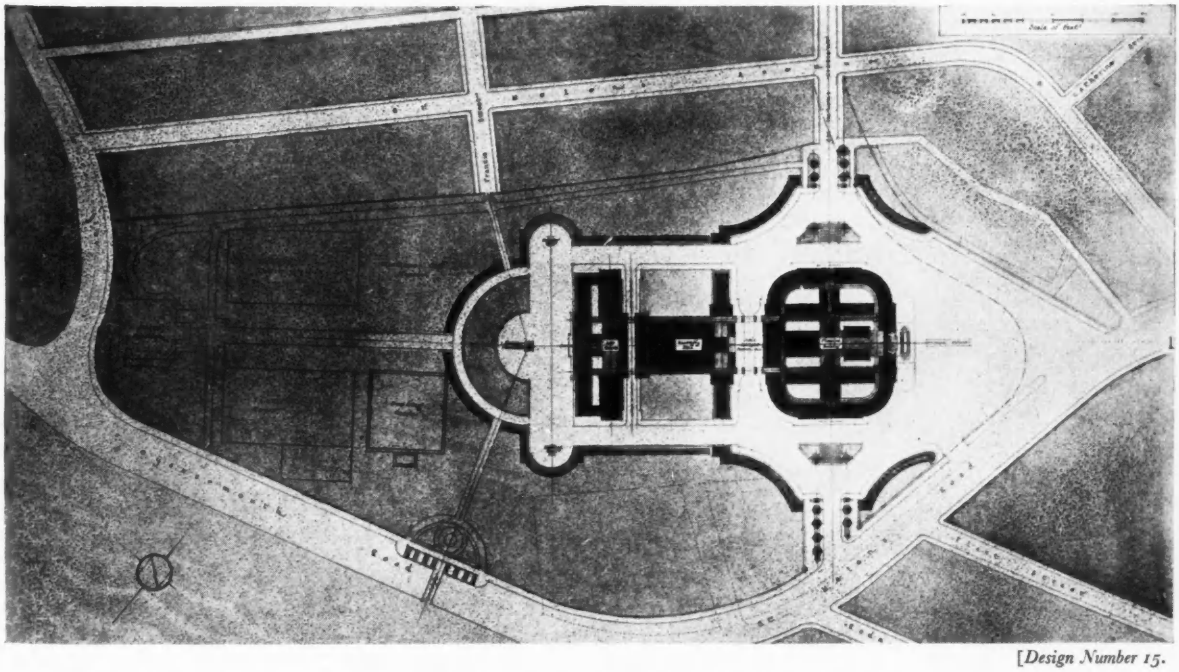
Two things only remain to be said: first, would Toomer's roof, in fact, have failed? No doubt on that point is possible; and if the reader considers what a tremendous resistance to spreading the principals were called upon to exert, the absence of the steel ties and of straps binding collars to rafters, and the undue economy of boltings of braces to rafters, and also observes the exaggerated height of the collar, he will not feel any. Toomer's truss was of such workmanship and material that it must have failed.

The second point is the doubt whether the overthrow of the walls was *necessarily* due to the synchronization of the period of vibration of the wall with the rhythm of the dance. I have always had that view in mind as a possible explanation of the outward lolling over of the walls of the hall—of which, as I need scarcely say, I was myself the architect—and of their return to perpendicular on their release; and after threshing the matter out with my friend, Mr. Ackermann, who found the problem curiously interesting and not by any means easy to solve, he satisfied himself, and satisfied me, that, for the reasons given in Randegger's evidence, no other explanation is possible.

When I dragged out my old drawings, for the purpose of illustrating this narrative, I found, on my half-inch pencil detail, of which figure five is an exact tracing, a reminder that, when I was at work, it was in my head that I had kept the collar up just as high as was safe. The figure which I sometimes sketch on a half-inch detail to fortify my sense of scale is there shown. It is a joyous, grinning, festive, capering figure—but it is the figure of a *skeleton*. Death and destruction were evidently humorously in mind at that moment, and I am sorry I did not complete the tracing (here reproduced) with a thing born of the same awareness which preserved me from the fate of Mr. Toomer—or probably a far worse one, for I should never have had his wonderful luck. THE END

East elevation of design placed second. By D. H. McMorran and Arthur Bailey, Harrow-on-the-Hill.

SWANSEA CIVIC CENTRE COMPETITION



BY "OLD COMPETITOR"

WHEN a critic is confronted with an exhibition of competition designs, one of his difficulties is to determine how to cope with such a mass of material. For the Swansea Civic Centre over seventy schemes were submitted. There is scarcely one of them that does not raise some interesting point of design which one might dwell upon and derive some benefit from its examination. Manifestly, an exhaustive analysis of every scheme is not possible, so the question arises how one may limit the discussion.

In the first place, it may be well to separate the critics into two main sections—those who took part in the competition themselves and those who did not. Members of the former class have a peculiar and intensive interest in the designs submitted and in the method of their presentation. On the other hand, a series of designs for a large group of buildings has a purely architectural interest, apart from the competitive element.

An examination of the designs reveals the fact that the assessor's choice must have been a very easy one, for Messrs. Ivor Jones and Percy Thomas's scheme was not only the best but pre-eminently the best. They alone of the competitors succeeded in arranging the four blocks in that ideal manner which needs only to be seen in order to be accepted as inevitable. Obviously, when a group of buildings comprises four principal sections between which a complete system of circulation is demanded, a quadrangular arrangement is the best, provided that the site admits of such a treatment.

Mr. Ashley, in his choice of designs to be placed second, third and fourth, must obviously have attached great importance to draughtsmanship and general finish of presentation. There appears to be no recognized convention to decide the policy of assessors in this matter. Should the second prize be given to the scheme most closely resembling the winner's, or to one which, while differing from it, is almost as practical and economical? Or is the second prize to be in the nature of a compensation to a competitor who, though he has, perhaps, not observed the limits of cost specified in the conditions, nor even produced a plan of outstanding merit, has,

nevertheless, submitted a set of drawings so beautifully rendered, and finished in such detail, that he deserves to be rewarded for this alone ?

It is certainly true that the designs placed second, third and fourth in the Swansea Competition showed that their authors had " gone all out to win," and had paid the assessor the compliment of supposing that nothing but their very best was worthy of his attention. In contrast to these schemes I might mention others equal to them and perhaps, in some respects, superior in the qualities of design, but which, nevertheless, were so poorly finished that they show traces of haste and bad management on the part of their authors. In particular it may be remarked that not more than a dozen even tolerable half-inch details are to be found among the seventy or more designs exhibited at Swansea.

Let me describe a not uncommon case where a competition scheme fails through lack of organization. After an immense effort the plans are inked in. Then it is found, of course, that although they appeared to be completed to all intents and purposes, they were really very far from being in that agreeable condition. A thousand unforeseen little odds and ends have to be added. The printing and dimensioning of the rooms takes two men three days to accomplish, and then the master of ceremonies surveys his staff and says : " There are forty-eight hours left. Let us tackle the elevations and half-inch detail." He has thought these all out, of course ; but not quite. And now it is time for the last great push.

Half a dozen minions come, prepared to work all night. Lest their spirits should droop during the effort, a raucous gramophone is put on to play the latest rag-time tunes. The architect, on the verge of a nervous breakdown, flits from board to board, settling innumerable little points of detail at the last moment, while his assistants are only praying that he would have the sense to keep out of the way and let them get on with the work without these interruptions.

And then there is the report. He had forgotten all about the report ! With feverish haste he pens the sentences, and in as impersonal a style as he can muster he sings the praises of his own scheme and by implication condemns every possible alternative which might be submitted by his rivals. A few winged words about acoustics are added, together with an almost unintelligible diagram, especially designed to obfuscate the assessor.

And now for the rendering. During the chief's absence, this has been started in a manner which is the direct opposite to that which he had expected or desired. Sponges have to be brought out at four o'clock in the morning. Frayed nerves are the result, and several of the draughtsmen do not know whether to lose their tempers openly or to burst into tears. Nevertheless, the thing is done. Nearly all the " mosaicing " has been washed out in the process, but it cannot be helped.

" For heaven's sake shut off the gramophone for one moment," says the chief ; " I can't hear myself speak."

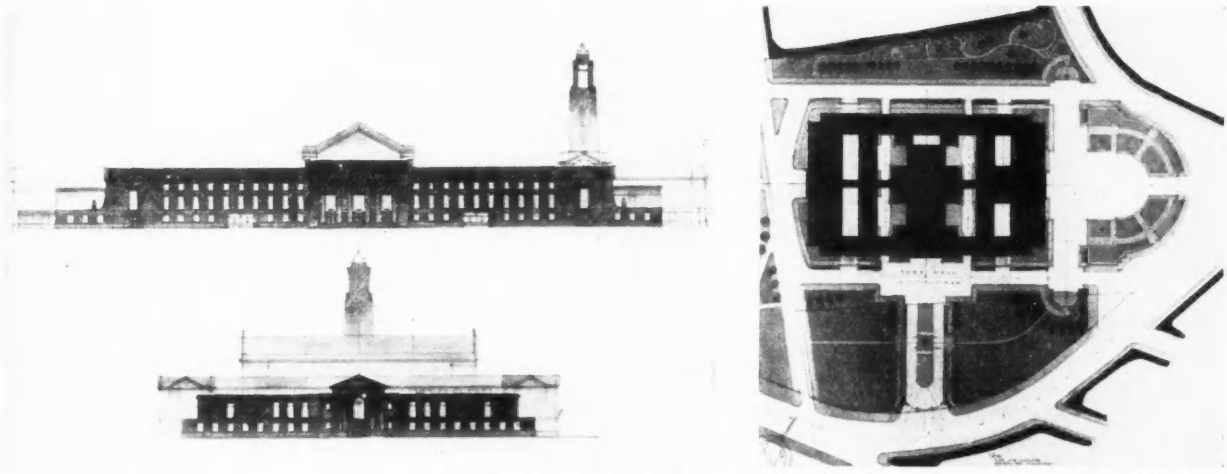
So, without musical aids, the work proceeds until, to everybody's relief, it is time for breakfast. It is discovered, however, that the few hours available between the conclusion of this meal and the time at which the drawings are due to be dispatched by train to their destination are inadequate.

A motor car has to be hired, and the services of an assistant to secure the safe delivery of the precious package.

The competitor, after weeks of wild excitement and extravagance, has not even the satisfaction of imagining that his design can be in the running at all. For architecture is not only an art, it is a business; and assessors are quick to seize upon those designs which show evidence of an all-round competence. A designer who has allowed himself time to supplement his plans, sections and elevations by a very carefully worked out half-inch detail, is sure of the assessor's regard.

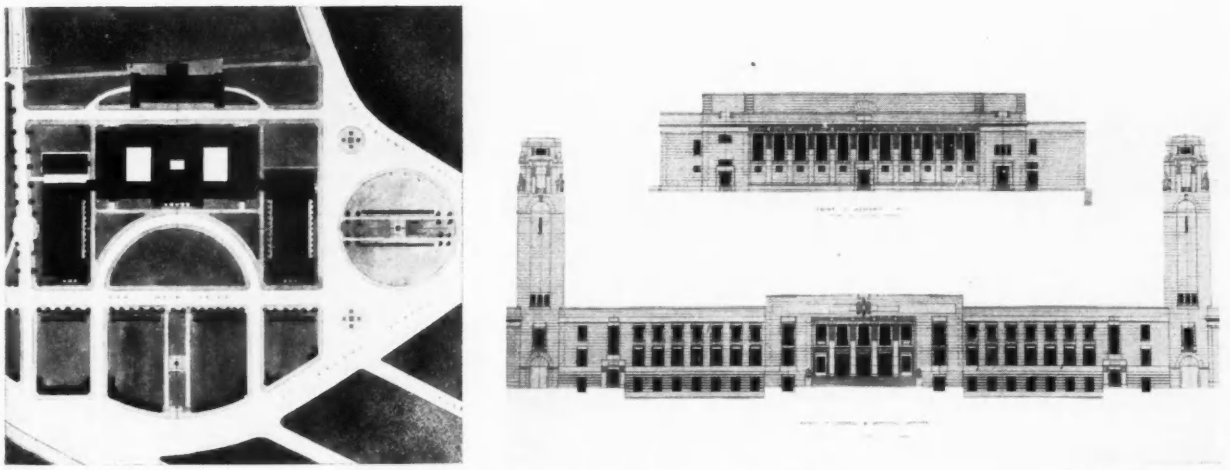
While, however, this much is due to the assessor, and indeed architects might almost be advised not to compete at all unless they are prepared to submit schemes exemplifying such a standard of accomplishment, the competitors, on their side, may claim of the assessor certain prerogatives. Again and again we must plead that an architectural competition cannot be conducted with fairness unless the assessor insists upon *absolute uniformity in presentation*. There should be no place in competitions for the " swagger " draughtsman exhibiting engaging idiosyncrasies of his own.

It was entirely to the good that for the Swansea Civic Group various parts of the plan were to be coloured in certain specified tints to distinguish them from one another, and the competitors had also reason to be grateful for the injunction that the elevations were to be uncoloured. Although one competitor, whose design is here illustrated, was disqualified for disregarding it, the rule is an excellent one, and its enforcement cannot but promote the best interests of the competition system in general. Further instructions, however, are needed for the representation of sections and block-plans. Should the solids in the sections be consistently all black or all white, and should footings be shown ? In the block plans, should the buildings be in dark tone, and should rooms or corridors be indicated ? For one particular prohibition the competitors have reason to thank Mr. Ashley with all their hearts, and that is his ban upon the ridiculous line borders around the sheets of drawings, which used to be so fashionable.



The ten schemes here illustrated are chosen as representing three main types of solution to the problem which was set to the competitors. The first five show the three main divisions—Municipal Offices, with Council Chamber; Assembly Hall; and Law Courts—arranged in a row and lightly joined together either by bridges or low wings. The question arises as to how far the architects in these schemes have contrived to give to the various blocks a sufficient degree of homogeneity to enable them to appear as parts of a single artistic whole. It will be observed that Messrs. D. H. McMorran and Arthur Bailey have sought to achieve this homogeneity by the time-honoured device of employing the same Order around the group, and this certainly helps to tie the blocks together, although the complete symmetricality of the municipal block renders it somewhat too independent of the remainder. Naseby Adams and Messrs. Martin-Kaye and Edward Thewlis have both produced distinguished designs, in the Classic manner, in which the various blocks, in spite of the differences in shape, expressive of their various functions, have similar stylistic elements, and are thus made to appear members of one family. The schemes submitted by V. O. Rees and by Messrs. Home and Knight are both exquisitely drawn and rendered, but the silhouette of the buildings towards the south front, facing the sea, is somewhat incoherent. Messrs. Lanchester and Lodge, who have disregarded the assessor's rather plain hint that the entrance to the municipal offices should be to the east of the site, have produced a fine elevation, which is perhaps the only one in which a tower of narrow width has been properly related to the façades on either side of it.

The next two schemes here illustrated, namely, those by Trystan Edwards and Messrs. Lyon and North, differ from the remainder inasmuch as they have merged the several sections into a single compact group.



Messrs. Crouch, Butler and Savage's scheme has an impressive symmetrical layout, though it is perhaps questionable whether the twin towers are altogether happy. J. A. Ogg Allen, realizing the difficulty of making a slender tower preside over so large a group, has made it a detached campanile.

I hope that other enterprising municipalities will soon follow the example of Swansea and serve the cause of architecture, in competitions, in a similar manner.

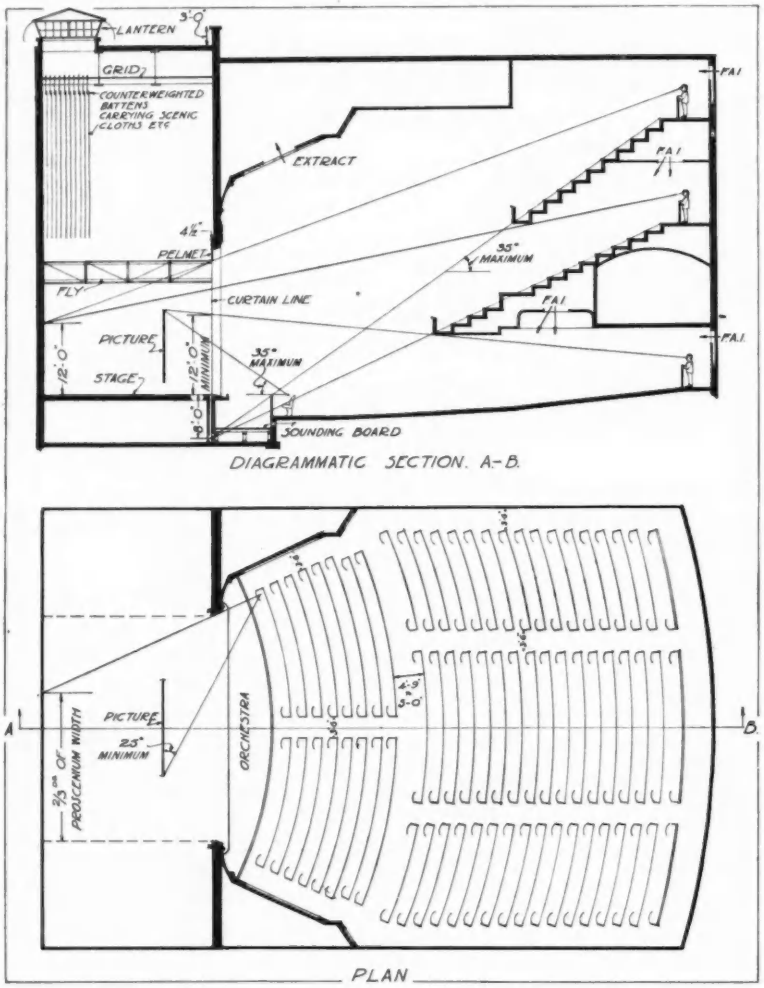
LITERATURE

SPECIFICATION, 1930

THE 1930 edition of *Specification* well maintains the tradition which has earned for this publication in the past its high reputation as a work of reference for architects, surveyors, civil engineers, and all interested in building. It would be difficult to find in more compendious and convenient form such a mass of information on building materials and processes as is contained in this volume. Notwithstanding the wide field which has had to be covered and the number of subjects treated, the book is a perfectly simple one to handle, owing to its orderly method of arrangement and the care with which the contents have been indexed.

The utility of a book of reference depends to a large extent upon the ease with which it can be handled, a test which *Specification* easily passes.



The building industry, however, never stands still; and improvements in methods of construction and fresh sources of supply of materials (particularly proprietary articles) are continually being brought into use. This element of progress in the industry has not been lost sight of by Mr. Frederick Chatterton, F.R.I.B.A., the editor, nor by the publishers. If such a publication is to maintain its status as a standard work, it must continually be kept up to date.

Since the last edition was published, considerable alterations have been made in the trade sections, which comprise the greater part of the work. Much new technical information has been added, principally in the direction which we have indicated of keeping the volume abreast of modern practice. This has led the compilers systematically to condense and compress the other matter in revision, and they justly claim that great gain to the work has thus resulted. The essential features remain, particularly the Standard Specification clauses, and the new matter is of the kind that is especially valuable to all anxious to keep in touch with modern developments. In illustration of this policy I would mention articles dealing with such subjects as ultra-violet-ray glass, and with artificial daylight. Again, in the "Roads and Footways" section there is reproduced (by permission of the British Engineering Standards Association) the latest specification for single-coat asphalt surfacings, recently prepared by the Institution of Municipal and County Engineers and the County Surveyors' Society.

Welcome additions are made to the important series of illustrated special articles which have proved so valuable in former issues. The subjects for the present series have been chosen on the principle which has been followed for many years past, viz., to select topics of present-day interest and importance upon which concise information is not readily obtainable elsewhere. There are five such articles in the 1930 edition, treating of matters so widely different as the planning of theatres, oil as a heating fuel, motor garages, tall chimneys, and acoustics. It is impossible in the limited space at my disposal to do more than make general reference to this section of the work. It may be said, however, that three of these articles are signed by writers who are acknowledged experts on the subjects treated; and, further, that the two anonymous articles are obviously the work of men equally qualified, both by knowledge and experience, to give advice in their own particular line.

O. J. HEALING

Specification, 1930. Edited by Frederick Chatterton, F.R.I.B.A. The Architectural Press. Price 10s. 6d. net.

From Specification 1930.] [*Edited by Frederick Chatterton.*

Diagrammatic plan and section of a hypothetical building, illustrating the principles which govern the setting out of the seating sight lines, stage and screen in theatres and cinemas.

THE NATIONAL PHYSICAL LABORATORY'S REPORT

IT is not often that an official report contains so much of both scientific and industrial interest as does the report of the Executive Committee of the National Physical Laboratory for the year 1928, recently issued.

When it is recalled how wide is the range of work covered by the institution, it is not surprising to find the Executive Committee's brief summary, together with the more detailed reports of the departments, extending to 270 pages. Research work in physics, electricity, metrology, engineering, metallurgy and other branches of science naturally bulks largely in the activities of the institution, but the increase in paid work done for British manufacturers indicates that the

industrial applications of science are being better appreciated now than in the past. Even a brief catalogue of the activities of the Laboratory would occupy considerable space, but mention should be made of various matters of special interest to the architect.

The new building to accommodate the Physics Department will enable the work of the Heat Division to be carried on under much improved conditions, though unfortunately the Sound Division is still hampered by lack of adequate facilities for research work. The acoustics of buildings, the measurement and analysis of sound, sound production, reproduction, transmission and magnification, and the study of noise are all becoming of increased importance. In this Division the study of sound transmission by partitions has been continued, and a number of simple and composite partitions have been examined, including plywood, various wall-boards, match-boarding and a brick wall. We look forward with anticipation to the published account of this work, which is promised. The methods developed for examination of the acoustics of buildings have been applied to a hall in the new building of Imperial Chemical Industries, Ltd., to a proposed new lecture theatre at Edinburgh University, and to the Royal Albert Hall. For the last a new three-dimensional method has been devised in which light waves replace for experimental purposes the waves of sound.

In the Heat Division, in addition to the usual determinations of the conductivity of heat-insulating materials, made for firms, an investigation into heat-flow through insulating walls as affected by certain modifications of shape has been conducted, and the results already published.

In connection with lighting, the Photometry Division organized a series of tests for estimating glare and visibility in lighted streets. These tests, made in connection with the Sheffield meeting of the Association of Public Lighting Engineers, yield interesting information, and a full report on the work has been submitted to the Illumination Research Committee. An investigation, referred to in the previous year's report, on "Reflection from Road Surfaces" has been completed and a report sent to the Illumination Research Committee. A résumé of this work was read at the meeting of the International Commission on Illumination in September, 1928. Good progress has been made in the investigation into various problems of room-lighting, including the study of illumination from light wells, measurement of daylight factor in deep rooms, transmission of window glasses when clean and after exposure, and various other associated work.

In the Engineering Department, a large proportion of the research work was done to programmes controlled by various boards and committees of the Research Department or by outside bodies, and this work included, amongst many others, research for the Building Research Board, for whom the investigation into the wind pressure on structures was continued. These experiments, it will be remembered, are in continuation of the investigation initiated by Doctor, now Sir, Thomas Stanton. Experiments have also been made on a number of floor slabs of reinforced concrete, designed and made at the Building Research Station.

These represent merely a few activities of the Laboratory, for there are many more of both scientific and practical industrial interest. Touching the electrical side, it may be mentioned that the erection of the million-volt transformers in the high-tension building was completed in June, 1928. The installation has successfully passed the contract tests, which included a run of one hour at 10 per cent. overload. A fine photograph (see frontispiece of this issue) shows the spark obtained from the plant at about a million volts.

Despite the fact that the report represents merely a brief statement of work done during the year, it is impressive as an indication of the part which scientific research plays in industrial life to-day. A. H. H.

The National Physical Laboratory Report for the Year 1928. His Majesty's Stationery Office. Price 9s. net.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

AN interesting debate, initiated by the Bishop of Southwark, took place in the House of Lords on the question of slum clearance. The Bishop asked the Government when it was proposed to introduce legislation on the subject. He pointed out that, in spite of the magnificent effort at housing which had been made in this country, there was reason to believe that the slums were almost as overcrowded as they were ten years ago. A simpler method of carrying through slum clearance schemes was needed, and also some different method of compensation. The present method penalized the good as well as the bad landlord. A larger amount of help was required from the Government in slum clearance schemes, and legislation should be passed penalizing the tenant who deliberately damaged the house in which he lived.

The Bishop of London urged the Government to take the matter up with determination.

Lord Daryngton said there was no reason why we should have 50,000 men idle in the building trade. Was there, he asked, no way in which the 1,500,000 unemployed could be utilized to build houses?

Lord Onslow said a great deal of the difficulty and delay in the solution of the problem was due to the unfair basis of compensation to the owners of property. The opportunities which the reconditioning of houses presented were considerable, and new powers should be given to local authorities in that direction.

Lord Jessel, in putting the view of the London County Council, said that as late as last June the L.C.C. decided to expedite their existing programme of slum clearance and embark on a further programme involving the rehousing of 30,000 people, at an estimated cost of £4,500,000. Pending the removal of certain legal difficulties, several schemes had been held up under the new programme, and, he hoped, therefore, that the debate would accelerate the introduction of the Government's Bill. He hoped also that the Government would consider dealing with section 46 of the Act of 1925, because that was a matter which kept a great many local authorities from making plans for the reconstruction of slum areas. If an area was condemned, they could only get the site value, and no compensation was given for the building. It had always seemed to him a great injustice that an owner who had looked after his property, though the surrounding area might be bad, should get nothing at all for that property. Reconditioning could be done much more cheaply than the building of new houses, and if the public utility companies could be assisted to a greater degree in getting cheaper money they would do the work much better than any local authority. They might also get the building societies interested in the matter.

Lord Marley, for the Government, admitted that the result of many years' work had been disappointing. The total number of houses under the confirmed schemes was only 15,000, and the persons rehoused just over 74,000. The Government, in their Bill, had decided to simplify and shorten the procedure for dealing with slum-clearance schemes. They would make provision for the necessary capital to deal with the cost of such clearances, and they would assist local authorities in the inspection of property, and its maintenance in proper repair. They were definitely prepared to encourage the decentralization of industry, and the removal of factories from closely populated areas into more rural areas where

town planning would ensure that they did not interfere with the amenities of the district. There were difficulties in an overcrowded legislative programme, but it was the full intention of the Government to introduce their Bill into the House of Commons very shortly.

The debate was then adjourned.

In the House of Commons, Mr. Greenwood informed Mr. Gould that the number of houses authorized under the 1923 Act which had not been completed by September 30, 1929, was approximately 46,500.

Miss Rathbone asked the Minister of Health whether he would so expedite the making up of accounts relevant to the cost of slum-clearance schemes under the Housing Act, 1923, that the House might have, at least, approximate figures showing the average expenditure per dwelling incurred out of public funds in, at least, some of the schemes carried out under existing legislation before it was asked to embark on a new policy of slum clearance under the promised new Bill.

At question time Mr. Greenwood informed Dr. Hastings that the total sum paid to February 15, 1930, on account of Exchequer subsidy in respect of houses built since the Armistice had been £82,832,993. The Exchequer subsidy in respect of houses already built was payable for varying periods of from twenty to sixty years under the relative provisions of the Housing Acts, 1919 to 1926. The present annual Exchequer liability was about £11,000,000 and, apart from increased provision necessary in respect of further houses, would be first reduced about the year 1940.

Mr. Robert Richardson asked the Minister of Health if he would furnish a return showing annually, from 1919 to 1929, the number of local authorities in England and Wales who erected houses by direct labour, and the number erected.

Mr. Greenwood said that particulars as to direct labour schemes in the form desired were not available, but the following statement showed the number of State-assisted houses included in direct labour schemes of local authorities in England and Wales which had been approved since January 1, 1919 :

Under the Housing, Town Planning, etc., Act, 1919 :	
1919 to 1927	8,160
Under the Housing, etc., Act, 1923, and the Housing (Financial Provisions) Act, 1924 :	
8 months ended March 31, 1924 ..	1,522
Year ended March 31, 1925	3,344
" " " 1926	4,667
" " " 1927	5,921
" " " 1928	5,948
" " " 1929	4,481
9 months ended December 31, 1929	4,558
Total under Acts of 1923 and 1924 ..	30,441

All the houses approved under the Act of 1919 had been completed. The number of local authorities concerned was approximately 120. 25,903 houses approved under the Acts of 1923 and 1924 had been completed by December 31, 1929. The number of local authorities concerned is 110.

Mr. McKinlay asked the Minister of Health whether he could state the number of working-class dwellings in England and Wales which had been acquired for demolition under clearance schemes between April 1, 1925, and December 31, 1929, and the number of new dwellings erected in connection with such schemes.

Mr Greenwood said that information as to the number of working-class dwellings acquired was not available. The number of buildings which would include some buildings other than houses acquired by local authorities in England and Wales between April 1, 1925, and December 31, 1929, in connection with approved slum-clearance schemes was approximately 10,000, and the number demolished approximately 8,000. The number of new dwellings erected during the same period in connection with such schemes was nearly 9,000.

Mr. Greenwood informed Mr. F. Owen that, up to December 31 last, the latest date for which figures were available, assistance had been promised under the Housing (Rural Workers) Act in respect of 2,510 dwellings in England and Wales. Work had been finished on 1,669 of these, and was in progress on a further 650. Applications in respect of an additional 396 dwellings were then before the local authorities.

Sir William Davison asked the First Commissioner of Works whether steps would be taken to remove, or at any rate to reduce in height to the level of the boundary wall, the galvanized-iron building used for Office of Works stores immediately to the west of Sir Christopher Wren's orangery in Kensington Gardens, on the north side of Kensington Palace.

Mr. Lansbury said that the building in question was at present in use, but it was hoped that it could be vacated and pulled down by the end of the present year.

SOCIETIES AND INSTITUTIONS

R.I.B.A. ANNUAL CONFERENCE

The R.I.B.A. annual conference will be held in Norwich from June 18 to 21, 1930, inclusive.

THE HONAN SCHOLARSHIP

Mr. R. P. S. Hubbard, of Bedford, has been awarded the Honan Scholarship for 1930. The scholarship is a travelling one of £50. The second prize of £10 has been divided between Messrs. F. H. Littler, of Preston, and A. G. S. Sidler, of North Wales. The three prizewinners are third-year students at the School of Architecture, University of Liverpool.

SOCIAL LIFE IN FRANCE

Professor A. E. Richardson, F.R.I.B.A., lecturing on "Social Life in France during the Years 1700–1830," at Leeds, said that in art as in life there was continual change. Architecture, which embodied all the arts, demanded to be studied as an integral part of the social fabric of a nation.

By the year 1700, he said, the thawing influence of the Italian Renaissance had been at work for two centuries. The Catholic Church had not lost authority. On the land men were held in thrall; they worked, delved, spun, carved and shaped, much as their ancestors had done. All work was accomplished by hand; the machine, as we know it, had not yet emerged as an instrument of intricate parts. For these reasons the art of the eighteenth century, despite its pseudo-classicality, was related to the volume of endeavour which gave the world the glorious cathedrals of the thirteenth and fourteenth centuries. The intuition for fitness, which previously had accompanied Gothic art, was in process of transference to a revived classicism. The beginning of the period marked the end of the compromise between the mediæval and the rise of the modern. The end of the period showed the limits to which the purer expressions of revived classicism could be taken.

The aftermath of the strictly classical experiments, the lecturer said, came in the first quarter of the nineteenth century, when the well-known themes of the Italian Renaissance were exploited in all directions. From thence onwards French architecture, aided by the doctrines of the "Ecole des Beaux-Arts," provided a formula for design. All nations paid tribute to Paris. Viewed in retrospect, it could be said that the value of French art in the eighteenth century was that it extended the best manifestations of the later Italian Renaissance at a period when any other form of expression would have been opposed to contemporary thought.

ART AND CIVILIZATION

An appeal on behalf of distressed artists was made by Sir William Llewellyn, P.R.A., when presiding at the annual general meeting of the Artists' General Benevolent Institution held at Burlington House last week.

Sir William said that art was necessary

to civilized life. It was always with us, and we could not get away from it. Without it there could be no civilization. Everyone who had to do with their profession knew that an artist could not work in distress of mind, and if that distress were not relieved his work must suffer.

The balance-sheets of the institution and the orphan fund, which were presented by Mr. E. Guy Dawber, F.R.I.B.A., hon. treasurer of the institution and the orphan fund, showed that the total of the annual subscriptions and donations last year amounted to £6,589, and the total of reliefs and annuities was £10,062. The interest on investments totalled £5,550.

The president, directors, and hon. officers of the institution, and the committee of the Artists' Orphan Fund, were re-elected, and the following were added to the directors: Messrs. W. G. de Glehn, Harold Knight, and Sydney Tatchell, F.R.I.B.A.

ARCHITECTURE AND SCULPTURE

The second of a series of lectures on the art of building was given at Manchester University recently. Mr. Stanley Casson, who spoke on "Modern Sculpture and its Architectural Background," illustrated by means of lantern slides the uses to which sculpture had been put in the interiors and on the exteriors of modern buildings, and in gardens and public places. He said that to establish a connection between sculpture and architecture seemed to be essential, and he explained how this had been done in Europe and America.

Interiors of buildings, he pointed out, had opportunities for sculpture which were limited but quite definite, as in the case of the Chanu building, a skyscraper whose central heating apparatus, in some instances, was set in panels of decorative bronze and allegorical figures. Private houses had opportunities in alcoves and niches.

ANNUAL MEETING OF THE SOUTH WALES INSTITUTE OF ARCHITECTS

At the eleventh annual general meeting of the Western branch of the South Wales Institute of Architects, held at the Hotel Metropole, Swansea, the following officers were elected: Chairman, Mr. Oliver S. Portsmouth, A.R.I.B.A.; treasurer, Mr. G. R. H. Rogers, L.R.I.B.A.; honorary auditor, Mr. E. E. Morgan, A.R.I.B.A.; and Mr. J. Herbert Jones, honorary secretary.

The following members were elected to serve on the Branch Committee: Fellows: Messrs. Charles S. Thomas, F.R.I.B.A.; Edwin Smith, A.R.I.B.A. (Neath); Edward R. Brown, L.R.I.B.A.; J. T. Jones (Neath); and H. A. Ellis, F.R.I.B.A.

Associates: Messrs. C. W. Geddes and L. W. Devonald.

The officers elected to represent the West Wales area on the General Council of the South Wales Institute of Architects were:

Fellows: Messrs. J. Herbert Jones, F.R.I.B.A.; O. S. Portsmouth, A.R.I.B.A.; Charles S. Thomas, F.R.I.B.A.; G. R. H. Rogers, L.R.I.B.A.; H. A. Ellis, F.R.I.B.A. and Edwin Smith, A.R.I.B.A. (Neath).

Associates: Messrs. C. W. Geddes and L. W. Devonald.

Mr. J. Herbert Jones, the retiring chairman, presented the prizes awarded to successful students in the annual studentship competitions as follows: D. Eric Stephens, first prize for the best essay on "The Æsthetic Value of Concrete as a Monumental Building Material." W. T. Evans (Haverfordwest), first prize for a set of measured drawings of St. David's Church, Hubberston, Pembrokeshire. Elwyn J. Rees, first prize, and John Nicholls (Neath), second prize, for designs for combined electric railway station and bus centre at Oystermouth.

MR. MORRISON ON BRIDGE CONSTRUCTION

Mr. Herbert Morrison, the Minister of Transport, replying to the toast of "His Majesty's Ministers" at the annual dinner of the Institution of Civil Engineers on Wednesday last, said that in the last five years two thousand bridges, varying from small culverts to a structure such as the Newcastle-Gateshead bridge, had been undertaken with the aid of grants from the Ministry, and at the present time Parliament had under consideration the biggest scheme of all, the Charing Cross Bridge. At this period of acute unemployment he was anxious to expedite the reconstruction of weak bridges and the elimination of level crossings over classified roads, and he would encourage the engagement of consulting engineers to supplement the efforts of the technical staffs of local authorities.

Speaking of the Charing Cross Bridge controversy, he said he had had delicately to hint to the architects that he could not regard them as engineers or traffic experts, but nobody was more anxious than he was that the architect should be consulted and employed no less than the engineer in every case where there was a useful sphere for his creative art.

LONDON MASTER ASPHALTERS AT DINNER

The tenth annual dinner of the London Master Asphalters' Association was held at the Restaurant Frascati, Oxford Street, recently. Mr. W. T. Faldo presided over a gathering of about 180.

In response to the toast of "The Association" by Mr. F. Sutcliffe, F.R.I.B.A., Mr. Faldo, president, who has taken office for the second year in succession, said that one of the many important questions which confronted them was that of the sub-contract. He pointed out that the Association had used its best endeavours to get this matter settled and, in conjunction with the National Federation of Sub-Contractors, they had now produced a standard form of sub-contract, which he thought was the most equitable and fair of this kind that had ever been produced. In that form of contract they had had to take into account the difficulties not only of their own trade, but of twenty-five or twenty-six other trades which were associated with the building industry.

Other toasts and responses were given by Messrs. George Mitchell, H. Woodward Aston, T. Bolton, G. J. Spicer, and T. H. Knight.

During the evening Mr. R. D. Daniels was presented by Mr. Faldo with a cigarette case for services rendered to the Association.

WATER SUPPLY OF ANCIENT ROME

Sir Banister Fletcher, P.R.I.B.A., lecturing at the L.C.C. School of Arts and Crafts, described the tombs and works of public utility—aqueducts and bridges—of the Romans. He explained how water was supplied to Rome by stupendous aqueducts on great arches which carried the water in a covered "specus," free from contamination.

DAMP IN BUILDINGS

A lecture on the Knapen systems for the cure and prevention of damp and the aeration of buildings was delivered last Thursday at the Manchester School of Technology, under the auspices of the Society of Ancient Monuments, by Colonel John Brown. Mr. J. T. Halliday, president of the Manchester Society of Architects, presided.

[The Knapen systems were fully described and illustrated in our issue for December 25, 1929.]

ANNOUNCEMENTS

The Kent County Council has appointed Mr. Sidney H. Loweth, A.R.I.B.A., M.R.SAN.I., as deputy county architect.

Messrs. Unsworth and Goulder, F. AND A.R.I.B.A., have removed their offices to No. 28 Essex Street, Strand, W.C.2. Telephone numbers: Central 2304 and 2305.

Mr. Laurence M. Gotch, F.R.I.B.A., late of the firm of Gotch and Saunders, of Kettering and London, is now practising under his own name, at St. Mildred's Court, Poultry, London, E.C., whilst his late partners are continuing the practice at Kettering under the old title.

Mr. A. J. Healey, F.R.I.B.A., of 29 George Street, Hanover Square, W.1, has taken into partnership Mr. F. W. MacKenzie, L.R.I.B.A. The title of the firm will be Healey and MacKenzie, F. AND L.R.I.B.A., architects and surveyors, and they will practise at the above address.

TRADE NOTES

The Stanton Ironworks Company, Ltd., near Nottingham, have acquired the sole British rights of the Victaulic Joint for use with cast-iron pipes. The Victaulic Joint, it is claimed, gives flexibility to a pipe line at each of the joints, and it is anticipated that in the hands of the Stanton Company this joint will be extensively adopted for cast-iron pipes, thereby introducing flexibility into cast-iron mains. In connection with this company's spun pipe, a special form of Victaulic Joint has been designed which obviates the use of the housing.

The calendar for 1930 of the Travel Association of Great Britain and Ireland contains a day-to-day diary of 500 leading events of 1930 throughout the British Isles; lists of shows, exhibitions, festivals, celebrations and old-world customs; information upon a score of different subjects, including customs, passports, taxes, means of transport, motoring, hotels, postal arrangements; and notes on some special features of life in this country which are particularly attractive to visitors from abroad, and in which the position of this country is unique, such as the high standard of general health, its notable spas and resorts, the facilities for sports, the love of pageantry and the attractions of our flower gardens. The calendar is intended for circulation abroad and will be issued in four editions. The English edition of half a million copies is now out and is being despatched abroad. This edition will be followed by 300,000 copies in French, Spanish and German.

An increasing number of architects are availing themselves of the advantages to be derived in the execution of building and other contracts by the use of Eccostats: prints made from any subject drawn, written or printed, by means of large-size, high-speed bromide cameras, using sensitized paper in the place of plates or films. The prints may be of the same size as the original, or enlarged or reduced views of it. Direct copies are exact reproductions of the originals except that the colours are reversed; thus a blueprint when copied gives a black-line print, and a black line subject such as a pencil or ink drawing gives a white-line copy. By re-copying the white-line print a black-line Eccostat is obtained, a fascimile of the original. Tints are reproduced in monochrome as greys. Portions of originals not required can be blocked out and will not appear on copies. Eccostat black-line prints can be worked on in pencil, ink or colour. They are permanent, and can be folded without injury. This form of printing is claimed to be the quickest and cheapest means of 1: Obtaining indisputable copies of documents, leases, ledger accounts, letters, policies and contracts with their original signatures and stamps; 2: Copying engineers' blueprints; 3: Copying maps, pages of books, etc.; 4: Providing legible miniature copies of plans and data sheets for binding in filing covers, or for transmission by post; 5: Enlarging and reducing drawings and outlines to different scales for re-tracing, etc. Eccostats are made by the Engineering and Commercial Copying Co., Ltd., 137 Victoria Street, Westminster, S.W. 1.

THE BUILDINGS ILLUSTRATED

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

Westminster Bank, Doncaster (pages 387-389). General contractors, J. T. Wright and Sons. Sub-contractors: Wm. Bellerby, Ltd., counters and fittings; G. and A. Brown, Ltd., decorative plaster work; Fenning & Co., Ltd., marble and external granite work; Waring, Withers and Chadwick, electrical installation; Waygood-Otis, Ltd., bullion lift; Northern Rubber Co., rubber paving; N. F. Ramsay & Co., bronze book racks, standards, and hardware; Val de Travers Asphalt Co., asphalting; James Walker, stone carving; Stuarts Granolithic Co., Ltd., artificial stone; F. J. Barnes, Ltd., Portland stone; Luxfer Ltd., pavement lights and metal windows; Benham and Sons, Ltd., heating and hot water; Fawcett Construction Co., Ltd., reinforced concrete; Art Pavements and Decorations, Ltd., wall tiling, Terrazzo floors, marble sills, and radiator bases; Jos. F. Ebner, wood block floors; Ed. Wood & Co., steelwork; Wm. Bellerby, Ltd., joinery; Dent and Hellyer, Ltd., plumbing and sanitary work; Fawcett Construction Co., Ltd., suspended floors and roofs on the Mon'lithcrete and Tubular systems.

House at Rhiwbina (pages 408-409). General contractors, Ben. Thomas & Co., Ltd. Sub-contractors: W. Small & Co., roofing; Page and Stibbs, electrical; Williams and Borgars, Ltd., sanitary fittings, grates, locks and ironmongery.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents, and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W. 1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C. 2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

5009. Brooke, H. Building construction. February 14.

4813. Carey, W. L. de M. Building construction. February 13.

4961. McKenzie, J. T. Means for refixing loose slates or tiles on roofs. February 14.

4777. Walker, F. T. Building construction. February 12.

4833. Wright, N. W. Construction of sectional buildings. February 13.

COMPETITION CALENDAR

March 10. The Council of the Metropolitan Borough of Greenwich invites architects to submit designs for a drinking fountain, which it is proposed to erect at Blackheath on a site facing the War Memorial at the junction of Maze Hill and Charlton Way. Premiums: £50, £20 and £10. Particulars of the competition and a copy of the site plan may be obtained from Frederick J. Simpson, Town Clerk, Town Hall, Greenwich Road, S.E. 10. Latest date for applications: March 10.

March 31. — The Accrington Corporation invites architects of British nationality to submit designs in competition for new Police and Fire Stations which it is proposed to erect on a site in Manchester Road, Accrington. Assessor: Herbert J. Rowse, F.R.I.B.A. Premiums: £250, £150 and £100. Conditions of the competition, together with a plan of the site and all particulars, may be obtained from William Henry Warhurst, LL.B., Town Clerk, Town Hall, Accrington. Designs to be submitted before March 31.

April 28.—Messrs. Josiah Wedgwood and Sons, Ltd., invite designs in competition for a Wedgwood Vase, to be made in commemoration of the Bicentenary of the Birth of Josiah Wedgwood, which will be celebrated in 1930. Assessors: Philip Connard, R.A., W. Reid Dick, A.R.A., H. S. Goodhart-Rendel, F.R.I.B.A., and Frank H. Wedgwood. Premiums: £100, £50 and £25. Full particulars may be obtained on application to the Secretary, Messrs. Josiah Wedgwood and Sons, Ltd., Etruria, Stoke-on-Trent. Latest date for submission of designs: April 28.

June 14. — The Chelmsford Corporation invites architects to submit designs in competition for a new public library in accordance with conditions drawn up by H. V. Lanchester, F.R.I.B.A., who will act as assessor. Applications for conditions and a plan of the site should be made to G. E. Barford, Town Clerk, Chelmsford. Deposit £1 1s. Latest date for submission of designs: June 14.

July 1.—The Royal National Eisteddfod of Wales, 1930, has issued a list of competitions in the arts, crafts and science section. Assessor: Percy E. Thompson, F.R.I.B.A. The drawings are to be delivered to Mr. W. H. Protheroe, General Secretary, Eisteddfod Office, Llanelly, not earlier than July 1, 1930, or later than July 5, 1930. Besides the architectural section there are also competitions for fine art, sculpture, applied art, and domestic arts and crafts. Programme giving full particulars, etc., is obtainable from James Davies & Co., Ltd., Murray Street, Llanelly. Price 1s. (post free, 1s. 3d.).

July 31.—The Luton Town Council invites architects to submit designs for the proposed Town Hall which is to be built on the site of the old town hall, at an approximate cost of £250,000. Assessor: Sir Brumwell Thomas. Premiums: £500 to £100. Latest date for submission of designs: July 31.

No date.—The Leicester Corporation invites local architects to submit designs for the erection of a library at West Humberstone. Assessor: Hugh Gold, F.R.I.B.A. Premiums: £75, £50, and £25.

Mr. Vincent Harris, F.R.I.B.A., has been appointed assessor for Johannesburg's new library and museum, which is to be erected at a cost of £200,000.

The Crook Urban District Council has received fourteen designs in the limited competition for the new town hall and council chamber which it is proposed to be erected in the Market Place, Crook. Mr. F. Willey, F.R.I.B.A., of Durham, has been appointed assessor.

The Lancashire Education Committee has obtained sanction for a loan of £32,000 for the erection of extensions at HUTTON Grammar School.

The Lancashire Education Committee has obtained sanction to borrow £26,000 for the erection of new buildings for POULTON BAINES Grammar School.

The Lancashire Education Committee is to erect a senior school at POULTON LE FYLDE.

The Lancashire Education Committee has purchased a site at Sedgeley, PRESTWICH, for the erection of a junior and infants' school.

The SHIPLEY U.D.C. Housing Committee has instructed the surveyor to prepare a layout for the erection of houses upon sites to be purchased at Busy Lane and off Carr Lane.

The SOUTH SHIELDS Corporation Housing Committee is acquiring land at East Jarrow, and has authorized the borough engineer to prepare plans for the erection of houses for the working classes to be erected thereon.

Plans passed by the SOUTH SHIELDS Corporation: Conversion of shop into flats, 65 South Eldon Street, for Mr. F. W. Newby; alterations, "Garden Gate" public-house, Havelock Street, and alterations Norfolk and Suffolk Hotel, Market Place, for Messrs. T. A. Page and Son.

Plans passed by the TYNEMOUTH Corporation: Six houses, Creswell Avenue and Ancroft Avenue, for Mr. A. K. Tasker; extension to hairdressing saloon, The Allotment, for Mr. R. Ellison; twelve houses, Wansbeck Avenue, Cullercoats, for Messrs. Beautyman and Gray; six houses, Mast Lane, for Mr. H. D. Burton; alterations, High Lighthouse, for Mr. R. F. Hindmarsh, on behalf of Tyne Improvement Commissioners; two bungalows, Highbury Place, for Messrs. F. R. N. Haswell and Son; layout Hawkey's Lane Estate, North Shields, for Messrs. Brannen; bakehouse, Charlotte Street, North Shields, for Mr. W. Stockdale.

The YORK Corporation has authorised the city engineer to obtain tenders for the erection of 100 houses on the Burton Stone Lane Estate.

Plans passed by the YORK Corporation: Additions, James Street, for British Petroleum Co., Ltd.; offices, Aldwark, for Messrs. J. Holmes & Co.; garage, Barbican Road, for West Yorkshire Road Car Co.; extensions, Mount School, Dalton Terrace, for the Education Committee; layout of land, Acomb Road, for Backhouses, Ltd.; offices, Museum Street, for Mr. J. Hetherton; additions, Picture House, Coney Street, for Provincial Cinematographs, Ltd.; four houses, Heworth Hall Drive, for Messrs. T. and M. Caffrey; additions, Hull Road, for Tang Hall Working Men's Club and Institute; factory, Hull Road, for Mr. P. Lazenby; additions, 61 Gillygate, for Mr. R. Williams; additions, Layerthorpe Grove, for Messrs. F. L. and A. London; four houses, Winchester Grove, for Mr. W. E. Puckering; additions, Coney Street, for Messrs. J. B. Inglis and Son; additions, Market Street, for Public Benefit Boot Co.; four houses, Ainsty Avenue, Dringhouses, for Ainsty Building Estates, Ltd.

WALES

The MERTHYR borough engineer has prepared plans for the erection of an administrative block at the isolation hospital, at a cost of £16,500.

SCOTLAND

The following figures show the progress that has been made in State-aided housing schemes in Scotland to January 31, 1930: 1919 Act, by local authorities, 25,129: 1919 Act, by public utility societies, 421; private subsidy schemes, 1919 Additional Powers Act, 2,324; slum clearance schemes, 11,108; under construction, 2,142: 1923 Act, by local authorities, 4,028; under construction, 2: 1923 Act, by private enterprise, 17,643; under construction, 1,242: 1923 Act by public utility societies, 80: 1924 Act, by local authorities, 42,110; under construction, 5,174: 1924 Act, by private enterprise, 1,431: under construction 1,499: 1924 Act, by public utility societies, 127; demonstration houses, 17; steel houses erected on behalf of Government by Scottish National Housing Company, 2,552. Total completed, 106,970; total under construction, 10,059. Total, 127,029.

MISCELLANEOUS

Plans passed by the DOUGLAS (I.O.M.) Corporation: Additions, 7 Palace Road, for Mr. Blincoe; first-aid station and lounge, Cunningham Holiday Camp, Victoria Road; waiting-room over foyers, Picture House, Strand Street, for the Strand Cinema Theatre Co.; shop, rear of 32 Circular Road, for Mr. T. W. Bridson; alterations, 96 Strand Street, for Mr. Thomas.

At a meeting of the ISLE OF ELY C.C. the county surveyor submitted amended drawings for Adelaide Bridge, Prickwillow, the general plan of which has been approved by the Ministry of Transport and the engineer of the Ouse Drainage Board.

E

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

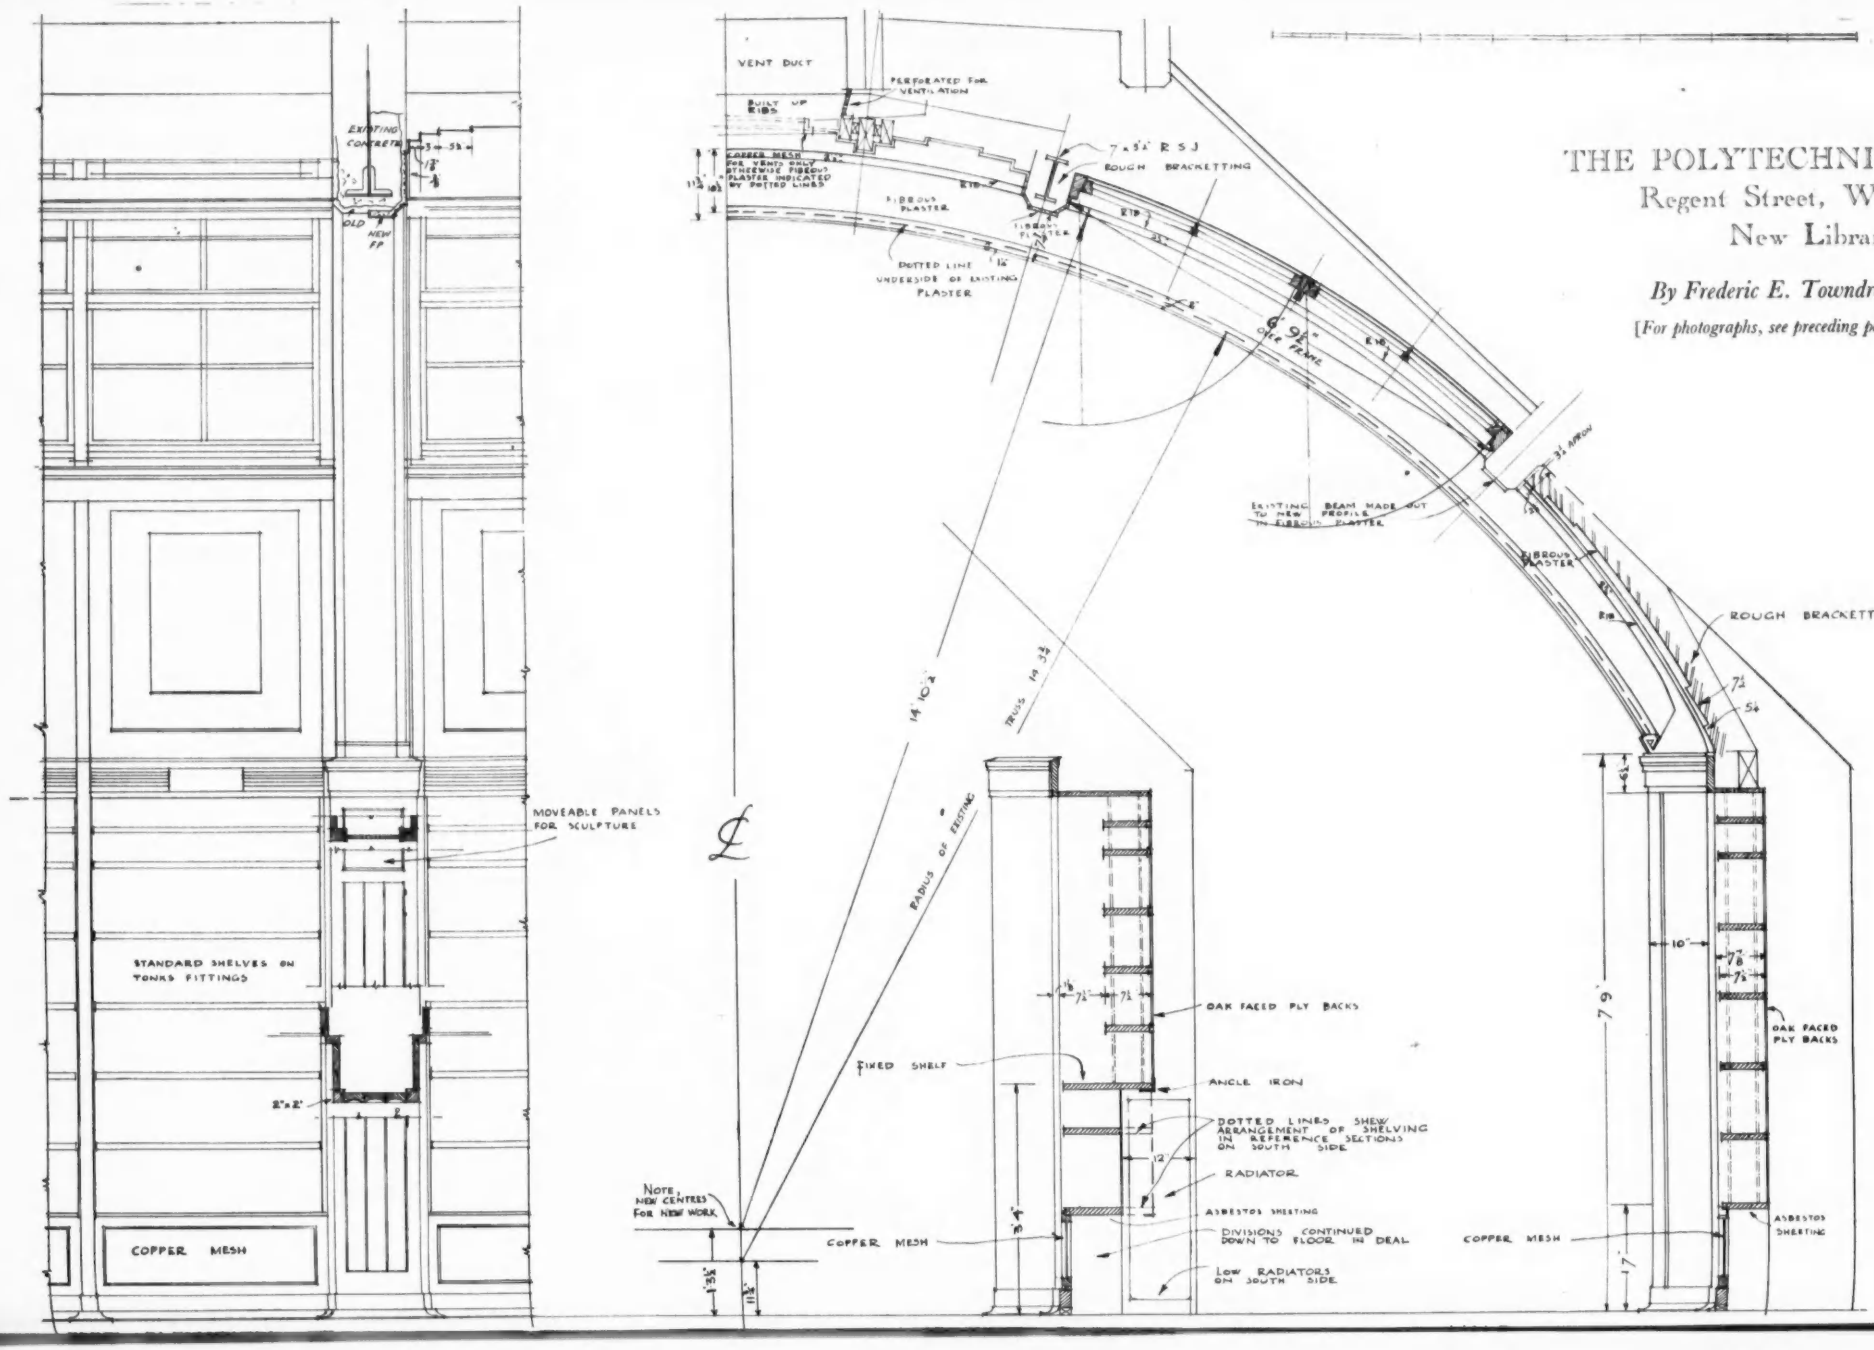
NEW LIBRARY AT THE POLYTECHNIC, REGENT STREET, W.1 : BY FREDERIC E. TOWNDROW

THIS library has been planned to hold 25,000 books and to accommodate both lending and reference departments.

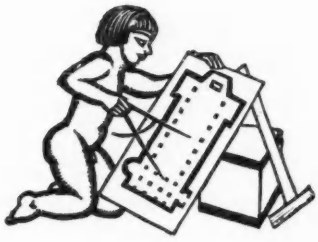
For the most part the work formed an internal construction on the site of the old architectural studios on the first floor. In transverse section these were like a semi-octagon, with the top side for the ventilation ducts, the two sloping sides glazed with large sheets of patent glazing, and the vertical sides of brick walling. In reality, the new work is a large semicircular laylight beneath a concrete roof. The coffers are of fibrous plaster, all the projecting members being structural.

The electric light fittings were specially designed by the architect.

The slight golden tone of the joinery, which is Austrian wainscot oak, oiled and waxed, is enhanced by the warmer colours of the cork tile floor and a sparing use of bright yellow in the edges to the coffers. A warm cream is used to pick out the main structural members of the ceiling. The ceiling air-vent panels and the light fittings are lacquered in gold.



The above photographs, of a section of the ceiling, looking upwards, and a bay of the bookshelves, were specially taken to illustrate the working drawing reproduced on the following page.



THE POLYTECHNIC, Regent Street, W.: New Library.

BUILDING HIGH IN SPITE OF LONDON'S BYLAWS

Today's Exceptions May Become Tomorrow's Rule

IT will have puzzled many people to know why, when the bylaws that govern the height of buildings in the London area expressly define the maximum cornice height of new buildings at 80 feet and the limit of occupied room space at 100 feet, there should appear above the skyline in all parts erections that clearly infringe this law and set standards more consonant with New York than with London.

On the evidence of these buildings anyone might casually assume that the law had been altered or had been allowed to lapse. He may be comforted to know that in every case where a building has exceeded the statutory height a definite exception has been made to an Act which still stands on the statute-book. It could be pointed out that in no case does any one of these buildings obtrude a greater bulk between sunlight and the neighbouring streets and property than would otherwise have been allowed by the normal reading of the Act, and that in no case were any of them put to occupational uses above the 100-foot line. So that it comes to this: for the purposes of architectural distinction, advertising or pure pride, whatever may be included under the liberality of "ornamental towers, turrets or other architectural features" may rise above the common mean in lordly but unoccupied splendour—a costly extravagance, withal.

If one looks backward a few years it is easy to remember a London that, by comparison with the appearance today—an appearance largely due to the operation of the 80-foot limit—was decently low in height, easy to move about in, and pleasant and sunny withal. Thinking of Regent Street as it was and is gives one exactly the extremes of comparison by which one may gauge the effect produced by setting a maximum limit of height far above the then existing mean level of building. One notices how much less sun enters Regent Street than used to in past times, and one finds with horror that the curiously narrow back streets have become impossible gullies at the base of towering walls of steel, brick and glass. One sees, in fact, that the 80-foot limit is one beyond which it would be unwise to build unless considerations of light and air, traffic and communication are to be entirely left out of account.

Looking at this advance of rebuilding without regard to the regulations which have governed its growth, and seeing it as merely the manifestation of economic expansion, one might say that as buildings a few years ago were normally low, and as they have so prodigiously increased over so short a period, nothing should prevent the natural tendency to rise, and that, indeed, the higher they rise the better. In this way do many business men think, wondering that even 100 feet should be a limit. Let us attempt to assess the present state of affairs in its true relationship to the past and the future. Not in the carping spirit of those who would like London to remain a city of domestic squares and country streets, nor yet from the soaring standpoint of him who measures success in stories from the pavement, let us consider now the bearing of these exceptions.

Allowing for the known fact of their being untenanted above the regulation height and of their invoking discretionary rights under the Act, it is still necessary to inquire whether, perhaps, the creation of thirty-eight exceptions in one year is not piling up too unwieldy a mass of precedent. There may come a day when all the towers may put their heads together and refuse to be regarded as exceptions, and one may be sure that there is a section of the business community only too eager to back them up. Again, may one not wonder whether the L.C.C. themselves find 80 feet too low for general tastes? Probably not, but nobody knows.

We do know that London streets are getting higher, and that less light and air are circulating in roadways that are filled with ever-increasing traffic. Would it not be far better for the health of us all if town planning were to solve the difficulty by exercising discretionary powers directly regulated by the incidence of light and air over the whole area of London?

A MODERN MASTERPIECE OF BRICK DESIGN

The Ninth Church of Christ, Scientist, Great Smith Street, Westminster, S.W., designed by Sir Herbert Baker, A.R.A., was officially opened on Sunday last. The accommodation provided includes a big circular assembly hall, a large entrance hall with apsidal ends, and a children's Sunday school. Among the outstanding constructional features are vaults and semi-domes, beautifully executed in brickwork. Even the inscription has been worked in this material.

NEWS & TOPICS

G. D. Gordon Hake, F.R.I.B.A., headmaster of the R.W.A. School of Architecture, Bristol, first recipient of the new R.I.B.A. annual Athens bursary, which is of the value of £100 and requires the bursar to spend four weeks in Greece.

THE SLUM CLEARANCE BILL

THE Labour peer, Lord Marley, introduced the Government's Slum Clearance Bill in a maiden speech to the House of Lords last Wednesday. He made it clear that the new Bill is to differ from any of its predecessors in point of comprehensiveness, making a frontal attack on the problem in its worst manifestations. It regards reconditioning methods as totally inadequate, and will institute a wide and expensive programme of actual rebuilding.

★

Lord Marley warned the House that the Bill would affect the rights of private property, meaning, I suppose, vested and speculatory interests; and that the expense would include the housing of people dispossessed by clearance of unhealthy areas.

★

If all this is made law, the two great bugbears of slum clearance will be on the way to being removed. The class of property owner most affected by slum clearance is not usually one that the public may feel too tender-hearted about, as many who are engaged upon social work fully realize; while town planners, on the other hand, know how much the presence of slums and decaying property may affect the spirit and the earning power of large masses of people and the real wealth of cities. It would be a fine thing for this country if public money could employ men on so fine a job of work as this.

FLOOD LIGHTING IN ST. PAUL'S—AND ELSEWHERE

When the screen, which has for five years hidden part of the interior of St. Paul's Cathedral from public view, is taken away some time in May, no change will be more noticeable than the reorganization of the electric lighting. The high altar, which Wren made the focus of the whole design, will be illuminated by hidden lighting, with what effect of dramatic grandeur one may imagine, when one remembers how beautifully it glows under an occasional beam of sunlight. Nearly as dramatic will be the transformation of the mosaics of the dome, flushed by light hidden above the upper cornice.

★

Light is becoming more and more a necessary factor of architectural design, so that it will soon be impossible to think of a great ceiling without at the same time thinking of light and colour—and one day, perhaps, of fine decoration and fresco. I have not yet been, but I mean to pay a visit, to the Banqueting Hall, now the Royal United Services Museum, in Whitehall, where the ceiling that Rubens painted for Charles I. in 1635 is clearly visible for the first time in three hundred years—through the agency of flood lighting.

WHAT DE-RATING COSTS THE L.C.C.

It appears from the L.C.C. estimates for 1930-31 that the De-rating Act does not seriously affect the budget for the county of London. The actual loss of rates amounted to £2,110,000 for the standard year 1928-29, which is not large when one considers that the L.C.C. has the yearly spending of the incredible sum of forty million pounds of public money. This is more than the income of all but the largest states, and the responsibility it carries with it might well fill with trepidation a body less capable and zealous in the public welfare than the L.C.C. itself.

★

It will be remembered that, while the De-rating Act does not seem to involve great losses, it is represented in the gigantic total by a sum of £11,601,080, occasioned by the transference of the Poor Law services from local authorities to the county, which services bring with them a wages bill amounting to over three million pounds.

A " BROAD ARROW " OF COMMERCE

This photograph of a rustic scene shows rather pointedly at what price, both to the enterprising press and to the defenceless roadsides of west and north countries, new papers have found a footing and a circulation where there was none before. One may well wonder how much the success of these undertakings is dependent upon good journalism of the bright and snappy sort, and how much upon the type of devastating publicity which has taken all savour from this little scene at the cross roads. Do these broad arrows point the way to anything of a new and peculiar value, I wonder?

One of the broad arrows of commerce, signs of the times, indices of " progress," or what not, that should have no place in the landscape of our ideals.

TOWN-PLANNING A DEAD LETTER IN FRANCE

Town-planning in France has become a dead letter. In 1919 the French brought in a most drastic town-planning law which made it compulsory upon the larger towns in France to prepare plans for their future development. But, although town-planners have prepared schemes for Greater Paris, for Rheims and for Dunkerque, none of them is being carried out, and the organization that has been set up for planning the region of Greater Paris moves all too slowly. Whereas in this country only a small staff connected with the Greater London Regional Planning Committee are paid officials, the members being all volunteers representing local authorities, in Paris the committee is composed almost entirely of public officials. M. Agache, the distinguished town-planner, thinks that the tenacious individualism of France has the effect of accentuating the national inaptitude for organization.

SOLVING THE HOUSING PROBLEM IN THE MIDDLE AGES

A unique example of the way in which the housing problem was partly solved in the Middle Ages may be found at St. Mary's Hospital, Chichester. Many visitors to this ancient city go to the cathedral and study the Market Cross, but never see the unique Hospital of St. Mary that is hidden away between St. Martin's Street and the street called Little London. It was probably built at the end of the thirteenth century as a hospital, with a chapel at one end 47 ft. long, and a hall at the other 84 ft. long. The details of the piscina in the hospital are so exactly like those in the neighbouring Church of St. Olive that they were probably made by the same mason. The oak screen appears to be modelled after the same ideas of tracery as the windows of the Cathedral Lady Chapel. But within the hall are sixteen rooms inhabited by eight old ladies—pensioners selected by the Dean and Chapter.

STATICS AND DYNAMICS

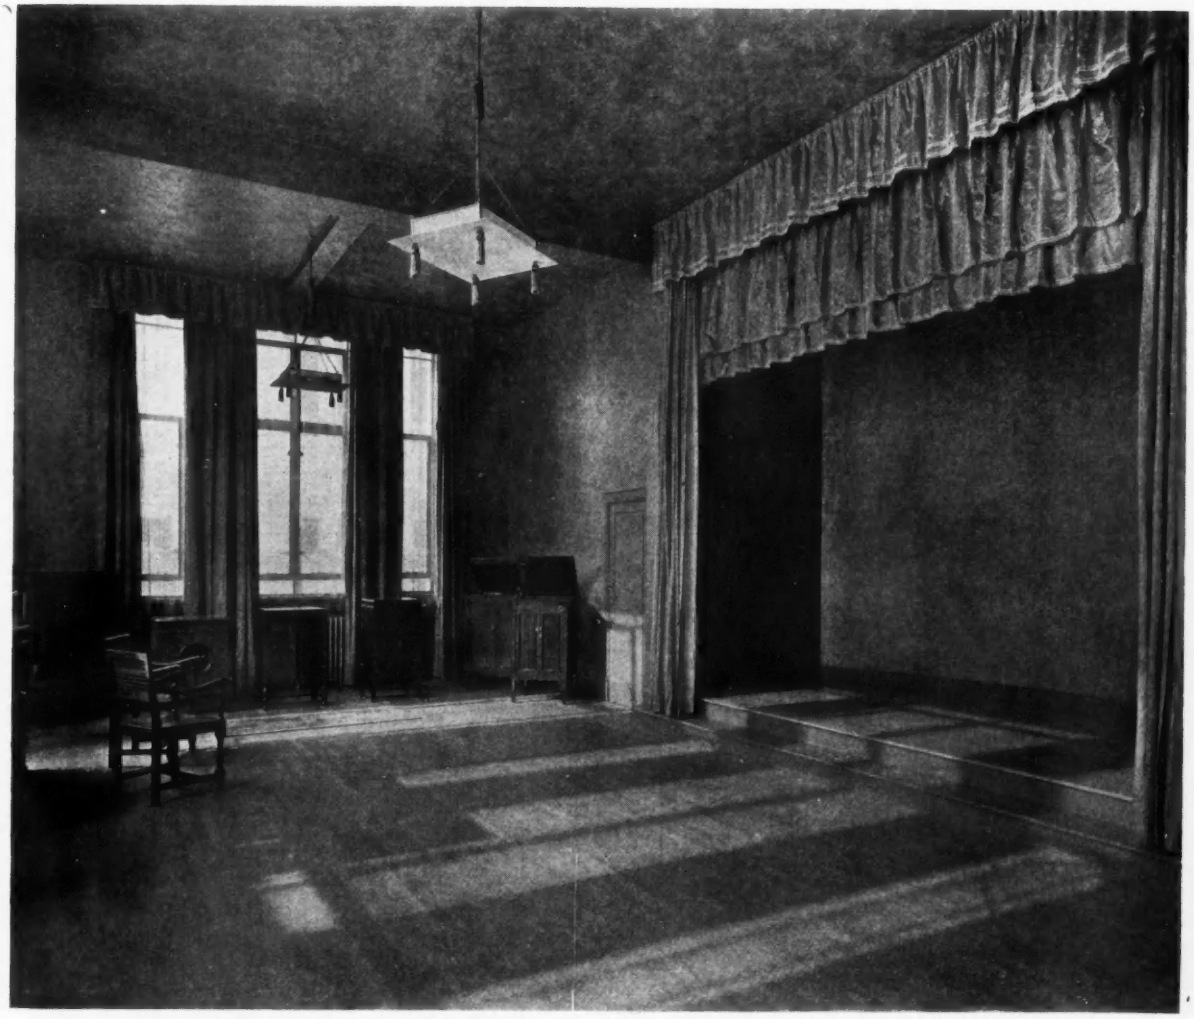
How seldom we realize what may be called the dynamic history of things that impress us by their static quality! Few could make a guess, by merely looking at the enormous block of marble that is the Mussolini monolith, at what labours of transit its position signifies. A recent article in the pages of this JOURNAL must, however, have brought them vividly home to readers. And now, here is *The Manchester Guardian*, with its story about the twelve splendid pillars that support the roof of the banking hall in Sir Edwin Lutyens's new Lloyds' Bank in Cornhill. Eight of these are cut from a piece of Italian marble weighing more than 100 tons, which, rolling down a hillside, threatened to destroy a village. In the course of blasting operations in the quarry hundreds of feet above, this prodigious mass took charge, broke away and balanced itself on a jutting crag. Only after twelve days of incessant and precarious work was danger averted. The marble columns, now in position in the new building, took over a year to cut and polish before they were transported to London by special steamer. The main section of each pillar is twenty-six feet long, has a diameter of three feet, and weighs fourteen tons.

POULTRY, E.C., A CENTURY AGO

A print which was exhibited recently at the Midland Bank, Poultry, shows the site of the bank in 1825, including Wren's Church of St. Mildred, Poultry, demolished in 1872. Here, too, had been the poulterers' stalls which gave the street its name. On the right was Scalding Alley, and beside it ran the Walbrook, then large enough to carry barges. Beyond the church was the Poultry Compter, where were imprisoned Dekker the dramatist, and the Smithfield martyr, John Bradford. In 1817 the Compter was destroyed and there was built the Poultry Chapel, which was to become famous under Dr. Parker. In 1872 the bank, which had been adjoining since 1837, extended itself to the Poultry and took in the chapel. The proceeds of the chapel sale went towards building the City Temple. This reproduction and information are due to the courtesy of Mr. H. C. Fisher, of the Midland Bank. ASTRAGAL

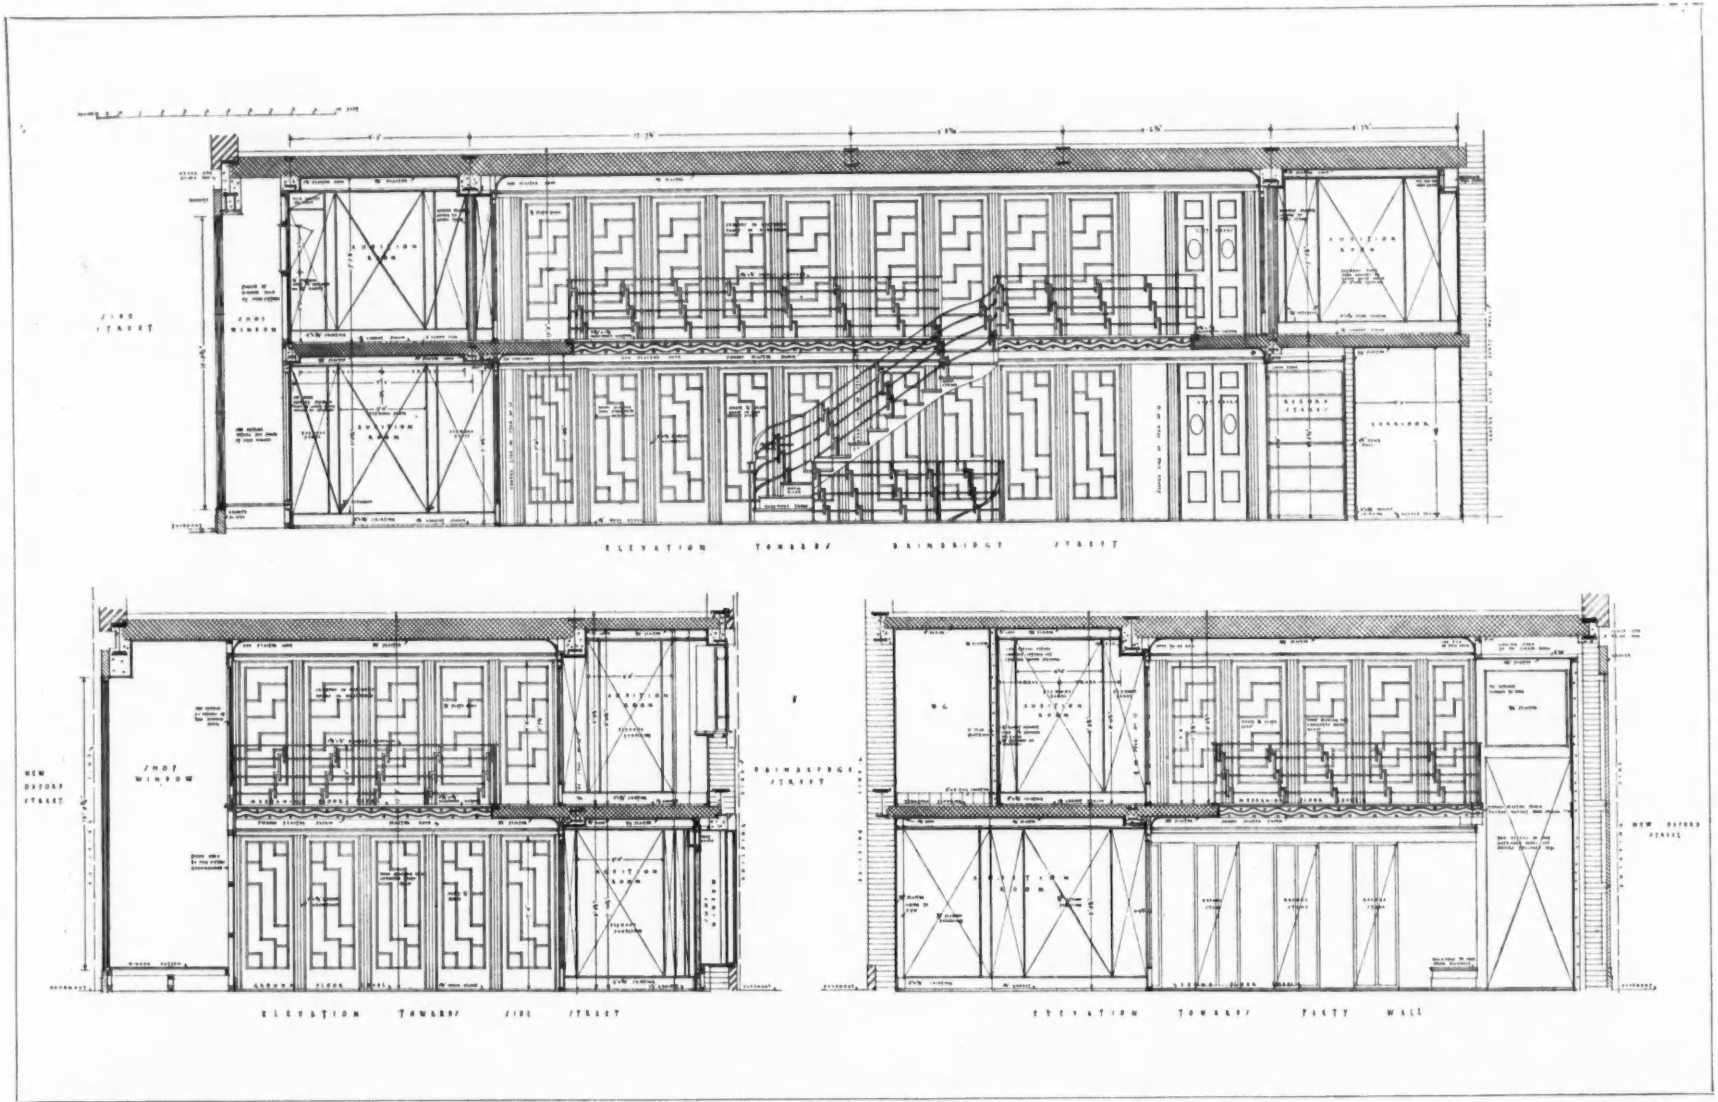
Upon the site here pictured as it was a hundred years ago now stands the massive Midland Bank, Poultry, E.C. This Wren Church of St. Mildred was demolished in 1872.

GRAMOPHONE GALLERIES IN NEW OXFORD STREET, W.



DESIGNED BY ROBERT ATKINSON

MESSRS. ALFRED IMHOF'S new premises, for the selling of gramophones, records and wireless apparatus, occupy the five lower floors of the new building erected at the corner of New Oxford Street and Bainbridge Street, London, W. Surrounding the shop space on the ground floor are sixteen audition rooms on two levels, those on the upper level being approached by a light iron staircase and open gallery. In the basement are further audition rooms and two large showrooms for the exposition of gramophones and wireless instruments.

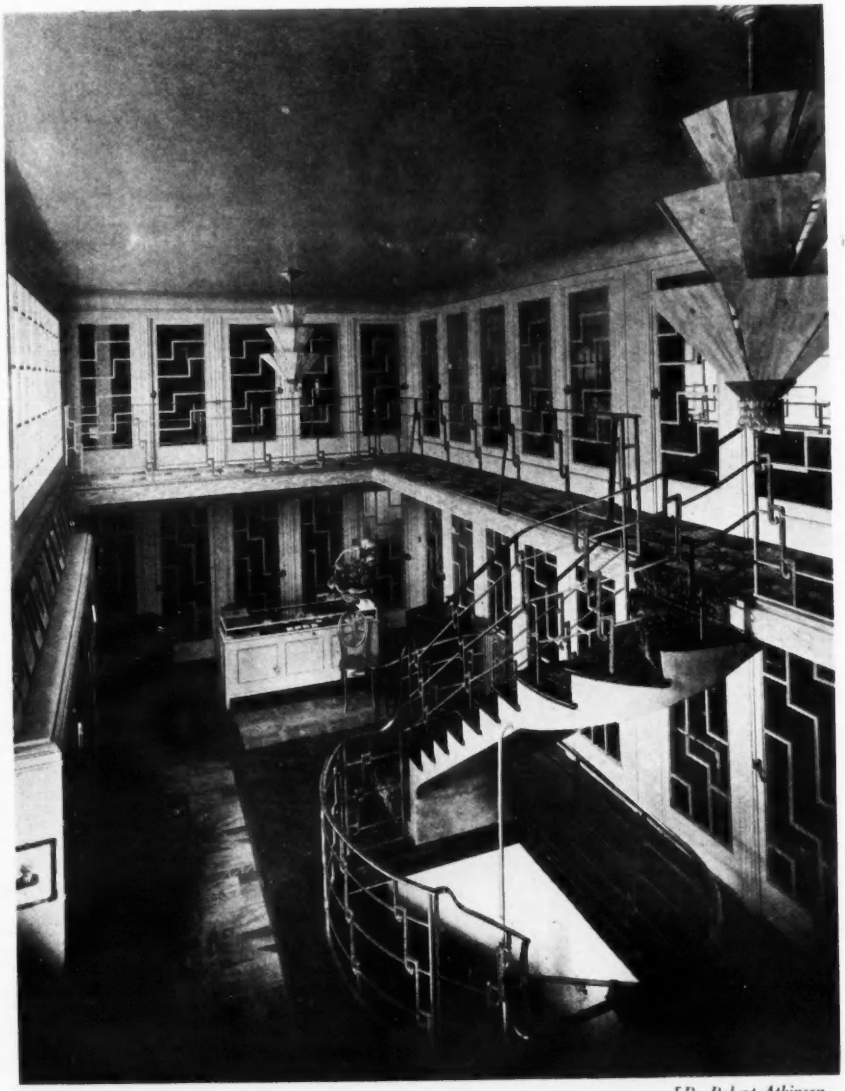


On the first floor there has been provided a large concert room expressly designed for gramophone recitals, with a small stage and special lighting arrangements. On this floor and the second mezzanine are placed the administrative offices, dealing with the large overseas trade carried on by this firm.

In the construction of the audition rooms particular attention was paid to the sound-proofing of walls and floors. The floors are of hollow tiling, and on top of these, in the audition rooms, are very thick carpets and felts. The walls between the audition rooms are built up of four thicknesses of three-ply Cabot's quilting, faced on each side with extra thick five-ply sheeting. The fronts of the audition rooms consist of glazed panels, each formed with one sheet of plate glass, $\frac{3}{8}$-in. thick. The doors are fastened with lever-type handles and are sound-proofed all round the edges with special rubber.

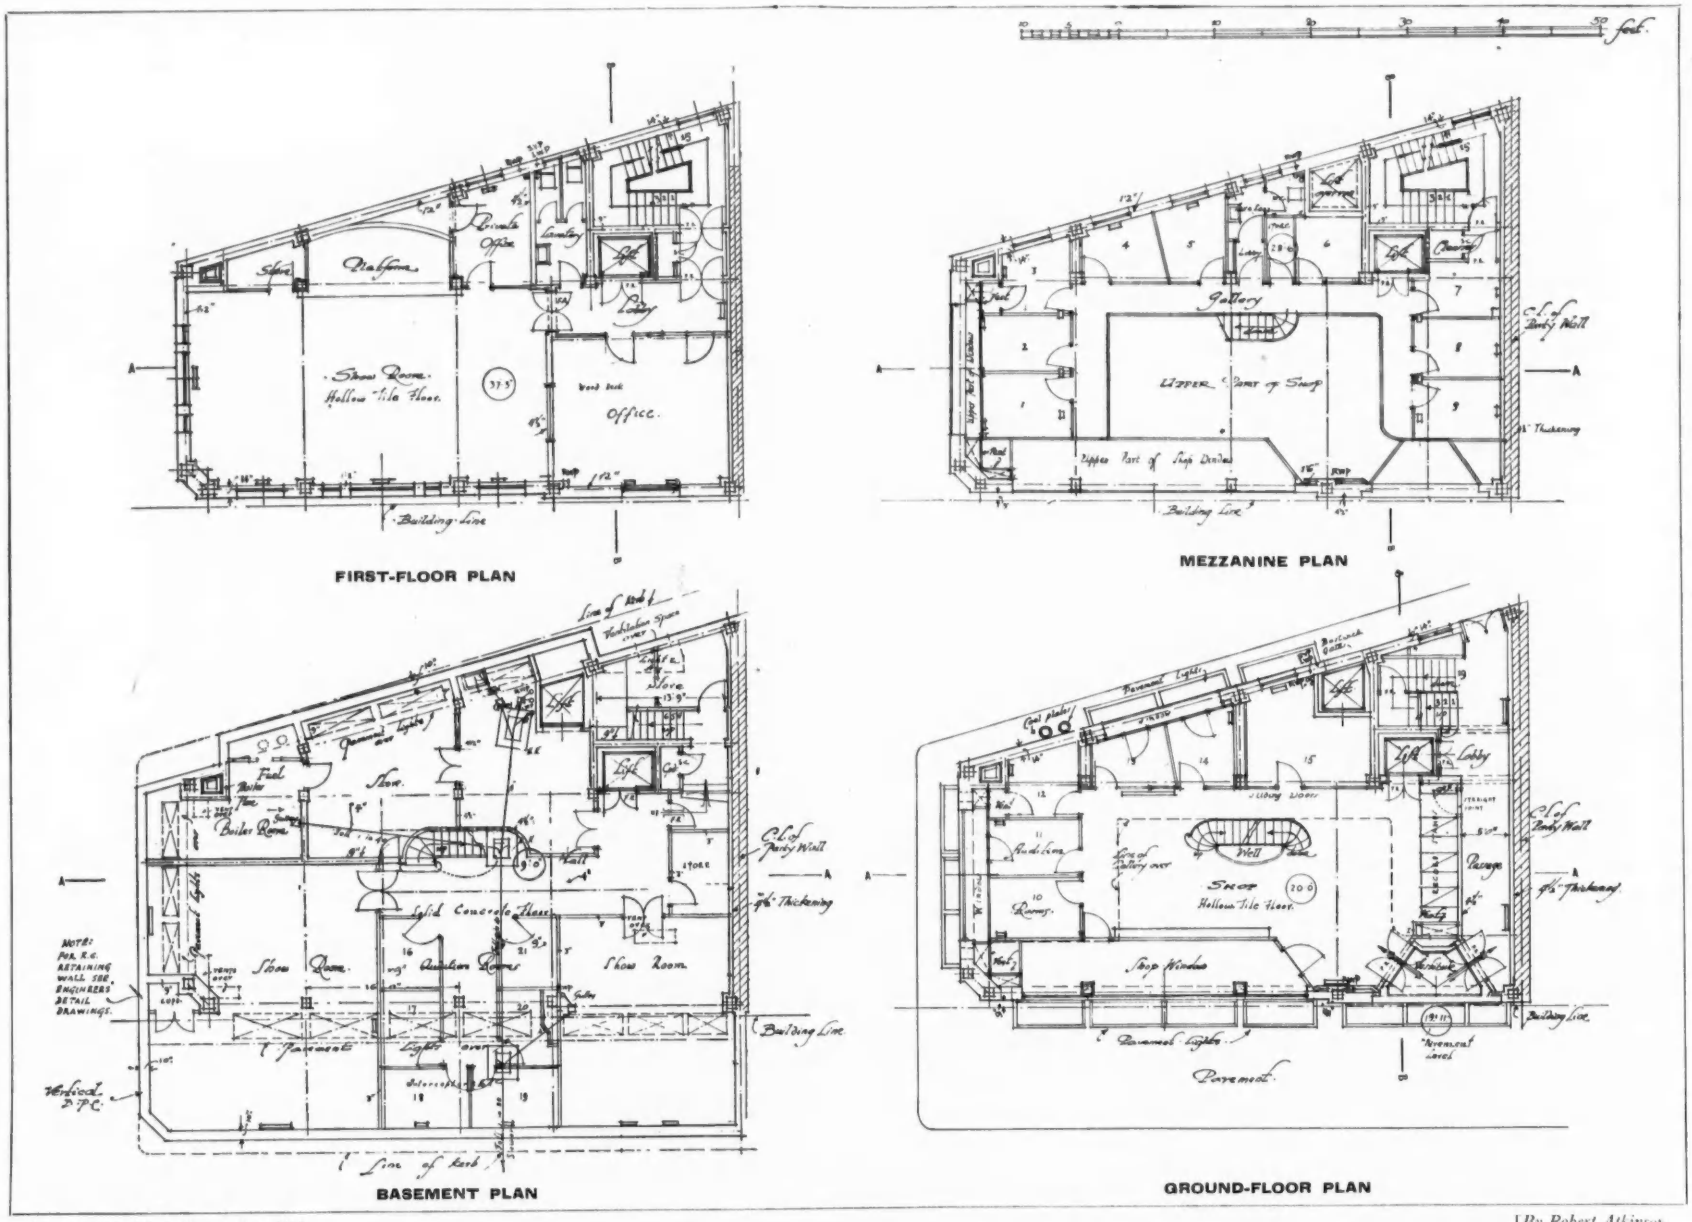
As regards decoration, the ground floor and mezzanine are painted a pale blue-green, picked out with lines of pale gold, the metal work being in dull gilt and the ceiling a dull silver. The audition rooms on the ground floor are painted pale buff, picked out with lines of gilt or a contrasting colour, and, on the mezzanine, an eau-de-nil colour with the panel lines similarly emphasized. The concert hall on the first floor is in green and gold; and the colour scheme in the basement is a pale warm grey, relieved with lines of rose and gilt, while in the showrooms, which are in deep parchment, a scumbled effect has been adopted with relieving lines of gilt. Specially designed lighting fittings are a feature of the decorations.

The concert room on the first floor is expressly designed for gramophone recitals, and is provided with a small stage and special lighting arrangements. It is decorated in green and gold.



Messrs. Alfred Imhof's premises, W.] *[By Robert Atkins.*

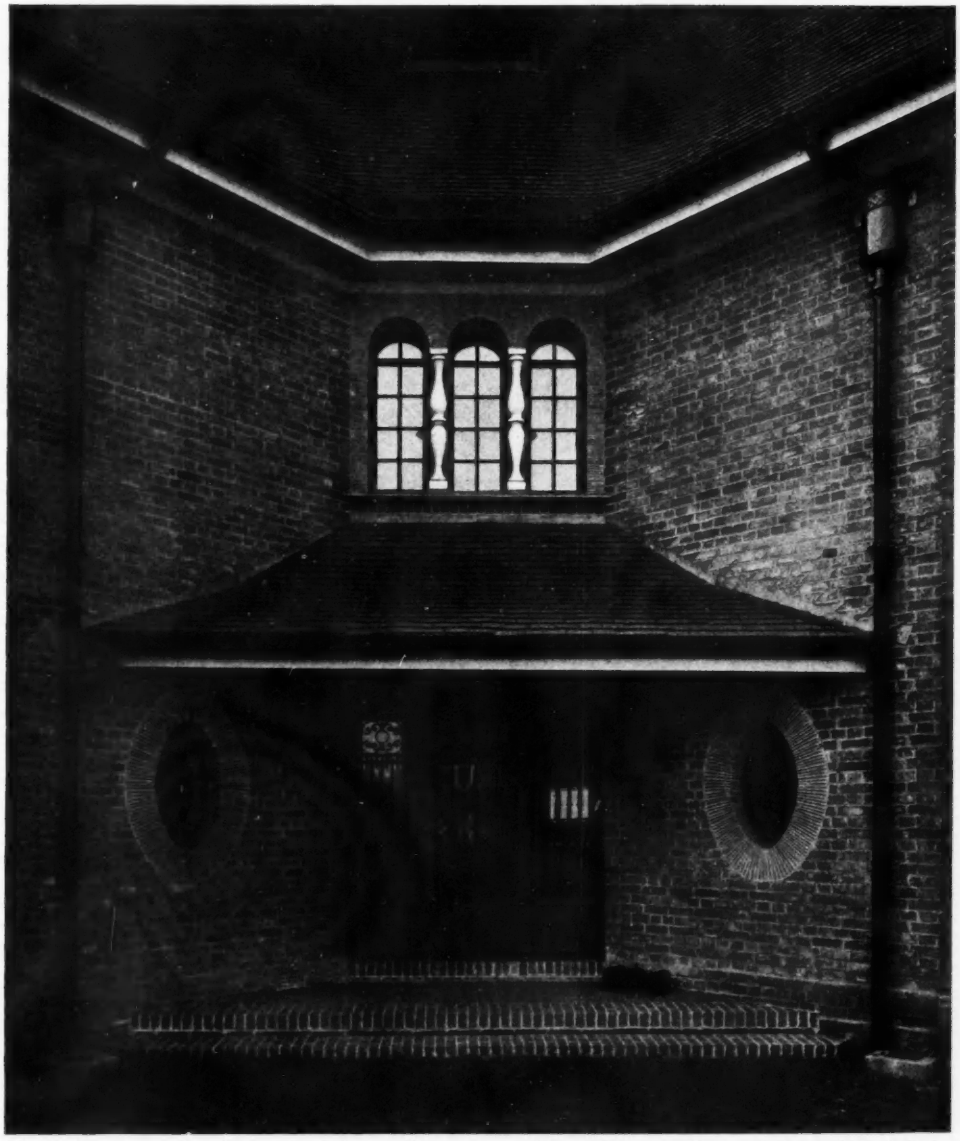
These architect's sectional drawings of the shop should be compared with the plans on page 422. Around the shop and its gallery are sixteen audition rooms, besides gramophone record stands.



The arrangement of the shop should be compared with the plans on page 422. Around the shop and its gallery are sixteen audition rooms, besides gramophone record stands.

Messrs. Alfred Imhof's premises, W. [*By Robert Atkinson.*

The shop, looking towards the entrance, and from the gallery in the opposite direction. It is painted pale blue-green, picked out with lines of pale gold. Metalwork is dull gilt and the ceiling dull silver.



Messrs. Alfred Imhof's premises, W.] [*By Robert Atkinson.*

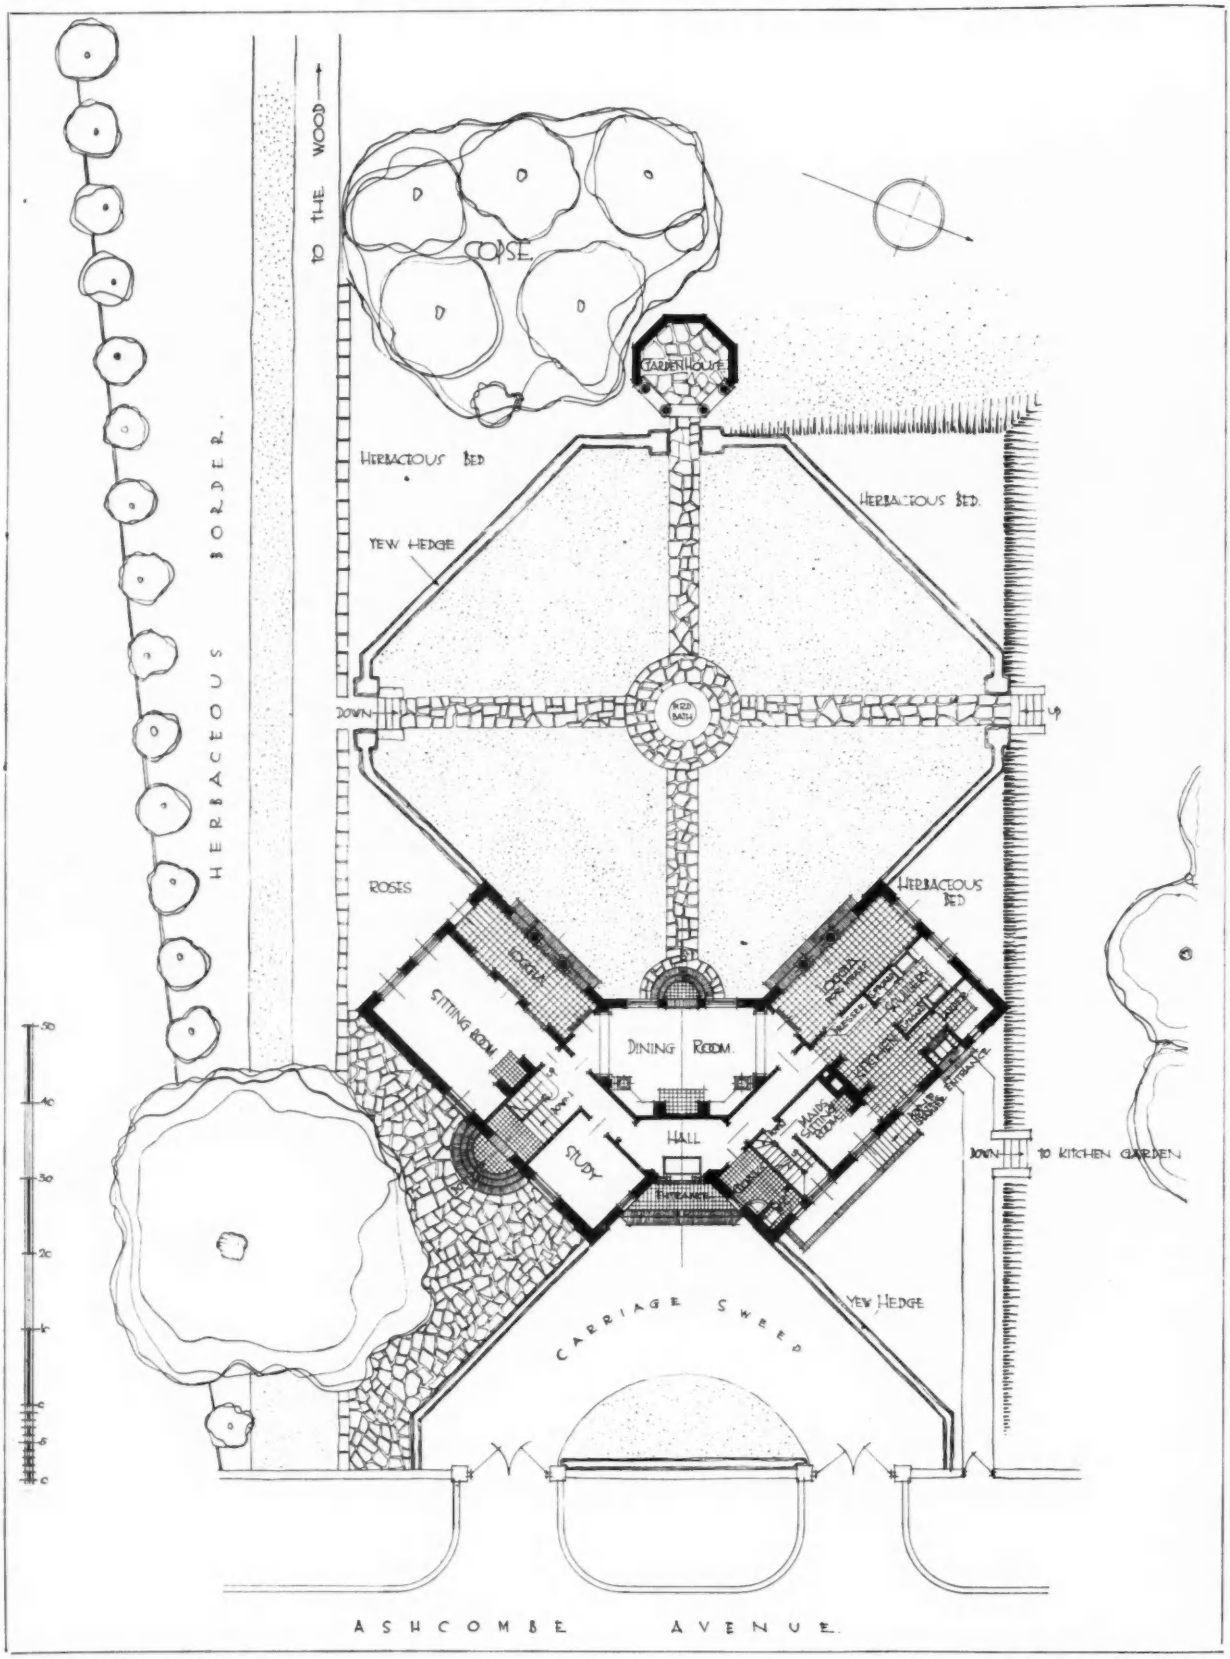
Plans of four of the floors. In the basement are further audition rooms and two large showrooms for the exposition of gramophones and wireless instruments. On the first floor is the concert room, with its platform, for gramophone recitals; here, too, and on the second mezzanine, are the administrative offices.

PLANNED AS A HALF-HEXAGON

An Interesting House, with Two Loggias, at Surbiton

DESIGNED BY JOSEPH HILL

The main entrance has door and window grilles in wrought metal to a pilaster design, which finds its echo in the cast stone treatment of the window above that lights the spacious first-floor landing. The rain-water heads find a definite place in the design, here as elsewhere.



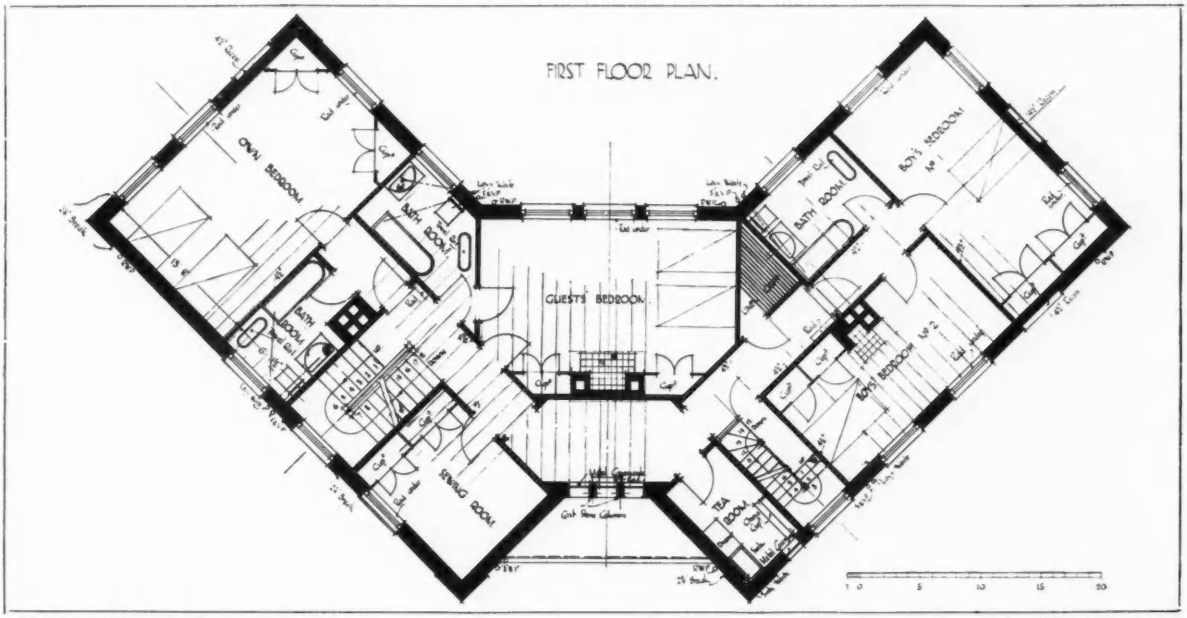
THE COPSE HOUSE has been designed with special reference to and erected upon what is probably the most commanding site in Surbiton, from which beautiful views may be obtained in every direction, particularly to the north-west, where an extensive portion of the Thames valley and many miles of the country beyond may be seen. In order to take advantage of these views and to overcome certain difficulties in levels, the architect resorted to a half-hexagonal layout, which has led to some very interesting planning, and has resulted in practically every room trapping the sunlight during the course of the day.

The general external treatment strikes a Georgian note, with a happy combination of brickwork in two colours and a good roof of hand-made red tiles. Important features are the two loggias on the garden front. The one facing south is especially designed to be used for taking meals and is fitted with collapsible glazed doors and with serving hatches from the kitchen and to the scullery, both of which are planned immediately behind it.

The entrance doorway, placed symmetrically between the splayed walls, has doors enriched with a pilaster treatment in wrought metal.

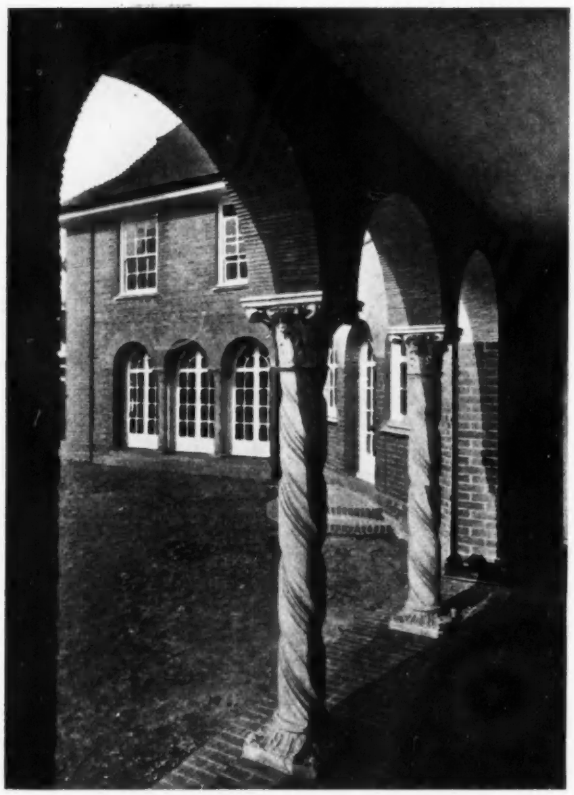
The architect has planned the layout of the garden and specified the nature of the trees and shrubs that have now been planted; thus comity of design has for once been realized.

Plans of four of the floors. In the basement are further audition rooms and two large showrooms for the exposition of gramophones and wireless instruments. On the first floor is the concert room, with its platform, for gramophone recitals: here, too, and on the second mezzanine, are the administrative offices. [By Robert Atkinson. Messrs. Alfred Imhof's premises, W.]



The Copse House, Surbiton, Surrey.] [*Designed by Joseph Hill.*

The ground-floor, and the layout of the garden, which was also planned by the architect, within a site measuring some 180 by 300 feet. One result of the half-hexagon planning is that both the front entrance and the door to the garden come between walls splayed at angles of 45 degrees. The loggia with a southerly aspect is backed by the kitchen connected to it with hatchways.



The back, or garden, elevation. The loggia on the left is the one intended for meals, and is fitted with storm-doors that can be folded right back in fine weather. The spirally-fluted columns are in cast stone, the walls in red brick, and the roof is tiled with sand-faced reds. Wood windows of the sliding-sash type are the prevailing rule.

The Copse House, Surbiton, Surrey.] [*Designed by Joseph Hill.*

The architect's drawing of the first floor. A study of the orientation (see plan on preceding page) will show that every room in the house receives full measure of direct sunshine. The V-shaped corridor and landing is a distinctive feature, and the provision of an upstairs tea-room is another. Both the principal bedrooms have their own bathrooms, and there is a third.

Looking across from within the open loggia to the closed one.

This side entrance gives on to what is now a stone garden.

The Copse House, Surbiton, Surrey. [*Designed by Joseph Hill.*

Another view of the meal loggia, fully furnished with sideboard, table, etc., showing doors folded back to admit air and sunshine.

ENGLISH PRECEDENT No. 106

BARN AT ABLINGTON, GLOUCESTERSHIRE

The architecture of barns is by nature monumental. The largeness of scale demanded by storage, and the simplicity of the whole programme that asks for great spans, few windows, entrances wide and high enough for laden wagons, and, in all, material solidity and permanence, produce of themselves the unified conception without which monumental architecture cannot exist.

Built thus to fulfil simply one of the fundamental needs of mankind, a barn is expressive of the very truest qualities of architecture. It has firmness, commodity and, in the finest sense of the word, delight.

—[E. MAXWELL FRY.]

PALACE OF VARIETY AT NEW CROSS

The frontage to Old Kent Road, approximately 200 ft. in length, is carried out in brick, with stone dressings. The publicity sign boards were allowed for in the design; and this view shows their appearance last week.

The Astoria Cinema Theatre, Old Kent Road, S.E.

DESIGNED BY E. A. STONE

THIS latest of London's picture theatres, known as the Old Kent Road Astoria, is within two hundred yards of the canal bridge in Old Kent Road, to which it has a frontage of 200 feet, and was opened last month.

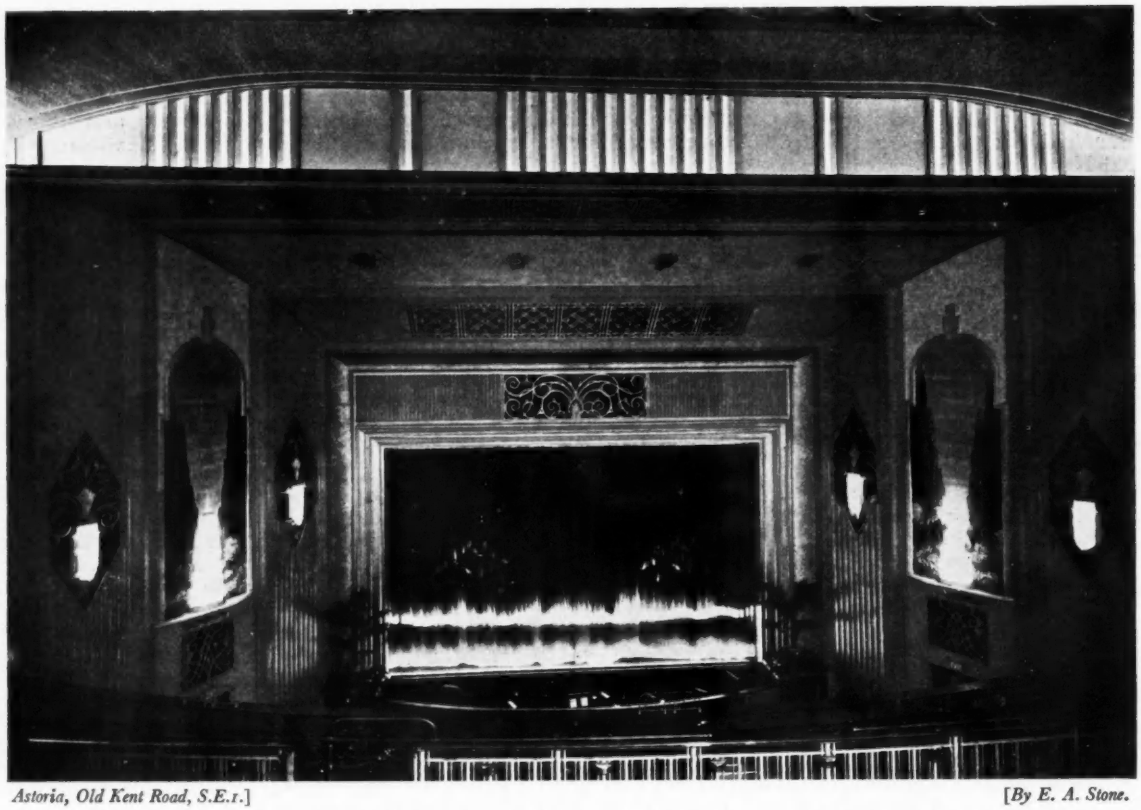
Upon a portion of the site, of about 28,000 square feet, there formerly stood a cinema, which had to be demolished to make room for the new Astoria. As is not seldom the case, considerable difficulties were experienced in planning the theatre with respect for the rights of adjoining owners. Application had to be made for a new building-line, which necessitated the surrender of 2,200 square feet to the local authorities, and an exit passage had to be provided, which further curtailed the site by 2,100 square feet. When all necessary adjustments had been made, it was found possible to plan a theatre with a seating accommodation of nearly 2,500, with a full stage and stage dressing rooms, and with spacious entrance halls, waiting halls and tea rooms.

Placed at the corner of Old Kent Road and Sandgate Street, the main entrance gives access, through a hall, to the auditorium, the balcony, foyer, and the waiting hall at the rear of the stalls, where patrons can queue up and wait under cover, as has now become the usual practice. A study of the plan will show how the capacity of the site has been exploited to obtain economic construction, the maximum of comfort in seating accommodation, and effective sight lines.

The external treatment is simple, relying as it does on masses of plain brickwork in varying planes and heights, relieved by stone dressings. Consideration has been given to the accommodation of publicity signs as permanent features of the façade, and so far as possible these have been incorporated in the design.

The building is a steel-framed, fire-resisting structure that can be roughly divided into three portions: auditorium and entrance hall foyer, stage, and projection room. One might almost say there is nothing in the structure which can burn. A fireproof curtain cuts the stage off from the auditorium, the galleries are of concrete, the grid is of steel, and all doors are of hardwood.

The entrance hall is rectangular in plan, with pay boxes on either hand, and a central staircase leading up to the balcony; and its decorative treatment is essentially simple.

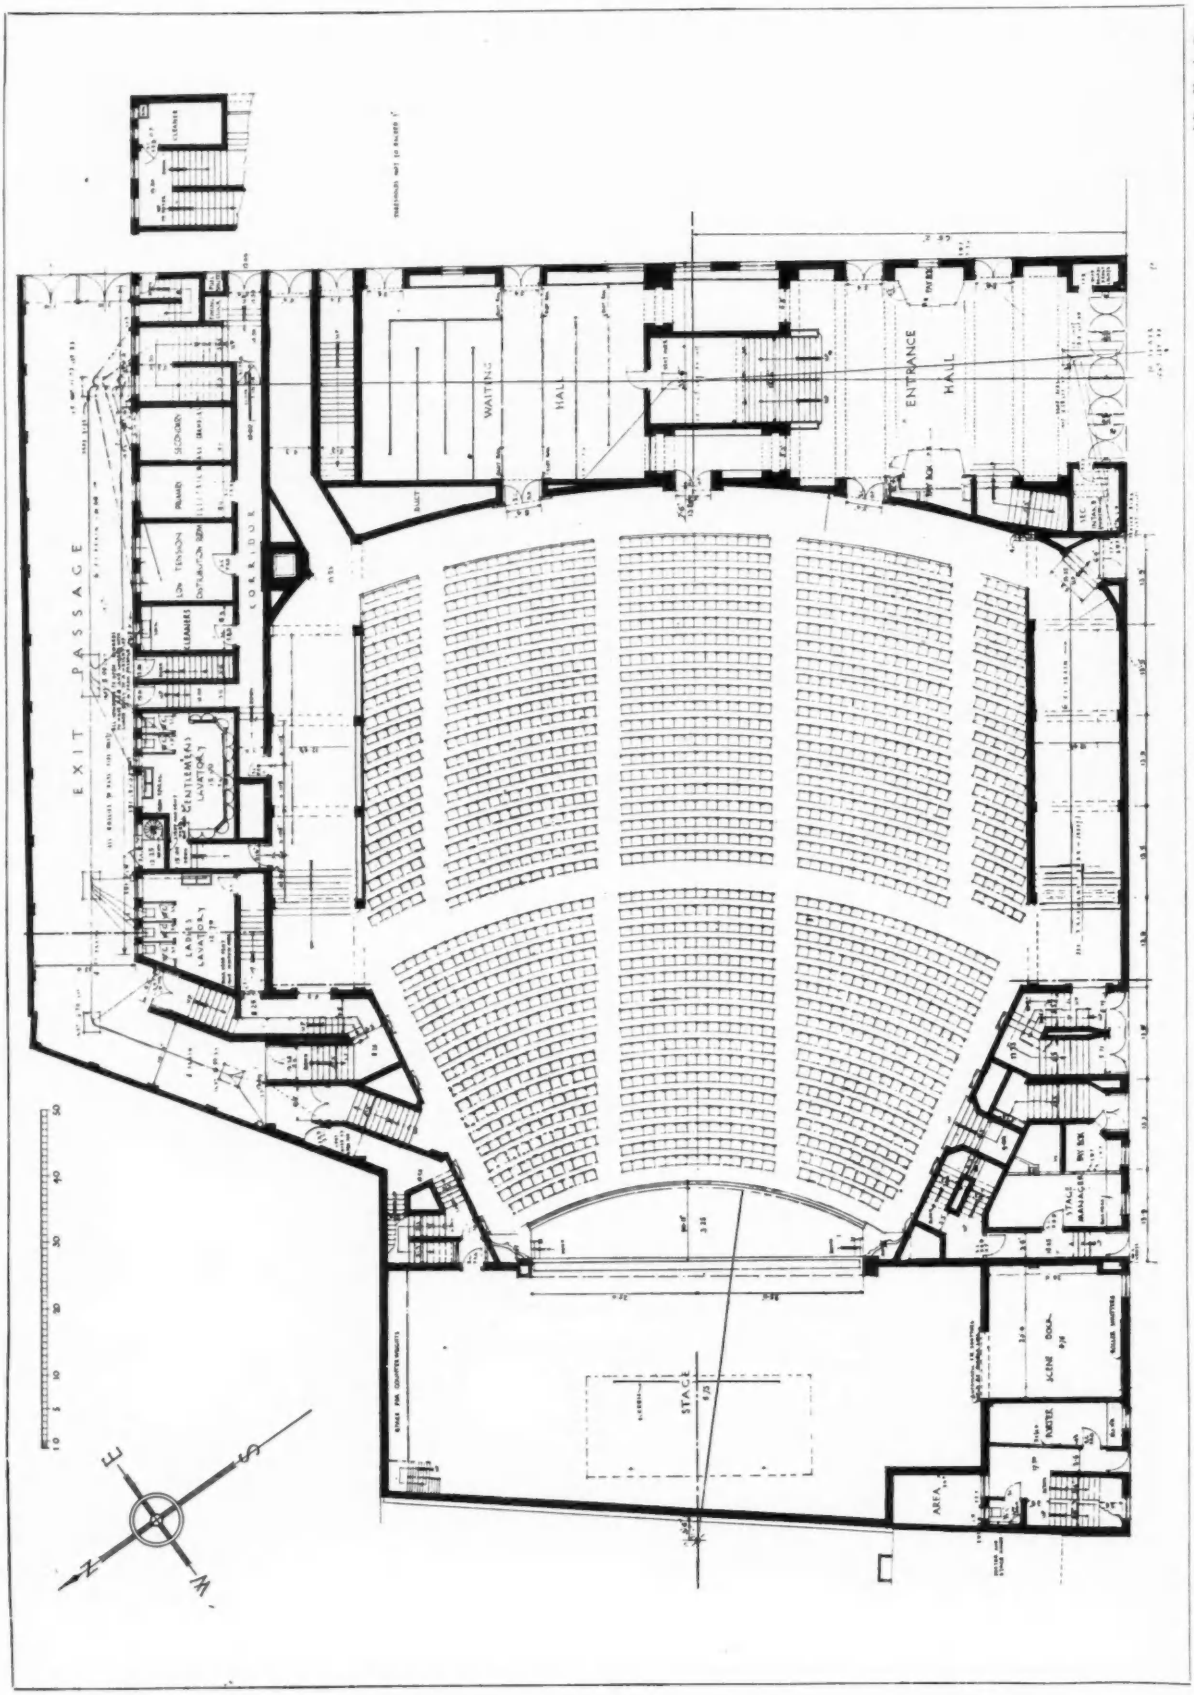


The auditorium gives an impression of spaciousness, and is in a modern style, without being too daring. The varying slopes to floor and ceiling are well proportioned and relieved in fibrous plaster. The wall surfaces have been treated with plastic paint, which has given some very interesting textures, worked up into attractive colour schemes. The lighting fittings have been specially designed, and fulfil very successfully their dual purpose of giving light and of harmonizing with the general decorative scheme that runs through the seat coverings, carpets and curtains.

The house has brick walls, with concrete floor and balcony, and the plaster work is suspended from metal fixings and lathing in accordance with the latest requirements of the authorities, which stipulate that no wood bracketing or fixings shall be used.

The stage is a fine one, being 90 feet wide by 35 feet deep. It is fully equipped with grid, counterweighting, fly galleries, lighting galleries, and a three-colour lighting system which enables any type of stage production to be efficiently presented. Ample dressing and chorus rooms, band rooms, etc., have been built in positions convenient to the stage, and every modern device has been adopted to make the working behind the scenes as smooth as possible. Simplicity and directness of

The axes of the entrance hall, here seen, planned with pay-boxes to either side of its rectangular area, and of the auditorium are at right angles. To the right of the stairs, which lead up to the balcony, is seen the door from the waiting hall, where patrons queue up under cover. The ceiling is in gold, and the walls are pale rose, picked out in black.



Astoria, Old Kent Road, S.E.1. [*By E. A. Stone.*

Looking down towards the proscenium and stage from the balcony. The stage is conveniently arranged for the production of stage shows of all descriptions. The organ is placed in the void of the roof and the sound is conducted to the auditorium through grilles above the proscenium. Lighting fittings have been specially designed. The delicate blue curtain is in a silver surround.

Astoria, Old Kent Road, S.E.1.] [*By E. A. Stone.*

A side view of the house, taken from one end of the balcony. The curve of the roof down towards the proscenium is continuous and, to all intents and purposes, uninterrupted. The rake of the floor is also perceptible. Both are significant of the attention given today by designers to problems of sight and sound. The scheme of decoration has some modern elements, but breaks away from the "atmospheric" idea lately in vogue, being graduated in tone, upwards, from dull gold to brown, with a silver ceiling.

Astoria, Old Kent Road, S.E.1.

The architect's drawing of the ground floor plan. The theatre seats 2,500 persons in all; over 1,700 on the main floor. It will be observed that in the waiting hall a series of barriers are arranged, serpentine-fashion, to induce waiting patrons to queue up: certain sections of these are removable to facilitate the rapid emptying of the house after the performance. The stage facilities are particularly complete and spac[illegible] art include a suite of drawing rooms, not shown on this plan, conveniently arranged.

[By E. A. Stone.

Astoria, Old Kent Road, S.E.1.] [*By E. A. Stone.*

A general view of the auditorium, from the stage. The array of projection ports, from which there is a throw of 120 feet to the screen, indicates the comprehensive nature of the equipment for the exhibition of every type of film, silent and "talkie," as well as for "stills," and spot-lights in connection with stage plays.

action have, indeed, influenced the planning not only of the stage but of the whole of the building. All the mechanism for stage operations is controlled from the prompt side, and the lighting for all parts of the house has been connected with the main switchboard at this spot.

The projection booth, placed over the balcony at the back of the auditorium, has been built completely outside the main building. The equipment includes 120-foot projectors for silent and talking films, spot arcs and effects machines, besides a workshop and rewinding room. This booth is fire-resisting in every detail, with its concrete floors and ceiling, hardwood doors, and fire-resisting glass, and is, further, cut off from the auditorium by steel shutters which are automatically released by fusible links should fire occur.

An interesting feature is the organ, which in this theatre has been placed in the roof void. It is contained in two fire-resisting chambers, from which a duct conveys the sound into the auditorium through a grille over the proscenium arch. A unique detail is presented by the two consoles, one on the stage and the other in the orchestra well, electrically connected to the organ, so that either or both can be played. The instrument was specially designed and built for the theatre.

The heating and ventilation installation is one of the largest yet incorporated in any theatre. Air is drawn into the building and, before being distributed, is washed and warmed, so as to provide not only a healthy atmosphere, but to maintain a comfortable temperature under all conditions.

All parts of the house are connected by an elaborate system of signals and telephones, and all exit doors are fitted with signal apparatus which indicates in the main office if any door is left open.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

THE adjourned debate on the Bishop of Southwark's motion on slum clearance was resumed in the House of Lords last week.

Lord Parmoor, who replied for the Government, said it was their intention to introduce a Slum Clearance Bill this Session and to pass it into law. They would, no doubt, have the advantage of the researches made and the facts ascertained by the late Government. The question could not be solved without the rural districts being considered as well as the slums of the towns and industrial areas, and the Bill would deal with both. He did not think that this great problem would be approached except on the basis of a large measure of State interference, though, of course, the voluntary societies, which introduced the human element, ought to be encouraged in every possible way. So far as reconditioning was concerned, there would be nothing in the Bill to discourage it, but it would not be one of the main features or proposals in the Bill itself. The Government considered that, although it might be costly, the work of providing alternative dwellings while

slum clearance schemes were being carried out were absolutely necessary, and they intended to press on as quickly as possible with such schemes. They also contemplated that local authorities should undertake in advance larger amounts of new building, which would put them in a position to deal effectively with bad conditions.

The Bishop of Southwark welcomed the reply and withdrew his motion.

At question time in the House of Commons Sir Lambert Ward asked the First Commissioner of Works if he would state what was the arrangement by which a representative of his department travelled abroad to visit buildings occupied by British representatives and officials in overseas countries.

Mr. Lansbury replied that the arrangements by which officers of his department visited public buildings overseas were designed to ensure that, as a general rule, all such buildings were inspected by an architect not less than once in seven years, the frequency of the visits being determined by the importance of the buildings; the larger continental embassies being inspected annually, legations so far as possible every two years, and consulates at less frequent intervals. Since June 1, inspections had been made by architects at Riga, Berne, Budapest, Prague, Vienna, Rome and Paris, at a cost of £138, Washington and Ottawa (£230), and a further visit to Paris and Rome at a cost of £60. Officers were at present visiting Moscow and Berlin, the cost being estimated at £70 or £80, and also various posts in South, Central and West Africa, at an estimated cost of £400. It was proposed to make visits during the next financial year to the Hague, Brussels, Prague, Rome, Vienna, Riga, Washington, Lisbon, Madrid and certain posts in North Africa. In addition to visits made by architects, visits were occasionally made by engineers in connection with the heating and lighting installations, and by technical officers in connection with refurnishing schemes. An officer of the Supplies Division was about to make a tour of inspection to China and Japan in connection with the furnishing of the new Tokio Embassy, and the supply of furniture to various consulates, and also to investigate various matters connected with supplies services generally in the Far East.

Mr. Greenwood informed Mr. Simon that the average superficial area of A-type non-parlour houses included in contracts let by or in direct labour schemes of local authorities in England and Wales during the year 1929 was 766 square feet.

Mr. Thorne asked the Minister of Health, seeing that, on April 27, 1923, his department appointed a committee to survey the prices of building materials and that two members of the employers' side of the Clay Industries I.I.R.C. were represented on the committee, if he could state the reasons why the workers' side of the I.I.R.C. were refused representation.

Miss Susan Lawrence, who replied, said that the two members of the Prices Survey Committee referred to were not appointed as representing manufacturers engaged in the clay industries only, but as representative of manufacturers of building materials generally. At the Minister's request, Mr. Longbottom had recently agreed to serve as an additional representative of labour on the committee.

The Minister was satisfied that the workers would be adequately represented and that any further appointment to the committee, which now had a membership of seventeen, would be undesirable.

Lieutenant-Commander Kenworthy asked the Minister of Health whether, in order to assist local authorities and to lessen the holding-up of slum clearance and town planning and improvement schemes, he would circulate the terms of the proposed Slum Clearance Bill for their information; and whether the general form of the Bill, including the financial provisions, was now settled.

Mr. Greenwood said he did not think that the suggestion was a practicable one. He hoped to be able to introduce the Bill at an early date.

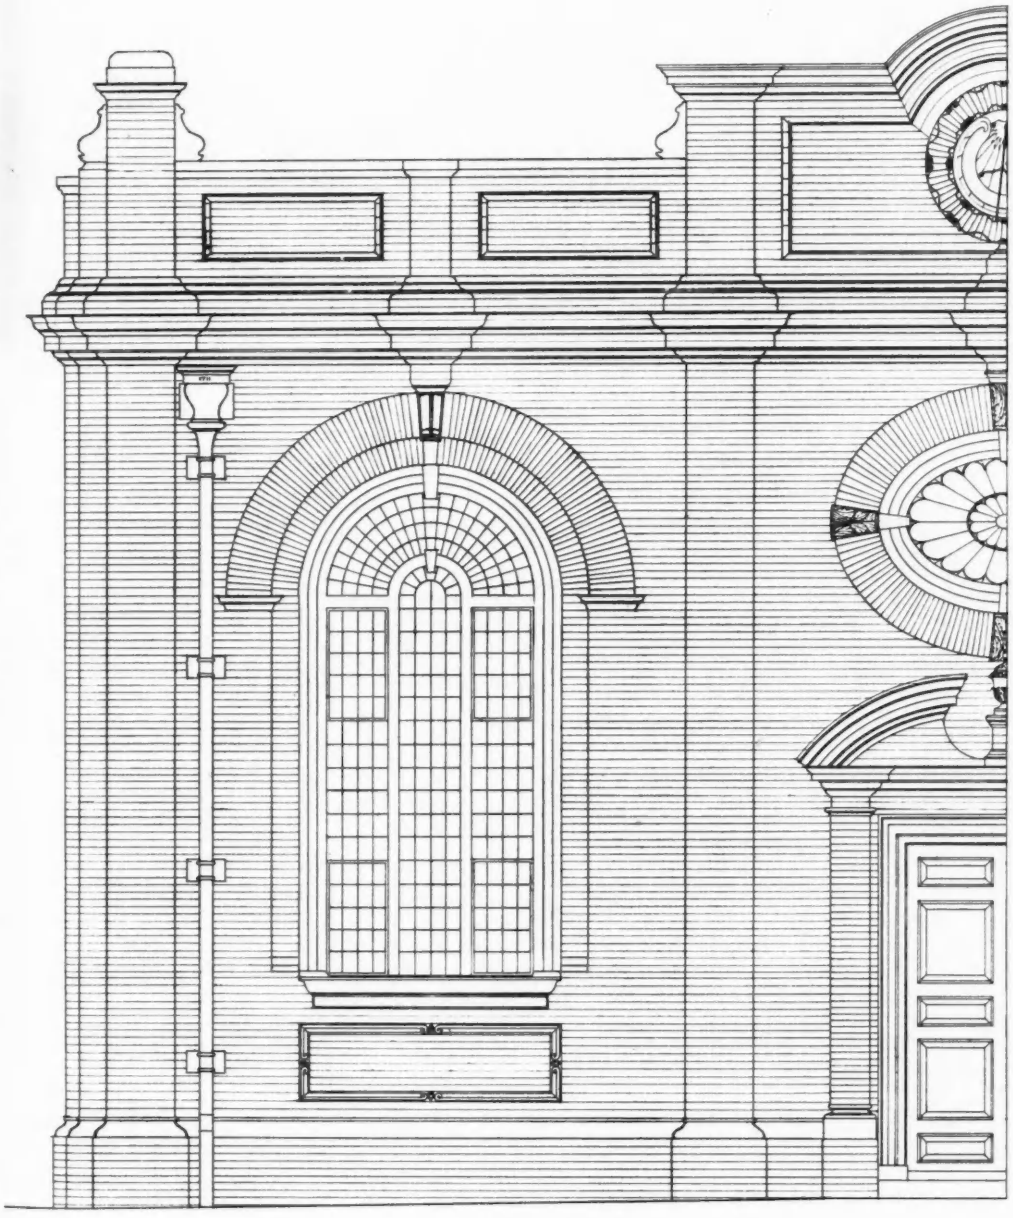
Miss Bondfield informed Sir Kingsley Wood that at January 27, 1930, there were 149,403 insured persons classified as belonging to the building industry recorded as unemployed in Great Britain, as compared with 159,219 at January 21, 1929.

THE Unitarian Chapel, Churchgate Street, Bury St. Edmunds, measured drawings of which are reproduced on the following two pages. The predominant features of this building, a fine example of brickwork, are the two side windows, the oval opening and the circular sundial above it shown in this illustration. The treatment of the two large semicircular headed windows is similar to that of those on the north and west elevations. The window above the entrance doorway has an oval-shaped brick surround, with enriched voussoirs.

LAW REPORT

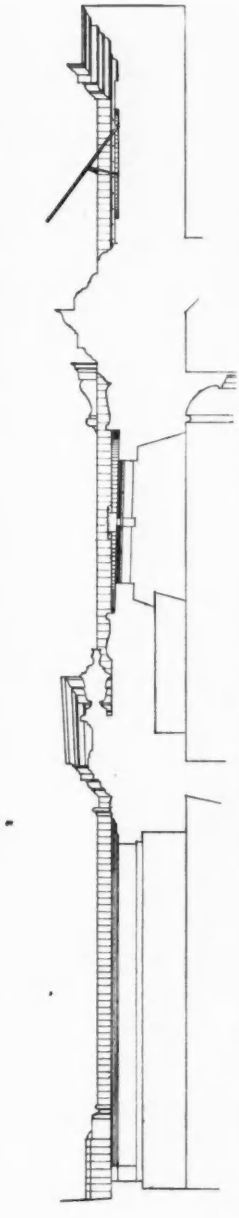
WATER SUPPLY TO CARAVANS

Laycock v. *Kirkland. King's Bench Division. Before the Lord Chief Justice and Justices Swift and Branson.*



THE point in this appeal by Mr. Laycock, the sanitary inspector of the Belper Rural District Council, was whether the defendant, Mr. Samuel Kirkland, of Markeston, had been guilty of an offence against the Council's bylaws by allowing a caravaner to occupy his land without provision for a proper water supply.

The Council's bylaw stipulated that the owner of land who permitted a caravaner or tent-dweller to occupy it, must provide for that person and his family a supply "of wholesome water on the land." The person in the caravan was on the land with Mr. Kirkland's permission, and he had to walk to a well, nearly a hundred yards away and on another piece of land, for his water. The Council said this was a contravention of their bylaw. When the matter came before the Derby County Justices they refused to convict.



The Council now appealed against the decision, submitting that the Justices had dealt with extraneous matters, and had paid no attention to the bylaw. It was further contended that the Justices had wrongly held that the respondent had created no offence.

The Court allowed the appeal with costs and remitted the case to the Justices to convict the respondent of the offence.

THE MANOR OF EIA

IN an article in the current issue of *The Architectural Review*, Mr. E. Beresford Chancellor describes the Grosvenor Estate as it was in the past. He writes:

It was through his marriage, in 1676, with Miss Mary Davies that Sir Thomas Grosvenor became possessed of that large, irregular tract of ground in the West End of London, once known as the Manor of Eia, and from the Conquest till the dissolution of the monasteries appertaining to the Abbey of Westminster. Today this is known as the Grosvenor Estate of the Duke of Westminster, covering a large portion of ground north of what is called generically Mayfair, Belgravia, and Pimlico.

As one wanders about all this part, the most aristocratic of residential London, what strikes one chiefly is, I think, the *character* attaching to the houses. Here you will find a collocation of Early Georgian architecture, unrivalled elsewhere in the West End. There is a specific hall-mark about the matured red brick, the decorative stone facings, the very shapes of doorways and windows. The cool, marbled halls seem still to resound with the subdued

hum of a past day, or with the clatter of a sedan run through the entrances and set down with an air in these select abodes.

Even the newly-built or reconstructed houses here are in keeping with the old tradition. A sort of archæological recrudescence has resulted in the earlier Georgianism clasping hands, so to speak, with the neo-Georgianism; and so a sort of apostolic succession in architecture has been evolved in all this quarter, preserving that quality of selection and restraint which gives it an unique air; and as one looks at its houses one has somehow that pleasant feeling which Goethe experienced when the sun glittered on the gilt vane at Frankfort.

In the April issue of the *Review* Mr. Robert Lutyens will discuss the Estate as it is today.

CORRESPONDENCE

CHARING CROSS BRIDGE

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—According to "Ponderivo" (paragraph 1), the scheme to be carried out is embodied in a plan by Sir Edwin Lutyens shortly to be published, and "Ponderivo" commends this plan by a process of anticipatory admiration—although he confesses he has not seen it and although no one else has done so, and for the excellent reason that it does not exist.

"Ponderivo" next states (para. 5) that the scheme of the Bill is a plan completely recast by Sir Edwin Lutyens from the official scheme prepared by the engineers; and he further tells us that "it is foolish to suggest that Sir Edwin had not a free hand in this recasting."

In the whole of this "Ponderivo" is entirely astray. Instead of (1) the engineers' official scheme; (2) Sir Edwin Lutyens' Bill scheme, recast from it; and (3) the admired scheme by Sir Edwin to be published shortly and which is to be carried out, there is, and will be—unless the Bill is upset—only one scheme, and that scheme is the engineers' official scheme, which is also the Bill scheme, and the scheme it is intended to carry out.

The only alterations made by Sir Edwin Lutyens in the engineers' official plan, so far as is known to anyone—except "Ponderivo"—consisted, apparently, in the rounding of certain corners, and the replacing of circus by octagon, and so forth: the plan attached to the Bill is in all essential particulars and details believed to be identical with the engineers' official plan.

The questions asked in Mr. Keen's ill-fated letter have never been answered by the Minister, nor by anyone else—except, again, by "Ponderivo": when they were pressed upon the Minister by the deputation, they were turned aside by him and a direct answer avoided. Those questions, it is to be known, are thoroughly well-informed questions; they are crucial; they throw down the challenge that Sir Edwin Lutyens was called in only late in the day, to give formal effect to Mr. Baldwin's promise that an architect would be consulted, and for the purpose of casting a gloss of æsthetic approval upon the tortured lucubrations of engineers, when, in fact, the reference to Sir Edwin did not include the essential or objectionable points of the scheme at all.

The Minister has withheld the simple answer which would establish the good faith of the Government, and no one but "Ponderivo"—least of all anyone who observed the elusive devices of the Minister when pressed by the deputation—has any doubt that the Minister has avoided answering the question because the only answer he could give would admit the impeachment. The "foolish" suggestions in Mr. Keen's letter are exactly true—that is to say the position of the station, the position of the bridge, the high-level northern approach from the Strand and, probably, the southern approach by the New Cut, together with the whole of the refractory restrictions and conditions imposed by this layout, were fixed as unalterable before the reference to Sir Edwin Lutyens.

"Ponderivo," after praising the unseen—and non-existent—shortly-to-be-published plan of Sir Edwin Lutyens (para. 1) goes on to commend the plan of the Bill (para. 5)—which the plan (para. 1) is to replace—and, on the ground that it is a complete recast of the engineers' official plan, he lavishes such praise upon it as leaves no room for the new delights he anticipates for the plan (para. 1) that is to replace it.

He describes Sir Edwin as having, on the evidence of this recast plan (para. 5), mentally "walked down his streets and considered every corner and detail," when all the time the architect has had no hand whatever in the layout of those streets; so that "Ponderivo's" admiration is not, as he supposes, an act of homage to the genius of a great architect, but is a prostration before the hand-to-mouth, botching expedients by which a parcel of constructionists—totally lacking in vision or imaginative enlightenment—have tried to reconcile the crude, conflicting need of shunters, signal-men, police, bargees, property-owners, motorists and sewermen.

I am the last of all persons to object to his criticism of town-planners' devices, for he has got the whole of his ideas on that subject (apparently) from articles I wrote in these pages five or six years ago; what I call attention to is his reasoning. Why, he asks, should we call in town-planners to help the solution of a problem when their ideas are open to criticism. It is obvious that a town-planner only differs from other men in having had experience in the planning of towns, and to say that one who has experience of a subject knows less about it than one who approaches it for the first time is much more truly "nonsense" than any "Ponderivo" so lavishly ascribes. He might, with equal justice, have said that as the work of all architects is open to adverse criticism, therefore architectural problems are better left in the hands of those who know nothing about architecture.

His attack on the Royal Institute is unfair to the point of being venomous. The Institute, with the allied interests, represents the public; and if Charing Cross Bridge is not a public affair, what sort of affair is it? The devotion, pertinacity, unsparing effort, and entirely disinterested concern for the public weal, which has actuated the men who, under the ægis of the Institute, have given their time and energies, is among those few things that allow us hope for our civilization and for our ideals.

It is amazing and it is terrible that in London, alone of any capital city in the world, and, one may feel, alone even among all considerable cities of her own Empire, it should be possible for municipal polemics, political hocus-pocus, and commercial expediency to put out of court the whole body of enlightened enterprise; and that, while a borough council can raise up a gas main as an obstacle to the Bill, the public has no means of declaring the duty of recognizing those civilizing amenities upon which the happiness, health and spiritual well-being of the populace depends.

H. B. CRESWELL

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—Your correspondent, "Ponderivo," apparently considers that the design for which a distinguished architect is joint author should be immune from criticism; but a great many of the younger members of the profession, who do not resent their own work being criticized, quite naturally believe that the work of even the most eminent architects should stand the test of intelligent criticism.

This is so when the subject is a single building, but when it concerns the greatest reconstruction scheme that has ever been attempted in London, involving the expenditure of vast sums of public money, the Royal Institute would appear to be a fit and proper body to examine and give a considered opinion on the proposals. If "Ponderivo" is a member of the Institute and cares to submit to that body his theory of "Scale" in civic design and Charing Cross in particular, it will no doubt be forwarded to the appropriate committee who welcome all constructive suggestions.

The chief criticisms made against the official scheme for the Charing Cross improvement are not concerned with the fact that a high-level bridge is proposed, but that the difficult problem of the re-planning of Central London on the Surrey side has been very largely avoided and left to future generations. The bridge only forms a single unit in the whole plan. It needs little imagination to see that a much greater area of Central London will be affected than that contained within the scheme on which Sir Edwin Lutyens has the honour to advise.

W. HARDING THOMPSON

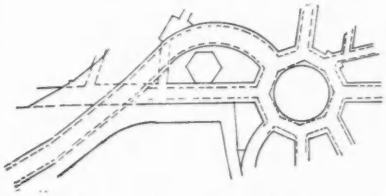
To the Editor of THE ARCHITECTS' JOURNAL

SIR,—"Ponderivo's" admirable and health-giving chastisement of the R.I.B.A. over its attitude in the Charing Cross Bridge controversy has, unfortunately, come too late to prevent a rather regrettable "scene." Although the letter is so worded as to refer specifically to Charing Cross Bridge, in its general substance of complaint it may be taken to apply equally well to any discussion of importance in which the Royal Institute has recently participated.

But in one particular "Ponderivo" has fallen into the same chasm as the R.I.B.A. He awards a palm to that body for being "instrumental to some extent in ousting steel bridges in favour of stone ones." Now, in so far as the Institute has done this, it has done untold harm.

The fact that so many steel bridges are execrably bad, æsthetically speaking, is no argument against steel as a material. A steel bridge can be a very beautiful thing, as is adequately proved by the illustrations of the Delaware River Bridge (which were published some time ago in this JOURNAL), as well as by the Forth and Sydney Harbour Bridges, and quite a number of others. As it cannot be thought that bad steel bridges are put up out of sheer devilment, it comes to mind that there must be a good reason for using steel, and that the ugliness is due to ignorance or apathy.

In so far as the use of steel is concerned it is clear that this material has strong advantages; it is cheaper, lighter and quicker to erect. From these points of view it is infinitely preferable to stone or concrete, and a bridge owner will generally prefer the subsequent cost of upkeep to the initial costs of delay and material.



And so the R.I.B.A. would do well to face the facts and see what it can do to make reasonably certain that these steel bridges shall be as beautiful as they can be made. But, instead of this, it apparently condemns the material out of hand, without giving economics another thought. I do not pretend to find a reason for this attitude; but it is quite clear that the engineers will regard it as an admission that the architects find the æsthetic use of steel to be beyond them. And, that being so (after all the talk and drumming into them that only architects can produce beautiful designs), what is more likely and more excusable than that they should turn sharp round from their present efforts in the direction of beauty, regret steel as an unfortunate necessity, and let the appearance of their bridges go hang?

M. L. ANDERSON

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—It is somewhat difficult to follow your correspondent "Ponderivo," in his lengthy apologia for the official Charing Cross Bridge scheme. That Sir Edwin Lutyens has done his best to make a complicated engineering scheme architecturally palatable is not the main question. Supposed railway exigencies have resulted in a scheme which is nothing more nor less than a road system contrived upon the alignment of an obsolescent railway system, and directly antagonistic to the most rational development of the southern side.

Your correspondent's reference to civic design appears to ignore the main principles of simplicity, economy, and directness. All these are lacking in the official plan, which no amount of architectural treatment can redeem.

The sketch illustrates the somewhat unusual, not to say extraordinary, device by which in the official scheme the new bridge road eventually descends into the Waterloo Bridge Road, and enters a circus of the very kind which your correspondent so particularly dislikes, in which there are no less than eight junctions with roads. The contribution of the architect to this detail appears to have been to suggest a tower, in a very awkward corner, in order to close the vista of the main bridge road.

Again, the right-hand spur road to the bridge head on the southern side is made to balance that on the left connecting to the Waterloo Bridge head. The latter is curved of necessity, owing to the bend of the river, but is practically level. The former, apparently to balance the other, is also made to curve, although the river does not bend to the same extent; but it has to *descend* to meet the level of York Road. This is effected by what can only be described as a very clumsy "dog-leg," both crooked and on an incline, which, moreover, cuts Belvedere Road in half; the portion towards the main bridge road being actually approachable by steps at each end!

But let us take the circus or square at the junction of the Strand and the bridge road. How it may be easier for traffic to proceed around two sides of a square rather than round a circle is not apparent; but in any case, the "circus" offers no relief for northbound traffic, which, together with that coming from Trafalgar Square, next door to the "circus," still has to pass through the congested artery of Charing Cross Road by the corner of the National Portrait Gallery, no widening being indicated, or alternative northbound route.

The criticisms put forward have, in the main, been just; the weakness has, apparently, been the lack of any kind of unanimity in a definite alternative. It is not necessary to assume that there are only two solutions to this complex problem, a high-level Strand bridge and an Embankment connection. There is, for example, the direct Northumberland Avenue approach into Trafalgar Square, rising over the Embankment, indicated in one or two schemes put forward. On the other side the problem, one imagines, is to come to earth as soon, not as late, as possible.

"VERIPONT"

THE ÆSTHETIC FRONT

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—I was interested to see that Mr. H. B. Creswell, in the letter which he addressed to you last week, defined architecture as "the poetry of building." How nice it would be if Mr. Creswell were to take upon himself to instruct students in design! I feel sure that they would find his definition of architecture so helpful. As he is in favour of the registration of architects who regard their art as the poetry

of building, is he also prepared to advocate the introduction of a Bill for the registration of poets?

A. TRYSTAN EDWARDS

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—An artist cannot be made by Act of Parliament, and Mr. Trystan Edwards's final paragraph puts in a nutshell the sentiments of all architects who favour the Registration Bill. We do not need the approval of anyone as "artists": our own feelings during the production of a work are sufficient reward for us. But we *do* need protection as men trained in practical matters connected with building and its arrangement, and also as men pledged to *an honourable code of professional conduct*. This last clause needs underlining, for a man who rigidly adheres to a strict code is fighting with tied hands against the unauthorized, ill-educated "creepers-in" to the profession, who flatter the business instincts of a client by offering to do work at ridiculous fees, at the same time deceiving him most amazingly as to their real methods of ensuring very adequate reward for their clumsy efforts.

It is for this recognition as trained men, and men of strict honour, that we need the support of the Registration Bill and are doing all we can to get it passed by Parliament. W. ARTHUR VERCOE,

President, Devon and Cornwall Architectural Society.

REFERENCE BOOKS

SPON'S POCKET PRICE BOOK

THIS pocket price book has now reached its fifty-seventh year of publication. Since the last edition the prices throughout the book have been thoroughly revised, and are based on actual prices in Bills of Quantities for various contracts now being carried out under the supervision of Mr. Clyde Young, F.R.I.B.A., the editor, who has made every endeavour to keep the contents up to date. Mr. Young states that under the grading system labour rates vary in different districts. The difference between the highest and the lowest rate is as much as 7d., and in order to render the Price Book more useful the Rates of Wages under the various grades, together with an alphabetical list of towns to which they apply, is included in the present edition.

Spons' Architects' and Builders' Pocket Price Book, 1930. Edited by Clyde Young, F.R.I.B.A. E. & F. N. Spon, Ltd. Price 5s. net (postage 4d.).

LAXTON'S AND LOCKWOOD'S BUILDERS' PRICE BOOK

LAXTON'S AND LOCKWOOD'S Builders' Price Book has now reached its 113th edition. Its features are too well known to need special mention, but the fact should perhaps be emphasized that all the information has been subjected to the most thorough revision and correction, and that it will be found at least as reliable as its predecessors.

As in previous editions, the prices in general apply to London, but sufficient details are given in the analyses, tables and memoranda, under the various trade headings and elsewhere, to enable the book to be used in the provinces equally as well as in London. The current rates of wages in the building trades throughout England and Wales are also given.

The alphabetical list of specialities and proprietary articles and brands, some 10,000 in all, has again received very careful attention and has been extended. Experience has shown that this is one of the most popular sections of the book. It is printed on blue paper and gives the name and address (and in most cases the telegraphic address and telephone number) of the manufacturer of each article.

Laxton's and Lockwood's Builders' Price Book. Kelly's Directories, Ltd. London. Price 7s. 6d. net, post free.

THE CONCRETE YEAR-BOOK

THE new edition of this well-known work of reference, now in its seventh year, has been further enlarged by forty pages. The handbook section, of 200 pages, contains a great deal of valuable information of everyday use to all concerned with civil engineering and constructional work. Chapters are included giving tabulated designs of foundations, floors, walls, beams, columns and other building members to carry various loads, illustrated with clear diagrams.

The directory section contains a complete directory of the concrete and allied industries, with a list of trade names and brands, and the names and addresses of their proprietors. In the catalogue section are 350 pages describing the businesses and products of firms engaged in the concrete industry or supplying plant and materials for constructional work, forming a very complete guide for those in need of a contractor to carry out specialist work, or machinery and materials for a particular purpose.

The Concrete Year Book, 1930. Edited by Oscar Faber, O.B.E., D.SC., M.INST.C.E., and H. L. Childe. Concrete Publications, Ltd. Price 3s. 6d. net.

SOCIETIES AND INSTITUTIONS

OLD AND NEW ARCHITECTURE

The Hon. Humphrey Pakington, lecturing on "Old and New Architecture" at the Architectural Association last Saturday, said that the understanding of architecture was an affair of great complexity, and it was a mere platitude to say that the lack of critical appreciation of the art by the public was due to a lack of training in the language of archi ecture. We would not expect a person to be musical just because he had read a history of music and knew the dates of Beethoven's birth and death. Yet all the architectural training which the average person got was a history of the styles. He could tell the Doric Order from the Ionic, and the Elizabethan manner from that of Queen Anne.

The educated layman knew his styles, and he might know his preferences, but he could not usually back them with reasoning. He could sort architecture into styles, but could not trace the thread of beauty which linked those styles.

Mr. Pakington interspersed his lecture with many delightful lantern illustrations and, showing a slide of Westminster Abbey from the air, he said that symbolism in architecture was an interesting subject. The symbolism of the classics was directed to the representation of abstractions, while the Gothic builders, far less subtle, imitated concrete realities. It seemed probable, indeed, that the symbolism of the Middle Ages had its origin in accident rather than in design. The typical church plan, such as seen at Westminster Abbey, became cruciform because the addition of transepts was the obvious method of giving more accommodation within range of the High Altar.

Mr. Pakington concluded by saying that the subordination of individuality to the laws of design was too complete. The very conditions under which architects worked—the varied requirements of planning, the elasticity of materials—allowed a wide individuality of treatment within the limits of the rules of the game. And in the age of organization which we were approaching we should need the delightful variation of human personality shining through the ordered arrangement of a building.

SOUTH WALES INSTITUTE OF ARCHITECTS' ANNUAL MEETING

At the annual general meeting of the South Wales Institute of Architects (Central Branch), held at Cardiff, the following officers and members of the executive committee were elected: Chairman, Mr. H. Norman Edwards; hon. treasurer, Mr. H. Teather, F.R.I.B.A.; hon. secretary, Mr. W. S. Purchon, M.A., A.R.I.B.A.; committee, Messrs. Percy Thomas, F.R.I.B.A., J. Llewellin Smith, L.R.I.B.A., Ivor Jones, A.R.I.B.A., J. Williamson, A.R.I.B.A., and T. Alwyn Lloyd, F.R.I.B.A.; representatives of associates and students, Miss O. E. Price and Mr. A. S. Fletcher.

The following were elected as members

of the Council of the South Wales Institute of Architects: Messrs. H. Norman Edwards, W. S. Purchon, M.A., A.R.I.B.A., J. Williamson, A.R.I.B.A., Percy Thomas, F.R.I.B.A., J. Llewellin Smith, L.R.I.B.A., Edgar Smith, A. G. Lynham, F.R.I.B.A., C. F. Jones, A.R.I.B.A., J. B. Fletcher, W. D. Thomas, Lennox Robertson, F.R.I.B.A., Gordon Griffiths, and Lewis John, M.A., B.ARCH., A.R.I.B.A.; representatives of associates and students, Messrs. H. J. Hughes, A. G. Fletcher and A. J. Hayes.

THE PALATINE HILL, ROME

Sir Banister Fletcher, P.R.I.B.A., lecturing at the Central School of Arts and Crafts, described the Palaces of the Roman Emperors on the Palatine Hill, Rome, and showed how, from the ruins on the site, it was possible with the aid of knowledge and imagination to reconstruct these buildings in one's mind's eye, so as to get some idea of the appearance of Rome in the days of the Cæsars.

R.I.B.A. PRIZES AND STUDENTSHIPS

The R.I.B.A. has issued a pamphlet dealing with their Prizes and Studentships for 1930-1931. It contains full information upon the various prizes and studentships, together with, where applicable, the detailed programme for the competitions. Copies are obtainable from the R.I.B.A., 9 Conduit Street, W.1. Price 1s., exclusive of postage.

R.I.B.A. INTERMEDIATE EXAMINATION

Belfast will be an additional centre for the R.I.B.A. intermediate examination, provided that at least five candidates for examination at that centre are forthcoming on each occasion.

PROBATIONERSHIP OF THE R.I.B.A.

The Council of the R.I.B.A. has decided to include in the list of examinations recognised for the Probationership of the R.I.B.A. the preliminary examination of the Surveyors' Institution and the preliminary examination of the Institution of Civil Engineers.

THIRD INTERNATIONAL CONGRESS OF MODERN ARCHITECTURE

The Third International Congress of Modern Architecture will be held at the Palais de Beaux-Arts, Brussels, on October 2, 1930. The principal subject of the congress will be a discussion of "The Minimum Dwelling," a continuation of the theme which occupied the attention of the last congress held at Frankfurt in 1929.

There will be an exhibition of work dealing with this subject, including—in addition to the material shown at Frankfurt—plans of layouts, details of new methods of construction, and schemes which do not comply with existing building codes. There will also be a stand devoted to the town of Frankfurt, and public lectures on the exhibition.

It is proposed to form an English section of the congress, and any architect requiring further information should apply to Mr. Howard Robertson, F.R.I.B.A., 36 Bedford Square W.C.1.

FOREIGN WORK COMMITTEE TOURS

The Foreign Work Committee of Leplay House are arranging to take a group of their members and others to North Africa during the Easter vacation. They will have as their leader Mr. E. M. Keith Ellerton, F.R.I.B.A., of the University of Liverpool. The route covered is Algiers to Biskra and Touggourt, then to Tunis via Timgad and Constantine. In addition, a group will go to Holland for the purpose of studying art and architecture, and a further group will go to Brittany, making Carnac their centre, for archæological studies. Particulars are obtainable from Miss Margaret Tatton, Director, Leplay House Foreign Work Committee, 65 Belgrave Road, S.W.1.

TRADE NOTE

Those responsible for the acoustic effects in sound film studios and cinemas have found Masonite to be of invaluable service in facilitating the achievement of the best results. This conclusion is reached after a perusal of a new book just issued by Masonite, Ltd., to explain the properties and application of the material. In this country Masonite products have been adopted by such leading film-producing companies as the Gaumont Co., Ltd., British International Pictures, Ltd., British and Dominions Film Corporation, Ltd., Twickenham Film Studios, Ltd., British Screen Productions, Ltd., and the Blattner Picture Corporation, Ltd. As an instance, in both the studios of the Gaumont Co., Ltd., Masonite has been used throughout to provide acoustic correction for the production of sound films. In this case the problem was a particularly difficult one, as the studios, owing to their location, are especially subject to airborne sounds from electric trains and heavy road traffic. The fact that the experts of this company have expressed their complete satisfaction with the work carried out is some indication of the value of the material employed.

Scene from the Gaumont sound film "High Treason," showing furniture and panelling constructed of Masonite.

In the recent production by the Gaumont Co., Ltd., of the highly successful film "High Treason," Masonite Presdwood was used for the construction of furniture, fittings, and "sets," and the results achieved show the possibilities of this material as a decorative medium in the hands of a skilled designer. The publication is profusely illustrated and shows the adaptability of the products to every type of building. It is well produced, and contains samples of the several varieties of Masonite inside the back cover.

THE BUILDINGS ILLUSTRATED

Following is a list of the general contractors and some of the sub-contractors for the buildings illustrated in this issue :—

Imhof House, 112-116 New Oxford Street (pages 419-422). General contractors, Bovis, Ltd. Sub-contractors : Huntley and Sparks, Ltd., audition rooms soundproofed with "Cabot's Quilt"; Limmer and Trinidad Lake Asphalte Co., Ltd., asphalt; Indented Bar and Concrete Engineering Co., Ltd., reinforced concrete; United Stone Co., stone; Stuart's Granolithic Co., Ltd., artificial stone; Aston Construction Co., Ltd., structural steel; Roberts, Adlard & Co., Ltd., slates; Luxfer Co., Ltd., patent glazing and casements; Kleine Patent Fire-Resisting Flooring Syndicate, Ltd., patent flooring and stairtreads; H. Eldred & Co., Ltd., central heating (the boiler is of the White Rose, Series B, sectional type, of a rated capacity of 545,600 B.T.U.s per hour); Griersons, Ltd., electric wiring; Bagues, Ltd., and Dernier and Hamlyn, Ltd., electric light fixtures; Venning & Co., sanitary fittings; Walter Cassey, Ltd., locks and door fittings and lever fastenings to doors to audition rooms; Kingsmill Art Metal Co., metalwork; Gilbert Seale & Co., carving; Anselm Odling, Ltd., marble; Van Straaten & Co., tiling; Marryat and Scott, Ltd., lifts.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents, and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATION

5762. Maughan, W. Building construction, etc. February 21.

SPECIFICATION PUBLISHED

307434. Junkers, H. Structural members, more particularly for use in building walls.

ABSTRACT PUBLISHED

323532. Carson, N. B. Floors; roofs.

COMPETITION CALENDAR

March 31. — The Accrington Corporation invites architects of British nationality to submit designs in competition for new Police and Fire Stations which it is proposed to erect on a site in Manchester Road, Accrington. Assessor : Herbert J. Rowse, F.R.I.B.A. Premiums : £250, £150 and £100. Conditions of the competition, together with a plan of the site and all particulars, may be obtained from William Henry Warhurst, LL.B., Town Clerk, Town Hall, Accrington. Designs to be submitted before March 31.

April 28.—Messrs. Josiah Wedgwood and Sons, Ltd., invite designs in competition for a Wedgwood Vase, to be made in commemoration of the Bicentenary of the Birth of Josiah Wedgwood, which will be celebrated in 1930. Assessors : Philip Connard, R.A., W. Reid Dick, A.R.A., H. S. Goodhart-Rendel, F.R.I.B.A., and Frank H. Wedgwood. Premiums : £100, £50 and £25. Full particulars may be obtained on application to the Secretary, Messrs. Josiah Wedgwood and Sons, Ltd., Etruria, Stoke-on-Trent. Latest date for submission of designs : April 28.

June 14. — The Chelmsford Corporation invites architects to submit designs in competition for a new public library in accordance with conditions drawn up by H. V. Lanchester, F.R.I.B.A., who will act as assessor. Applications for conditions and a plan of the site should be made to G. E. Barford, Town Clerk, Chelmsford. Deposit, £1 1s. Latest date for submission of designs : June 14.

July 1.—The Royal National Eisteddfod of Wales, 1930, has issued a list of competitions in the arts, crafts and science section. Assessor : Percy E. Thompson, F.R.I.B.A. The drawings are to be delivered to Mr. W. H. Protheroe, General Secretary, Eisteddfod Office, Llanelly, not earlier than July 1, 1930, or later than July 5, 1930. Besides the architectural section there are also competitions for fine art, sculpture, applied art, and domestic arts and crafts. Programme giving full particulars, etc., is obtainable from James Davies & Co., Ltd., Murray Street, Llanelly. Price 1s. (post free, 1s. 3d.)

July 31.—The Luton Town Council invites architects to submit designs for the proposed Town Hall which is to be built on the site of the old town hall, at an approximate cost of £250,000. Assessor : Sir Brumwell Thomas. Premiums : £500 to £100. Latest date for submission of designs : July 31.

No date.—The Leicester Corporation invites local architects to submit designs for the erection of a library at West Humberstone. Assessor : Hugh Gold, F.R.I.B.A. Premiums : £75, £50, and £25.

Architects' Wills

Mr. Joseph Leeming, F.R.I.B.A., of Beverley, Wynn Avenue, Colwyn Bay, architect, left £13,175 (net personalty £11,110).

Mr. Segar Segar-Owen, of Palmyra Square Chambers, Warrington, and of Beaumaris, Anglesey, F.R.I.B.A., left £36,711.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
If left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* BRICKLAYER, 1s. 8½d. *per hour;* PLUMBER, 1s. 8½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. *6 in., per ft.*	0	1	3
DO. *9 in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. *6 in., per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft. 0 4 3
DO. 6 in., per ft. 0 5 0
DO. 9 in., per ft. 0 7 9

CAST-IRON DRAINS, jointed in lead, 4 in., per ft. 0 8 3
DO. 6 in., per ft. 0 10 3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 8½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour.*

London stocks, per M.	£4	5	6
Flettons, per M.	2	12	6
White facing bricks, per M.	5	0	0
Multi-coloured facings, per M.	7	7	9
Best red facings, per M.	7	7	9
Rubbers, 9½ in., per M.	12	0	6
Staffordshire blue, per M.	9	5	0
Firebricks, 2½ in., per M.	9	5	0
Glazed salt, white, and ivory stretchers, per M.	21	10	0
DO. *headers, per M.*	20	10	0
Colours, extra, per M.	5	10	0
Seconds, less, per M.	1	0	0
Cement and sand, see "Excavator" above.			
Lime, grey stone, per ton	£2	11	6
Mixed lime mortar, per yd.	1	6	0
Dampcourse, in rolls of 4½ in., per roll	0	2	6
DO. *9 in. per roll*	0	4	9
DO. *14 in. per roll*	0	7	6
DO. *18 in. per roll*	0	9	6
BRICKWORK in stone lime mortar, Flettons or equal, per rod	30	0	0
DO. in cement do., per rod	32	10	0
DO. in stocks, add 25 per cent. per rod.			
DO. in blues, add 100 per cent. per rod.			
DO. circular on plan, add 12½ per cent. per rod.			
DO. in backing to masonry, add 12½ per cent. per rod.			
DO. in raising on old walls, etc., add 12½ per cent. per rod.			
DO. in underpinning, add 20 per cent. per rod.			
HALF-BRICK walls in stocks in cement mortar (1–3), per ft. sup.	£0	1	0
BEDDING plates in cement mortar, per ft. run	0	0	3
BEDDING window or door frames, per ft. run	0	0	3
LEAVING chases 2½ in. deep for edges of concrete floors not exceeding 6 in. thick, per ft. run	0	0	2
CUTTING do. in old walls in cement, per ft. run	0	0	4
CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0	0	7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0	3	6
DO. 14 ft. by 9 in. do., per ft. run	0	6	0
FLAUNCHING chimney pots, each	0	2	0
CUTTING and pinning ends of timbers, etc., in cement	0	1	0
FACINGS fair, per ft. sup. extra	0	0	3
DO. picked stocks, per ft. sup. extra	0	0	7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0	4	9
DO. in salt white or ivory glazed, per ft. sup. extra	0	5	6
TUCK pointing, per ft. sup. extra	0	0	10
WEATHER pointing, do. do.	0	0	3
TILE creasing with cement fillet each side, per ft. run	0	0	6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0	5	0
DO. 1½ in., per yd. sup.	0	6	0
DO. 2 in., per yd. sup.	0	7	0
If coloured with red oxide, per yd. sup.	0	1	0
If finished with carborundum, per yd. sup.	0	0	6
If in small quantities in finishing to steps, etc., per ft. sup.	0	1	4
Jointing new grano. paving to old, per ft. run	0	0	4
Extra for dishing grano. or cement paving around gullies, each	0	1	6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup.	0	0	7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0	8	0
DO. vertical, per yd. sup.	0	11	0
SLATE DAMP COURSE, per ft. sup.	0	0	10
ASPHALT ROOFING (MASTIC) in two thicknesses, ½ in., per yd.	0	8	6
DO. SKIRTING, 6 in.	0	0	11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0	5	3
DO. DO. 3 in.	0	6	6
BREEZE fixing bricks, extra for each	0	0	3

MASON

MASON, 1s. 8½d. *per hour;* DO. *fixer,* 1s. 9½d. *per hour;* LABOURER, 1s. 3½d. per hour; SCAFFOLDER, 1s. 4½d. *per hour.*

Portland Stone:			
Whitbed, per ft. cube	£0	4	6
Basebed, per ft. cube	0	4	9
Bath stone, per ft. cube	0	3	0
Usual trade extras for large blocks.			
York paving, av. 2½ in., per yd. super.	0	11	0
York templates sawn, per ft. cube	0	7	6
Slate shelves, rubbed, 1 in., per ft. sup.	0	2	6
Cement and sand, see "Excavator," etc., above.			
HOISTING and setting stone, per ft. cube	£0	2	2
DO. for every 10 ft. above 30 ft. add 15 per cent.			
PLAIN face Portland basis, per ft. sup.	£0	2	8
DO. circular, per ft. sup.	0	4	0
SUNK FACE, per ft. sup.	0	3	9
DO. circular, per ft. sup.	0	4	10
JOINTS, arch, per ft. sup.	0	2	6
DO. sunk, per ft. sup	0	2	7
DO. DO. circular, per ft. sup.	0	4	6
CIRCULAR-CIRCULAR work, per ft. sup.	1	2	0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0	1	1
DO. circular, do., per ft. run	0	1	4
HALF SAWING, per ft. sup.	0	1	0
Add to the foregoing prices, if in York stone, 35 per cent			
DO. Mansfield, 12½ per cent.			
Deduct for Bath, 33⅓ per cent.			
DO. for Chilmark, 5 per cent.			
SETTING 1 in. slate shelving in cement, per ft. sup.	£0	0	6
RUBBED round nosing to do., per ft. lin.	£0	0	6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1	7	6
YORK SILLS, W. & T., ft. cub. fixed	1	10	0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0	1	3
DO. 2½ in. thick, per ft. sup.	0	1	6

SLATER AND TILER

SLATER, 1s. 8½d. *per hour;* TILER, 1s. 8½d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* LABOURER, 1s. 3½d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:

	Med. Grey	Med. Green
Portmadoc Ladies	£14 0 0	
Countess	23 0 0	
Duchess	32 10 0	
Old Delabole	*Med. Grey*	*Med. Green*
24 in. × 12 in.	£42 11 3	£45 1 0
20 in. × 10 in.	31 4 3	33 0 6
16 in. × 10 in.	20 18 0	22 4 9
14 in. × 8 in.	12 1 0	12 16 3
Green Randoms, per ton	8 3 9	
Grey-green do., per ton	7 3 9	
Green peggies, 12 in. to 8 in. long, per ton	5 13 9	

In 4-ton truck loads, delivered Nine Elms station.

Clips, lead, per lb.	£0	0	6
Clips, copper, per lb.	0	2	0
Nails, compo, per cwt.	1	6	0
Nails, copper, per lb.	0	2	2
Cement and sand, see "Excavator," etc., above.			
Hand-made tiles, per M.	£5	18	0
Machine-made tiles, per M.	5	8	0
Westmorland slates, large, per ton	9	0	0
DO. *Peggies, per ton*	7	5	0

SLATING, 3 in. lap, compo nails, Portmadoc or equal:

Ladies, per square	£4	0	0
Countess, per square	4	5	0
Duchess, per square	4	10	0

WESTMORLAND, in diminishing courses, per square 6 5 0
CORNISH DO., per square 6 3 0
Add, if vertical, per square approx. 0 13 0
Add, if with copper nails, per square approx. 0 2 6
Double course at eaves, per ft. approx. 0 1 0

SLATING with Old Delabole slates to a 3 in. lap with copper nails, at per square.

	Med. Grey	Med. Green
24 in. × 12 in.	£5 0 0	£5 2 0
20 in. × 10 in.	5 5 0	5 10 0
16 in. × 10 in.	4 15 0	5 1 0
14 in. × 8 in.	4 10 0	4 15 0
Green randoms	6 7 0	
Grey-green do.	5 9 0	
Green peggies, 12 in. to 8 in. long	4 13 6	

TILING, 4 in. gauge, every 4th course nailed, in hand-made tiles, average per square 3 17 6
DO., machine-made do., per square 3 7 6
Vertical Tiling, including pointing, add 18s. 0d. per square.

FIXING lead soakers, per dozen	£0	0	10
STRIPPING old slates and stacking for re-use, and clearing away surplus and rubbish, per square	0	10	0
LABOUR only in laying slates, but including nails, per square	1	0	0

See "Sundries" for Asbestos Tiling.

CARPENTER AND JOINER

CARPENTER, 1s. 8½d. *per hour;* JOINER, 1s. 8½d. *per hour;* LABOURER, 1s. 3½d. *per hour.*

Timber, average prices at Docks, London Standard, Scandinavian, etc. (equal to 2nds):

7 × 3, per std.	£22	0	0
11 × 4, per std.	30	0	0

Memel or Equal. Slightly less than foregoing.

Flooring, P.E., 1 in., per sq.	£1	4	6
DO. *T. and G., 1 in., per sq.*	1	4	6
Planed boards, 1 in. × 11 in., per std.	30	0	0
Wainscot oak, per ft. sup. of 1 in.	0	1	6

DO. *Cuba, per ft. sup. of 1 in.*	0	2	6
DO., *African, per ft. sup.*	0	1	3
Teak, per ft. sup. of 1 in.	0	1	2
DO., *ft. cube*	0	14	0

FIR fixed in wall plates, lintels, sleepers, etc., per ft. cube 9 4 6
DO. framed in floors, roofs, etc., per ft. cube 0 4 6
DO. framed in trusses, etc., including ironwork, per ft. cube 0 8 6
PITCH PINE, add 33⅓ per cent.

FIXING only boarding in floors, roofs, etc., per sq.	0	13	6
SARKING FELT laid, 1-ply, per yd.	0	1	6
DO., 3-ply, per yd.	0	1	9
CENTERING for concrete, etc., including horsing and striking, per sq.	2	0	0
TURNING pieces to flat or segmental soffits, 4½ in. wide, per ft. run	0	0	4½
DO. 9 in. wide and over per ft. sup.	0	1	2

[*continued overleaf*

CARPENTER AND JOINER: *continued*

SHUTTERING to face of concrete, per square	£1	10	0
DO. in narrow widths to beams, etc., per ft. sup.	0	0	6
USE and waste of timbers, allow 25 per cent. of above prices.			
SLATE BATTENING, per sq.	£0	12	6
DEAL boarding to flats, 1 in. thick and firrings to falls, per square	2	10	0
STOUT feather-edged tilting fillet to eaves, per ft. run	0	0	6
FEATHER-edged springer to trimmer arches, per ft. run	0	0	4
STOUT herringbone strutting (joists measured in), per ft. run	0	0	6
SOUND boarding, ⅛ in. thick and fillets nailed to sides of joists (joists measured over), per square	2	0	0
RUBEROID or similar quality roofing, one ply, per yd. sup.	0	2	3
DO., two-ply, per yd. sup.	0	2	6
DO., three-ply, per yd. sup.	0	3	0
TONGUED and grooved flooring, 1½ in. thick, laid complete with splayed headings, per square	2	5	0
DEAL skirting torus, moulded 1½ in. thick, including grounds and backings, per ft. sup.	0	1	0
TONGUED and mitred angles to do.	0	0	6
WOOD block flooring standard blocks laid herringbone in mastic:			
Deal 1 in. thick, per yd. sup.	0	10	0
DO. 1¼ in. thick, per yd. sup.	0	12	0
Maple 1¼ in. thick, per yd. sup.	0	15	0
DEAL moulded sashes, 1¼ in. with moulded bars in small squares, per ft. sup.	0	2	6
DO. 2 in. do., per ft. sup.	0	2	9
DEAL cased frames, oak sills and 2 in. moulded sashes, brass-faced pulleys and iron weights, per ft. sup.	0	4	6
MOULDED horns, extra each	0	0	3
DOORS, 4-panel square both sides, 1¼ in thick, per ft. sup.	0	2	6
DO. moulded both sides, per ft. sup..	0	2	9
DO. 2 in. thick, square both sides, per ft. sup.	0	2	9
DO. moulded both sides, per ft. sup..	0	3	0
DO. in 3 panels, moulded both sides, upper panel with diminished stiles with moulded bars for glass, per ft. sup.	0	3	6
If in oak, mahogany or teak, multiply 3 times.			
DEAL frames, 4 in. × 3 in., rebated and beaded, per ft. cube	£0	15	0
Add for extra labours, per ft. run	0	0	1
STAIRCASE work:			
DEAL treads 1¼ in. and risers 1 in., tongued and grooved including fir carriages, per ft. sup.	0	2	6
DEAL wall strings, 1¼ in. thick, moulded, per ft. run	0	2	0
If ramped, per ft. run	0	4	6
SHORT ramps, extra each	0	7	6
ENDS of treads and risers housed to strings, each	0	1	0
2 in. deal mopstick handrail fixed to brackets, per ft. run	0	1	6
4½ in. × 3 in. oak fully moulded handrail, per ft. run	0	5	6
1½ in. square deal bar balusters, framed in, per ft. run	0	0	6
FITTINGS:			
SHELVES and bearers, 1 in., cross-tongued, per ft. sup.	0	1	6
1¼ in. beaded cupboard fronts, moulded and square, per ft. sup.	0	2	9
TEAK grooved draining boards, 1½ in. thick and bedding per ft. sup.	0	4	6
IRONMONGERY:			
Fixing only (including providing screws):			
To DEAL—			
Hinges to sashes, per pair	0	1	2
Do. to doors, per pair	0	1	7
Barrel bolts, 9 in., iron, each	0	1	0
Sash fasteners, each	0	1	0
Rim locks, each	0	1	9
Mortice locks, each	0	4	0

SMITH

SMITH, *weekly rate equals* 1*s.* 8½*d. per hour;* MATE, *do.* 1*s.* 3½*d. per hour;* ERECTOR, 1*s.* 8½*d. per hour;* FITTER, 1*s.* 8½*d. per hour;* LABOURER, 1*s.* 3½*d. per hour.*

Mild Steel in British standard sections, per ton	£12	10	0
Sheet Steel:			
Flat sheets, black, per ton	17	0	0
DO., *galvd., per ton*	18	0	0
Corrugated sheets, galvd., per ton	17	10	0
Driving screws, galvd., per grs.	0	1	10
Washers, galvd., per grs.	0	1	1
Bolts and nuts per cwt. and up	1	18	0
MILD STEEL in trusses, etc., erected, per ton	25	0	0
DO.. in small sections as reinforcement, per ton	16	0	0
DO., in compounds, per ton	17	0	0
DO., in bar or rod reinforcement, per ton	22	10	0
WROT-IRON in chimney bars, etc., including building in, per cwt.	2	0	0
DO., in light railings and balusters, per cwt.	2	5	0
FIXING only corrugated sheeting, including washers and driving screws, per yd.	0	2	0

PLUMBER

PLUMBER, 1*s.* 9*d. per hour;* MATE OR LABOURER, 1*s.* 4*d. per hour.*

SHOP FRONT : 21-22 SLOANE STREET, S.W.
BY
HENRY TANNER AND SYDNEY JACQUES

THIS shop front, recently completed, to the joint architects' special designs, under their direct supervision, has been carried out in a modern Continental style which is both effective and arresting, whether seen by daylight or after dark.

The plate glass show-windows finish not higher than 7 feet above the footway, and, above them, the wide fascia, in selected blue Belge marble, carries the illuminated day-and-night sign in letters 5 feet 6 inches high, executed in metal and finished in gold bronze.

The metal shop-front is finished in cellulose gold bronze, framed with a bold architrave of black marble. A sun-blind is housed in a case above the marble, and this, also, is of bronze finish.

Within, the entrance lobby is in panelled walnut, with Travertina paving, and an illuminated laylight. The entrance doors are of the portable type, with sliding wings.

Two photographs of the shop front, by day and by night, which illustrate the working drawing reproduced on the following page.

21-22 SLOANE STREET, LONDON, S.W.

Shopfront

By Henry Tanner and Sydney Jacques

(For photographs see preceding page)

THE ARCHITECTS' JOURNAL

WEDNESDAY, MARCH 19, 1930

BOILING POINT

"I have been into many homes in which my blood has boiled at the sight of the arrangement of the house. It was perfectly obvious that the architect had never given a thought to the manner in which the women would have to run them ; there was an utter lack of imagination on the part of the architect. . . . Educated women of today will not tolerate such stupidities."

—MISS MARGARET BONDFIELD, M.P., MINISTER OF LABOUR

THE architect is commonly subjected to a certain complacent type of ridicule that makes him a figure of fun for the practical man. Of this form of humour the joke about " forgetting the stairs " is best known, and most used; though it is being superseded today by one more dangerous and equally futile that would saddle the architect with all the faults of every foolish client, and of every unconscientious jerry-builder of bad villas. This latest gibe might be called the " cupboard " joke. Architects never design enough cupboards; architects never think of women's work; architects never, in short, know the first thing about running a house—a labour-saving house.

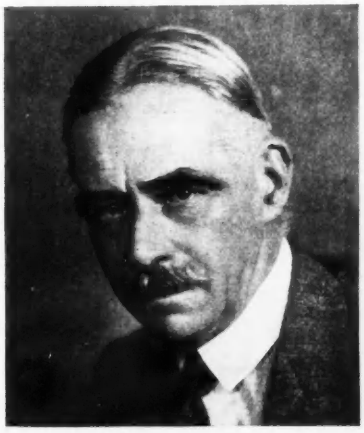
It would normally be a waste of time to point out the falseness of an accusation which could never be made with so much impunity were the architect able to defend himself with the same weapons; but for once we must take up arms against a frontal attack so packed with allegations of incompetence, ignorance and hare-brained stupidity as to make *our* blood boil for some form of retort, however inadequate. That the accuser should be Miss Bondfield, M.P., Minister of Labour, and a woman, only adds to the offence.

She, as Minister of Labour, must have given thought to that immense unclassified labour which, as wives and mothers, women are called upon to perform. She has realized the apparent waste of effort which takes unremitting toll of women's life, and how that life is spent in drudgery in and about houses not worthy the name of home. It is a weary thought that this drudgery goes on, with little check—cleaning, dusting, mending and eternal dish-washing.

Thinking of all this, Miss Bondfield wonders why the enormous influence of the building societies could not be directed towards inducing architects to instal labour-saving devices in the houses they design—a very understandable point of view in one unaware of the true financial aspect of building societies or the cost of labour-saving devices. When she proceeds, in public utterance, to accuse the architect of the type of gross incompetence that *adds* more labour to the running of the house, her view becomes unworthy of an observant and educated Minister of the Government, and one may wonder whether, indeed, she has been able to tell when a house is designed by an architect and when not.

For it is exactly in this matter of logical and thoughtful planning of detail that the architect's house is distinguished from the bulk of speculative building, where only those points that help to *sell* the house are thought out and given prominence. Small kitchens made to look labour-saving; large halls that make the house look bigger than it is; sham half-timbered gables that give it a character that it cannot maintain—all these things are paid for by cheap materials, rushed construction and bad workmanship.

If Miss Bondfield will examine the many plans which architects made in the days after the war, when they had some form of control over the houses that were being built, she will see with what care the arrangement of larders, sculleries and living-rooms was worked out to make the greatest use of restricted space, and to catch as much sunlight as possible. She will see also that in these houses attention is paid to other and more lasting aspects of human life; they are built to last several generations and not merely the term of a financial loan. If she will further follow the history of housing, she will see how economic stress pushed out architects from their task of home-building, and how a host of incompetents took their place; and how, slowly but surely, essentials were replaced by attractions, and good design by falseness and pretension. It is, in her, a vexatious and ironical perversion of the truth to saddle architects with what they know is wrong and deplore as fervently as Miss Bondfield can. The science of cheap and good building belongs to architects. The parody that holds the field today will become the slum of the future, because there is so little good in it.



If Miss Bondfield could induce building societies to exercise more than a financial control over the money they lend, there might be some chance for the knowledge and brains of architects to be used once again to good purpose.

EXCAVATOR, CONCRETOR AND STEEL ERECTOR

A photograph of the foundations, the retaining wall, and the grillage, for the sub-basement of Thames House, Grosvenor Road, S.W., in course of erection from the designs of Sir Frank Baines, K.C.V.O. The retaining wall is 36 feet high, 16 feet wide at base, and 4 feet at top. Twenty-eight cranes, excavators and other appliances were employed in constructing the foundations. 110,000 yards cube of earth were excavated, and 17,670 yards cube of concrete were used in constructing the retaining wall. The building will have a river frontage of 560 feet and a height from sub-basement to ridge of 164 feet.

NEWS & TOPICS

Dr. Percy Scott Worthington, M.A. (Oxon.), the recipient on Monday last of the 1930 Royal Gold Medal. A collection of drawings and photographs of Dr. Worthington's architectural work is on exhibition at the R.I.B.A. until March 29.

WHERE HOUSING HAS BROKEN DOWN

WE have for some time been avoiding the problem of housing the enormous population lying outside the economic rental figure. In spite of the million houses built since the war, it is known that we have only satisfied those capable of paying a rental of over ten shillings a week, and that a much larger section of the community is living in the slums which have not been touched, or is existing under great stress in houses which they cannot afford.

★

The situation has been exposed by *The Hull Evening News* in an article that makes very disagreeable reading for everyone who has looked upon municipal housing as one of the things which, in a difficult period, has been fairly well done. According to this article, the state of some of the city housing schemes borders on a poverty which we have never associated with wide roads, gardens and well-planned houses; and yet if one may believe that in the past year 11,000 summonses have been served in one estate alone, and that houses are to be had in plenty by those who can afford the rent, one may ask whether indeed one class of the community is not already completely catered for, while another is without any other refuge but an overcrowded slum. That this situation is not confined to Hull, I have the evidence of an omnibus driver, who remarked to me, as we passed the L.C.C. Roehampton estate, which I was praising to a friend, " the only thing wrong with that place is that the people who live there can't afford to."

TAXING ART EXPORTS

Mr. Alfred Bossom has suggested a new tax to Mr. Snowden—a tax on exported art treasures. The idea is not exactly new, for the recent Rural Amenities Bill contained a clause forbidding the export of old buildings. Mr. Bossom goes one better, for he purposes to tax all art treasures leaving the country, and to use the money so raised to restore and preserve what remains. Mr. Snowden might have known there was a snag somewhere. It would be hard if he accepted the first part of the suggestion and pocketed the rest.

A LONDON STEELWORK " HUSTLE "

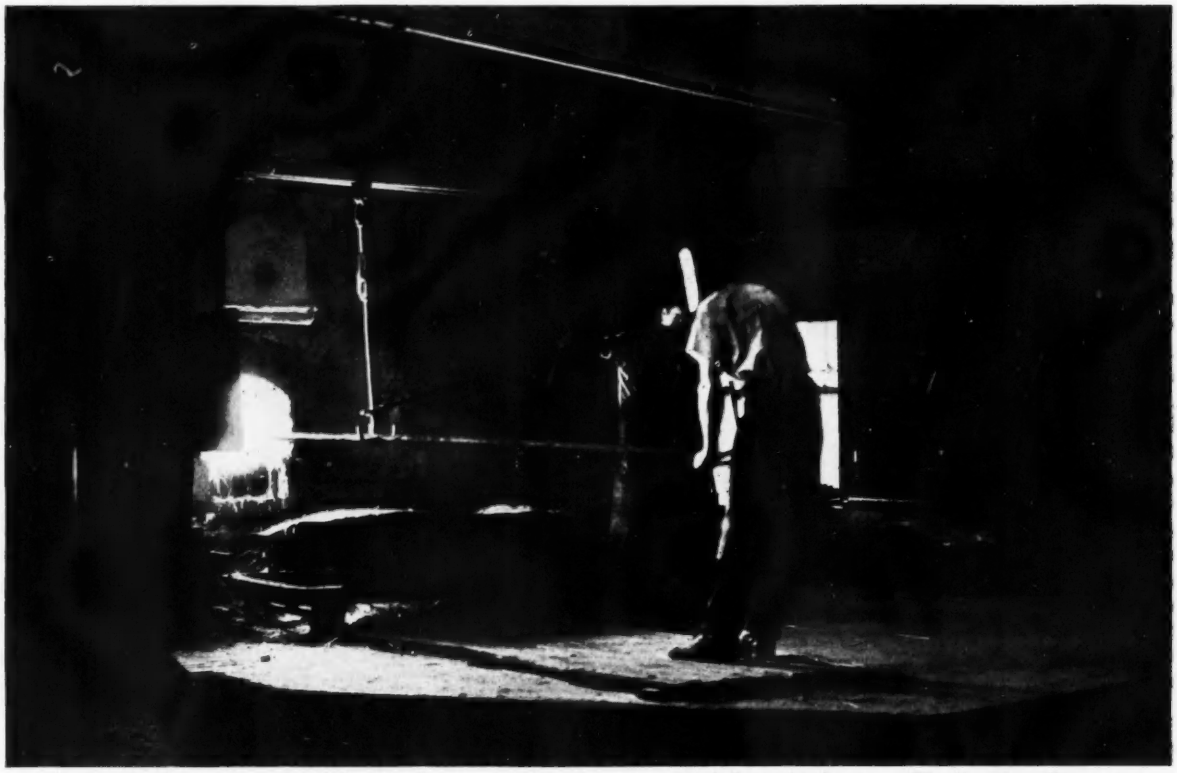
I understand that the speed with which work is proceeding on Thames House, Sir Frank Baines's new office building in Grosvenor Road, Westminster, is without precedent in the building trade. The steel frame, which will weigh nearly 12,000 tons when complete, is being erected at an average rate of over 400 tons per week by means of eight cranes concentrated on the site. During one week no less than 1,080 tons of steel were fixed, constituting a record for the country, and easily beating the previous record of 680 tons in one week, at Empire Hall, Olympia. Thames House will be the largest office building in London. Horseferry Road and the widened extension of Millbank along Grosvenor Road will shortly become two of the main traffic arteries of the metropolis; thus the new site, instead of being separated from the river by a jumble of old wharves, will front upon a great embankment roadway 70 feet wide.

VANISHING TRICKS AT THE TROC.

Some interesting steelwork is also being erected at the Trocadero Restaurant, Piccadilly Circus, where extensive alterations are in progress from designs of Mr. F. J. Wills and Mr. Oliver P. Bernard. A week or so ago I saw a braced girder, which is believed to be the biggest of its type in London. It is 70 feet long, 14 feet 6 inches deep, and weighs 62 tons. Its top flange is at fifth floor level, and its bottom flange at fourth floor level, and access to the kitchens on the fourth floor is obtained by a door in the girder itself. Owing to difficulties of access, some of the large plate girders and framed members had to be delivered " piece small " and riveted up on the site. I also saw there a " dropping screen," built on a lattice steel girder 66 feet long and 15 feet high. It separates two rooms, each capable of accommodating 250 diners, and can be made at will to sink through the floor, complete with all lighting, decorations and doors, thus converting the two dining-rooms into one large hall. Surely this electrically controlled wall constitutes one of the most remarkable interior construction jobs ever carried out in this country.

MR. EVERYMAN AS HOME DESIGNER

One of the by-products of " home making " journalism is to be seen in a steady stream of fatuity directed to convince the gullible reader that architecture is child's play. All you do, according to one particularly bright article, is to think of all the things you would like, and then have your ideas " incorporated into a workable plan that satisfies sanitary and other legal requirements *by an architect*." Were we ever brought so low as this ! Yet, when I think of it, under the terms of this gratuitous insult a large proportion of very useful work is carried out. And I have known the insult to be most handsomely withdrawn. After all, no one can be more insulting than the light-hearted press, poor fellows !



HEAVY TRAFFIC THROUGH OXFORD

Traffic through Oxford has increased to such an extent that fears are entertained for the safety of some of the older college buildings. The ordinary traffic which one associates with a university town could never be considered dangerous, and one realizes how much Oxford is transformed into the semblance of a twentieth-century industrial town, that latest manifestation of progress in the South of England, when the complaint is chiefly directed against heavy traffic. It is suggested that a public inquiry be held to discover the true bearing of the problem, and, if the Road Traffic Bill is passed with some important amendments, it may be possible that such an inquiry might lead to certain streets being closed to heavy traffic where

universities, colleges or other ancient monuments are rendered liable to the dangerous effects of vibration.

WHO GIVETH EYES TO SCIENCE

Ever shall I bear about me a memory of my introduction, in company with a party of London architects, into the secrets of glass-making at Smethwick, Birmingham, on Wednesday last. With an indefinable sense of awe I watched the "gatherers" drawing molten metal from the furnaces for the making of rolled plate-glass. They wore metal masks over their faces to protect them from the intense heat: metal masks with dark glass eye-holes to enable them to see into the blinding glow of the furnaces.

A stage in the making of rolled plate-glass: drawing the molten metal from the furnace. The "gatherer" wears a metal mask to protect him and enable him to see into the brilliant glow of the furnace.

As we roamed from place to place, I saw glass of the finest kinds for decorative and practical purposes. I saw white-hot metal, tortured into motion by the breath of the human glass blowers, struggling fitfully as it settled into the shapely bed of its mould. But I shall not attempt to describe my feelings as I saw the production of Crown glass, with its bullions, its brilliant surface and its slight "bow," by the same process which was employed in the sixteenth century: amazement was predominant. I believe it is here, at Chance's, and in no other place in the world, that this process is now employed.

THE "CLAMEUR DE HARO."

Some architects might be embarrassed if the ancient Norman custom of "crying for justice," which is still recognized in the Channel Islands, were enforced in Great Britain. By this custom any wronged person can cry aloud, "Haro! Haro! come to my help." Recently a Mr. Machon was annoyed because the scaffolding of a building next door overhung his rose-bushes. He complained that his flowers were being covered with plaster. As the foreman refused to remove the scaffolding, Mr. Machon raised the "clameur de Haro." The case was eventually taken into the Royal Court of Guernsey, and it was agreed that the foreman, by his refusal to remove the scaffolding, had risked a breach of the peace. A nominal fine of one shilling was inflicted.

"IN A FINE FRENZY," ETC.

I cull some flowers of rhetoric from a painter's own foreword: These Landscapes, Flowerpieces, Portraits and Still-Life Studies are meant to be receptacles for holding a much more important treasure: my Rapture. Let me unfold the meaning of this. The sight of an object—a scene, a face, or a flower—may affect me somehow. I do not snatch at the opportunity of interpreting this impression into a picture and becoming famous. I merely enjoy a certain emotion, which more often than not fades away. But sometimes it lingers within me and lives. It works like leaven and creates an unrest and an urge to express something. This is my first joy. The nursing of an idea, the kindling of an emotion, the passionate love-work of creating a picture in one's mind. As a result of this, I feel (not labour or think) all I want to know about the decorative handling and grouping, the tonality, the design and the technique. . . . Then I am ready to make use of my perception of the object. . . . My work is not of the nature of a hardship. It is hurried, and feverishly pursued. Needless to say, it is ever an intense struggle, but fought under glorious excitement. . . . If I can smite you with some of the rapture which has been mine during the time of activity of each picture, then I may derive from this fact an increase of delight and enjoyment.

How lo-ovely!

ASTRAGAL

PROBATIONERS' TRAINING SCHOOL

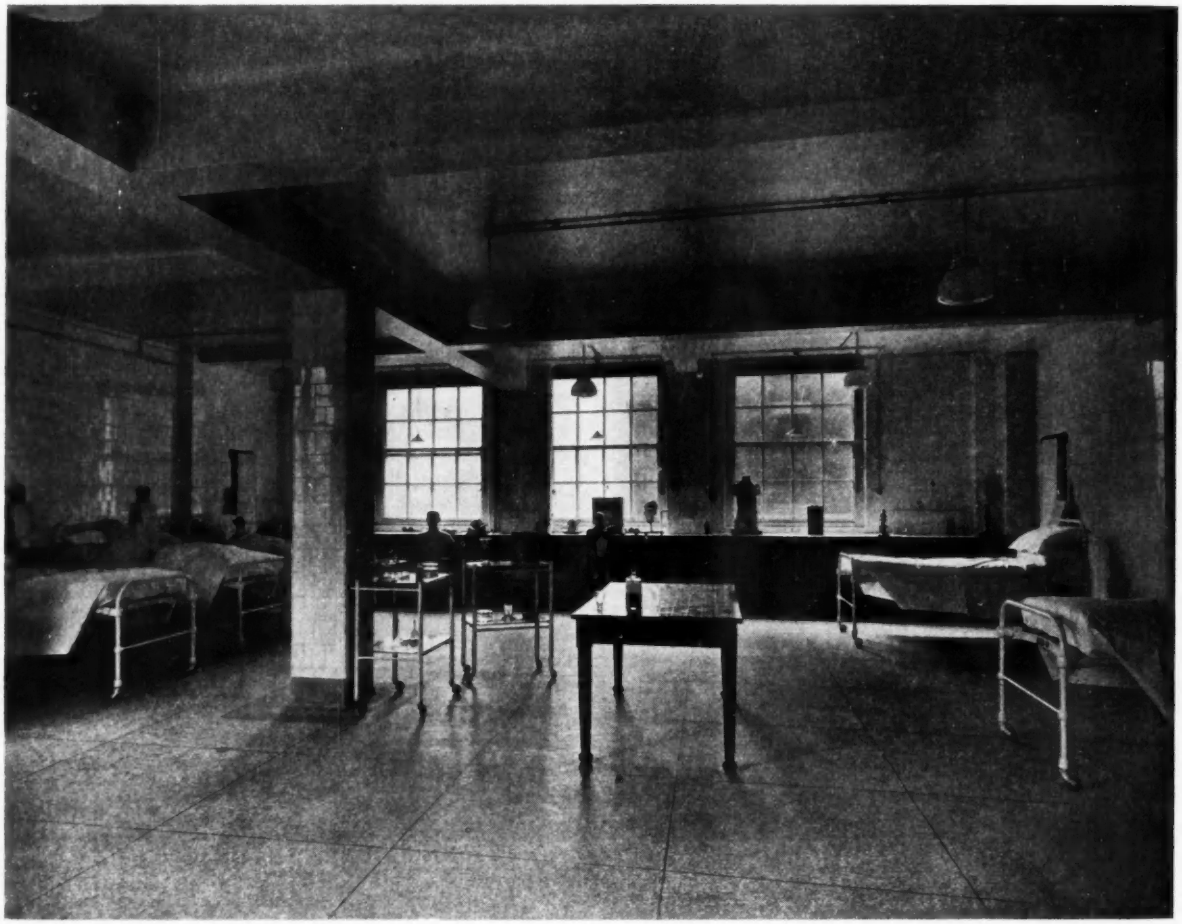
Novel Unit at University College Hospital, W.C.

DESIGNED BY MICHAEL WATERHOUSE

A view of the front to Huntley Street, carried out in red brick, with dressings and two decorative sculptured tablets of a book and a dove in stone, and wrought iron balcony, etc. The new building adjoins the nurses' home, seen on the left, the old servants' entrance of which has been utilized to serve the new premises. A drawing of the elevation appears on page 460.

TODAY, March 19, has been appointed for the opening, by Prince George, of a unit in the complex organization of a modern hospital that is particularly interesting and novel in character. This is the preliminary training school for probationers at University College Hospital.

It has been appreciated for some time past, by those interested in the training of nurses, that it would be beneficial both to the pupils and the



teaching staff if they could be separated from the general life of the nursing staff. If the probationers and their teaching staff can be placed in a separate building closely adjoining the hospital and nurses' home, and this building can be fully equipped with all the necessary practical rooms and apparatus for demonstration, then teaching can be carried out without having to use either the hospital wards or the rooms of the general nurses' home for the earlier stages of training. Very few hospitals in this country are fortunate enough to have either the means or the accommodation for this ideal arrangement. It has, however, been made possible for the University College Hospital by the wise generosity of the Rockefeller Trustees. The cost of the preliminary training school, which has been built to the designs of Michael Waterhouse, is some £27,000, and is being defrayed by the Trustees in their desire to complete in the best possible manner their earlier gifts which have done so much to enlarge and reconstruct this hospital.

The site for this new building, which adjoins the new nurses' home in Huntley Street, designed by the late Paul Waterhouse, father of the present architect, has been provided by the generous gift of the Misses Paxton, in memory of the late Dr. Francis Valentine Paxton. It has a frontage to Huntley Street of 33 ft. and a depth along Hills Place of 62 ft., and is of irregular shape, thus presenting many problems. A compact and economical plan has been contrived, with a maximum of light and accommodation and a minimum of waste space in stairs and corridors.

The building has its own separate entrance—in effect, the old servants' entrance of the nurses' home—and staircase, and is quite independent of the nurses' home, though through communication is provided for use as and when desired. It contains dining- and sitting-room accommodation, demonstration rooms, lecture rooms, and bedrooms for twenty-one probationers and their teaching staff, numbering three, divided between a basement, ground floor, and six stories above.

The basement contains, on the front, a well-lit and very well-equipped training kitchen, with tiled-top benches, gas stoves, sinks, etc., all of the most modern type. Adjoining this is a scullery and cold storage, all these being designed for training purposes and not for the cooking of students' meals. At the back is the probationers' dining-room, with its own pantry and servery; the food for this room is provided from the general kitchen of the nurses' home, which connects through the servery.

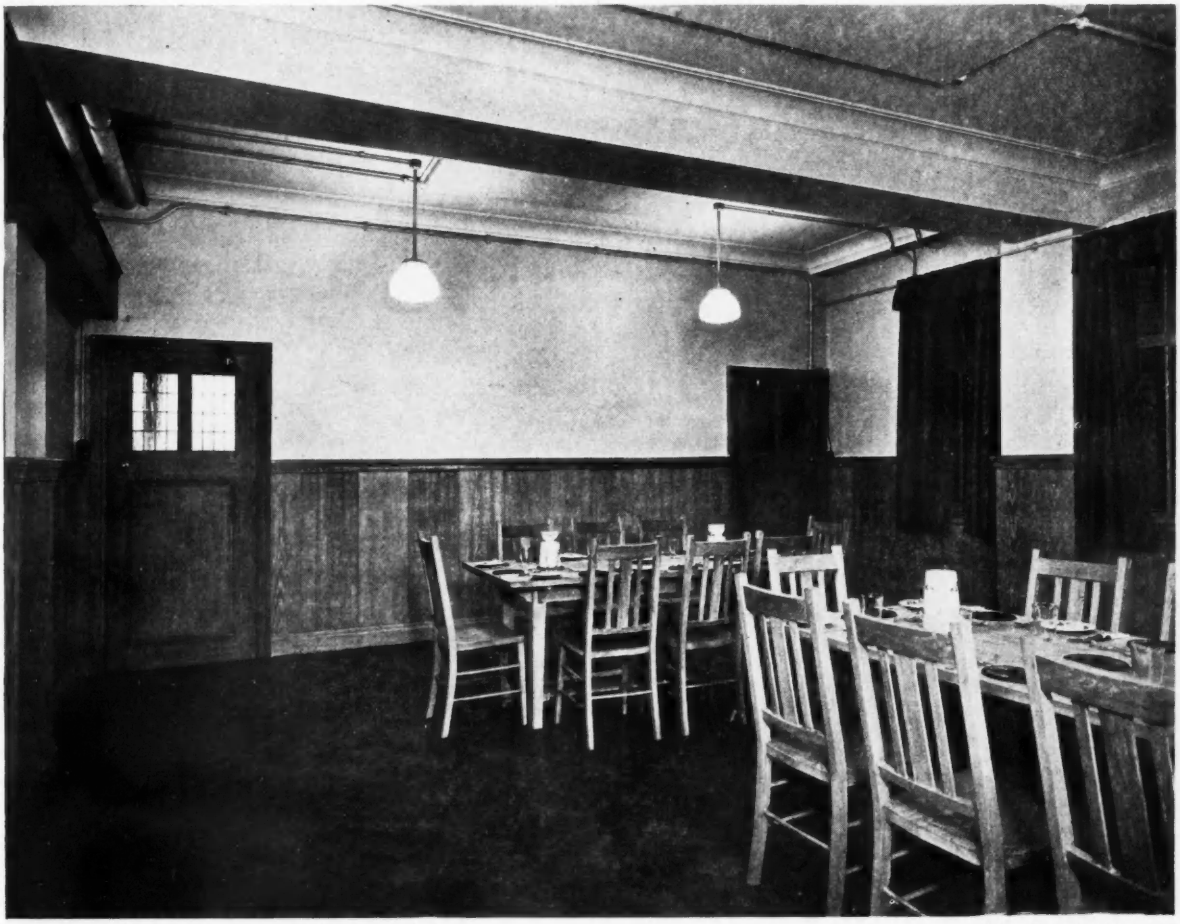
On the ground floor is the entry, with

Probationers' School, University College Hospital, W.C. [*By Michael Waterhouse.*

In the practical room, on the first floor, looking towards the front windows of the building. The outstanding feature of the school is the detailed nature of the equipment; this is, practically, a model ward, with demonstration beds and benches, sinks, etc. No human patients, however, will occupy it: only figures, for practice in bandaging, and life-size dolls, two of which may be discerned in the beds on the left.

its hall and office, and, adjoining this, on the Huntley Street front, is the probationers' sitting-room. At the rear is the large lecture-room, lit from Hills Place and equipped with lecture table, screens, boards, and large cupboards for demonstration models. The whole of these ground-floor rooms are panelled in Oregon pine, and the dining-room in oak; and these, in common with the bedrooms and bed-sitting-rooms, are designed to appear comfortable and home-like and form a contrast to the usual " hospital " type of architecture.

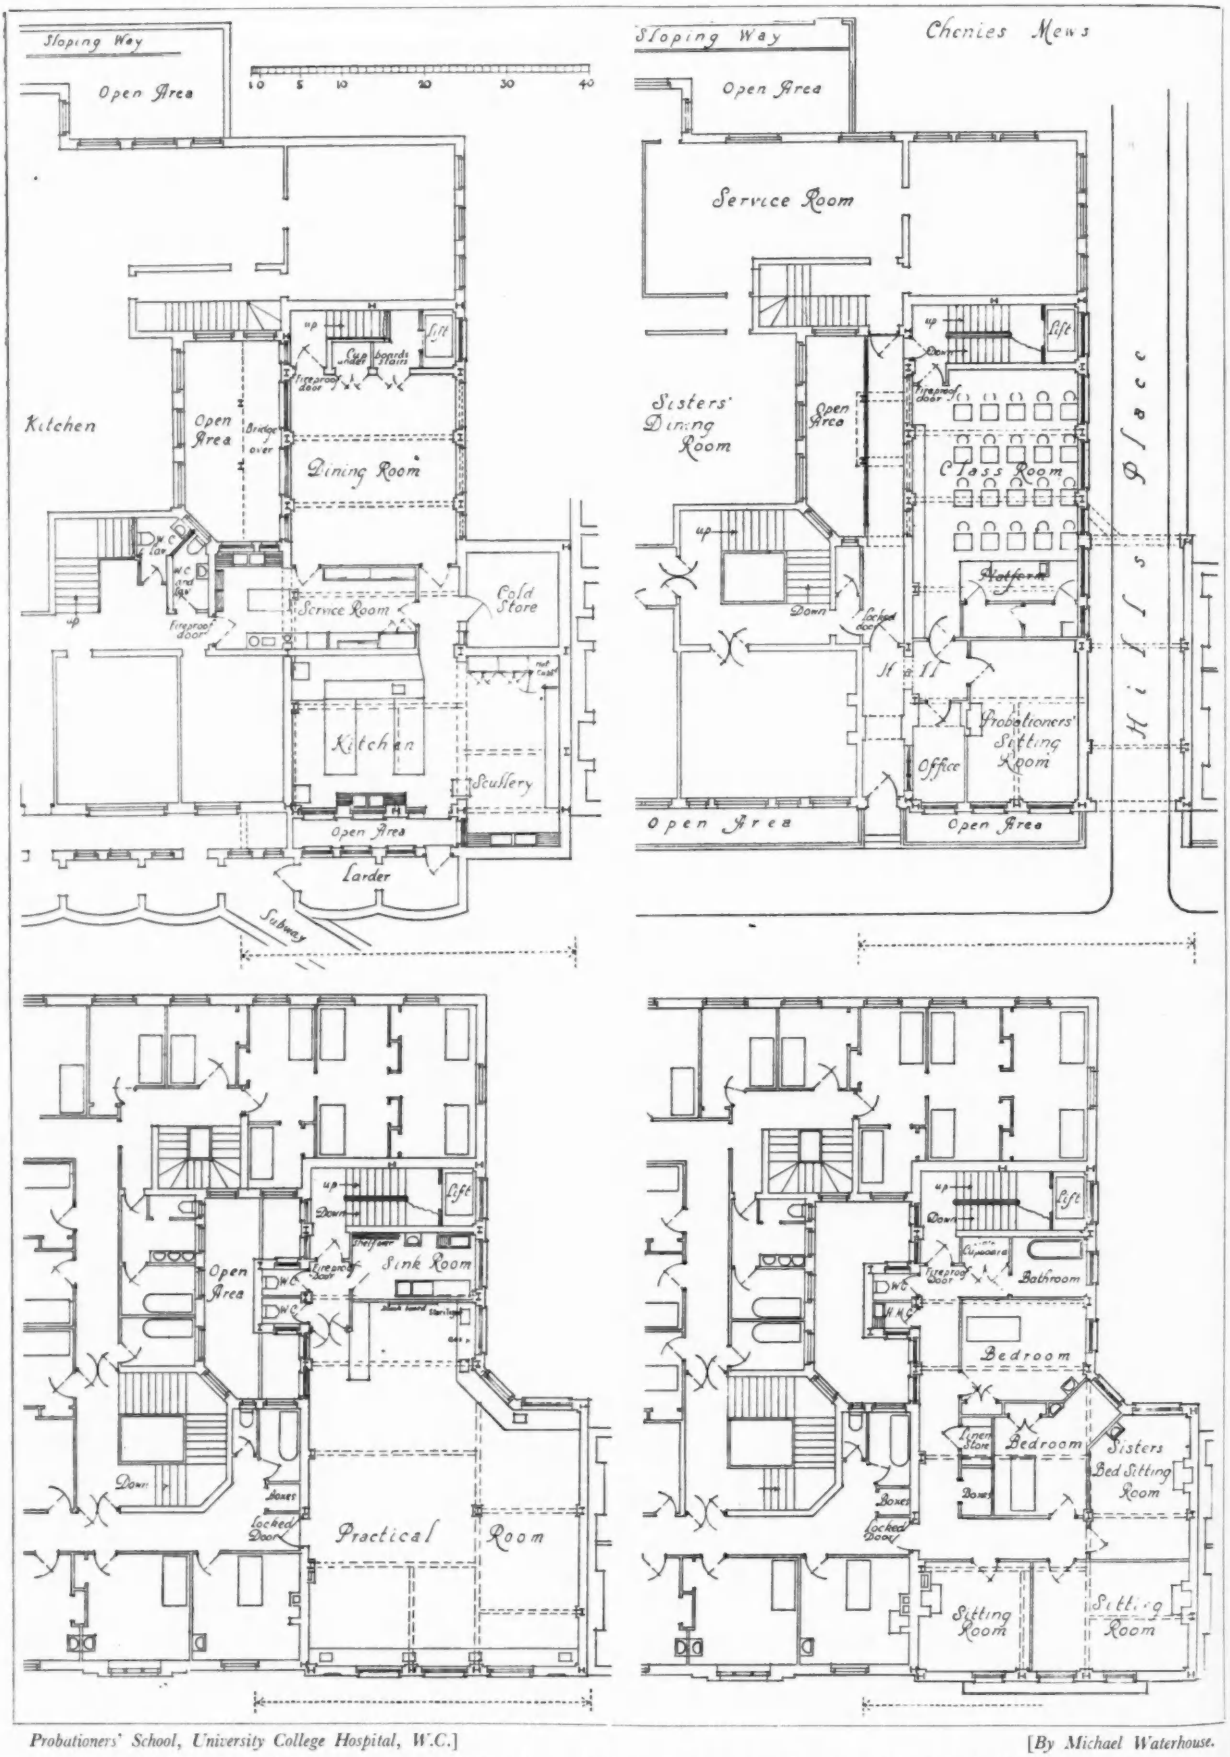
On the first floor advantage has been taken of the old archway over Hills Place to extend the large practical demonstration room along the whole frontage and also to secure back light from Hills Place. The practical room, with its adjoining sink-room, has been made as large as possible and is fitted as a model ward, with the addition of laboratory sinks and benches round the walls, for all branches of training. The sink-room is an exact copy of those in the hospital and, generally speaking, all equipment has been so arranged, selected and designed that it will give the students practical experience with the apparatus that they will either find in the University College Hospital wards or ought to find in the wards of any other up-to-date hospital to which they may go.



The second floor is devoted to the teaching staff, and consists of two sitting-rooms, one bed-sitting-room, and two bedrooms, with their own bath and lavatory accommodation, linen-rooms, and boxrooms. The average size of the sitting-rooms is 208 sq. ft., the bed-sitting-room, 210 sq. ft., and of the bedrooms, 140 sq. ft.

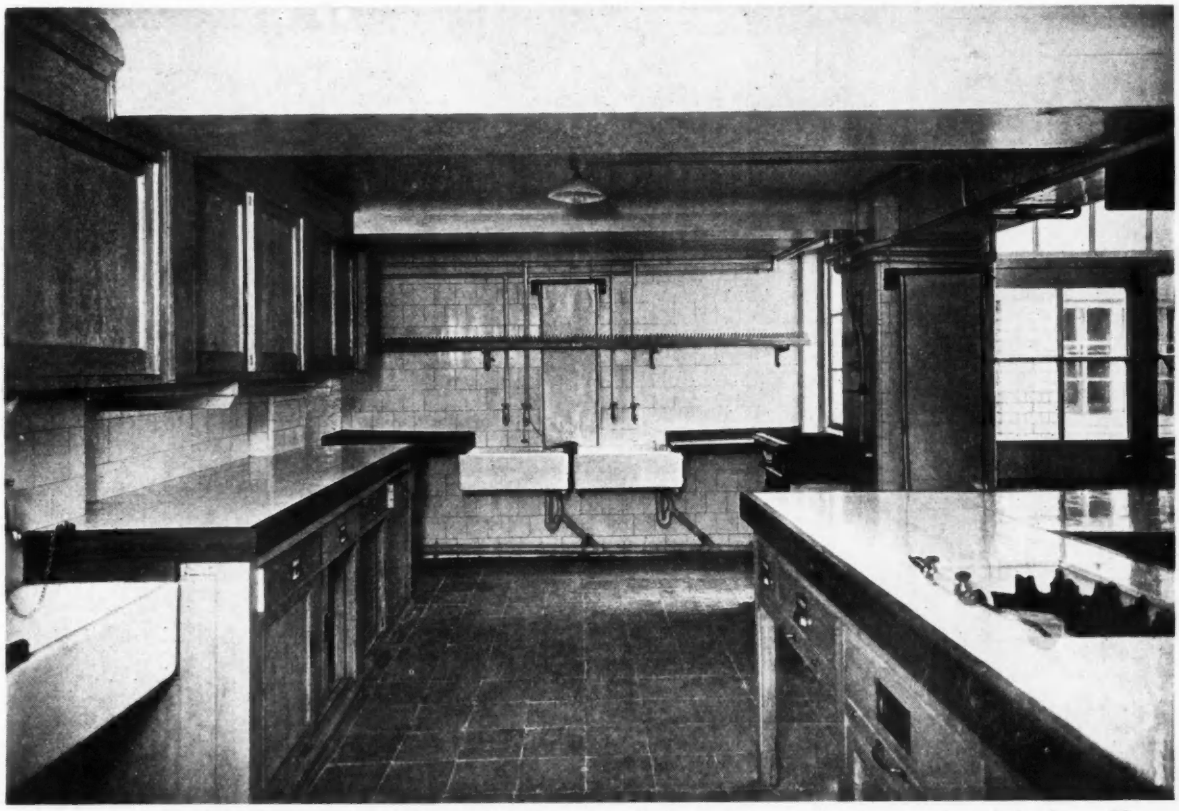
The third, fourth and fifth floors are all alike, each containing bedrooms of an average size of 125 sq. ft., all fitted with built-in wardrobes and cupboards and fixed lavatory basins, with hot and cold water; each floor has its own bath and lavatory accommodation and its box and linen rooms.

The sixth floor is built to accommodate ten maids of the general hospital staff, and is connected with the servants' quarters of the nurses' home, being distinct from the preliminary training school.



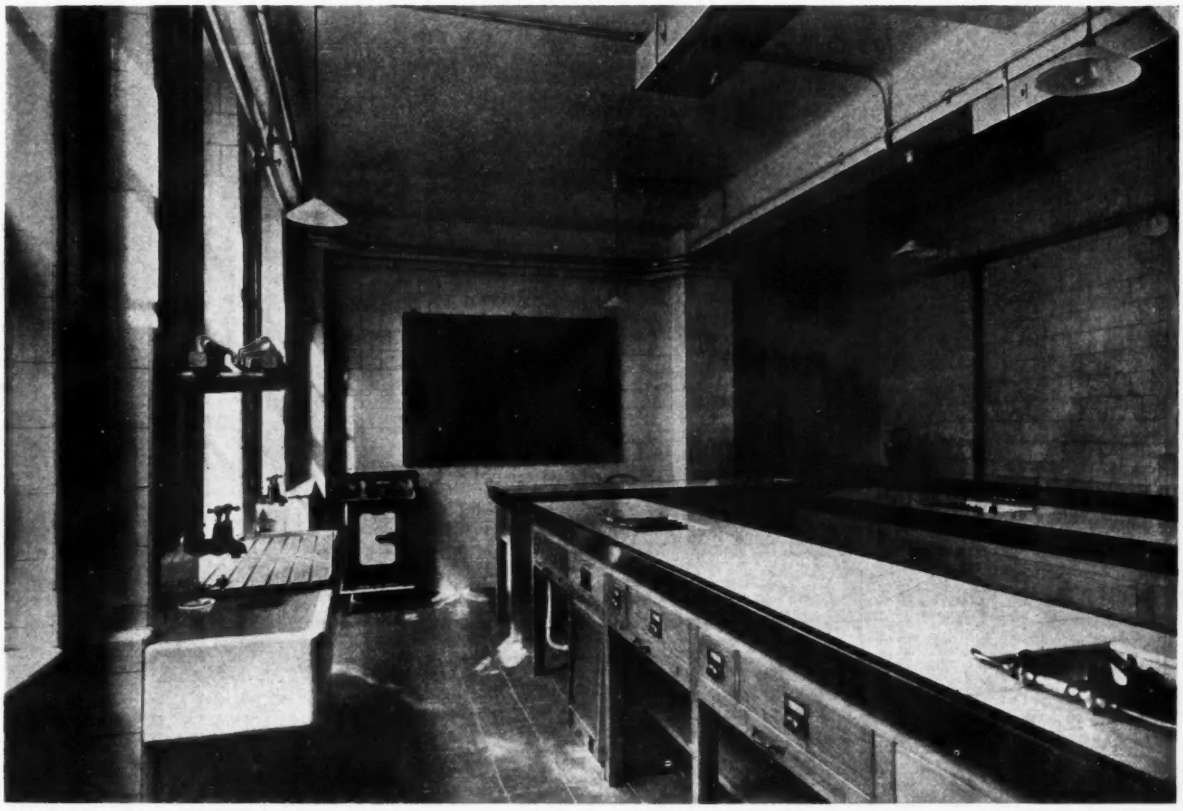
The building has its own lift and staircase, and is heated by low-pressure hot water from the central boiler-house of the hospital. In addition, there are fireplaces, adapted for either coal or gas, in the public rooms, sitting-rooms and bed-sitting-rooms.

The exterior, of red brick and Portland stone, has a very distinctive character, while at the same time it harmonizes with the other hospital buildings in the street and particularly with the adjoining nurses' home.



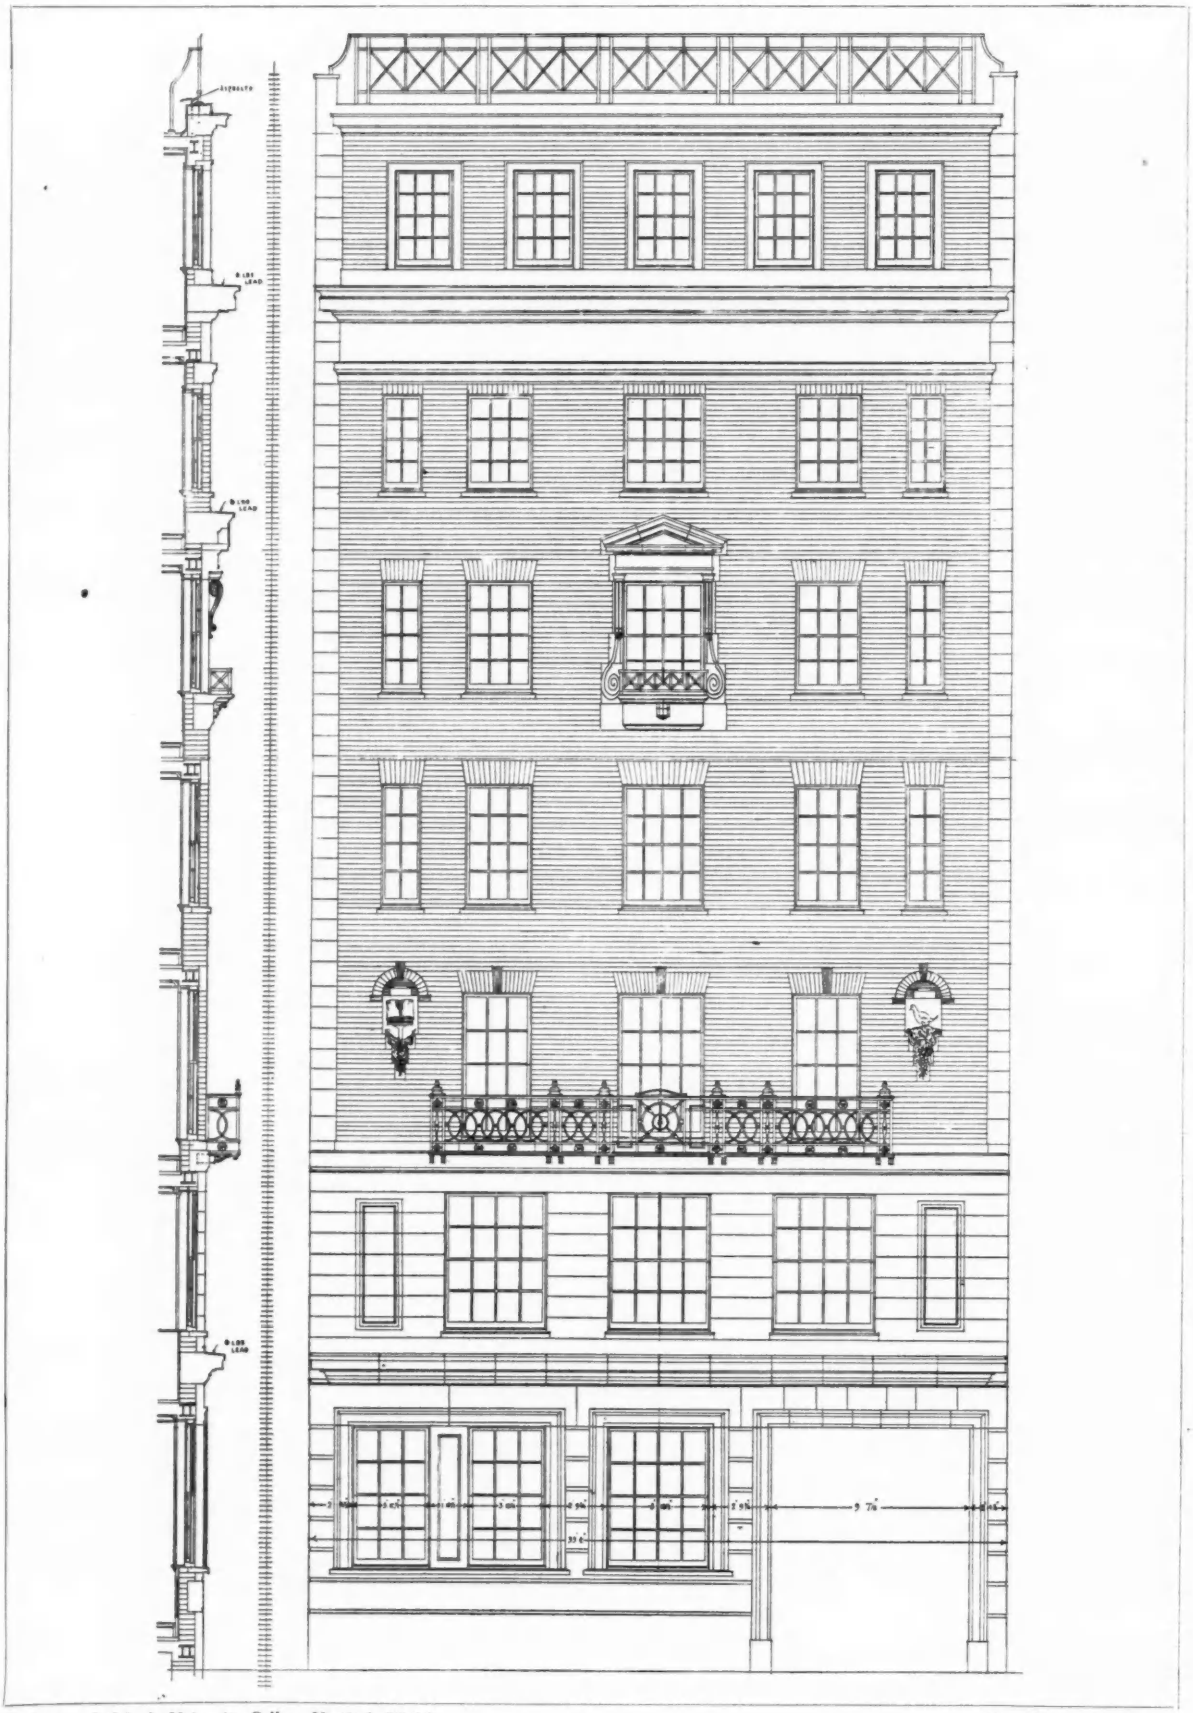
Probationers' School, University College Hospital, W.C.] [*By Michael Waterhouse.*

The probationers' dining-room, in the basement, is panelled and furnished in oak, and has its own pantry and servery. The ood served is cooked in the general kitchen of the nurses' home, in the adjoining building, not in the demonstration kitchen of the school itself, of which illustrations are reproduced on page 459. This room is typical of the aim, held throughout the school, to make the domestic quarters home-like.



Probationers' School, University College Hospital, W.C.] [*By Michael Waterhouse.*

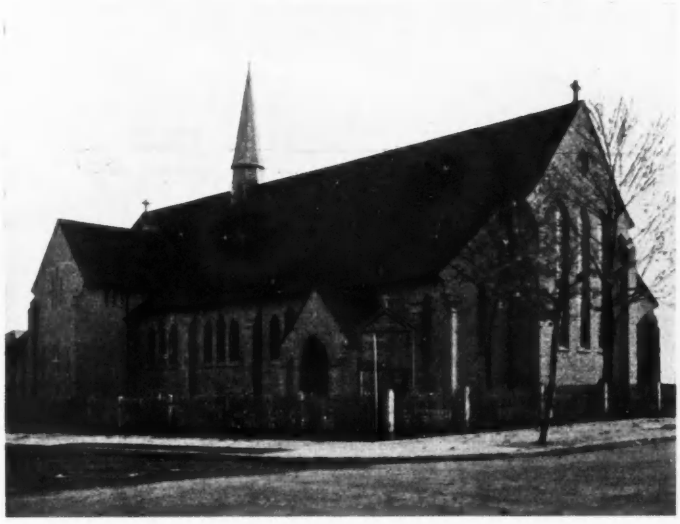
The architect's plans of basement, ground, first and second floors, respectively. The third, fourth and fifth floors are devoted to sleeping accommodation, and follow the general lines of the second. The dotted lines indicate the limits of the new building.



The scullery end of the demonstration kitchen, in the basement; the larder is across the open area beyond the door. The benches, with tops of white tiles, recessed gas-rings, and cupboards and drawers beneath, were made by the general contractors.

Probationers' School, University College Hospital, W.C.] *[By Michael Waterhouse.*

At one end of the kitchen is a blackboard, with two gas cookers within easy reach, for demonstration purposes. The plate racks over the washing-up sinks, seen on the left, like other metal fixtures and pipes, have been given an aluminium finish.

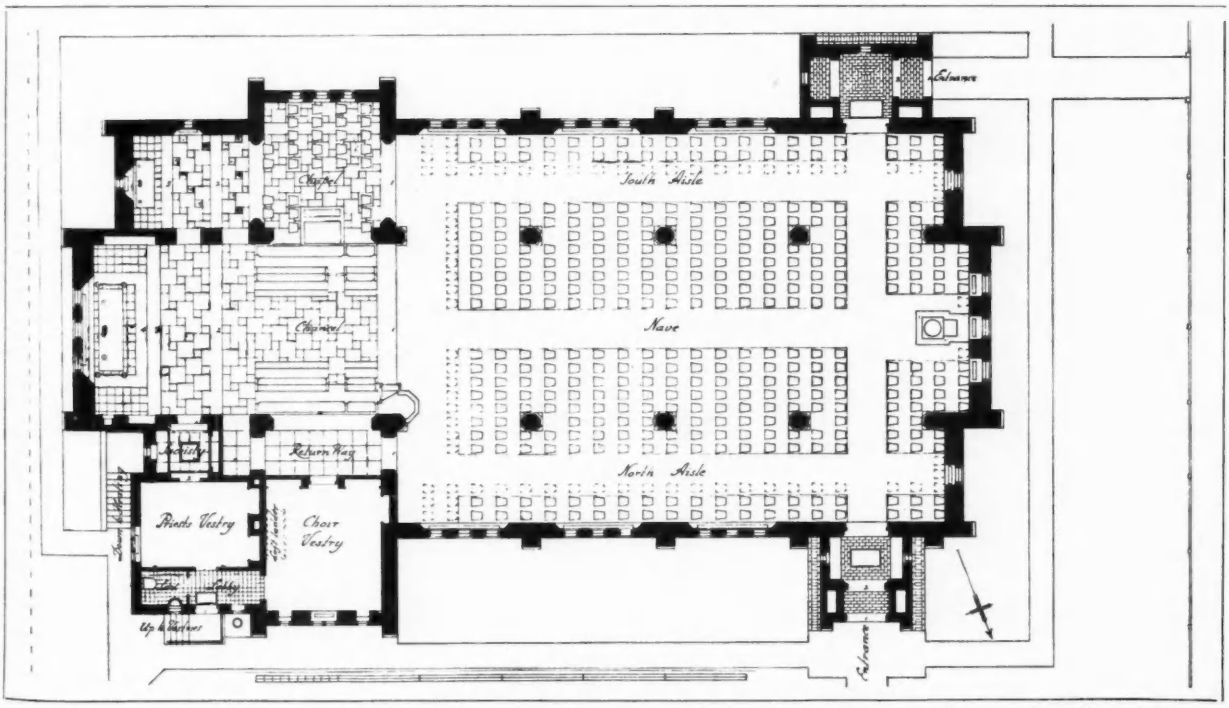


Probationers' School, University College Hospital, W.C. [*By Michael Waterhouse.*

The architect's detail drawing of the front elevation, of which a photograph appears on page 455. The scale may be gauged from the chart of the brick courses that divides the elevation from the section, shown to the left: a division equals three inches.

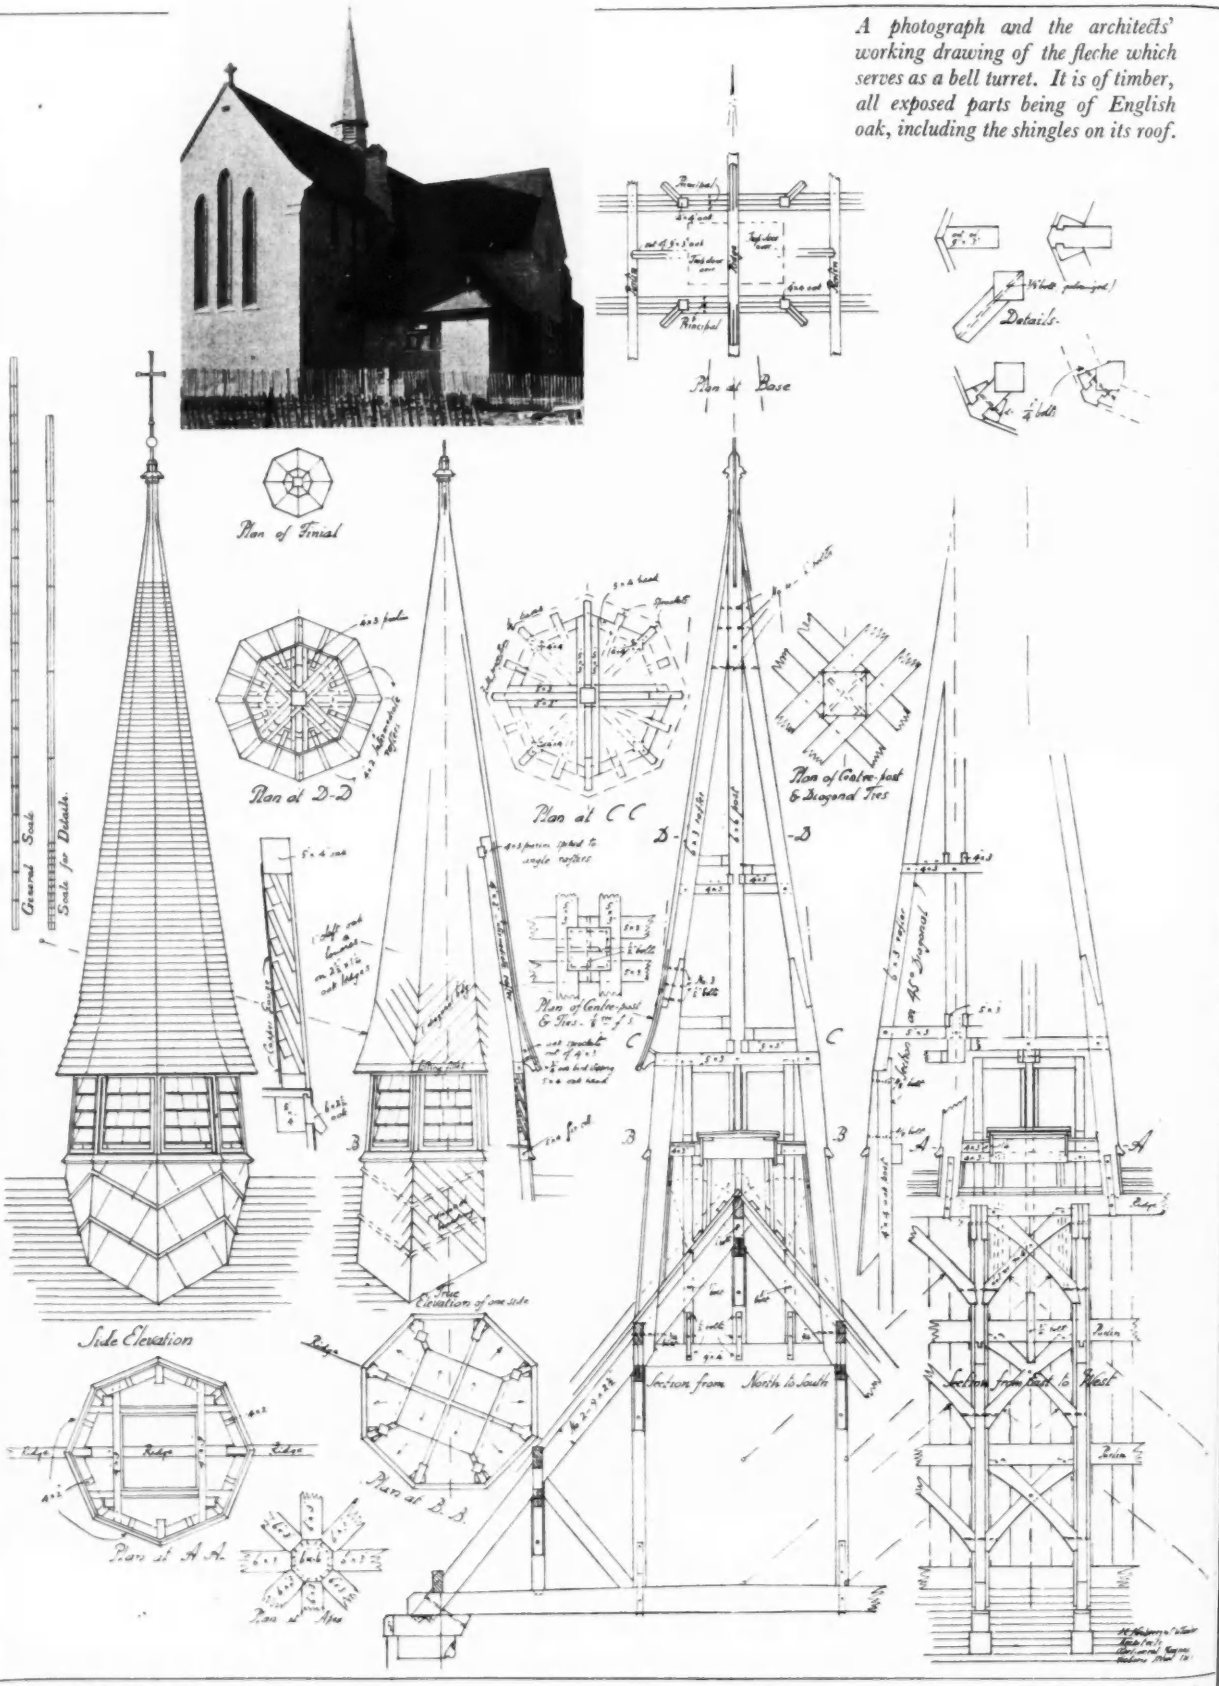
ALL SAINTS' CHURCH, EAST SHEEN, SURREY

In Brick and Tiles



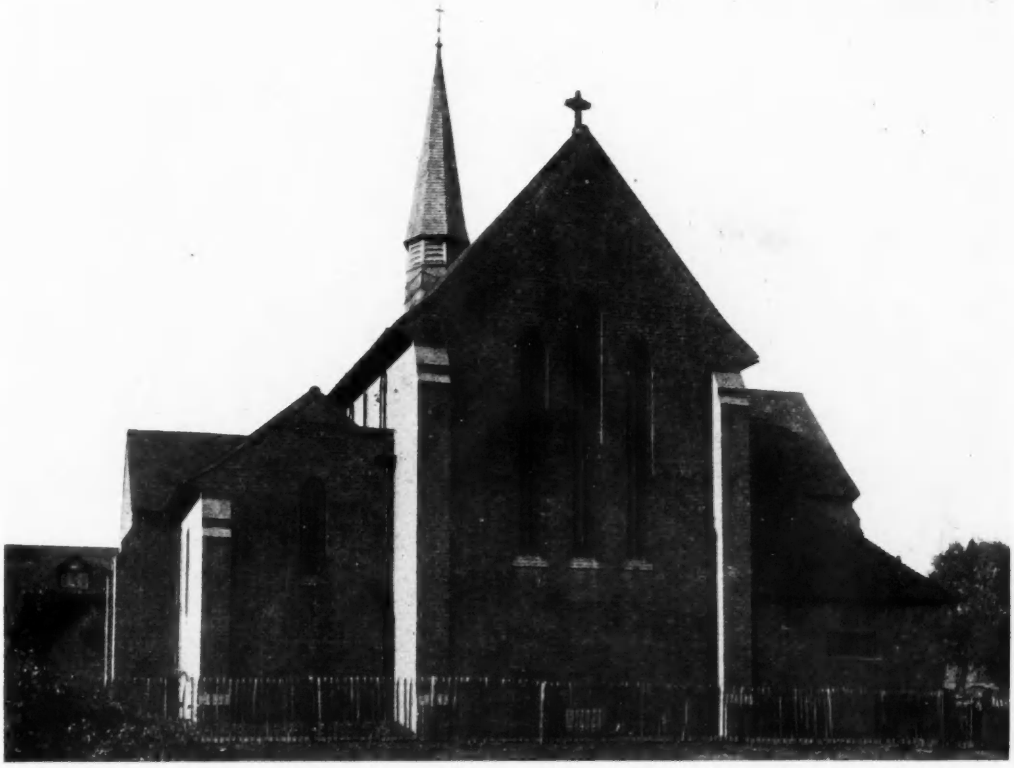
DESIGNED BY NEWBERRY & FOWLER

A general view taken from the corner of Park Avenue (left) and East Sheen Avenue. The church is built of hand-made multicoloured facing bricks, and covered with thick roofing tiles carefully selected for their colour and texture.



THE site of All Saints' Church is approximately 211 ft. long by 110 ft. wide, and has roads on three sides—East Sheen Avenue on the west, Park Avenue on the north, and Park Drive on the east. On part of the site, to the east of the church, will eventually be built a parish hall or parsonage house. The exterior relies for its architectural character upon the simple and effective use of materials of pleasant texture and varied colour. Hand-made multicoloured facing bricks, with wide mortar joints; and thick roofing tiles, were used. The cost of the building being about double what it would have been before the war, when the scheme for building this church was first originated, and the difficulty of obtaining funds being greater, it was necessary to design the building as economically as possible, consistent with a proper regard for dignity, proportion and stability.

In order to obtain the greatest effect of height and space for the least expenditure of money, the nave, chancel and aisles are narrow, the walls as lofty as is compatible with stability, and the roofs simply constructed with tie-beam principals. There is no clerestory, but a single roof spans the naves and aisles, and nave and chancel roofs are continuous from end to end, there being no chancel arch. The building is designed in the Early English style, freely adapted to modern requirements and materials. A characteristic feature is the plain pointed arch or lancet window, with its simplicity and absence of tracery, and this type of window is found throughout the building.



The church consists of a nave and four wide bays with north and south aisles, and accommodates 526 persons, including 36 in the choir and 36 in the chapel, which balances the choir vestry on plan.

A photograph and the architects' working drawing of the fleche which serves as a bell turret. It is of timber, all exposed parts being of English oak, including the shingles on its roof.

All Saints Church, E. Sheen, Surrey.] [*By Newberry and Fowler.*

This photograph of the east end shows four of the lancet windows which have been made a characteristic feature of the elevations. They are of brick, designed in a simple manner, without tracery.

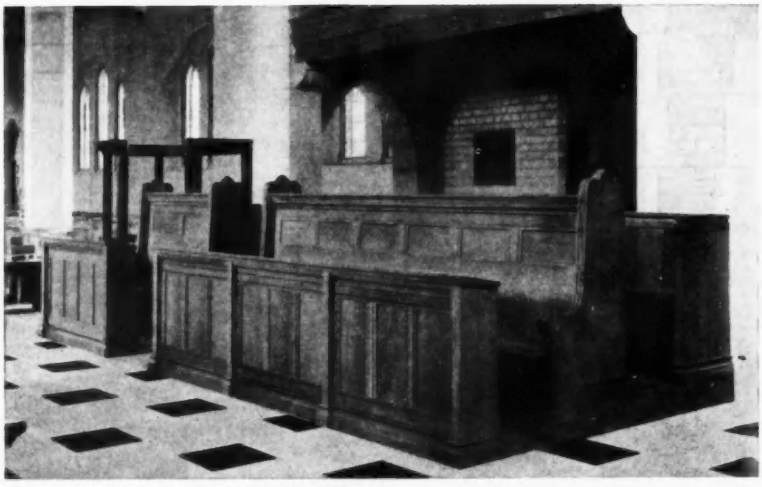
All Saints' Church, E. Sheen, Surrey.] [*By Newberry and Fowler.*

The west end and entrance from East Sheen Avenue. As will be seen from the plan on page 461, there are two main entrances to the church, the other being on the north side, from Park Avenue.

The building consists of a nave and four bays, with north and south aisles, accommodating 526 persons. The chancel is the same width as the nave, and the chapel opens out of it on the south side, whilst on the north there are the choir and priests' vestries, a small sacristy, and a spacious organ chamber above a return way for communicants, as well as an entrance lobby and lavatories.

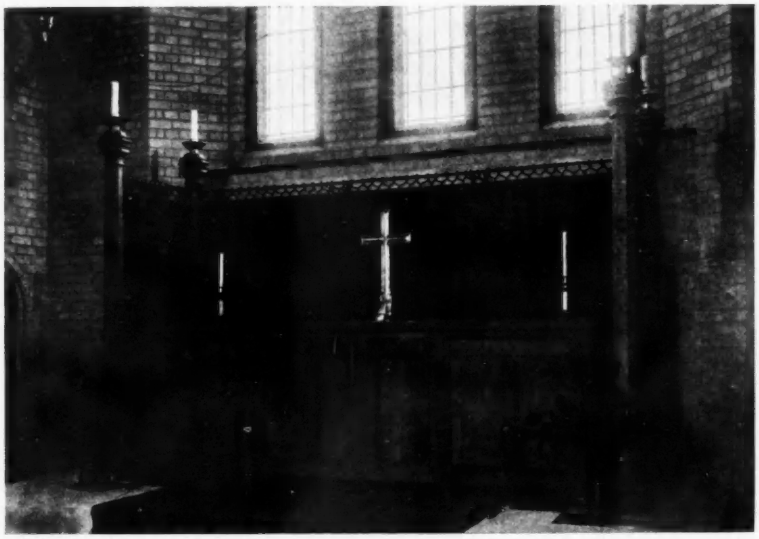
A lofty flêche springing athwart the main ridge marks the junction of the nave and chancel, serves as a bell turret, and gives a note of verticality to the whole composition. It is constructed of timber, and all parts that are exposed to the weather are of English oak, including the shingles on its roof.

The latest type of electro-pneumatic organ has been installed, which allows the organ to be placed in the loft provided, whilst the organist can operate from a detached console placed on the south side of the chancel, the connection between the organ and console being made by a small cable of electric wires under the chancel floor. Access to the organ loft is provided for by a "loft ladder" in the choir vestry.



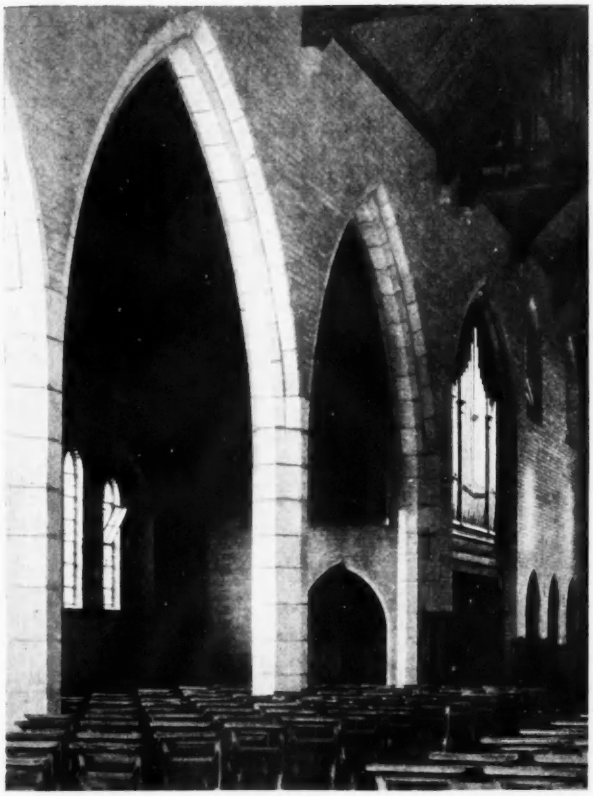
The windows are formed entirely of brick, with their inner sills of red quarry tiles. The roofs throughout are of Columbian pine, also the doors in the vestries. The vestry windows and external doors are of English oak, as are also the porch doors.

The church is heated by a low-pressure hot-water system, with heaters concealed in wide air flues under the windows. Cold air enters these flues through grilles near the floor; is warmed by the heaters, which consist of pipes and fins of copper, and passes into the church through another grille in the window sill. Natural ventilation is provided by iron casements in the windows and by openings in the gables. The church is lighted by shaded electric lamps concealed in the roofs; and the vestries, etc., are provided with pendants.

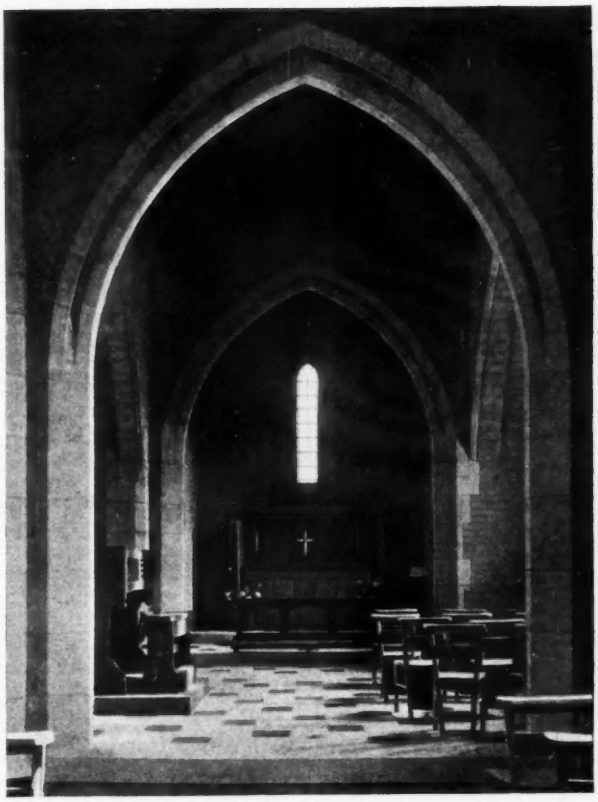


The foundation stone is in the outside eastern wall of the chancel and was laid by the Duchess of York. The cost of the building, excluding the organ, amounted to about £11,500.

View of the chapel, taken from the sanctuary. It seats 36, and accommodates the organ console. The church is lighted by electric lamps concealed in the roofs, as seen.



The choir stalls are of unstained English oak. The chancel floor is of Portland stone and slate. The pulpit, a temporary one, was formerly in St. Mary's, Sanderstead.



All Saints' Church, E. Sheen, Surrey. [*By Newberry and Fowler.*

The altar, of simple design, carried out in unstained English oak, and the altar cross and candlesticks, of pewter, were made from the architects' designs.

North side of chancel, showing organ chamber over choir vestry. The organ console is in the chapel opposite organ loft.

Chapel on south side of chancel. The floor is of Portland stone and slate, and arches and responds are of Bath stone.

All Saints' Church, E. Sheen, Surrey.] [*By Newberry and Fowler*

The east end. The nave and chancel roofs are continuous from end to end. There is no chancel arch, but a lofty fleche marks the junction of the nave and chancel, and serves as a bell turret. (*See also page 462.*)

SEA SALT AS A CAUSE OF THE DECAY OF LIMESTONE

BY ARTHUR R. WARNES AND D. NORTHALL-LAURIE

WHILST it is common knowledge that the air in proximity to the sea is frequently charged with sea spray, and in consequence contains material quantities of sodium chloride and the other salts present in sea water, yet it is not generally known to what great distances inland salt of marine origin is carried. Atmospherically-carried sodium chloride has been found in places well up to the watershed near the northern parts of Britain, at a great distance inland in Gloucestershire, owing to heavy south-westerly gales blowing up the Bristol Channel, at Rothamstead, and at many other inland places in the British Isles.

The action of small and, in many cases, gradually increasing quantities of salt is undoubtedly deleterious to stone, even though slow, and in our opinion insufficient notice has been taken of such action; at times the decay attributed to sulphur acids or their salts has been partly due to sodium chloride. The rapid manner in which salt spray becomes deposited upon outlying structures through being carried in the air by strong gales, in the absence of rain, has been the cause of the breakdown in the dielectric capacity of high tension insulators which are now being used to such a great extent throughout the country in connection with the distribution of high-tension electricity by overland conductors. When only low voltages were employed for distributing electric current across country, the margin of safety of the insulators was sufficiently high for any deposition upon them of a conductor, such as salt, to be without effect on the efficiency of the system, but as the voltages used have been increased of late years to a very high degree (the distribution under the grid system being at a pressure of 110,000 volts) the deposition of salt upon the insulators supporting the conductors carrying these high voltages has become a very serious problem.

Although the grid system has only been installed for a comparatively few miles up to the time of writing, yet serious breakdowns have already occurred as the result of sea spray being carried during the heavy gales in winter.

We have drawn attention to these troubles from salt incurred by the electrical industry merely to indicate that sea salt is definitely carried inland, not only for short but for long distances, in material quantities, in spite of the statements which have been made by certain individuals that such a phenomenon was impossible.

One of us (A. R. W.) called attention to localized decay in Portland stone by sea salt in 1926[1] and gave brief explanations of possible ways in which this substance acted. We had occasion lately to investigate a case of serious deterioration of the surface of portions of Portland stone ashlar on a building which had been erected less than six months. The stone, before fixing and after cleaning down, appeared in perfect condition, and it had been selected for the work on account of the importance of the building. It was therefore extremely disappointing to the firm who erected it that, in spite of the fact that unusual care had been taken to select the stone, portions of it should have failed so quickly.

A large number of samples of the decayed stone and also undecayed stone, bedding mortar and soil were taken, and exhaustive analyses made upon them. It seemed impossible that the stone should have decayed in places through any local atmospheric agency in the short time in which it had been exposed at the place of erection, and we were forced to the conclusion that there must have been a cause for the decay existing in the stone previously to its being prepared for the work.

Analytical examinations indicated the presence of small quantities of calcium sulphate and magnesium sulphate, but what was extremely interesting was the fact that the bedding mortar contiguous to the stone which had become decayed contained material quantities of chlorine, present as sodium chloride, whereas in the bedding mortar contiguous to the undecayed stone there was a mere trace.

There are three possible ways in which the salt could have got into the stone and mortar, namely, by contamination with urine, from the soil, or from sea water; and the analytical data, when carefully considered, indicated that the first two theories were untenable. This left sea water, probably in the form of spray, as being the only likely cause for the presence of the salt.

The origin of this salt was then investigated, and from the following considerations there is no doubt left in our minds that the stone had become contaminated at some time or another, either directly with sea water or indirectly through spray being carried to it by wind from the sea. If the geographical position of the quarry faces of the beds of Portland stone on the island of Portland is noted, it cannot but be apparent that those beds are exposed to weather conditions under which they must become contaminated with salt, and the same may be said of blocks of stone lying in the quarries. It is a fact, moreover, that some of the low-lying quarries are actually subjected to direct contact with sea water in stormy times, and it is of interest to draw attention to the fact that as lately as February 1 the sea made a breach in the Chesil Beach at Portland, flooding a considerable area.

Random blocks of stone, when removed to the mason's yard, and after sawing and dressing for use, might appear perfectly sound, and in many cases would remain sound for years; but it must be remembered that Portland stone, in common with other sedimentary rocks used as building stone, is not homogeneous in its physical composition. We refer more especially to its porosity, which porosity has been defined as " capillary head."

Our explanation of the decay of certain portions of the stone which had become contaminated with sea water is that the sodium chloride or salt concentrates in those portions of the stone exhibiting a higher capillary head than contiguous portions.

The salt collecting in the interstices acts in two ways: (a) in presence of water it hydrolyses slightly and then dissolves portions of and ultimately loosens the calcium carbonate or calcite binding material of the stone; (b) it crystallizes, and in so doing exerts a pressure on the fine particles, rupturing the weakened binding material and resulting in surface disintegration.

In regard to action (a), experiments have shown that calcium carbonate is more soluble in solutions of sodium chloride than in water.

In regard to action (b), experiments carried out by the Building Research Department on repeated crystallizations of salts in stone have led to the disruption of the samples as a result of the crystallization. In our very extensive practice we have found the same results in the laboratory and *in the field.*

A bedding mortar composed of Portland cement, or lime and stone dust, often has a very high capillary head, and we would expect that a stone which contained portions in which salt had concentrated, on being placed in juxtaposition to such a bedding mortar, would allow the salt to travel from it to the mortar and therefore the mortar would in time contain a high percentage of salt. Such a condition we found to be the case when investigating the decay of the stone above mentioned, and from a consideration of all the facts obtainable we are of the opinion that much of the decay noticed had been caused in the first place by the presence of salt derived from the sea.

[1] See *Building Stones, their Properties, Decay and Preservation*, p. 184.

ENGLISH PRECEDENT No. 107

HOUSES,
CHURCH STREET,
WARWICK

Converted into a free library and club, this building, of the local stone, though much perished, shows a finely proportioned front of the mid-eighteenth century. The stone urns count for much in the general effect. It is probably the work of "Smith of Warwick," who designed the Court House there in 1730, following the Palladian mansion of Stoneleigh.

Since the photograph was taken, the front has been faced with a patent cement, and, with only four of the eight urns replaced, has lost much of its character.

—[C. M. C. ARMSTRONG.]

CORRESPONDENCE

CHARING CROSS BRIDGE

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—" Ponderivo's " letter (issue of March 5) leaves a curious impression on the mind and a bad taste in the mouth. In his endeavour to prove that all is for the best in the best of all possible worlds he does not scruple to juggle with facts, nor to misrepresent the views of those whom he seeks to admonish. It is, of course, very difficult to meet, on a ground of surmise, one who represents that he not only knows of the drawings which Sir Edwin Lutyens is going to produce in the by-and-by, but understands his mind and can marshal his ideas.

The rest of the architectural world knows only a few facts. We know that Sir Edwin Lutyens was called in to dress a skeleton ready prepared by the engineers, and it is false to say that " he completely recast the scheme . . . in detail." We can only guess the length of time he had upon it before he left for India, during which, to " Pondivero's " surprise, " he appears actually to have walked down his streets "; we know nothing of the architectural possibilities which this unborn drawing is to reveal to us. We do know that in public no one voice has been raised in support of the design; and we are able of our own knowledge to deny that " it is a triumph of civic design." We also know that Sir Edwin Lutyens took a private letter, written in good faith by a friend, and handed it to an expert in the art of parliamentary debate, in the course of which all sorts of constructions were put upon it.

I am not a member of the Institute, but having had the honour of serving on committees which meet within its walls, I can bear tribute to the single-mindedness with which the members have approached this question, and especially to the artistic fidelity with which Mr. Arthur Keen has discharged his duties as chairman.

" Sir Edwin's plan is so right in scale," says " Ponderivo." Well, what is Sir Edwin's plan ? Why is it we have not yet seen it? Is Sir Edwin responsible for putting 1,400 ft. of roadway into tunnel ? Are the ramps and the viaducts the product of his genius ? " Ponderivo's " talk about " the gulf which separates " our " thought from that of Sir Edwin Lutyens " is merely as foolish as it is vulgar.

Whether it is better for traffic to debouch near the Embankment, where it is at once split up into five or six lines of direction, or to plunge direct into the overcrowded Strand is a matter of opinion, but the Committee have certainly taken no sides in the matter. " Ponderivo " ignores entirely the fact that the Committee of Engineers reported against the present position of the railway station, and I refuse to accept the position that any railway company shall be able to dictate to the world's metropolis.

And does " Ponderivo " seriously mean that the Surrey side doesn't matter? The scheme condemns it to a maze of tunnels, viaducts and embankments, and apparently this has been done purposely so that Sir Edwin can exercise his genius upon it. Where are the noble building sites we hear about? The plan does not reveal ONE.

" Ponderivo " seems to know as little about town planning as about traffic requirements. How futile, how insufferably foolish, it is to complain of large-scale planning ! Piecemeal planning is what London is suffering from today ; it opens to most potent criticism the little-mindedness of the official scheme. Here a little, there a little; no generous gesture; no considered whole. More than anything in regard to London's growth we need a co-ordinated scheme of improvements for the next fifty years at least. " Ponderivo " must have spent his time in a classroom : where does he find, in actual schemes, these axial lines and circles he talks about ?

Sir Edwin's genius does not require the additional attribute of a necromancer : it is patent, gladly acknowledged. And when an anonymous writer tells us in advance of all the architectural glories that are going to be done, and be done by Sir Edwin, will he tell us also how he has faked the issue and doped the judges in advance ? For we have the specific undertaking that these things shall be the subject of an open competition.

If it takes an aeroplane to appreciate the plan of those curious town planners among whom " Ponderivo " lives, what sort of hextry-double-magnifying kind of glasses does it require to sort out the few grains of wheat from " Ponderivo's " desert of chaff ?

EWART G. CULPIN,
President, the Incorporated Association of Architects ; Member, the Town Planning Institute.

THE ÆSTHETIC FRONT

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—Mr. A. Trystan Edwards shows less respect for himself than I did. I deplore that he should not keep faith with his readers, and ascribe to me a wish to restrict the freedom of architecture when it was his own advocacy of such restriction that I deprecated.

H. B. CRESWELL

To the Editor of THE ARCHITECTS' JOURNAL

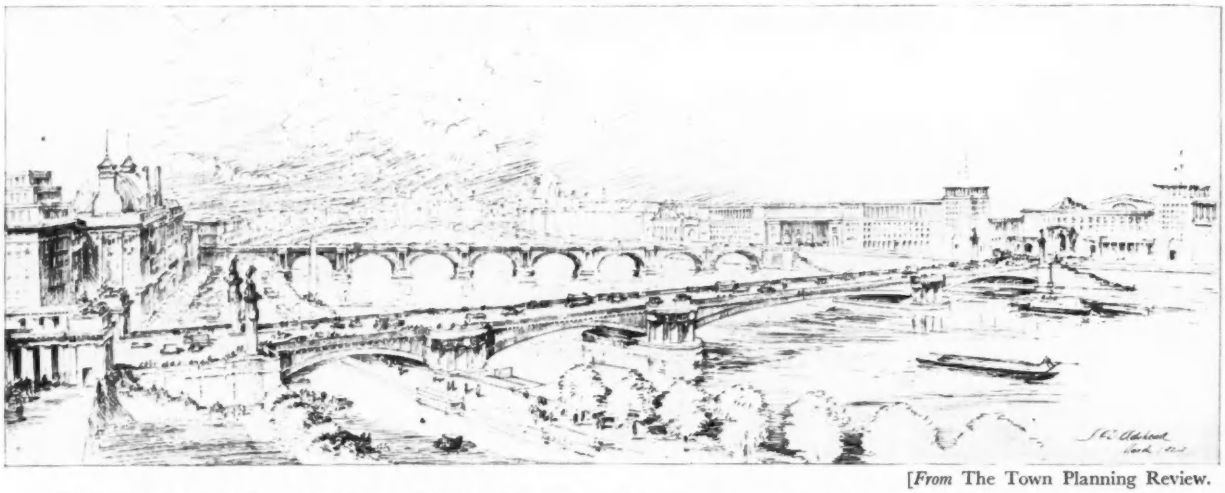
SIR,—With reference to the above letter, in my reply to Mr. Creswell, published in your issue of March 12, there was no sentence that attributed to him " a wish to restrict the freedom of architecture," nor was there, in either of my two articles on Registration, a single sentence advocating such a restriction. But your readers are doubtless capable of forming their own opinions as to which of us has misrepresented the other.

A. TRYSTAN EDWARDS

CLEANING OAK FURNITURE

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—In your JOURNAL for January 29 last J.C.R. advises a querist to clean off his weather-stained furniture, which he says " is best done with glasspaper and a cabinet scraper." In point of fact, a scraper should never be used on oak. The " figure " or " flower " of this wood runs across the grain, and is far harder than the unfigured portions of the timber. A scraper will scoop out these softer portions, leaving the " flower " untouched; and the result will be a most unsightly succession of ridges and depressions which could only be removed by planing. The only method of cleaning off oak is to use glasspaper or any similar abrasive. Should the furniture be stained in places or unevenly weathered, a better result might be obtained by bleaching with a solution of oxalic acid, glasspapering to remove the raised grain, and oiling with raw linseed oil. Yet, in the case of exposure to the elements for several months, the weathering has probably penetrated to such a depth that only planing could restore the creamy-white surface that the furniture bore when new. Under these circumstances, the querist had better make the best of a bad job; and lightly glasspapering his furniture, oil it. The colour when oiled should be a light golden brown.



There is one other matter. The use of scrapers is not confined to " plain, flush surfaces," since chairmakers use a " scraper-spokeshave " when finishing cabriole and similar chair legs.

THOMAS FOSTER

[The above letter has been submitted to our expert, and we print his reply below.]

To the Editor of THE ARCHITECTS' JOURNAL

SIR,—There may be a rule amongst purists that " a scraper should never

[*From* The Town Planning Review.

Perspective sketch of Professor S. D. Adshead's scheme, viewed from the north shore of the river, looking eastwards towards St. Paul's Cathedral. It indicates the direct way in which the proposed new station would be approached from the bridge.

be used upon oak," but it is a dogmatic statement to which in practice there are many exceptions. The fact that the silver grain is far harder than the unfigured portions I considered too well known to mention, and the use of the scraper upon strongly-figured surfaces, of course, needs skill and care. I can imagine exceptional pieces of Austrian oak where it would be difficult though not impossible, hence my cautionary remark in the reply to your querist. Not all oak used in furniture, however, is strongly figured, much, in fact, is cut at an angle with the medullary rays, and upon such surfaces the scraper will act perfectly. Properly used, it is an exaggeration to state that the "scraper will scoop out these softer portions leaving the flower untouched." It is true the softer grain will respond more readily and that after careful scraping, if the fingers be passed over the surface in some cases, the larger markings of the silver grain can be felt standing ever so slightly above the softer tissues; but to produce "a most unsightly succession of ridges and depressions" is to visualize very brutal treatment indeed, such as I have never experienced.

I never hesitate to use the scraper on oak where the job can be best done by so doing. In my opinion, judicious scraping of quarter-cut oak surfaces enhances rather than spoils the effect, for it produces conditions similar to those present on old oak furniture, where by the process of time the soft tissues have shrunk, leaving the hard silver grain slightly prominent: for which the old pieces are much admired.

The use of glasspaper alone involves a very lengthy and tedious job, and, if too vigorously and unevenly applied, can certainly cause undulations; moreover, there is always the temptation to use too coarse a grade, by which the amateur can seriously score and scratch the surfaces, which is a disfigurement, and can only be rectified by a scraper or finely set plane. The use of a plane is practically limited to the top in the case of existing furniture; it is useless on panels, and little can be done with it on rails and stiles and drawer fronts, whereas the scraper searches all corners and short lengths and, properly sharpened, will cut both hard and soft tissues.

As regards restoring the tone, the use of linseed oil is out of the question; the natural colour of oak was desired, whereas oiling gives a yellowish tone which is unpleasant.

With regard to your correspondent's last remark, I think I was entitled to assume that your querist was not in possession of the full equipment of a cabinet- and chair-making establishment, for had he been he would also have possessed the knowledge for which he wrote. Assuming it was the inquiry of an amateur I gave the method of cleaning up turned—and, of course, cabriole — legs, which is safe and effective.

J. C. R.

LITERATURE

TOWN PLANNING REVIEW:
DECEMBER, 1929

IT is one of the invigorating qualities of the *Town Planning Review* that it keeps always before it the consciousness that the practice of town planning is as much an art as a social service, and that this side of its nature is the more permanent, and in the end therefore the more important. It is for this reason, if my diagnosis is right, that the review of current work, and the discussion of current problems, is blended with the study of the best work of the past. Looking through back numbers, one is reminded again and again that the problems that beset us today are old problems reappearing, and that the principles of the art are deductions from the study of what has been good in the past.

Since principles are too often forgotten under stress of immediate necessity, this element of real scholarship, which gives so fine a flavour to the pages of this magazine, should be regarded as a really valuable contribution to town planning.

The December number gives pride of place to a thorough examination of the various schemes for a Charing Cross Bridge, which were exhibited recently at the London Museum. Mr. Trystan Edwards, while dealing with each scheme impartially, points out the, I think, acknowledged virtues of that submitted by Professor S. D. Adshead. He also urges the importance of a competition, or a series of competitions, covering the whole range of reconstruction of both the bridge and the banks, and both from the standpoint of the town planner and the architect.

There follows a description of a competition for the replanning of the town of Foggia, in Southern Italy, an absorbingly interesting series of plans.

Housing problems in the U.S.A. are discussed in a rambling and rather indecisive article by Mr. Lawrence Veiller: one learns that housing in the States is good, bad and indifferent, but mostly indifferent. Then comes a close study of a fresco, in the Vatican Library, of a bird's-eye view of Rome at the end of the sixteenth century, with excellent book reviews concluding the number.

E. M. F.

The Town Planning Review. December, 1929. The Journal of the Department of Civic Design, School of Architecture, University of Liverpool.

ARCHITECTURE AND THE CHILD AT SCHOOL

IT is significant of the acceptance of architecture as one of the vital affairs of everyday life that this little book on *Foundations of Architecture* should be written not merely for the adult but for "a child at the secondary school stage." It is still more significant that it should be designed not simply to give a novel form of entertainment for the child, but as a guide for the teacher or scout leader whose own knowledge of architecture and building is not yet sufficient to cope with the needs of this new activity towards the inculcation of the principles of citizenship.

In the introduction Professor Reilly reminds the reader that "there is no escape from buildings . . . from the earliest times man has used them as a means of expression. . . . No community today, either by cunning or carelessness, can escape making a similar manifestation of its true self." The authors' aim is not only to stimulate curiosity as to existing buildings but also to contribute to the education of those responsible for the buildings of the future.

To cultivate an awareness of the functional and æsthetic qualities of simple materials, and an appreciation of the essential principles of construction as well as a power to observe the uses and enjoy the beauties of buildings—these are the basic foundations on which may be built up more detailed historical knowledge, or more definite conscious taste. To this end Mr. and Mrs. Manning Robertson, with their joint appreciation of the technical and the non-technical standpoints, and of the intimate, indissoluble relation between the two, discuss various aspects of their subject. In twelve concise chapters they treat of the brick, the beam and the arch, timbers, "The House," and various details about it, besides such matters as colour and shadow, grouping and proportion, decoration, and the elements of engineering, while some more general notes co-ordinate the separate parts of the whole and a few reasonable sketches and diagrams support the statements of mechanical facts or the formulation of some basic opinion in æsthetics.

Because the book is so valuable as the thing it sets out to be, one is the more aware of its failings. Most noticeable among these is a tendency here and there to lapse into the slightly irritating chattiness, with an element of condescension, which is too commonly supposed to appeal to "the young." One wonders whether such a manner of addressing boy and girl readers really produces the desired result, or whether it does not produce rather a tolerant pity, not untinged with contempt, which the growing-up child accords to the grown-up who attempts to be childish.

For instance, the schoolboy knows better than to expect to gather "roast chestnuts" from the Spanish chestnut tree, even though he knows also that they are not the battling variety. That sort of grown-up childishness would have spoiled that jolly chapter on timber for many of us at the school age. On the other hand, to assume that "It will, of course, be understood" that certain members in the king post truss are shown "end on" is to assume quite a considerable knowledge on the part of the school-child, and even of some of his elders.

There is a little too much about the "sham chocolate" for the palate of many of the serious-minded youngsters of today, when quite a number of modern children have a healthy ability to eat rice pudding. The authors run off again on a grown-up sentence rather too heavy for any but a sixth-form fellow to enjoy when they write of "apt recognition that distinguishes good judgment from the mere expression of a valueless opinion." But if Smith Minor has been "doing" grammar he will exult impudently in catching them out with "the roof, which are used almost entirely to keep off the wet and for no other purpose."

To return, however, to the book's abundant virtues, one should mention the admirable analysis of stresses and strains in the roof truss, and in steel and concrete construction. The non-technical amateur of architecture may dispute the statement that "an understanding and love of architecture comes from understanding why things stand up," but the fact remains that such knowledge is one of the firmest foundations of individual appreciation and of constructive public opinion, more particularly when it grows from and is exercised by such intelligent observation as that which this volume aims at encouraging in the citizens of the rising generation. NEW SIX-STORY TIMBER WAREHOUSE IN BARBICAN, E.C.

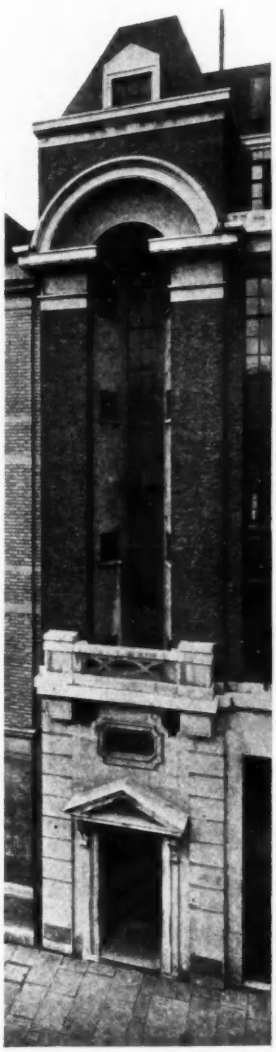
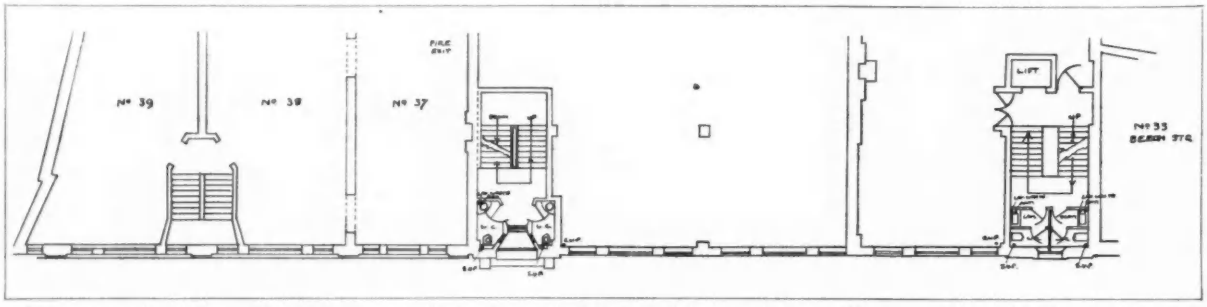
DESIGNED BY S. TOWSE



The main front is faced with 2-in. red variegated bricks, with dressings of artificial stone.

THE firm of Messrs. Ingram, Perkins & Co., Ltd., timber merchants, was founded in 1797, and until recently was housed in a heterogeneous collection of timber sheds and offices. The opportunity arising to acquire some adjoining property, they have now had erected, in Beech Street, an up-to-date building that will allow for future expansion.



The building is steel framed throughout, and faced with 2-in. red variegated facing bricks on the main front. The dressings are in artificial stone, and as large a space as possible has been devoted to windows in order to obtain the maximum amount of light, the street being narrow. The whole of the basement and first floors are used as a timber store and office. The upper floors are let out as offices and workshops, and an electric crane is provided at the back of the building in Red Lion Square to serve all floors.

The accompanying illustrations show the ingenious manner in which the principal staircases and lavatories are planned on the main front. These two staircases are provided with electric lifts in the staircase well. The lavatories are arranged on the mezzanine landings of the staircases, which are lit and ventilated by canted recesses in the front walls. This ensures good lighting to the staircases and enables the various soil and anti-syphonage pipes to be carried down the recesses and to be invisible from the front of the building.

The adjoining property on one side of the building being old and dilapidated, it was necessary to carry the foundations down to a depth of 18 ft. or more. Special consent had to be obtained from the L.C.C. for building above the height allowed for in a narrow street, and the building being over 250,000 cubic feet, it was necessary to divide up the various floors by division walls fitted with double steel doors.

One of the two recessed staircase and lavatory blocks.

The outstanding features of the building are the two recessed staircase and lavatory blocks. The manner in which these are planned ensures good lighting to the staircases and enables the soil and anti-syphonage pipes to be carried on the internal walls.

IN PARLIAMENT

BY OUR SPECIAL REPRESENTATIVE

Paintings by Brangwyn

MR. HORRABIN asked the First Commissioner of Works if he intended to accept the recommendation of the Royal Fine Arts Commission that the paintings by Mr. Frank Brangwyn, R.A., executed under the bequest of the late Earl of Iveagh, should not be placed in the Royal Gallery; and, if so, whether he proposed to find some other place in the Palace of Westminster for these paintings.

Mr. Lansbury said that the matter was about to be considered in the House of Lords, and until he learned the result of their deliberations he was not able to make any announcement.

Official Visits Abroad

Sir Lambert Ward asked the First Commissioner of Works whether any permanent official or officials of his department other than architects, engineers, and supply officers, had visited since June 1929, or proposed to visit during the coming twelve months, any buildings occupied by British representatives or officials in oversea countries; and, if so, in what capacity, for what purpose, and at what cost to the Exchequer.

Mr. Lansbury said that no officials, other than technical officers, had been sent abroad since June 1929, but he had asked the Permanent Secretary of his department to proceed to Washington on March 26th on business connected with the new Embassy. The cost would be under £200.

Non-Parlour Houses

Sir Kingsley Wood asked the Minister of Health if he would give, for a convenient date in February in 1928, 1929 and 1930, the average superficial area for A-type non-parlour houses erected by local authorities in England and Wales under the Housing Act, 1923, and the Housing Act, 1924, respectively.

Mr. Greenwood said that figures for the month of February, 1930, were not yet available. The average superficial areas of A-type non-parlour houses included in contracts let by or in direct labour schemes of local authorities in England and Wales during the month of January in the years 1928, 1929 and 1930, were 785, 761 and 749 feet respectively. Separate particulars as to the average areas of houses erected under the Housing Act, 1923, and the Housing (Financial Provisions) Act, 1924, respectively, were not available.

Dr. Vernon Davies asked what effect, if any, the Housing (Revision of Contributions) Act, 1929, had had upon the average price of parlour and non-parlour houses.

Miss Susan Lawrence said that the Act of 1929 came into operation on October 1st, 1929. The average price of non-parlour houses in contracts approved during the six months ended September 30th, 1929, was £346, and for the four months ended January 31st, 1930, had been £337. The average sizes of these houses were substantially the same. As regarded parlour houses, the corresponding figures were £404 and £422, but there had in this case been an appreciable increase in the size of the houses concerned.

Rent Restrictions Act

Mr. Morley asked the Minister of Health if his attention had been called to the excessive rents often charged for decontrolled houses; and if he proposed to introduce legislation to set up fair-rent courts.

Mr. Greenwood said that this matter would receive consideration in connection with any legislation amending the Rent Restriction Acts, but it would not be practicable to introduce further legislation in the immediate future.

Mr. Harris asked the Minister of Health whether he was aware that the Rent Restrictions Act was being evaded by property owners by allowing properties to get into such a bad state of repair that local authorities had to issue a closing order, so that the owner got possession and let the property at a much higher rent for commercial or other purposes; and whether he would consider introducing amending legislation in his contemplated Housing Bill to meet cases of this kind.

Mr. Greenwood said he would consider the suggestion. Local authorities had already wide powers of requiring the execution of works necessary to keep houses in all respects fit for human habitation.

READERS' QUERIES

LEAKY ROOF

J. A. W. writes : " *Do you consider that torching with lime and mortar is likely to be a successful and lasting cure for twenty-one years in the case of a badly leaking roof, the tiles of which are badly laid and porous, and which is exposed to the full force of south-westerly gales ?* "

The roof is said to be " badly leaking," which may be due to a variety of causes. As the tiles are described as " badly laid and porous," presumably other possible causes have been ruled out—such as insufficient pitch, inadequate lap, or age resulting in decay of tile-laths or nails, with slipping. If battens are sound and " badly laid " means irregular inch spaces through which wind can blow, I am of opinion that well-executed torching, by stopping the passage of strong winds, should make a dry roof, pitch and lap being adequate —say over 45° and not less than 4-in. gauge to tiles 10½ in. long. Should, however, the tiles be not only porous but *permeable* (that is, allowing soakage and dripping *through* the tiles), then the torching would be apt to become saturated, and would effect little improvement in times of stress such as the recent rain-laden gales.
